ERRATA.

1,392,335, page 10, in the heading, title of invention, for "Vertical-Surface-Grinding Machine" read *Surface-Grinding Machine.*

1,392,405, page 28, in heading, residence of patentee, for "Toronto, Ontario, Canada" read *Toronto, Ohio.*

1,394,682, page 509, first claim, line 6, strike out the word "and."

15,205, (Reissue,) page 387, in heading, after residence of patentee, insert the words *assignor to Morgan Construction Company, Worcester, Massachusetts, a Corporation of Massachusetts.*

147,703, (Registered Trade-Marks,) page 880, particular description of goods, before the compound word "Tie-clasps" insert the compound word and comma *Cuff-buttons,.*

Alphabetical List of Inventions, October 4, 1921, page xix, second column, line 66, title, for "Car ends, Machine for and method of lining," read *Can ends, Machine for and method of lining.*

Alphabetical List of Patentees, October 11, 1921, page ii, first column, line 75, for Patent No. "1,393,401" read *1,393,491.*

Vol. 291.

Patents Nos. 1,302,288 to 1,302,897.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 291—No. 1. TUESDAY, OCTOBER 4, 1921. Price—$5 per year.
[PUBLISHED OCTOBER 11, 1921.]

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

New Examining Division.

(ORDER No. 2,697.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., September 26, 1921.

A new examining division, No. XLVIII, is hereby established, with Examiner O. B. Roepke in charge, and it is directed that the following classes be transferred thereto, this order to take effect October 1, 1921: class 173, Electricity, Conductors, from Division XLII; class 175, Electricity, General Applications, from Division XXXVII.

THOMAS E. ROBERTSON,
Commissioner.

Interference Notices.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., September 20, 1921.

The American Perfumer Company, their assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications of Hersey P. Barnes, of 156 Jamestown street, Manayunk, Philadelphia, Pa., for registration of a trade-mark and trade-mark registered May 1, 1906, No. 51,958, to The American Perfumer Company, of 15 Taylor street, Springfield, Mass., and a notice of such declaration sent by registered mail to The American Perfumer Company at the said address having been returned by the post-office undeliverable, notice is hereby given that unless The American Perfumer Company, their assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., September 27, 1921.

The All in One Tractor Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Stroud Motor Manufacturing Ass'n., Ltd., of 117 East Houston street, San Antonio, Tex., for registration of a trade-mark and trade-mark registered April 22, 1913, No. 91,271, to The All in One Tractor Company, Waterloo, Iowa, and a notice of such interference sent by registered mail to The All in One Tractor Company at the said address having been returned by the post-office undeliverable, notice is hereby given that unless The All in One Tractor Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., September 27, 1921.

H. J. Nice Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Percy Pierce, 445 North Fifth street, Philadelphia, Pa., for registration of a trade-mark and trade-mark registered December 23, 1919, No. 70,281, to H. J. Nice Company, 15 Northeast Fifth street, Minneapolis, Minn., and a notice of such interference sent by registered mail to said H. J. Nice Company at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said H. J. Nice Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

Adverse Decisions in Interference.

PATENT No. 1,310,841.

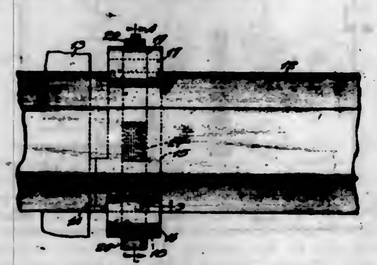
On September 8, 1921, a decision was rendered that Edmund G. Robinson was not the first inventor of the subject-matter covered by claims 1, 2, 3, 4, 5, 6, 7, and 8 of his Patent No. 1,310,841, subject, "Fireproof composition," and no appeal having been taken within the time allowed such decision has become final.

Amendments to Amendments.

RULE 74. When an amendatory clause is amended, it must be wholly rewritten, so that no interlineation or erasure shall appear in the clause, as finally amended, when the application is passed to issue. If the number or nature of the amendment shall render it otherwise difficult to consider the case or to arrange the papers for printing or copying, the Examiner or Commissioner may require the entire specification to be rewritten.

4704

Condition of Applications Under Examination at Close of Business September 24, 1921.



Room No.	Divisions, Examiners, and subjects of inventions. (Oldest new case, Oct. 5; oldest amended, Dec. 4.)	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.
314	1. LOEFFLER, F. S., Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Scattering Unloaders.	Apr. 21	Apr. 20	748
128	2. BALDWIN, M., Bee Culture; Dairy; Medicines; Pneumatics; Preserving; Presses; Tents, Canopies, Umbrellas, and Canes; Tobacco; Trees, Plants and Flowers.	Dec. 21	Feb. 18	1,666
175	3. RICH, WM. J., Electric Heating and Rheostats; Electrochemistry; Heating; Metal-Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Dec. 18	Dec. 24	832
234	4. MERRITT, A. D., Conveyers; Conveyers, Fluid-Current; Excavating; Handling—Hand and Hoist-Line Implements; Hoisting; Material or Article Handling; Pushing and Pulling Implements; Railway Mail Delivery; Traversing Hoists.	Oct. 5	Mar. 16	1,701
167	5. MACNAB, J. F., Book-Making; Books, Strips and Leaves; Harvesters; Jewelry; Manifolding; Music; Printed Matter; Tying Cords or Strands.	Nov. 24	Jan. 12	912
318	6. LEWERS, A. M., Bleaching and Dyeing; Chemicals; Explosive, Pyrotechnic and Match Compositions; Fertilizers; Liquid Coating Compositions; Plastic Compositions; Substance Preparation.	Mar. 2	June 15	944
312	7. JARBOE, C. G., Games and Toys; Optics; Photography; Velocipedes.	Mar. 15	May 18	1,796
131	8. CLIFT, J. W., Beds; Chairs and Seats; Flexible-Sheet Securing Devices; Furniture; Kitchen and Table Articles; Store Furniture; Supports.	June 21	Aug 13	667
221	9. TRYON, F. M., Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid-Current; Pumps.	Nov. 3	July 2	1,007
235	10. MITCHELL, T. H., Land-Vehicles; Land Vehicles, Animal Draft Appliances; Land-Vehicles—Bodies and Tops; Land-Vehicles—Dumping Land-Vehicles, Wheel Substitutes; Motor Vehicles.	Mar. 1	June 27	1,220
154	11. ARMSTRONG, H. C., Boot and Shoe Making; Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whips and Whip Apparatus.	June 11	July 14	429
222	12. PIERCE, P. F., Machine Elements.	Feb. 11	May 26	1,156
320	13. NIXON, G. A., Bolt, Nail, Nut, Rivet, and Screw Making; Chain, Staple, and Horseshoe Making; Driven, Headed, and Screw-Threaded Fastenings; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Tools and Implements, Making; Metal Working; Needle and Pin Making; Turning.	Nov. 16	July 1	1,645
323	14. BRUMBAUGH, N. J., Compound Tools; Cutting and Punching Sheets and Bars; Farriery; Metal-Bending; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structures; Wire-Working.	Dec. 2	July 5	842
306	15. REDROW, W. L., Bread, Pastry, and Confection Making; Glass; Laminated Fabrics and Analogous Manufactures; Paper-Making and Fiber Liberation; Plastic Block and Earthenware Apparatus; Plastics.	Oct. 7	Feb. 12	1,682
111	16. BACKUS, C. D., Radiant Energy; Telegraphy; Telephony.	Oct. 8	Feb. 7	1,786
307	17. RAFTER, G. S., Coating, Label Pasting and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet Material Associating or Folding; Sheet Feeding or Delivering; Type Setting.	Jan. 31	May 3	967
220	18. PORTER, M. E., Liquid Heaters and Vaporizers; Motors, Expansible Chamber Type; Power Plants; Speed Responsive Devices; Steam and Vacuum Pumps.	Nov. 26	Feb. 15	1,722
236	19. GLASCOCK, E. S., Automatic Temperature and Humidity Regulation; Furnaces; Heating Systems; Stoves and Furnaces; Domestic Cooking Vessels; Thermostats and Humidostats.	Nov. 27	Mar. 19	972
179	20. WRIGHT, H., Artificial Body Members; Miscellaneous Hardware; Closure-Fasteners; Cutlery; Dentistry; Locks and Latches; Sales; Undertaking.	Apr. 6	May 17	1,413
212	21. THURBER, W. L., Brakes and Gins; Carding; Cloth-Finishing; Continuous-Strip Feeding; Cordage; Felt and Fur; Knitting and Netting; Silk; Spinning; Weaving; Winding and Reeling.	Mar. 1	June 6	653
249	22. COLWELL, J. H., Aeronautics; Firearms; Ordnance; Ammunition and Explosive Devices; Ammunition and Explosive Charge Making.	May 16	July 2	541
217	23. GROESBECK, W. D., Acoustics; Coin-Handling; Horology; Recorders; Registers; Sound Recording and Reproducing; Time-Controlling Mechanism.	Dec. 8	June 8	830
144	24. DARBY, J. J., Apparel; Apparel Apparatus; Garment Supporters; Sewing-Machines.	Jan. 10	May 5	1,020
315	25. LIGHTFOOT, J. H., Agitating; Butchering; Centrifugal Bowl Separators; Mills; Threshing; Vegetable Cutters and Crushers; Gas Separation.	July 9	July 16	313
105	26. HODGES, J. S., Electricity, Generation; Motive Power; Prime Mover Dynamo Plants.	Feb. 5	Apr. 20	801
214	27. ANDERSON, L. S., Abrading; Brushing and Scrubbing; Laundry; Washing Apparatus.	Mar. 28	June 2	1,423
225	28. BENSON, A. R., Internal-Combustion Engines.	Jan. 17	Apr. 25	1,462
147	29. MORRIS, B., Boring and Drilling; Button Making; Chucks or Sockets; Coopering; Tool Handle Fastenings; Wheelwright Machines; Wood-Sawing; Wood-Turning, Woodworking; Woodworking-Tools.	Feb. 2	July 12	731
152	30. SULLIVAN, M. E., Illuminating-Burners; Illumination; Liquid and Gaseous Fuel Burners; Type-Writing Machines.	Feb. 7	July 12	1,304
172	31. HOLMES, W. N., Alcohol; Ammonia, Water, and Wood Distillation; Charcoal and Coke; Fuel and Igniting Devices; Gas, Heating and Illuminating; Hides, Skins, and Leather; Hydraulic Cement and Lime; Mineral Oils; Oils, Fats, and Glue; Sugar and Salt.	Oct. 27	Dec. 7	2,049
278	32. BANCROFT, J. F., Gas and Liquid Contact Apparatus; Heat Exchange.	Dec. 4	June 7	1,030
70	33. COWLES, W. A., Bridges; Hydraulic and Earth Engineering; Masonry and Concrete Structures; Metallic Building Structures; Roads and Pavements; Roofs.	Mar. 21	Apr. 30	726
304	34. SIMPSON, G. E., Electricity-Transmission to Vehicles; Pneumatic Despatch; Railways; Railway Rolling-Stock; Railway Switches and Signals; Railways, Surface Track; Railway Wheels and Axles; Store Service; Track-Sanders; Vehicle-Fenders.	July 9	July 21	306
57	35. REYNOLDS, E. C., Buckles, Buttons, Clasps, Etc.; Card, Picture, and Sign Exhibiting; Signals and Indicators; Toilet.	June 20	July 2	716
204	36. MORTON, G. L., Automatic Weighers; Driers; Geometrical Instruments; Measuring Instruments; Force Measuring.	Apr. 18	Apr. 12	1,585
107	37. TAYLOR, E. C., Electricity, Circuit Makers and Breakers; Electricity, General Applications.	Jan. 26	Feb. 2	2,330
378	38. IDE, G. B., Animal Husbandry; Earth Boring; Fishing, Trapping and Vermin Destroying; Mining, Quarrying, and Ice-Harvesting; Stationery; Stone-Working; Walls.	Apr. 30	Apr. 30	1,166
220	39. COWLES, A. W., Fluid Pressure Regulators; Joint Packings; Multiple Valves; Packed Shaft or Rod Joints; Pipe Joints or Couplings; Rod Joints or Couplings; Valved Pipe Joints or Couplings; Valves; Water Distribution.	Oct. 27	Jan. 10	1,956
273	40. OBERLIN, J. J., Baggage; Bottles and Jars; Check-Controlled Apparatus; Cloth, Leather, and Rubber Receptacles; Deposit and Collection Receptacles; Metallic Receptacles; Package and Article Carriers; Paper Receptacles; Special Receptacles and Packages; Wooden Receptacles.	Jan. 10	Mar. 10	2,187
125	41. BROWN, J. I., Land Vehicles, Wheels and Axles; Resilient Tires and Wheels.	Mar. 12	Apr. 7	861
114	42. CUTTING, H. G., Electricity, Conductors; Electrical Conduits and Housings; Electric Signaling; Electric Lamps.	Dec. 7	Dec. 4	2,305
382	43. HOPKINS, F. M., Baths and Closets; Dispensing; Dispensing Beverages; Electricity, Medical and Surgical; Fire-Extinguishers; Sewerage; Surgery; Liquid Separation or Purification.	Dec. 20	Jan. 11	1,583
253	44. SHAFFER, C. H., Air-Guns, Catapults, and Targets; Boats and Buoys; Filling and Closing Portable Receptacles; Marine Propulsion; Railway Draft Appliances; Refrigeration Ships.	Jan. 3	June 22	484
379	45. GILES, A. H., Journal-Boxes, Pulleys, and Shafting; Lubrication; Motors; Spring Devices.	Feb. 17	Apr. 14	1,165
332	46. WOLCOTT, C. L., Curtains, Shades and Screens; Educational Appliances; Fire-Escapes; Ladders; Fluid Sprinkling, Spraying, and Diffusing; Paper Files and Binders; Wooden Buildings; Scaffolds.	Mar. 1	Mar. 9	1,112
264	47. BARKER, H., Brakes; Clutches and Power Stop Control; Elevators; Fluid Pressure Brake and Analogous Systems.	Dec. 22	Apr. 12	1,133

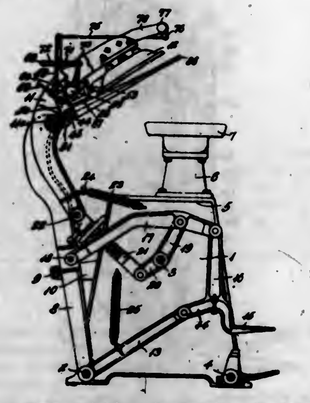
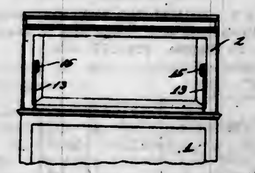
PATENTS



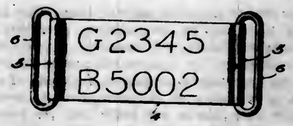
GRANTED OCTOBER 4, 1921.

1,392,288. RAIL-ANCHOR. OTTO R. BARNETT, Glencoe, Ill., assignor to P & M Company, Chicago, Ill., a Corporation of Illinois. Filed June 3, 1919. Serial No. 301,428. 12 Claims. (Cl. 238—324.)



1. An anti-creeper comprising a yoke adapted to extend transversely under a rail base, jaws at opposite ends of the yoke and in operative relation thereto, provided with means for biting transversely of the rail into the upper surface of the base flange of said rail, a wedge adapted to be driven between the yoke and the rail base to cause said jaws to tightly grip the rail base, means on said wedge for biting transversely of the rail into the bottom of the rail base when the wedge is driven to gripping position, and means on the structure to engage a stationary part of the road bed.

1,392,289. GARMENT-PRESS AND STEAMING MECHANISM. DANA H. BENJAMIN, Cleveland Heights, and GEORGE N. LINK, Cincinnati, Ohio, assignors to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio. Filed July 5, 1918, Serial No. 243,893. Renewed Mar. 19, 1921. Serial No. 453,705. 10 Claims. (Cl. 68—9.)

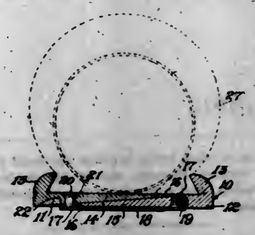


1. In a press, a buck, a head, means for bringing the same into pressing position, and steaming mechanism comprising an envelop lying beneath the head and movable bodily with respect thereto, means for projecting steam into said envelop, and controlling means therefor movable with said head.

1,392,290. BALANCE-WEIGHT COVER-SUPPORT FOR PHONOGRAPHS. ALFRED BERSTED and MARTIN BERSTED, Chicago, Ill. Filed Feb. 5, 1921. Serial No. 442,693. 6 Claims. (Cl. 217—60.)

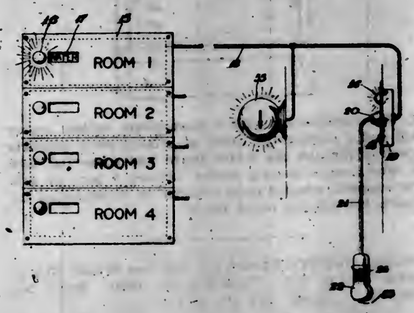
1. The combination with a phonograph cabinet motor board and a phonograph cover, of balance cover supports projecting through the motor board and connected with the cover, and adjusting means forming a part of said cover supports adapted to be adjusted by withdrawing the supports through the motor board.

1,392,291. IDENTIFYING-TAG. EDWARD STUART BLACKBURN, Austin, Tex. Filed Feb. 28, 1920. Serial No. 361,998. 1 Claim. (Cl. 40—20.)



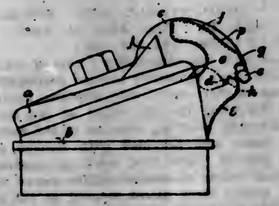
A tag comprising a substantially flat sheet-metal body devoid of surface projections in its median portion arranged to have either side of the body lie close to a binding-band, and two elongated comparatively narrow loops swingably mounted on the end portions of the body arranged to have a binding-band disposed snugly therein and to hold the body close to the band.

1,392,292. DEMOUNTABLE RIM. EDWARD G. BLUE, Grape Creek, Ill. Filed June 14, 1920. Serial No. 388,997. 1 Claim. (Cl. 301—35.)



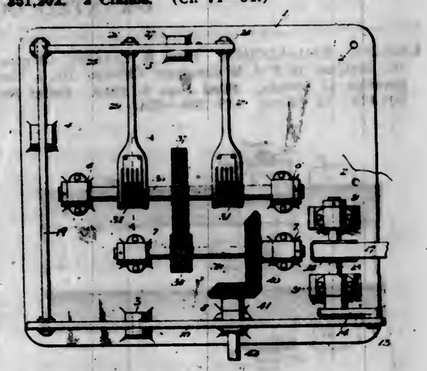
A demountable rim comprising a pair of cylindrical sections having inner oppositely beveled overlapping portions terminating in flat edges, said sections having annular shoulders receiving the flat edges of the beveled inner portions laterally abutting relation in the operative position and being also provided with flanged outer edges and with slotted valve tube receiving openings, one of said sections having circumferentially spaced transversely extending spring catch pieces secured at one end thereto and provided with outwardly projecting locking studs at their free ends, and the other of said sections being provided with apertures to receive the studs and also provided upon its inner face with transverse grooves into which the inner ends of the apertures open, said grooves ex-

tending through the annular shoulder of said section and having the side walls thereof merging into the shoulder



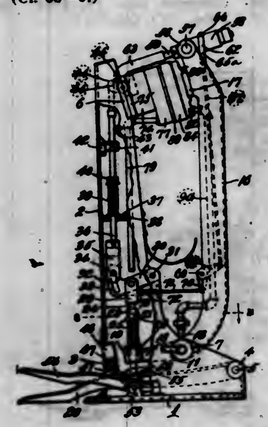
along curved lines to form guides for the free ends of the said spring catches when the two sections are shifted laterally into effectively abutting relation.

1,392,293. **SIGNALING SYSTEM.** BORNETT L. BOBROFF, Milwaukee, Wis. Filed Jan. 5, 1918. Serial No. 210,509. 12 Claims. (Cl. 177—334.)



1. An electrical signaling system comprising an electrical circuit including an annunciator operating step by step by successive electrical impulses, a push button located at a distance for transmitting such electrical impulses to the annunciator to produce any one of a number of signals, a plurality of electrical circuits each including a visible indicator in the holder for the push button, and means operated by the annunciator for separately closing the circuits containing the visible indicators.

1,392,294. **VALVE.** EDWARD CYRIL BOWDEN-SMITH, London, England. Filed July 1, 1920. Serial No. 396,412. 4 Claims. (Cl. 251—128.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. A clack valve comprising a casing, an extension on said casing, a valve pivotally connected to said casing, said pivotal connection comprising a V shaped edge on said extension and an arm formed on said valve, and a V shaped groove and lugs on said arm, said V shaped groove coacting with the said V shaped edge on the extension of the valve casing.

1,392,295. **DOUBLE COMPOUND POWER-APPLYING MACHINE.** JOSEPH A. BOZUNG and PATRICK S. MCMAHON, Denver, Colo. Filed Jan. 13, 1920. Serial No. 351,202. 2 Claims. (Cl. 74—54.)

1. In a machine of the character described, a power shaft, two groups of ratchet wheels rigidly mounted on said shaft, a pair of levers having bifurcated ends, which ends are pivotally mounted on said shaft, each bifurcated end inclosing one group of ratchet wheels, pins extending through said bifurcated ends, pawls mounted on said pins and adapted to engage said ratchet wheels, the teeth of each wheel in each group being out of line with those of the next succeeding wheel, an oscillating lever, links connecting the same on each side of its fulcrum, with the free ends of the bifurcated lever, and means for oscillating said lever.

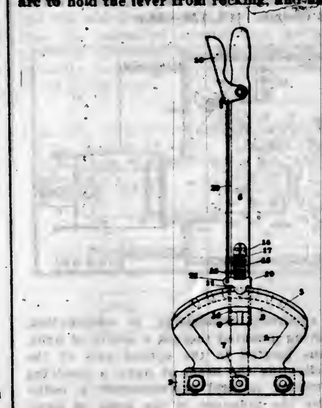
1,392,296. **COLLAR, CUFF, AND NECKBAND PRESS.** CHARLES L. BEALEY and CHARLES E. WARHAM, Cincinnati, Ohio, assignors to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 9, 1916. Serial No. 124,570. 22 Claims. (Cl. 68—9.)

1. In a press, a standard, a stationary pressing member carried thereby, an upwardly extending movable arm

mounted in said standard, a movable pressing member carried by said arm and adapted to cooperate with the stationary pressing member, means for moving the movable arm to bring the pressing member carried thereby into engagement with the stationary pressing member, a device connected to one of said members and adapted to engage over the other of said members and means for causing said device to exert a direct clamping action upon said members.

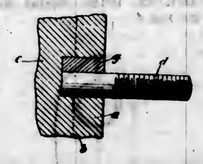
1,392,297. **AUTOMOBILE-JACK.** ARTHUR E. BURNSIDE, South Jacksonville, Fla. Filed Sept. 27, 1920. Serial No. 412,926. 4 Claims. (Cl. 254—86.)

1. An automobile jack mechanism for motor vehicles comprising a jack member permanently associated with each end of the front axle and rear axle housing, said jack members being pivotally mounted therewith to be capable of swinging movement in a vertical plane, latch members connected with said jack members whereby to maintain them normally elevated and in substantially horisontal position, a flexible member connected with each jack member and leading over suitable guides to a point adjacent the driver's seat, lever operated mechanism connected with said flexible members whereby to swing a selected jack member upwardly into engagement with said latch members, and means for releasing said lever mechanism to permit a selected jack member to swing downwardly so that when the vehicle is driven the jack member thus swung will be rocked into vertical position beneath the axle or axle housing, each jack member including a support, a base plate having a portion thereof hinged, and a brace for holding said hinged portion against movement, and means connected with said brace member whereby upon a pull upon the latter said brace will be released to permit said hinged portion to swing to permit the jack member to swing and allow the axle or axle housing to descend.



1,392,298. **COLLAR AND NECKTIE HOLDER.** FIAM B. BYRAS, New York, N. Y. Filed Mar. 19, 1920. Serial No. 367,100. 8 Claims. (Cl. 24—81.)

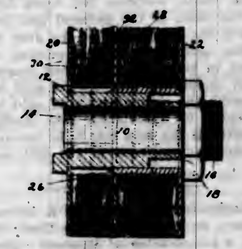
1. A collar and necktie fastener comprising a front curved bar thickened at its outer ends, and elastic arms projected from the inner face of said front bar and forming, with said thickened ends, clasps for the edges of a collar, said elastic arms being bent back at their ends opposite said thickened portions of the front curved bar, and the bends being sharpened to facilitate their engagement with the collar.



1,392,299. **LEVER.** OSCAR F. H. CARLSON, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Sept. 30, 1919. Serial No. 327,555. 6 Claims. (Cl. 74—39.)

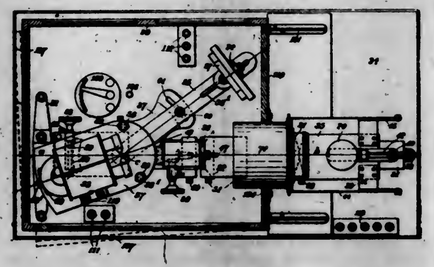
1. In a lever mechanism, the combination with a sector, of a lever pivotally mounted to be rocked lengthwise of the sector, means on the lever coacting with means on the arc to hold the lever from rocking, and means on the lever

operable to spring the lever laterally to release it from said holding means.



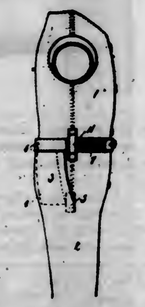
1,392,300. **METHOD OF SECURING ATTACHMENTS TO IRON OR STEEL PLATES HAVING HARDENED SURFACES.** WILLIAM LAWES COLE, Mile End, East London, England, assignor to Quasi-Arc Company, Limited, London, England. Filed May 28, 1918. Serial No. 237,135. 18 Claims. (Cl. 29—160.)

1. The method of securing attachment to surface hardened plating, consisting in making holes in the plating, welding studs in said holes, and securing the attachment to said studs.



12. The method of securing attachments to surface hardened plating consisting in making holes in the plating by fusing the metal, welding studs in said holes and securing the attachment to said studs.

1,392,301. **APPLYING DEVICE.** JOHN W. COSGROVE, Medford, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 27, 1919. Serial No. 273,257. 16 Claims. (Cl. 91—67.8.)



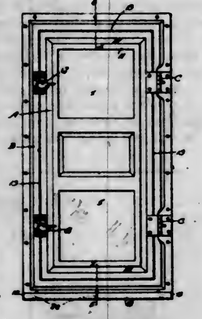
1. An applying device comprising relatively fine filaments of flexible material compressed into a rigid body at the applying surface.

1,392,302. TELEGRAPHY. KENWRICK CECIL COX, Norfolk Island, South Pacific. Filed July 17, 1917. Serial No. 181,462. 6 Claims. (Cl. 178—88.)

1. Telegraphic apparatus comprising, in combination, a common base having mounted thereon a source of light, a condenser, means located in the optical axis of the apparatus for subdividing the beam of light, a receiving galvanometer, a mirror on said galvanometer, a radio-sensitive cell under the influence of the beam of light, and means for adjusting angles of the galvanometer mirror and selenium cell with respect to the projected beam of light without altering the focus, size, definition or character of the projected image, the galvanometer and the cell being adjustable about a point concentric with the axis of movement of the galvanometer mirror substantially as described.

1,392,303. UNION-GARMENT. BESSIE CUSTER, Satanta, Kans. Filed Oct. 22, 1918. Serial No. 259,222. 1 Claim. (Cl. 2—144.)

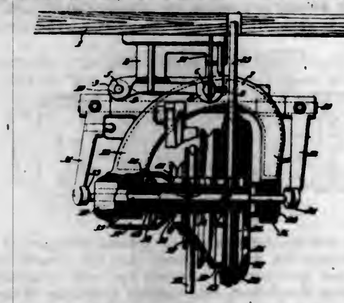
In a union garment, a drop flap provided with a pair of belt members at its upper ends adapted to extend around the front of the body of the wearer, said belt members provided with elastic sections, belt loops formed on the garment at the sides of the garment and in substantial alinement with the upper edge of the drop flap when in closed position, said belt members passing through and being retained in position by said belt loops and means for adjustably connecting the ends of said belt members together whereby the circumference of said belt members may be increased or diminished, said elastic inserts in the belt permittting the drop seat to be lowered as desired without disengaging the ends of the belt members from each other.



1,392,304. BORING-TOOL. ROBERT R. DAVIS, St. Louis, Mo., assignor to Robert R. Davis Tool Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 17, 1918. Serial No. 254,479. 14 Claims. (Cl. 77—56.)

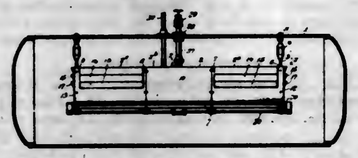
1. A boring-tool comprising, in combination, a body having a bore, a pair of oppositely-disposed cutters mounted for movement in the body at right angles to the bore, and means for moving the cutters outwardly relatively to the body, said means including a circumferentially threaded wedge-member located in the bore and disposed

wholly within the body for axial movement between the cutters, and a member fitting for rotary movement in the bore wholly to one side of the cutters, said member being held from axial movement and having threaded engagement with the wedge-member.



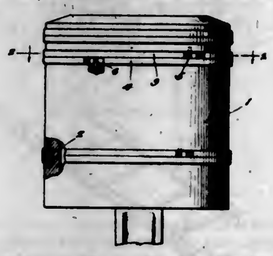
1,392,305. DOOR STRUCTURE FOR AIR-WASHERS AND THE LIKE. ARTHUR A. DAY, Buffalo, N. Y., assignor to Buffalo Forge Company, Buffalo, N. Y. Filed Sept. 18, 1919. Serial No. 324,651. 9 Claims. (Cl. 189—46.)

1. A door structure for air washer casings and analogouse apparatus, comprising a door and door frame made of pressed sheet metal, said door and frame having integral lateral flanges extending along the side and top edges of the door and door opening of the frame and interfitting to obstruct the escape of water, and means adjacent the lower end of the door for directing into the casing any water escaping through the joint between the door and the frame.



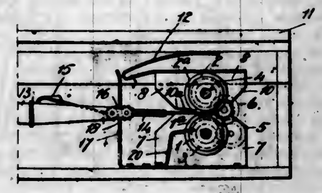
1,392,306. BEARING AND OILING MEANS THEREFOR. ALBERT H. DE VOS, Westfield, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Original application filed Apr. 1, 1918, Serial No. 225,935. Divided and this application filed Oct. 30, 1918. Serial No. 260,253. 7 Claims. (Cl. 64—31.)

1. In a power-transmitter, in combination, a hanger formed with an oil-well, driving and driven members supported by said hanger, running and thrust bearings for said members, and ports for conducting the oil to said bearings in series and lastly returning the surplus oil to the oil-well, and means for conducting the oil from



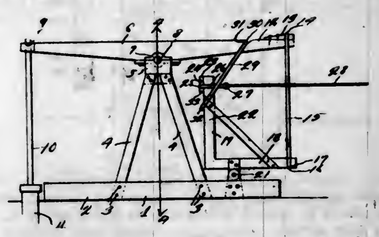
the well to the ports leading to one of the bearings whereby the oil passes through each of the various bearings of the transmitter and then returns to the supply in the well.

1,392,307. BOILER-CLEANER. HARVEY H. DICK, Lincoln, Ill. Filed Oct. 31, 1917. Serial No. 199,414. 2 Claims. (Cl. 122—389.)



1. A device of the class specified comprising a tank or receptacle constructed of a plurality of substantially V-shaped frames and side and end walls secured to the outer edges of said frames, said end walls and end portions of said side walls being provided with intake orifices at different levels, and a discharge pipe at the angle forming the bottom of said tank or receptacle, said discharge pipe being provided with intake orifices, and a funnel shaped intake member mounted on a pipe supported by said intake pipe, said funnel shaped member having a closed top and side intake orifices.

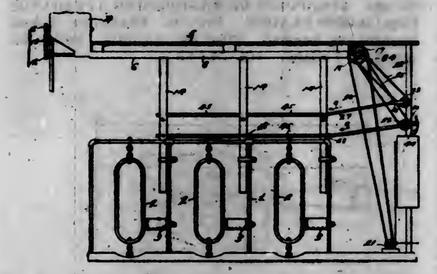
1,392,308. PISTON-RING ASSEMBLAGE. SILAS T. DOYLE and JOHN L. DICE, Caledonia, Ohio. Filed Nov. 19, 1920. Serial No. 425,176. 1 Claim. (Cl. 74—109.)



The combination with a solid piston head of a length greater than its diameter and having a circumferential groove formed directly therein and unobstructed from wall to wall, of studs projecting one from the upper side wall and the other from the lower side wall of the groove, the said studs being circumferentially relatively displaced, a relatively thin expanding leaf spring member seated within the groove between the bottom wall thereof and the said studs, and piston rings of greater thickness than the expanding member and having open portions receiving the studs, the outer edges of the piston rings normally projecting beyond the circumferential surface of the piston head.

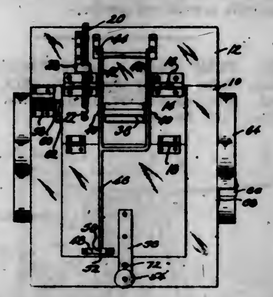
1,392,309. STROPPING OR SHARPENING APPARATUS FOR RAZOR-BLADES. STANLEY BEAUMONT EARLE, Hornchurch, England. Filed Feb. 14, 1917. Serial No. 148,577. 1 Claim. (Cl. 51—80.)

A device for stropping razor blades comprising in combination, a pair of rolls each of which is provided with an outwardly projecting spirally disposed stropping surface, the stropping surfaces between said rolls being respectively disposed between the stropping surfaces of the other roll, means mounting said rolls to permit them to be moved apart for insertion of a blade therebetween and pressed together to grip the blade with the stropping surfaces on each roll pressing the blade toward the space between the stropping surfaces of the other roll, gearing connecting said rolls and permitting them to be moved apart and positively maintained in the same angular relation when brought together, a box within which said rolls and their mountings are inclosed, and a resilient device adapted upon the lid of said box being closed to urge said rolls toward one another.



1,392,310. PUMP-JACK. JAMES NEWTON EDWARDS, Skiatook, Okla. Filed June 17, 1919, Serial No. 304,764. Renewed Aug. 17, 1921. Serial No. 493,094. 2 Claims. (Cl. 74—5.)

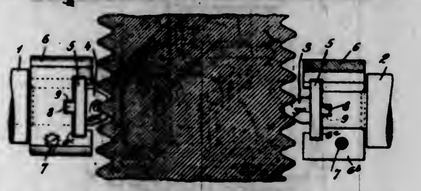
1. A pump jack comprising a base member, a standard extending upwardly from said base member, a walking beam pivotally mounted in the upper end of said standard, one end of said walking beam having means whereby the same may be attached to a polishing rod, the other end of said walking beam having a link connection with the end of one arm of a right angle lever, said lever being pivotally mounted on the base, means connected to the end of the other arm of the pivoted right angle lever, whereby said lever may be oscillated and a rocking motion imparted to the walking beam and a link loop pivoted to one end of the walking beam and having its lower end arching the upwardly extending arm of the angle lever, in which loop said upwardly extending arm moves and a



limiting stop carried by the upper end of the upwardly extending arm and adapted to be engaged by the loop when power is removed from the oscillating pivoted right angle lever.

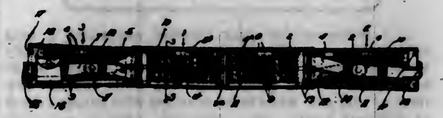
1,392,311. TIME-CONTROLLED FEEDING DEVICE. OSCAR EGELAND, McVille, N. D. Filed Jan. 18, 1921. Serial No. 438,110. 3 Claims. (Cl. 161—10.)

1. A time controlled feeding device comprising a horizontally disposed conveyer pipe, a conveyer in said pipe, downwardly extending discharge pipes carried by the conveyer pipe, one end of said conveyer pipe in communication with a feed bin, means located in the discharge pipes for allowing feed to be discharged from the discharge pipe and for preventing further discharge after the feed has been discharged and means controlled by a clock for discharging the feed from the discharge pipes and working the conveyer in the conveyer pipe.



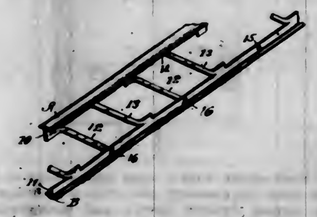
1,392,312. PHOTOPRINTING DEVICE. HENRY G. EISENHAND, Denver, Colo. Filed Jan. 22, 1920. Serial No. 353,197. 2 Claims. (Cl. 95—73.)

1. A photo printing device comprising a frame, a cover hinged thereto, a stamping member set in said cover, and means to operate said stamp as the cover is moved to closed position, comprising a rigid lever mounted on the frame having sliding connection with the cover and adapted to engage a portion of the stamp to depress the latter.



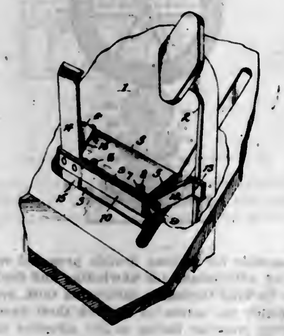
1,329,313. SCREW-THREAD GAGE. GAVIN S. FALLOW, Wethersfield, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 16, 1918. Serial No. 222,869. 11 Claims. (Cl. 33—167.)

1. A thread gage comprising in combination, two measuring devices adapted to be placed in opposed positions on the respective opposed plungers of a measuring machine, which plungers have portions adjacent the ends that are of uniform cross section throughout, the said devices being provided respectively with male and female thread engaging points and being constructed to be movable transversely of the plunger axes, and holders adapted to engage the sides of the plungers for holding the respective measuring devices in place on the plungers while permitting them to automatically adjust themselves transversely.



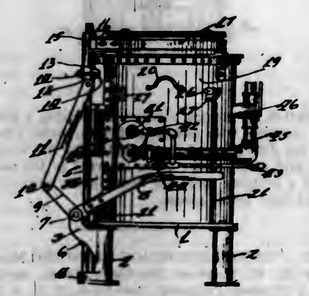
9. The combination of the two opposed plungers of a measuring machine, which plungers have flat parallel end surfaces and have portions adjacent the ends of uniform cross section throughout, two opposed measuring devices provided at their outer sides with flat surfaces in engagement respectively with the corresponding flat surfaces of the plungers and provided respectively at their inner sides with male and female thread-engaging points adapted to fit each other so that a zero point can be established by moving the plungers so as to bring the said points together, and holders engaging the sides of the plungers for holding the respective measuring devices in place while permitting the said devices to independently adjust themselves in any direction perpendicular to the plunger axes or angularly about any axis within a limited range parallel to or coinciding with the plunger axes.

1,392,314. GARMENT-SUPPORTER. JACOB N. FAUST and CLYDE A. FAUST, Chicago, Ill. Filed June 7, 1920. Serial No. 386,936. 8 Claims. (Cl. 241—8.)



1. A supporting device for trousers or similar garments, comprising a back section and a pair of end sections, and flexible connections between each end section and the back section, said connections being adjustable lengthwise to vary the distance between the end and back sections and including a pair of straps extending lengthwise and forwardly for adjustable connection to each other at the front of the body.

1,392,315. METAL-REINFORCING FRAME FOR CONCRETE STRUCTURES. WILLIAM E. FICKLEN, Norfolk, Va. Filed Jan. 24, 1914, Serial No. 814,051. Renewed Jan. 8, 1920. Serial No. 350,244. 3 Claims. (Cl. 72—113.)

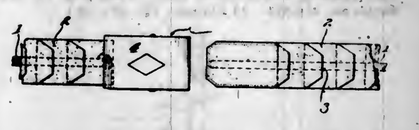


1. A reinforcement for concrete structures, comprising a pair of T-bars arranged with their webs toward each other, but spaced apart, stiffening members, cut from the edge of each of said webs and extending straight across to the web of the other, there being holes in each of said webs, and the ends of said stiffening members being split, passed into said holes, and secured in place.

1,392,316. TRANSMISSION-CONTROL DEVICE FOR MOTOR-VEHICLES. STANLEY W. FINCH, Washington, D. C., and EDWARD M. KENNARD, Clarendon, Va. Filed Nov. 5, 1920. Serial No. 421,946. 3 Claims. (Cl. 74—81.)

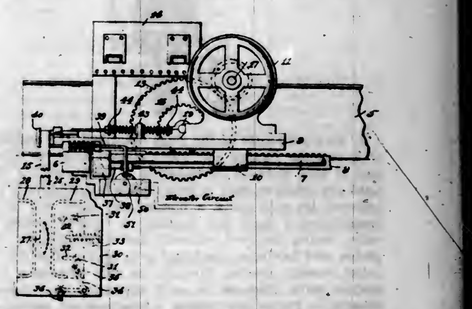
1. In combination with the transmission positioning lever of an automobile; a base adapted to be secured to a fixed portion to one side of the lever; a ball shaped frame pivotally mounted on the base; an arm extending outwardly from that end of the frame adjacent the lever; a finger extending from the arm into the path of movement of the lever; a spring acting to rock the frame upwardly; and a foot lever secured to the frame for moving the same in opposition to the spring.

1,392,317. BRASS-FURNACE. ALFRED FISHER, Chicago, Ill. Filed Feb. 24, 1920. Serial No. 360,678. 16 Claims. (Cl. 263—11.)



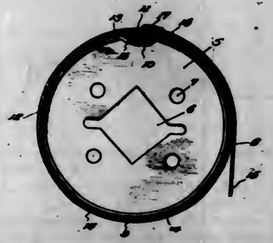
1. A furnace of the class described having a fire-pot provided with a plurality of horizontal over-hanging shoulders, and peripherally and downwardly directed blast-burners opening obliquely through the side of the furnace adapted to direct reducing flames centrifugally around the furnace crucible, said flames adapted to be choked by said overhanging shoulders to cause an even heating and reduction of the metal in said crucible.

1,392,318. WRENCH. CHARLES FREDERICK FLETCHER, Farmington, W. Va. Filed May 26, 1921. Serial No. 472,643. 2 Claims. (Cl. 81—118.)



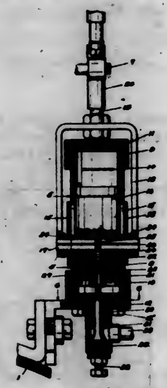
1. In a wrench, the combination with a body having a stationary wrench jaw at one end of a movable jaw provided with a disk, said disk being pivotally mounted in a recess of the body, a vertically disposed screw disposed within the recesses and having its ends provided with rectangular shaped portions disposed in vertically alined rectangular shaped recesses, a thumb nut threaded on said vertically disposed screw, a radially disposed shoulder carried by the disk of the movable jaw with which shoulder the thumb screw engages, a coiled spring disposed within the recess of the body, said coiled spring having one of its ends disposed in an arcuate recess in the disk, the other end of said screw engaging the lower rectangular shaped portion of the vertically disposed feed screw, said feed screw being maintained in engagement with the rectangular shaped recesses by means of the coiled spring and the disk.

1,392,319. BELT. JULIUS E. FRANK, St. Louis, Mo. Filed Apr. 19, 1920. Serial No. 374,862. 6 Claims. (Cl. 241—8.)



1. A belt comprising a cincture and a plurality of interlocking links strung thereon so as to cover said cincture and so as themselves to be relieved of tensile and shearing stresses.

1,392,320. ELEVATOR-DOOR-OPERATING MECHANISM. CLAUD L. FULGHUM, Quincy, Ill. Filed Sept. 11, 1920. Serial No. 409,687. 9 Claims. (Cl. 187—52.)



1. An elevator-door operator comprising a platform movable on the top of the elevator-car, a power mechanism for moving said platform back and forth mounted on the platform, a door-arm pivoted on the platform and constructed to engage the door to be operated, means for controlling said pwer mechanism from within the car, a buffer mechanism for stopping the movement of the door, and means operated by the door-arm for stopping the power mechanism.

1,392,321. STOCK-ROLL. WILLIAM F. GAMMETER, Cadis, Ohio. Filed Apr. 6, 1920. Serial No. 371,584. 1 Claim. (Cl. 242—68.)

A stock roll comprising a hub structure, a split cylindrical inner tube carried thereby a split tube telescoping over the inner tube and having the joint and split thereof spaced radially from the joint of the first tube, the inner tube being provided exteriorly with a longitudinal groove registering with the split in the outer tube and the edges of the split in the outer tube being out of contact with and projecting over the walls of the groove in the inner tube, and means for securing the tubes permanently together, said means being located adjacent the splits in the respective tubes.

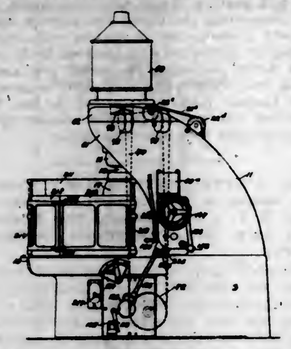
1,392,322. ENGINE OR MOTOR. GEORGE W. GILL, Battle Creek, Mich., assignor of one-fourth to William L. Carroll, one-fourth to Bernie W. Ward, and one-fourth to Carl Sanberg, Battle Creek, Mich. Filed Aug. 11, 1919. Serial No. 316,821. 11 Claims. (Cl. 121—2.)

1. In a structure of the class described, the combination of a cylinder having side ports spaced from its ends, one end of said cylinder constituting a work and the other a dash pot chamber, said cylinder being longitudinally slotted between its said ports, a piston, the outer end of which constitutes a dash pot member, a tubular piston relief valve casing disposed centrally and longitudinally of said piston and having a discharge port at its outer end and a relief passage opening through the side thereof, a plunger piston valve disposed in said casing to seat outwardly therein, a piston pin having a longitudinal passage communicating with the discharge port of said piston valve casing, an inlet valve casing communicating with the inner end of said cylinder, a plunger inlet valve projecting into said cylinder to be engaged by said piston valve on the return stroke of said piston whereby said inlet valve is unseated, a sleeve slidable on said cylinder, slides disposed within said sleeve coacting with said slots of said cylinder, and a pitman yoke engaging said piston pin.

1,392,323. MACHINE FOR MAKING FLEXIBLE WATERPROOF ROOFING. SOLOMON H. GOLDBERG, Chicago, Ill., assignor to Charles S. Bird, Walpole, Mass. Filed May 23, 1914. Serial No. 840,403. 1 Claim. (Cl. 91—16.)

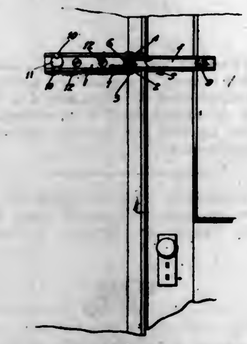
In a machine for making flexible prepared roofing, the combination with means for unwinding and feeding a roll of flexible backing through a saturating tank, presser rolls through which the saturated backing sheet passes, means for applying granular facing to the adhesive face of the sheet, and means for applying a printed design on the granular facing, comprising a printer roll, a pressure roll cooperating therewith, a plurality of rolls for feeding regulated quantities of liquid to the printer roll and a liquid supply tank in which the feeding rolls ride.

1,392,324. SWITCH FOR ELECTRIC CIRCUITS. ALEXANDER GRAF, Berlin-Hermsdorf, Germany. Filed Nov. 28, 1919. Serial No. 341,227. 4 Claims. (Cl. 200—155.)



1. A switch for electric circuits comprising a base of insulating material with channels therein, metal pieces with holes in the directions of their lengths for the wires of the circuits, said metal pieces being inserted in the said channels, and a bridging piece for establishing connections between the said metal pieces.

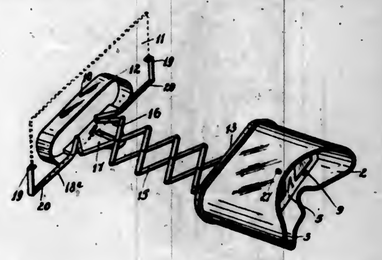
1,392,325. VERTICAL-SURFACE-GRINDING MACHINE. BENOT M. W. HANSON, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed July 31, 1918. Serial No. 247,633. 15 Claims. (Cl. 51—67.)



1. In a grinding machine, the combination of a horizontally movable work supporting table, a wheel head positioned above the table and capable of vertical movement, a grinding wheel and a spindle therefor rotatably mounted in the head, driving means for said wheel comprising a motor mounted in alinement with the axis of said wheel, a shaft connected to said motor having a slidable connection with said wheel spindle whereby the head with the spindle and

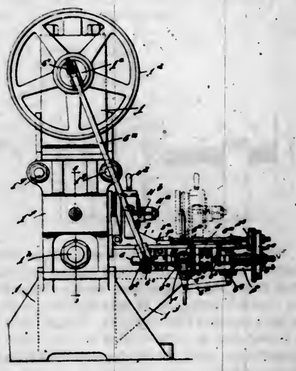
wheel may be moved vertically independently of the motor and its shaft while the wheel engages the work and with-

out disturbing the power connection, and means in said head for resiliently thrusting said wheel and spindle upward independently of said motor and motor-shaft.



1,392,326. BURGLAR-ALARM. JAMES F. HADWICK, Owensboro, Ky. Filed Oct. 1, 1920. Serial No. 413,978. 1 Claim. (Cl. 116—67.)

A burglar alarm comprising a channeled plate provided with spaced ears at one end and having overhanging lips at the opposite end to retain an explosive thereon, said plate being adapted to be secured upon a fixed support, a second channeled plate pivoted at one end between said ears and adapted to extend over a relatively movable object, a spring coiled about the pivotal connection between the two members and having its opposite ends secured to the respectively adjacent plates whereby to swing the second-mentioned plate forcibly onto the first-mentioned plate, and a firing-pin on the free end of the second-mentioned plate, one of the ears on the first-mentioned plate being extended beyond the pivot toward the second-mentioned plate and provided with an inwardly extending projection on its inner side to yieldably engage over the edge of the second-mentioned plate and normally hold the plates in extended relation against the action of the spring.

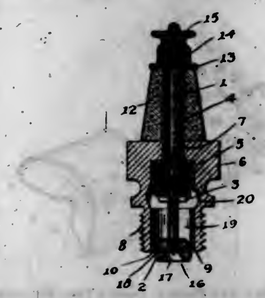


1,392,327. FOLDING STEREOSCOPE. JOHN MCDONALD HATTERSLEY, Birmingham, England. Filed Oct. 20, 1920. Serial No. 418,296. 5 Claims. (Cl. 88—29.)

1. A folding stereoscope comprising a rigid hood member, a flange on the forward end of said hood member, a lens carrying member within said hood having a pair of lenses, a rigid picture carrying member corresponding in shape with the hood member, a flange on the rear end of said picture carrying member adapted to fit around the flange

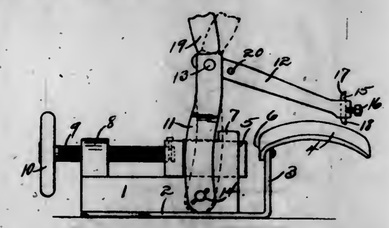
on the hood member and form a closure therefor, end extensible connecting means secured to said hood and to said picture carrying member whereby the picture carrying member can be extended for use.

1,392,328. SWAGING AND FORGING PRESS. LEWIS W. HEATH and HUBERT D. COOK, Hastings, Mich., assignors to Consolidated Press Company, Hastings, Mich., a Corporation of Michigan. Filed Aug. 15, 1918. Serial No. 249,937. 13 Claims. (Cl. 78—98.)



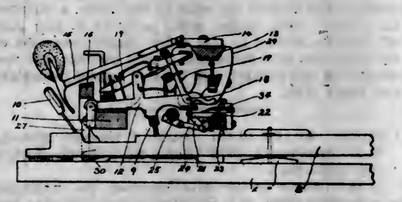
1. In a forging and swaging press the combination of a main frame having openings in its sides, recessed castings connected to the frame opposite said openings, spacing members interposed between the opposite castings, tie bolts extending through said spacing members and said castings and binding the same to the frame, a reciprocating plunger, slide guides, slides mounted in said guides, die members carried by said slides, toggles connected with the slides and with abutments in said castings, and means connecting said plunger with the said toggles to straighten and break them.

1,392,329. SPARK-PLUG. DAVID S. HENNEY, Montclair, N. J. Filed Oct. 4, 1919. Serial No. 328,402. 3 Claims. (Cl. 123—169.)



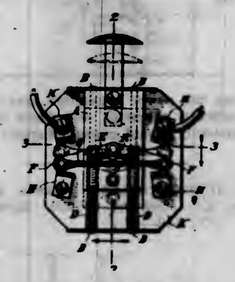
1. In a device of the class described, the combination of a metallic shell, of a metallic spindle extending therethrough and provided at its lower end with an electrode, which forms a spark gap with the lower edge of the shell, a covering of insulating material comprising a strip of mica wrapped around the spindle, said covering extending through the shell into the interior thereof, a shoulder pro-

vided upon the spindle upon which said covering rests, a bushing of insulating material positioned between said shoulder and the inner surface of the upper wall of said



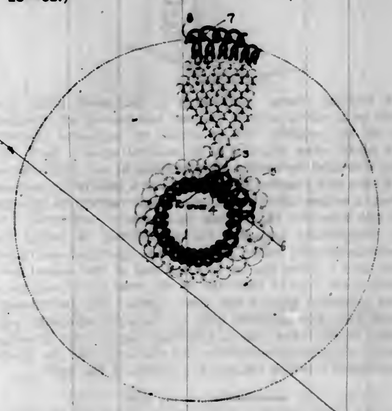
shell, and an insulator formed of plastic material molded about the insulating covering exteriorly of the shell and resting upon the inner wall of the shell.

1,392,330. MACHINE FOR CUTTING TIRE-CASING TREADS AND REMOVING BEADS. CASSELL D. HIBBS, Fort Worth, Tex. Filed June 2, 1919, Serial No. 301,151. Renewed Mar. 5, 1921. Serial No. 449,743. 5 Claims. (Cl. 164—45.)



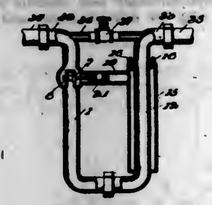
1. A tool for operating on tire casings comprising a frame having a channel therein, a casing support, a flange projecting from said frame and terminating with an upstanding member attached ta said support, a plunger operating in said channel for clamping casings on said support, a blade holder and a blade carried thereby, and a swinging yoke mounted on said frame for adjusting and directing said blade holder.

1,392,331. PIANISSIMO DEVICE FOR GRAND PIANOS. JOHN A. HUSSEY, De Kalb, Ill. Filed Sept. 27, 1919. Serial No. 328,046. 3 Claims. (Cl. 84—223.)



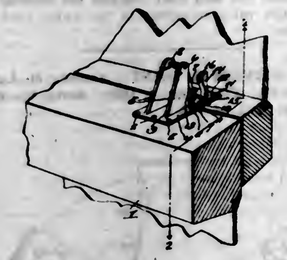
1. In combination with the keys and hammer action of a grand piano, said hammer action including a rest rail, an action frame, and an action support, a pianissimo device comprising an operating rod for raising the hammer rest rail, a depending arm carried by the rest rail, a rock shaft journaled in the action frame, a rocker arm carried by said rock shaft, a thrust rod for each key, means for movably supporting the thrust rod between the key and the support normally out of contact with both and for connecting the thrust rod with the rock shaft, and a lever and link device connecting the rocker arm and the said depending arm, whereby the rock shaft is operated whenever the hammer rest rail is raised, so tha. the thrust rod is moved into vertical position between the key and its action support to support the latter.

1,392,332. ELECTRIC SWITCH. LEE P. HYNES, Albany, N. Y., assignor to Consolidated Car-Heating Company, Albany, N. Y., a Corporation of West Virginia. Filed Oct. 7, 1919. Serial No. 329,076. 8 Claims. (Cl. 200—76.)



1. An electric switch comprising a base, a reciprocating member mounted thereon, a contact arm pivoted on said member, a stationary post on which said arm has a sliding bearing as its pivoted point is reciprocated, and an actuating spring for said arm movable therewith across the pivoted axis thereof.

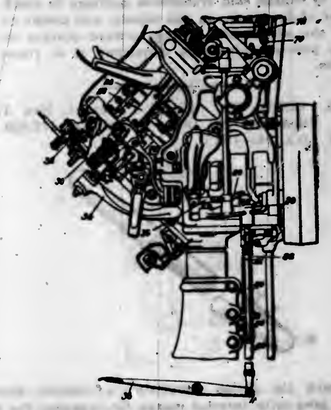
1,392,333. FLOOR-MAT AND METHOD OF MAKING SAME. EDMOND JACKSON, Newport News, Va. Filed July 3, 1919. Serial No. 308,371. 2 Claims. (Cl. 15—62.)



1. A mat formed from a single length of rope and comprising an annular nucleus about which nucleus a portion of the rope is looped in a series of helices, another portion of the rope being looped in a spiral and forming other helices interlooping with the first mentioned helices to produce the body of the mat.

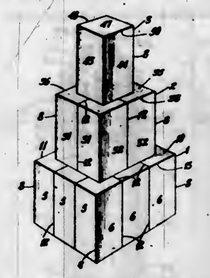
1,392,334. AUTOMATIC REGULATING-VALVE. ARTHUR B. JOHNSON, U. S. Navy. Filed May 20, 1919. Serial No. 298,447. 8 Claims. (Cl. 236—42.)

1. In a regulating valve, a fluid inflow pipe, a fluid outflow pipe, a jacket upon one of said pipes for containing a heat expansible fluid, a branch establishing rigid connection between and communication with the other pipe and the jacket, a valve in the last-mentioned pipe for controlling the flow through the pipes, a fluid pressure means in the said branch for controlling the valve and actuated through the expansion of the fluid in the said jacket, and a valved vent in the said means.



1,392,335. WINDOW-LOCK. ROLAND E. JOHNSON, Medford, Mass. Filed Dec. 18, 1918. Serial No. 267,274. 1 Claim. (Cl. 292—128.)

In a window sash latch the combination with a stationary hook on the lower rail of the upper sash, of a spring tensioned latch hook pivotally supported on the upper rail of the lower sash, said spring tensioned latch hook being inclined downwardly and overlying the lower rail of the upper sash at an acute angle for engagement with said stationary hook when the two sashes are closed, said latch hook having a lateral arm, and a flexible lug carried by the lower rail of the upper sash and adapted to be engaged by said lateral arm to support the latch and hold its hook out of engagement with the stationary hook, said lug extending into the path of movement of said arm and adapted to be flexed back thereby on opening or closing the window, and to spring back into said path to hold the latch out of operative position.



1,392,336. MACHINE FOR SHAPING UPPERS OVER LASTS. BERNHARDT JORGENSEN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 25, 1919. Seial No. 319,617. 27 Claims. (Cl. 12—4.)

1. In a machine of the class described constructed to perform its cycle of operations in successive stages after each of which the machine comes automatically to rest, the combination with starting means movable to initiate the operation of the machine at each stage of the cycle, of means for engaging the marginal edge of the sole of the shoe to position it relatively to the last in one stage of the cycle, and means operated by a subsequent movement

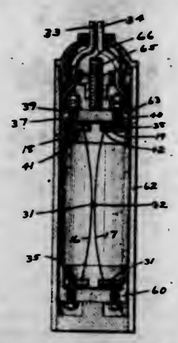
of said starting means to cause said sole-engaging means to be withdrawn from operative position independently of the power operation of the machine.

1,392,337. COLLAPSIBLE-CARTON DISPLAY. GORDON KAY, New York, N. Y., assignor to Carl G. Percy, Yonkers, N. Y. Filed Dec. 23, 1920. Serial No. 432,699. 13 Claims. (Cl. 40—126.)

1. A collapsible display device in the form of a stepped pyramid, comprising a plurality of sections constituting the respective steps of the pyramid and each adapted to fold flat, and means for attaching each of said sections to the top of the section immediately beneath it, said attaching means permitting collapse of the assembled sections.

1,392,338. AUTOMOBILE-LIFTER. LUKE L. KELLOGG, Fredonia, N. Y. Filed Nov. 4, 1919. Serial No. 335,573. 2 Claims. (Cl. 254—88.)

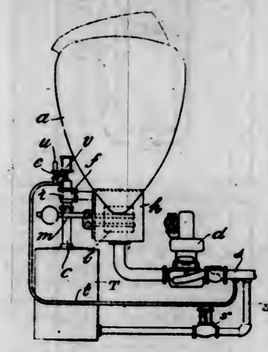
1. An automobile lifter comprising side portions having ends which are inclined in the direction of approach thereto, cradles connecting said ends and providing side slots at the bottom thereof, and transverse frame members, supporting wheels arranged in pairs, and upon the peripheries of which side portions of the frame rest, said



wheels extending into said slots, vertically adjustable bankers carried by said side portions, said wheels being designed to engage said transverse members to check the movement of the frame on the wheels, and means at the front of the wheels and at the forward portion of the frame to prevent retrograde movement of te frame on the wheels.

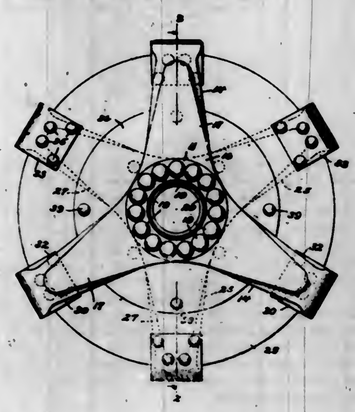
1,392,339. CORD-TIP. JAMES P. KELLY, New York, N. Y. Filed May 25, 1921. Serial No. 472,429. 5 Claims. (Cl. 24—143.)

5. A cord tip device comprising a member having clamping jaws with interior means for engaging the end of a cord and preventing said jaws from slipping from the end of the cord, and a sleeve surrounding said jaws but slidable with respect thereto, for holding said jaws in engagement with the end of the cord.



1,392,340. THERMOSTAT. EDWIN B. LANE, West Hoboken, N. J. Original application filed Nov. 4, 1916, Serial No. 129,605. Divided and this application filed Jan. 28, 1918. Serial No. 214,078. 8 Claims. (Cl. 200—137.)

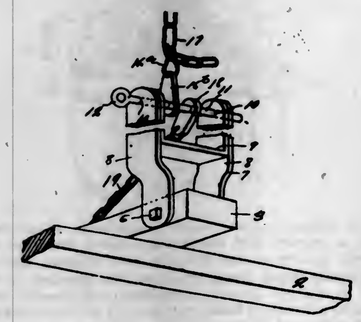
8. A thermostat combining a pair of leaf-springs bowed toward each other, contacts riveted to the springs and normally abutting one another to complete an electric circuit, means at either end of the springs for insulating them from each other and from the casing of the apparatus and for limiting the movement of the springs away from each other, the casing being responsive to temperature changes for permitting movement of one of said retaining means to effect making and breaking of the circuit at predetermined temperatures, and means for adjusting the other retaining means toward and away from the first retaining means to vary the standard of temperature maintained.



1,392,341. FEED-WATER SYSTEM FOR STEAMSHIPS. CHARLES RUSSELL LANG, Glasgow, Scotland, assignor to G. & J. Weir, Limited, Glasgow, Scotland. Filed July 17, 1919. Serial No. 311,587. 4 Claims. (Cl. 103—86.)

1. In a feed water system employing a feed tank for steam-ships the combination with a condenser, a main feed conduit, a water-extraction pump for withdrawing the water of condensation from the said condenser and delivering it into the said main feed conduit, a feed-tank, a by-pass connecting the said main feed conduit with the feed tank, a supplementary feed conduit connecting the said feed tank with the said condenser and an automatic

valve on the said supplementary feed conduit, of a collecting chamber for receiving the water of condensation from the condenser, a float in the said chamber, and means whereby the said float controls the opening of the said automatic valve according to the water level in the said chamber.



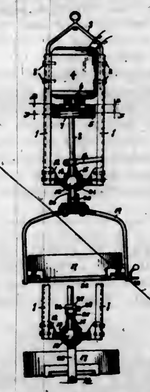
1,392,342. UNIVERSAL JOINT. ARTHUR M. LAYCOCK, Fortyfort, Pa. Filed Sept. 4, 1920. Serial No. 408,173. 10 Claims. (Cl. 64—96.)

10. An attachment adapted for use as a universal joint connection between alined driving and driven shafts comprising a pair of similar spring metal disks with similar radiating arms super-posed and fitting each other and having corresponding central openings adapting them to be secured to the end of one shaft the outer ends of the arms being bent forwardly away from the shaft end and inwardly in U form, a spring metal plate having a central opening transversely in advance of said disks the inwardly bent ends of the superposed section of the arm being brought to position bearing against said plate on opposite sides, means for securing said ends to said plate, a similar

pair of disks and radiating arms similarly curved and secured to said plate at points in staggered relation to said first mentioned arms and adapted to be secured at its center to the other shaft, the outer layer of each arm at the U bend being spaced slightly from the inner layer to permit the spring action without binding.

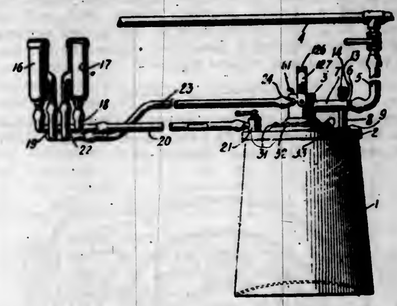
1,392,343. LOAD-SECURING MEANS FOR FREIGHT-CARS. ORSON M. LEISHMAN, Baker, Oreg. Filed Sept. 30, 1920. Serial No. 413,840. 1 Claim. (Cl. 280—79.)

The combination with a flat car, of a load holding device therefor, said load holding device comprising pivoted brackets pivoted to opposite sides of the car, said pivoted brackets being pivotally connected to the car at their lower ends, removable pins carried by the pivoted brackets adjacent their free ends, stay chains detachably connected to the pins and extending inwardly and downwardly and having their free ends detachably connected to the car flooring, and a load holding chain having one of its ends detachably connected to one of the pins and passing over the load and having its other end detachably connected to the removable pin of the pivoted bracket at the other side of the car.



1,392,344. ENVELOP. PAUL JOSEPH LEMMER, Groton, Conn. Filed Apr. 29, 1920, Serial No. 377,560. Renewed Mar. 22, 1921. Serial No. 454,415. 1 Claim. (Cl. 229—86.)

The combination with an envelop having a flap, of an opener for said envelop, said opener comprising a strip of tape adhesively secured to the inner face of the envelop, transversely disposed members extending across the tape and spaced from each other, said transversely disposed members being adhesively secured to the inner face of the flap and forming means whereby during a flap severing operation an intermittent jerking operation will be imparted to the tape for insuring a quick severance.



1,392,345. POWER-AGITATOR. ROBERT G. LOWE, Clawson, Mich. Filed Aug. 5, 1920. Serial No. 401,432. 4 Claims. (Cl. 83—60.)

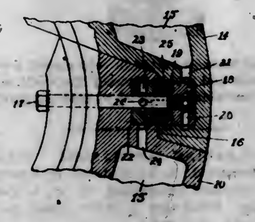
1. In combination, a pair of frame bars and means to suspend said bars, an electric motor mounted between the bars and having a vertical shaft, a cross bar below the motor having a spherical socket for a ball, a supporting

shaft and a ball thereon seated in said socket, a connection between the shaft and motor whereby the shaft is caused to gyrate, and a container attached to said supporting shaft.

1,392,346. PULSATING MECHANISM. HERBERT MCCORNACK, Bloomfield, N. J., assignor to Empire Cream Separator Company, Bloomfield, N. J., a Corporation of New Jersey. Filed July 2, 1917. Serial No. 178,078. 43 Claims. (Cl. 31—101.)

1. In vacuum operated pulsator mechanism, the combination of a valve for controlling the action of the vacuum and means operated by an unbalanced pressure condition produced by the vacuum for actuating said valve, said means having an initial resistance to movement greater than its resistance to continue movement after such initial resistance has been overcome.

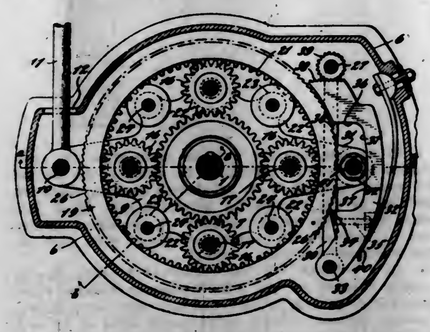
4. In a pulsator, the combination of a casing having a motor chamber therein, a fluid pressure operated valve actuating diaphragm in said chamber, said casing having a second chamber therein, valve means actuated by said diaphragm for controlling the connection of said second chamber with a source of vacuum and with the atmosphere respectively, and a fluid pressure connection between said second chamber and said motor chamber.



7. In fluid operated pulsator mechanism, the combination of valve means for controlling the operating fluid and means for moving said valve means including a flexible resilient metal diaphragm having an initial conformation convex to the direction of application of the operating pressure.

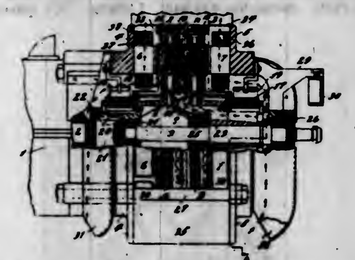
15. In a pulsator, the combination of a pair of oppositely facing valve seats, a valve stem, a puppet valve

slidingly mounted on said valve stem and adapted to seat on one of said seats, a spring carried by said valve stem and engaging said valve, a second puppet valve adapted to seat on the second of said valve seats, and an abutment on said valve stem for engaging said second valve and lifting it from its seat.



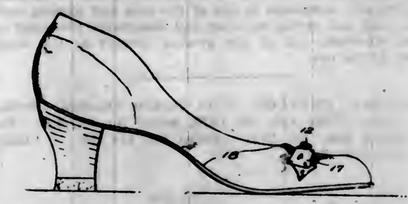
40. A milking machine pulsator including a casing haing a motor chamber therein, a motor element in said chamber, a pulsation chamber formed in said casing, said casing having a port opening into said pulsation chamber, a puppet valve for closing said port, and a reciprocating valve atem for actuating said valve, said stem extending into the motor chamber and adapted to be reciprocated by engagement with said motor element.

1,392,347. COLLAPSIBLE CORE. THOMAS MIDGLEY, Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Jan. 6, 1920. Serial No. 349,806. 6 Claims. (Cl. 18—45.)



4. In a collapsible core, a pair of adjacent hollow sections, and a member passing between said sections through their abutting surfaces to fasten said sections together and providing a passageway connecting the hollow interiors of said sections with each other.

1,392,348. POWER-TRANSMISSION DEVICE. WILLIAM D. MOUNT, Lynchburg, Va. Filed Sept. 4, 1920. Serial No. 408,257. 11 Claims. (Cl. 74—34.)



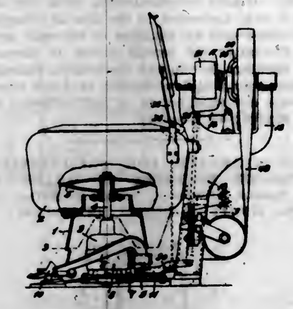
1. In a power transmission device, a driven shaft, a gear secured to the shaft for driving the same, a rocking member pivoted to the shaft, a plurality of pinions carried by said member and meshing with said gear, a second gear meshing with said pinions and rotatable about the shaft as an axis, means for oscillating said member, a spring pressed pawl adapted when effective for preventing movement of the second gear in one direction, means carried by the member for engaging with said pawl to render it ineffective, and means for selectively adjusting the position of the pawl to vary the portion of each oscillatory movement of the member during which the means carried by the member will hold the pawl ineffective upon the gear.

1,392,349. ELECTROMAGNETIC TRANSMISSION. ALFONS H. NEULAND, San Francisco, Calif., assignor to Neuland Electrical Company, Inc., San Francisco, Calif., a Corporation of New York. Filed Dec. 17, 1917. Serial No. 207,509. 17 Claims. (Cl. 172—239.)

1. An electro-magnetic power transmission device comprising a primary field element, a primary armature inductively related to the primary field element, one of said primary parts being rotatable and arranged to be driven by a prime mover, a secondary field element, and a secondary armature inductively related to the secondary field element and to the primary armature, one of said secondary parts being rotatable and arranged to be connected to a mechanical load, and the windings of the two field elements being connected in multiple and the two armatures being connected in series with each other and in series with the multiply connected fields.

1,392,350. VENTILATOR FOR SHOES. DANIEL M. O'BRIEN, Sayre, Pa. Filed May 1, 1919. Serial No. 293,909. 1 Claim. (Cl. 36—3.)

The combination with a shoe, of a plate bearing against the outer surface of the shoe near the toe portion thereof and provided with spaced transverse slots and an intermediate opening, a ribbon threaded through the slots and over the opening to form a bow, an exteriorly threaded stud extending through the opening in the plate and piercing the ribbon, said stud being provided throughout its length with an aperture communicating with the interior of the shoe and having an enlarged head bearing against the inner surface of said shoe, and an internally threaded cap engaging the exterior threads of the stud and provided with an aperture registering with the aperture in the stud, said cap bearing against the ribbon and serving to clamp the bow, plate and stud in position on the shoe.



1,392,351. CARD GAME. RAY F. PARKS, Melrose, Iowa; W. E. Parks administrator of said Ray F. Parks, deceased. Filed Aug. 13, 1919. Serial No. 317,335. 3 Claims. (Cl. 46—25.)

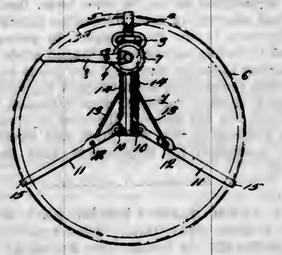
1. A card game of the character specified comprising a pack of which the cards are divided into: a main set, subdivided into separate card groups one of which contains the objective or "Kaiser" card, while the other groups are distinguishably representative of events leading up to the attainment of such objective, said groups being playable in succession according to the natural sequence of the events indicated; a set of delay cards for interrupting the play of the main set, such delay cards being distinguishably representative of difficulties or

incidents attendant upon the events indicated by the cards of the main set and having a retarding playing value with reference to the unit of such set; and a set of release cards playable in succession to the cards of the delay set, said release cards being distinguishably representative of events counteractive to the delay incidents and having a playing value counteracting or neutralizing the reverse value or effect of the delay unit.

1,392,352. CONTROL FOR EXTRACTORS. SYDNEY PRESTWICH, Cincinnati, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 8, 1917. Serial No. 147,446. 6 Claims. (Cl. 192—116.)

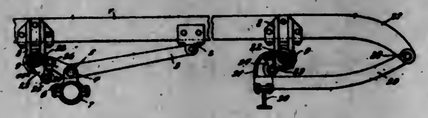
2. An extractor, comprising a rotatable basket, power driving means therefor, a guard cover for said basket, a lock therefor, a basket brake, brake operating means, and operating connections between said brake operating means and lock and between said brake operating means and power driving means, whereby actuation of said brake controls both said cover and the application of power to the basket.

1,392,353. EXTENSION-RAIL. THOMAS QUINN, Huntington, W. Va. Filed Apr. 12, 1920. Serial No. 373,246. 6 Claims. (Cl. 238—10.)



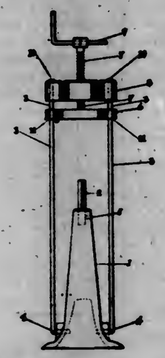
4. In a device of the character described, the combination of an extension rail formed to slidably fit over a track rail, and a bumper carried by the extension rail.

1,392,354. VALVE. MATTHEW S. RILEY, Ocean Park, Calif. Filed July 3, 1920. Serial No. 393,809. 1 Claim. (Cl. 251—139.)



A device for the purpose set forth comprising a spindle having its lower portion enlarged and exteriorly threaded, an annular head at the lower end of said spindle, a flexible washer fitted about the lower portion of the spindle and against the head thereof, a rigid washer fitted loosely upon the spindle and resting upon the flexible washer, a polygonal nut engaged upon the threaded portion of the spindle whereby the washers may be clamped between said nut and the head of the spindle, and a smooth faced wear plate fitted loosely about the spindle and resting upon the nut, said wear plate being adapted to engage loosely against the lower end of a rotatable valve shank and said spindle being adapted to loosely fit within a central longitudinal socket in the end of said valve shank whereby the shank may rotate about or move longitudinally on the said spindle without imparting motion to the spindle.

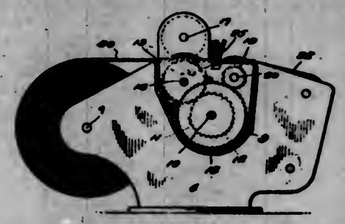
1,392,355. COMBINED JACK AND RIM-CONTRACTOR. FRED C. RHODE, Fairview, Mont. Filed Sept. 30, 1920. Serial No. 413,810. 2 Claims. (Cl. 254—131.)



1. The combination with a base of a jack, of pivoted base members pivoted to said base, arms pivoted to the pivotal base members at points spaced from their pivotal points and racks carried by the jack base and adapted to be engaged by said pivoted arms and forming means whereby the pivoted base members may be positioned at various angles in relation to the jack.

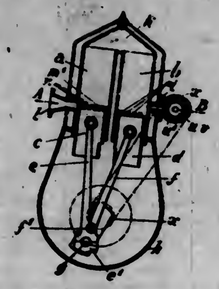
1,392,356. SUSPENSION FOR VEHICLES. OSCAR C. RIXSON, New Rochelle, N. Y. Filed Jan. 31, 1920. Serial No. 355,478. 19 Claims. (Cl. 267—20.)

3. In a spring suspension for vehicles, the combination of the body frame, an axle having a non-resilient extension, a crank arm rotatably and non-resiliently carried by the frame, a spring for opposing rotary movement of the crank arm in one direction, a link pivotally depending from the axle extension and also pivoted to the free end of the crank arm, the strength of the spring having a value sufficient when the vehicle carries its normal load to bring the body to rest with the crank arm substantially horizontal and yielding when subjected to an excessive load to permit rotation of the crank arm until the pull thereon is in a direction substantially along the direction of its length for a maximum relative movement between the body frame and axle.



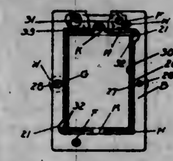
1,392,357. CLAMPING DEVICE FOR SHOE-HEELS. HERBERT H. ROOSA, Lincoln, Nebr. Filed Sept. 27, 1917. Serial No. 193,419. 7 Claims. (Cl. 12—125.)

1. In a clamping device for shoe heels, the combination with a last support, of a clamp carrier pivotally mounted with reference to the last support to swing about the same and including oppositely arranged guide rods, and a clamp having openings receiving said guide rods and movable thereon toward and from the last support and having a clamping surface inclined with reference to a plane perpendicular to the general direction of clamping action so as to conform to the heel pitch and terminating in a shoulder positioned for engagement with the rear edge of a heel.



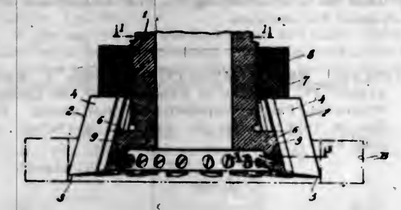
1,392,358. GUM-TAPE CUTTER AND MOISTENER. ROGER I. ROSS, Troy, Ohio. Filed June 10, 1919. Serial No. 303,151. 1 Claim. (Cl. 91—14.5.)

The combination of a frame, means for feeding a strip over the frame, means for moistening the strip, a cutter pivoted at one end at one side of the frame and extending across the frame between the feeding means and the moistening means, a rod slidably mounted on the opposite side of the casing and connected at its upper end to the free end of said cutter, yieldable means for holding said rod normally raised, a pin projecting laterally from said rod, a crank mounted upon the side of the frame, a tappet arm carried by said crank adapted to impinge



against said pin, and means driven by said crank for operating the feeding and moistening means.

1,392,359. TWO-STROKE-CYCLE ENGINE. CARL RUDQVIST, Munich, Germany. Filed Dec. 12, 1916. Serial No. 136,582. 6 Claims. (Cl. 123—53.)

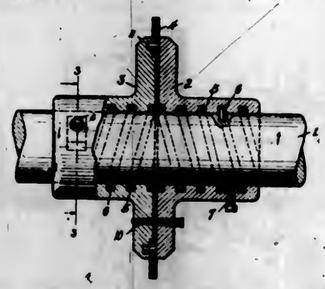


1. In a two cycle internal combustion engine, the combination with a casing having a compressed air chamber therein, of a pair of cyylinders within said casing the wall of each cylinder having openings through which compressed air from said chamber may flow, a combustion chamber common to both cylinders at one end thereof, a fuel admission passage communicating with one of said cylinders, an exhaust passage communicating with the other of said cylinders, a piston operable in each cylinder, and means for operating said pistons whereby the openings in the cylinder communicating with the admission passage are first uncovered to the flow of compressed air from the compressed air chamber to scavenge such chamber and thereafter the second piston is moved to uncover the openings therein and the exhaust passage whereby compressed air will flow through said last named openings to cause a suction action in both cylinders and complete the scavenging operation.

1,392,360. APPARATUS FOR FACILITATING THE CUTTING OF RECESSES IN WALLS. EPHRAIM FRANK SHARLE, Lawrence, Mass. Filed Oct. 23, 1920. Serial No. 419,111. 2 Claims. (Cl. 33—180.)

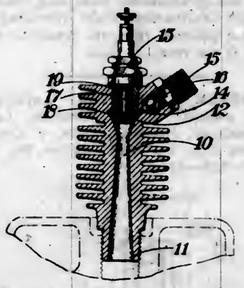
1. A templet for an electrical box having ears with screw passages therethrough, which has an opening through which said box except the ears can pass, and screw holes which register with said screw passages.

1,392,361. GEAR-CUTTER. WILLARD T. SEARS, Montclair, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 17, 1919. Serial No. 283,170. 10 Claims. (Cl. 90—9.)



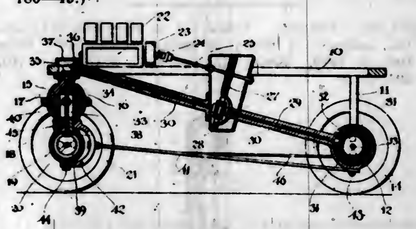
1. A circular gear cutter of the axially reciprocating and tooth-curve-generating type, comprising a circular series of radially extending adjustable cutting teeth having contours of gear tooth form on their end faces.

1,392,362. TYPEWRITING-MACHINE. GEORGE A. SEIB, Ilion, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Nov. 6, 1920. Serial No. 422,329. 8 Claims. (Cl. 197—129.)



1. In a typewriting machine, the combination of a split platen, an internal clutch between the sections thereof, a finger button external of said platen for controlling said clutch, means for line spacing said split platen, and means independent of said internal clutch for turning the sections of said platen independently of each other to any desired extent.

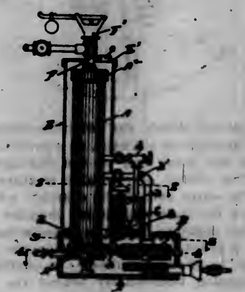
1,392,363. CLAMPING MEANS FOR ROTARY MEMBERS. EDWIN P. SHANNON, Lockland, Ohio. Filed Jan. 24, 1920. Serial No. 353,774. 2 Claims. (Cl. 287—52.)



1. In combination, a shaft, a pair of collars mounted on the shaft and having their adjacent ends adapted for clamping a tool therebetween, each collar having its bore of a size for rotatably fitting the shaft and provided with an internal thread with the thread of one collar reverse to that of the other, means fixed to the shaft and entering the threads of the respective collars to cause the collars to have axial opposed movements when rotated in the same direction on the shaft, and means for locking the collars in adjusted relation to the shaft.

1,392,364. IGNITION DEVICE FOR INTERNAL-COMBUSTION ENGINES. FREDERICK ARTHUR SMITH, Brasted, England. Filed Apr. 2, 1921. Serial No. 458,059. 4 Claims. (Cl. 123—169.)

1. An ignition device for internal-combustion engines comprising an ignition chamber, an electric igniter therein, an inlet at the inner end of the chamber for an auxiliary ignition charge of explosive mixture, and a flame nozzle at the outer end of the chamber which nozzle extends toward the main combustion chamber of the engine, said ignition chamber being so constructed and shaped as to form a space for accommodating the igniter points, which space is of regular tubular formation without an abrupt expansion immediately behind the outlet orifice, and it and the remainder of the ignition chamber are of such proportions and shape, and so situated, relatively to each other and to the main combustion chamber of the engine, that, during compression, only the auxiliary ignition charge is compressed stratified around the igniter points, no turbulence being set up during such compression to displace the auxiliary ignition charge clear from the igniter points.

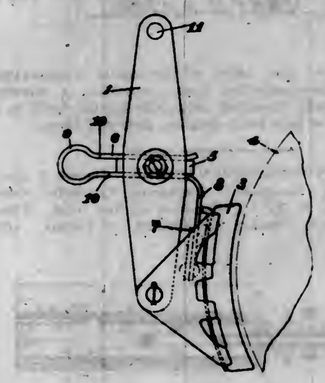


1,392,365. FOUR-WHEEL DRIVE. ROY DALTON SMITH and ALFRED CHRISTOPHERSON, Mohler, Idaho. Filed June 11, 1920. Serial No. 388,136. 1 Claim. (Cl. 180—49.)

The combination with an automobile frame and a motor mounted on the frame; of a rear axle housing connected to the frame; an axle rotatable therein and having drive wheels fixed thereto, a longitudinal shaft geared to the rear axle, a housing inclosing portions of the engine shaft and the longitudinal shaft, gearing mounted on said shafts within the housing, a front axle housing, an axle journaled therein and having drive wheels fixed to the ends thereof, a driving and turning gear for the front axle including a relatively large ball member provided with an attaching plate secured to the front of the frame and having a hollowed out portion, a socket member receiving said ball at the bottom and provided with a reduced sleeve portion joined with the front axle housing, a shaft journaled through said sleeve portion and ball member and provided with a knuckle joint in the center thereof, said shaft being formed in two sections and having geared connection with the front axle at its lower end, a geared connection between the upper end of

said vertical shaft and the forward end of the longitudinal shaft, a truss rod connecting the front and rear axle housings and having a fork member provided with a bearing portion for the reduced sleeve of the large socket member, and braces extending from said truss rod to the rear axle, said longitudinal shaft extending in a rearwardly inclined position from the frame at the front to the rear axle at the rear.

1,392,366. STEAM-GENERATOR. ARTHUR E. SNOW, Erie, Pa., assignor to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio. Filed June 14, 1918. Serial No. 240,089. 1 Claim. (Cl. 122—115.)



In a device of the class described, a horizontally elongated casing, a vertically elongated casing in communication therewith, a primary water heating unit within one end of said horizontally elongated casing, a secondary water and steam member within said vertical casing extending downwardly into said horizontally elongated casing in circulatory communication with said primary water unit, a feed-water tank mounted on said horizontally elongated casing over said primary water unit and contacting with said vertical casing, and means to supply heat within said horizontally elongated casing, substantially as set forth.

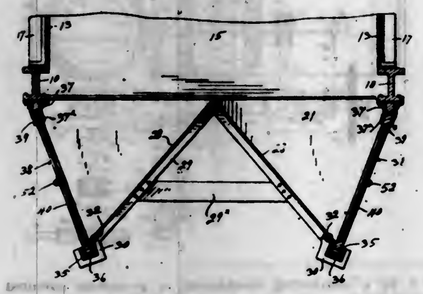
1,392,367. WHEEL. FREDERICK S. STAFFORD, Chicago, Ill., assignor to Henry G. Saal, Chicago, Ill. Filed Dec. 5, 1919. Serial No. 342,644. 2 Claims. (Cl. 301—37.)

2. A wheel having a tire, spokes, and a hub which has a flange and a circular clamping plate between which hub elements the inner ends of the wheel spokes are disposed, and bolts that clamp said hub elements against the spokes; in combination with a disk substantially covering a face portion of the wheel that is surrounded by the tire and also covering ends of the aforesaid bolts; and additional bolts for clamping the disk against one of the aforesaid hub elements.

1,392,368. BRAKE MECHANISM. JOHN F. STREIB, Avalon, Pa., assignor to Pressed Steel Car Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Feb. 8, 1921. Serial No. 443,374. 4 Claims. (Cl. 188—212.)

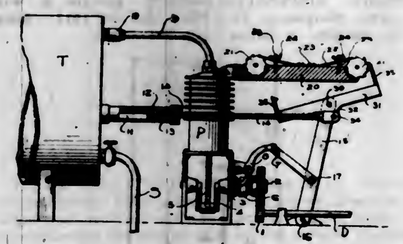
4. The combination with a brake lever and a brake beam, of a brake head pivotally connected with said lever below said beam and means connected with said head and slidably mounted on said beam adapted to maintain said head in its proper position relative to the car wheel.

1,392,369. SHAVING-BRUSH. CHARLES F. STOEWSAND, Chicago, Ill., assignor to Walter Kargus, Louis Cleppe, and Charles F. Stoewsand, Chicago, Ill., a Copartnership. Filed Oct. 22, 1919. Serial No. 332,448. 5 Claims. (Cl. 15—50.)



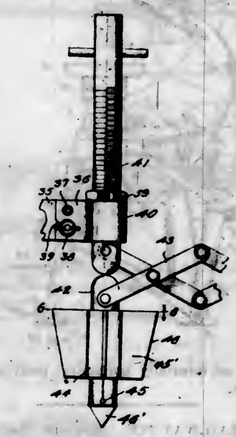
1. A shaving brush comprising a liquid container; a tubular member communicating with said container and leading to the bristles of said brush; a valve at each end of said tubular member; and means for forcing liquid in said container through said tubular member to the bristles of said brush, substantially as described.

1,392,370. METHOD FOR THE PURIFICATION OF HYDROCARBONS. JOSEPH MAURICE THOMSEN, New York, N. Y., and CHARLES S. BENJAMIN, East Orange, N. J., assignors to Andrew J. Doremus, West New Brighton, N. Y., and Howard G. Turner, Paterson, N. J. Filed June 4, 1920. Serial No. 386,632. 8 Claims. (Cl. 96—26.)



1. A process for the purification of non-liquid hydrocarbons which comprises treating the impure hydrocarbons with benzol containing sulfur-dioxid and separating the non-liquid hydrocarbons from the liquid impurities.

1,392,371. HOPPER-CAR. MARK A. VILLIAMO, New Castle, Pa. Filed Nov. 3, 1920. Serial No. 421,522. 13 Claims. (Cl. 105—255.)



1. In a hopper car, a transverse partition extending across the car approximately centrally thereof, a longitudinally extending inverted V-shaped partition arranged adjacent the bottom of the car and secured to said transverse partition, inverted V-shaped braces engaging beneath said longitudinally extending partition, side sills for said car, hook portions formed on said braces at the lower ends thereof and directed toward said side sills, tracks mounted in said braces, guides secured to said side sills and doors slidably mounted in said tracks and having the upper edges thereof disposed within the guides secured to said side sills.

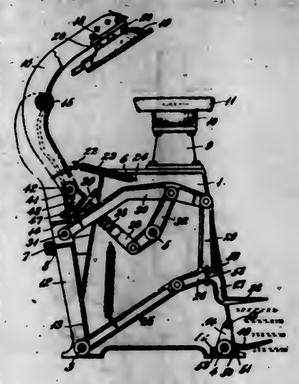
1,392,372. AUTOMATIC PUMP CONTROL. JERRY T. VINE, Seattle, Wash., assignor of one-half to Thomas Conroy, Seattle, Wash. Filed May 25, 1920. Serial No. 384,058. 4 Claims. (Cl. 103—87.)

1. The combination with a power driven pump, a power control lever, a tank to which the pump delivers, a cylinder projecting from the tank, a piston in the cylinder moved in one direction by accumulated energy, and a spring moving the piston in the other direction; of a rocker pivoted to said lever and having latches at its opposite ends for holding the lever at either extreme position, and connections between said piston and rocker whereby movement of the piston will first turn the rocker to unlatch it and then swing the lever to its opposite extreme.

1,392,373. VALVE-LIFTING DEVICE. JOSEPH A. WAINWRIGHT, Brooklyn, N. Y. Filed Nov. 15, 1920. Serial No. 424,128. 11 Claims. (Cl. 29—86.5.)

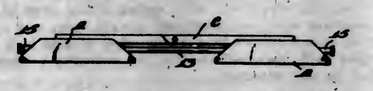
1. A valve spring lifting tool comprising a body formed of a lazy-tong structure, valve spring lifting jaws pivotally mounted upon the outer end of said body, and overhanging means carried by the side edges of said body for engaging said jaws and limiting the swinging movement thereof in one direction.

1,392,374. HAIRPIN. FRED WALKER, Philadelphia, Pa. Filed Mar. 20, 1920. Serial No. 367,318. 1 Claim. (Cl. 132—52.)



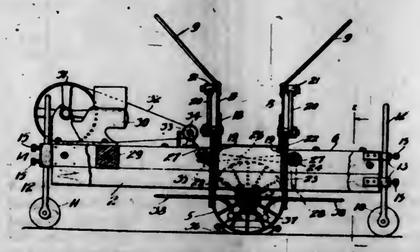
As an article of manufacture, a hair pin, comprising a single piece of material bent upon itself to form spaced parallel central tangs and having their ends bent outward upon themselves to form outer tangs spaced from the central tangs, said outer tangs being approximately parallel with the central tangs, said central tangs having corrugations lying in one direction and said outer tangs having corrugations lying at right angles to the first mentioned corrugations.

1,392,375. GARMENT-PRESS. CHARLES E. WARHAM, Cincinnati, Ohio, assignor to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio. Filed July 10, 1918. Serial No. 244,252. Renewed Mar. 19, 1921. Serial No. 453,713. 14 Claims. (Cl. 68—9.)



1. In a press, a frame, a buck mounted thereon, a swinging presser head support, a presser head carried thereby, a horizontally disposed treadle, and parallel link mecha-

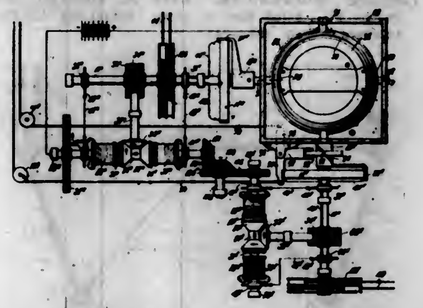
nism between said treadle and said swinging support for manipulating the presser head and maintaining said



treadle in a substantially horizontal position throughout its movement.

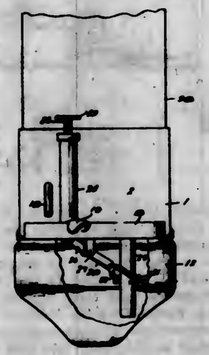
1,392,376. RAILWAY-TIE. EDWARD WATERS, Capreal, Ontario, Canada. Filed Aug. 27, 1920. Serial No. 406,431. 1 Claim. (Cl. 238—53.)

A tie comprising a pair of chocks each formed like a frustum of a rectangular cone, means for securing the chocks in spaced relation, a false tie being provided formed with beveled shoulders on the bottom adapted to engage the inner beveled walls of the chocks.



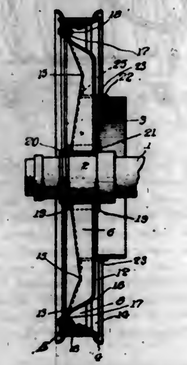
1,392,377. SUGAR-CANE CUTTER. MAX WERTHEIM, Pietermaritzburg, Natal, South Africa. Filed Oct. 1, 1919. Serial No. 327,815. 7 Claims. (Cl. 56—17.)

1. In a machine of the character described, the combination of a vehicle, a trough mounted on said vehicle, a horizontally disposed rotary knife at one end of said trough, a vertically disposed rotary knife at the opposite end of the trough, means carried by said vehicle for rotating said knives, a vertically movable carrier within said trough, and means for partially rotating said carrier during its vertical movement.



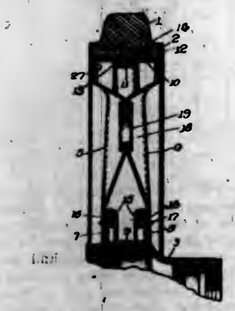
1,392,378. CONTROLLING MECHANISM. LOUIE E. WILLARD, Chula, Ark. Filed Nov. 6, 1916. Serial No. 129,832. 4 Claims. (Cl. 172—282.)

1. In a controlling mechanism, a gyroscope mounted for movement in two planes, a pair of controlling shafts having their axes disposed at relative right angles, a commutator carried by each controlling shaft, a pair of arms mounted for rotation and for engagement with each of the commutators, each arm being rotatable about an axis coincident with the axis of rotation of the correlated controlling shaft, means operatively connecting the gyroscope to the arms whereby movement of the gyroscope in one direction will rotate one arm and a movement of the gyroscope in another direction will operate the other arm, and means for driving the shaft, a reversing gear associated with each shaft, and electrically operable means controllable by movement of the arms and commutators to operate the reversing mechanism.



2. In a controlling mechanism, a gyroscope mounted for movement in two planes, a pair of controlling shafts mounted to dispose the axes thereof at relative right angles, a commutator carried by each controlling shaft, an arm movable adjacent each commutator for contact therewith each arm having an operative connection to the gyroscope, whereby a movement of the gyroscope in one plane will move one arm, and a movement of the gyroscope in another plane will move the other arm, a spirally grooved boss formed on one arm, a ring encircling said boss, a pin on said ring extending into the groove of the boss, means for reciprocating said ring to oscillate the arm, means for driving the shaft, a reversing gear associated with each shaft, and electrically operable means controllable by movement of the arms to operate one or the other of the reversing mechanisms, one of said shafts being operable through movement of the ring in the manner described.

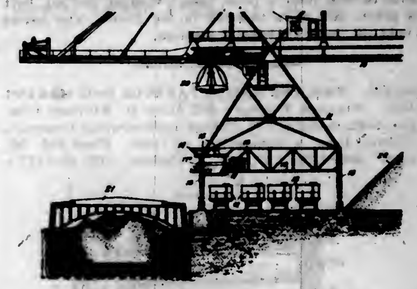
1,392,379. DISPENSING DEVICE. EDWARD R. WILLIAMS, Sharpsburg, Pa. Filed Mar. 23, 1917. Serial No. 156,926. 9 Claims. (Cl. 221—102.)



6. Liquid dispensing apparatus, comprising a hollow body having an opening in its bottom wall, a liquid holding vessel depending from said body, means supported by said body and extending through said opening for supplying liquid to said vessel, and a reciprocating member supported by said body and depending within said vessel for discharging liquid over the edge thereof.

1,392,380. PRESSED STEEL WHEEL. WILLIAM ERASTUS WILLIAMS, Chicago, Ill. Filed Sept. 6, 1919. Serial No. 322,168. 9 Claims. (Cl. 301—64.)

1. In a wheel of the class described, a disk having tapering corrugations extending radially deeper at the hub and shallower at the rim the back faces of the corrugations on the inside of the wheel adjacent to the hub being in a plane and the peripheral zone being dished outwardly from that plane.



1,392,381. FLANGED DISK PRESSED STEEL WHEEL. WILLIAM ERASTUS WILLIAMS, Chicago, Ill. Filed Sept. 13, 1919. Serial No. 323,524. 10 Claims. (Cl. 301—64.)

1. In a wheel of the class described, a hub having a circumferential flange parallel to the general plane of the wheel and provided with an annular lateral groove of approximately rectangular cross section adapted to receive the inwardly bent marginal portion of a wheel disk, and a ring forced into and laterally filling the remaining space between the opposite walls of the groove.

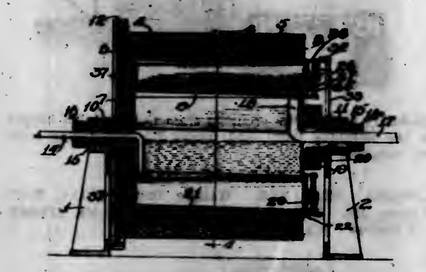
1,392,382. APPARATUS FOR HANDLING COAL, ORE, AND THE LIKE. CHARLES S. WILLIAMSON, Chicago, Ill. Filed Aug. 9, 1917. Serial No. 185,402. 6 Claims. (Cl. 214—2.)

1. In a plant of the class described, a bridge, tracks supporting said bridge, a receiving hopper fixed with relation to the bridge, a lifting bucket, traveling relatively to the bridge and hopper, a weighing lorry, traveling transversely to the tracks, readily controllable means for

gradually feeding the products from the receiving hopper to the weighing lorry, and means for discharging from the weighing lorry.

1,392,383. STRAINER. WALTER BRUCE WILLS, Baltimore, Md. Filed Oct. 26, 1920. Serial No. 419,663. 2 Claims. (Cl. 53—3.)

1. The combination with a strainer having a rim portion; of a wire ring encircling said rim portion and provided with a handle, said ring having a pair of outward bends which are spaced and provided with a downturned connecting portion at their outer ends, said connecting portion forming a hook and being pliable to permit bending in a direction to draw the aforesaid outward bends together and thereby contract the ring.



1,392,384. BROOM. STEPHEN G. WILSON, Philadelphia, Pa. Filed Apr. 24, 1919. Serial No. 292,253. 14 Claims. (Cl. 306—15.)

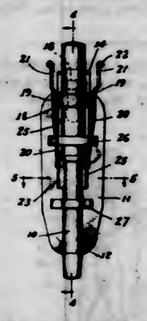
1. In a broom, a box with slots, a butt therein with its lower portion inserted in the body of the broom and

its upper end extended beyond the said broom body and disposed in said box, a reinforcing plate in the butt to engage in said slots, a pivot passed through the box, butt and plate, said plate inserted in the handle, and means to hold the parts in angular position.

1,392,385. PROCESS AND APPARATUS FOR MAKING ICE. WILLIAM WISHART and JOHN O. WISHART, Clinton, Iowa, assignors to Clinton Refrigerating Company, Clinton, Iowa, a Corporation of Iowa. Filed Feb. 26, 1918. Serial No. 219,212. 11 Claims. (Cl. 62—172.)

1. The process of making ice which consists in partially filling a vaporizing receptacle with a volatile refrigerant liquid, placing the water to be frozen in a rotatable compartment in the receptacle, replenishing the volatile refrigerant liquid in the receptacle and exhausting the vapor therefrom, rotating the compartment so that it is periodically immersed in and withdrawn from the liquid in the receptacle, and permitting the escape of air from the compartment as it is rotated to relieve the pressure therein.

1,392,386. SHOCK-ABSORBER. ARTHUR GEORGE WITT, Hamilton, Ontario, Canada. Filed Dec. 11, 1920. Serial No. 429,937. 5 Claims. (Cl. 267—34.)

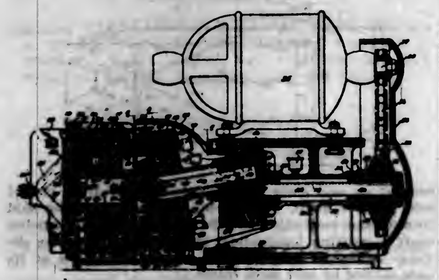


2. A shock absorber, comprising inner and outer cylindrical members adapted to be secured to the opposing portions of a vehicle and telescoping one within the other, a ball cushion within the outer telescoping member at each end thereof, a coil spring separating the ball cushions and a cupped bearing plate situated between each end of the coil spring and the adjacent ball cushion, the ends of the coil spring engaging flanges on the cupped bearing plates.

1,392,387. TRUCK. A. J. WOOD, Grand Rapids, Mich., assignor to Bennett Injector Company, Muskegon, Mich., a Corporation of Delaware. Filed Feb. 24, 1920. Serial No. 360,865. 5 Claims. (Cl. 280—35.)

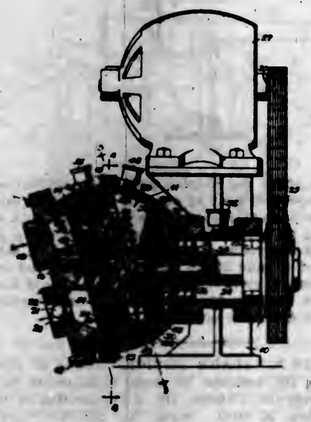
4. In a truck, a front truck member including a vertically positioned member of wood, a ledge attached to and extending back of said vertical member at the lower part thereof, a rear truck member including a similar vertical member of wood, a ledge connected thereto and extending forwardly from the lower portion thereof, casters attached one at each end of each truck member, rods passing loosely through the truck members and disposed in spaced apart relation, and means on the rods for drawing the truck members toward each other and against a barrel or similar container disposed between them, substantially as described.

1,392,388. PEN OR PENCIL HOLDER. JOSEPH AMATO, Ossining, N. Y. Filed Apr. 13, 1921. Serial No. 461,130. 7 Claims. (Cl. 24—11.)



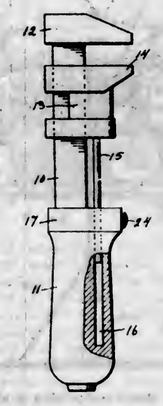
5. As a new article of manufacture, a pen or pencil holder comprising in combination, a base, a clasp pivotedly secured to the back of said base, an annular band secured at right angles to said base, a pair of clamping members pivotedly secured to said band and parallel to said base, said clamping members being provided at their upper ends with off-set extensions and at their lower ends with semi-cylindrical shaped jaws adapted to grip an article placed thereinbetween, a spring adapted to keep said clamp-members in engaged position, a strap secured at right angle to said base, and another strap secured to said base intermediate said annular band and said former strap adapted to limit the outward movements of said clamping members.

1,392,389. MECHANICAL MOVEMENT. LARS ANDERSON, Chicago, Ill. Filed Sept. 1, 1920. Serial No. 407,510. 10 Claims. (Cl. 108—77.)



1. The combination of a rotatable shaft, a crank rotatable by the shaft, an inclined shaft connected by one end with the crank and to one side of the axis of rotation of the first recited shaft, the axis of the free extremity of the inclined shaft coinciding with the axis

of the first recited shaft, a bearing for the said free extremity of the inclined shaft, a wabbler element mounted upon said inclined shaft, the internal diameter of the said element being somewhat greater than the external diameter of the shaft, roller bearings interposed between

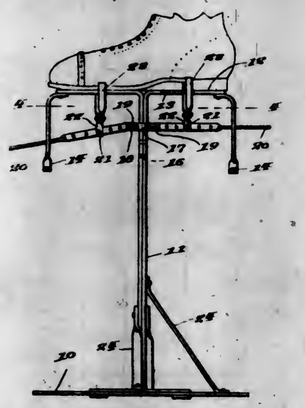


the said element and the inclined shaft, a plurality of pump cylinders, pistons in the cylinders, operative connections between the said wabbler element and the respective pistons, means exterior of the cylinders and operatively connected with the first recited shaft to rotate the latter to actuate the wabbler element.

1,392,390. PUMP. LARS ANDERSON, Chicago, Ill. Filed Oct. 21, 1920. Serial No. 418,363. 14 Claims. (Cl. 230—30.)

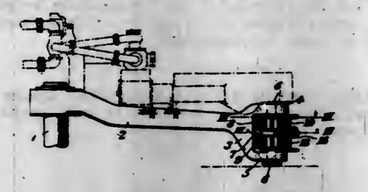
1. A pump of the character described embodying a chamber, a piston element bodily rotatable in the chamber, a fulcrum for the said element intermediate its ends and by means of which fulcrum the piston element is adapted for an oscillating movement in a plane transverse to the plane of its bodily rotation, one wall of said chamber being inclined transverse to the axis of rotation of the said piston element, means for rotating the said element, and means for maintaining one edge of the piston element in contact with the said inclined wall, whereby the piston element will be oscillated upon its fulcrum during such rotation, the last recited means embodying the fulcrum, said fulcrum being movable in a plane transverse to the plane of oscillation of the piston element.

1,392,391. QUICK-ADJUSTABLE MONKEY-WRENCH. FRANK E. BABTS, Pittsburgh, Pa. Filed Oct. 2, 1920. Serial No. 414,310. 3 Claims. (Cl. 81—152.)



3. A wrench of the character described including a shank having a handle portion and a fixed jaw at its end remote from the handle portion, a movable jaw slidably mounted on the shank between the fixed jaw and the handle portion, a rod attached to the movable jaw and extending parallel to the shank, the handle being provided with a longitudinally extending bore through which said rod travels at all times, a housing having an opening through which the shank passes and having a slot at its other end, that face of the housing confronting the handle being open and being abutted against the adjacent end of the handle, the shank having a shoulder engaging over the outer face of the housing and holding it in place, and a locking device mounted within the housing and adapted to have locking engagement with said rod, the extremity of the locking device having a finger piece extending out through the slot in the housing whereby it may be manipulated.

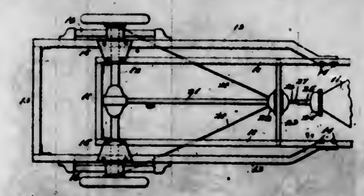
1,392,392. AUTOMATIC CAR-REPLACER. JOSIAH W. BODIE, Effingham, S. C. Filed Mar. 18, 1920. Serial No. 366,826. 1 Claim. (Cl. 246—423.)



A rerailing device for railways comprising a pair of blocks which are trapezoidal in plan and each of which has a vertical longitudinal rib on its upper face adjacent one of the sides thereof and a longitudinal ledge adjacent the other side, the wider end of one block being beveled longitudinally, the other end of the ledge being beveled, and the rib being tapered toward the last-named end of the block, the other block having the ledge inclined longitudinally from a point adjacent the longitudinal center to the wider end of the block, the rib tapering toward the wider end of the block and having its other end beveled to a line lying in the plane of the adjacent end of the ledge.

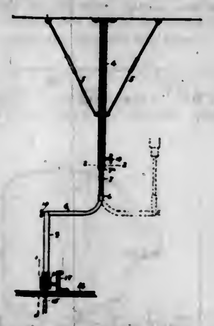
1,392,393. SHOE-HOLDING STAND. JOHN J. BRENTANO, St. Paul, Oreg. Filed Mar. 28, 1921. Serial No. 456,214. 1 Claim. (Cl. 15—58.)

A shoe blacking stand comprising a standard having a foot rest on its upper end, a vertically adjustable collar on the standard, levers pivotally carried by the collar and extending toward the ends of the foot rest, depending loops carried by the ends of the foot rest, one leg of each loop having an inner vertical series of notches for engagement by the levers, and pivotally connected shoe sole gripping arms carried by the levers and diverging upwardly at the sides of the foot rest, said foot rest having notches in the edge portions of one end thereof to receive one set of gripping arms to maintain the gripping arms against movement longitudinally of the foot rest.



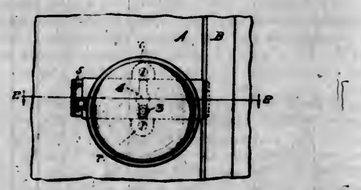
1,392,394. STEERING-GEAR FOR SHIPS. HARRY BROUSSEAU, Bath, Me. Filed Oct. 23, 1920. Serial No. 418,932. 4 Cairns. (Cl. 114—159.)

1. In a steering gear for ships, the combination of a tiller, a drive shaft journaled on the tiller, a pair of pinions fixed on said shaft with their teeth in alinement, a pair of arcuate racks having teeth meshing with the teeth of the pinions, means for holding one rack in fixed position, and means for adjusting the other rack endwise and positively holding it in its adjusted position, one rack being relatively short and located substantially centrally of the other rack.



1,392,395. EXTENDIBLE TRUCK CONSTRUCTION. HOWARD R. BRUAN, Chicago, Ill. Filed Feb. 2, 1920. Serial No. 355,617. 4 Claims. (Cl. 180—1.)

1. As a means for re-building a truck having a rear axle, differential gearing on said axle, a transmission mechanism, a propeller shaft rigidly connecting said differential gearing and said transmission mechanism longitudinally, a main frame and a cross spring between said frame and said axle, in combination with said rear axle, differential gearing and propeller shaft, transmission mechanism, and said main frame, an extension frame, rigid connections between said frames, side springs between said extension frame and said axle engaging at their ends fixed pivot rods carried by said extension frame, a cross

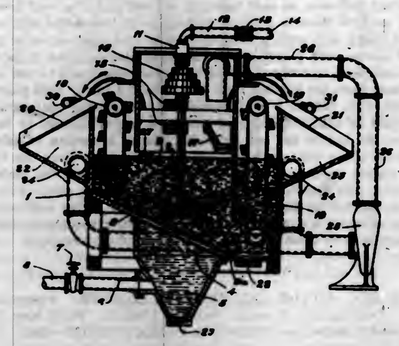


member on said main frame supporting the front end of said propeller shaft, and driving devices connecting said transmission mechanism and the front end of said propeller shaft permitting longitudinal slip in said connecting devices, said cross member having sliding supports at its ends carried by said main frame.

1,392,396. CIRCULAR-SAW GUARD. JOSEPH H. BURKE, Portland, Me. Filed Nov. 10, 1919. Serial No. 337,614. 5 Claims. (Cl. 143—159.)

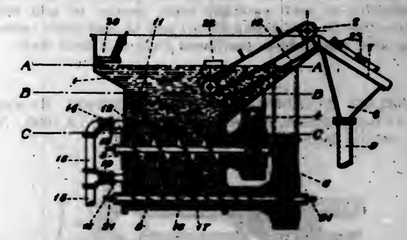
1. In a guard for circular saws, the combination of a tubular dependent post at one side of the saw, said post having an angular socket at its lower end, an L-shaped rod having its upper end fitting said socket and a portion below said end reduced in size and adapted to rotate in said socket, a hand clamp for clamping said rod in place in said post, a vertical rod on the end of said L-shaped rod and a hood on the lower end of said vertical rod adapted to cover the saw.

1,392,397. ALARM DEVICE. JAMES M. BUTCHER, Chicago, Ill., assignor, by mesne assignments, to Sentinel Alarm Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 2, 1919. Serial No. 269,212. 9 Claims. (Cl. 116—86.)



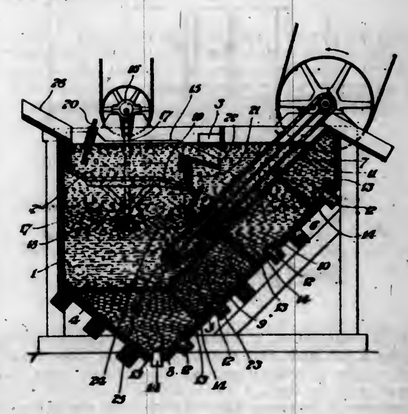
1. In an alarm device, an alarm, a mounting adapted to be applied to the face of a closure to be guarded, and a controlling member longitudinally slidable on said mounting and having its ends deflected, respectively, for engagement with the jamb or frame of said closure and with the alarm; said alarm being mounted in the path of movement of said controlling member.

1,392,398. TIE-PLATE AND RAIL-FASTENER. WILLIAM A. BUTLER, Portsmouth, Va., assignor of one-half to William J. Beale, Norfolk, Va. Filed May 23, 1921. Serial No. 471,902. 3 Claims. (Cl. 238—304.)



3. A tie plate comprising a flat substantially rectangular body having guide ways struck up from the lower surface thereof, the guide ways having inwardly extending slots formed therein, the plate having bolt receiving openings formed therein adjacent to the corners thereof, and teeth struck up in said guide ways forming corrugations in the upper and lower surfaces of the plate.

1,392,399. METHOD AND APPARATUS FOR WASHING COAL AND CONCENTRATING ORES AND MINERALS. THOMAS M. CHANCE, Philadelphia, Pa. Filed Aug. 27, 1917. Serial No. 188,430. 10 Claims. (Cl. 83—85.)



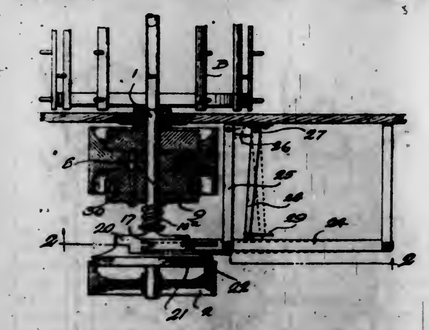
1. A method of separating materials of different specific gravities which consists in subjecting said materials to the separating action of a fluid mass consisting of an agitated mixture of liquid and comminuted insoluble solid material heavier than the liquid; in permitting material of relatively low specific gravity to rise to and float in the upper portion of said fluid mass; in permitting the material of relatively high specific gravity to sink to the lower portion of said fluid mass; in removing the materials thus separated from said fluid mass; in transporting the material of high specific gravity thus removed through a body of liquid superimposed upon said fluid mass, said liquid being of a specific gravity not greater than that of the liquid constituent of said fluid mass, in causing the contact of said body of liquid with said separated materials to remove a portion of the comminuted solid matter of said fluid mass from said materials; and in permitting the action of said body of liquid to assist the return of said solid matter to said fluid mass, whereby comminuted solid matter of said fluid mass mixed with said separated material is washed therefrom.

1,392,400. METHOD FOR WASHING COAL AND CONCENTRATING ORES AND MINERALS. THOMAS M. CHANCE, Philadelphia, Pa. Filed Aug. 27, 1917. Serial No. 188,431. 6 Claims. (Cl. 83—85.)

1. A method of separating materials by means of differences in their specific gravities which consists in immersing said materials in a compound fluid mass composed of liquid and particles of solid matter heavier than the liquid and maintained by agitation in zones of relatively different specific gravities; in permitting the materials of relatively low specific gravity to rise to and float in the upper portion of the low density zones of said fluid mass; in permitting the materials of relatively higher specific gravity to rise to and float in the upper portion of the high density zones of the fluid mass; in permitting the materials of highest specific gravity to sink to the lower portion of the highest density zone; in separately removing the materials thus separated from said compound fluid mass and in transporting the materials of low specific gravity thus removed through a body of liquid superimposed upon said compound fluid mass; and thereby removing some of the comminuted solid matter of said mass mixed with said separated materials.

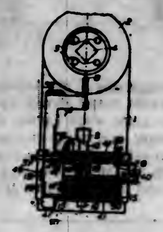
1,392,401. METHOD AND APPARATUS FOR CLASSIFYING MATERIALS. HENRY M. CHANCE, Philadelphia, Pa., and THOMAS M. CHANCE, Baltimore, Md. Filed July 8, 1918. Serial No. 243,911. 10 Claims. (Cl. 83—85.)

1. The method of separating materials of unlike physical characteristics which consists in submerging said materials in a continuously agitated fluid mass composed of a mixture of liquid and comminuted granular solids, said materials being of greater and said liquid of less specific gravity than said fluid mass and said solids being of such nature as to remain suspended in a hydraulic current



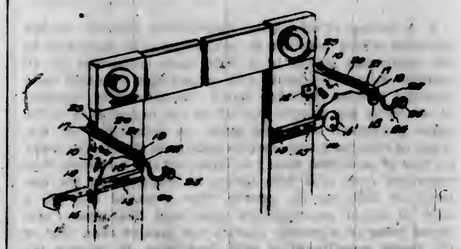
that will not support the materials to be separated by differences in falling velocity; in causing said materials to fall in said fluid mass, whereby the materials of relatively high falling velocity position themselves below those of relatively low falling velocity, the differences in falling velocities of said materials being greater in said fluid mass than in said liquid alone; and in separately removing said materials so positioned from said fluid mass.

1,392,402. BUILDING-WALL CONSTRUCTION. RICHARD CLARK COTTMAN, Merced, Calif. Filed July 13, 1920. Serial No. 395,887. 1 Claim. (Cl. 72—30.)



A wall construction comprising a plurality of separately built up units lying in spaced relation to each other and each comprising a body portion of cementitious material having reinforcing elements embedded therein consisting of a tubular column of wire mesh and two spaced wire mesh sections with an open space between them, one end of each of said wire mesh sections being attached to the tubular column of wire mesh, eyes projecting centrally from the ends of said units the shanks of said eyes extending to and entering the spaces between the two spaced wire mesh sections, said eyes being adapted to be brought into overlapping relation with each other, vertical pins adapted to traverse said eyes to unite the sections and joint filling material between the adjacent ends of the units, the ends of said units being vertically recessed for the reception of said joint filling material and said joint filling material surrounding and inclosing the eyes and the rods.

1,392,403. CLUTCH FOR GRAIN-SEPARATORS. JACOB R. CROGAN, Shaunavon, Saskatchewan, Canada. Filed Oct. 5, 1918. Serial No. 257,021. 4 Claims. (Cl. 192—18.)

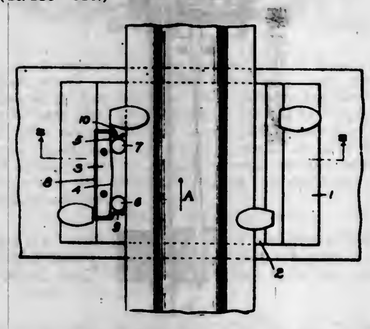


4. In combination, a rotatable shaft, a pulley thereon having a web made with recesses at opposite sides thereof and a series of conical openings therethrough being concentric with the shaft, a clutch element fixed to the shaft at one side of the pulley web and situated in one of the recesses, a shiftable clutch element situated at the opposite side of the web and loose on the shaft, said shiftable clutch element adapted to slide in the recess at the other side of the web, a concentric series of conical pins projecting from said shiftable clutch element slidably entering the conical openings in said web, said first mentioned fixed clutch element having notches to receive the reduced ends of said tapered pins, a ring carried by said shiftable clutch element and adapted to move relatively thereto, said ring provided with pins projecting therefrom, a pair of arms fixedly engaging with said pins, a friction brake element made in one piece with said arms and provided with pins extending therefrom, a coil spring wound about said shaft and bearing against said shiftable clutch element for urging the same into coupling position, a second pulley fixed on said shaft and having a braking surface arranged to receive the friction brake element, a forked lever engaging the pins on said braking element, and manual means for shifting said forked lever.

1,392,404. KEYHOLE-GUARD, LAGAR R. CULVER, Portland, Oreg. Filed Feb. 15, 1921. Serial No. 445,079. 2 Claims. (Cl. 70—8.)

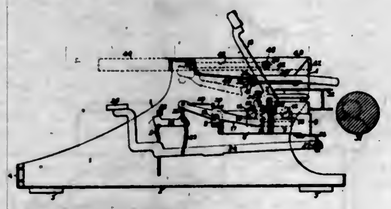
1. In an auxiliary lock for a door the combination with a door-lock having a knob spindle and a key hole, of a plate having a circular opening cut in one end portion, and slots in the other end portion; bearing disks having a square hole centrally therein and radially slotted and mounted for partial rotation in said opening of said plate; a bolt having an arm thereon adapted to engage in the radial slot of said disks, and with a ratchet rack in one edge; a housing slidable on said plate; a bolt engaging plate carried in said housing and movable longitudinally for engagement with or release from the ratchet rack of said bolt a lug on said plate adapted to engage a contiguous plate; a release plate also carried in said housing and having a recess therein to receive the lug on the bolt engaging plate; a portion of said release plate bent parallel thereto and having slots cut in its edges; another portion bent at right angles to the main portion and adapted to engage lever tumblers; lever tumblers carried in said housing having a slot in the end portion of each; a spring on each of said lever tumblers; and a key to move them against the tension of said springs.

1,392,405. SHADE AND CURTAIN HANGER. STEPHEN O. DOUGHERTY, Toronto, Ontario, Canada. Filed May 7, 1919. Serial No. 295,268. 2 Claims. (Cl. 156—24.)



1. A device of the character described including a bracket body formed at its inner margin for receiving fastening devices therethrough and having its inner margin slit from the inner edge of the body to define a laterally directed stop flange lying in advance of the rear edge of the bracket body.

1,392,406. DUSTPAN. WILFRED DUPUS, Worcester, Mass. Filed Feb. 17, 1921. Serial No. 445,682. 3 Claims. (Cl. 65—20.)

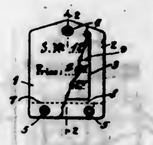


1. A device as described consisting of a dust pan having its front end open, a cover plate hingedly mounted upon said dust pan so as to normally close said front open end, a substantially U-shaped member connected pivotally at its upper end to said cover plate, and having its cross-rod projecting below and out of contact with the bottom of said pan, the side arms of said U-shaped member straddling said dust pan, and guides for said side arms upon the sides of said pan, said cross-rod adapted to be moved upwardly in order to cause said cover plate to be thrust to open position.

1,392,407. RAIL-ANCHOR. ROBERT FARIES, Pittsburgh, Pa. Filed Dec. 9, 1919. Serial No. 343,587. 3 Claims. (Cl. 238—310.)

1. In a rail anchor, a vertical, rail engaging ridge, an inclined ridge spaced therefrom, a roller adapted to contact with said inclined ridge and the side of a rail positioned between said ridges, and means for maintaining contact of said roller with said inclined ridge and the rail.

1,392,408. TYPEWRITING-MACHINE. JACOB FELBEL, New York, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Sept. 22, 1919. Serial No. 325,390. 15 Claims. (Cl. 197—186.)



1. In a typewriting machine, the combination of a set of type bars pivoted to the fixed framework of the machine, means for elevating and depressing said type bars so as to expand and compact the machine, and a fixed guide for said means.

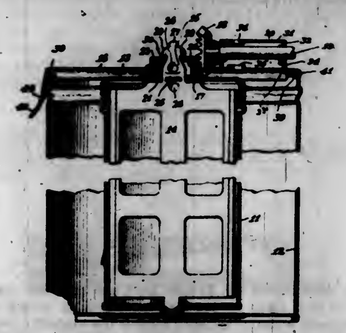
1,392,409. CIGAR-CARRIER. GEORGE R. FULLERWIDER, Fairfield, Mont. Filed Nov. 6, 1919. Serial No. 336,097. 2 Claims. (Cl. 131—51.)

1. A cigar holder for Fedora hats and the like, consisting of a thin piece of sheet metal centrally folded upon itself to form a slot adapted to receive the inwardly creased portion of the crown of the hat, and oppositely disposed lateral extensions bent backwardly to form a cigar pocket on each side of said central fold.

1,392,410. TAG. THOMAS R. GAINES, Norwood, Ohio. Filed Nov. 13, 1917. Serial No. 201,726. 5 Claims. (Cl. 40—2.)

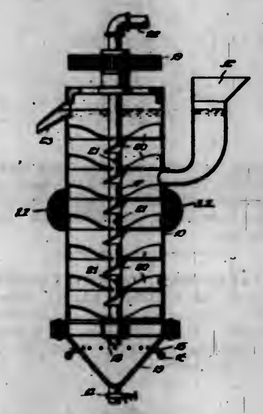
1. A marking tag comprising front and back sheets secured together to prevent access to the space between the sheets, and a detachable sheet secured in the space between said front and back sheets and inaccessible except by mutilation of the tag.

1,392,411. VALVE-STEM FOR THE VALVES OF COMPRESSION-COCKS AND THE LIKE. JOHN H. GAVIN, Chicago, Ill., assignor, by mesne assignments, to Wolff Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 19, 1919. Serial No. 298,041. 7 Claims. (Cl. 251—46.)



6. A valve for compression cocks and the like, comprising a rod forming the body of the stem, a thread carrying collar, and a valve member, said rod and said valve member extending into the collar, said rod being locked both against relative rotative and longitudinal movement with respect to the collar and said valve member being rotatably locked therein.

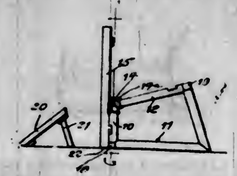
1,392,412. ICE-CREAM FREEZER. JOHN C. GIBBS, Lancaster, Pa. Filed Feb. 25, 1921. Serial No. 447,005. 10 Claims. (Cl. 259—53.)



1. In an ice-cream freezer of the type set forth, a journal-bracket rigidly affixed to the bridge-plate and

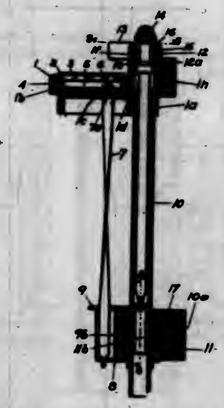
having a top-wall and two vertical walls, the top-wall being provided with an opening serving as a shaft-

journal and said end-walls being provided with alined openings adapted to serve as shaft-journals, for the purpose set forth.



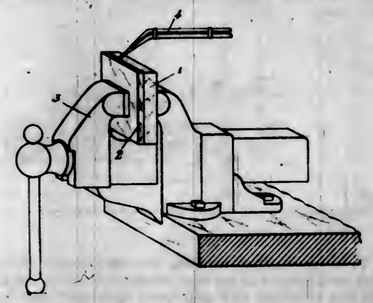
1,392,413. ORE-WASHER. ALEXANDER M. GOW, Duluth, Minn. Filed July 16, 1920. Serial No. 396,781. 4 Claims. (Cl. 83—71.)

1. In an ore washer for separating magnetic from non-magnetic particles or particles of different degrees of permeability, the combination of a vertically arranged tank, means for drawing to the inner surface of the tank magnetic particles of ore deposited in said tank, a vertically arranged rotatable shaft within said tank carrying means for removing the magnetic particles from the inner side of the tank and for causing the same to descend, and means for supplying water to the tank whereby the gangue is caused to flow upwardly and discharge from said tank.



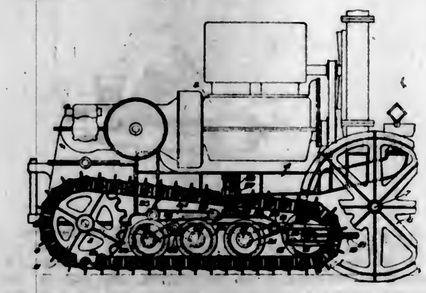
1,392,414. DAM CONSTRUCTION. ONESIME J. HALLEE, Chisholm, Me. Filed Apr. 16, 1921. Serial No. 462,059. 3 Claims. (Cl. 61—25.)

1. An automatic flood gate comprising a pair of spaced supports, each embodying a substantially vertical wall and a wall connected to and inclining upwardly from the same, a brace connecting the vertical walls of said supports at the lower ends thereof, a second brace connecting said inclined walls at the upper ends thereof, a pivot member secured at its ends to said supports at the juncture of the vertical and inclined walls thereof, and



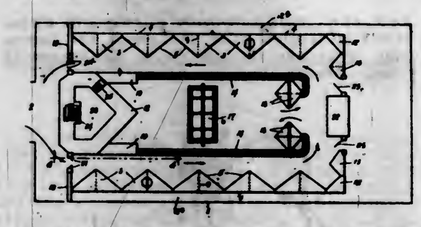
a flash board pivotally mounted upon said member and swinging to alternately engage said braces.

1,392,415. COMBINED FLUID-LEVEL INDICATOR AND RESERVE-VALVE. HERBERT HASTINGS, Brighton, N. Y. Filed Feb. 25, 1921. Serial No. 447,899. 9 Claims. (Cl. 158—46.5.)



1. In combination a gage head, a fluid level indicator supported thereby, a tube supported in the head and projecting therefrom, said head being further provided with an outlet communicating with the tube.

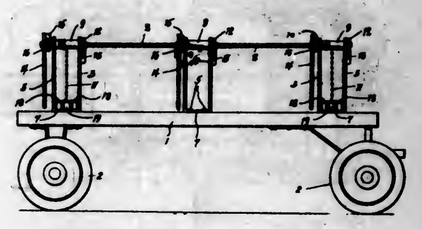
1,392,416. METHOD OF PRODUCING COMPOUND METALS. JOHN CLIFTON HENDERSON, New York, N. Y., assignor to Driver-Harris Company, Harrison, N. J., a Corporation of New Jersey. Filed Dec. 27, 1919. Serial No. 347,829. 4 Claims. (Cl. 29—189.)



1. The method of uniting together a plurality of dissimilar metallic bodies having corresponding surfaces, which consists in bringing the corresponding surfaces into juxtaposition, locally welding exposed edges together by the application of heat so as to produce a metallic sealing weld, heating the bodies sufficiently to dilate their crystalline structures, and then subjecting them to a compacting action.

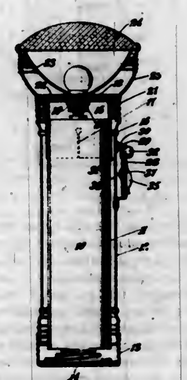
1,392,417. TRACTOR-TREAD. REX P. HICKS, Milwaukee, Wis., assignor to Hicks Tractor Company, Milwaukee, Wis., a Corporation of South Dakota. Filed May 12, 1919. Serial No. 296,343. 7 Claims. (Cl. 305—9.)

1. In a tractor, the combination, with a frame, of an endless tread, a drive wheel therefor, a link pivotally connected to said frame, a lever medially pivoted to the end of said link, levers medially pivoted to the ends of said lever, shafts mounted on the ends of said last named levers, tread engaging rollers mounted on said shafts, and spring means interposed between the first lever and said frame and exerting pressure against said rollers through said levers.



1,392,418. ARRANGEMENT AND CONSTRUCTION OF SELF-SERVICE-STORE FIXTURES. LESLIE A. HILL, Dallas, Tex. Filed Dec. 9, 1920. Serial No. 429,387. 2 Claims. (Cl. 211—8.)

1. The arrangement and construction of fixtures for a self-service store as described which consists of a plurality of triangular shaped shelving on each side and at one end of a building, a passageway between the back faces of the shelving and the store building walls, a storage space beyond one end of the shelving, a substantially V-shaped counter at the front of the store and between the shelving, a centrally inclosed space in the counter, railings for a sliding receptacle, and a double triangular unit at each end of the receptacle railings, said railings spaced apart and an entrance at their lower ends between the double triangular units, an entrance and an exit at opposite sides of the V-shaped counter and private passageways leading into the storage space.

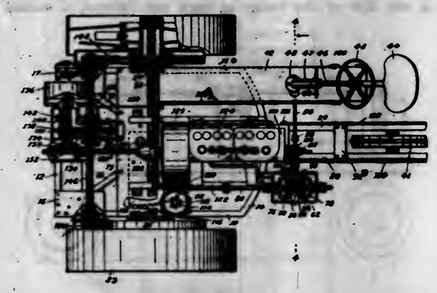


1,392,419. UNLOADING DEVICE. WILLIAM R. JONES, Marlin, Tex. Filed May 10, 1920. Serial No. 380,037. 3 Claims. (Cl. 298—18.)

1. In a device of the character described, a wheeled support, a frame mounted thereon, said frame comprising upright and horizontal arms, a shaft journaled in the upright arms, a lever arm and ratchet wheel at each end and intermediate the frame, a pair of lateral arms pivoted to one side of the frame at each end thereof, a second

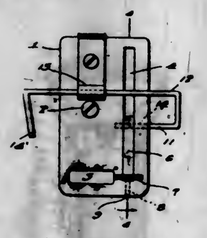
arm intermediate the lateral arms and pivoted to the inner ends of the lateral arms and means for raising and lowering the arms and locking same in a horizontal position.

1,392,420. PORTABLE ELECTRIC LIGHT. HARRY M. KORETZKY, New York, N. Y. Filed Mar. 10, 1920. Serial No. 364,635. 5 Claims. (Cl. 240—8.5.)



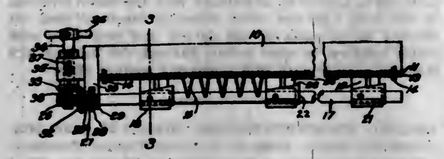
1. A portable electric light comprising an external battery-containing casing, a lamp bulb carried thereby, a removable contact plate adapted to be slipped into position between the casing and battery, said contact plate being connected electrically with the outer terminal of the lamp bulb and being normally insulated from all exterior metal parts of the device, and means on said casing adapted to close circuit through the battery and lamp by contact with said removable contact plate.

1,392,421. TRACTION-ENGINE. MARTIN H. LANG, Minneapolis, Minn., assignor to Lang Tractor Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Dec. 9, 1918. Serial No. 265,838. 2 Claims. (Cl. 180—27.)



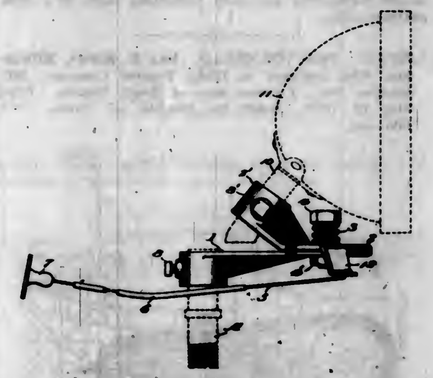
1. A traction engine comprising a frame, a pair of drive wheels supporting said frame, a motor and transmission elements on said frame for driving said drive wheels, a stationary power pulley rotatably mounted on

said frame, an operator's platform secured to said frame to turn therewith and extending rearwardly in alinement



with said pulley, an operator's seat on said platform, and means controlled by the operator from his seat for oscillating said frame to steer the engine.

1,392,422. SOLE-CHANNELING CUTTER. ROBERT R. LAMBVERS, Cairo, Ill. Filed Jan. 28, 1921. Serial No. 440,604. 3 Claims. (Cl. 112—45.)



1. A needle plate of the class described having a longitudinally extending slot therein and openings communicating with the slot, a cutter including a shank and a cutting head, the shank sliding in the slot, said shank having an extension for engaging one of the openings when the cutter is in operative position and an opening for registering with the other opening in the plate and a locking bar slidably mounted on the plate and having a part for passing through the registering opening for holding the cutter in operative position and for engaging the extension for holding the cutter in inoperative position.

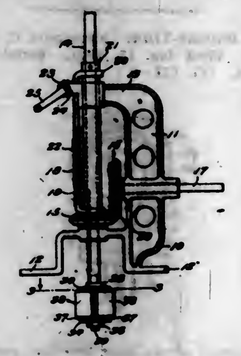
1,392,423. PEN-CLAMP FOR RULING-MACHINES. HARMON E. LINDBLADE, Boston, Mass. Filed Oct. 21, 1916. Serial No. 258,986. 8 Claims. (Cl. 33—45.)

1. A pen-clamp for ruling machines comprising a relatively fixed jaw, an opposed movable jaw, supports extending from the fixed jaw to points outside the movable jaw, and an actuating member for the movable jaw mounted to move longitudinally of the jaws upon the supports at the exterior of the movable jaw.

1,392,424. HEADLIGHT FOR VEHICLES. FRANK O. LINSTROM, Watertown, and PETER A. LINSTROM, Castlewood, S. D. Filed Apr. 24, 1918. Serial No. 230,426. 1 Claim. (Cl. 240—61.)

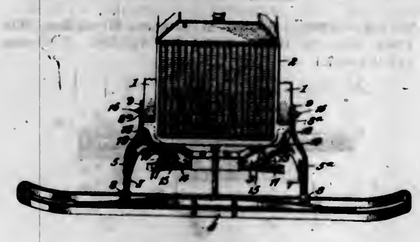
A vehicle light comprising a bracket with means for removably securing it on its support, one end of the bracket extended horizontally to form an enlarged flat circular bearing, a plate of corresponding form and adapted to fit the enlarged bearing of the bracket, a bolt extended through the centers of said parts, a spring thereon, means on the bolt for drawing the bolt through the parts and applying tension to the spring, whereby said parts are held pivotally together and in yielding turning contact, the plate having a socket formed on the upper end thereof, a lamp having a shank fitted to the socket, a set-screw in the socket for holding the shank of the lamp adjustably therein, an arm extending from said plate, and means within reach of the operator connected with said arm, whereby to turn the plate axially with the bolt as a pivot to reflect the light in various directions horizontally.

1,392,425. TIRE-BLOW-OUT CLAMP AND EMERGENCY MUD-HOOK. CARL T. LIPPOLD, Los Angeles, Calif. Filed July 22, 1920. Serial No. 398,150. 3 Claims. (Cl. 152—14.)



1. In a tractor device, a plurality of segmental units each consisting of a tread member, a clamp member hingedly connected to the tread member, a latch member hingedly connected to the clamp member, a lever integral with the latch member, a bar fixed to the tread member, said latch member engaging with the bar in operative position, and a spring adapted to press against the clamp member in operative position.

1,392,426. GRINDING-TOOL. JOHN FRANK MACDONALD, Chester, Pa. Filed Oct. 12, 1920. Serial No. 416,479. 2 Claims. (Cl. 51—206.)

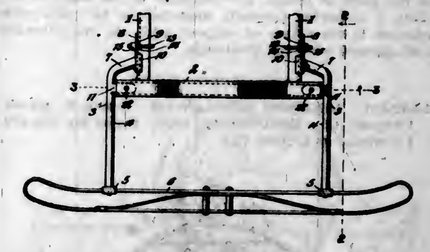


1. A boring and tool comprising a shaft, a body revoluble upon said shaft and formed cruciform in cross sec-

tion whereby to have a plurality of radial arms, segment-shaped shoes engaged upon said arms and carrying grinding members, and means for moving said shoes inwardly

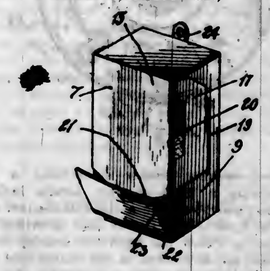
or outwardly, said means comprising disks secured upon said shaft and having their confronting faces formed with spiral grooves, and lugs projecting from the ends of the shoes and engaged within said spiral grooves.

1,392,427. FRONT-BUMPER BRACKET. GEORGE STEWARD MACLEOD, Seattle, Wash., assignor of one-half to Angus P. MacLeod, Seattle, Wash. Filed Feb. 7, 1921. Serial No. 443,081. 4 Claims. (Cl. 293—55.)



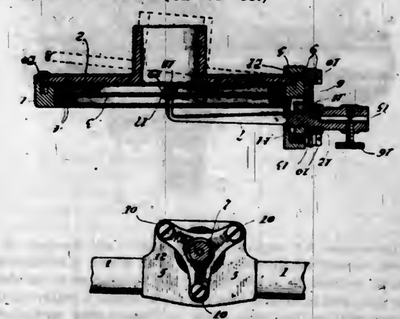
1. In an automobile fender structure, a supporting bracket for the fender, comprising an arm with a fender or bumper holder at the outer end, and an expanded fork at the inner end having branches, with one branch provided with a terminal eye and a hook bolt traversing it to engage a flange of the outer chassis frame, and the other branch slanting at an angle and terminating in an angle extension, with both the angle slanting portion and the angle extension having perforations for a U-bolt traversing the perforations and embracing the front cross member of the chassis frame.

1,392,428. REAR-BUMPER BRACKET FOR AUTOMOBILES. GEORGE STEWARD MACLEOD, Seattle, Wash., assignor of one-half to Angus P. MacLeod, Seattle, Wash. Filed Feb. 7, 1921. Serial No. 443,062. 3 Claims. (Cl. 293—55.)



1. A rear bumper bracket for automobiles, comprising a stem, with a bumper clip at one end and a plate-like expansion at the other end offset with relation to the length of the stem and provided with ears having perforated terminal portions, with the perforations spread apart to a greater extent than the height of the side bars of the automobile chassis and lugs related to over-ride and under-ride the top and bottom of a side bar of the

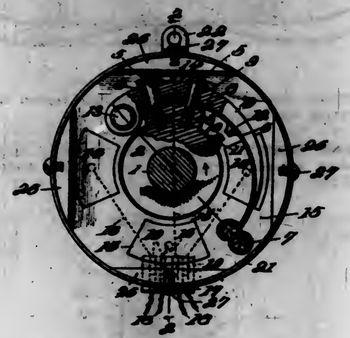
automobile chassis, and said stem having a lateral lug for introduction between the rear cross member of the



automobile chassis and the rear spring housed in and underlying said rear cross member.

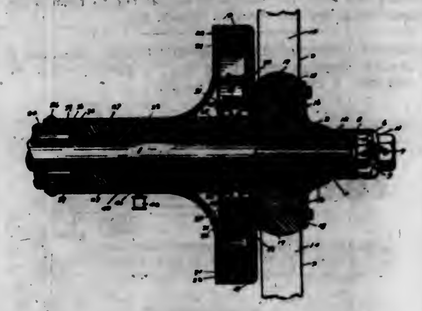
1,392,429. MATCH-BOX. HENRI MAHEUX, Montreal, Quebec, Canada. Filed Oct. 12, 1920. Serial No. 416,495. 1 Claim. (Cl. 206—31.)

In a carton such as described, the combination of opposite side and end members and a bottom therefor, an upper closing section secured to one end of the box and having interlocking engagement with the sides of the box, the lower end of the said upper closing section being tapered, a lower closing section hinged to the lower end of the box, an extension thereon fitted beneath the lower tapered edge of the upper closing section, side members formed upon the lower closing section and fitted within the box, said lower section adapted to be pulled outwardly and with the side sections thereof to form a discharge chute for the contents of said box.



1,392,430. PHONOGRAPH-REPRODUCER. ORLANDO R. MARSH, Chicago, Ill. Filed Dec. 9, 1918. Serial No. 265,890. 6 Claims. (Cl. 274—35.)

1. In a phonograph reproducer, a frame provided with a base, a diaphragm carried by the frame, in combination

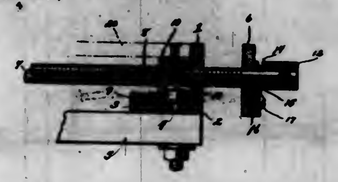


with a resilient plate supported on the base at three or more points so arranged that a line passing from one point to another point will not pass through the center of the plate to permit free vibration of the edges of the plate, a stylus-bar centrally supported by the plate with relation to the points of support, with one end extended and engaged with the diaphragm.

1,392,431. IGNITION MECHANISM. RALPH F. MEYER, Freeport, Pa. Filed May 10, 1920. Serial No. 382,559. 7 Claims. (Cl. 200—24.)

1. A contact making timber comprising a rotating member carrying a fixed contact, means including a resilient member provided with a movable contact designed to engage the fixed contact and also provided with a brush, a casing in which the rotatable member rotates, a plurality of cam pieces located in the casing and designed to engage the resilient member for causing the contacts to engage one another each time the resilient member passes over a cam piece and a stationary member provided with a plurality of conductor segments designed to be engaged by said brush.

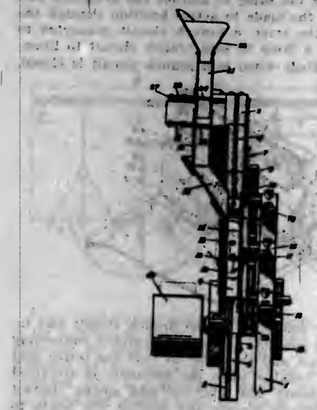
1,392,432. AUTO ATTACHMENT. FREDERICK C. MILES, San Francisco, Calif. Filed Apr. 7, 1921. Serial No. 459,861. 1 Claim. (Cl. 301—8.)



In means for supporting the rear axle housing of a Ford automobile directly on the rear wheel, a reinforcing sleeve secured to the inside of the housing so as to clear the axle and to extend into the brake drum, a collar on the sleeve within the brake drum, a flanged ring within the brake drum positioned co-axially with the collar having a plurality of perforations in its flange adapted to register with bolts securing the brake drum to the wheel and to be engaged by the bolts, and an anti-friction bearing having the collar and the ring for inner and outer races respectively.

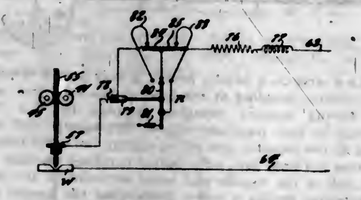
1,392,433. WHEEL-TIRE. FREDERICK C. MILLER, Chicago, Ill. Filed Jan. 17, 1921. Serial No. 438,040. 13 Claims. (Cl. 152—8.)

7. In a device of the kind described and in combination, a felly adapted to receive an outer casing thereon, an annular series of coil springs on said felly, an annular ring surrounding said felly, said springs having their inner ends secured to said ring, radial members secured to said ring and extending inwardly thereof, stirrups on said felly, said radial members being slidable through said felly and stirrups, springs between said stirrups and felly to resiliently resist the inward movement of said radial members, and locking means at the free ends of said radial members to limit the outward movement of said radial members.



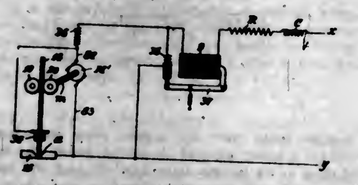
1,392,434. VISE. ROBERT M. MILLER, Milwaukee, Wis. Filed Nov. 22, 1920. Serial No. 425,692. 3 Claims. (Cl. 81—17.)

1. In a device of the character described, an angle iron, means for securing the same to a bench with one flange substantially horisontal and the other flange substantially vertical, a Z plate secured to said angle iron with its intermediate portions substantially vertical, a movable jaw having guide rods attached thereto and passing horisontally through said angle iron and Z plate, and slidably engaging the same, a threaded rod rotatably mounted in said movable jaw and held against longitudinal movement therein, said threaded rod passing horisontally through said angle iron and Z plate and threadingly engaging the latter, and means for rotating said threaded rod to open and close said jaws.



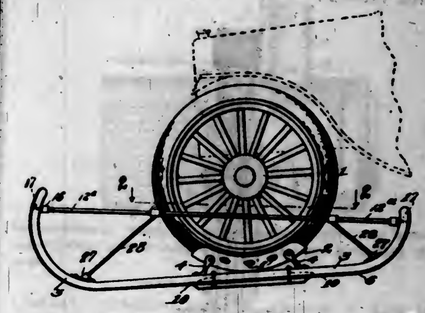
1,392,435. AUTOMATIC PRESS FOR CONCRETE BLOCKS. WILLIAM J. MILNER, Stockton, Calif. Filed May 15, 1920. Serial No. 381,561. 3 Claims. (Cl. 25—103.)

3. A concrete block press including a pair of presser heads arranged for opposed reciprocatory movement, a chamber in which said presser heads slide and adapted to receive the concrete to be pressed, a flexible wall structure for the chamber at the point where the concrete is pressed, such structure comprising a door hinged to the front of the chamber and side members hinged to the door; and automatically actuated means for clamping the door and sides firmly in position adjacent the chamber when the block is being pressed and for releasing said



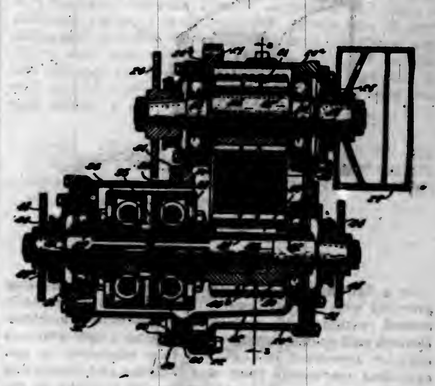
door and sides after the pressure on the block is withdrawn, whereby the door may be opened and the block removed from the chamber.

1,392,436. METHOD OF AND APPARATUS FOR ARC-WELDING. HARRY D. MORTON, Detroit, Mich., assignor to Automatic Arc Welding Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 2, 1918. Serial No. 264,929. 17 Claims. (Cl. 219—8.)



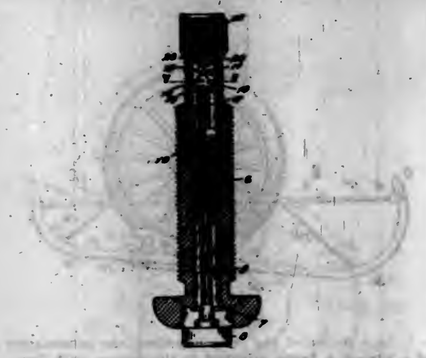
1. In a metallic electrode arc welding apparatus, means for continuously feeding a welding strip toward the work, and means for varying the rate of fusion to control the relation between the rate of fusion and the rate of feed.

1,392,437. ARC-WELDING SYSTEM AND METHOD OF OPERATING THE SAME. HARRY D. MORTON, Detroit, Mich., assignor to Automatic Arc Welding Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 2, 1918. Serial No. 264,930. 28 Claims. (Cl. 219—15.)



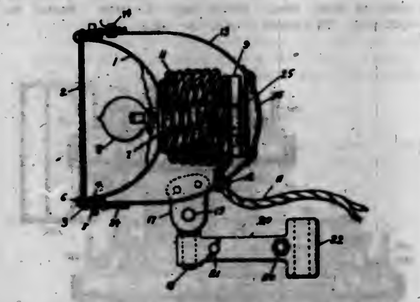
1. In a welding apparatus, a welding tool, a welding circuit, and a stabilising means constant in its effect included in said welding circuit.

1,392,438. SLEIGH ATTACHMENT FOR AUTOS. NORDAHL O. NELSON, Westby, Wis. Filed Dec. 7, 1920. Serial No. 428,939. 3 Claims. (Cl. 280—13.)



1. In a device of the class described, the combination of a runner, a frame attached to the runner, said frame including a primary coupling sleeve and a hinged arm, said arm provided at its outer end with an auxiliary coupling sleeve, said primary coupling sleeve provided with a rib, said auxiliary coupling sleeve provided with a socket portion adapted to fit over the rib, and fastening means extending through the auxiliary coupling sleeve and into the primary coupling sleeve.

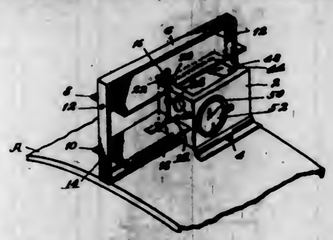
1,392,439. POWER-TRANSMITTING MECHANISM. BOUDEWIJN B. NEUTEBOOM, Detroit, Mich., assignor to The Militor Corporation, New York, N. Y., a Corporation of New York. Filed June 3, 1918. Serial No. 237,963. 13 Claims. (Cl. 64—52.)



1. In power transmitting mechanism for motor vehicles, the combination of a casing supported by the chassis of the vehicle, a driving shaft rotatably supported by the casing and having operative connection with the power plant, a member journaled within the casing on an axis parallel to that of the driving shaft, a driven shaft journaled within said member eccentric with respect to the journals of said member but parallel to the axis thereof, driving connections between the shafts and located within the casing, and means exterior of the casing for rotating the member within the casing, the driven shaft having connection with the driving wheels of the vehicle.

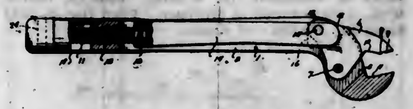
1,392,440. VALVE CONTROL FOR PNEUMATIC TIRES. Joseph M. Newsom, St. Louis, Mo., assignor to Newsom Valve Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 5, 1920. Serial No. 356,544. 3 Claims. (Cl. 152—12.)

1. In a valve control of the class described an element comprising wards arranged for fitment in a valve tube to be engaged by a valve-stem depressing key.



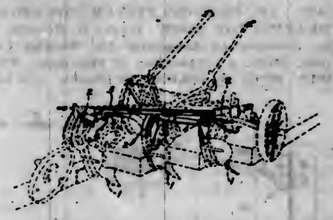
1,392,441. ELECTRIC LAMP. John P. Nikonow, New York, N. Y., assignor, by mesne assignments, to The Hawthorne Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Apr. 9, 1919. Serial No. 288,775. 1 Claim. (Cl. 240—7.)

In a lighting apparatus, the combination of a housing provided with a front opening; a portable unit normally housed within said casing and removable therefrom through said opening, said unit comprising a light-source, a reflector associated therewith, a tube supported by and extending rearwardly from said reflector and supporting said light-source, a disk carried by and adjacent to the rear end of said tube; and light-source supply conducting means extending from said light-source within said tube and laterally therethrough forward of said disk and through said casing to the exterior of the latter, said conducting means being normally wound on said tube forward of said disk.



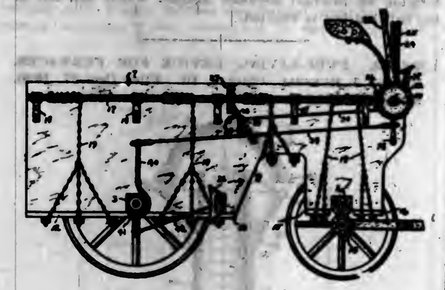
1,392,442. DIRECTION-INDICATING SIGNAL. George B. Owens, Merriam, Kans. Filed June 1, 1920. Serial No. 386,525. 1 Claim. (Cl. 177—329.)

A device of the character described, consisting of a rockably-mounted signal blade, a lever associated with said blade to rock the same to active and inactive positions, an armature on said lever, a normally deënergized electromagnet, a main circuit to energize said electromagnet and cause the same to attract the armature and effect rotation of the blade to active position through the intermediacy of the lever, a branch circuit connected to the main circuit, a lamp in said branch circuit to illuminate the signal blade when said branch circuit is closed,



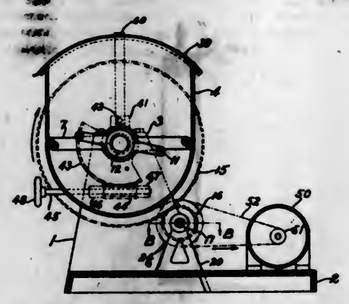
a circuit breaker connected to the branch circuit and including a spring contact, and a rod operably connecting said spring contact and the lever so that the latter may close the circuit breaker when the armature is attracted by the electromagnet and whereby said spring contact may open the branch circuit and restore the blade to inactive position through the intermediacy of the lever when the electromagnet is deënergized.

1,392,443. WRENCH. William Petersen, De Witt, Nebr. Filed Feb. 26, 1921. Serial No. 447,940. 2 Claims. (Cl. 81—111.)



1. In a wrench, a handle having a fixed jaw, a movable jaw pivotally mounted at the base of the fixed jaw, said jaws having member engaging gripping faces, a link engaging in and longitudinally of the handle and connected to the movable jaw for operating the same toward and from the fixed jaw, an actuator threaded through the other end of the handle and being swiveled to the link, said actuator having a sleeve telescoping the handle and being substantially of uniform diameter with the handle.

1,392,444. PLOW-BEAM BRACE. Carl E. Peterson, Kerkhoven, Minn. Filed Nov. 12, 1920. Serial No. 423,582. 3 Claims. (Cl. 97—68.)



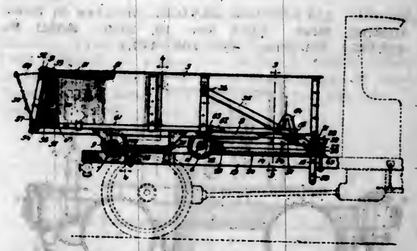
1. A plow beam brace for a gang plow comprising a longitudinal member adapted to extend across the beams of said plow at an intermediate point thereof and having pairs of spaced lugs depending therefrom and adapted to tightly embrace said beams, and plates connecting the lugs of each pair bolted thereto and disposed beneath said plow beams, to tightly and rigidly inclose said beam.

1,392,445. DUMP-WAGON. Peter A. Peterson, Omaha, Nebr. Filed June 24, 1920. Serial No. 391,474. 3 Claims. (Cl. 298—24.)

1. In combination with a vehicle body having openings in its bottom and having doors hingedly mounted thereon adjacent to said openings, a pair of operating-shafts mounted on the sides of the vehicle body, each being provided with a gear wheel, flexible strands connecting the operating shafts with the doors and adapted to be moved by a revoluble movement of the operating-shafts for moving the doors into closed relation with said openings, a sleeve, a pair of tubular clutch-members each circumscribing the sleeve and having bearings in the vehicle-body, a pair of gear-wheels each being provided with a clutch-member and rigidly mounted on a stub-shaft in engagement with a gear-wheel of an operating shaft, means for moving the clutch-members on the sleeve into engagement with the clutch-members of the gear-wheels of the stub-shafts, and means to rotate the sleeve for rotating the operating-shafts.

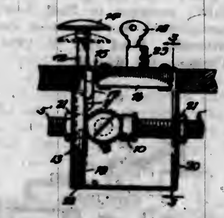
1,392,446. DOUGH-MIXER. Bryan D. Pinkney, Newport, Ky. Filed Nov. 13, 1920. Serial No. 423,797. 6 Claims. (Cl. 259—105.)

1. In a dough mixer, a plurality of mixing arms, and means controlled by the variations in the consistency of the material worked upon to automatically change the speed ratio of the mixing arms, so that a homogeneous substance is effected.



1,392,447. FUEL-ECONOMIZER. George L. Pagtz, Clovis, N. Mex. Filed Apr. 20, 1918. Serial No. 229,715. 2 Claims. (Cl. 162—7.)

1. In a device of the class described the combination of a chamber having an outlet, a fire box and a communication between the fire box and the chamber, an exhaust port exhausting into the chamber and a bar positioned in the chamber and arranged between the exhaust port and the outlet transversely to the outlet and exhaust port, said bar permitting the exhaust from the exhaust port to at all times pass into the outlet, said bar being secured

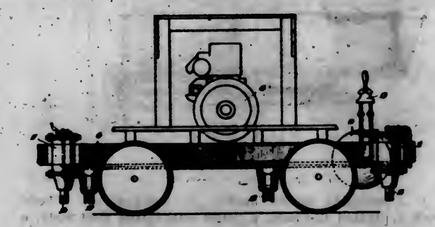


for movement relatively to the exhaust port and outlet and having means connected thereto for actuating the same.

1,392,448. DUMPING DEVICE. Charles F. Randall, Chicago, Ill. Filed Sept. 20, 1919. Serial No. 325,163. 4 Claims. (Cl. 298—14.)

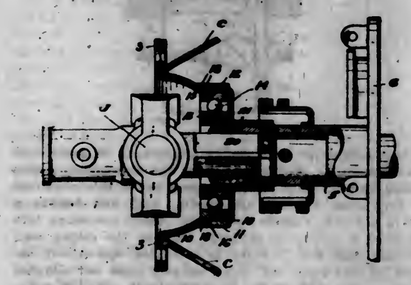
1. A dumping device having in combination, a body with a pivoted tail-gate, a roller supporting said body, a rack and pinion, a lever connected to the axis of said pinion and pivotally secured to said body for sliding and tilting said body upon said roller, a latch for holding said tail-gate in closed position, and means operated by said lever for releasing said latch when said body has been tilted.

1,392,449. CUT-OFF FOR GASOLENE-FEED ON MOTOR-VEHICLES. Bernard W. Richards, Chicago, Ill. Filed Mar. 18, 1920. Serial No. 366,773. 1 Claim. (Cl. 251—6.)



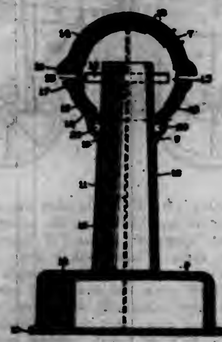
The combination of a casing adapted to be secured to an automobile, a fuel feed pipe for the automobile engine passing through said casing, a push bar within said casing projecting through the casing wall and having a bore in one end, a guide rod on the casing extending into said bore, a spring on said rod between the casing wall and said push bar, a valve in said pipe operatively engaged by said push bar, a lug on said push bar adapted to engage the wall of the casing to limit outward movement of said push bar, and means to engage the lug to lock the push bar in inward position.

1,392,450. FUEL-OIL BURNER. JOHN EDWARD ROGERS, Imperoyal, Nova Scotia, Canada. Filed Nov. 1, 1920. Serial No. 421,055. 4 Claims. (Cl. 158—75.)



1. A fuel oil burner comprising a fuel nozzle, a steam nozzle, each of the said nozzles having a suitable discharging port which said ports are adjacent to each other and being adapted to discharge in a plane substantially at right angles to the ports, and independently adjustable controlling plates for each nozzle adapted to be adjusted in a plane transverse to the plane of discharge of the fuel

1,392,451. AIR-LIFTING DEVICE. WILLIAM N. ROWE, Hibbing, Minn. Filed Nov. 10, 1920. Serial No. 423,145. 3 Claims. (Cl. 105—177.)



1. In combination with a car adapted to run upon rails, main wheels running on the rails, and supplemental wheels, a source of compressed air carried by the car, air lines leading from said source to a plurality of air cylinders carried by the car and having pistons with portions adapted to lift the car vertically, said pistons being independent of said main and supplemental wheels.

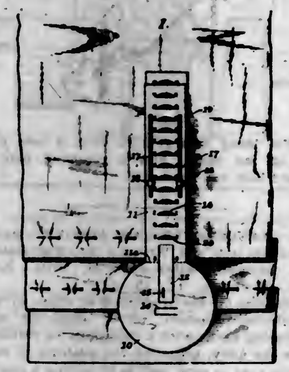
1,392,452. TRANSMISSION-BEARING AND UNIVERSAL-JOINT CAP. GLOVER EDWIN RUCKSTELL, San Francisco, Calif., assignor to Hall Scott Motor Car Company, Incorporated, San Francisco, Calif., a Corporation of California. Filed July 19, 1920. Serial No. 397,320. 6 Claims. (Cl. 64—89.)

4. The universal joint cap and casing end of a motor vehicle, said cap having its usual smaller end removed and a sleeve applied in its stead, and a ball bearing retained in the sleeve to take the contiguous end of a drive element of the transmission, said sleeve and cap forming an internal shoulder against which one end of the ball bearing is abutted.

1,392,453. FUEL-SAVING DEVICE FOR FURNACES. NELSON J. RUSSELL, Chicago, Ill. Filed Dec. 27, 1920. Serial No. 433,345. 1 Claim. (Cl. 126—163.)

A fuel saving device, consisting of a relatively flat hollow base having its lower portion open, an upright chimney centrally mounted on the upper surface of the base in communication with the cavity thereof and a casing surrounding the upper portion of the chimney and mounted thereon, said casing forming an expansion chamber and provided with a horizontally disposed opening for the discharge of air.

1,392,454. PROCESS FOR WITHDRAWING FLUIDS FROM SEALED CONTAINERS WITHOUT CONTAMINATION. JOHN J. SEELMAN, Milwaukee, Wis. Filed Mar. 10, 1920. Serial No. 364,862. 2 Claims. (Cl. 167—7.)

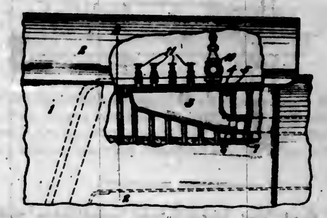


1. The process of withdrawing fluid used for injection purposes from a container for said fluid, which consists in drawing the fluid into the needle of the syringe kept out of contact with the air and simultaneously introducing into the space in the container not occupied by fluid sterilized air to take the place of the withdrawn fluid.

1,392,455. SEWER'S GAGE. PHILIP C. SIMONS, New York, N. Y., assignor to The Butterick Publishing Company, New York, N. Y., a Corporation of New York. Filed Sept. 23, 1919. Serial No. 325,785. 3 Claims. (Cl. 33—9.)

1. A sewer's gage of sheet material, comprising a member forming a base; a second member, connected with

the first member and adapted to lie in the plane of the latter or to be bent up at right angles to form a standard, said second member having a plurality of transverse apertures spaced one beyond the other; and means for holding said second member in vertical position, comprising a folding brace, connected at one end to one



of said members and adapted to extend flat across the line of juncture of said members when the two latter are in the same plane, and a device carried by the other member and adapted for releaseable engagement with the free end of the brace to hold the same when the said second member is in vertical position.

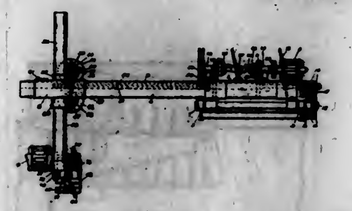
1,392,456. FAUCET WITH DRINKING ATTACHMENT. NOAH SPATTER, Kansas City, Mo., and ATANAS WKLIKOFF, Wilkes-Barre, Pa. Filed Jan. 7, 1919. Serial No. 269,964. Renewed Feb. 26, 1921. Serial No. 448,075. 7 Claims. (Cl. 299—9.)

1. A faucet provided with a member adapted to communicate with a water supply passage of the faucet and to direct water from such passage to a discharge opening independent of the normal discharge opening of the faucet; said member comprising a tube concentrically and resiliently mounted to play within a chamber in the faucet valve and its stem, said tube having a port for water ingress.

1,392,457. INVISIBLE CAB-TURRET. HAL R. STAFFORD, North Plainfield, N. J.; Mary M. Stafford administratrix of said Hal R. Stafford, deceased. Filed Nov. 17, 1919. Serial No. 338,634. 7 Claims. (Cl. 105—37.)

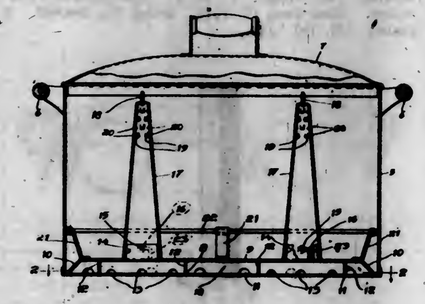
1. A locomotive boiler having a steam turret secured upon the inside of the boiler and steam supply valves connected with said turret, but located upon the outside of the boiler.

1,392,458. TYPEWRITER-RIBBON. HARRY S. STARK, Park Ridge, N. J., assignor to Mittag & Volger, Incorporated, Park Ridge, N. J., a Corporation of New Jersey. Filed June 12, 1919. Serial No. 303,607. 1 Claim. (Cl. 197—172.)



A writing-machine ribbon of customary textile weave having adjacent parallel longitudinal stripes or bars of differently colored inks, and an applied narrow dividing line between the same of glue serving as an oil-repellent and adapted to prevent the merging of the bars of color at their adjacent edges into one another, said lines of glue penetrating the fabric of the ribbon.

1,392,459. APPARATUS FOR CUTTING BRICKS OR BLOCKS FROM NATURAL DEPOSITS. EDWARD B. STARR and HOWARD E. MARSH, Lompoc, Calif. Filed Jan. 31, 1921. Serial No. 441,346. 4 Claims. (Cl. 262—19.)



1. An apparatus for cutting bricks or blocks from a natural bank of material comprising a vehicle adapted to move parallel to the bank face, guide means extending laterally from said vehicle, a slide member mounted to slide on said guide means, motor-driven controllable means for moving said slide member along said guide

means, a cutter head mounted on said slide member to move vertically thereon, sewing means carried by said

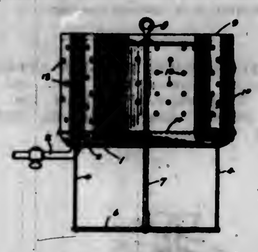
cutter head, and motor-driven controllable means for moving said cutter head vertically on said slide member.

1,392,460. ATTACHMENT FOR WASHBOILERS. JOHN I. STERN, Waukegan, Ill., assignor to Triple Metals Corporation, Waukegan, Ill., a Corporation of Illinois. Filed Oct. 6, 1920. Serial No. 415,023. 1 Claim. (Cl. 68—20.)

A device of the class described, consisting of a base having its edges downwardly deflected therefrom and adapted to rest on the bottom of a boiler thereby forming a chamber between said base and the bottom of the boiler, said deflected portion of the base having spaced recesses therein, a pair of spaced upright tubes mounted on the base at a distance from its edges in communication with said chamber, a perforated annulus mounted on the lower surface of the base around each of said tubes and each adapted to rest on the bottom of the boiler, a pipe interlockingly and detachably connected at its lower end to each of said tubes and having its upper end closed and below said end a plurality of openings, an inwardly and downwardly disposed deflector located within each of said pipes above each of the openings in the upper part thereof, a hook or loop on the upper end of each of said pipes, and a horizontally disposed rail supported by the base at a distance above the same along its edges.

1,392,461. AUXILIARY SEAT FOR BABY-CARRIAGES. EDWARD H. STRUMMING, Tonawanda, N. Y. Filed Feb. 6, 1919. Serial No. 275,378. 1 Claim. (Cl. 155—10.)

A seat for a baby-carriage, having an adjustable T-shaped foot-rest comprising a single length of wire doubled on itself to form the shank of the rest, the end portions of the wire being bent laterally in opposite directions to form foot-supports, the middle portions of the

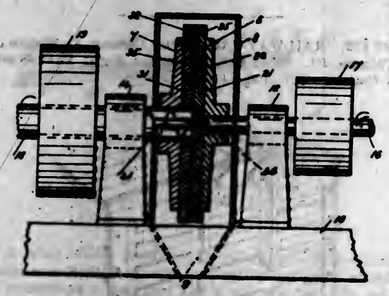


doubled wire being separated to form a loop extending crosswise of the board, and a clamping bolt passing through said loop and the board.

1,392,462. MANUFACTURE OF ALLOYS. HENRY LIVINGSTONE GULMAN and WILLIAM BOWMAN BALLANTINE, London, England. Filed June 21, 1919. Serial No. 305,869. 20 Claims. (Cl. 75—17.)

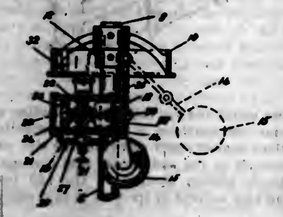
1. The process for the production of alloys by high temperature thermo-reduction, which comprises mixing a thermo-reducing agent with a compound of certain metals required in the alloy, adjusting the quantity of one of the metals above that in combination by adding a compound of that metal with another metal required in the alloy, and igniting the mixture to reduce the compounds to the metallic state.

1,392,463. GASIFIER FOR LOW-GRAVITY OILS. THOMAS M. TAGGART, Belvedere, Calif. Filed Feb. 7, 1920. Serial No. 357,056. 2 Claims. (Cl. 158—86.)



1. In a burner a gasifier for low gravity liquid fuel formed of thin metal and of annular form and supported from below an annular chamber formed about a central axis and within which said gasifier is disposed and through which it may be raised, means extending through the bottom of said chamber and supporting said gasifier and a central member extending upward substantially at the chamber axis and adapted to operate said supporting means from above the burner to raise and lower said gasifier in said chamber.

1,392,464. GRINDING-MILL. CARL G. THOMPSON, Knoxville, Tenn. Filed Oct. 30, 1920. Serial No. 420,666. 1 Claim. (Cl. 83—8.)



In a mill for re-grinding bran and other similar material, two horizontal driving shafts arranged end to end, one of the said shafts being tubular, means for revolving the said shafts at different speeds in the same direction, opposed vertical grinding heads secured on the said shafts, metallic inner grinding rings secured to the said heads and provided with relatively coarse saw-shaped grinding teeth which work point to point, metallic outer grinding rings encir-

cling the inner grinding rings and provided with feed furrows and finely serrated grinding surfaces arranged alternately, and means for forcing the material to be re-ground

under pressure through the tubular shaft and between the inner grinding rings into the feed furrows of the outer grinding rings.

1,392,465. DRIVING MECHANISM. CARL G. THOMPSON, Knoxville, Tenn. Filed Feb. 12, 1921. Serial No. 444,421. 5 Claims. (Cl. 74—14.)

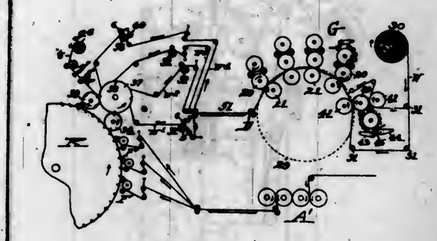
1. The combination, with a gyratory device, of a driving shaft journaled therein, a weighted driving arm pivotally connected with the said shaft, and a dash-pot cylinder closed at each end and provided with a piston and piston-rod, said dash-pot cylinder and its piston-rod being operatively connected with the said shaft and arm and controlling the pivotal movements of the arm in each direction.

1,392,466. CAN-OPENER. HENRY TILL, Pittsburg, Calif. Continuation of applications Serial No. 335,355, filed Nov. 3, 1919, and Serial No. 346,025, filed Dec. 10, 1919. This application filed June 1, 1920. Serial No. 385,527. 5 Claims. (Cl. 30—3.)

1. A can opener comprising a shank, a rotary cutting disk thereon, and a sharp edged and narrow lip projecting from the periphery of the cutter and in the same plane as the cutting edge thereof.

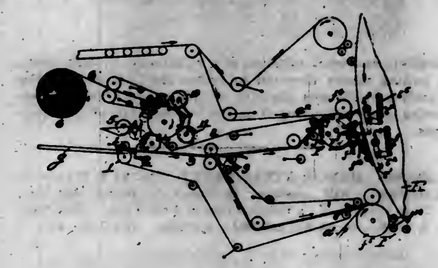
1,392,467. WINDOW AND DOOR SECURER. CHARLES A. TOPP, Lebanon, Mo. Filed Apr. 28, 1920. Serial No. 376,789. 1 Claim. (Cl. 292—339.)

A window and door securer comprising two similar members having butt inner ends and beveled outer ends, a hinge connection between the butt ends of the members at one side thereof permitting the members to extend in alinement or fold flat against each other, the bevels of the outer ends of the members converging toward the hinged sides of the



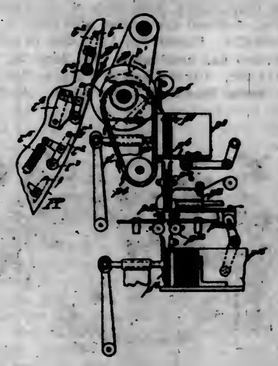
members and being disposed at a right-angle to each other, a locking means mounted to bridge the butt ends of the members at the side opposite the hinge connection, and securing spurs projecting from the beveled ends of the members.

1,392,468. PENCIL ATTACHMENT. HENRY E. WATKINS, Oakland, Calif., assignor to Frank A. Weeks Mfg. Co., New York, N. Y., a Corporation of New York. Filed Dec. 9, 1918. Serial No. 265,964. 1 Claim. (Cl. 120—87.)



A pencil point protector formed of flexible and resilient material and having a tubular body for fitting upon a pencil in spaced relation thereto, a tapered extension formed at the outer end of said body for fitting in tight engagement with the sharpened end portion of a pencil and having an opening for passage of the pencil lead, the inner end portion of the body being tapered and inwardly thickened to provide a gripping flange for engaging the pencil and holding the guard in position thereon.

1,392,469. INSERT-PRINTING PRESS. HENRY A. WISE WOOD, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Original application filed Sept. 7, 1910, Serial No. 580,870. Patent No. 1,232,639, dated July 10, 1917. Divided and application filed June 29, 1917, Serial No. 177,652. Divided and this application filed Jan. 31, 1919. Serial No. 274,217. 9 Claims. (Cl. 270—19.)

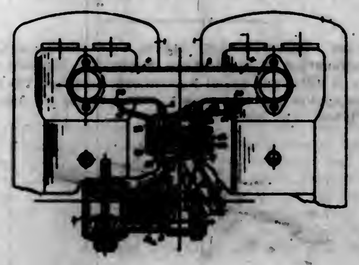


3. In a printing press, the combination with a series of plate cylinders comprising a plate cylinder movable into two positions, and two impression cylinders for the last named plate cylinder, each adapted to contact therewith when it is in one of its extreme positions, of two ink fountains, and an inking device adapted to coöperate with either of the fountains and deliver ink to the said last named plate cylinder in each of its positions.

1,392,470. **INSERT FEEDING AND CUTTING DEVICE.** HENRY A. WISE WOOD, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Original application filed Sept. 7, 1910, Serial No. 580,870. Patent No. 1,232,639, dated July 10, 1917. Divided and application filed June 29, 1917, Serial No. 177,652. Divided and this application filed Jan. 31, 1919. Serial No. 274,218. 10 Claims. (Cl. 270—49.)

1. In a printing press, the combination with means for receiving insert sheets of means for feeding a web, a cylinder for receiving the web, a plurality of cutting cylinders each adapted to be brought into operative engagement with said cylinder for dividing the web into sheets, said cutting cylinders having different numbers of cutting knives thereon, and means for associating the sheets cut thereby with the insert sheets.

1,392,471. **MACHINE FOR DELIVERING MAGAZINES AND THE LIKE.** HENRY A. WISE WOOD, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Original application filed Sept. 7, 1910, Serial No. 580,870. Patent No. 1,232,639, dated July 10, 1917. Divided and this application filed June 29, 1917, Serial No. 177,652. Renewed Apr. 15, 1921. Serial No. 461,677. 16 Claims. (Cl. 270—51.)



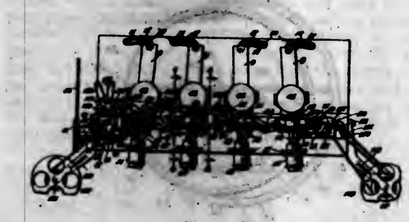
1. In a delivery, the combination of a delivery member for receiving the sheets and signatures to be delivered, a traveling conveyer having means thereon in position to receive each sheet or signature as it passes over the delivery side of the delivery member to support the same, a collating box having a reciprocating bottom past which the conveyer is adapted to move and normally projecting out into position to extend under the sheets and signatures as they are lowered, means for collecting a plurality of bundles of sheets or signatures in the collating box, and means for periodically withdrawing said bottom to permit said bundles of sheets and signatures to drop from the collating box.

1,392,472. **RAILWAY-CAR END.** GEORGE A. WOODMAN, Chicago, Ill. Filed Dec. 28, 1918. Serial No. 268,607. 6 Claims. (Cl. 105—410.)

4. A sheet metal end for railway cars having a plurality of transverse corrugations, a pair of vertically disposed rolled sections spaced apart and from the side edges of the end and secured to the end across said corrugations, and a buffer block section secured to the end between the sections and also secured at its ends to said rolled sections.

1,392,473. **REATOMIZER.** FREDERICK O. BALL, Detroit, Mich., assignor to Ball & Ball Carburetor Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 4, 1920. Serial No. 408,242. 17 Claims. (Cl. 261—66.)

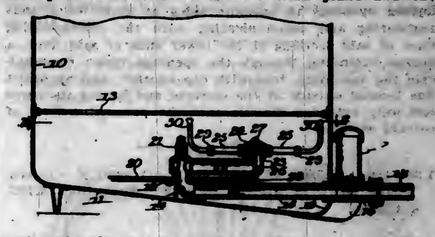
1. In a reatomiser, the combination of a wall forming a mixture passage; a liquid collector opening from said wall and intercepting ingoing fluid from said wall; and means for driving the fuel from the collector by a current of gaseous fluid passing through the collector and spraying the liquid into the mixture passage.



3. In a reatomiser, the combination of a wall forming a mixture passage; a liquid collector opening from said wall and intercepting ingoing liquid; means inducing a current of mixture through the opening; and means returning the fuel collected into the current of mixture in the mixture passage.

1,392,474. **WINDSHIELD-PROTECTOR.** JOSEPH BERARD, Columbus, Ohio. Filed Aug. 3, 1920. Serial No. 400,973. 2 Claims. (Cl. 296—95.)

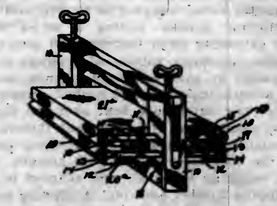
1. A wind shield protector including, in combination, suitable standards, a top for connection with said standards comprising a rear part and a forward part, the rear part including a pair of longitudinally slotted side bars, a threaded rod and clamping nuts thereon connecting said side bars to said standards, the forward part of said top including side bars each having a longitudinal slot and a hole in the end thereof beyond said slot, clamping means connecting the forward ends of the rear side bars with the rear ends of the forward side bars at their slots adapted to permit the sliding of the forward side bars with relation to the rear side bars, and means connecting the forward side bars at the rear holes thereof at the slots of the rear bars adapted to hold the forward and rear bars in parallel relation to each other, a rod connecting the forward ends of the forward side bars and separate coverings secured to and extending between said rear and forward side bars respectively.



1,392,475. **MOTION-PICTURE APPARATUS.** GEORGE W. BINGHAM, Cleveland, Ohio, assignor to The International Moving Picture & Film Company, Nashville, Tenn., a Corporation of Tennessee. Filed Oct. 23, 1918. Serial No. 259,362. 20 Claims. (Cl. 88—16.6.)

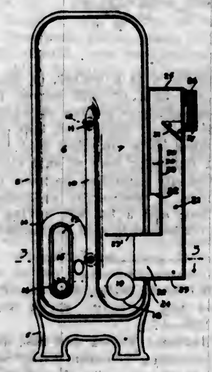
1. In a motion picture apparatus, the combination of a plurality of cinematographic units pivoted for angular adjustment with respect to each other, the pivotal and focal axes of each unit intersecting, and means for directing a film through the focal axes of the several units substantially at the point of intersection of their respective pivotal axes.

1,392,476. **DISH-WASHING MACHINE.** WALTER U. BOSOMWORTH, Chicago, Ill., assignor, by mesne assignments, to H. B. Corporation, Chicago, Ill., a Corporation of Illinois. Filed Sept. 27, 1920. Serial No. 412,960. 3 Claims. (Cl. 299—69.)



3. In a dish washing machine, the combination with a revolving sprinkler head, and a pivoted arm through which water is supplied to said head, of planetary gearing having one member stationary and the other member secured to said head, said parts being so constructed that the sprinkler head revolves in a fixed plane and the water therefrom is projected uniformly upward at a slight incline from said plane.

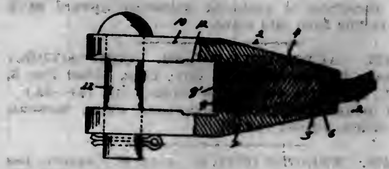
1,392,477. **AUTOMOBILE-POLISH, (COMPOSITION.)** THOMAS BROWN, Salt Lake City, Utah. Filed Feb. 3, 1921. Serial No. 442,166. 3 Claims. (Cl. 134—24.)



1. A polish composition comprising water, beeswax, soap, shellac, alcohol and oil.

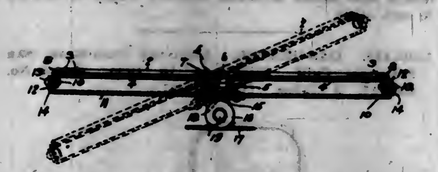
1,392,478. **WRINGER DEVICE.** PAUL W. CARROLL, Des Moines, Iowa. Filed Nov. 20, 1919. Serial No. 339,455. 3 Claims. (Cl. 68—32.)

1. The combination of a wringer having rolls with a pair of rollers spaced from said rolls, endless flexible members designed to extend around the respective rolls and rollers, and means formed on said rollers for alternately moving the adjacent stretches of the endless members toward and from the rollers as they pass over said means, said means including members staggered relative to each other.



1,392,479. **GAS-HEATER.** LEGENDRE CINQ-MARS, San Francisco, Calif. Filed Aug. 10, 1920. Serial No. 402,717. 3 Claims. (Cl. 126—91.)

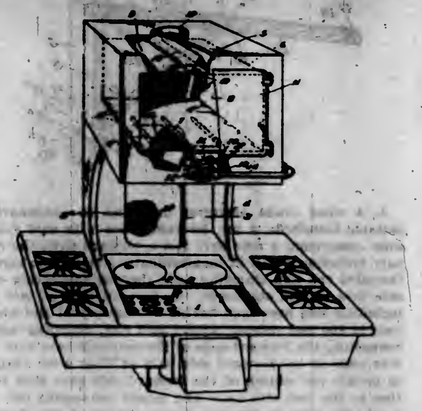
1. A gas heater embodying in its construction identically constructed heater sections each of which comprises



an ascending flue and a descending flue communicating with one another at their upper ends only, said sections having openings in opposite sides at their lower ends registering and communicating with the corresponding flues of said sections at the lower ends of said flues, a burner extending through the openings which communicate the ascending flues with one another, and an outlet flue located outside of the sections and having its lower end only extended directly into the descending flues of certain sections.

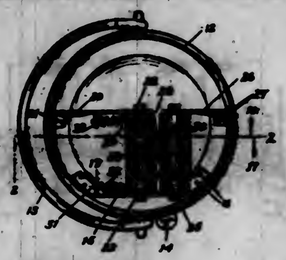
1,392,480. CABLE CONNECTION. ALBERT E. CLARKE, Detroit, Mich. Filed Apr. 15, 1920. Serial No. 374,163. 4 Claims. (Cl. 24—126.)

1. The combination with a stranded cable, having the strands at one end separated, of a body having an outwardly tapering recess adapted to receive said strands, a conical gripping member having a series of annular rearwardly extending teeth thereon, said conical gripping member being insertible within said conical passage-way and surrounded by said separated strands, said strands extending longitudinally of said conical gripping member and having their outer ends bent over the inner end of said conical member and lying adjacent thereto, a washer gripping member having a series of concentric teeth engageable with the bent over ends of said strands, and a nut threadedly engaging said body and adapted to force said washer gripping member and conical gripping member outwardly relative to said conical passage-way.



1,392,481. MIRROR-SUPPORT. GEORGE F. COLBERT and WILLIAM H. COLBERT, Pittsburgh, Pa. Filed Apr. 19, 1921. Serial No. 460,884. 3 Claims. (Cl. 45—97.)

1. The combination with a mirror, of clamping plates extending along the back of said mirror longitudinally thereof, said clamping plates having outwardly projecting clips engaging the ends of the mirror, lugs on said clamping plates, adjusting bolts engaging said lugs, inwardly extending lugs at the outer ends of said clamping plates, a bar having outwardly extending portions pivotally connected to said lugs, a rearwardly extending horizontal portion on said bar, and a bracket having a horizontal portion pivotally connected to said horizontal extension.

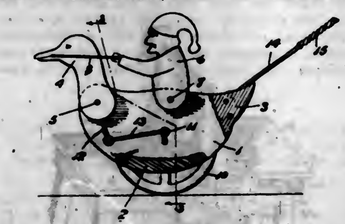


1,392,482. COOKING-RANGE. EDWARD P. COLE, Chicago, Ill. Filed Aug. 9, 1919. Serial No. 316,478. 3 Claims. (Cl. 126—17.)

1. In a stove having a firebox and flue, an oven structure comprising a casing communicating with said flue at its bottom and having an outlet flue at its top, an oven proper arranged within said casing and separated therefrom at its sides and top by heating passages communicating with said flues, and a partition inclosing a compartment at the bottom of said oven and above the bottom of the casing above said first-mentioned flue, an opening being provided permitting the admission of outside air into said compartment, said oven being provided with openings at top and bottom arranged to permit passage

of air from said compartment to said outlet flue, and a hollow shield secured to the top of said oven above its top openings and having imperforate sides arranged transverse to the path of products of combustion passing over the top of the oven into said outlet flue, said shield opening into the flue passage between the casing and oven.

1,392,483. MOP-BUCKET. ARMIN A. CUNNINGHAM, Omaha, Nebr., assignor of one-half to Garrett P. Wig, Omaha, Nebr. Filed Feb. 5, 1921. Serial No. 442,790. 2 Claims. (Cl. 15—12.)

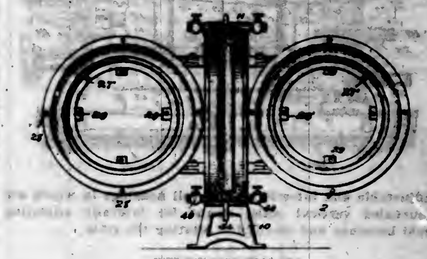


1. In combination with a bucket, a supporting bar mounted therein and provided with a slot and a perforated lug bent at substantially right angles from the bar away from the adjacent side of the bucket, a pair of arms extending across substantially the central part of the bucket and lying approximately parallel with said bar whereby to leave a large space at the other side of said arms away from the bar clear, one of said arms being provided with a slot therein and a perforated lug bent toward said first mentioned lug, a pair of rollers provided with trunnions extending therefrom, the trunnions of one roller being fitted in one of said arms and the bar, the trunnions of the other roller being slidably fitted in the slots in the other arm and bar, plunger brackets connected to the trunnions mounted in said slots and having abutments, rods extending from the abutments and being slidable in said perforated lugs, and resilient means on said rods between the lugs and abutments.

1,392,484. TOY BOAT. ABBOTT B. DAVIS, Saugatuck, Mich. Filed Jan. 19, 1920. Serial No. 352,427. 2 Claims. (Cl. 46—37.)

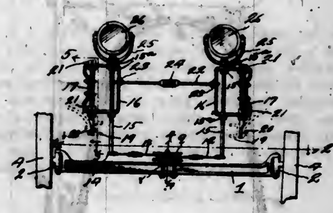
1. In combination, a miniature boat, a supporting plate extending between and pivotally mounted on the sides of the boat, a figure attached to and extending upwardly from said plate, arms pivotally mounted on and extending from the figure, cams pivotally mounted on the boat and connected at their inner ends to the outer ends of said arms, a shaft formed with an intermediate offset portion mounted between the sides of the boat below the supporting plate, a U-shaped stirrup attached to the supporting plate between the sides of which the offset portion of the shaft passes, a link attached to said offset portion of the shaft at one end and to the arms at its opposite end, and means for turning the shaft, substantially as and for the purposes described.

1,392,485. TOY DUCK. ABBOTT B. DAVIS, Saugatuck, Mich. Filed July 29, 1920. Serial No. 399,818. 7 Claims. (Cl. 46—45.)



1. A toy comprising a body having spaced apart sides, a weight secured between the sides at the lower portion of the body, a shaft extending through the body and formed with a crank portion between said sides of the body above the weight, a neck and head portion pivotally connected at its lower end to the body between the sides thereof, a stirrup extending downwardly from the said head and neck portion, a link connecting the stirrup with the crank portion of the shaft, wheels connected with the ends of the shaft, and means for propelling the toy over the floor, said weight normally holding the body in upright position, substantially as described.

1,392,486. FOLDING STAND. ROBERT E. DICE, Indianapolis, Ind. Filed Apr. 17, 1920. Serial No. 374,640. 3 Claims. (Cl. 248—41.)

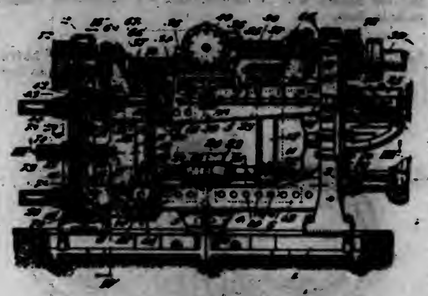


2. A foldable stand comprising a group of braces hinged together so as to occupy parallel or radiating positions, a leg member hinged to each brace, the brace members being so proportioned when folded into parallel position that the leg hinges will be alined, and leg extensions hinged to said legs.

1,392,487. TIRE-MOLD. JOHN RUSSELL BASS, Chattanooga, Tenn. Filed Feb. 17, 1921. Serial No. 445,638. 6 Claims. (Cl. 18—18.)

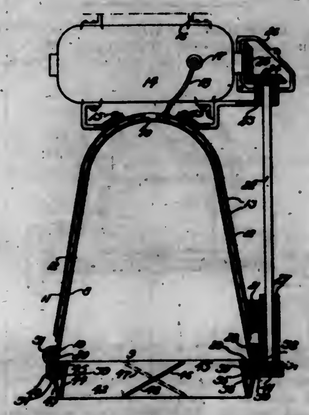
1. In a vulcanizer, a tread mold, a pair of side molds hinged to said tread mold, means to draw said side molds together, and other means to hold said side molds adjustably apart.

1,392,488. DIRIGIBLE HEADLIGHT FOR VEHICLES. CHARLIE FRED FLETCHER, Farmington, W. Va. Filed Mar. 11, 1921. Serial No. 451,501. 1 Claim. (Cl. 240—62.)



The combination with a front axle of a motor driven vehicle having wheels pivoted at the ends thereof and controllable by a transversely disposed rod located behind said axle, of a dirigible light mechanism for the vehicle, said dirigible light mechanism comprising vertically disposed lamp posts having lamps at their upper ends, the lower ends of said posts terminating above the axle and provided with forwardly and rearwardly extending arms, a horizontally disposed drum pivoted on the axle substantially centrally thereof and between the lamp posts, cables extending around said drum and having their ends connected to the forwardly and rearwardly extending arms, said cables being anchored to the drum, a rearwardly, downwardly and upwardly extending arm carried by the drum, a member clamped to the connecting rod for controlling the wheels carried by the axle, a rearwardly extending plate carried by said connecting rod member, the upper end of the rearwardly, downwardly and upwardly extending arm being disposed in an elongated aperture in the rearwardly extending plate carried by the connecting member.

1,392,489. UNIVERSAL MILL. HARRY R. GEER, Johnstown, Pa. Filed July 26, 1920. Serial No. 398,977. 14 Claims. (Cl. 80—36.)

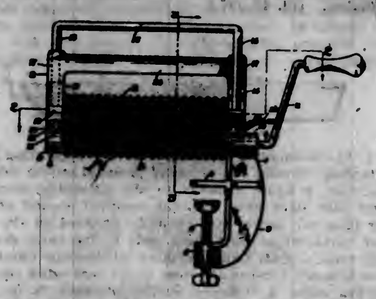


10. In a universal mill, end frames, upper and lower guides frames of unitary construction extending there-

between and secured thereto, slideways in said guide frames adapted to guide and support a pair of laterally

adjustable and interchangeable roll housings in which are journaled vertical rolls, means for laterally adjusting said housings and means for rotating the rolls.

1,392,490. COMBINED MEASURING AND DISPENSING DEVICE. CHARLES H. GEISTE and WILLIAM KLINE, Philadelphia, Pa. Filed June 7, 1920. Serial No. 386,942. 24 Claims. (Cl. 107—48.)



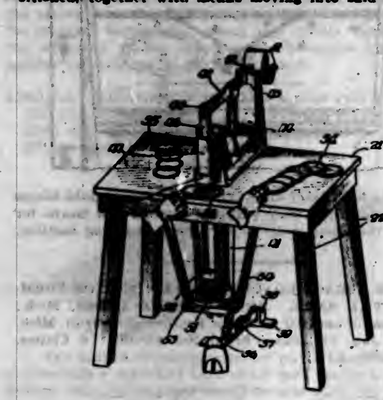
1. A measuring container adapted to be projected into a receptacle containing material to be measured out and including an open mouth; and a propeller located adjacent said open mouth and operative when advanced into said material to move material into said container through said mouth; substantially as described.

19. A measuring container including an open mouth; a propeller located adjacent said open mouth and operative to move material into said container through said mouth, whereby the material will be packed in a measured quantity within said container; and a motor supported by said container and operatively connected to said propeller; substantially as described.

1,392,491. KITCHEN UTENSIL. FRED G. GRAHAM, Canton, Ohio. Filed July 19, 1921. Serial No. 485,802. 2 Claims. (Cl. 17—29.)

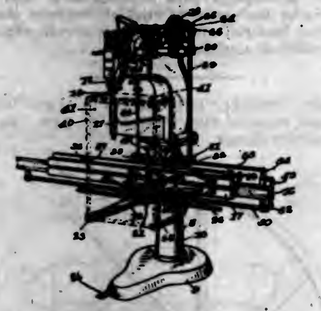
2. A meat tenderer, including an inverted U-shaped frame, a roll journaled in the lower portion thereof, said frame being provided with vertical slots, a second roll journaled in said slots and an inverted U-shaped bar slidably mounted in the frame and engaging the journal portions of the second named roll, said U-shaped bar positioned to permit the operator to grasp the same together with the U-shaped frame to force the second named roll against the first named roll.

1,392,492. MACHINE FOR AND METHOD OF LINING CAN ENDS. CHARLES W. GRAHAM, Allendale, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed July 20, 1917. Serial No. 183,396. 14 Claims. (Cl. 113—80.)



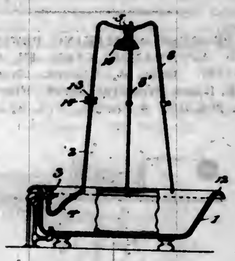
1. A machine for assembling thin, annular gaskets with flanged and shouldered can ends, comprising in combination a bed having a shouldered aperture arranged to permit an operator to deposit a gasket therein, a can end support beneath said aperture and arranged to permit an operator to deposit a can end thereon in axial alinement with the gasket in said aperture, centering means yieldable in a radial direction relative to the can end and engageable with the edge of the can end and a plunger operable at will for assembling said gasket and said can end.

14. A method of applying gasket liners to flanged and shouldered can ends, which consists in placing at the two hands of and in front of the operator and at opposite sides of an assembling station the ring liners and can ends respectively in horizontally extended piles of superposed articles, manually selecting a gasket and a can end from said conveniently arranged sources of supply and manually sliding them toward each other to said assembling station and depositing them in holding devices and in spaced axial alinement, and thereafter assembling the same by axial pressure set in operation by the foot of the operator while the hands are selecting another gasket and a can end for subsequent placing in said holding devices.



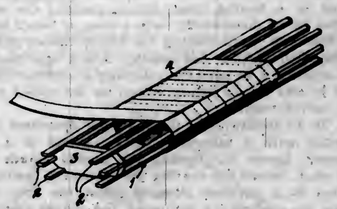
1,392,493. SEMI-AUTOMATIC GASKET-LINING MACHINE. CHARLES W. GRAHAM, Allendale, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 13, 1917. Serial No. 196,506. 11 Claims. (Cl. 113—80.)

1. A machine for assembling thin, annular gaskets with flanged and shouldered can ends, comprising in combination a bed having an aperture therein into which from the same side of said bed a can end smaller than the aperture and a superposed gasket may be manually positioned, together with means moving into said aperture



for assembling the gasket upon the flange of said can end, and yielding supporting means in said aperture for sustaining the can ends against the assembling pressure and removable by additional pressure to permit the passage of the assembled can ends and gaskets.

1,392,494. AUTOMATIC RIVETING-MACHINE. FREDERICK J. GREENE, Racine, Wis. Filed June 30, 1919. Serial No. 307,575. 13 Claims. (Cl. 78—49.)

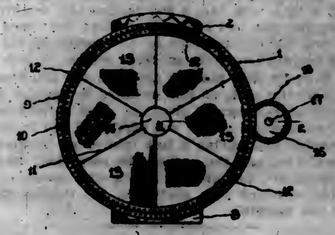


13. An automatic riveting machine, comprising a standard provided with riveting mechanism and a revoluble member having radially opposite openings, a wrist pin member revolubly connected to the revoluble member and having a tubular wrist pin, a bolt extending through said wrist and adapted to enter one of the openings of the revoluble member, means for moving said bolt, an arm and a link connection between the standard rock shaft and the tubular wrist pin, a transversely extending guide member mounted on the standard, a rock shaft of rectangular form in cross section carried by and extending longitudinally of the guide member, a slidable bar mounted on the guide member and provided with an outwardly projecting guide arm, a material holder mounted on the slidable bar, a rack bar mounted on the material holder, a dog reciprocally mounted on the transverse member and engaging the rock bar, a rock shaft carried by the standard and having an arm and a link connection with the dog, means for rocking the rock shaft, a material holder slidably carried by the outwardly projecting arm and provided with a rack bar, a dog reciprocally mounted on the projecting arm and engaging the last mentioned rack bar, an arm slidably mounted on and rocked by the rock shaft of rectangular form in cross section, a link connection between said slidable arm and the dog mounted on the projecting arm, an arm mounted on one end of the rock shaft of rectangular shape in cross section, a bell crank lever mounted on one end portion of the transverse guide member and having a link connection between the bell crank lever and the arm of the rock shaft mounted on the standard, and an arm and a link connection between the standard rock shaft and the driving mechanism of the machine.

1,392,495. PORTABLE SHOWER-BATH APPARATUS. ALBERT P. GUMAER, East Orange, N. J. Filed Feb. 28, 1921. Serial No. 448,381. 4 Claims. (Cl. 4—26.)

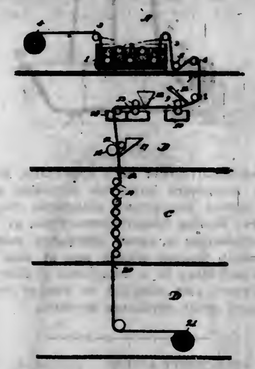
1. In a portable shower bath apparatus, the combination with a stationary bath tub including a discharge faucet, of jointed supporting standards removably attached thereto having hinged connections at their upper ends and supporting a spray discharge member therefrom, a conduit located within one of said supporting standards terminating in a detachable flexible connection with said faucet and adapted to convey water therethrough to said spray discharge member.

1,392,496. CONCRETE-FORM. JAMES C. HAIN, Los Angeles, Calif. Filed June 24, 1919. Serial No. 306,444. 8 Claims. (Cl. 25—118.)



8. A core for casting hollow units of plastic material comprising a frame having a flexible covering thereon previously moistened to caused a contraction thereof after application.

1,392,497. ARC-LIGHT. JOSEPH JUSTICE HARMER, New York, N. Y. Filed Jan. 7, 1920. Serial No. 349,941. 4 Claims. (Cl. 240—3.)



1. A device of the character described comprising a supporting casing, a light intensifying deflector mounted

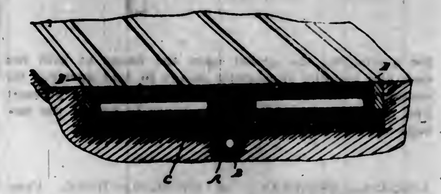
therein, electrodes mounted in said casing and adjustable with relation to said collector, a rotatable lens mounted

in said casing, multi-colored plates in said lens, a spot light aperture formed at the centralized juncture of said plates, and means for rotating said lens.

1,392,498. PROCESS OF MAKING PREPARED ROOFING AND APPARATUS USED IN CONNECTION THEREWITH. OTTO A. HEPPES, Chicago, Ill., and CHESTER E. RAHR, Brookline, Mass. Filed Dec. 5, 1918. Serial No. 265,846. 4 Claims. (Cl. 91—70.)

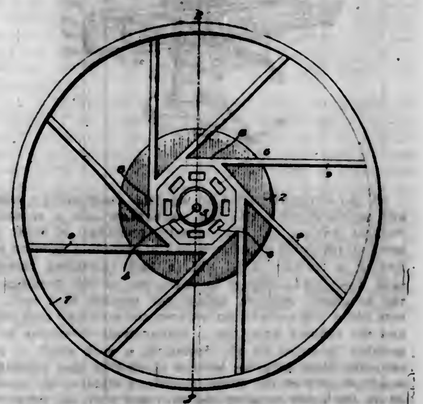
1. A process of making prepared roofing consisting in passing the roofing fabric through a saturating tank seated in a heated zone, thence passing the saturated roofing fabric downwardly into a zone of lesser heat than the first and there coating the same, thence passing the roofing still farther downwardly into a still cooler zone and causing it to pass therethrough a sufficient length of time to cool it and finally collecting the cooled saturated and coated roofing.

2. In an apparatus of the character described, the combination with a saturating tank, located in a suitable chamber, means for feeding the roofing length through said tank, means for coating the saturated roofing length located in a chamber situated below the first chamber, means for cooling the saturated and coated roofing, comprising a plurality of rolls located in a chamber below the second chamber and means for collecting the completed roofing.



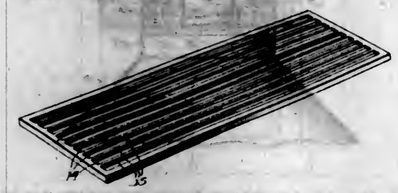
1,392,499. AUTOMOBILE-LOCK. FRED HAYDEN HOWARD, Stirling, Ontario, Canada. Filed Aug. 16, 1920. Serial No. 403,811. 6 Claims. (Cl. 70—128.)

1. A lock for automobile gear shift levers comprising hinge members adapted for connection to a suitable stationary part at widely separated points situated at the ends of the base of a triangle at the apex of which the gear shift lever lies; clamp arms connected with said hinge members having their outer ends adapted to clamp



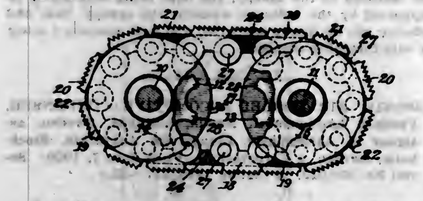
about the lever, said arms being swingable on said hinges to and from their lever engaging position and means for locking the clamp arms in their lever engaging position.

1,392,500. TRACK-ROADBED AND METHOD OF FORMING THE SAME. SOLON G. HOWE, Detroit, Mich., assignor of one-half to Wilbur Brotherton, Detroit, Mich. Filed Jan. 24, 1921. Serial No. 439,493. 6 Claims. (Cl. 238—7.)



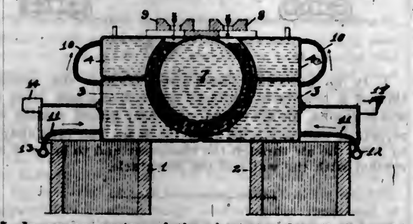
1. The combination with a railway track, of a supporting bed therefor formed of a void-filled coarse road material impregnated with a deliquescent salt, and a ballasting of finer road material of the same character, the lattter material forming a hard smooth surface for other vehicular traffic.

1,392,501. WHEEL AND SHAFT. JAMES CONDRON HUDSON, Gorman, Tex. Filed Oct. 11, 1920. Serial No. 416,261. 2 Claims. (Cl. 64—17.)



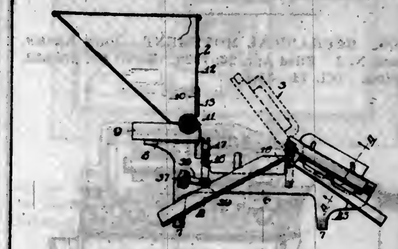
1. In combination with a cylindrical hollow shaft having adjacent each end an integral radial flange, and a hollow hub extending outwardly from said flange, said hub having a polygonal perimeter and a front wall provided with handholes, of a wheel body comprising a hub, spokes and rim, the spokes and hub being integral and channel-shaped, the second hub having a polygonal bore to fit the perimeter of the first named hub, the inner flange of the channel spokes and second hub rigidly secured to the aforesaid radial flange, and replaceable gudgeons secured at each end of the hollow shaft.

1,392,502. METHOD OF MAKING RAILS FOR PRINTING-PLATES. WILLIAM G. IMLACH, Berwyn, Ill. Filed Oct. 25, 1920. Serial No. 419,297. 7 Claims. (Cl. 22—203.)



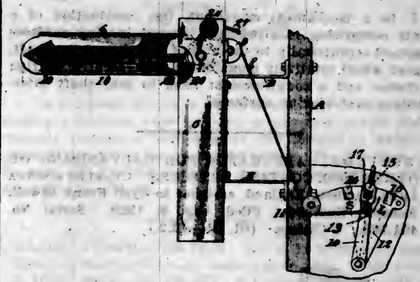
1. The method of making rails for plates which consists in providing a relatively hard metal shell having a groove therein, then casting soft metal in said shell and filling the groove, then cutting the reinforced casting to provide a T rail.

1,392,503. ENDLESS SAW. THADDEUS A. JACKSON, Brooklyn, N. Y. Filed July 8, 1919, Serial No. 309,469. Renewed Apr. 29, 1921. Serial No. 465,502. 1 Claim. (Cl. 143—32.)



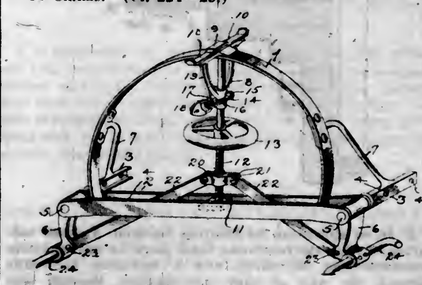
An endless saw comprising a chain of units each constituted by a web portion of uniform thickness throughout and integral toothed cutting bar of a thickness twice that of the web portion, as shown.

1,392,504. SLAG-FURNACE. EDWARD E. JAMES, San Francisco, Calif. Filed Oct. 16, 1920. Serial No. 417,335. 8 Claims. (Cl. 122—27.)



5. In an apparatus of the character described a relatively long steam boiler, a series of boiler sections surrounding the same in spaced relation to the circumference thereof, the space between said boiler sections and the steam boiler adapted to contain hot slag, some of said boiler sections being fixed relative to the steam boiler and other of said sections adapted to be withdrawn from around the same to release the slag, the said fixed sections being supported above the movable section but in close proximity thereto to provide an unbroken channel around the steam boiler.

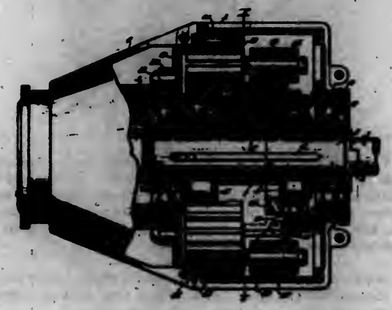
1,392,505. CULLING-MACHINE. CHARLES W. JOHNSON, Chicago, Ill., assignor to Wm. Wrigley Jr. Company, Chicago, Ill., a Corporation of Virginia. Filed Sept. 13, 1920. Serial No. 409,978. 5 Claims. (Cl. 83—92.)



1. In a device of the character described, the combination of a culling frame comprising a series of bars spaced apart a predetermined distance, means for agitating said frame, and a series of fixed bars adapted to pass between the bars of said culling frame by the bodily movement of the latter from operative position.

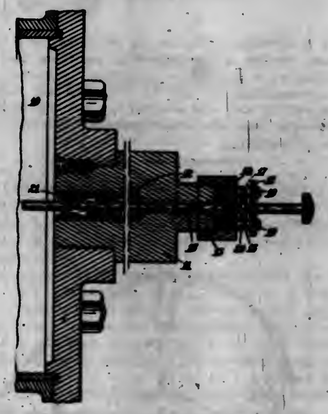
1,392,506. DIRECTION-INDICATOR. EDMUND F. KIESSLING, Oakland, Calif. Filed Aug. 9, 1920. Serial No. 402,160. 5 Claims. (Cl. 116—52.)

1. In a direction indicator, an indicating arm adapted to assume various active indicating positions, and means for displaying a descriptive indicating character on the arm corresponding to one of the direction indicating positions of the arm and adapted to positively distinguish said position from the other positions that the arm is capable of assuming.



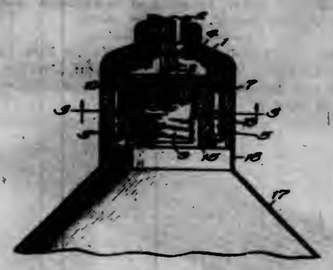
1,392,507. TIRE-CARRIER. ROBERT C. KISSINGER, Dayton, Ohio. Filed Aug. 12, 1919. Serial No. 316,986. 13 Claims. (Cl. 224—29.)

2. In a tire carrier, a main frame, a tire supporting member carried thereby, two movable tire engaging members adapted to simultaneously engage the inner circum-



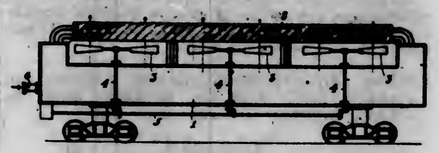
ference of the tire, and means for simultaneously adjusting said tire engaging members to and from each other including a revolvable screw, having spaced journal bearings in the main frame, and means for locking the screw.

1,392,508. MECHANICAL MOVEMENT. JOHN KROHN, Newark, N. J. Filed Apr. 26, 1920. Serial No. 376,553. 5 Claims. (Cl. 74—35.)



1. In a mechanical movement, the combination of a shaft comprising longitudinally spaced bearing surfaces disposed eccentrically to the axis of rotation of the shaft, a gear wheel rotatively mounted on said eccentric bearing surfaces, and a counterweight fixed to said shaft intermediate said bearing surfaces.

1,392,509. APPARATUS FOR GALVANIZING OR OTHERWISE COATING ARTICLES. CHARLES JOSHUA LANE, London, England, assignor to Cyril Frank Elwell, London, England. Filed Aug. 6, 1920. Serial No. 401,768. 6 Claims. (Cl. 91—12.2.)

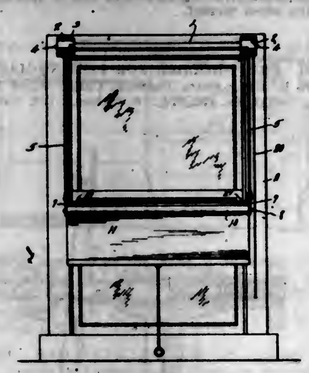


1. In an apparatus for treating material, a closed container wherein the treatment takes place, an ante-chamber communicating therewith, and a test-piece projecting through the wall of said ante-chamber, through said chamber and into said container whereby it is subjected to the treatment therein, said test-piece being adapted to be withdrawn in a plurality of stages.

1,392,510. SOCKET AND REFLECTOR. ERNEST M. LARKINS, South Bend, Ind., assignor to George Cutter Company, South Bend, Ind., a Corporation of Indiana. Filed Oct. 16, 1919. Serial No. 329,865. 7 Claims. (Cl. 240—11.)

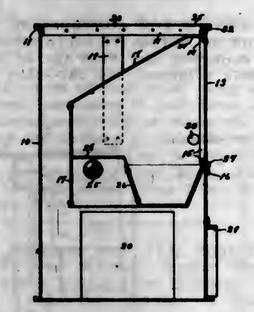
1. In an electric lighting fixture, the combination of a canopy from which the electric conductors descend; a separate insulating base having a screw socket having terminals to which the electric conductors may be connected to thereby energise the terminals and temporarily support the base; upright fastening members adapted to be fastened to the canopy, the base being apertured to accommodate the fastening members, and a reflector adapted to support the fastening members before they are fastened to the canopy and to be supported by the fastening members after they are fastened to the canopy, the base being adapted to be supported by the reflector, whereby the canopy, base and reflector are all finally supported and held assembled solely by said fastening members.

1,392,511. AIR-COOLED LOCOMOTIVE-CONDENSER. FREDRIK LJUNGSTRÖM, Brevik, Lidingön, Sweden, assignor to Aktiebolaget Ljungström Angturbin, Stockholm, Sweden, a Corporation. Filed Jan. 7, 1920. Serial No. 350,012. 2 Claims. (Cl. 257—25.)



1. In an air-cooled locomotive-condenser the combination of a receptacle arranged to receive steam from the steam engine, an air cooled condenser placed outside said receptacle and connected with the same, and fans adapted to drive the air through the condenser and to bring it into contact with the walls of the receptacle.

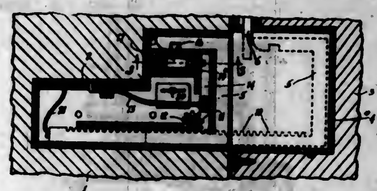
1,392,512. SHADE-ROLLER SUPPORT. JOHN E. MCCLOSKEY, Johnstown, Pa. Filed Jan. 10, 1920. Serial No. 350,501. 4 Claims. (Cl. 156—27.)



3. A device of the character described, including an upper spring roller, fixedly mounted casings receiving the ends of the upper spring roller, cords connected to the ends of the spring roller, a lower shade roller, bracket plates suspended by the before mentioned cords and supporting the shade roller, a detent mounted upon one of the before mentioned casings, means coöperating therewith to lock the upper spring roller against action, a detent releasing

lever mounted upon the said casing at a point between its ends, one end thereof being formed with an arm which is

adapted to engage the detent to move the latter into inoperative position, and a pull member connected to the other end of the lever for operating the same.

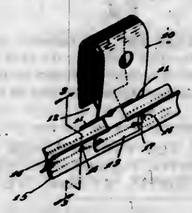


1,392,513. HOG-WATERER. WILLIAM A. MCCOLLOUGH, Webster City, Iowa, assignor to W. A. McCollough & Sons, Inc., Webster City, Iowa, a Corporation of Iowa. Filed Jan. 19, 1920. Serial No. 352,468. 2 Claims. (Cl. 119—73.)

1. A stock waterer, comprising a housing formed with a lateral drink opening, means for normally closing said drink opening, a tank rigidly mounted in said housing and accessible through said opening, a valve-controlled inlet pipe entering said housing and tank, and a drinking pan mounted in said tank and removable and replaceable through said drink opening, said pan being formed with openings for the passage of water thereto from said tank, the rear wall of said pan being spaced from the rear wall of the tank to provide space for the inner end of said inlet pipe, the rear wall of said pan being formed at its top with a rearwardly extending flange overlying the inner end of said inlet pipe.

1,392,514. LOCK. WISDOM MCGILL, Waco, Tex. Filed Feb. 15, 1921. Serial No. 445,090. 3 Claims. (Cl. 70—14.)

1. A lock of the character described, comprising a bolt with a substantially U-shaped formation on one end and a notch in the formation, the shank of the bolt provided with teeth meshing with a pinion rotated by a pin to move the bolt outward and inward in the body of the lock, a vertically disposed bolt under spring tension for locking the U-shaped bolt in locking position, a horizontally arranged

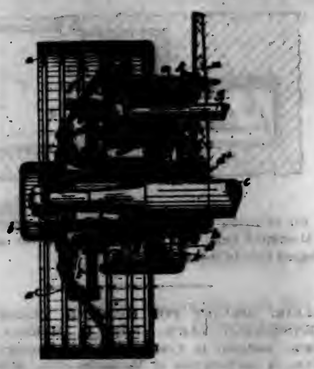


bolt for securing the vertical bolt out of engagement with the U-shaped bolt, and auxiliary means for securing the U-shaped bolt in locked position.

1,392,515. DEVICE FOR GUIDING, CLEARING, AND TENSIONING YARN. JOHN O. MCKEAN, Westfield, Mass., assignor to Foster Machine Company, Westfield, Mass., a Corporation of Massachusetts. Filed Apr. 12, 1921. Serial No. 460,636. 14 Claims. (Cl. 28—20.)

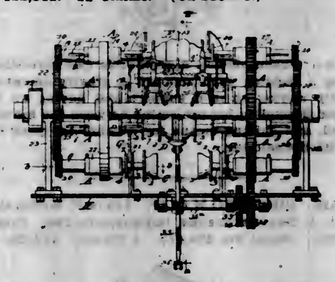
2. In a tension device, a removable and reversible grid forming a skeleton yarn support, a gravity operated disk normally resting on said support and having an axially arranged depending lug projecting between the branches of the grid, and guiding means for causing the yarn to contact with the said lug.

1,392,516. PHOTO-FILM CLIP. LOUIS F. MCKELVEY and JOHN A. BRANDENBURGER, Indianapolis, Ind. Filed Jan. 3, 1921. Serial No. 434,473. 4 Claims. (Cl. 24—259.)



1. A photo-film clip, comprising a spring carrying member, two jaws carried by said member and spring-pressed toward each other thereby, said two jaws being curved with their convex sides toward each other so that they engage substantially along a line, said two jaws being provided with one or more registering pins and holes arranged on such line of engagement.

1,392,517. DRIVE FOR MOTOR-VEHICLES. ALFRED F. MASUAY, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 15, 1919. Serial No. 290,120. 2 Claims. (Cl. 74—7.)

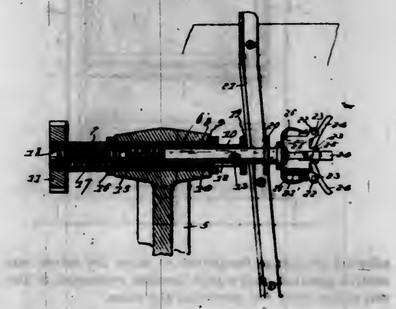


1. In combination with the wheel and dead axle of a motor vehicle, driving mechanism for the wheel comprising a spur gear mounted rotatively on the axle independent of

the wheel, a driving pinion in mesh with the gear, a casing inclosing the spur gear and mounted non-revolubly on the

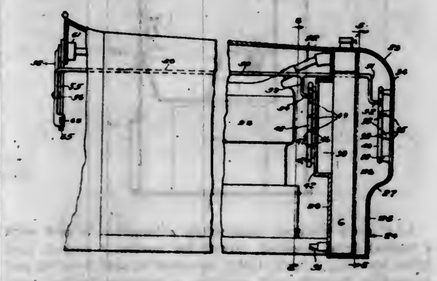
axle independent of the wheel, a housing formed in the casing to support the driving pinion, and a positive but flexible connection between the pinion and the wheel.

1,392,518. FRUIT-PITTING MACHINE. GEORGE R. PARANTEAU, Simi, Calif. Filed Sept. 21, 1920. Serial No. 411,841. 12 Claims. (Cl. 146—6.)



11. In a fruit pitting machine, yieldable coacting fruit grasping members, means for moving the said members into operative relation with a knife, and means for simultaneously shifting the fruit grasping members in corresponding directions.

1,392,519. KNIFE FOR FRUIT-PITTING MACHINES. GEORGE R. PARANTEAU, Ventura, Calif. Filed Mar. 16, 1921. Serial No. 452,873. 6 Claims. (Cl. 146—6.)

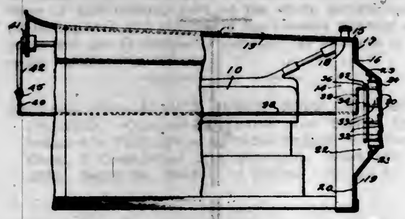


1. In a knife for fruit pitting machines a shank having a curved blade terminating in a substantially horizontally disposed portion, the last mentioned portion being single and terminating in a dual blade having a space between the cutting edges thereof.

1,392,520. FRUIT-HOLDER FOR PITTING-MACHINES. GEORGE R. PARANTEAU, Ventura, Calif. Filed Mar. 16, 1921. Serial No. 452,874. 6 Claims. (Cl. 146—6.)

4. In a fruit carrier for pitting machines, a head, fingers extending approximately radially of and pivotally mounted on the head between the ends of said fingers, means for mounting the head for axial movement, and means for holding the fingers normally open.

1,392,521. DEVICE FOR CONTROLLING THE TEMPERATURE OF AUTOMOBILE-RADIATORS. ROBERT L. PATE, Springfield, Mo. Filed Apr. 30, 1919. Serial No. 293,867. 4 Claims. (Cl. 257—132.)

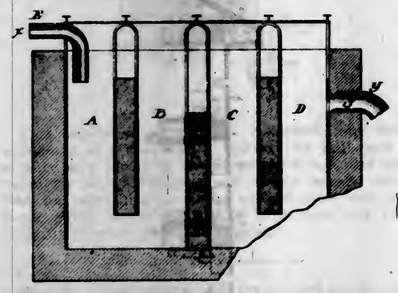


4. The combination with the radiator of a motor vehicle, of a casing adapted to receive the radiator and having front and rear sections, a portion of the front and rear sections being offset to provide enlarged chambers at the front and rear of the radiator and sets of pivoted ventilators arranged within said chambers and adapted to be swung in opposite directions.

1,392,522. DEVICE FOR CONTROLLING THE TEMPERATURE OF AUTOMOBILE-RADIATORS. ROBERT L. PATE, Springfield, Mo. Filed May 20, 1919. Serial No. 298,519. 5 Claims. (Cl. 257—132.)

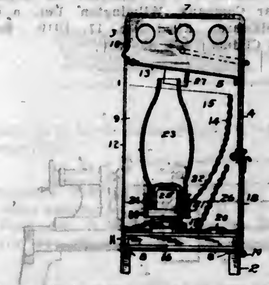
2. In apparatus of the character described, a sheet to cover one side of an automobile radiator, a chamber carried by the sheet and provided with a main opening and having its material at the main opening rolled to

form a hollow flange, a heat insulating lining arranged upon one side of the sheet and projecting into the hollow



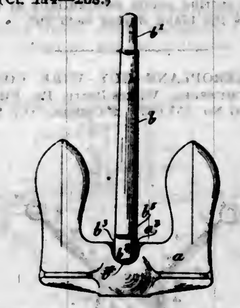
flange to be engaged by the same, a plurality of shutters arranged within the opening and connected with the hollow flange, and means to move the shutters.

1,392,523. RAILWAY-CARRIAGE OF LARGE CAPACITY. GUSTAVE PERRIER and GUSTAVE JOLIVET, Paris, France. Filed Mar. 7, 1919. Serial No. 281,302. 8 Claims. (Cl. 105—157.)



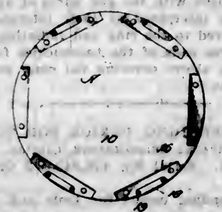
1. In a railway carriage, the combination of a platform mounted at each end upon a group of separate trucks adapted to travel on a plurality of approximately parallel tracks with each track comprising parallel lines of rails, the trucks of each group being arranged to travel in parallel succession on said tracks, and yielding means connecting each group of trucks with the superposed end of the platform to transmit the load from the platform to the trucks and to permit lateral and longitudinal displacement of each group of trucks relative to the platform as the trucks follow the curves in their respective tracks.

1,392,524. PROCESS FOR THE PURIFYING AND CLARIFYING OF WATER. MIGUEL PUIGGARI and NESTOR VENEZIA, Buenos Aires, Argentina. Filed Nov. 24, 1917. Serial No. 203,841. 6 Claims. (Cl. 204—25.)



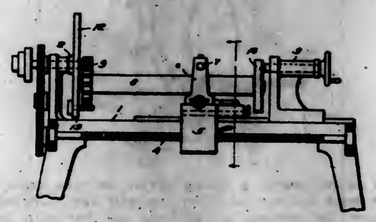
1. Apparatus for purifying water, comprising means for defining a water passage and means for subjecting the water during its flow through said passage to the action of an intensely stressed electric field under conditions producing cataphoresis.

1,392,525. OIL-HEATER. GEORGE F. RHENOR, Mercer, Pa. Filed July 18, 1919. Serial No. 311,405. 1 Claim. (Cl. 126—97.)



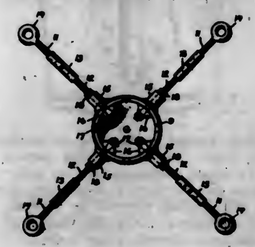
In an oil heater, a casing having an open front, a sheet-metal reflector extending upwardly and rearwardly opposite the opening in the front and having a hole therein, an oil-receptacle slidable into the casing from the back thereof and carrying a burner adapted to enter the said hole, a chimney for the burner insertible on the burner in front of the reflector, a removable filler cap at the rear portion of the receptacle, and a screen between the filler-cap and the opening.

1,392,526. ANCHOR. PATRICK J. RYAN, New York, N. Y. Filed Jan. 21, 1921. Serial No. 438,855. 4 Claims. (Cl. 114—208.)



1. A stockless anchor, comprising an anchor-head and a detachable shank, the anchor-head having a central socket and the shank having a head to enter the socket freely, the head and the socket respectively having interengaging devices formed thereon to prevent accidental separation of the shank and anchor-head and to permit the ready separation thereof when desired.

1,392,527. EXTENSION-TABLE. FILIPPO SANTORO, Holyoke, Mass. Filed June 16, 1920. Serial No. 389,468. 9 Claims. (Cl. 45—9.)



1. The combination with a circular table top of filler blocks shaped for coöperation with said circular top to produce an angular table top.

1,392,528. METHOD OF AND MEANS FOR GENERATING MECHANICAL ELEMENTS. HENRY SCHMICK, Williamsport, Pa., assignor to Schmick Screw and Gear Company, Wilmington, Del., a Corporation of Delaware. Filed Dec. 11, 1919. Serial No. 344,265. 8 Claims. (Cl. 82—5.)

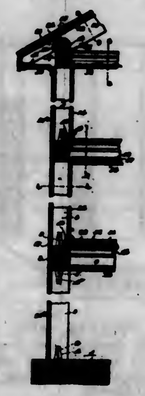
1. A method of generating mechanical power transmitting elements of the continuously rotating type, consisting in rotating the blank element upon its axis and swinging it through a path eccentric to the cutter, and uniformly changing the relative positions of said blank element and cutter while maintaining the cutter at the successive cutting points substantially at right angles to the axis of the blank during each cut.

1,392,529. AEROPLANE-GUY-WIRE CONNECTION. FRANCIS SCHUSSLER, Wilkes-Barre, Pa. Filed Feb. 10, 1920. Serial No. 357,637. 2 Claims. (Cl. 244—81.)

1. In combination with the guy wires of an aeroplane, an annular ring interposed at their intersecting point, turnbuckles secured to the ring and radiating therefrom, eyelets at the free ends of the turnbuckles for receiving the guy wires, a sleeve covering the ring, and a casing inclosing the ring.

1,392,530. SUSPENDING DEVICE FOR TOOLS AND THE LIKE. HARRY SHELDOMRIDGE, Clinton, Ind. Filed June 17, 1921. Serial No. 478,343. 3 Claims. (Cl. 248—5.)

1. In a suspending means for tools and the like, a hanger, a cable operating thereover, a weight suspended from one end of the cable, a guide through which the cable is movable, the said guide being diagonal to the perpendicular, a clamp carrying the said guide and engaging the opposite run of the cable, means for securing the said clamp to the cable, the said weight having a guide formed therein, the said cable extending through



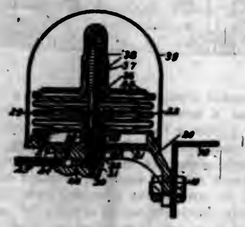
the guide of the weight, and implement supporting elements on the said cable below the weight.

1,392,531. SUITCASE-LOCK. ERNEST H. SHAFF, Grand Haven, Mich. Filed Dec. 4, 1919. Serial No. 342,490. 3 Claims. (Cl. 70—5.)

2. In a device of the class described, a hasp plate; a hasp pivoted to the plate; a spring strip extended along the hasp and engaged at one end with a part of the plate, the strip being fashioned at its opposite end into a hollow integral keeper independent of the hasp; means for securing the strip to the hasp at a point adjacent to the keeper; a casing having an opening receiving the keeper; and a latch movable in the casing and coöperating with the keeper.

1,392,532. REINFORCED-CONCRETE BUILDING. JOHN THOMAS SIMPSON, Newark, N. J. Filed Apr. 23, 1919. Serial No. 292,211. 5 Claims. (Cl. 72—1.)

1. A building comprising pre-cast reinforced concrete studs and floor beams there being recesses in the studs,



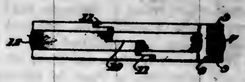
a field cast reinforced girt engaging the extremities of the studs and beams, said girt extending entirely around the building, pre-cast, reinforced wall slabs secured to the surfaces of and forming part of the studs, reinforcements projecting into and grouted in the recesses whereby such slabs will act as flanges to increase the strength of the studs.

1,392,533. INFLATABLE FABRIC BOAT AND BED OR CUSHION. CHARLES F. SMYTH, New Haven, Conn., assignor to Connecticut Aircraft Company, New Haven, Conn., a Corporation of Connecticut. Filed July 16, 1920. Serial No. 396,794. 5 Claims. (Cl. 9—2.)

1. A device of the character described comprising an outer rectangular inflatable frame portion composed of permanently connected side cylinders and end cylinders, flexible cone-shaped partitions disposed within said cylinders and sub-dividing the same into air compartments for inflating and deflating said compartments, and a flexible bottom surrounded by said cylinders and permanently secured thereto between the upper and lower surfaces thereof.

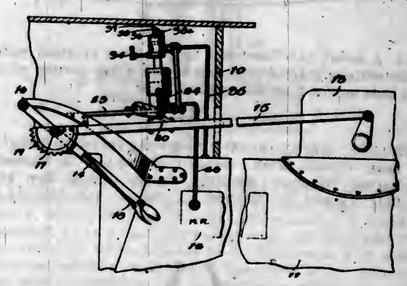
1,392,534. HYDROCARBON-MOTOR. LYLE K. SNELL, Detroit, Mich., assignor to Cadillac Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 1, 1916. Serial No. 134,516. 10 Claims. (Cl. 137—53.)

1. A regulator comprising a collapsible side wall, a stationary end wall, and a moving end wall, said stationary wall having an intake port and an outlet port, a valve for said outlet port, and means on said movable wall for controlling the action of said valve, said means being adjustable in relation to said valve and having laterally movable connection therewith.



1,392,535. COMPOSITE ARTICLE INCLUDING PHENOLS AND FORMALDEHYDE AND METHOD OF MAKING SAME. WILLIAM D. STEVENSON, Pittsburgh, Pa. Filed June 18, 1919. Serial No. 305,095. 8 Claims. (Cl. 91—70.)

4. A composite non-laminated article composed of an integral fabric body in which the weaving extends in three directions to produce a substantial thickness to the

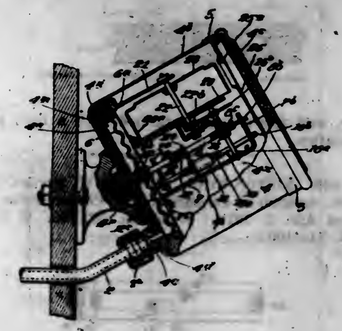


fabric, said fabric being saturated with a hard plastic composition.

1,392,536. PISTON-RING. WILLIAM W. SYFERT, Tulsa, Okla., assignor of one-half to C. A. Cooper, Tulsa, Okla. Filed Apr. 5, 1919. Serial No. 287,785. 3 Claims. (Cl. 74—109.)

3. A piston ring comprising a supporting body having a peripheral groove, a packing of relatively soft resilient material set into said groove, said ring carrying projections at the bottom of said groove adapted to engage the packing material and hold it in position.

1,392,537. SAFETY DEVICE FOR THROTTLES. WILLIAM WHITE SYKES, South Richmond, Va. Filed Mar. 26, 1921. Serial No. 455,888. 5 Claims. (Cl. 116—70.)



1. The combination with a self-propelled vehicle having a throttle and an air brake apparatus including a main reservoir, of signal means for indicating a fall of pressure in the main reservoir below the safety point, said means being normally controlled by the pressure in the said reservoir and including elements operable in conjunction with the throttle when the latter is closed and elements operable independent of the throttle when the latter is open.

1,392,538. PNEUMATIC LIQUID-SUPPLY-TANK GAGE. PERCIVAL S. TICE, Chicago, Ill. Filed Sept. 2, 1920. Serial No. 407,747. 8 Claims. (Cl. 73—54.)

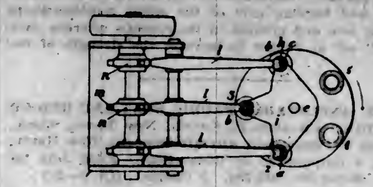
1. In combination with a liquid supply tank, means for indicating the liquid contents thereof, comprising a pressure-communicating tube leading from the bottom of the liquid-containing space of the tank; a pressure-gage device comprising a chamber having a yielding wall, said tube leading to said chamber and comprising *en route* thereto a substantially horizontal part located above the high liquid level of the tank, said chamber having an ex-

haust connection whereby partial vacuum may be produced therein for elevating liquid from the tank to said hori-

zontal part of the conduit, and a capacity registering device connected to the yielding wall of the chamber.

1,392,539. SWEATBAND. CARL M. TIPOGRAPH, New York, N. Y. Filed Apr. 29, 1921. Serial No. 465,524. 3 Claims. (Cl. 2—32.)

1. A sweat band having a body portion provided with substantially pointed ends and having a flap portion with its ends spaced from said pointed ends.



1,392,540. REINFORCED SPRING. GUGLIELMO TREMOLADA, Detroit, Mich., assignor of one-half to Michael Baroni, Winnipeg, Manitoba, Canada. Filed Nov. 14, 1917. Serial No. 202,026. 2 Claims. (Cl. 152—18.)

1. A vehicle tire providing a tread portion having a plurality of resilient members incorporated thereinto each comprising a core of flexible nonelastic material having its ends interwoven with the fabric of the tire and a wire spring coiled around its medial portion.

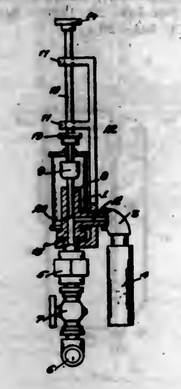
1,392,541. PROCESS AND APPARATUS FOR THE MANUFACTURE OF CRUCIBLES. LOUIS VESSIAUD, Paris, France, assignor to Etablissements Jacob Holtzer, Paris, France, a Corporation. Filed July 9, 1919. Serial No. 309,694. 5 Claims. (Cl. 25—22.)

1. A process for forming crucibles consisting in placing the material, from which the crucible is to be formed, in a mold member and successively introducing mandrel members of successively increasing sizes into the material in the mold, and moving one of said members relatively

to the other member while a mandrel is in engagement with said material for causing said material to be compressed.

1,392,542. HAND-EMBROIDERY NEEDLE. ALBERT F. VORCE, Ludington, Mich. Filed Apr. 26, 1920. Serial No. 376,460. 1 Claim. (Cl. 112—80.)

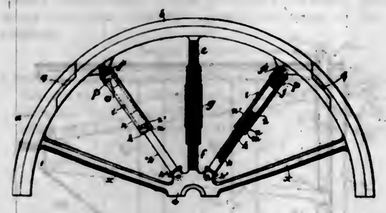
A needle, a tubular handle therefor, a gage adapted to limit the penetration of the needle, the handle provided with stops to vary the position of the gage, the gage passing through the handle and engaging the stops from the interior of the handle.



1,392,543. ELECTRICALLY-OPERATED MACHINE FOR SCRAPING IRREGULAR WOODEN SURFACES. ISAAC A. WATROUS, Bridgeport, Conn. Filed Apr. 9, 1921. Serial No. 460,070. 2 Claims. (Cl. 144—119.)

1. In a surface scraper, a body having a vertical propelling handle, a motor on the body, a switch having a vertical part adjacent the handle for controlling the motor and for engagement by the fingers of the hand of the operator which gripe the handle, a vertically movable spring tensioned scraper carrying member borne by the body, means to drive said member from the motor, a scraper having resilient teeth carried by said member, and a swiveled handle connected to said member for guiding the device and for regulating the degree of engagement of the scraper with the surface by mere depression of the handle and upon release to allow the spring to instantly raise the scraper out of engagement with the surface.

1,392,544. ELECTROPNEUMATIC VALVE. EUGENE WIET and FOREE CHITTENDEN, San Francisco, Calif., assignors to National Safety Appliance Company, San Francisco, Calif., a Corporation of California. Filed Mar. 19, 1918. Serial No. 223,301. 1 Claim. (Cl. 137—139.)

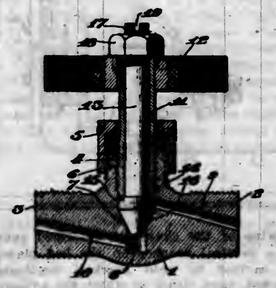


In combination with a valve casing of substantially T formation provided with an open ended bore having parallel side walls and formed intermediate of its length

with a lateral outlet communicating with said bore, a valve controlled pipe connected to the lower end of said bore for supplying fluid under pressure to said bore, a longitudinally movable valve having parallel side walls received at one end in the upper end of said bore, said valve being of a diameter to have a sliding fit within the bore with the walls of said bore and capable of movement therein against fluid pressure in said bore to extend below said fluid outlet to close the same, the outer end of said valve being formed with a ball end, a frame ex-

tending parallel with said casing and provided on its upper portion with laterally extended ported guide arms overlying the upper open end of said bore, a longitudinally movable operating stem extended through said ported arms in alinement with said valve and provided at its lower end with a socket for engaging said ball to provide a flexible connection between said valve and stem, and electrically operated releasable means associated with said stem for retaining the same in closed position at one end of its longitudinal movement in one direction.

1,392,545. ROAD-WHEEL FOR VEHICLES. SAMUEL OSWALD WILLIAMS, Northumberland, England. Filed Mar. 31, 1921. Serial No. 457,229. 1 Claim. (Cl. 152—20.)



In a road wheel for vehicles, a rim section adapted to be movable inward relatively to the remaining portion of the rim and radially adjustable spoke members supporting said movable rim section and designed to provide for such movement thereof, certain of said spoke members comprising elements rigid with the rim and wheel hub, and oppositely threaded for engagement by a nut, and others of said spoke members comprising elements pivoted to the rim and wheel hub and telescopically arranged within a sleeve, and means for detachably connecting said sleeve and elements.

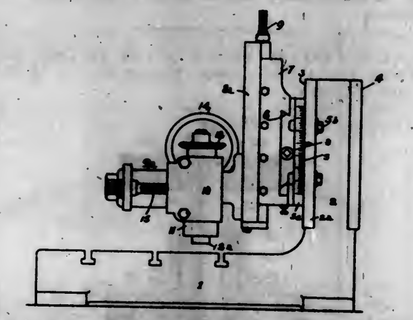
1,392,546. APPARATUS FOR CLEANING EGGS. COLONEL J. WILLIAMSON, San Francisco, Calif., assignor to Williamson Machine Company, San Francisco, Calif., a Corporation of California. Filed Apr. 26, 1921. Serial No. 464,655. 11 Claims. (Cl. 146—14.)

2. An apparatus for the described purpose, the same comprising an egg-runway consisting of parallel disposed rotary and fixed brushes, a carrier for advancing eggs stream-wise through said runway and in contact with the surfaces of the brushes, and means associated with said runway for receiving such of the eggs as are crowded out of the stream of eggs as advanced through the egg runway.

1,392,547. VALVE. PRIOR F. WILLIS, St. Louis, Mo. Filed Feb. 1, 1917. Serial No. 145,888. 2 Claims. (Cl. 251—37.)

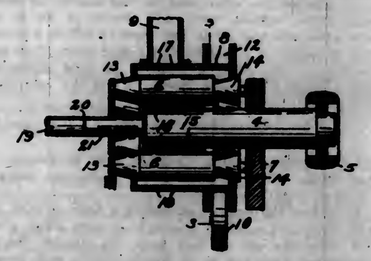
2. The specific valve construction shown, the same comprising the integral body portion 1 and nipple extension 4, having the bore through said extension 4, screw-threaded, as at 6, and terminating with the valve-seat 7, the sleeve 11 screw-threaded to fit the threads 6 of said bore and having a manipulating handle, as at 12, thereon, the stem 13 rotatable and longitudinally slidable in said sleeve and having the valve-head 14 at its inner end to coöperate with said valve-seat 7, the outer end portion of said stem having the slot 19 therein and being screw-threaded, as at 17, the nut 18 on said screw-threaded portion of the stem whereby to clamp said sleeve 11 against the valve-head 14, and also to be moved outward from contact with said sleeve so as to coöperate with said slot 19 in the stem to afford a pocket for the reception of a key to rotate said stem 13 in said sleeve 11, and the packing gland 5 on said nipple extension through which said sleeve 11 and the valve-head 14 are entirely withdrawable.

1,392,548. TAG-HOLDER. JOSEPH WM. WUENSCH, St. Paul, Minn. Filed July 18, 1921. Serial No. 485,512. 3 Claims. (Cl. 40—26.)



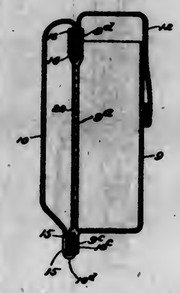
3. A card or tag holder comprising a loop of wire, the ends of which are normally spaced from each other, a coil formed near one end of said loop, the portion beyond the coil being extended at an angle thereto and toward the other end of the loop, a coil formed on the end of said extended portion, the other end of the loop being adapted

to be closed over said first end and secured between the convolutions of said first coil, said extension being



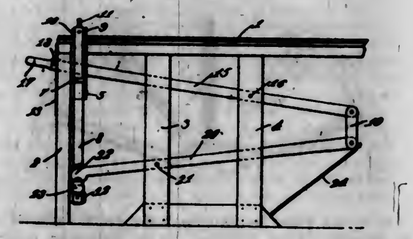
adapted to be arranged adjacent said other end with said other end positioned between the convolutions of said second coil.

1,392,549. MACHINE FOR SCARFING BOILER AND SHIP PLATES, CUTTING INCLINED KEYWAYS, OR OTHER PURPOSES. JOHN WILLIAM BARNES, Cheshire, England. Filed Nov. 17, 1919. Serial No. 338,535. 3 Claims. (Cl. 90—15.)



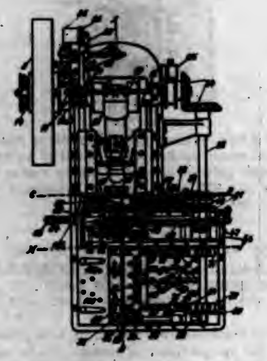
1. Apparatus of the character described comprising a bed plate, a vertical bracket on the bed plate, a guide adjustably carried by said bracket, duplicate facings on said bracket, upon either of which the adjustable guide may be positioned, a pair of relatively adjustable slides carried by said guide, a milling attachment carried by one of said slides, and means for driving said milling attachment.

1,392,550. ROLLER-FILLER FOR BEARINGS. LEONARD BARTLETT, Boston, Mass., assignor, by direct and mesne assignments, to Reliance Machine & Specialty Co., Boston, Mass., a Corporation of Massachusetts. Filed Oct. 22, 1919. Serial No. 332,556. Renewed Jan. 17, 1921. Serial No. 437,965. 7 Claims. (Cl. 18—5.)



3. A pressure filler for oilless bearing comprising a holder adapted to receive a perforated tube, an arbor adapted to fit said tube, and close the interior of said perforations, means to insert lubricating material in the perforations in said tube, a plurality of rollers adapted to apply pressure to said lubricating material after entering said perforations, and means to adjust said rollers to apply pressure in varying degrees.

1,392,551. WOVEN CARRIER EQUIPMENT. FRANK R. BATCHELDER, Worcester, Mass., assignor to Mills Belt Company, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 22, 1920. Serial No. 353,318. 10 Claims. (Cl. 224—23.)



6. In pocketed carrier equipment, an accessory carrier or pocket comprising a pocket-piece having a pocket thereon and formed with a divided top margin, and a strip or band of web material having one portion thereof formed into a cover or flap for the pocket, another portion formed into a suspensory loop at the back, and an intermediate portion tucked in and fastened between the walls of said divided top margin.

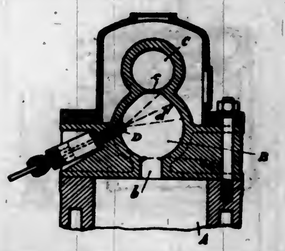
1,392,552. CLOTH-CLAMP. JOSEPH EVERT BERRY, Carthage, Mo. Filed July 18, 1920. Serial No. 396,032. 5 Claims. (Cl. 164—79.)

1. The combination with a cutting table, of a clamping member tiltably and slidably connected thereto and including a clamping bar and a cross bar, a lever overhanging the cross bar, means for actuating said lever, and a spacing block pivotally connected to the lever and movable to position between the lever and the cross bar.

1,392,553. ELECTRICALLY-HEATED STAMPING-MACHINE. JEAN BILL, Legnano, Italy. Filed Apr. 4, 1918. Serial No. 226,629. 11 Claims. (Cl. 219—3.)

1. An automatic metal stamping machine for stamping from metal bars, having an electromagnet which electrically controls the operation of the different members, including the stamping members, and the gradual heating of the bar to be stamped.

1,392,554. MAGNETO-ELECTRIC IGNITION-MACHINE. FRÉDÉRIC BILLON, Solothurn, Switzerland, assignor to Firm Scintilla, Solothurn, Switzerland. Filed Nov. 2, 1918. Serial No. 260,910. 1 Claim. (Cl. 171—209.)



The combination with a permanent magnet of a series of magnetisable plates insulated from one another and each encircling a pole of the said magnet, said plates jointly constituting a pole piece and severally providing short circuited windings about the poles of the said magnet.

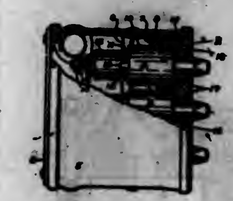
1,392,555. STARTING INDUCTION-MOTORS. JOHANNES BRUNCKEN, Cologne-Bickendorf, Germany. Original application filed Jan. 13, 1920, Serial No. 351,240. Divided and this application filed Dec. 2, 1920. Serial No. 427,835. 1 Claim. (Cl. 172—120.)

The method of starting an induction motor having two separate sets of primary windings, which consists in successively connecting said windings in series in mesh, in parallel in star, in parallel one in star and one in mesh, in parallel in mesh, and finally shifting the field produced by one winding relatively to the field produced by the other through 180°.

1,392,556. SEMIDIESEL OIL-ENGINE. JEAN BAPTISTE COTTARD, Paris, France, assignor to Société de Moteurs à Gaz et d'Industrie Mecanique, Paris, France, a Limited Joint-Stock Company of France. Filed Jan. 4, 1921. Serial No. 434,930. 1 Claim. (Cl. 123—32.)

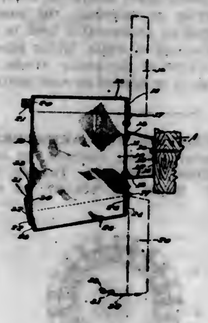
In an internal combustion engine of the Diesel type, the combination of an engine cylinder having a non-cooled cylinder head chamber open to said cylinder through a narrow passage, an ignition chamber open to said cylinder head chamber through a passage of smaller cross-section than said first-named passage, means for injecting liquid fuel at such inclination and thickness of jet as will confine the injected liquid in the interior of the upper portion of said cylinder head chamber, fuel-distributing means controlling said injecting means whereby fuel is injected in two stages and of unequal amounts, the first of which stages taking place about the lower dead center of the piston stroke to introduce the smaller igniting charge to be ignited by accumulated heat in said ignition chamber and the second of which taking place at or near the upper dead center of the piston stroke to introduce the working charge to be ignited by said ignition charge.

1,392,557. INSULATION FOR ARMATURES. JASPER F. CULLIN, Detroit, Mich., assignor, by mesne assignments, to William J. Hartwig, Detroit, Mich. Filed Dec. 29, 1919. Serial No. 348,087. 2 Claims. (Cl. 171—206.)



1. A cylindrical armature core provided with evenly spaced longitudinal grooves, armature widings comprising metal bars bent on themselves substantially midway their length to constitute two sections, a pair of sections of two windings being positioned in each groove, one inside of the other, means to insulate the windings in each groove from each other and from the core, and a strip of insulating material woven in and out between the inner sections of the windings adjacent one end of the armature and extending generally circumferentially of the armature.

1,392,558. ELECTRIC COUPLING. WILLIAM A. DARRAH and REX G. AVERILL, Mansfield, Ohio, assignors to The Ohio Brass Company, Mansfield, Ohio, a Corporation of Ohio. Filed Aug. 20, 1917. Serial No. 187,068. 21 Claims. (Cl. 173—332.)



5. An electric coupler for connecting a train line circuit comprising a metallic housing, a contact making

unit independently removably arranged in the housing, said unit comprising an insulation casing, a live terminal and a separate movable contactor mounted and inclosed within the casing, and resilient means interposed between

the contactor and terminal and tending to normally hold the movable contactor away from the terminal, but yielding under pressure to permit movement of the contactor into engagement with the terminal and means for retaining the unit in position in the housing.

1,392,559. RECEPTACLE. SUSAN E. DE LONG, Fellows, Calif. Filed Dec. 11, 1919. Serial No. 344,094. 2 Claims. (Cl. 220—18.)

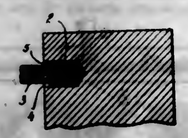
1. In a receptacle, the combination of a body, the forward side of said body being relatively longer than the rear side of said body, a hinged cover for said body having a relatively deep depending border flange thereon, a bottom cover hingedly connected to the rear side of said body, and forming a closure for the lower end of said receptacle, said bottom cover having a relatively deep upstanding border flange thereon, said bottom cover when in closed position upon said bottom inclining toward the forward side thereof, and a bracket upon the rear side of said receptacle, said bracket being relatively deeper than the flanges upon said top and bottom covers, and adapted to be mounted upon a support, to permit unimpeded opening and closing of said covers.

1,392,560. TROLLEY. MANUEL D. DOMINGUEZ, New Orleans, La. Filed Feb. 10, 1921. Serial No. 444,021. 6 Claims. (Cl. 191—80.)

1. A trolley comprising in combination, a harp having side pieces, a trolley wheel revolubly mounted in said side pieces, a vertical shaft journaled on each side piece, inwardly projecting members carried by said shafts, said members closing the space above the trolley wheel, and re-

silliently yielding means to keep said members in normal position.

1,392,561. CLEVIS ANTIRATTLING AND PIN-RETAINING ATTACHMENT. CHARLES HUGH DUFFY, Chevy Chase, Md. Filed June 17, 1920. Serial No. 389,699. 14 Claims. (Cl. 74—17.)



6. An attachment for clevises including a spring member having two arms, one arm having an opening to receive a clevis-pin and having a part of said arm adapted to engage the eye-member of a clevis to press the same transversely against the yoke-member of a clevis, the other arm of the spring member having an opening to receive a clevis-pin and including means adapted to engage the head of a clevis-pin to retain the pin against longitudinal movement.

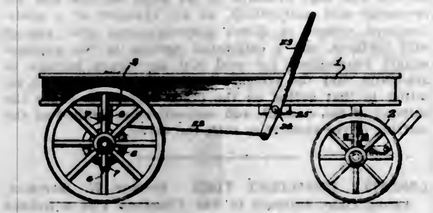
1,392,562. RAILWAY-TIE AND RAIL-FASTENER. CHARLES ELSWORTH ESTABROOK, Springport, Ind. Filed May 13, 1921. Serial No. 469,228. 1 Claim. (Cl. 238—111.)

A railway tie comprising a pair of hollow anchor members of substantially pyramidal form adapted to support rails at the apex thereof, rail engaging projections formed on the anchor members at points intermediate the sides thereof so as to engage the outer edge of the rail base, recessed portions formed on the anchor members at opposite sides of the rails and projections, fastening members extending through the anchor members at the recessed portions and adapted to engage the opposite edges of the rail bases, and means for adjustably connecting the anchor members.

1,392,563. BRUSH CONNECTION. HOWARD BLAINE EYNON, Wellsville, N. Y. Filed Nov. 9, 1920. Serial No. 422,768. 8 Claims. (Cl. 171—326.)

6. A carbon brush having an opening, and a flexible conductor received in the opening and an independent packing of pointed pieces of metal in the opening about the conductor for engaging the conductor and the wall of the opening.

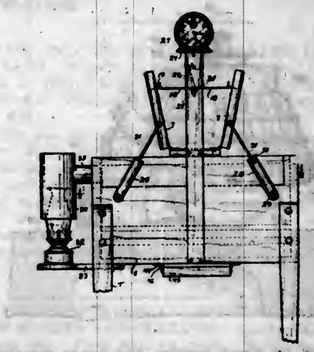
1,392,564. METHOD OF PRODUCING SOLIDIFIED SOLUBLE DISINFECTANT. AXEL FRANCK-PHILIPSON, Chicago, Ill. Filed Mar. 15, 1918, Serial No. 222,580. Renewed Mar. 20, 1920. Serial No. 367,428. 4 Claims. (Cl. 167—3.)



1. The method of producing a disinfectant of the character set forth which consists in commingling tar oil with an alkali to neutralise the free acids thereof, and also with a fat and saponifying or partially saponifying the latter, and thereupon condensing the mixture to effect solidification thereof when cold.

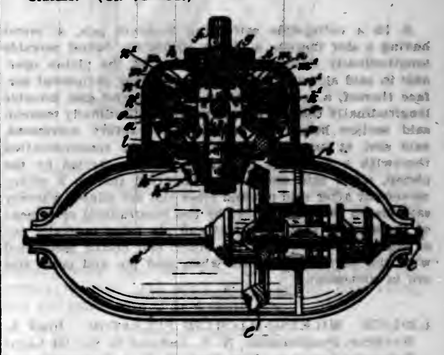
2. The method of producing a disinfectant of the character set forth which consists in commingling tar oil with an alkali to neutralise the free acids thereof, and also with a fat in the presence of heat and agitation to saponify the fat and condense the mixture to effect solidification thereof when cold.

3. The method of producing a disinfectant of the character set forth which consists in commingling tar oil with an alkali to neutralise the free acids thereof, and also with a fat and saponifying or partially saponifying the latter, and thereupon condensing the mixture to effect solidification thereof when cold, the tar oil contained in the finished compound being in excess of the fat.



4. The method of producing a disinfectant of the character set forth which consists in commingling tar oil with an alkali to neutralise the free acids thereof, and also with a fat and saponifying or partially saponifying the latter, and thereupon condensing the mixture to effect solidification thereof when cold, the tar oil constituting substantially seventy-five per cent. of the finished compound.

1,392,565. PROPULSION MEANS FOR VEHICLES. WILLIAM H. FRENCH, Detroit, Mich. Filed Oct. 29, 1920. Serial No. 420,375. 4 Claims. (Cl. 208—38.)

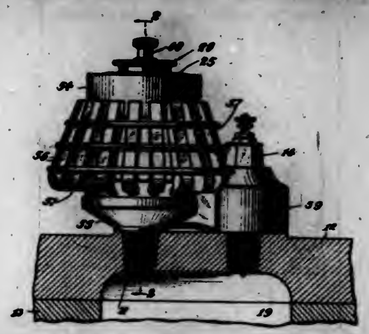


1. In a propulsion mechanism for a vehicle, having an axle, a wheel drum, a casing loose on said drum and adapted to impart movement to said wheel drum, a stationary closure for said casing, means in said casing attached to said stationary closure adapted for rotating said casing in one direction, said drum, casing and closure being concentrically disposed about the vehicle axle, and means adapted for rotating said casing in an opposite direction.

1,392,566. INCUBATOR. WILLIAM C. PETTS, Milwaukee, Wis. Filed Feb. 12, 1917. Serial No. 148,096. 2 Claims. (Cl. 119—40.)

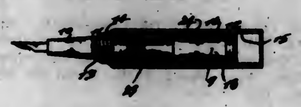
2. In an incubator, the combination with the incubator body having a hinged door, means for releasably securing the door in open position, time controlled means for releasing said securing means, and means for checking the descent of the door and preventing jarring on the closing thereof.

1,392,567. PLANETARY DRIVING-GEAR. MERRILL C. HOZINS, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed May 5, 1919. Serial No. 294,903. 4 Claims. (Cl. 74—34.)



1. Planetary gearing comprising in combination a power shaft, a rotatable spider including a shaft section and radial arms thereon, planetary compound pinions on the arms, a pinion on the power shaft in mesh with one of the pinions of each compound pinion, a nonrotatable sun gear with which the other pinion of each compound pinion meshes, a bearing for the spider shaft carried in the face of the pinion on the power shaft and a second bearing for the spider shaft supported with the sun gear.

1,392,568. ALARM. JOSEPH HORN, West Orange, FERDINAND H. MAY, Montclair, and JOSEF MEILNER, West Orange, N. J. Filed Feb. 26, 1921. Serial No. 448,274. 9 Claims. (Cl. 116—33.)

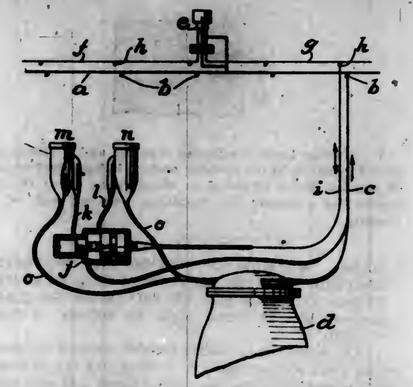


1. An alarm of the kind described comprising a support having an inlet for an actuating fluid, a valve controlling the same, a sounding device carried by said support and arranged to be actuated by said fluid, a housing mounted

upon said support and locking means within said housing whereby said valve is locked against tampering in either

its open or its closed position and means mounted exteriorly upon said housing for actuating said locking means.

1,392,569. SELF-FILLING FOUNTAIN-PEN. EDWARD HUGHES, New York, N. Y. Filed Dec. 17, 1920. Serial No. 431,415. 4 Claims. (Cl. 120—47.)

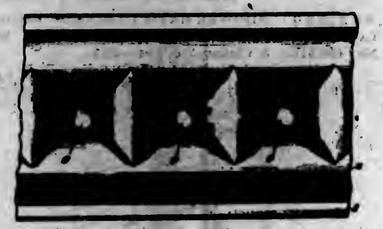


3. In a collapsible self-filling fountain pen, a barrel having a slot therein, a piston within the barrel movable longitudinally thereof, a pin carried by the piston operable in said slot and extending beyond the peripheral surface thereof, a section carried by the barrel and movable longitudinally thereof, having a slot longitudinally thereof, said section being also arranged for rotary movement, said slot at one end thereof having in communication therewith a cross-slot to engage the pin carried by the piston, when said section has imparted thereto a rotary movement after said pin and cross slot are alined, whereby said piston can be operated by the longitudinal movement of the section, said cross slot and pin being normally out of engagement one with the other, and means associated with the barrel to indicate when said pin and cross slot are in alinement.

1,392,570. MILKING-MACHINE PULSATOR. JOHN L. HULBERT, Poughkeepsie, N. Y., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 30, 1920. Serial No. 413,679. 17 Claims. (Cl. 31—101.)

1. In a milking machine pulsator, in combination, a pulsation member comprising a cylinder, a piston reciprocable therein, and ports and passages, whereby the piston in its movements supplies alternating pneumatic pulsations; and a control member comprising a variable pressure chamber, a cylinder supplied with alternating pulsations from the pulsation member, a piston reciprocable in the control cylinder, ports and passages whereby the control piston in its movements supplies alternating pulsations to operate the pulsation piston, said control piston being, at any instant, under the influence of two or more unbalanced uniform pressures and one gradually variable pressure.

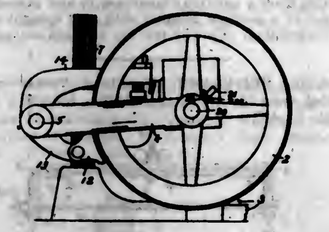
4. In a control member for a pneumatically operatable milking machine pulsator, in combination, a cylinder and a piston reciprocable therein by opposing pneumatic pressures on several areas, means for gradually varying one of said pressures to cause the resultant pressures to change from one tending to retain the piston at one end of the cylinder to one tending to force it to the opposite end.



7. In a pneumatically operable milking machine pulsator, two cylinders, a piston reciprocable in each, ports and passages whereby each cylinder reverses pressure connections for the other, the first piston being freely reciprocable, the second piston being, immediately after the movement of the first, under the influence of three or more pressures on as many areas on the opposite ends of the piston, the resultant pressure being opposed to movement, means to gradually vary one of said pressures until the resultant pressure causes movement, and means whereby initial movement of the piston admits air from a high pressure area to a low pressure area to cause a quick completion of the movement.

11. In a control member for a pneumatically operable milking machine pulsator, a cylinder, a piston therein having a plurality of pressure surfaces pneumatic pressure against either of which tends to shift the piston in one direction, means to create an opposing pneumatic pressure preventing such shift and then to reduce said opposing pressure to allow the pressure against one of said surfaces to start said shift, and means causing the last named pressure, after said shift is started, to operate also against the other pressure surfaces, thereby accelerating the shift.

15. In a pulsator for milking machines, a moving element having two surfaces arranged to be acted on by pneumatic pressure, a high pressure supply, a low pressure supply, a valve for admitting low pressure to one surface and high pressure to the other surface and for reversing said connections, an air chamber of a predetermined volume in direct communication with one of said surfaces, and a calibrated opening in the pressure supply connections for said last mentioned surface to gradually vary the pressure in the air chamber with relation to that acting on the other surface to cause the shifting of the element, and connections controlled by the shifting of the element to shift the valve.



1,392,571. RESILIENT TIRE. ROBERT H. BOWMAN, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 21, 1918. Serial No. 223,888. 1 Claim. (Cl. 152—1.)

A vehicle tire comprising a solid ring of elastic material having spaced circumferential tread sections of substantially semicircular cross section, and a circumferential series of transverse ribs disposed between the tread sections and extending from top to bottom thereof and integral therewith and of substantially semicircular shape in cross section, the tread sections and ribs defining substantially pyramidal cavities constituting suction cups having their sides convexed longitudinally to permit flow of the tire material under compression and expansion to obtain resiliency and to dislodge accumulations from the

side walls of the cups, the bottoms of the cavities being dished and the side walls merging into the bottom walls in reflex curves, the tread faces of the circumferential sections and cross ribs lying in the same circumferential surface of the tire and constituting the tread thereof.

1,392,572. BRAKE FOR LINEAL-MEASURING REGISTERS. EMIL EK, Portland, Me., assignor to Adde & Company, a Corporation of Maine. Filed Mar. 2, 1920. Serial No. 362,724. 4 Claims. (Cl. 33—142.)

1. In a rotary meter for measuring lumber and other like stock, the combination of the support, an arm pivoted to said support by its rear end, a friction wheel journaled on said arm, a rotary indicating device on said arm, axially in line with said wheel and arranged to be operated by the rotation of the wheel shaft and a brake for said wheel arranged to be brought into action when the wheel is not supported by the stock.

1,392,573. REGISTER FOR LINEAL MEASURING. EMIL EK, Portland, Me., assignor to Adde & Company, a Corporation of Maine. Filed Mar. 2, 1920. Serial No. 362,725. 1 Claim. (Cl. 235—144.)

In a register for lineal measuring, the combination with a grooved shaft of a number wheel composed of a soft metal wheel body having a shaft opening and an offset opening communicating laterally with said shaft opening, a hard metal washer at each end of said wheel body having a shaft opening and an offset opening, a pawl block extending through said offset opening and having its ends seated and guided within the openings in said washers, said pawl block being adapted to engage the shaft groove and means for uniting said washers in said wheel body.

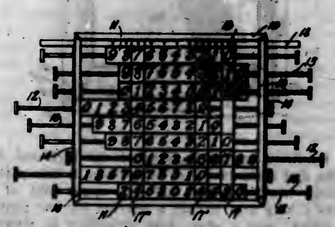
1,392,574. PROCESS OF MAKING PLASTIC CALCINED GYPSUM. WARREN E. EMLEY, Washington, D. C. Filed Feb. 3, 1921. Serial No. 442,313. 11 Claims. (Cl. 222—4.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

3. The process of increasing the plasticity of calcined gypsum which consists in grinding the calcined gypsum to eliminate the water content during the grinding operation, preventing the escape of the said water content during the grinding step, and continuously keeping the above treated gypsum in contact with the water thus eliminated and permitting thew ater thus eliminated to be reabsorbed before ceasing the grinding operation.

1,392,575. SUPPORTING AND STRETCHING BRACKET FOR SHADES AND CURTAINS. LAURA GLADISH, St. Louis, Mo. Filed Mar. 18, 1920. Serial No. 366,831. 1 Claim. (Cl. 156—24.)

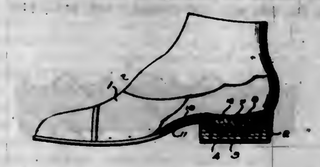
An improved supporting-bracket, for lace and drapery curtains and a shade-roller; comprising a base-plate from the outer vertical edge and the upper end of which projects a long arm having a bearing for the pintle of a shade-roller; and a short arm extending at right-angles from the inner vertical edge of the said base-plate, at a distance below said long arm, and provided with two parallel inclined open slots which extend downwardly from the upper edge of said short arm.

1,392,576. METHOD OF MANUFACTURING SOLID TIRES. DANIEL E. GOODENBERGER, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 5, 1918. Serial No. 256,933. 20 Claims. (Cl. 154—12.)



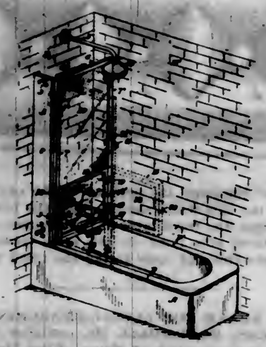
1. In the process of manufacturing articles of rubber or similar material, the step of providing spaced venting elements along which an entrapped fluid may find outlet from the interior of the article during vulcanization.

1,392,577. POST. Leo G. Haasn, Pasadena, Calif. Filed Nov. 15, 1920. Serial No. 424,072. 3 Claims. (Cl. 72—84.)



3. In a post, a cement member, a second member, bolts connecting the members, and means coöperating with the bolts to produce buckling of the second member when the bolts are drawn up tight.

1,392,578. EDUCATIONAL APPARATUS. Palmer J. Jones, Port Washington, N. Y. Filed May 7, 1920. Serial No. 379,457. 4 Claims. (Cl. 35—2.)



4. Educational apparatus comprising a plurality of horizontally disposed changeable display members, a horizontally adjustable support, means for securing vertical shields to said support at various positions thereon.

1,392,579. SHOE ATTACHMENT. Frank L. Kryder, Akron, Ohio. Filed Dec. 3, 1920. Serial No. 427,967. 2 Claims. (Cl. 36—37.)

1. An insert for shoes, comprising a lining of cushioning material adapted to be arranged within a shoe, a cup-shaped member arranged at the rear of said lining, said lining being shaped to fit said cup-shaped member, said cup-shaped member being provided with a plurality of openings through which said cushioning material extends, the edges of the cup-shaped member being provided with flanges, and a layer of fabric arranged beneath said cup-shaped member, the edges thereof being secured within said flanges.

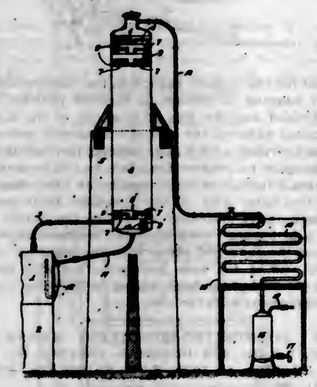
1,392,580. SHOWER-BATH CABINET. Benjamin Landau, Philadelphia, Pa. Filed Mar. 8, 1921. Serial No. 450,516. 5 Claims. (Cl. 4—26.)

1. The combination with a bath tub, of a fixed upright forming a jamb, a door hinged to said upright and movable from a position transverse to and extending over the tub to a position parallel with said upright and with the longitudinal edges of the tub and against said jamb.

1,392,581. BED-CLAMP. Max Leaf, Youngstown, Ohio. Filed Oct. 25, 1920. Serial No. 419,507. 1 Claim. (Cl. 5—41.)

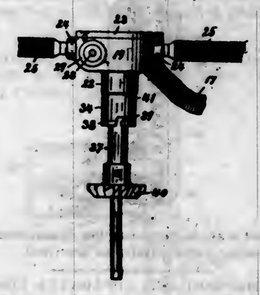
In a device of the class described, a plate member, a hole centrally located in said plate, two clamping members, U-shaped portions at outer ends of said clamping members, slotted openings at inner ends of said clamping members, a bolt passing through the plate and said slotted openings, openings through the lower ends of said U-shaped portions, a brace and securing bolt extending through said openings, substantially as described.

1,392,582. HOLDER FOR COLLARS. Frank J. Le Clair, Attleboro, Mass., assignor to Freeman-Daughaday Company, Chartley, Mass., a Corporation of Massachusetts. Filed May 17, 1921. Serial No. 470,359. 7 Claims. (Cl. 24—81.)



1. A collar holder comprising a gripping device having opposed clamping members and a slide member, said latter member having an opening therethrough adjacent one extremity and an oblique slot extending from the edge of said member to the opening, and an actuating spring having a loop element at one of its extremities passing through said opening.

1,392,583. APPARATUS FOR LOADING ORDNANCE. Hugh Warren Lee and John Windlow Swindale, Newcastle-upon-Tyne, England, assignors to Sir W. G. Armstrong, Whitworth and Company, Limited, Newcastle-upon-Tyne, England. Filed Mar. 22, 1921. Serial No. 454,472. 9 Claims. (Cl. 89—46.)



1. In a hoist, a trunk, two independently operated sliders in the trunk, a number of lifting arms pivoted to the sliders, means for raising and lowering the sliders and positively acting means for rocking the lifting arms on their pivots.

1,392,584. ART OF DISTILLING PETROLEUM-OILS. Frank B. Lewis and Thomas S. Cooke, Whiting, Ind., assignors to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed May 7, 1917. Serial No. 166,965. 7 Claims. (Cl. 196—5.)

1. The improvement in the art of cracking petroleum oils by distillation under pressure which consists in passing the mixture of sufficiently cracked and insufficiently cracked vapors continuously produced within the still through a plurality of separated bodies of petroleum oil arranged in series and maintained at temperatures such as to condense all insufficiently cracked fractions but not to condense the sufficiently cracked fractions, and condensing and collecting the sufficiently cracked fractions which escape condensation in the said liquid bodies.

1,392,585. RESEATING ATTACHMENT. Arthur C. Landholm, Springfield, Mass. Filed June 24, 1920. Serial No. 391,378. 5 Claims. (Cl. 90—12.5.)

1. In a reseating attachment, a portable cutting element comprising a casing having an extension, a worm and worm shaft journaled in said casing, a flexible shaft, said worm shaft having a socket in one end for the attachment thereto of one end of the revoluble member of said flexible shaft, a split bushing in said extension to receive the corresponding end of the sheath of said flexible shaft, means to cause said bushing to bind on said sheath, and a worm-wheel and spindle therefor also journaled in said casing, said worm-wheel intermeshing with said worm, and said spindle being adapted to have a cutter connected therewith.

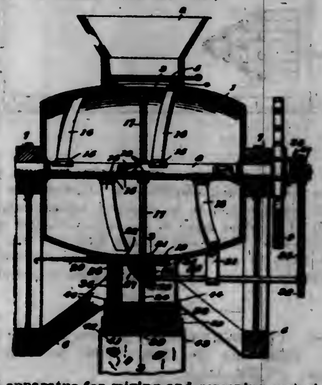
1,392,586. GAME APPARATUS. Hugo Loewenbach, Hartland, Wis., assignor to Automatic Bowling Alley Co., Milwaukee, Wis. Filed Dec. 29, 1919. Serial No. 347,933. 6 Claims. (Cl. 46—54.)

1. In a game apparatus, a supporting floor, a pin disposed on said floor and adapted to be knocked from upright to prone position and to be disposed substantially longitudinally of the floor when in the last mentioned position, a rib disposed transversely of the floor, the pin resting thereon when in prone position, and means coöperating with said rib to move the pin from prone to upright position.

1,392,587. PRESSURE-GAGE. Arthur B. Low, Denver, Colo. Filed June 19, 1920. Serial No. 390,109. 5 Claims. (Cl. 73—111.)

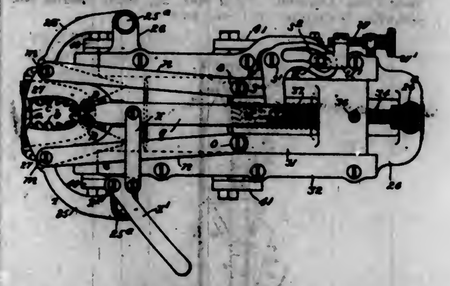
1. A pressure gage embodying a hollow casing forming a chamber that provides an upper internal seat, encompassing a top aperture, and having a bottom closure providing a pressure fluid duct, a valve stem contacting element and a surrounding seating face; a piston in said chamber having a guide stem; an elongated indicator member normally seated freely on said piston, in contiguous association with said guide stem, and operating through said top aperture; compressible retractile means supported by

said piston; and yielding frictional means, supported by said retractile means and forced up thereby against said



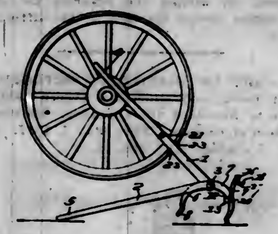
upper internal seat, in encompassing engagement with said indicator member, substantially as described.

1,392,588. METHOD AND APPARATUS FOR MAKING TERNE PLATES. JAMES R. MCELHANEY, Vandergrift, Pa., assignor to American Sheet and Tin Plate Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Dec. 24, 1920. Serial No. 433,041. 11 Claims. (Cl. 91—12.7.)



1. The combination with a terne pot, rollers for feeding plates into and out of said pot, and guides for the plates, of a conveyer for receiving plates emerging from said pot, said conveyer being constructed to engage only the longitudinal edges of said plates, and thereby preventing marring the surfaces of the coated plates.

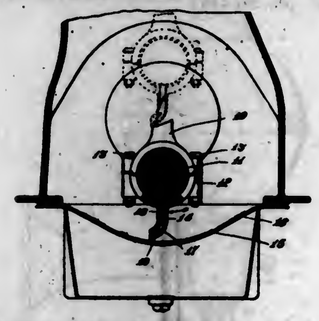
1,392,589. MIXING AND SCREENING DEVICE FOR FERTILIZERS AND THE LIKE. ALFRED M. MARSHALL, Savannah, Ga. Filed Jan. 25, 1921. Serial No. 439,769. 5 Claims. (Cl. 259—10.)



1. An apparatus for mixing and screening material such as fertilizer and the like, comprising a receptacle, a shaft therein, stirring arms on the shaft for mixing the material and means for feeding material to and delivering material from said receptacle, in combination with a screening device located under the delivering means of the said receptacle and comprising a rotatable screen, and means for rotating the same on a vertical axis while the stirring devices of said receptacle are in operation.

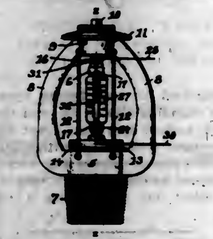
1,392,590. LASTING-MACHINE. FRANK W. MERRICK, Boston, Mass., assignor to Union Lock Stitch Company, Boston, Mass., a Corporation of Maine. Filed Sept. 25, 1916. Serial No. 121,925. 29 Claims. (Cl. 12—14.)

1. In a lasting machine, in combination, an end-band or compressor-band, opposite movable lateral supports therefor, and a bar at each end of the said band, said bar having its upper and lower portions in universal joint engagement with the corresponding end of the band and its middle in universal joint engagement with the corresponding support.



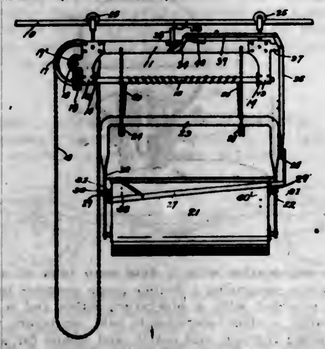
1,392,591. TIRE-TOOL. ORA MOBLEY, Cincinnati, Ohio. Filed Feb. 18, 1920. Serial No. 359,730. 1 Claim. (Cl. 157—6.)

In a tool for the purpose indicated, the combination with a support adapted to assume an inclined position engaging the ground and the hub of a wheel, of an L-shaped plate disposed adjacent the side of the support nearest the wheel and provided with means passing through the plate and the support to connect the plate to the support, said plate having lateral lugs, one engaging on each edge of the support, the latter arm of the L-shaped plate provided with a hook at its extremity to engage the flange of the rim, and a bell-shaped cone rotatably mounted on the lateral arm of the L-shaped plate, with the marginal edge of the larger end of the cone approximating and partially overlying the root of the hook, acting to force the tire upon and in engagement with the rim.



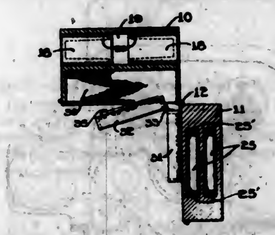
1,392,592. CONNECTING-ROD-OILING MEANS. JOSEPH W. NELSON and ROBERT S. COULTER, St. Cloud, Minn. Filed Mar. 13, 1920. Serial No. 365,378. 2 Claims. (Cl. 184—13.)

1. Means of the class described, comprising a piston or connecting-rod cap provided with a projection arranged on the opposite side of the crank-pin to extend into the dip-trough or oil-pan of the motor during the lower part of the reciprocating stroke of the rod, the projection being provided with a longitudinal passage extending to the connecting rod bearings about the crank-shaft pin, the lower end of said passage terminating in a forwardly disposed inlet orifice adapted to dip up oil from the dip-trough of the oil-pan, and baffle members, secured to opposite sides within said passage, disposed in a direction lengthwise of the passage to provide oil retaining pockets opening upwardly toward the crank-shaft pin end thereof whereby the oil



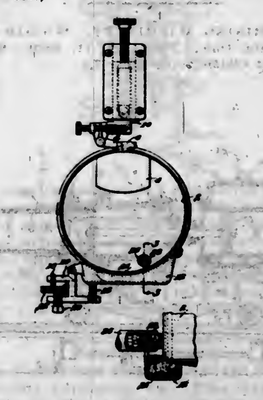
is held against outflow through the inlet orifice but permitted to flow toward the crank-shaft pin when the action of centrifugal force is in reverse direction.

1,392,593. AUTOMATIC SPRINKLER. ROBERT WILKINSON NEWTON, Providence, R. I. Filed Apr. 29, 1920. Serial No. 377,620. 5 Claims. (Cl. 169—38.)



1. An automatic sprinkler having a holder in the form of a strut of glass or other breakable material and interposed intermediate the valve seat and the frame hub, said holder having scales to record the amount and expansion of the material in the holder.

1,392,594. LETTER-CARRIER. ALVIN C. PERKINS, Goodland, Ind., assignor of one-half to Lee R. Perkins, Goodland, Ind. Filed Nov. 8, 1920. Serial No. 422,578. 3 Claims. (Cl. 212—137.)

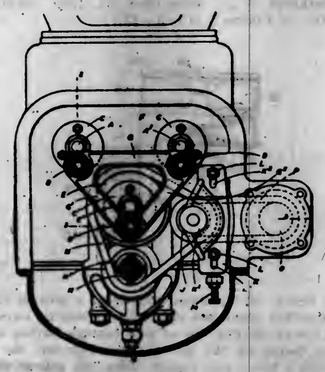


1. In a latch releasing mechanism for an elevated carrier bucket, the combination with a track having a beveled projection, and a bucket suspended from the track by a bail pivoted to said bucket, of a rod slidably mounted on one side of the bucket, a latch carried by one end of the bucket and normally engaged with the bail, and means operable upon engagement with said beveled projection for moving said rod to disengage the latch from the bail.

1,392,595. COMBINATION FURNITURE. JAN PIFKO, Elisabethport, N. J. Filed Mar. 31, 1921. Serial No. 457,310. 3 Claims. (Cl. 5—18.)

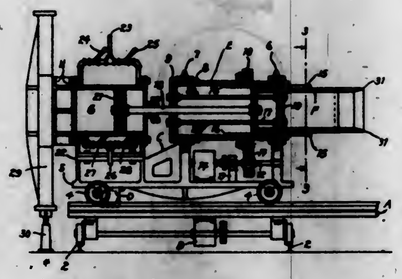
1. An article of furniture comprising a pair of casings hinged together along one side, and presenting outwardly opening compartments, one of said casings having a compartment facing on the side thereof, adjacent the other casing, and a bed frame hinged along one side to the adjacent wall of the other casing, and adapted to be accommodated in the said compartment when the two casings are swung together.

1,392,596. SKIVING-MACHINE. EUGENE J. RAY, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 30, 1920. Serial No. 355,094. 4 Claims. (Cl. 69—0.5.)



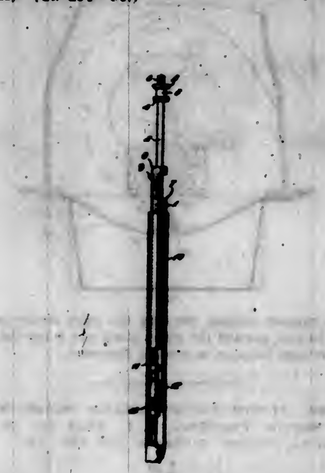
1. A skiving machine having, in combination, a tubular knife, a feed roll, a presser foot, a movable carrier for presenting a moistening pad to the edge and outer surface of the knife, and a spring acting on the carrier to press a pad carried thereby against the periphery of the knife.

1,392,597. MECHANISM FOR THE DRIVING OF CAM-SHAFTS OF INTERNAL-COMBUSTION ENGINES. HARRY RALPH RICARDO, London, England. Filed Feb. 12, 1919. Serial No. 276,567. 8 Claims. (Cl. 123—96.)



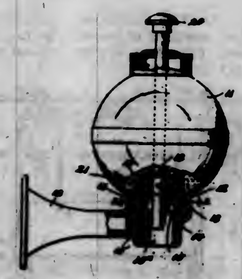
1. In mechanism for driving the cam shafts of an internal combustion engine the combination of two cam

shafts each of which carries at one end a crank pin, an idle toothed wheel provided with a similar crank pin, a triangular connecting rod by means of which these three crank pins are coupled together, a second idle toothed wheel having a double set of teeth, a toothed wheel mounted on the engine crank shaft, a driving chain which passes



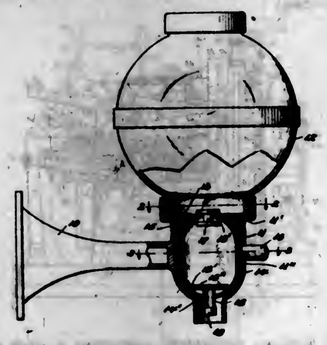
over the first idle wheel over the first set of teeth of the second idle wheel and over the toothed wheel on the crank shaft, a shaft serving to drive auxiliary mechanism, and means for driving this auxiliary shaft off the second set of teeth of the second idle toothed wheel as set forth.

1,392,598. MINING MACHINERY. WILLIAM W. ROBBINS, Lorain, Ohio. Filed Oct. 11, 1920. Serial No. 415,971. 3 Claims. (Cl. 262—7.)



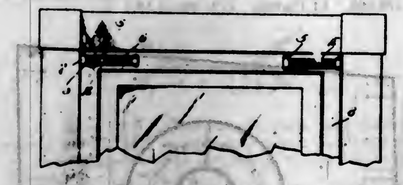
1. In a mining machine, the combination of a piston, a cylinder therefor and hydraulic means for operating said piston, a cylindrical mining tool on the end of said piston, and operated thereby back and forth, a cylinder within which said boring tool is adapted to reciprocate in a telescopical manner, bearings for said cylinder, a spline connection between the tool and the cylinder, whereby any rotary motion of the cylinder is communicated to the tool; a motor for rotating said cylinder whereby said tool may also be rotated.

1,392,599. FISHING-TOOL. ALBERT F. ROSE, Tulsa, Okla. Filed Apr. 15, 1920. Serial No. 374,091. 10 Claims. (Cl. 294—90.)



1. In a fishing tool for well boring apparatus, a long spear, an object engaging slip on one end thereof, a shank on the other end, a short spear, an object engaging slip on one end of the short spear coöperating with the slip on the long spear, and means coöperating with the long spear and the short spear holding the two spears in close relation to each other but permitting a relative sliding movement.

1,392,600. LIQUID-SOAP DISPENSER. WILLIAM H. ROSE, Jersey City, N. J. Filed Oct. 19, 1920. Serial No. 417,965. 7 Claims. (Cl. 221—94.)



1. The combination with a fluid soap tank of a discharge device comprising a flexible pump chamber having an inlet provided with a non-return valve and a self-closing outlet, a stem connected to said non-return valve and extending through said outlet, and means for applying pressure to the wall of the pump chamber to eject fluid from said outlet.

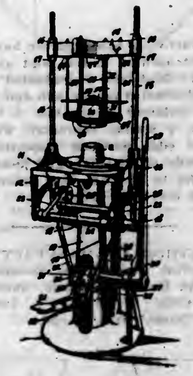
1,392,601. SOAP-DISPENSER. WILLIAM H. ROSE, Jersey City, N. J. Filed Dec. 8, 1920. Serial No. 429,113. 6 Claims. (Cl. 221—94.)

1. The combination with a fluid soap tank of a discharge device comprising a flexible pump chamber having an inlet provided with a non-return valve and an outlet, and a flexible member extending through said outlet and constituting a valve therefor.

1,392,602. ADJUSTABLE WINDOW-CURTAIN BRACKET. EMIL C. ROSENCRANS, Evansville, Ind. Filed July 2, 1920. Serial No. 393,669. 4 Claims. (Cl. 156—24.)

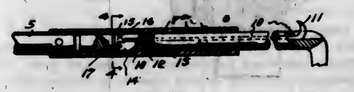
4. The combination with a window frame, of spaced supporting members permanently secured thereto and each provided with a series of transverse slots, brackets adjustable longitudinally with respect to the supporting members and each including a base portion having a depending locking tongue adapted to enter the slots in the supporting member, and an upstanding shank terminating in a shade roller supporting head, said brackets each having a limited lateral tilting movement with respect to the adjacent supporting member, and locking devices carried by the shanks of the brackets and movable into engagement with the supporting members for locking said brackets against tilting and longitudinal movement with respect to the supporting members.

1,392,603. SPRING SUSPENSION SYSTEM. ALBERT F. SHOAR, New York, N. Y. Filed Dec. 11, 1920. Serial No. 429,841. 11 Claims. (Cl. 267—28.)



1. In a spring suspension system, the combination with a subframe fulcrum attached directly to the axles or housing thereof of the front and rear supporting wheel sets, of a fulcrum spring set hinged on said sub-frame for free vertical oscillation and positioned approximately midway between said front and rear wheels and adapted for attachment to the beams of a suspended chassis, and springs positioned at the fore and rear ends of said chassis.

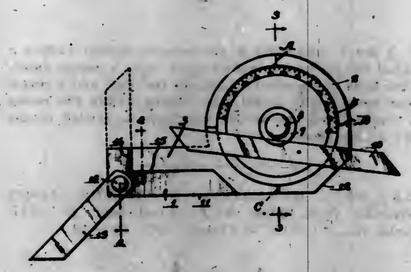
1,392,604. JEWELRY. CHARLES G. SMITH, Cambridge, Mass. Filed Aug. 22, 1919. Serial No. 319,290. 3 Claims. (Cl. 240—1.)



2. A jewel comprising a transparent crystal having a polished top surface to reflect light rays, a recess entering the body of the crystal adjacent the base, and a transparent hermetically sealed tube located within the recess and containing a radioactive substance suspended in gas under a high pressure.

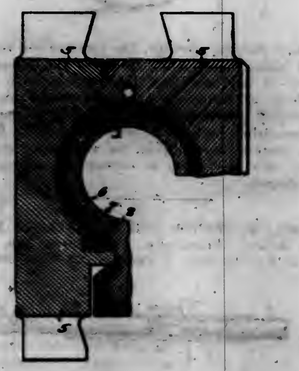
1,392,605. HAT-SHAPING APPARATUS. LESLIE STEVENS, Glen Ridge, N. J. Filed Sept. 14, 1917. Serial No. 191,371. 36 Claims. (Cl. 223—31.)

1. In a shaping machine, the combination with a press having opposed supporting members and means for moving one of said members toward and from the other, of a form carried by one of said supporting members, and shaping means carried by the other supporting member comprising both a shaping member of flexible and porous material and means for tensioning said shaping member over said form to stretch thereon the material being shaped.



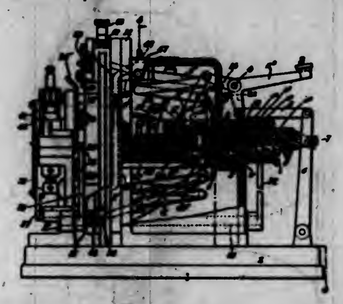
1,392,606. FASTENER FOR ADJUSTABLE WINDOWS. JAN STOCH, Uniontown, Pa. Filed Jan. 15, 1921. Serial No. 437,376. 1 Claim. (Cl. 292—266.)

A device of the class described comprising, in combination with a window pivotally attached to a sash, means for varying the degree of opening of said window comprising a member pivotally attached to said window, a sleeve rigid with said member, said sleeve having its in-



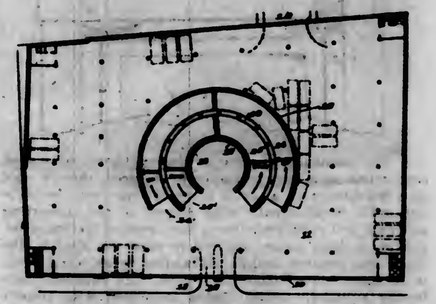
terior surface notched, a second member slidable within said first member, a channel in said second member having a rod slidable therein, a recess near the end of said second member, a lug slidably mounted in said recess and having a nose extending therefrom, means for urging said lug against said sleeve, said rod being adapted to move said lug against the force of said means when said rod is moved inward in said channel.

1,392,607. BEVEL-PROTRACTOR. CHARLES STRAUB, Chicago, Ill. Filed Dec. 23, 1920. Serial No. 432,753. 5 Claims. (Cl. 33—102.)



1. In a protractor, a base member having a fixed hub with a threaded opening therein and an annular recess surrounding said fixed hub, a graduated dial disposed in the recess and journaled on the hub and having a groove across its face adjacent to the hub, a blade slidable in the said groove, a washer concentric with the hub and having opposite edge portions respectively overlapping parts of the blade of the dial, and means engaging the threaded opening in the hub for clamping the washer against the said overhung parts.

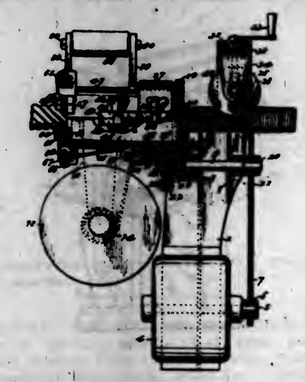
1,392,608. METHOD OF MANUFACTURING TIRES. JOHN C. TUTTLE, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 7, 1919. Serial No. 328,964. 9 Claims. (Cl. 18—56.)



1. The method of manufacturing tires comprising the steps of forming a tire casing from fabric and rubber on a core, placing the tire in a mold, and causing the rubber under heat and pressure to flow toward the beads of the tire.

1,392,609. METHOD AND MEANS OF SELECTION. CHARLES R. UNDERHILL, New Haven, Conn. Filed Nov. 19, 1915. Serial No. 62,270. 58 Claims. (Cl. 177—380.)

1. A selecting mechanism, comprising a stock of unit elements of different kinds, means for integrating from said stock of unit elements different combinations, an operated means, the operation of which is rendered effective by certain of said elements, and selective means for either restoring the unit elements to said stock or causing them to again affect the operated means.

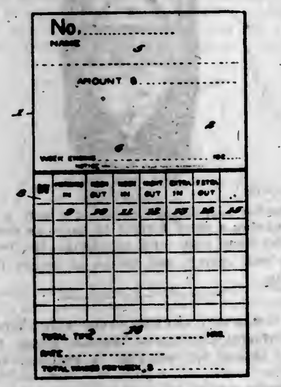


1,392,610. AUTOMOBILE-HANDLING DEVICE FOR GARAGES AND THE LIKE. CLINTON J. WARREN, Winchester, Mass. Filed Feb. 19, 1919. Serial No. 278,094. 14 Claims. (Cl. 20—1.13.)

1. A device for the handling of automobiles between the ground and other stories of a building, comprising the combination, with a building having a plurality of stories, other than the ground story, of a way comprising a series of coöperating inclined ways arranged in succession from floor to floor, adapted in grade, course and surface for automobiles to traverse them, the several ways of the series being arranged, in respect to each other and to the several floors, with the inclines of the succession approaching and leaving a floor having their connections with that floor grouped together.

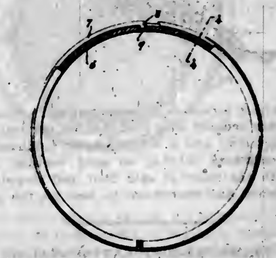
1,392,611. SERVING-MACHINE. VIRGIL P. ADAMS, Bremerton, Wash. Filed Sept. 9, 1920. Serial No. 409,185. 8 Claims. (Cl. 28—6.)

1. In a serving machine, a frame movable longitudinally along the material being served, a mechanism bodily revoluble concentrically about and on a radius from the material being served and carried by the frame and letting out the serving material, said mechanism including means extending radially of the mechanism for closely engaging the convolutions of the serving material and at the same



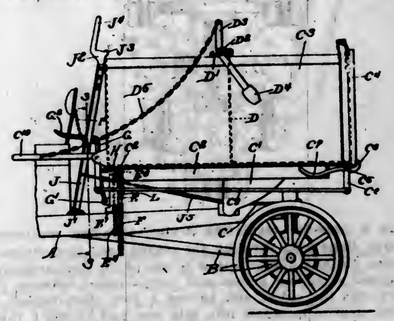
time advancing the machine along the material being served, and a trolley mechanism for suspending the frame on the material being served.

1,392,612. PALATAL BAR. HUGO ADERER, East Orange, N. J., assignor to J. F. Jelenko & Co., New York, N. Y., a Firm composed of Jesse F. Jelenko and Hugo Aderer. Filed Apr. 22, 1921. Serial No. 463,465. 4 Claims. (Cl. 32—12.)



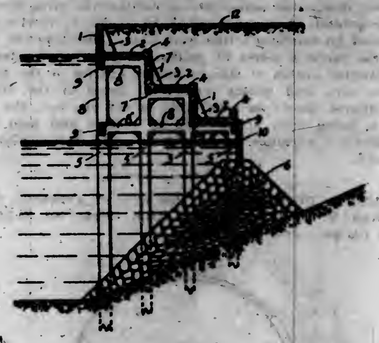
1. A palatal bar having integral ends, said ends comprising prongs, said prongs being curved outwardly from the plane of the bar, and said prongs having corrugations thereon.

1,392,613. TIME-CARD, PAY-ENVELOP, AND DAILY-PRODUCTION RECORD. MARCUS ADLER, Chicago, Ill. Filed Dec. 9, 1920. Serial No. 429,410. 2 Claims. (Cl. 283—1.)



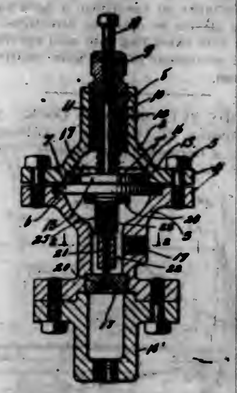
1. A record-keeping system comprising an envelop having on one face a series of rulings which divide the same into a commercial form having appropriately designated spaces of size to receive entries of an employee's work, hours, and having on its reverse face a series of rulings which divide the same into a commercial form having appropriately designated spaces of a size to receive entries of an employee's time-work data, there being on one of the faces a series of rulings to form appropriately designated spaces of size to receive entries of the total time, rate, and weekly wage-total noted in the aforementioned spaces on both faces of the envelop; the envelop being open at one end to receive and hold the employee's earnings, as noted in said last-mentioned spaces.

1,392,614. PISTON-RING. PER AUGUST ANDERSON, New York, N. Y. Filed Aug. 12, 1919. Serial No. 317,017. 2 Claims. (Cl. 74—100.)



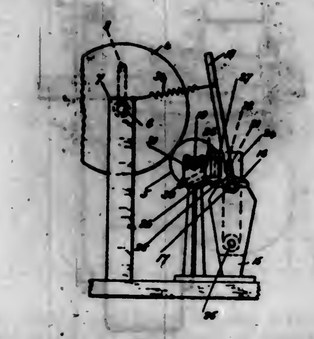
2. The combination of a piston ring having an annular groove formed in its outer peripheral surface and provided with an aperture, an annular packing wire sprung into said groove and projecting radially outward beyond said ring for engagement with the inner surface of an engine cylinder to constitute a packing, said wire and ring being elastic in opposite directions and a projection on said wire extending into said aperture whereby circumferential movement of said wire relatively to said ring is prevented.

1,392,615. BODY SUPPORT AND LOCK. WILLIAM C. ANTHONY, Streator, Ill., assignor to Anthony Company, Streator, Ill., a Corporation of Illinois. Filed Apr. 17, 1920. Serial No. 374,558. 11 Claims. (Cl. 298—38.)



1. The combination with a vehicle of a dumping body mounted thereon and adapted to be tipped with relation thereto, of a locking and supporting assembly adapted to lock and support the body in the untipped position and to support the body in the tipped position, said assembly including a pivoted locking member adapted normally to hold the body in the untipped position, and a second pivoted member adapted to support the body in the tipped position, each of said pivoted members mounted upon said vehicle alone.

1,392,616. WHARF-WALL AND THE LIKE. TAGGART ASTON, Bellingham, Wash. Filed Mar. 18, 1921. Serial No. 453,331. 8 Claims. (Cl. 61—30.)



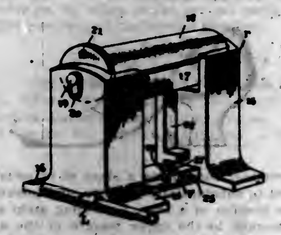
1. In a wharf structure in combination, a wharf floor; a substructure beneath said floor, having vertical members set in the ground; and a stepped-down bulkhead, having horizontal members bearing on said vertical members, engaged with the front of said floor and stepping diagonally downward and shoreward to bear on the ground.

1,392,617. PRESSURE-REGULATING VALVE. EDWIN J. AUGUSTIN, Wauwatosa, Wis., assignor of one-third to George Bauer and one-third to Otto Gray, Milwaukee, Wis. Filed Mar. 6, 1920. Serial No. 363,752. 1 Claim. (Cl. 50—22.)

In a pressure regulating device, a casing, an imperforate diaphragm dividing the casing into two compartments, an inlet and an outlet to one of the compartments, a spider extending across said compartment between the inlet and the outlet and having a bore therethrough, a valve stem reciprocable into said bore and having a valve at one end adapted to seat on the outside of said inlet, a head mounted on the other end of the valve stem and adjustable longitudinally thereof, said head being adapted to engage the diaphragm, an expansile spring acting between the head and spider to urge the head into engagement with the diaphragm and simultaneously urge said valve onto its seat to close said inlet, and means on the other side of the diaphragm for urging the diaphragm and consequently the head and valve in the opposite direction.

1,392,618. LEVER MECHANISM. NORMAN AYERS, McArthur, Ohio. Filed Aug. 5, 1921. Serial No. 489,995. 4 Claims. (Cl. 74—26.)

1. The combination, with a bearing, and a shaft having one end portion journaled therein; of a supporting standard provided with two bearings, a lever pivoted to to the standard between the said two bearings and provided with a slot, a crankshaft journaled in the said two bearings and provided with a crank which engages with the slot and affords a means for moving the said lever pivotally, and a bearing for the other end portion of the first said shaft pivotally connected with the free end portion of the said lever.



1,392,619. CASING-PLUG. REUBEN C. BAKER, Coalinga, Calif., assignor to Baker Casing Shoe Company, Coalinga, Calif., a Corporation of California. Filed Sept. 29, 1919. Serial No. 327,281. 6 Claims. (Cl. 166—13.)

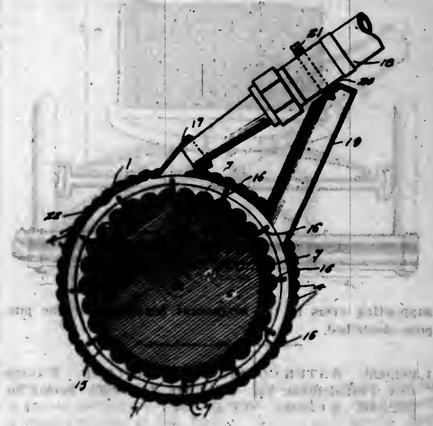
5. A plug for well casings including a body, a gasket on the body having a skirt formed to have its free edge lie between the body ends and to engage the bottom end edge of a well casing, and means to secure the gasket to the body.

1,392,620. SAFETY APPARATUS FOR TRAINS OR CARS. WILLIAM O. BATTS, Wilmot, Kans. Filed July 2, 1921. Serial No. 482,120. 4 Claims. (Cl. 246—171.)

1. A safety apparatus for cars comprising a plurality of units adapted to support a car for rolling movement on the rails of a track when the car wheels are derailed, brake actuating means forming a part of and operable by each of said units, and yokes adapted to be secured to the car

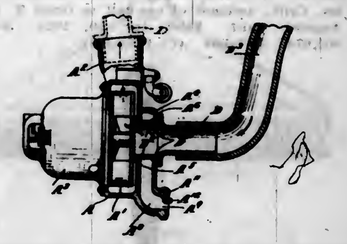
and in embracing relation to the wheel truck for the purpose described.

1,392,621. MACHINE FOR SHAPING MATRICES. LOUIS H. BUCHMAN, Battle Creek, Mich., assignor to Duplex Printing Press Company, Battle Creek, Mich., a Corporation of Michigan. Filed Aug. 5, 1919. Serial No. 315,485. 20 Claims. (Cl. 34—16.)



10. Apparatus for shaping and drying matrices for casting stereotype plates; comprising a stationary form, a flexible resilient metal sheet having one end connected with the form and adapted to be wrapped around it to bend a matrix inserted between the sheet and form, means for holding the sheet in wrapped position to retain the bent matrix in place, and means for supporting the sheet and limiting its separation from the form when released.

1,392,622. PRICE-TICKET HOLDER. GEORGE A. BERRY, Excelsior Springs, Mo., assignor of one-third to W. J. Marsh, St. Louis, Mo., and one-third to Bernard C. Baynes, Excelsior Springs, Mo. Filed Feb. 21, 1919. Serial No. 278,397. 2 Claims. (Cl. 40—11.)

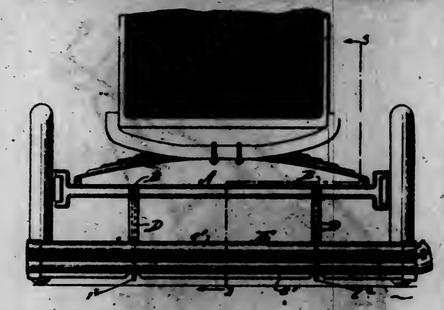


1. A ticket holder formed from a single strand of resilient wire and comprising a shank, a bend at the upper end of the shank, an arm depending from said bend and having its lower end portion normally urged toward the shank, a lateral bead at the lower end of said arm, a loop member rising from said bend, and a lateral gripping arm extending from the upper end of said loop member across the vertical plane of the shank and the first-mentioned arm.

1,392,623. AUTOMOBILE-BRUSH. RAYMOND L. CHEATHAM, Richmond, Va. Filed Oct. 30, 1920. Serial No. 420,653. 1 Claim. (Cl. 15—37.)

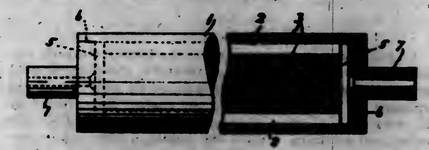
A brush comprising a casing, a stationary cleaning element carried by said casing, a rotatable cleaning element carried by said casing, a nozzle carried by said casing and arranged at the inclination to the casing, fins carried by the rotatable cleaning element, a handle secured to the casing and inclining toward the nozzle, a hose clamp carried by said handle and adapted to be attached to a hose for supporting the same in alinement with the nozzle and away from the casing.

1,392,624. VACUUM-CLEANER. GEORGE CLEMENTS, Chicago, Ill., assignor to Clements Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed June 14, 1911. Serial No. 633,011. 10 Claims. (Cl. 15—60.)



2. A vacuum cleaner comprising a pump chamber, a suction chamber, having an outlet opening to the pump chamber, a suction nozzle and an inlet opening, and a removable closure therefor, said openings adapted to receive a connecting inlet tube.

1,392,625. VEHICLE-FENDER. MORRIS B. DIMIN, Brooklyn, N. Y. Filed July 29, 1920. Serial No. 399,670. 4 Claims. (Cl. 293—36.)



1. In combination with a vehicle fender of the character designated, means for effecting the vertical adjustment of the buffer bar comprising segmental brackets secured to a fixed part, buffer bar supporting arms pivotally

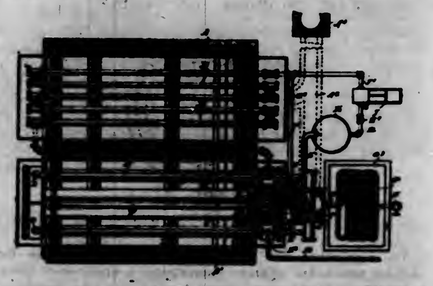
connected with said brackets and with the buffer bar, said buffer bar, and retractile latch means for coupling the

supporting arms to the segmental brackets, for the purpose described.

1,392,626. WATER-COOLED GLASS-ROLLER. WALTER COX, Philadelphia, Pa. Filed Jan. 19, 1920. Serial No. 352,580. 3 Claims. (Cl. 49—34.)

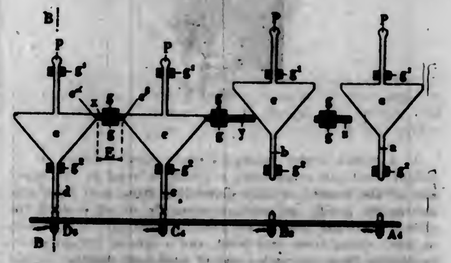
1. A water cooled glass roller consisting of a metal cylinder having a circular row of spaced parallel water channels extending axially through its body and arranged near its surface and providing between and around them a metal core and solid metal supports and having at the ends inlet and outlet water connections communicating with said channels in multiple, substantially as described.

1,392,627. TOOL-HANDLE. JOHN P. DOMAN, Los Angeles, Calif., assignor of one-half to Orval T. Deal, Los Angeles, Calif. Filed Apr. 30, 1921. Serial No. 465,674. 5 Claims. (Cl. 145—61.)



5. A handle for chisels and the like, provided with an elongated opening in one end thereof, a screw in said opening to receive the blow of a hammer, said screw being of less diameter than the opening, and having its lower end embedded in the material of the handle, and wood adhering cement or the like filling the space between the screw and the wall of the opening.

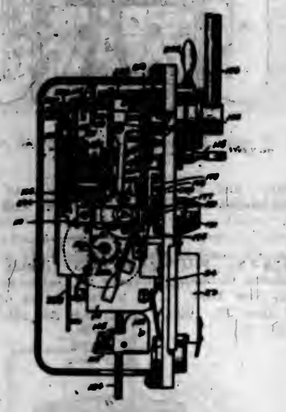
1,392,628. SHOE-RETAINER. JOHN ARTHUR DESCHESNES, Hillsdale, Mich. Filed Mar. 1, 1919. Serial No. 279,907. 1 Claim. (Cl. 36—58.5.)



A shoe retainer comprising a sheet of material adapted to be curved to substantially U-shape, and inserted within the counter portion of a shoe, a yielding strip secured at its upper margin to the upper margin of the sheet, and throughout a portion of its length, the ends of said sheet extending beyond the ends of the yielding strip and affording means for securing the sheet within a shoe.

1,392,629. PROCESS OF CONVERTING HYDROCARBONS. CARBON P. DUBBS, Wilmette, Ill. Filed Mar. 19, 1919. Serial No. 283,673. 9 Claims. (Cl. 196—25.)

1. A process of converting relatively heavy into lighter hydrocarbons, consisting in passing a stream of oil through a zone where the oil is heated to a cracking temperature but without substantial vaporization, passed thence to and through a zone where vaporization takes place, removing the vapors, subjecting them to reflux condensation, returning reflux condensate for further cracking, removing the residue, after said vaporization, from the system without permitting intermingling of any substantial portion thereof with the oil in the heating zone and maintaining a pressure upon the material during distillation.

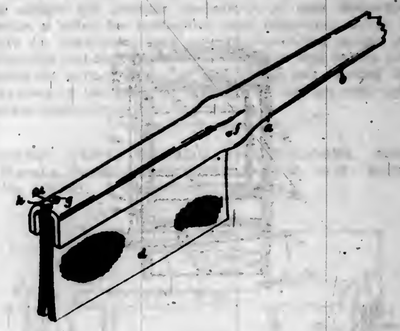


1,392,630. INTERLOCKING DEVICE. AXEL EGNELL, Paris, France. Filed Sept. 15, 1920. Serial No. 410,565. 20 Claims. (Cl. 246—134.)

1. In an interlocking device, control members movable according to guide lines, each capable of taking a series

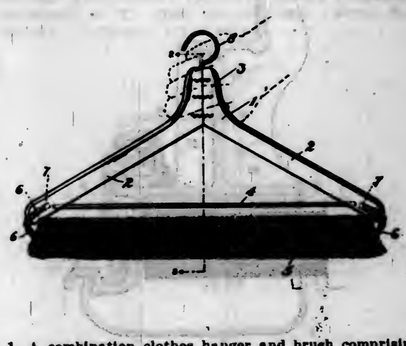
of positions on these lines, cut out members movable according to other lines, a cut out member being interposed between the paths of two adjacent control members, projecting parts on the edges of the cut out parts controlling the possible positions of the control members.

1,392,631. PRINTING-TAXIMETER. WILLIAM EISENSCHMID, Etna, Pa., assignor to Pittsburgh Taximeter Company, a Corporation of Pennsylvania. Filed Nov. 1, 1918. Serial No. 260,713. 18 Claims. (Cl. 235—30.)



1. In a taximeter, a total miles counter, a units counter, a movable flag or signal, means operated by said flag or signal to render said units counter operative at the beginning of a trip or inoperative at the end of a trip, printing mechanism associated with said counters and arranged to be operated upon each reverse movement of said flag or signal and record strip advancing means constructed so as to space the records of one trip from those of the next trip.

1,392,632. FILLING APPARATUS FOR STORAGE BATTERIES AND THE LIKE. LOUIS H. FLANDERS, Jenkintown, Pa.; Ida Y. Flanders, administratrix of said Louis H. Flanders, deceased, assignor to The Electric Storage Battery Company, Philadelphia, Pa., a Corporation of New Jersey. Filed Jan. 28, 1919. Serial No. 273,603. 8 Claims. (Cl. 226—127.)

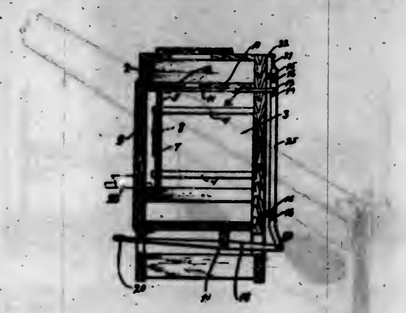


1. In a filling apparatus the combination of a self-closing manually openable valve, a hand lever for operating said valve, an electro-magnet sufficient for holding the hand lever in open position and insufficient for opening said valve, and contacts and their circuit connections for weakening the excitation of the winding while maintaining its continuity to permit the valve to close.

1,392,633. DUSTER. EMMA G. GILMAN, Paterson, N. J. Filed Apr. 8, 1921. Serial No. 459,695. 2 Claims. (Cl. 15—28.)

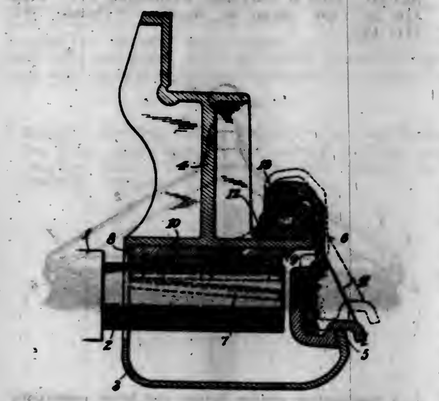
1. In combination, an elongated handle member having a groove formed therein and extending to one end thereof, a fabric having a fold formed therein and having such fold lying in the groove, and an elongated taut flexible securing device for the fabric secured at one end thereof permanently to the handle and in the groove and detachably secured at its other end to the handle exterior of the groove and straddling and thereby holding the fabric clamped against the bottom of the groove.

1,392,634. COMBINATION CLOTHES HANGER AND BRUSH. JOHN H. GOLDBERG, Washington, D. C. Filed Jan. 29, 1920. Serial No. 354,910. 2 Claims. (Cl. 211—13.)



1. A combination clothes hanger and brush comprising a coat hanger element having downwardly divergent arms, a handle-like projection extending upwardly from the center of said coat hanger element, and a brush having a twisted wire core arranged with the wire core connected across the ends of the said arms to form a strut mutually holding and held by the said arms in a manner to form a rigid structure wieldable with said handle-like projection.

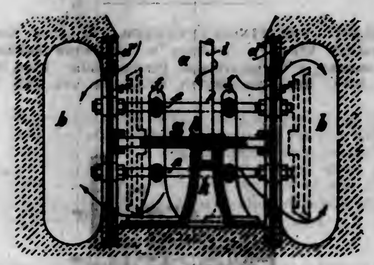
1,392,635. BEEHIVE. JOZEF GORNIAK, Denver, Colo. Filed Jan. 22, 1921. Serial No. 439,181. 1 Claim. (Cl. 6—12.)



A device of the class described comprising a base, a frame mounted thereon, a jam door on the front of said

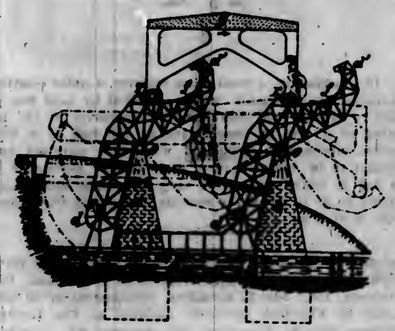
frame, and means for opening said door comprising a lever having a pedal thereon pivotally mounted in said base, a horizontal rod slidably mounted in said frame, a vertical rod slidably mounted on the rear of said frame,

an arcuate slot in said vertical rod, a pin on the extremity of said horizontal rod having engagement with said slot, a pin on the lower extremity of said vertical rod, and a slot in the extremity of said lever being engaged by said last-named pin.



1,392,636. JOURNAL-BEARING. LOUIS D. GRISCO, Hackensack, N. J., assignor to The Gregg Company, Limited, Hackensack, N. J., a Corporation of New York. Filed Dec. 2, 1918. Serial No. 265,014. 4 Claims. (Cl. 64—10.)

1. The combination of an open-ended journal-box whose chamber has a non-cylindrical upper portion with two inclined guideways and two depending shoulders, and a removable bearing-block resting upon the inner ends of said guides and located between said shoulders.

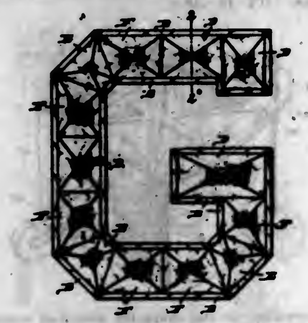


1,392,637. BALANCE CLOSING DEVICE FOR WATER-CONDUITS. FELIX GRIMMELS, Mannheim, Germany, assignor to Techno-Service Corporation, New York, N. Y., a Corporation of New York. Filed May 28, 1920. Serial No. 385,061. 8 Claims. (Cl. 251—82.)

1. In a balanced closing device for water-conduits, in combination: two co-axially arranged disk-valves; stays connecting the disks of them with each other; guides for

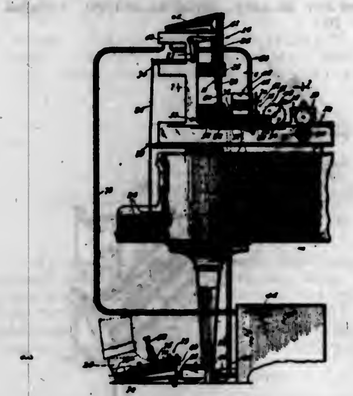
said stays; and means for actuating said disks; said actuating means being arranged between said valves.

1,392,638. SHIP-LOCK LIFT. FELIX GRIMMELS, Mannheim, Germany, assignor to Techno-Service Corporation, New York, N. Y., a Corporation of New York. Filed June 15, 1920. Serial No. 389,258. 2 Claims. (Cl. 61—9.)



1. In a ship-lock-lift, the combination of pairs of similarly shaped double-armed levers, of which one pair is located adjacent the tail water end of a canal and the other adjacent the head water end of the same; of supports for said levers; a tank suspended from the corresponding arms of all of said levers; rails provided upon the other arms of said levers; a counter-poise carried by said other lever-arms and being adapted to be displaced along said rails in horizontal direction; and means for thus displacing said counter-poise.

1,392,639. SIGN-LETTER AND THE LIKE. PAUL O. GROVE, Buffalo, N. Y. Filed Feb. 7, 1921. Serial No. 442,978. 5 Claims. (Cl. 40—141.)

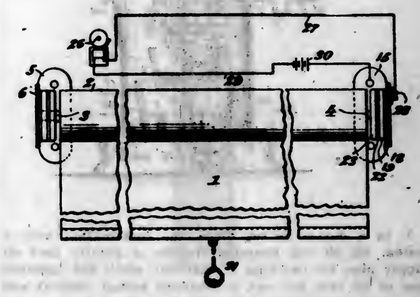


1. A letter or other character comprising a series of abutting transparent sections, provided with a reflecting material at the rear, each section having a plurality of

surfaces arranged at an angle one with the other, and means engaging the outer and inner marginal portions of

said sections to secure and retain the same in related position.

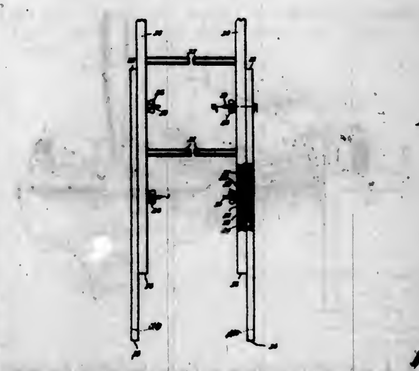
1,392,640. INDICATING DEVICE USABLE WITH MUSIC-RECORDING MECHANISM. JAMES CLARKE HAGEY, Chicago, and ALFRED SWENSEN, Cicero, Ill., assignors to The Cable Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 19, 1917. Serial No. 163,319. 37 Claims. (Cl. 84—461.)



2. A combination including a manually attended musical instrument, means for making a record on a record-receiving means of a selection as it is played on said instrument, means for advancing the record-receiving means as the selection is being played, and indicating means for acting feelably upon the person of the attendant to indicate the speed at which the record-receiving means is being advanced.

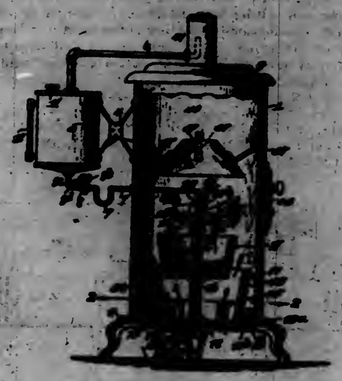
9. Means for indicating the tempo at which a musical selection should be rendered, comprising automatically controlled means for periodically acting feelably on the attendant.

12. Means for indicating the tempo at which a musical selection should be rendered, comprising a foot-support, means for securing the foot of the attendant to said foot-support, and automatically controlled means for periodically actuating said foot-support.



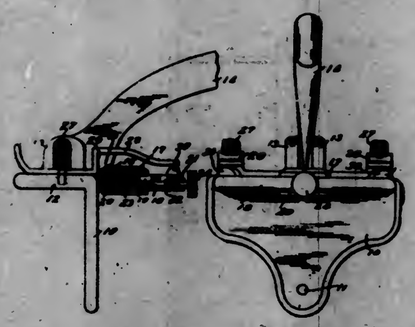
31. A combination including a manually attended musical instrument, means for making a record on a record-receiving means of a selection as it is played on said instrument, means for advancing the record-receiving means as the selection is being played, pneumatically actuated periodically operating indicating means for indicating to the attendant the speed at which the record-receiving means is being advanced, pneumatically actuated periodically operating means for recording on the record-receiving means the periodic operations of said indicating means, a valve for controlling said indicating means, a valve for controlling said operation-recording means, an adjustable lost-motion-connection between said valves, and means for actuating one of said valves and causing the actuation of the other of said valves through said lost-motion-connection.

1,392,641. CURTAIN-SHADE CIRCUIT-CLOSER. JOHN HAVRAN, Portland, Oreg. Filed Oct. 18, 1916. Serial No. 126,391. 5 Claims. (Cl. 200—52.)



1. A curtain shade alarm device including a shade provided with a trunnion, a contact, and a second contact on which said trunnion may roll to engage the first mentioned contact.

1,392,642. ADJUSTABLE LADDER. GEORGE J. HEWINS, Rochester, N. Y. Filed Dec. 16, 1920. Serial No. 431,241. 3 Claims. (Cl. 228—63.)

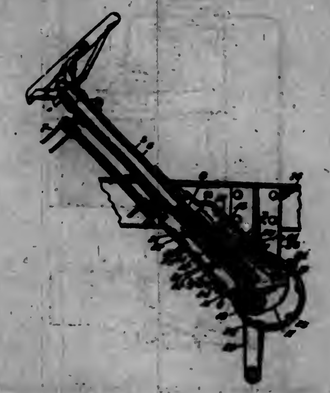


3. A leg extension for ladders comprising a leg having rectangular sockets in one face thereof with partitions between the sockets, the said leg having a longitudinal slot through said partition and the bottoms of the sockets, a guide rib removably positioned within the portions of the slot within said partitions and securing bolts having rectangular heads for setting within said sockets, the said heads being threaded for sliding movement upon the said rib with the bolts projecting through the slot at the bottoms of the sockets, and lock nuts for said bolts.

1,392,643. BURNER FOR STOVES. HENRY B. HEATHILL, Eldorado, Ill., assignor of one-fourth to Antonio Buscemi and one-fourth to Raffaele Cleveno, Eldorado, Ill. Filed May 1, 1920. Serial No. 378,040. 22 Claims. (Cl. 158—91.)

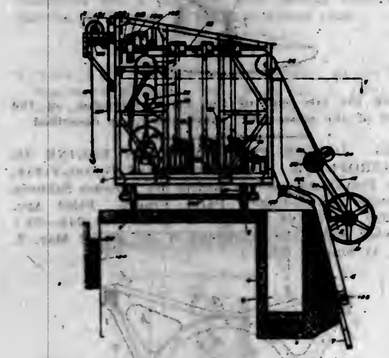
1. In a device as set forth, the combination with a casing, an oil cup mounted therein, a gravity feed oil supply pipe for carrying a relatively small but constant flow of oil into the cup, a combined burner support and air supply tube rising upwardly from the bottom of the casing and terminating in a plurality of branch tubes, terminating at diametrically opposite points relatively to the cup for permitting air to mix with the vapor from the fuel in the cup.

1,392,644. SAW-SET. JAMES WILLIAM INGLETON, Astoria, Oreg. Filed July 1, 1920. Serial No. 393,296. 7 Claims. (Cl. 76—63.)



1. A saw set comprising a frame including an upper horizontal plate, a lever pivoted upon the rear portion of the plate and having an angular flat surface upon its lower portion adjacent to its pivot, an anvil upon the forward portion of the plate and adjustable toward and away from the pivot of the lever and having an angular flat surface adapted to oppose the said surface of the lever, saw bearing members carried by the forward portion of the plate, and a guard frame adjustably mounted on the frame plate for movement parallel to the anvil and having side extensions provided with saw engaging shoulders at opposite sides of the lever as described.

1,392,645. VULCANIZER. WILLIAM E. JOHNSON, St. Joseph, Mo. Filed Dec. 13, 1920. Serial No. 430,304. 4 Claims. (Cl. 18—18.)

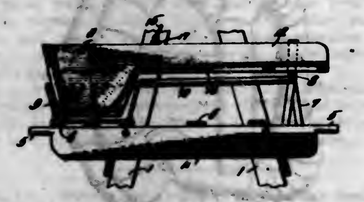


1. A vulcanizer of the character described comprising a container divided into combustion chamber and a cool air chamber, partitions arranged within the combustion chamber and disposed to radiate heat to said cool air chamber, said partitions terminating short of the bottom of the container to form a fuel chamber, one wall of the container having draft openings, and means for securing the vulcanizer to the wheel of the vehicle.

1,392,646. STEERING-GEAR. DAVID W. JONES, Chicago, Ill. Filed Nov. 29, 1918. Serial No. 264,580. 2 Claims. (Cl. 74—79.)

1. A steering gear, comprising a two-part housing, a web disposed transversely from one wall of the housing at a point removed from the lower end and terminating at a point removed from the opposite wall of the housing, a shaft rotatably mounted at its lower end in said web, each part of the housing being provided with an elongated rib arranged in opposing relation and disposed parallel with the shaft, a single member encircling said shaft and having operative relation therewith whereby rotation of the shaft will cause said member to travel lengthwise of the housing, said member being provided with a laterally disposed portion adapted to slide between said ribs to prevent rotative movement of said member, a lever oscillatingly mounted in the lower part of said housing, a rocker arm disposed transversely within the housing beneath said web and having operative relation with said lever, and an arm disposed lengthwise intermediate of the web and the opposing wall of the housing, said arm being connected to said member and one end of said rocker arm whereby movement of the member will induce oscillation of said lever.

1,392,647. RACK-CLEANING DEVICE. IRA W. JONES, Lebanon, Mo. Filed Dec. 9, 1920. Serial No. 429,429. 34 Claims. (Cl. 210—172.)

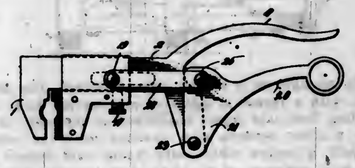


1. The combination with a dam having a mill race therethrough and a grating across said race, of a car mounted for movement along said dam above said grating, a canal in the upper part of said dam, and a power operated rake mounted on said car and operative to rake debris out of said grating and deliver it to said canal.

1,392,648. MEANS FOR RAILWAY-TRACK EXTENSION. JOSEPH F. JOY, Pittsburgh, Pa. Filed July 23, 1920. Serial No. 398,376. 8 Claims. (Cl. 238—340.)

8. A rail tie clamp comprising a body having a jaw adapted for engagement upon the base flange of a rail, means for slidably connecting the body to a bar tie, said body having an angular socket therein, a nut fitted in said socket, and a set screw threaded through said nut adapted for engagement with the upper surface of a tie.

1,392,649. GRAIN-TREATING MACHINE. HENRY LEPAK, Minneapolis, Minn. Filed Feb. 6, 1920. Serial No. 356,724. 3 Claims. (Cl. 83—28.)



1. A grain treating apparatus comprising a supporting frame, a solution receptacle and drain plate discharging therein arranged within the frame, and dipper means of perforated material disposed longitudinally over and above the said receptacle and plate and mounted for movement upwardly and laterally of the frame for discharge purposes, said means embodying a receptacle movable to dip into said solution receptacle and an extension forming a discharge spout for the dipper receptacle and perforated to drain upon said plate substantially throughout its length.

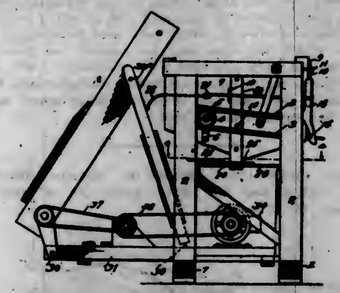
1,392,650. FISHING-TOOL. JOHN F. MCMILLIAN, Humble, Tex. Filed June 3, 1919. Serial No. 301,481. 1 Claim. (Cl. 294—93.)

A fishing tool including a head, having peripheral teeth, a blank neck, carried by the head and eccentric with respect thereto, a stem to which said neck is attached and through which the tool may be rotated, an eccentric sleeve on said neck provided with peripheral teeth, said tool having a water course extending therethrough from the upper to the lower end thereof, through which water may be forced through said tool.

1,392,651. WRENCH. ARTHUR W. MINNEY, Stockton, Calif. Filed May 20, 1921. Serial No. 471,044. 2 Claims. (Cl. 81—181.)

1. The combination with a bar provided with a longitudinal slot therein carrying a primary jaw, of a secondary jaw, a casing carried by the secondary jaw in slidable engagement with the bar, a pin passing through the casing and through the slot in the bar, a transverse extension provided on the bar, an operating lever pivotally mounted on the transverse extension and operative connections between the lever and the secondary jaw.

1,392,652. FUEL-FEEDING DEVICE FOR AUTOMOBILES. WILLIAM H. MUZZY, Chicago, Ill. Filed Apr. 10, 1920. Serial No. 372,836. 19 Claims. (Cl. 158—36.)



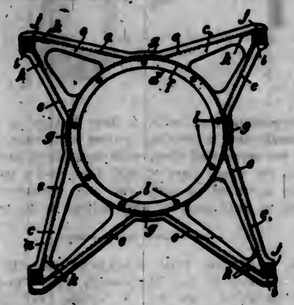
1. In a vacuum tank, the combination with a vacuum chamber, of a suction connection therefor, a connection

feeding gasolene thereto, an atmosphere valve for said chamber, mechanical means within the chamber controlled

by the liquid level thereof for operating the valve, and additional means, electrically operated, for supplementing said mechanical means for opening the valve.

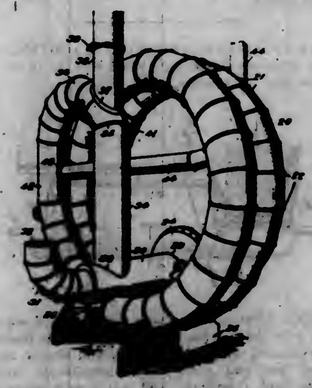
1,392,653. MANURE-LOADER. ARVID R. NELSON, Mediapolis, Iowa. Filed June 28, 1920. Serial No. 391,065. 6 Claims. (Cl. 214—41.)

1. In an apparatus of the class described, the combination with a frame, of pairs of rods having their ends extending into said frame positioned at the ends of the frame, a roller between and traveling upon the rods of each pair, a hopper within said frame, said hopper provided with brackets at its ends, said brackets provided with stub shafts extending into said rollers, locking means for holding said hopper in a fixed position upon said frame, and means for loading said hopper.



1,392,654. SOUND-CONVEYER FOR TALKING-MACHINES. WILLIAM D. PFROMMER, West Berlin, N. J., and FREDERIC W. ADAMS, Milbourne, Pa., assignors to The Perfek'tone Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed June 4, 1919. Serial No. 301,792. 1 Claim. (Cl. 274—24.)

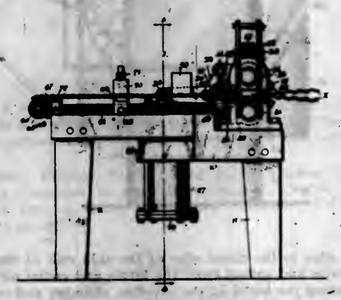
A talking machine sound conveyer comprising the combination of a tone arm turnable about a vertical axis only, right angle elbows pivoted together to provide a playing joint and constituting a goose-neck, means for turnably adjusting one end of the goose-neck on the end of the tone arm, an elbow extension having a curved arm and a laterally opening sound-box receiving neck, a sound box mounted against rotation on the neck and parallel with the elbow extension, and means for turnably



adjusting the free end of the elbow extension on the free end of the goose-neck, substantially as described.

1,392,655. DEVICE FOR FIXING AN ENGINE IN AN AEROPLANE. PIERRE JEAN RENÉ POSTEL-VINAY, Paris, France, assignor to Societe des Moteurs Salmson (Systeme Canton-Unne), Paris, France. Filed Apr. 28, 1920. Serial No. 377,400. 5 Claims. (Cl. 244—31.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. An improved device for fixing an engine in an aeroplane, consisting of a metal frame composed of two substantially identical flat frame plates, each cut out so as to have four radial arms adapted to be fixed at their outer ends to the fuselage longitudinals and arranged around a circular aperture to the edge of which the engine is adapted to be bolted and bracing channel bars inserted between said frame plates along their outer edges and around the peripheries of their circular apertures and riveted to said frame plates.



1,392,656. DESICCATOR. WILLIAM O. RAW, Eureka, Calif., assignor to California Central Creameries, San Francisco, Calif., a Corporation of California. Filed Apr. 17, 1918. Serial No. 229,076. 11 Claims. (Cl. 83—46.)

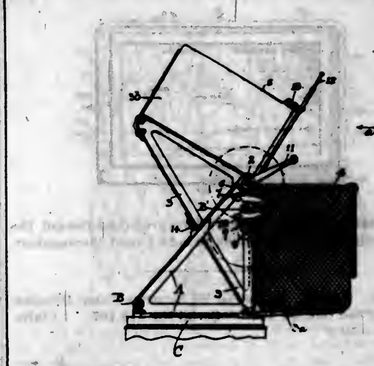
11. A device of the character described consisting of a receptacle, a helical pipe having disintegrating projections

connected therewith and having an exit opening in one side thereof, a heating supply leading into said helical pipe, a blower connected with said helical pipe and said receptacle and a discharge pipe leading from the exit opening in the side of the said helical pipe.

1,392,657. WEAVING-MACHINE. JAMES LEAMON REYNOLDS, Scottdale, Pa. Filed Nov. 2, 1920. Serial No. 421,245. 13 Claims. (Cl. 139—32.)

12. In a machine of the character described, a series of dies adapted to engage every other warp rod from one side, a second series of dies adapted to engage alternate warp rods intermediate those engaged by the first-named series and from the opposite side, said first mentioned series and said last-mentioned series being shiftable transversely with respect to each other, means for imparting oppositely rocking motion to said dies, and shifting mechanism for shifting said series transversely to reposition the dies after each bending operation.

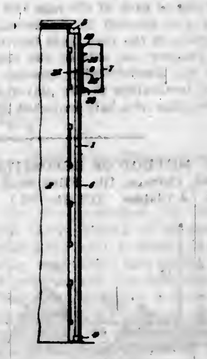
1,392,658. CAPILLARY TUBE AND PROCESS FOR MAKING THE SAME. ALFRED ROESCH, Brooklyn, N. Y., assignor to Charles J. Tagliabue Manufacturing Co., Brooklyn, N. Y., a Corporation of New York. Original application filed Apr. 7, 1917, Serial No. 160,352. Divided and this application filed July 27, 1918. Serial No. 247,052. 5 Claims. (Cl. 29—180.)



1. The process of making capillary tubes of metal which consists in first producing a metallic tube having a bore of materially less cross-sectional area than that of the tube itself, closing said bore by pressure exerted upon said tube in radial directions and reopening said bore to a limited, infinitesimal extent corresponding to a mere fissure in said tube.

4. A capillary tube of metal having a longitudinally extending bore, the cross-sectional dimension of which is greater in one direction than in a transverse direction, said bore representing a mere fissure in said tube.

1,392,659. WEIGHING APPARATUS. ERNEST ABRAHAM ROPER, Oakworth, near Keighley, and JOHN WILLIAM HARTLEY, Haworth, near Keighley, England. Filed Nov. 14, 1918. Serial No. 262,435. 4 Claims. (Cl. 265—27.)

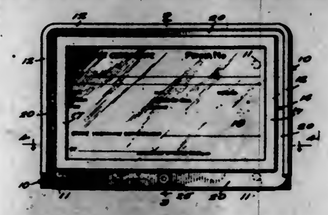


1. In apparatus for use in weighing balls of yarn, bobbins, tubes, cops and the like, framework, oscillating arms mounted on said framework, a receptacle fixed upon

said arms, on one side of their pivotal supports, means or extensions from said arms on the other side of their

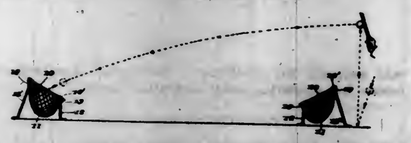
said supports for receiving a detachable receptacle and means for operating said oscillating arms.

1,392,660. FIRE-ESCAPE. FELIKS SEBESTAKOWICZ, McKeesport, Pa. Filed May 11, 1921. Serial No. 468,471. 1 Claim. (Cl. 227—12.)



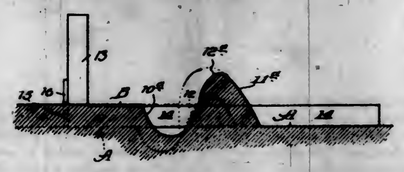
A fire escape including an upright tubular support, laterally projecting flanges upon said support, a carrier positioned for sliding movement upon the edges of the said flanges, clutch means between the carrier and flanges including a pair of arm members pivotally mounted within the carrier, friction plates upon the rear ends of the arms engageable with the inner faces of the said flange members, spring means for normally maintaining the clutch plates away from the flange members and manually controlled means within the carrier for engaging the clutch plates with the said flanges.

1,392,661. LICENSE-CERTIFICATE-DISPLAY CASE. SAMUEL R. SMEAD, Vanderbilt, Pa. Filed Feb. 21, 1921. Serial No. 446,685. 3 Claims. (Cl. 40—16.)



1. In a device of the character described, a casing including side walls and a transparent face, the walls of said

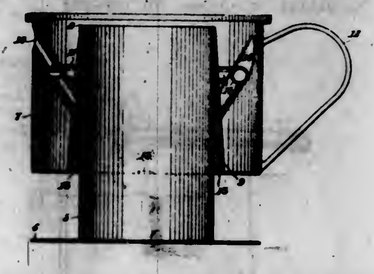
casing being provided with integral stamped out sockets, and a spring having ends adapted for insertion within said



sockets, said spring being normally projected toward the transparent face of said casing to hold a card thereagainst.

1,392,662. **GAME.** RAYMOND W. SEIBOLD, Camp Douglas, Wis. Filed Oct. 20, 1920. Serial No. 418,197. 1 Claim. (Cl. 46—59.)

A game apparatus comprising a ring formed of round wire and having a plurality of enlarged and angular portions, a pair of longer legs and a single leg, the latter being shorter than the pair of legs, and a sleeve secured to the upper end of each of the legs and having its upper end bifurcated and secured in embracing relation to an enlarged portion of the ring, said legs being arranged in position to support one side of the ring at a higher elevation than the diametrically opposite side to present the ring at an inclination to the player and a single opening for the reception of a ball projected by the player.



1,392,663. **METHOD OF DEPOSITING SAND.** JACOB B. SENSIBAR, Chicago, Ill. Filed Sept. 7, 1920. Serial No. 408,492. 4 Claims. (Cl. 61—30.)

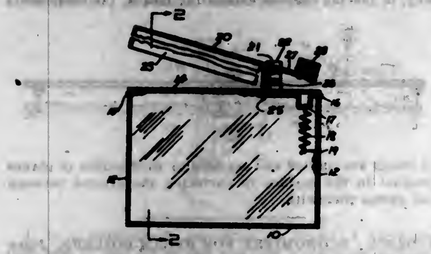
1. The method of depositing sand and the like which consists in forming an embankment about the area to be filled, placing a strip of fabric longitudinally of the embankment, over the crest and extending down the inner side thereof to prevent it from eroding, placing a plurality of drains near said embankment leading outside said area, pumping water and sand into said area, digging out the sand as the fabric becomes covered, from the inner side of the strip of fabric, placing this sand on the outer face of the embankment and turning the lower edge of the strip of fabric over the newly made top of the embankment.

1,392,664. **MILK-BOILER.** JOSEPH SLOBODA, Charleroi, Pa. Filed Mar. 31, 1921. Serial No. 457,371. 1 Claim. (Cl. 53—1.)

A milk boiler comprising a central main receptacle having a bottom wall, means including a side and a bottom wall forming an overflow chamber of annular form about the main receptacle with the bottom of the overflow chamber placed above the bottom of the main receptacle, said side wall being extended above the side wall of the main receptacle and said main receptacle being provided with an annular relatively wide bottom flanged coextensive with the bottom thereof, said overflow chamber also including an inner wall of downwardly flaring form connected at its

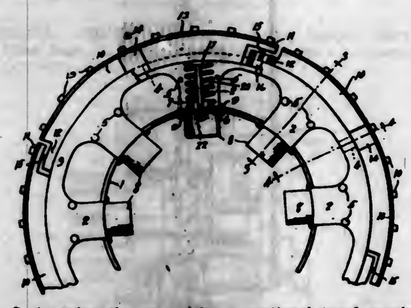
upper edge to the upper edge of the side wall of the main receptacle and spaced from the latter and radial air tubes connecting the walls of the overflow chamber and communicating at one end with the space between said chamber and the main receptacle and at the other end with the space surrounding said chamber and a series of curved pipe sections or tubes providing intercommunication between said radial tubes.

1,392,665. **SWITCH.** LEWIS STERLING SUTLIFF, Charleston, S. C. Filed June 28, 1920. Serial No. 391,037. 6 Claims. (Cl. 200—155.)



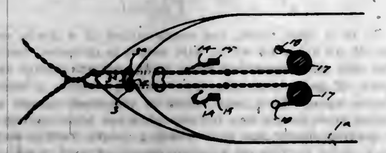
1. A switch of the class described comprising a pair of disks axially connected for movement one with respect to the other, one of said disks being provided with a bridge piece and the other provided with contacts adapted to be spanned by the bridge piece for controlling an electrical circuit including said contacts, said disks being provided with recesses adapted to accommodate circuit wires connected to said contacts, and integral radial projections on the peripheries of said disks for movement into and out of alinement whereby to move said bridge piece into position to span said contacts to close the circuit therethrough and for movement out of engagement with one of said contacts.

1,392,666. **TRAP.** JOHN SKARZYNSKI, South Amboy, N. J., assignor of one-half to John Smolienski, South Amboy, N. J. Filed June 5, 1920. Serial No. 386,667. 5 Claims. (Cl. 43—69.)



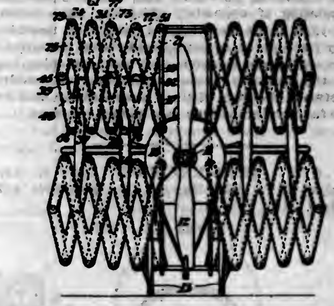
5. An animal trap comprising a box, a trap door hinged in the top of said box midway between its sides, one of the hinge pintles of the trap door having a cranked portion disposed at right angles to the door, a tension spring connected to said cranked portion of the hinge pintle, a cover hinged transversely to the trap door at the end thereof to which is secured the said pintle and disposed at a

distance above the said trap door, a depending flange extending around the free end and the two sides of said



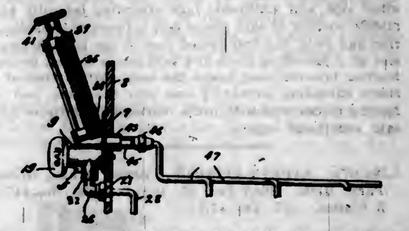
cover, a cam upon the said pintle adapted to support said cover in a position inclining upwardly from its hinge end, and a counterweight partially balancing the said cover.

1,392,667. **SPRING-TIRE.** WILLIAM G. WAGNER, Carter, S. D., assignor to Alice Belle Wagner, Carter, S. D. Filed June 3, 1920. Serial No. 386,160. 2 Claims. (Cl. 152—8.)



2. A spring tire comprising a sectional tread member and a rim member, the sections of the tread member being loosely connected together, the rim member including an inner band concentric to the tread member and having outwardly radiating pairs of spokes connected at their outer ends by circular ring portions which support the tread sections, inwardly radiating bolts carried by the tread sections extending between adjacent pairs of spokes and through the inner band, the tread sections having bosses surrounding the adjacent ends of the bolts respectively, the band having outwardly directed bosses surrounding the adjacent portions of the bolts respectively, casing radiating inwardly from the band and receiving the inner ends of the bolts, a coil spring encircling each bolt and having its opposite ends embracing the first- and second-named bosses, and interlocking connections between the rim and tread.

1,392,668. **MEANS FOR MOORING SHIPS.** FRANCIS W. B. WALTON, San Francisco, Calif. Filed Nov. 30, 1920. Serial No. 427,322. 5 Claims. (Cl. 114—230.)



1. In a ship mooring means, the combination with a pair of anchor cables, of a hawse pipe common to and receiving both of the cables, said hawse pipe being arranged centrally of a vessel at the bow thereof.

1,392,669. **EXPANSIBLE AND CONTRACTIBLE STRUCTURE.** JOHN A. WEIS, Chicago, Ill. Filed July 15, 1919. Serial No. 310,987. 18 Claims. (Cl. 244—12.)

1. In an expansible and contractible structure, a plurality of sets of links associated in pairs adapted to be extended to a right line position for use, each pair of links being pivotally connected in a position approximately centrally thereof and also pivotally connected at one end to the adjacent end of the next succeeding pair with each set of links being provided with means for giving the structure rigidity when in a straight line position.

1,392,670. **PUMP.** RAYMOND O. WONNS, Maplewood, Ohio. Filed Feb. 1, 1919. Serial No. 274,406. 2 Claims. (Cl. 123—180.)

1. In a device of the class described, the combination of a valve casing, said casing having an air passage and a gas passage communicating with a recess, pump means connected to said casing, said casing also having communications between said pump means and said casing and a check valve within said communication, a valve for regulating the passage through said air passage and said gas passage, said casing having an exhaust passage communicating with said pump means, whereby the pump means may draw air or gas through said check valve into the pump means and then drive the same from the pump means to the exhaust passage.

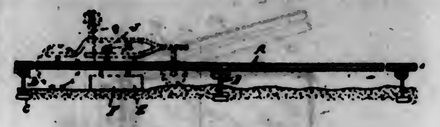
1,392,671. **RESILIENT TIRE.** JOHN M. ABRAMS, Brooklyn, N. Y. Filed Apr. 12, 1921. Serial No. 460,642. 7 Claims. (Cl. 152—8.)

5. In a vehicle tire: the combination with a rim and a casing carried by same; of a continuous metal base member

extending throughout the interior of said casing, said member being provided with transverse slots and having integral drops extending inwardly and under same, riser members extending outwardly and over said base member and consisting of oppositely extending arms having attaching lugs to fit the slots of said base member, and auxiliary risers retained within said risers, the latter being provided with spurs between their said attaching lugs for holding the auxiliary risers thereto and with additional spurs between the ends of their arms and the said attaching lugs for further holding said auxiliary risers.

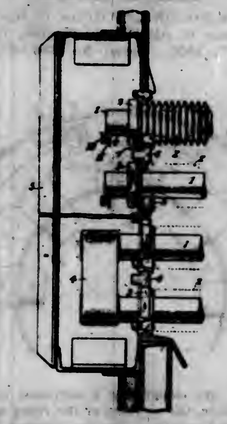
1,392,672. RESILIENT TIRE. JOHN M. ABRAMS, Brooklyn, N. Y. Filed May 6, 1921. Serial No. 467,469. 7 Claims. (Cl. 152—8.)

3. In a vehicle tire: the combination with a rim and a shoe or casing carried by same; of a resilient supporting member extending throughout the interior of said casing and comprising a succession of interlocking pieces disposed transversely of the casing, said pieces each having laterally projecting lugs at one side and a slot at the other side, and additional lugs extending laterally at the middle portion of said pieces and between the middle portion and ends, the first-named lugs of one piece fitting the slot of a preceding piece and said pieces having drops extending inwardly and under the body portion thereof and risers extending outwardly and over the same, and reinforcing pieces held within the corresponding risers by the said additional lugs.



1,392,673. SAFETY-STIRRUP. BRENT BAKER, Highland Park, Mich. Filed Feb. 25, 1921. Serial No. 447,741. 5 Claims. (Cl. 54—47.)

1. In a stirrup, an outer bow, an inner bow provided with a tread bar, said bar being pivotally supported in the lower end of the outer bow, said ends of the outer bow being notched and provided with an opening on one side of the notch permitting withdrawal of the inner bow upon its being turned to a right angle relative to the outer bow.



1,392,674. METHOD OF GRADING ROADBEDS FOR CONCRETE ROADS. ROBERT D. BAKER, Detroit, Mich. Filed May 8, 1919. Serial No. 295,592. 6 Claims. (Cl. 37—7.)

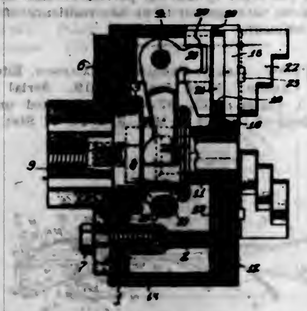
1. The method of grading road beds for concrete pavement foundations which consists in establishing temporary gaging means along and over the roadway entirely extraneous thereto, the longitudinal and transverse guiding members of which are substantially coincident with the elements of a predetermined profile surface for the roadway, in placing thereon excavating means, the movements

of which are limited and confined by such guides to planes parallel to the surface in surfacing the ground between the guides therewith.

1,392,675. ECONOMIZER FOR STEAM-BOILERS. JOHN E. BELL, Brooklyn, N. Y., assignor to Power Specialty Company, New York, N. Y. Filed Oct. 30, 1920. Serial No. 418,200. 3 Claims. (Cl. 122—510.)

1. In a structure of the kind described, the combination with a bank of tubes having end plates secured thereto and built up in horizontal rows to form a wall, of cross beams between the rows of plates and removable wedges under each plate supporting the same upon the beam beneath it.

1,392,676. MAINSPRING-BARREL FOR TIMEPIECES. HELGE A. BORRESEN, Marquette, Mich. Filed Sept. 4, 1915. Serial No. 48,982. 9 Claims. (Cl. 58—66.)



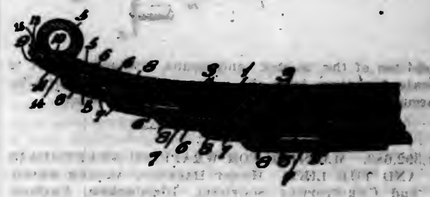
1. In a time piece, the combination of a main spring barrel, an arbor on which said barrel is mounted, bearings for said arbor mounted upon rigid portions of the movement of said time piece, a winding wheel, a winding sleeve upon which said wheel is mounted, means associated with said sleeve for engaging the main spring, and a bearing sleeve for said winding sleeve fixedly secured to a rigid portion of the movement of said time piece, said bearing sleeve surrounding said arbor and extending inwardly to a point opposite that portion of the winding sleeve which takes the thrust of the main spring.

1,392,677. REPRODUCER FOR PHONOGRAPHS. JULIUS A. BROWN, Peekskill, N. Y. Filed Aug. 27, 1919. Serial No. 320,091. 2 Claims. (Cl. 274—35.)

1. In a phonograph reproducer, a frame, a vibrating disk held in said frame and carrying a vibrating arm, an annular vibrating plate held in the ring and provided with a free tubular extension at its inner edge, said annular plate having small apertures, and a conical ring extending forward from the intermediate portion of the annular plate and provided with a tubular extension at the inner edge, said apertures communicating with the space between said tubular extensions.

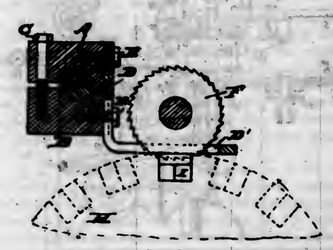
1,392,678. CHUCK. JOSEPH F. BUHR, Detroit, Mich. Filed Sept. 5, 1919. Serial No. 321,780. 7 Claims. (Cl. 279—119.)

1. In a chuck head having a plurality of jaws, a removable unitary guide plate for said jaws completely housed within said chuck head.



1,392,679. HONEY-EXTRACTOR. BEATTY M. CRAWFORD, Santa Ana, Calif., assignor to Victor V. Kunkel, Los Angeles, Calif. Filed May 20, 1920. Serial No. 382,768. 2 Claims. (Cl. 210—65.)

1. In a centrifugal honey extractor, a shaft, a reel on said shaft, honey-comb carriers mounted on said reel, means for automatically partly reversing said honey-comb carriers when said shaft is reversed and for allowing said honey-comb carriers to complete their reversing movement under the influence of centrifugal force.

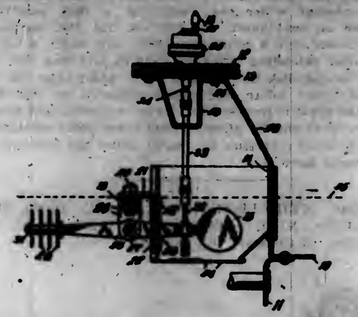


2. In a centrifugal honey extractor, a shaft, a reel rotatively mounted on said shaft, honey-comb carriers mounted on said reel, the hub of said reel being provided with a recess at one end, a collar secured on said shaft, a lug on said collar extending into said recess for alternately engaging the side edges of said recess, said recess being somewhat wider than said lug, a disk rotatively mounted on said shaft, the hub of said disk having a recess in one end, a collar secured on said shaft, a lug on said collar extending into the recess in said disk hub, the recess in said disk hub being slightly wider than the lug on said latter collar, and means actuated by said disk when the shaft is reversed for partly reversing said honey-comb carriers and for allowing said honey-comb carriers to complete their reversing movement under the influence of centrifugal force.

1,392,680. VEHICLE-SPRING. JOHN C. DOWD, Merchantville, N. J. Filed Dec. 7, 1920. Serial No. 428,899. 6 Claims. (Cl. 267—50.)

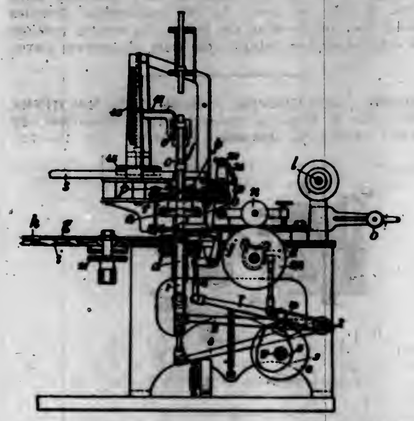
1. A spring of the character stated formed of a series of leaves with channels in the faces of, and ports through the leaves forming communications between the channels of adjacent leaves, the walls of said channels being nested in adjacent leaves in the longitudinal direction thereof thus interlocking the latter, the nesting portions and communications being at the ends of separate leaves.

1,392,681. NUT-KEEPER FOR MILLING-MACHINES. WILLIAM R. DURHAM, Detroit, Mich. Filed Nov. 22, 1920. Serial No. 425,686. 3 Claims. (Cl. 10—72.)



1. In a milling machine, a saw, opposing rotatable plates arranged in pairs and recessed to form pockets to receive a plurality of nuts for delivery to the saw, and an adjustable keeper adapted to overlap the nuts as they are fed to the saw, whereby when acted upon by the latter they are held against withdrawal from the pockets formed by the opposing rotatable plates.

1,392,682. STEAM-BOILER LOW-WATER SIGNAL. CHARLES E. FULLER, Omaha, Nebr., assignor of one-half to Arthur H. Fetters, Omaha, Nebr. Filed Apr. 16, 1920. Serial No. 374,480. 7 Claims. (Cl. 137—102.)



1. In a water level signaling apparatus, the combination with a signaling device; of a member subject to scale formation from the water; operative connections between

said signaling device and member by which the signaling device is adapted to be affected in accordance with the

position of the member; and means, similarly subject to scale formation from the water arranged to neutralize accumulation of scale deposits on said member.

1,392,683. MACHINE FOR WRAPPING SWEETMEATS AND THE LIKE. HENRY HACKETT, ARTHUR SMITH, and CHRISTOPHER SOUTHALL, Birmingham, England. Filed Jan. 24, 1920. Serial No. 353,834. 4 Claims. (Cl. 98—2.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

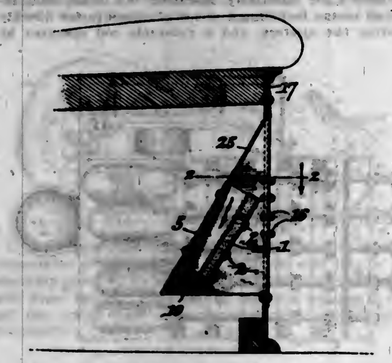
1. In machines for wrapping sweetmeats and like bodies with a thin enveloping medium, the combination comprising a sheet of flexible material having an orifice therein, upper and lower plungers between which the body and its enveloping medium are carried through the said orifice, grippers situated above the flexible material for holding the body and permitting it to be released by the plungers, slides for closing the ends of the enveloping medium against the underside of the body, and means for imparting movements to the said parts in their proper sequence, substantially as described.

1,392,684. BOW-HOLDER. EDWARD E. HAMILTON, Westfield, Mass. Filed Dec. 29, 1920. Serial No. 432,781. 5 Claims. (Cl. 132—47.)

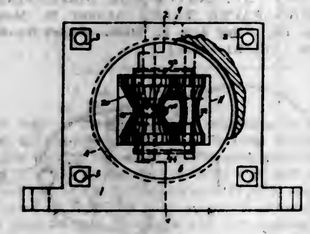
5. As an article of manufacture, a bow holder comprising a convex body member adapted to be secured on the hair, having at its opposite sides two parallel cylindrical portions separated from each other, and a bow holding element consisting of a single piece of celluloid wire doubled centrally on itself to form a tongue, said tongue being provided with a transverse groove on its outer surface, the two strands of said wire extending in a direction away from said tongue but spaced from each other for engagement at separated points with a

bow, the free ends of said wire being brought into contact and cemented together and bent into circular form to pivot it around one of said parallel portions of the main body, said bow holding element being formed in a convex shape so that its tongue is adapted to engage the inner wall of the other cylindrical portion or side of the main body to be held against it by the resiliency of the bow holding element.

1,392,685. PLOW. JAMES FREDERICK HAMPSON, Edwin, Manitoba, Canada. Filed Jan. 4, 1919. Serial No. 269,629. 1 Claim. (Cl. 97—36.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



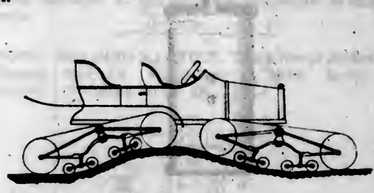
The combination with the beam of a walking plow, of a pair of side bars bolted to the forward end of the plow beam and extending in advance thereof, a hitching connection attached to the forward end of the bars, a side bracket secured permanently to one of the bars, a forward cross shaft carried in bearings provided on one of the bars and bracket, said shaft having a cranked end, a furrow wheel rotatably mounted on the cranked end of the shaft, a rear cross shaft rotatably mounted in bearings carried by the bracket, and one of the bars and having a cranked end, a land wheel rotatably mounted on the cranked end of the latter shaft and positioned at the opposite side of the plow beam to the furrow wheel, adjustable levers controlling the adjustment of the crank shafts and a spring acting upon the land wheel controlling lever.



1,392,686. CAR-HEATER. LEE P. HYNDS, Albany, N. Y., assignor to Consolidated Car Heating Company, Albany, N. Y., a Corporation of West Virginia. Filed July 2, 1919. Serial No. 306,182. 7 Claims. (Cl. 219—34.)

1. An electric car-heater comprising a heater element having its wire adjusted for trolley-line voltage and embedded in a sheet of insulation located in an inclined

position, and a housing-wall spaced away from said element and having a portion parallel therewith for directing an air current over said element into the interior of the car.



1,392,687. FAIR-LEADER. AARON J. JOHNSTON, Pysht, Wash. Filed Apr. 30, 1921. Serial No. 465,648. 2 Claims. (Cl. 254—190.)

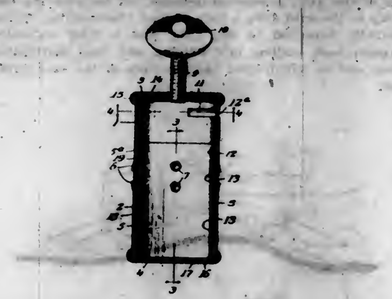
1. A device of the class described, comprising in combination, a frame and an integral base consisting of two upright members of identical construction adapted to be bolted together, a circular opening through the side of each member, each provided with a circumferentially extending and interiorly facing recess adapted to aline and define a centrally located guideway for a cylindrical member mounted therein, a cylindrical member having a circumferentially extending upstanding section complementary to said recess and rotatable therein, said section provided with a plurality of recesses communicating with an opening in the top of the frame for manually rotating said cylindrical member, a central cable guide journaled in the cylindrical member and extending therethrough, comprising a sheave and guiding means adapted to retain a cable in operative position for winding on a drum and during change in angular positions of the sheave and cable.

1,392,688. AUTOMOBILE-SLEIGH SUSPENSION. ADOLPHE KEGRESSE, Courbevoie Seine, Russia. Filed Mar. 21, 1916. Serial No. 85,574. 10 Claims. (Cl. 180—5.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a motor vehicle driven by endless belts with load distributing rollers, a suspension system comprising in combination, a center axle, a load distributing and endless belt driving group arranged symmetrically at each side of the axle, a separate tension rod for pivoting each group to the said axle, a pair of load transmitting springs centrally attached to the axle, and a lever extending between each endless belt driving and load distributing group and on which lever the free ends of the said springs rest.

2. In a motor car driven by endless belts with load distributing rollers, a suspension system comprising in combination a center axle, endless belt driving mechanism symmetrically disposed on each side of the axle, a load distributing roller frame also symmetrically disposed on each side of the axle, arms connecting the load distributing roller frame to each of the driving mechanisms, a tension rod to enable each endless driving and load distributing device to pivot relatively to one another on each side of the axle and a pair of load transmitting springs, centrally attached to the axle, the free ends of the springs resting upon the arm connecting the driving mechanism and load distributing devices at each side.

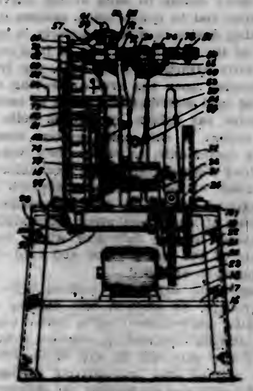
3. In a motor car driven by endless belts with load distributing rollers, a suspension system comprising in combination a center axle, an endless belt driving mechanism and a load distributing roller mechanism both disposed on each side of the axle, means whereby each group may rotate around the center axle independently of the other and a pair of load distributing transmitting springs centrally attached to the axle and whose ends control the movements of the belt driving and load distributing devices hereinbefore specified.



4. In a motor car driven by endless belts with load distributing rollers, an endless belt driving element, a load distributing quadrilateral roller frame hinged to the endless belt driving mechanism, tension rods extending between the center axle and the axle of the driving mechanism and a pair of load transmitting springs centrally attached to the axle and controlling the movements of the driving element and load distributing frame hereinbefore specified.

5. In a motor car driven by endless belts with load distributing rollers, a suspension system comprising in combination a center axle, endless belt driving mechanism symmetrically disposed on each side of the axle, a load distributing frame connected with the axle of each driving mechanism, rollers mounted in the load distributing frame and engaging with the lower stretch of the endless belt, beams centrally disposed of the load distributing frame, a connection between said beam and the axle of its adjacent belt driving mechanism, a pair of load distributing springs centrally attached to the axle and whose free ends rest upon the said connections extending between the load distributing frame and the driving mechanism.

1,392,689. SMALL-COIN BANK. ISIDOR J. KUSEL, Chicago, Ill. Filed Jan. 20, 1919. Serial No. 271,956. 1 Claim. (Cl. 133—7.)

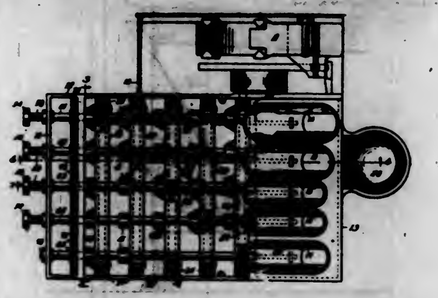


In a coin bank in combination, a container composed of two separably connected closed sections, each comprising substantially a half portion of the complete container, means for normally frictionally maintaining the sections connected, a coin entrance slot in the side wall of one of

said sections near the outer end thereof, an inner shell in one of the sections extending into the slotted section,

and means carried by said shell and extending across said slot for preventing extraction of the coin contents.

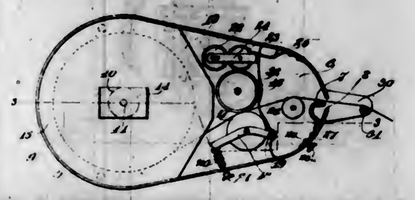
1,392,690. FRUIT-PITTING MACHINE. CHESTER S. LEONARD, Lansdowne, Pa. Filed May 5, 1921. Serial No. 466,923. 8 Claims. (Cl. 146—6.)



1. A fruit pitting machine comprising a stand, a carrier wheel having grooves in its periphery mounted on said stand, means for intermittently actuating said wheel, a table from which fruit is fed to said wheel, means for clamping the fruit in the mentioned grooves, and means for expelling the pit from the fruit while clamped.

1,392,691. SELECTIVE CHANGE-MAKING MACHINE. JOHN E. LEWIS, Milwaukee, Wis. Filed Nov. 8, 1915, Serial No. 60,190. Renewed Oct. 29, 1919. Serial No. 334,374. 14 Claims. (Cl. 122—2.)

1. In a machine of the character described, the combination with keys denoting the amounts for which change is to be made, of keys corresponding to the number of units of the commodity being sold, and adjustable means between said keys corresponding to changes in price per unit of said commodity, whereby the amount of change delivered will be correspondingly varied.

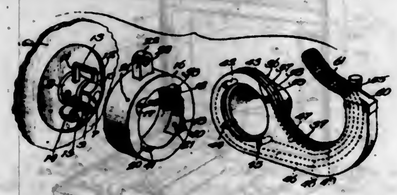


5. In a machine of the character described, the combination with a plurality of keys indicating different monetary values, of a plurality of digital keys, coin ejecting means, and selective variable means interposed between and cooperating with the ejecting means and said sets of keys.

14. In a change making machine, the combination with coin ejectors and amount tendered keys, of purchase keys, and means interposed between said purchase keys and the ejectors for selectively operating the latter, said interposed means including a series of elements for directly actuating the ejectors, and a rotatable rod operated by

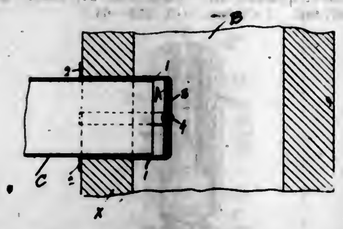
each of the purchase keys, each of said rods having a series of elements thereon rotatable to different positions for selectively engaging said members, a rotatable purchase value indicator, and gearing between said value indicator and said rotatable elements arranged, upon rotation of the value indicator, to indicate different values, to correspondingly change the position of said elements.

1,392,692. APPARATUS FOR DISPENSING AND PRINTING PAPER TAPE. ALBERT H. MARSHALL, Chicago, Ill. Filed Jan. 12, 1920. Serial No. 351,039. 1 Claim. (Cl. 91—14.5.)



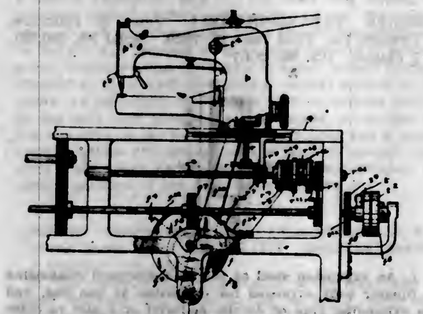
The combination of a casing having a side exit slit and a bottom depression adjacent to said slit, a tape moistening wiper strip in the casing behind the exit slit and extending into the depression, a support for the wiper strip carried by the casing wall and adjustably in the direction of the exit slit, and a tape-holder and printing means for the tape in the casing.

1,392,693. GROUSER FOR TRACTOR-TREADS. FRED H. MEYER, Oakland, Calif. Filed Dec. 24, 1918. Serial No. 268,188. 3 Claims. (Cl. 301—42.)



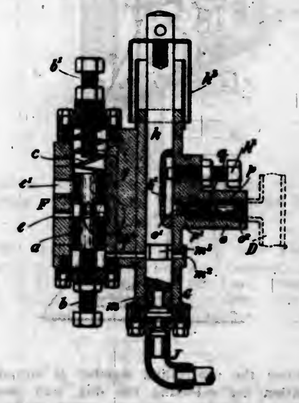
3. A grouser adapted to be attached to the tread face of a traction element and including a rotary bar having radial webs and end lugs, and sets of links connected to said lugs and for attachment to the traction element.

1,392,694. TIMER FOR INTERNAL-COMBUSTION ENGINES. JOHN F. MEYER, Chicago, Ill., assignor, by mesne assignments, to Eclipse Specialty Manufacturing Company, a Corporation of Illinois. Filed Sept. 10, 1917. Serial No. 190,477. 2 Claims. (Cl. 200—19.)



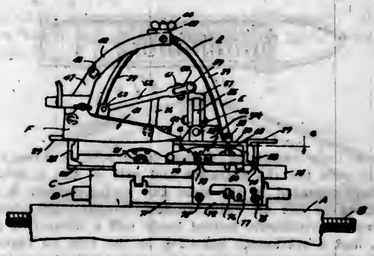
1. In a timer, the combination with a gear case, of a commutator ring removably mounted on said case, a cap separably mounted on said ring and having a conduit arm with wires therein, and coupling members upon said ring and cap which hold same together and connect them electrically.

1,392,695. FUEL-SAVING DEVICE. FRANK S. MILLER, St. Louis, Mo. Filed Aug. 12, 1920. Serial No. 403,106. 1 Claim. (Cl. 126—285.)



A draft reducer for stove pipes, consisting of a sheet metal disk that is adapted to be stationarily mounted inside of a flue opening opposite to and spaced away from the inner end of a stove pipe that projects into said opening through one wall of the flue, a plurality of right angularly-disposed arms on said disk that extend longitudinally of the stove pipe between said pipe and the opening in the flue wall through which the stove pipe projects, and laterally-projecting portions on the ends of said arms that lap over the front side of said flue wall and thus prevent said disk from moving away from the end of the stove pipe.

1,392,696. CONTROLLING DEVICE FOR STITCHING MECHANISM, &c. GEORGE E. MOLYNEUX, Bayonne, N. J. Filed Dec. 1, 1917. Serial No. 204,971. 7 Claims. (Cl. 112—219.)

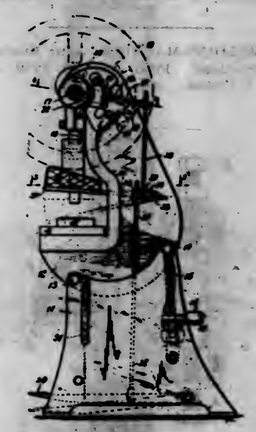


1. In an apparatus of the character described, the combination of stitching mechanism, means to reciprocate the stitching mechanism continuously through a predetermined movement including a cam wheel, means to operate the stitching mechanism, electromagnetic controlling devices for the operating means and devices operated with said cam wheel for determining the operation of the controlling devices, whereby the reciprocation of the stitching mechanism is continuous through a predetermined movement and the operation of the stitching mechanism is discontinuous.

1,392,697. MOLDING-MACHINE. JOHN BIRCH NEEDHAM, Glasgow, Scotland. Filed June 10, 1919. Serial No. 303,106. 7 Claims. (Cl. 251—164.)

3. In a molding machine of the type specified, a casing, a cylindrical extension in connection therewith, a pilot valve in said casing, a piston in said extension, means whereby fluid under pressure may be admitted to said extension for operating said piston and means in connection with said piston for positively locking said pilot valve on the operation of the piston.

1,392,698. AUTOMATIC CUTLERY-GRINDER. OSVILLE P. NORMAN, Los Angeles, Calif., assignor of one-half to Lester Alice Winter, Los Angeles, Calif. Filed July 6, 1920. Serial No. 394,115. 15 Claims. (Cl. 51—224.)



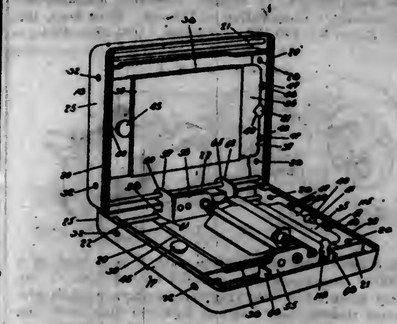
1. In a cutlery grinding mechanism, the combination of a reciprocating carriage, a clamp for the cutlery adapted to present the blade to the grinding tool, and means operated by reciprocation of the carriage to swing the clamp through the arc of a circle at a point in its travel so as to grind a curved edge.

1,392,699. SAFETY-GUARD FOR PRESSES. HERMAN OSWALD, Richmond Hill, N. Y., assignor to The V. & O. Press Company, a Corporation of New York. Filed Apr. 15, 1918. Serial No. 228,565. 8 Claims. (Cl. 74—105.)

1. A punch press having an operating shaft, a power member, a dog movable on the operating shaft in the

direction of the axis of the shaft into engagement with the power member to connect the power member to the shaft, a controlling member for positioning the dog, means for moving the controlling member outwardly from the shaft to release the dog, a guard connected to the controlling member so as to be moved to its operative

position when the controlling member is moved to its outer position for releasing the dog, and means for holding the controlling member in substantially the position to which it is moved to release the dog during substantially a half revolution of the operating shaft; substantially as described.



1,392,700. LUNG-EXERCISING DEVICE. HENRY M. OTEN, Chicago, Ill. Filed Sept. 21, 1920. Serial No. 411,718. 3 Claims. (Cl. 128—27.)

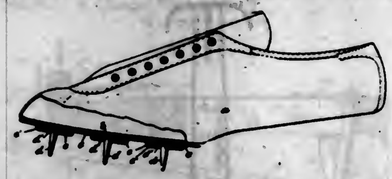
1. A lung exercising device comprising a tube open at its ends for the entrance and exit of air, a plunger slidably mounted in the tube and spring-pressed in the direction of the air entrance end thereof, said plunger having longitudinally spaced heads and a connecting portion, and a stationary partition in the tube on opposite sides of which the plunger heads are located, the partition having an aperture through which the connecting portion of the plunger head passes, said connecting portion having means for closing the partition aperture at the limits of the sliding movement of the plunger, and the plunger heads having air passageways of restricted area.

1,392,701. RAZOR-BLADE SHARPENER. DANIEL B. PERKINS, Providence, R. I. Filed Oct. 20, 1919. Serial No. 332,110. 15 Claims. (Cl. 51—65.)

6. In a razor blade sharpener, a carriage, an oscillatory blade holder pivotally mounted in the carriage, bodily reciprocable frames on opposite sides of the carriage, abrasive elements in the frames coöperating with

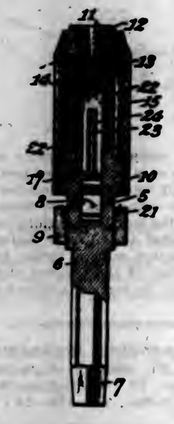
the blade holder, and means operated by the frames for actuating the blade holder.

1,392,702. DRILL-CHUCK OR THE LIKE. JOHN H. PHILLIPS, Chicago, Ill. Filed Feb. 27, 1920. Serial No. 361,903. 7 Claims. (Cl. 255—64.)



1. In a drill chuck of the kind described and in combination, a shank having a head constructed to engage a drill, and a drill supporting member adapted to surround said drill and slidable on said shank away from said drill.

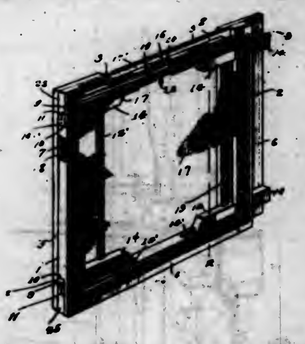
1,392,703. EXPANSION-SHELL. JOHN H. PHILLIPS, Chicago, Ill. Filed June 18, 1920. Serial No. 389,891. 7 Claims. (Cl. 85—2.4.)



1. An expansion shell of the kind described comprising a tubular body arranged for expansion at one end, and an expanding plug of ductile material of a size to enter the bore of the body.

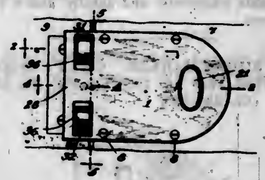
1,392,704. ATHLETIC SHOE. GEORGE L. PIMACI, Brooklyn, N. Y., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed Feb. 10, 1921. Serial No. 442,784. 2 Claims. (Cl. 36—59.)

1. A light, flexible, athletic shoe having a flexible outer sole of leather, a spike having a broad flat head resting upon the outer sole and a tap of leather through which the spike extends and of slightly greater width than the head sewed directly to the outer sole to confine the head of the spike and hold it on the outer sole whereby compression strains on the spike are transmitted to the face of the outer sole.



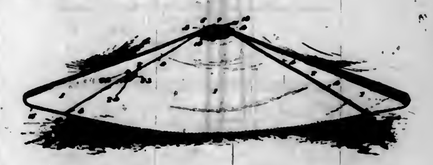
1,392,705. RETHREADING-TOOL. DANIEL S. RHODES, Gloversville, N. Y. Filed Oct. 25, 1920. Serial No. 419,166. 7 Claims. (Cl. 10—128.)

7. A rethreading tool, comprising a body portion bifurcated by a diametrical slot and having outer conical surfaces at the ends of the branches of the bifurcation, a sleeve adjustably held on the body and having an internal conical surface adapted to act on the conical ends of said branches, jaws fitted to slide longitudinally in the slot and provided at their outer ends with internal screw thread cutting teeth and external conical surfaces adapted to coact with the internal conical surface of the sleeve, an adjustable nut on the stem or reduced portion of the body and having a recess formed in its end for the reception of the inner ends of the jaws and a spring acting against the insides of the jaws to spread their outer ends apart and to maintain contact between the conical portions of the jaws and the sleeve.



1,392,706. WINDOW-SCREEN. CHARLES ROCHON, Fall River, Mass. Filed June 11, 1921. Serial No. 476,925. 2 Claims. (Cl. 156—27.)

2. The combination with a window screen frame and its fabric covering, the frame having its upper corner rabbeted at the side next the fabric and having egress openings formed therethrough between it and the fabric, of a plate slidably mounted in the rabbet and having cutaway portions registerable at times with the egress open-

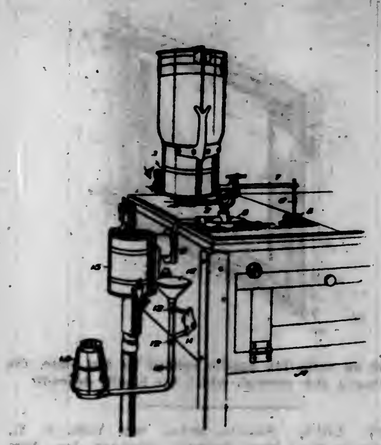


ings and an actuating handle carried by the plate, the rail having a slot through which the handle depends.

1,392,707. LOCK. SAMUEL SEGAL, New York, N. Y., assignor to Segal Metal Products Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Jan. 17, 1920. Serial No. 352,066. 4 Claims. (Cl. 70—14.)

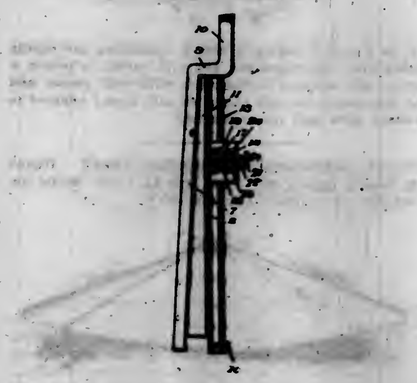
1. In a lock, a casing, a bar, a connecting bar rigidly joining said first-named bar and said casing, a keeper, a locking bolt adapted to interlock with said keeper and said first-named bar and means on said keeper adapted to interlock with said connecting bar.

1,392,708. KNOCKDOWN BROODER-CANOPY. HENRY M. SHEEN, Quincy, Ill. Filed May 14, 1920. Serial No. 381,320. 7 Claims. (Cl. 119—31.)



1. A knockdown canopy including sections mitered and interlocked at their edges and made substantially flush on their outer surfaces, the canopy thus formed having an opening at the apex, a ring fitted to and dropped into said opening and substantially fitting the surrounding outer surface, and forming a seat at its inner end, and a damper removably supported on said seat.

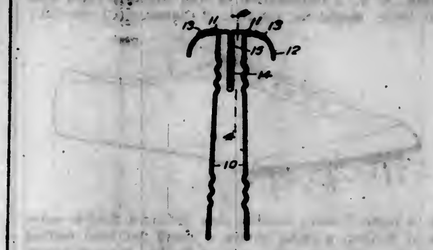
1,392,709. HEATER FOR INCUBATORS. HENRY M. SHEEN, Quincy, Ill. Filed July 10, 1920. Serial No. 395,422. 5 Claims. (Cl. 158—42.)



1. A heater for incubators including an oil feed pipe made in at least two parts or sections, one of which feeds

into the other, an oil font, valve and regulator in fixed relation to one pipe section, the other section of oil feed

pipe adjustable lengthwise and axially, and a burner connected thereto.

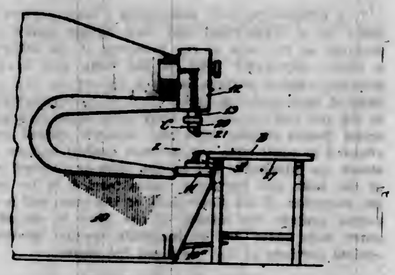


1,392,710. SIDING-MARKER. CARL F. SHONG, Wichita, Kans. Filed June 16, 1920. Serial No. 389,401. 3 Claims. (Cl. 33—33.)

1. A siding marker having legs to fit astride a siding board, a slide movable along one leg, and marking elements carried by said slide and adapted to mark the siding along both edges of said leg.

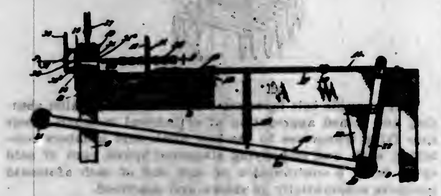
1,392,711. HAIRPIN. CLARA B. SITE, Washington, D. C. Filed Feb. 22, 1921. Serial No. 447,046. 1 Claim. (Cl. 132—52.)

A hairpin comprising spaced tines, an integral crossbar spanning the interval between and extending laterally beyond the tines at one end, being folded upon itself and twisted outside of the lines of the tines with the folded



ends curved toward the opposite ends of the tines and their component parts positioned broadside toward the tines.

1,392,712. FASTENER FOR HANDBAGS. MAX SLOANE, Brooklyn, N. Y., assignor to Sloane Brothers, Brooklyn, N. Y., a Copartnership composed of Max Sloane and Nathan Sloane, Brooklyn, N. Y. Filed Nov. 16, 1920. Serial No. 424,380. 5 Claims. (Cl. 292—145.)

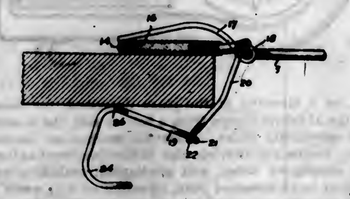


1. A bag frame comprising hingedly connected members movable to the open or the closed position, a fastener disposed transversely on one frame member and projecting beyond the same to center the other frame member, said frame members having longitudinal slots, and said fastener being movable in said slots to the fastening or the release position; together with a spring pressing against a longitudinal surface of the fastener and exerting friction on said fastener to prevent accidental sliding of the same.

1,392,713. WIRE-BENDING APPARATUS. JAMES D. SMITH, Chicago, Ill., assignor of one-half to Franklin P. Smith, Chicago, Ill. Filed June 30, 1920. Serial No. 392,978. 7 Claims. (Cl. 140—24.)

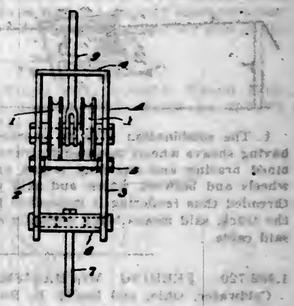
1. Wire bending apparatus for the purpose specified, comprising an anvil for holding wire mesh fabric, a wire bending tool having wire bending fingers formed with diverging faces arranged to engage and bend the end portions of the wires of the wire mesh fabric into substantially parallel relationship, and means for actuating said tool.

1,392,714. WIRE-INSERTING MECHANISM FOR WIRE-MESH FABRICATED MATERIAL. JAMES D. SMITH, Chicago, Ill., assignor of one-half to Franklin P. Smith, Chicago, Ill. Filed June 30, 1920. Serial No. 392,979. 6 Claims. (Cl. 29—1.)



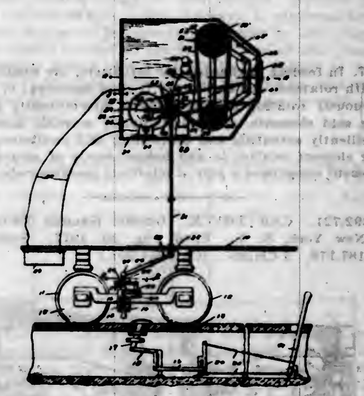
1. Apparatus for use in assembling wire mesh fabric with frame bars, comprising a wire guide having tapering wire guiding eyes, an inserter bar having wire mesh engaging fingers, and actuating means for said inserting bar.

1,392,715. KEY-RING CLIP. JOHN L. SOMMER, Newark, N. J., assignor to J. L. Sommer Manufacturing Co., a Corporation of New Jersey. Filed July 23, 1921. Serial No. 486,938. 5 Claims. (Cl. 24—3.)



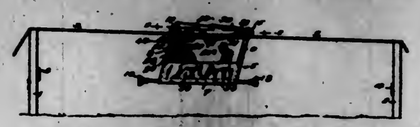
1. A key ring clip having a body portion and spring tongues returned from the ends of the body portion on opposite sides thereof and extending each past the free end of the other, the three overlapping portions being bent as a unit to form tortuous passageways.

1,392,716. BAG-SUPPORT. MARY C. SPRAGGINS, Jersey City, N. J. Filed Mar. 12, 1921. Serial No. 451,854. 4 Claims. (Cl. 83—26.)



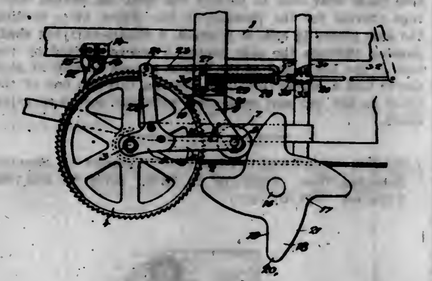
1. A support for a bag comprising a ring member for maintaining said bag open at one end, said ring member comprising a pair of arc-shaped sections, a pair of hinge structures for connecting said sections together, said hinge structures being substantially U-shaped in cross section with a pintle extending through each end of each of said sections, said pintles being set in from the end a sufficient distance so that the ring sections may swing together in one direction and move to an open position in the opposite direction and a clamp connected with one of said ring sections for clamping the ring sections to a support.

1,392,717. PULLEY. CHARLES A. STONER, Toledo, Ohio. Filed Aug. 28, 1920. Serial No. 406,883. 1 Claim. (Cl. 254—197.)



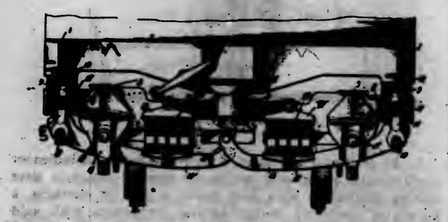
A device of the class described comprising a casing formed of two side plates, with the upper portion of one side plate bent over to form a top, said top having openings therein for the passage of the cables, bolts holding the side plates in spaced relation, a sheave-carrying shaft passing through the side plates, a sleeve carried by the bolt at the lower end of the plates, a hook carried by said sleeve and a supporting hook passing through one of the holes in the top and connected with the sheave-carrying shaft.

1,392,718. STATION-INDICATOR. LAMONT H. STROUD, Sheridan, Wyo. Filed Apr. 23, 1919. Serial No. 292,128. 2 Claims. (Cl. 40—53.)



1. An indicator including, a pair of spools, an indicator cloth wound about said spools, an electric motor, a gear having connection with said motor, a pair of contacts, a source of electrical energy having connection with said motor and said contacts, a control arm pivotally carried by said gear and extending radially from the center of the same, said control arm normally engaging one of said contacts, spring means for retaining said control arm in engagement with one of said contacts, and an operating rod adapted for disengaging said control arm from one of said contacts whereby a circuit may be completed to said electrical energy and said motor for rotating said gear and operating said indicator cloth.

1,392,719. ELEVATED COASTING APPARATUS. PATRICK MARVIN SWAIM, Lonoke, Ark. Filed Dec. 21, 1920. Serial No. 432,170. 6 Claims. (Cl. 104—112.)

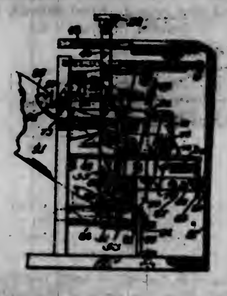


1. The combination with an overhead cable; of a car having sheave wheels mounted to travel thereon, and combined bracing and guarding means arranged below said wheels and between which and said wheels the cable is threaded thus rendering it impossible for the car to jump the track, said means being normally out of contact with said cable.

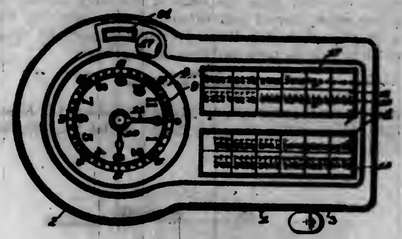
1,392,720. FEEDING MECHANISM. HENRY SYNCK, Coldwater, Ohio, and BRUCE B. ROLLMAN, Pittsburgh, Pa., assignors, by mesne assignments, to The New Idea Spreader Company, Coldwater, Ohio, a Corporation of Ohio. Filed June 4, 1918. Serial No. 238,331. 9 Claims. (Cl. 74—64.)

7. In feeding mechanism for fertilizers, the combination with rotatable and oscillatory feeding elements; of a continuously rotating driving element intermittently actuating said elements, and longitudinally movable means for resiliently actuating and controlling said oscillatory feeding element relative to and independently of said driving element comprising a pair of relatively movable rods.

1,392,721. CAR-TRUCK. GEORGE KRAMER THOMPSON, New York, N. Y. Filed Aug. 20, 1917. Serial No. 187,178. 5 Claims. (Cl. 105—201.)



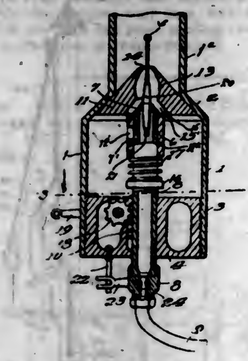
1. In combination with a car body, equipped with a pending king bolt, and a truck, cantalivers pivotally connected at their inner ends and pivotally connected to the truck and having their outer ends in connection with the car body, resilient means arranged between said cantalivers and car body, intermediate said pivot points, and springs interposed between said resilient means and king bolt to absorb shock of lateral thrust from the car body.



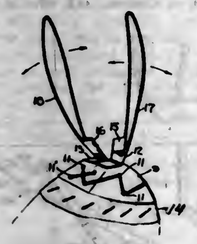
1,392,722. BELT-FASTENER. ELMER A. THURSTON, Chippewa Falls, Wis. Filed June 9, 1920. Serial No. 387,712. 3 Claims. (Cl. 24—36.)

1. A metallic belt fastener, consisting of a parallel abutting and joined aggregation of cylindrical members, their axes lying transverse to the belt joint, said members combining with, and embodying staggered spurs, each of said spurs being a continuation of each end of each aforesaid members substantially as shown and described.

1,392,723. FABRIC-MEASURING AND COST-COMPUTING MACHINE. DOUGLAS TURNER, St. Louis, Mo., assignor to The Measuregraph Company, St. Louis, Mo., a Corporation of Missouri. Filed July 21, 1919. Serial No. 312,239. 21 Claims. (Cl. 33—123.)

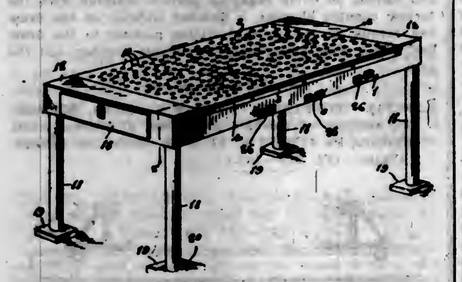


1. In a machine of the class described, for measuring lengths of fabric drawn from a bolt or roll, the combination of a measuring roller, indicating mechanism including a scale, means for driving the indicating mechanism from said measuring roller, and mechanism including an independent hand-actuated part, operated at will when a remnant is to be measured, for increasing the reading of the indicating mechanism at said scale.



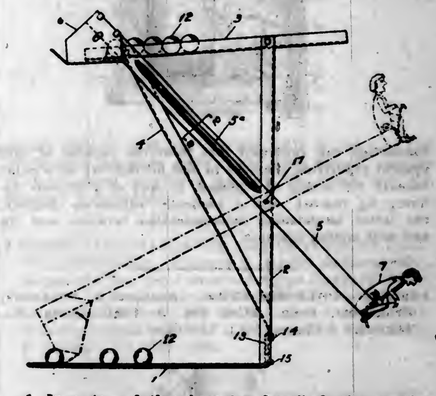
1,392,724. CARBURETER FUEL CONTROL. VICTOR H. WASSERLEIN, New York, N. Y., assignor to Wasserlein, Frees Company, Inc., a Corporation of New York. Filed Apr. 9, 1917. Serial No. 160,776. 2 Claims. (Cl. 261—50.)

1. In a carbureter, a casing, the lower portion of which serves as an air chamber, a fuel nozzle slidable within the casing, an air valve mounted on the fuel nozzle and having a mixing chamber communicating with air ducts formed therein, said fuel nozzle normally extending within the mixing chamber, a pin on the fuel nozzle for limiting its movement with respect to the air valve, said air valve



cooperating with said nozzle for cutting off the air supply at the termination of the upward movement of the fuel nozzle, and a compensating valve for controlling the flow of fuel from said fuel nozzle.

1,392,725. TOY ANIMAL. MABEL WATERMAN, New Rochelle, N. Y. Filed Feb. 19, 1920. Serial No. 359,836. 6 Claims. (Cl. 46—40.)



1. In a stuffed animal toy and in combination the stuffed body, a rigid cap upon the head, a pair of hinges fixed to the cap, ear supports fixed to the hinges, and ears carried by said supports.

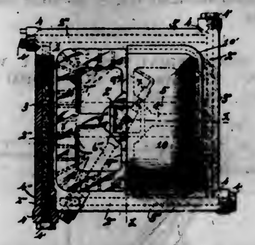
1,392,726. EDUCATIONAL BOARD. VERNA O'NEAL WATKINS, Atlanta, Ga. Filed Dec. 27, 1918. Serial No. 268,445. 1 Claim. (Cl. 35—12.)

An educational device for simulating a drawing table in kindergarten work comprising a box adapted at its corners to receive legs and provided with a hinged cover, legs adapted to fit within the box and to be inserted at the corners to form a table, the cover perforated throughout a major portion of its area with relatively small juxtaposed holes, pegs adapted to fit the holes whereby characters may be formed upon the table top by inserting the pegs in the perforations.

1,392,727. MECHANICAL TOY. CLYDE L. WELSH, Pittsburgh, Pa. Filed Aug. 25, 1920. Serial No. 405,939. 2 Claims. (Cl. 46—37.)

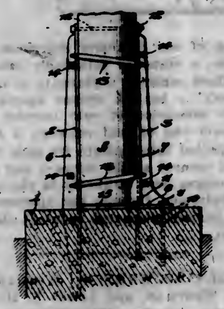
1. In a toy of the character described, the combination of a base; a standard detachably connected to said base; an inclined runway; a plurality of marbles carried in said runway; a keyhole shaped aperture, of smaller size than the dimension of said marbles, provided adjacent the lower end of said runway; a balancing-beam pivotally supported intermediate its ends by said standard; a bucket secured at the forward end of said beam; a depending tongue bent upwardly in the bottom of said bucket for protrusion through the aperture in said runway, and an inclined discharge spout at the forward end of said bucket.

1,392,728. OIL-COCK WRENCH. WILLIAM H. WESTMAN, ALFRED D. WESTMAN, and JAMES N. RICHARDS, Chatham, Ontario, Canada. Filed Feb. 12, 1921. Serial No. 444,573. 1 Claim. (Cl. 137—139.)



An iron rod placed horizontally with one end thereof bent downward at right angles, then bent forward and upward to an angle of 25° more or less sidewise, but parallel with the front face of the vertical part turned down, then projected straight for ¼" more or less, then bent sidewise and downward parallel with the inclined part thus forming two lugs leaving sufficient space between said lugs for the insertion of the oil cock handle.

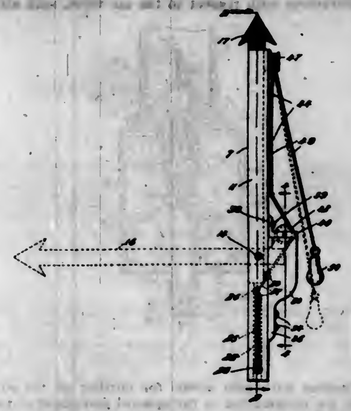
1,392,729. FUEL-VAPORIZING HEATER. SAMUEL L. WHITRIGHT, New Haven, Conn. Filed Sept. 26, 1919. Serial No. 326,643. 4 Claims. (Cl. 158—69.)



1. A fuel-vaporising heater comprising a burner fitted with a base mainly surrounded marginally by a general vaporising chamber composed of a plurality of straight angularly-intersecting, open-ended units constituting a general vaporising chamber, and having a casing formed integral therewith and depending therefrom, the interior

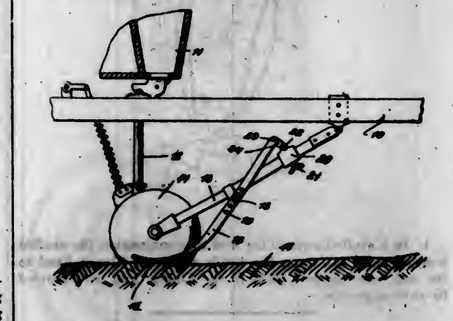
of said casing constituting a mixing chamber; plugs removably closing the open ends of said units; a general base detachably supporting said burner; a supply pipe for conducting fuel in a fluid state to and into the general vaporizing chamber aforenamed; a feed-pipe for

conducting the vaporized fuel from the interior of said general vaporizing chamber to and for delivery at a point beneath the casing aforenamed, by way of a suitable delivery tip thereat; and a vertically adjustable chimney, the latter establishing communication between said tip and said mixing chamber.



1,392,730. POLE-MOUNTING. ROLLAND G. WILLIAMS, Bridgeport, Conn. Filed Feb. 5, 1921. Serial No. 442,624. 3 Claims. (Cl. 72—84.)

2. In a pole mounting, a base, a pair of vertical supports secured at one end to the base, each support being transversely curved and having a vertical rib extending outwardly from the center of the outer side of the curved part thereof, a pole between the supports, the curved parts of the supports conformably engaging the pole, and integral semi-circular rods engaged with the pole and over the curved parts of the supports and extending through the ribs and having nuts on their ends abutting the exposed side faces of the ribs to draw the supports against the pole.



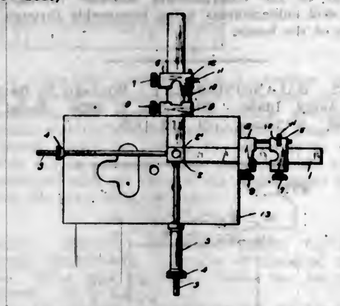
1,392,731. AUTOMOBILE-SIGNAL. WILLIAM WILLIS, Pawtucket, R. I. Filed May 21, 1921. Serial No. 471,343. 1 Claim. (Cl. 116—52.)

In a device of the character described, a shaft provided with a longitudinal recess extending from an intermediate portion to its top and one side, and with a vertical hole extending downwardly from the recess, an indicator arm pivotally mounted at a short distance from one end in the lower portion of the shaft normally seated in the recess, a helical spring in the hole, a pin on the lower portion of the hole engaged with the lower end of the spring, an eye on the side of the arm carrying the other end of the spring, said shaft being provided with a lateral slot to permit the passage of the spring, and allow play for the inner end of said arm, a pulley on the shaft above the eye, guides on the shaft above

the pulley, a second pulley on the shaft above the guides, and a flexible member attached to the eye and engaging the pulleys and the guides.

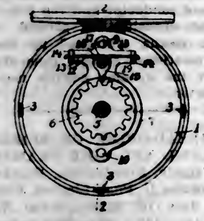
1,392,732. GRAIN-DRILL ATTACHMENT. HENRY ZARMSTORF, Flint, Mich. Filed Apr. 14, 1920. Serial No. 373,899. 2 Claims. (Cl. 97—14.)

2. The combination with a grain drill including a draw bar carrying a furrow opening element, of an arm movably coupled intermediate its ends to the draw bar and having an earth engaging portion coacting with the furrow opening element, a member slidable on the draw bar, means for locking said sliding member to the draw bar, and a link connecting the slidable member and the arm.



1,392,733. TIE-PLATE. GILBERT L. ADAMS, Eldorado, Pa., assignor of one-half to Charles F. Brown, Hollidaysburg, Pa. Filed Dec. 17, 1919. Serial No. 345,458. 1 Claim. (Cl. 238—288.)

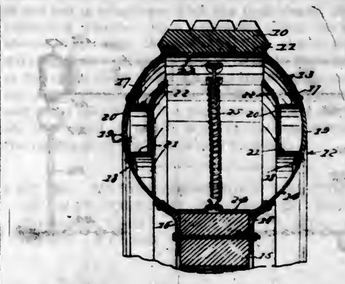
A device of the class described including a plate, a clip having a base overlapping the base flange of a rail,



said plate having a slot extending inwardly, a fastening member depending from the base through said slot and under the plate, a support for the tread flange of the rail rising from the base, said fastening member serving to rigidify the support and base, and fastening means common to the base and plate passing therethrough opposite the support and fastening member.

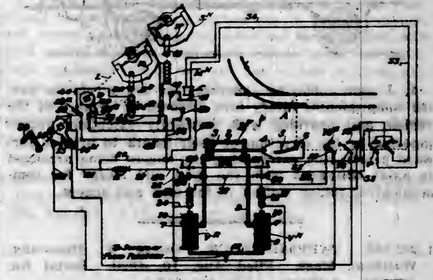
1,392,734. INSTRUMENT OF PRECISION. REUBEN A. ALDREN and SWAN HILLMAN, Rockford, Ill. Filed July 7, 1920. Serial No. 394,455. 3 Claims. (Cl. 33—189.)

1. An instrument of precision comprising two arms extending at a right angle to each other provided with an opening having the center thereof in alinement with the median longitudinal dimensions of said arms, work-engaging blocks adjustably mounted upon said arms, rods extending from said arms having their median longitudinal dimensions in alinement with the median longitudinal dimensions of said arms and in alinement with the center of said opening, and adjustable work engaging members mounted on said rods.



1,392,735. FISHING-REEL. LEONARD ATWOOD, Boston, Mass. Filed June 9, 1920. Serial No. 387,772. 5 Claims. (Cl. 242—84.6.)

1. A fishing reel having a spool provided with a pinion, a pivotally supported detent engaging said pinion, the detent having a flattened portion, and a length of spring supported at its ends and pressing at its mid-length against said flattened portion, whereby the resistance to oscillation given to the detent is equal in both directions.



1,392,736. WHEEL-TIRE. THOMAS BAGNELL, Hemmingford, Quebec, Canada. Filed Oct. 25, 1918. Serial No. 259,669. 1 Claim. (Cl. 152—37.)

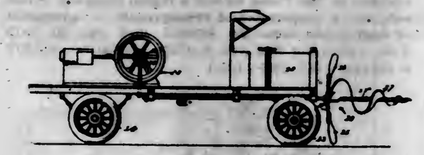
A wheel tire having tread and rim members of substantially semi-circular contour in cross section and interposed resilient means housed thereby, said members being provided on both sides and adjacent their proximate edges with inturned annular flanges paralleling each other throughout their perimeters, the flanges on one member being formed with annular guards at their inner edges, the said annular guards extending approxi-

mately parallel with the exterior wall of the tire and overlapping the inner edges of the other flanges, whereby relative lateral movement between the tread and rim members is precluded.

1,392,737. APPARATUS FOR THE CONTROL OF RAILWAY-SWITCHES. CHARLES R. BEALL, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Continuation of application Serial No. 320,691, filed Aug. 29, 1919. This application filed Nov. 1, 1920. Serial No. 420,876. 9 Claims. (Cl. 246—135.)

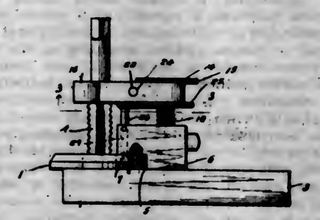
5. In combination, a railway switch having normal and reverse positions, a normal and a reverse magnet, means controlled by said magnets for moving said switch to normal or reverse position according as the normal or the reverse magnet is energized, a lever having normal and reverse positions as well as normal indicating and reverse indicating positions, means controlled by said lever and said switch for energizing said normal magnet when the lever is in normal to normal indicating positions and the switch is not in normal position and for de-energizing said normal magnet when the switch reaches the normal position, and means controlled by said lever and said switch for energizing said reverse magnet when the lever is in reverse to reverse indicating positions and the switch is not in reverse position and for de-energizing said reverse magnet when the switch reaches the reverse position.

1,392,738. DRAFT-EQUALIZER. ANGUS BEATON, Vulcan, Alberta, Canada. Filed Jan. 7, 1921. Serial No. 435,685. 1 Claim. (Cl. 54—1.)



A draft equalizer for use with a pole team comprising a tug pivotally mounted on the hame, a member riveted at one end to an intermediate portion of said tug and having its free end bent so as to extend parallel to the tug, a curved arm having one end extending between the

free end of said member and the tug and provided at its central portion with means to receive the end of a trace of the pole team and provided with means below the



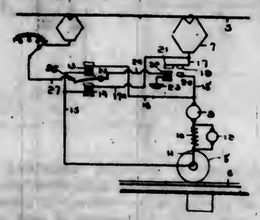
means that receive said trace of the pole team for receiving the ends of similar traces of the lead teams and means for pivotally mounting said arm.

1,392,739. SNOWPLOW. HANS J. BRENOW, Fond du Lac, Wis. Filed July 9, 1920. Serial No. 394,980. 2 Claims. (Cl. 37—43.)

1. A snow removing apparatus for motor vehicles having complemental rotary fans disposed in advance of the vehicle and provided with forwardly extending augers tapering in the direction of their length to provide forward penetrating extremities, the augers being arranged in axial alinement with the fans, and means for communicating rotary motion to the fans and augers.

1,392,740. TAPPING-BLOCK. OSCAR W. BERGGREN, Waltham, Mass. Filed Aug. 10, 1920. Serial No. 402,575. 6 Claims. (Cl. 10—147.)

1. A tapping block comprising a base having a central opening to receive a tapping tool, a block secured to said base, and tool guiding jaws adjustably connected to the block and adapted to be applied to the upper portion of the tapping tool.

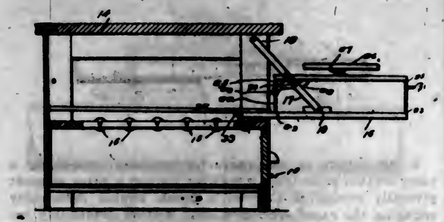


1,392,741. MOP. THOMAS L. BONSALL, Ottawa, Ontario, Canada. Filed Feb. 7, 1921. Serial No. 443,150. 7 Claims. (Cl. 15—56.)

1. In mop construction, a frame having hooked end portions, the openings of said hooks being smaller than the space within the hooks, and a mop cloth having enlargements at the ends thereof insertible by longitudinal

movement of the enlargements sidewise through the hoooks, said enlargements being impassable through the openings of the hooks.

1,392,742. BALANCING-RELAY. WILLARD E. BRANTIGAM, Avery, Idaho. Filed Jan. 2, 1920. Serial No. 348,888. 2 Claims. (Cl. 172—179.)

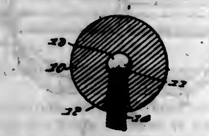


1. In a device of the character described, overhead and ground conductors, a dynamo electric machine, an electrical connection on one side of the dynamo electric machine connected with the ground conductor, opposed electro-magnets, electrical connections between one of the electro-magnets and the ground and overhead conductor, means electrically connecting the other magnet with the ground conductor and the pole of the dynamo electric machine opposite the ground conductors, an armature associated with the electro-magnets and operated thereby, the first mentioned magnet being normally energised, normally spaced contact elements connected respectively with the overhead conductor and the pole of the dynamo electric machine opposite the ground conductor, and electro-magnetic means controlled by the armature to move the last mentioned contact elements together and directly connect the dynamo electric machine with the overhead conductor.

1,392,743. THREAD-GUIDE OF SPINNING, TWISTING, DOUBLING, AND LIKE FRAMES. GEORGE F. BULL, Small Heath, Birmingham, England, assignor of one-half to Charles H. Pugh Limited, Birmingham, England. Filed July 10, 1920. Serial No. 395,413. 3 Claims. (Cl. 242—157.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

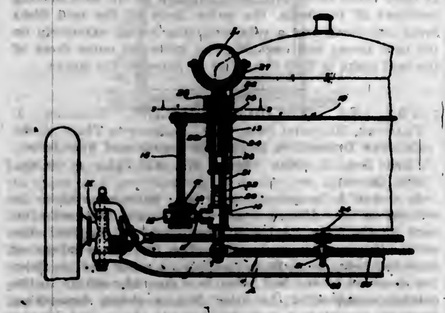
1. In thread-guide lappers for spinning, twisting, doubling and like frames the combination with a thread guide wire formed with a worm rack engaged by a rotatable worm by which the guide wire can be adjusted longitudinally, of a spring which exerts a lateral pressure upon the worm in order to retain the guide wire in its adjusted position, substantially as described.

1,392,744. TYPEWRITER-DESK. FRED. M. CLOUGH, Bryant, S. D. Filed Oct. 29, 1919. Serial No. 334,114. 3 Claims. (Cl. 45—52.)



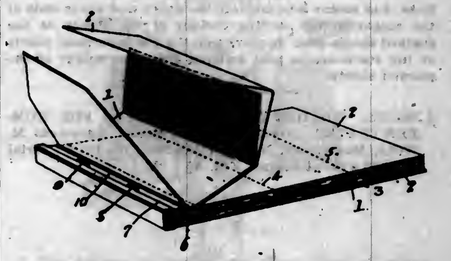
1. A typewriter cabinet having a receiving compartment, a drawer platform movable into and out of the compartment and carrying a vertically movable table connected with the platform by horisontally hinged swinging leaves, means for locking the leaves in an upright position and an extensible brace connecting the platform at midlength with the walls of the compartment for supporting the same when extended.

1,392,745. METHOD OF RECOVERING VANADIUM FROM SOLUTIONS. LEONARD S. COPELIN, Millers, Nev. Filed May 28, 1920. Serial No. 385,025. 7 Claims. (Cl. 23—13.)



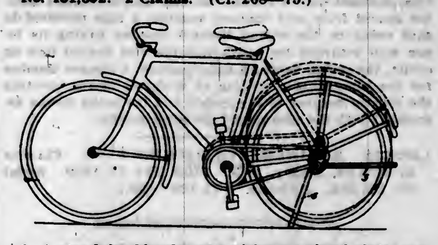
1. In the treatment of solutions for the recovery of vanadium the addition of a magnesium salt.

1,392,746. CAP FOR VALVE-TUBES. DAVID H. COX, Roselle, N. J. Filed Mar. 28, 1921. Serial No. 456,073. 5 Claims. (Cl. 152—12.)



5. A cap for tire valve tubes consisting of a spherical block of wood having an inwardly tapered radial bore at the inner end of which is seated a rubber cushion of spherical form revolubly fitted in a counterbored seat.

1,392,747. DIRIGIBLE HEADLIGHT. GEORGE W. J. CRABB, Newark, and EDWARD J. RENNIE, Bloomfield, N. J. Filed Apr. 26, 1920. Serial No. 376,743. 2 Claims. (Cl. 240—62.)

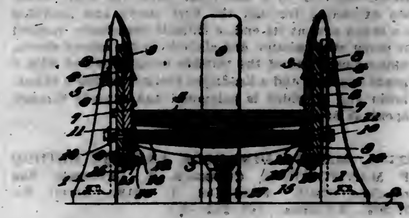


1. In a dirigible headlight for vehicles, the combination with the chassis, of a sleeve secured to the side bar of the chassis, a rod secured to the said side bar, a second sleeve having its upper end closed by an apertured cap, means for pivotally mounting the sleeve on the upper end of the rod in alinement with the first sleeve, shaft sections connected together by a universal joint, the lower shaft section extending through the first sleeve and provided with a crank arm at its end, a thimble detachably secured to the upper shaft section and slidable in the second sleeve, the upper closed end of the thimble being provided with a polygonal opening, and a headlight bracket having a shank, the lower end of which is polygonal and extends through the openings of the sleeve and thimble.

1,392,748. MANIFOLDING-BOOK AND THE METHOD OF MANIFOLDING. CLARENCE B. DAVIDSON, San Francisco, Calif. Filed Oct. 7, 1918. Serial No. 257,207. 3 Claims. (Cl. 282—9.)

3. A manifold book for executing triplicate records comprising record sheets and carbon sheets bound together, each record sheet having two weakened lines of fold, and three record sections, and each carbon sheet having a single weakened line of fold and two carbon surfaces, the carbon surfaces being placed on opposite faces of the sheet and on opposite sides of the line of fold, in such manner that impressions will be recorded on the upper faces of the record sheet only.

1,392,749. BICYCLE STAND OR SUPPORT. ADOLPH DONATI, Brooklyn, N. Y. Filed Mar. 12, 1921. Serial No. 451,692. 2 Claims. (Cl. 208—75.)

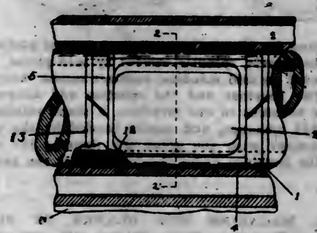


1. A stand for bicycles comprising a pair of plates carried by the bicycle, spindles carried by said plates, housings mounted on said spindles, resilient means interposed between the housings and the spindles and adapted to rotate the housings in one direction, a stand rigidly carried by said housings, and means carried by the plates for engagement with the stand for limiting the movement of the housings under the influence of the resilient means.

1,392,750. MAGAZINE FOR BLANKS OF SHEET METAL. HENRY A. FINK, Chicago, Ill., assignor to Continental Can Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed July 3, 1919. Serial No. 308,473. 9 Claims. (Cl. 271—32.)

1. The combination of a magazine, in which sheets of metal may be stacked, and devices for withdrawing the

sheets one at a time from the bottom of the stack, said magazine having means at the lower end thereof for supporting the stacked sheets adjacent the bottom of the magazine and permitting the sheets to be withdrawn there-

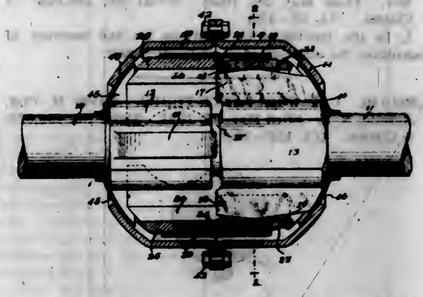


from, and means intermediate the upper and lower ends of the magazine for bending certain of the sheets as the stacked sheets pass thereby, whereby the lowermost sheets of the stack are in part relieved from the weight of the stacked sheets.

1,392,751. HOLDER AND ILLUMINATOR FOR NUMBER-PLATES. HENRY J. FISCHER and BERNHARD M. WOLF, Manchester, N. H. Filed Nov. 19, 1919. Serial No. 339,015. 1 Claim. (Cl. 40—132.)

A display device including a casing having a first section provided with a channel member and a channel member spaced from said channel member, a sign mounted in said members, the second channel member having its inner wall returned for reinforcements and shaped into an eyelet, the casing having a super-section, a closure member for the super-section serving as a signal, means pivoting the closure member to the eyelet, and fastening means associated with the closure and the super-section.

1,392,752. ROTARY-VALVE PACKING-RING. FRANCIS E. FOULKE, Albany, N. Y. Filed May 27, 1920. Serial No. 384,584. 4 Claims. (Cl. 123—190.)

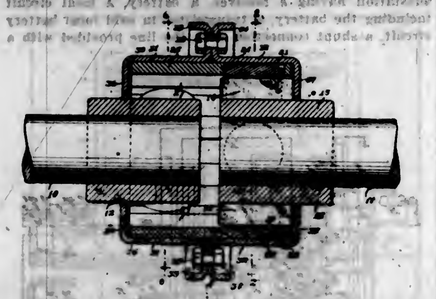


1. The combination with a rotary valve, having a port therein, of a packing, comprising coöperating relatively rotatable members, each having a bar and annuli at opposite ends of said bar, said annuli surrounding said valve at the ends of the port and said bars being at the sides of said port.

1,392,753. SAFETY-RAZOR. VAL F. FRANCK, Louisville, Ky. Filed Mar. 22, 1921. Serial No. 454,377. 8 Claims. (Cl. 132—80.)

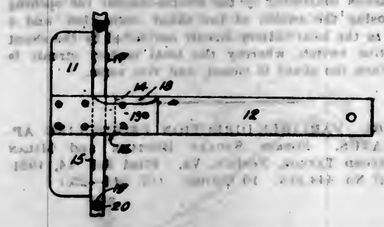
8. An article of the character specified comprising a razor section embodying a member having a razor element pivotally connected thereto, a brush section detachably engaging the razor section, a soap section detachably engaging the brush section and inclosing the brush, and caps detachably engaging the razor and soap sections and forming with the several sections a uniform case inclosing the parts.

1,392,754. UNIFORM-MOTION UNIVERSAL JOINT. WILLIAM J. FRANCKE, Highland Park, N. J., assignor to The Francke Co., New Brunswick, N. J., a Corporation of New Jersey. Filed Nov. 30, 1920. Serial No. 427,334. 8 Claims. (Cl. 64—21.)



8. A uniform motion universal joint, comprising a driving shaft, a driven shaft, hubs secured on the adjacent ends of the said shafts and each provided with diametrically disposed driving members, the driving members on one hub being at a right angle to the driving members on the other hub, a sleeve, disks mounted to turn in the said sleeve and having their axes intersecting the axes of the corresponding shafts, the disks being provided at their inner faces with slots engaged by the said driving members of the hubs, the outer faces of the said disks being spherical, and a retaining ring fitting exteriorly on the said sleeve and engaging the spherical outer faces of the said disks to hold the latter in place on the sleeve.

1,392,755. FLEXIBLE COUPLING. WILLIAM J. FRANCKE, Highland Park, N. J., assignor to The Francke Co., New Brunswick, N. J., a Corporation of New Jersey. Filed Dec. 2, 1920. Serial No. 427,741. 4 Claims. (Cl. 64—21.)

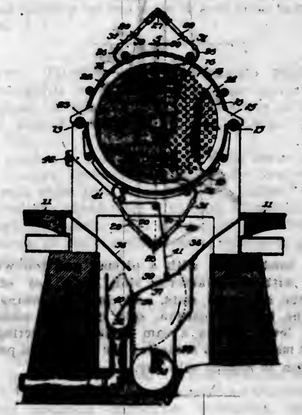


4. A flexible coupling, comprising hubs adapted to be secured on the adjacent ends of driving and driven shafts, each of the hubs having driving members disposed diametrically opposite each other, the driving members of each hub being at right angles to each other and the driving members of one hub being in staggered relation to the driving members of the other hub, a sleeve, connecting members mounted to turn in the said sleeve and having their axes intersecting the axes of the said hubs, the said connecting members being provided at the inner faces

with slots engaged by the said driving members, the said connecting members having outer spherical faces, and a

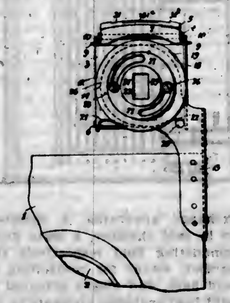
housing fitting onto the said sleeve and engaging the said spherical faces of the connecting members, the said housing inclosing the said driving members.

1,392,756. T-SQUARE. HUGH N. GAHAN, Kelowna, British Columbia, Canada. Filed Jan. 19, 1920. Serial No. 352,568. 5 Claims. (Cl. 33—76.)



1. The combination with a flanged straight-edge of a T-square having the lower surfaces of its head and blade located in the same place and also having a downwardly opening groove exposing an edge for coöperation with the straightedge, said exposed edge being formed with a longitudinally extending groove receiving the flange of the straight edge.

1,392,757. BATTERY-CLAMP. GEORGE T. W. GALES, Uniontown, Pa. Filed Jan. 2, 1920. Serial No. 349,102. 1 Claim. (Cl. 267—74.)

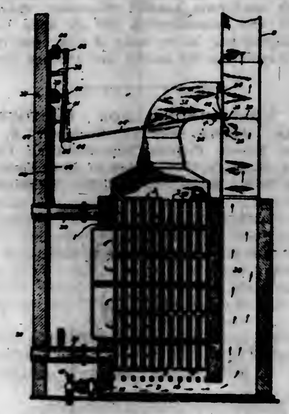


A battery box clamp comprising a threaded anchoring bolt for passing through a support and having a head at its upper end provided with a transverse opening, securing nuts carried by the bolt for engaging upper and lower faces of a support, a box engaging rod having its upper end portion bent to provide a box engaging hook and having its lower end portion flattened and provided with openings, and a spiral spring coiled about the flattened portion of the rod and having its lower convolution passing through the opening in the head of the bolt and having its upper convolution passing through a selected opening of the rod to releasably and adjustably connect the spring with the lower portion of the rod.

1,392,758. ART OF FILTRATION. HARRY F. GLAIR, Whiting, Ind., assignor to Standard Oil Company (of Indiana), Whiting, Ind., a Corporation of Indiana. Filed Aug. 11, 1920. Serial No. 402,810. 7 Claims. (Cl. 210—191.)

4. The process of filtering wax from chilled oil which consists in forcing the chilled oil through a filter surface, the pressure or head of oil upon said surface being substantially uniformly applied thereover, thereby depositing the wax suspended in the oil upon the filter surface, applying heat to the body of wax upon the filter surface, and removing the melted wax through the latter.

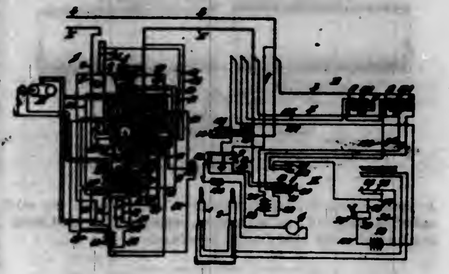
1,392,759. VIEW-FINDER FOR PHOTOGRAPHIC CAMERAS. JOSEPH GODDARD, Rochester, N. Y., assignor to Seneca Camera Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Sept. 22, 1919. Serial No. 325,325. 9 Claims. (Cl. 88—1.5.)



1. A view finder for photographic cameras comprising an objective lens, a reflector and an image screen to receive an image from said reflector, means for mounting the finder on a camera whereby the reflector and screen may be rotated into different positions about an axis parallel to the optical axis of the objective lens, and a device rotatable relatively to the reflector and screen and also rotatable relatively to the finder mounting means and located adjacently to the objective lens for delimiting and positioning the field projected by the objective lens and reflector onto the screen.

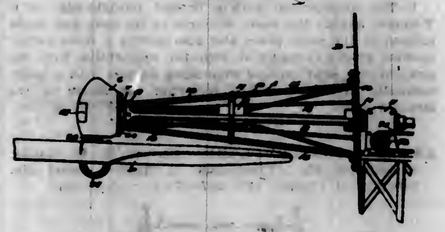
1,392,760. PITMAN-TIGHTENING DEVICE. CLARENCE R. GRIMM, Bowling Green, Ohio. Filed Sept. 1, 1920. Serial No. 407,463. 4 Claims. (Cl. 287—98.)

1. The combination with a pitman and follower, each provided with a transverse slot, of a key extending through the aforesaid slots, and clamping means for retaining the key in position, said clamping means comprising a lever having a cam element projecting therefrom, and means for so mounting the lever as to permit its cam portion to engage said key.



1,392,761. DAMPER CONTROL FOR HEAT-EXCHANGE APPARATUS. JAMES M. HARRISON, Cleveland, Ohio. Filed Apr. 17, 1919. Serial No. 290,789. 9 Claims. (Cl. 236—17.)

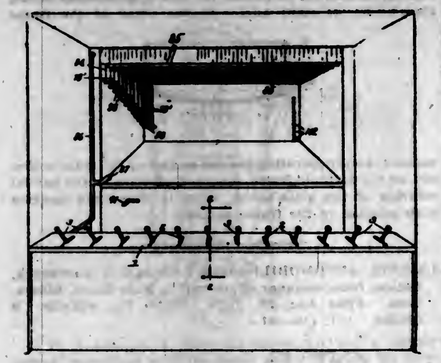
1. In heat-exchange apparatus, a chamber, heat-exchange elements in said chamber, a main flue and a by-pass flue for conducting fluid respectively through and around said chamber, means for controlling the flow of fluid through said flues, and means actuated by increase of pressure in said heat-exchange elements to operate said controlling means to divert the flow of fluid from said by-pass flue to said main flue.



1,392,762. SELECTIVE TELEPHONE SYSTEM. RUBEN C. M. HASTINGS, Columbus, Ohio, assignor to International Telephone Company, Columbus, Ohio. Filed Nov. 28, 1913, Serial No. 803,596. Renewed Nov. 6, 1920. Serial No. 422,364. 28 Claims. (Cl. 179—33.)

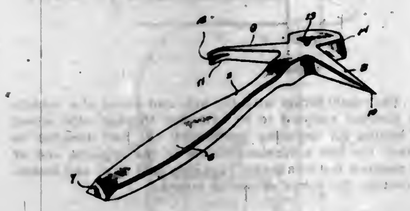
1. In a selective system of telephony, the combination of an exchange station and a plurality of substations connected electrically for the transmission of intelligence, said exchange station having a selecting device, and each substation having a receiver, a battery, a local circuit including the battery, a transmitter in said local battery circuit, a shunt connection with the line provided with a

switch, an electro-magnet influenced by the selecting device, means controlled by the electro-magnet for opening and closing the switch of the shunt connection, and a switch in the local battery circuit controlled by the shunt connection switch, whereby the local battery circuit is open when the shunt is closed, and vice versa.



1,392,763. VARIABLE-DIRECTION PROPELLING APPARATUS. ROBERT STUART HEDYLEN and MILAN RANSFORD TAYLOR, Norfolk, Va. Filed Feb. 14, 1921. Serial No. 444,913. 10 Claims. (Cl. 244—25.)

1. A variable direction propelling apparatus comprising, an outrigger, a housing rotatably supported on the outrigger, a propeller shaft journaled in the housing, a propeller fixed to said shaft, a tubular axle supported by the outrigger, a driving shaft rotatably fitted within said axle and operatively connected to said propeller shaft, means for rotating said housing including a shaft journaled on the outrigger and rotatably fitted on said axle, and means for rotating said shaft.



1,392,764. RACING GAME. MONNOSUKE HIGUCHI, College Point, N. Y., assignor of one-half to Tokichi Matsuoka, College Point, N. Y. Filed May 13, 1920. Serial No. 381,161. 9 Claims. (Cl. 46—56.)

1. In a device of the character described, an element to be propelled over a course of travel, means for propelling said element, and means for controlling the speed of said propelling means including a hand operated pneu-

matic pouch, a power transmitting pneumatic pouch, and means for conveying air from one pneumatic pouch to the other.

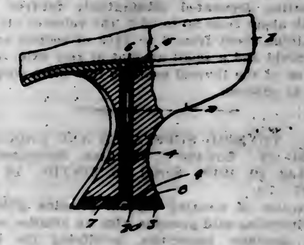
1,392,765. STAPLE-PULLER. GEORGE L. HUNTER, Fletcher, Okla. Filed Nov. 26, 1919. Serial No. 340,748. 1 Claim. (Cl. 254—25.)

In a compound tool of the class described, comprising a tapered handle having an enlarged, flat head integral therewith, tapered, diverging arms extending substantially at an angle of forty-five degrees with the longitudinal axis of the said handle and head, an inwardly curved claw at the free extremity of one of said arms, the second arm having a sharp pointed terminal, and an enlarged segmental rocker fulcrum offset from the head portion of the handle constituting an extension thereof and positioned medially between the said arms whereby a fastener may be removed by either of said arms without bending or crimping.

1,392,766. MUSICAL INSTRUMENT FOR TEACHING. WALTER H. HUTH, Chicago, Ill. Filed June 23, 1919. Serial No. 306,089. 4 Claims. (Cl. 84—470.)

4. In a musical instrument, the combination of a portable hollow body forming a chamber having a top wall provided with holes therein, pivoted strikers in said chamber, sound producing means inclosed in said chamber and located to respond to the impact of said strikers to produce musical tones, a music staff on said top wall, the axis of each striker extending obliquely to said staff, and push buttons representing notes on said staff and movable up and down in said holes to actuate the strikers.

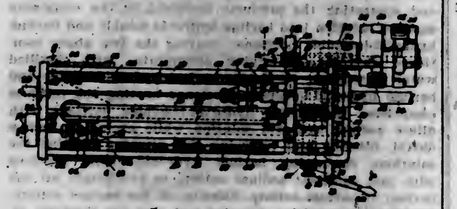
1,392,767. THYROID PRODUCT AND PROCESS OF PREPARING THE SAME. EDWARD CALVIN KENDALL, Rochester, Minn., assignor to University of Minnesota. Filed June 7, 1916. Serial No. 102,302. 24 Claims. (Cl. 167—7.)



1. A process of breaking down thyroid tissue which comprises heating desiccated substantially fat-free thyroid tissue with about from 80 to 95% (by volume) ethyl alcohol containing about from 1 to 2½% of sodium or potassium hydroxid and a small amount of zinc oxid, until decomposition of the thyroid proteins into more simple constituents is effected.

1,392,768. THYROID SUBSTANCE AND PROCESS OF MAKING IT. EDWARD C. KENDALL, Rochester, Minn. Filed Aug. 20, 1919. Serial No. 318,719. 16 Claims. (Cl. 167—7.)

1. A process of treating thyroid proteins which comprises hydrolyzing said proteins with an alkaline solution, removing insoluble impurities, acidifying the solution while preventing its temperature from rising materially above 25° C., allowing the mixture to stand with occasional stirring until a flocculent precipitate settles, separating the precipitate and dissolving it in a sodium hydroxid solution and filtering to remove any insoluble residue, acidifying the solution with hydrochloric acid while maintaining the temperature below 25° C., filtering off the resulting precipitate and dissolving it in ethyl alcohol of from about 85 to 95 per cent. strength to which a little hydrochloric acid has been added, filtering off insoluble constituents, making the filtrate neutral with sodium hydroxid and filtering to remove precipitated matter, again slightly acidifying the alcohol with hydrochloric acid, mixing barium hydroxid with the filtrate and heating to cause a precipitate containing thyroxin, filtering off said precipitate, and adding water containing barium hydroxid to the filtrate, evaporating the alcohol and separating the products dissolved in the remaining aqueous solution into barium hydroxid-soluble and barium hydroxid-insoluble portions; heating the two above mentioned thyroxin containing precipitates with distilled water to separate them into barium hydroxid-soluble and barium hydroxid-insoluble portions; heating the residues comprising the barium hydroxid-insoluble portions with dilute sodium hydroxid solution while excluding carbon dioxid, filtering and reserving this filtrate; treating the solutions containing barium hydroxid-soluble portions with just sufficient sodium sulfate to precipitate all the barium as barium sulfate, filtering off the barium sulfate, treating the resulting filtrates and also the reserved filtrate with carbon dioxid until precipitates form, dissolving the precipitates in dilute sodium hydroxid solutions, the precipitates of similar degrees of purity having been combined, heating the solutions to boiling and adding enough sodium chlorid to make at least a 20 per cent. solution thereof, allowing the solutions to cool and to form crystalline precipitates, dissolving the precipitates in dilute sodium hydroxid and heating for about one hour at 100° C., filtering off and discarding any precipitates which form, acidifying the filtrates with hydrochloric acid and adding barium hydroxid, heating the mixtures for several hours at about 100° C. while preventing evaporation of water, separating the solutions, which contain the barium hydroxid-soluble compounds, from the residues, which contain the barium hydroxid-insoluble compounds, subjecting these last mentioned residues and solutions to the series of steps above mentioned for the treatment of the barium hydroxid-insoluble portions and the solutions



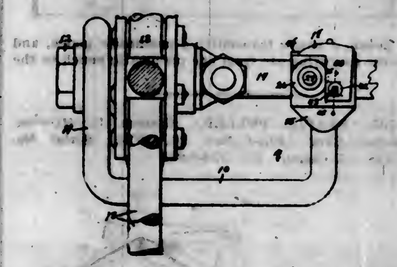
containing barium hydroxid-soluble portions, respectively, and repeating this series of steps until the precipitates which are obtained by heating the 20% sodium chlorid solutions and cooling, are colorless and highly crystalline; dissolving these crystalline precipitates in ethyl alcohol of from 85 to 95 per cent. strength containing a small proportion of sodium hydroxid, acidifying with acetic acid, heating the solution to the boiling point of alcohol, and removing the resulting fine white crystalline precipitate containing 65 per cent. of iodin.

1,392,769. SHOE-HEEL. ERNEST O. R. KRESSE, Brooklyn, N. Y. Filed Nov. 15, 1916. Serial No. 131,428. 1 Claim. (Cl. 36—42.)

A shoe heel including a body having a vertical bore extending therethrough and a wear plate engaging one end of the body and engaged by a lift, a reinforcing tube fitting snugly in the bore and having its upper end flared and countersunk in said body to prevent displacement from the bore, said member being internally screw threaded adjacent said end, a fastening screw constructed and arranged to extend through the sole of a shoe, said flared end engaging said screw threads, and means to support the wear plate from the tube.

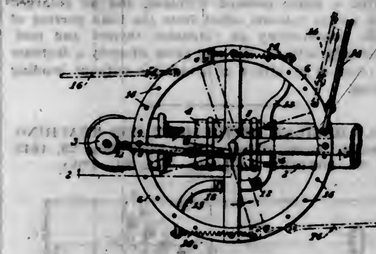
1,392,770. BROACHING-MACHINE. FRANCIS J. LAFOUNTE, Ann Arbor, Mich. Filed June 25, 1920. Serial No. 391,796. 16 Claims. (Cl. 90—53.)

1. In a machine of the class described, a cylindrical member provided with a plurality of rack teeth; a tool holder secured to an end thereof; a cylindrical sleeve through which said member is adapted to be reciprocated; a revolvable gear meshing with said rack teeth; a worm wheel for rotating said gear; and a driving worm coacting with said worm wheel.



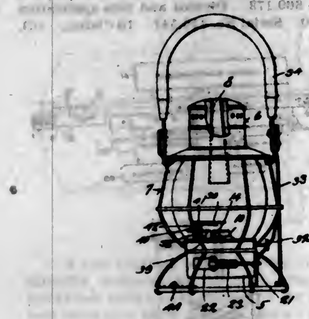
1,392,771. SHIP'S PORTHOLE, SCUTTLE, AND THE LIKE. CLAUDE LAUZIÈRES, Nantes, France, assignor of one-half to Société Anonyme des Ateliers et Chantiers de la Loire, Paris, France, a Corporation of France. Filed Apr. 15, 1920. Serial No. 374,167. 8 Claims. (Cl. 114—178.)

1. A port light comprising a fixed frame member provided with internal threaded sectors, a glass-holder having external threaded sectors adapted to interfit with those of the frame member and to engage therewith by a partial rotation of the glass-holder and, when out of engagement therewith, adapted to permit the free displacement of the glass-holder at right angles to the plane of the frame



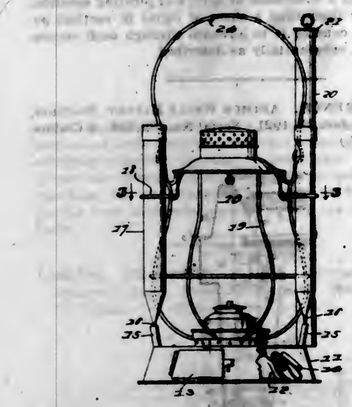
member, and coöperating sealing means on the glass-holder and on the porthole frame, rendered effective by the partial rotation of the glass-holder when in interfitted position with relation to the frame member.

1,392,772. AUTOMOBILE-LOCK. RICHARD N. LAWRENCE, Eldora, Iowa, assignor of one-half to Bute Ibach, Eldora, Iowa. Filed Aug. 25, 1920. Serial No. 405,859. 9 Claims. (Cl. 188—31.)



1. The combination with the axle and wheel of a vehicle of a member adapted to be extended through said wheel and having an engaging portion on one end adapted to embrace the hub extension, means on the opposite end of said member for detachably engaging said axle, and means for locking the latter engaging means.

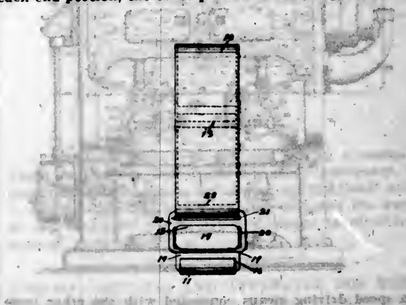
1,392,773. WHISTLE-OPERATING CONNECTION. JOSEPH E. LEMOINE, Vancouver, and CLEMENT W. O'NEAL, Union Bay, British Columbia, Canada. Filed May 28, 1921. Serial No. 470,229. 4 Claims. (Cl. 116—137.)



1. A whistle operating means for a logging donkey engine or the like, said means comprising a wheel rotatably mounted adjacent the whistle, the rim of which wheel has provision at intervals apart for connection of the whistle signal wire to it, means for limiting rotational movement of the wheel, means adjacent the hub of the wheel for actuating the whistle valve, and a spring normally holding the wheel in the out of action position.

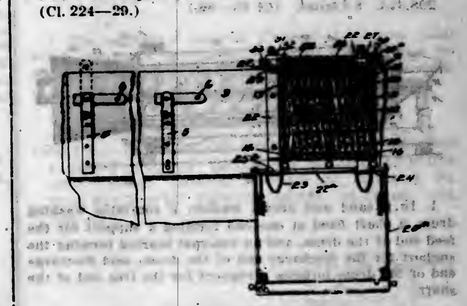
1,392,774. LANTERN. ROBERT LEWIS, Topeka, Kans. Filed Apr. 20, 1921. Serial No. 462,880. 6 Claims. (Cl. 67—12.)

1. In a lantern, a base, an upper portion, a handle having connection with the upper portion, means for forcing a match through the base, a match striking element supported by the base, and means controlled by the movement of the handle for operating the match striking element to cause the same to ignite the match.



1,392,775. FLAGMAN'S LANTERN. CLARENCE L. LIKEN, Enid, Okla. Filed June 8, 1920. Serial No. 387,312. 1 Claim. (Cl. 246—488.)

In combination with a flagman's lantern having a base and a globe guard upstanding on the base and provided with a guide ring disposed in parallelism with but spaced from the base, a tubular casing disposed within the guide ring and having one end resting upon the base, a removable cap fitted in the upper end of the casing, and a signal flag disposed within the casing and provided with a staff attached to said cap, whereby the flag and staff may be withdrawn from the casing upon the removal of the cap.

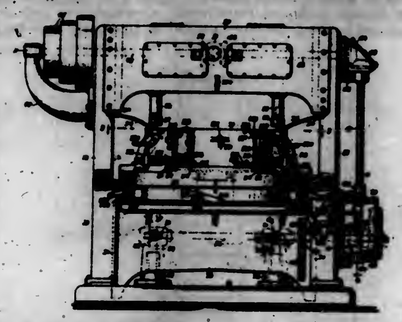


1,392,776. HOSE-SUPPORTER. CHARLES A. LINDQUIST and ERIC V. LINDQUIST, Des Moines, Iowa, assignors, by direct and mesne assignments, to Dupee Hose Supporter Company, Eau Claire, Wis., a Corporation of Wisconsin. Filed Jan. 24, 1920. Serial No. 353,809. 1 Claim. (Cl. 24—245.)

In a hose supporter having a flexible supporting member formed with depending loops one in front of the other, the outer loop being of less length than the inner loop and having an engaging member formed with a transverse slot, the combination with the longer base loop of a base plate formed of an integral sheet of metal bent and shaped to produce an outstanding stud member transversely arranged and formed at its outer end with upwardly and downwardly extending flanges, the downwardly extending flange being of greater length than the other, said base plate being formed with one transversely arranged slot only in each end portion, the outer portion of the longer base loop

being rove through said slots and overlying end portions of said plate, both portions of said loop extending longitudinally of the inner face of the base plate in contacting parallel relations and crossing beneath said stud, said stud being adapted to extend through the slot of the engaging member on the shorter outer loop, whereby the extremities of said loops are adapted to be detachably connected, the stud being wholly separate from and out of contact with the base loop.

1,392,777. AUTO-CARRIER. JOHN M. LOVELESS, Glenn, Ind. Filed Sept. 23, 1920. Serial No. 412,127. 4 Claims. (Cl. 224—29.)

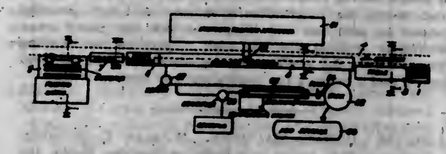


1. A luggage carrier of the class described, comprising a pair of hinges secured to the under side of the running board of an automobile, and having front and rear bearings, a pivot rod rotatably supported in the front bearings, a guard having supports fixed to and rotatable with said rod, means for longitudinally moving said rod, latching means on said rod and hinges to lock the guard when moved to vertical position with respect to the running board, means for positioning the guard beneath the said board, and a housing for concealing said guard.

1,392,778. BORING-MACHINE. WILLIAM F. MCCARTY, Defiance, Ohio, assignor to Defiance Machine Works, Defiance, Ohio, a Corporation of Ohio. Filed Dec. 16, 1919. Serial No. 345,239. 14 Claims. (Cl. 77—62.)

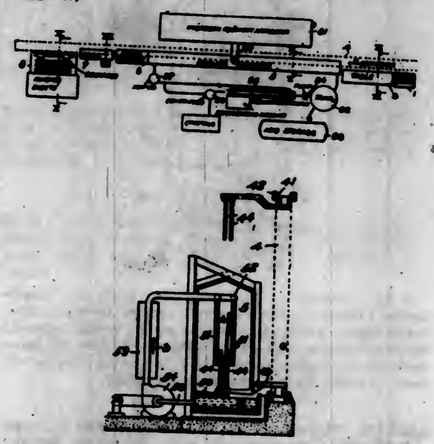
1. A boring machine, comprising a support mounted to slide up and down and supporting a work holder, a raising

and lowering means for the said support and including a clutch shaft, two clutch members loose on the said clutch shaft, a double clutch member mounted to slide on and to rotate with the said clutch shaft and adapted to engage either of the said loose clutch members, slow speed driving means connected with one of the loose clutch members,



high speed driving means connected with the other loose clutch member, a shifting device for the said double clutch member including a shifting lever, a link connected with the shifting lever, a hand lever having an arm and a crank, of which the latter is connected with the said link, and lugs moving with the said support and adapted to engage the said hand lever arm.

1,392,779. SAND AND GRAVEL WASHER. JOHN J. MCMANAMEN, Mitchell, S. D., and CHARLES F. SMITH and ALEXANDER L. MUNRO, Milwaukee, Wis., assignors to Smith Engineering Works, Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 21, 1917. Serial No. 208,313. 8 Claims. (Cl. 83—86.)

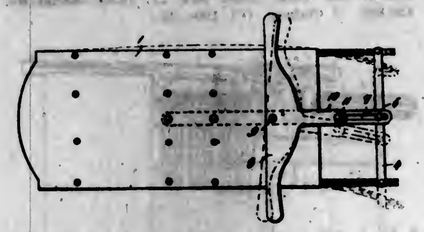


1. In a sand and gravel washer, a rotatable washing drum, a shaft fixed at one end forming a support for the feed end of the drum, and an external bearing forming the support for the discharge end of the drum, said discharge end of the drum forming a support for the free end of the shaft.

1,392,780. METHOD OF PICKLING METAL ARTICLES. HENRY S. MARSH and RALF S. COCHRAN, Youngstown, Ohio. Filed Mar. 27, 1920. Serial No. 369,173. 14 Claims. (Cl. 148—8.)

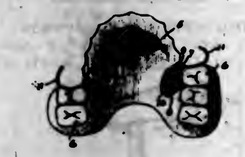
1. A step in a method of removing in continuous operation scale from the surface of a succession of metallic articles which consists in causing the articles to advance in succession through a spray of hot pickling solution.

1,392,781. APPARATUS FOR PICKLING METAL ARTICLES. HENRY S. MARSH and RALF S. COCHRAN, Youngstown, Ohio. Original application filed Mar. 27, 1920, Serial No. 369,173. Divided and this application filed Oct. 12, 1920. Serial No. 416,547. 10 Claims. (Cl. 266—7.)



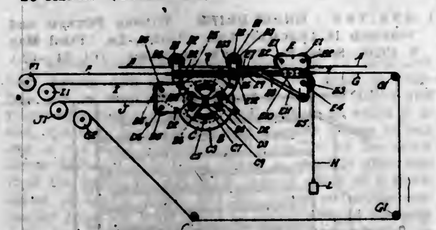
1. In apparatus for pickling sheet metal means for projecting laterally a succession of sprays of pickling solution, and means for sustaining a sheet of metal in vertical position and for causing it to advance through such succession of sprays, substantially as described.

1,392,782. WRENCH. ARTHUR WELLS MINNEY, Stockton, Calif. Filed Jan. 25, 1921. Serial No. 439,822. 2 Claims. (Cl. 81—167.)



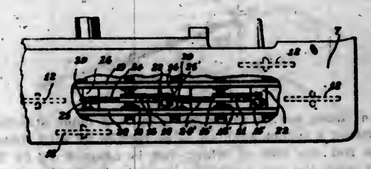
2. A wrench comprising a body portion having a channel way therein and a transverse opening communicating with said channel-way, a fixed jaw carried by said body portion, a movable jaw coacting with said fixed jaw and having a shank slidably received in and transversely of said channel-way, spring means carried by the body portion and engaging said shank for resiliently opposing transverse movement therein, and means for adjusting said jaws toward and away from each other and permitting said shank to partake of transverse movement in said transverse openings.

1,392,783. SLED. GEORGE F. MISH, Inwood, W. Va. Filed July 24, 1919. Serial No. 312,908. 4 Claims. (Cl. 280—22.)



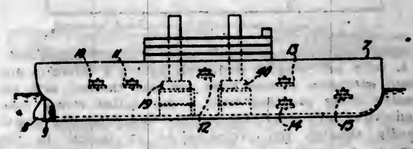
1. A sled provided along its sides with hangers, runners hingedly connected to the lower ends of the hangers, a spring bar having connection with the runners to normally hold them in a given position and a steering member having connection with the runners for turning them against the tension of the spring bar when it is required to steer the sled.

1,392,784. CLASP FOR TEETH. EDMUND R. NEBELING, New York, N. Y. Filed June 15, 1921. Serial No. 477,676. 2 Claims. (Cl. 32—12.)



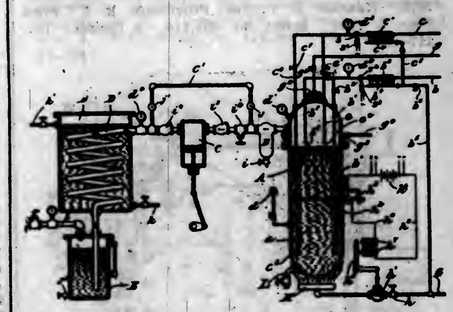
2. A device of the character described comprising a body portion of substantially triangular shape provided with a centrally disposed opening therethrough, a plurality of projections formed on the body portion and defining said openings, and an elongated tongue of uniform width projecting from said body portion, as and for the purpose set forth.

1,392,785. TRAVELING HOIST. RICHARD L. NEUBERT, Knoxville, Tenn. Filed Oct. 10, 1919. Serial No. 329,695. 16 Claims. (Cl. 212—89.)



1. In an apparatus of the nature described, the combination of a carriage comprising an extension and means for articulating the extension to the main part of the carriage and guiding the below-mentioned load-line, wheels on the carriage adapted to travel on an elevated track, a multiple pulley, a load-line attached to said pulley and extending along said articulating and guiding means, two cables oppositely applied to said pulley for rotating the pulley, and lines leading to the carriage from opposite directions for drawing the carriage on the track, substantially as described.

1,392,786. AUXILIARY APPARATUS FOR STEERING VESSELS. ALEXANDER MCLEAN NICOLSON, New York, N. Y. Filed Dec. 17, 1917. Serial No. 207,479. 8 Claims. (Cl. 114—144.)

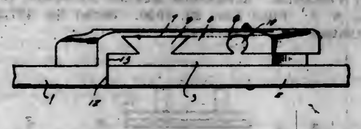


1. The combination with a vessel having a rudder, of means for steering said vessel during an emergency, said means comprising means for storing up rotational energy in a given direction, and means for changing the amount of said rotational energy when a change in direction is desired.

1,392,787. METHOD AND APPARATUS FOR STEERING VESSELS. ALEXANDER MCLEAN NICOLSON, Hillsdale, N. J. Filed Nov. 29, 1920. Serial No. 427,230. 12 Claims. (Cl. 114—144.)

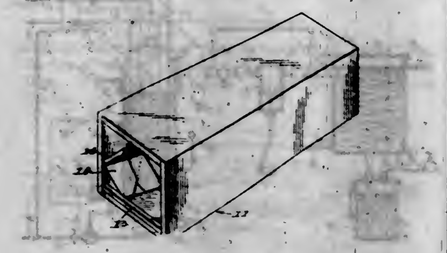
1. The method of steering a vessel in a given plane which comprises developing rotational energy in a flywheel for steering in either a clockwise or counter clockwise direction in said plane.

1,392,788. PROCESS OF DISTILLING SOLIDS AND LIQUIDS AND OF CRACKING SOLIDS, LIQUIDS, AND GASES. AUGUSTE J. PARIS, Jr., Bradford, Pa. Filed May 3, 1915. Serial No. 25,403. 11 Claims. (Cl. 196—25.)



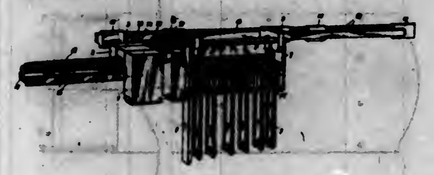
10. The process of altering the composition of petroleum distillates which consists in passing them through molten metal and thereafter compressing and condensing the products of the cracking operation.

1,392,789. CHURN. Hoskins N. Paine, Shawnee, Okla. Filed Nov. 15, 1920. Serial No. 424,149. 1 Claim. (Cl. 259—124.)



In a churn having a vertical spindle, a blade structure comprising a socket adapted to be carried by said spindle and a rod one end of which rod is adapted to fit the socket with the rod extending radially from the spindle, means for retaining the rod immovably in the socket, the rod bent into a plurality of loops and filled with the loops having their axes on chords of a circle having the axis of the spindle as their center.

1,392,790. RAIL-JOINT. Dempsey P. Parker, Osteen, Fla. Filed Apr. 20, 1920. Serial No. 375,320. 4 Claims. (Cl. 238—231.)

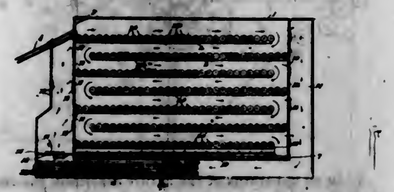


1. In a rail joint, a track rail having a laterally disposed extension formed upon one end thereof, said extension being provided with a dove-tailed recess communicating with its inner surface and extending downwardly through the extension at an incline to the vertical, a coupling member having a dove-tail projection formed thereupon for seating in said dove-tailed recess, a longitudinally extending dove-tailed extension formed upon the opposite side of said coupling member from said first named dove-tailed extension, and a complementary track rail having a longitudinally extending dove-tailed recess formed in its inner surface for receiving the dove-tailed projection formed upon said coupling member, the meeting ends of said track rails being cut at an incline to the vertical and substantially parallel to said inclined dove-tail recess and projection.

1,392,791. CARRIER FOR PASTEBOARD CONTAINERS. Herbert B. Pettes, Providence, R. I. Filed June 7, 1920. Serial No. 387,116. 5 Claims. (Cl. 217—8.)

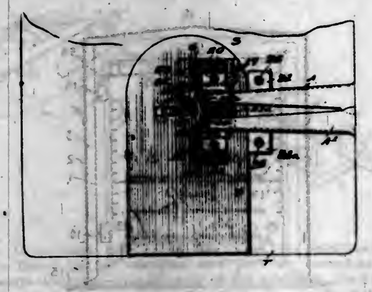
1. A tubular carrier or housing for rectangular containers having each wall intermediate the corners provided with an interior seating groove for the reception of one of the angles or corners of the containers.

1,392,792. LINE-STOP FOR TYPOGRAPHICAL MACHINES. Edwin W. Pierson, Newark, N. J., assignor to Intertype Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 27, 1920. Serial No. 426,825. 7 Claims. (Cl. 199—82.)



2. In a typographical machine having an elevator adapted for the endwise reception of an assembled line, a line stop within such elevator and tending to move in opposition to an incoming line, and means for holding the line stop in set position.

1,392,793. RAZOR-BLADE SHARPENER. Isaiah W. Pretorius, Chicago, Ill. Filed July 3, 1919. Serial No. 308,436. 1 Claim. (Cl. 51—98.)



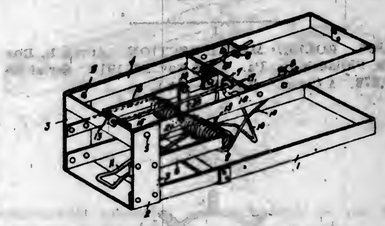
In a device of the class described, a base plate of resilient material provided at opposite longitudinal edges with upstanding bearing members, a sharpening roll having a supporting spindle journaled in said members, the base plate at a point relatively remote from the bearing members being bent back upon itself in an upward direction along lines parallel to the axis of the sharpening roll whereby to provide a yielding supporting portion extending over and spaced from the base plate with its free end presented in proximity to the said roll.

1,392,794. GRAIN-DRIER. Wilbur Putnam and Garfield D. Longman, Lake Charles, La. Filed May 8, 1920. Serial No. 379,875. 4 Claims. (Cl. 34—12.)

1. A drier, comprising a casing, a series of superimposed racks in the casing, each rack depositing on the rack below, each of said racks comprising a series of rollers, pinions secured to turn with the rollers, idle pinions between the first-mentioned pinions, whereby said rollers are compelled to turn in the same direction, and means for inducing a current of air through the drier and the racks thereof.

1,392,795. APPARATUS FOR MAKING ORNAMENTAL ROPE. Charles A. Rose, Williamsport, Pa. Filed Mar. 15, 1920. Serial No. 365,873. 10 Claims. (Cl. 112—122.)

1. An apparatus of the character described comprising, feeding means, stitching means, and cutting means including a pair of blades movable by said stitching means and disposed upon opposite sides of the line of stitching and substantially transversely thereto, and a third blade movable by the first two blades to effect a shearing cut.

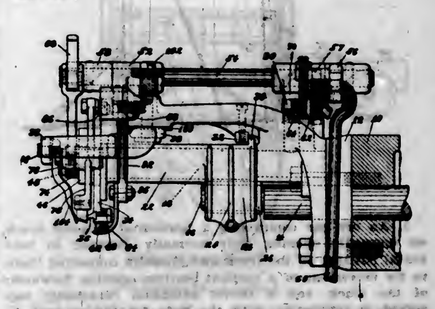


1,392,796. SCREWDRIVER ATTACHMENT. Peter Reinhalter, Wilkes-Barre, Pa. Filed Jan. 14, 1919. Serial No. 271,107. 1 Claim. (Cl. 145—52.)

A screw driver attachment including an elongated body having side spring fingers spaced apart at their free ends to snap over the shank of a screw driver and frictionally hold the body in any position to which it is slid, the body having a resilient angular tongue at one end of the same conformation as the bit of the screw driver and said body being bowed in opposite directions from the fingers to engage the tapered shank of a screw driver at spaced points and the tongue extending outwardly from the lower point of engagement of the body with the shank of the screw driver and adapted to cooperate with the bit of the screw driver to engage within the slot or niche of a screw.

1,392,797. ANIMAL-TRAP. Anton F. Renken, Crete, Nebr. Filed July 29, 1920. Serial No. 399,683. 4 Claims. (Cl. 43—81.)

1. In a trap of the character described, a fixed jaw, a movable jaw, a spring normally holding the jaws in closed position, a lever pivotally mounted on the movable jaw, a leg carried by the lever, said lever adapted to fulcrum on said leg to raise said movable jaw, a transversely positioned arm carried by said lever, a locking arm pivoted at one end to said movable jaw adapted to engage said last mentioned arm to lock said lever in position, a trigger



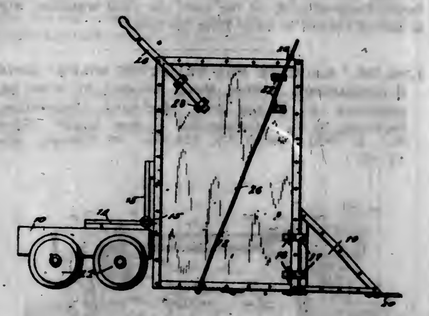
engaging the free end of said locking arm to maintain said jaws in open position against the torsion of said spring and means for locking the free end of said movable jaw at various distances from said fixed jaw.

1,392,798. COLLAPSIBLE SHAFT. Harvey Terry Rich, Norfolk, N. Y. Filed Nov. 29, 1919. Serial No. 341,539. 1 Claim. (Cl. 82—44.)

A collapsible shaft, comprising a core having a screw threaded portion, an adjusting sleeve having internal screw threads engaging the threads of the core, a segmental shell around core, each segment of the shell having an internal groove, an annular flange on the sleeve located in the grooves of the core segments, and a plurality of circular series of tenons fixed to the core, said shell segments having mortices receiving the tenons, said tenons and mortices being dove-tailed and having longitudinally inclined contacting faces, whereby when the sleeve is adjusted longitudinally of the core, the shell segments will be moved toward or away from the core.

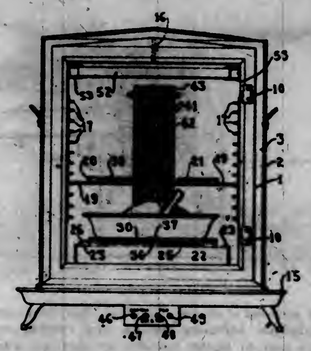
1,392,799. MACHINE FOR TRIMMING SOLES. John H. Richardson, Melrose, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 3, 1916. Serial No. 129,304. 36 Claims. (Cl. 12—85.)

33. A machine of the character described comprising a chopping knife, and mechanism constructed and arranged



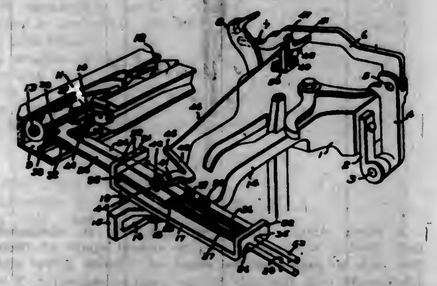
to operate said knife, said mechanism including a reciprocatory member by which the chopping knife is supported but relatively to which the knife moves to execute its chopping motion, said supporting member being adjustable to advance and retract the chopping knife with respect to its lines of chopping motion.

1,392,800. ROLLED METAL SECTION. ALVIN L. ROBERTS, Philadelphia, Pa. Filed Nov. 25, 1919. Serial No. 340,576. 1 Claim. (Cl. 189—41.)



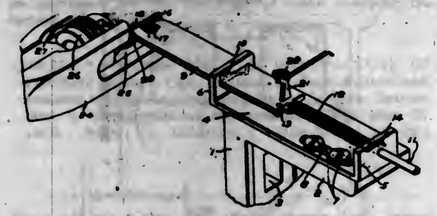
A rolled column section concave on one face and convex on the other, and provided on its convex face with integral longitudinal equally spaced stiffening ribs which are deep in proportion to their width all of which are of approximately the same size and also provided at each of its edges with a side flange of less thickness than the intermediate ribs and having flat outer faces to engage similar faces on its companion section to which it is riveted.

1,392,801. ORE-CAR. ALEXANDER ROY, Hill City, S. D. Filed Jan. 6, 1920. Serial No. 349,698. 5 Claims. (Cl. 105—274.)



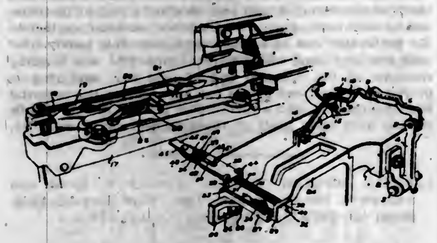
1. An ore car comprising a horisontal wheeled truck, an upwardly opening body normally disposed in horisontal position on the truck and hingedly connected thereto for movement to a vertical position opening forwardly of the truck, and a shovel extension detachably supported in connection with the body for the purpose described.

1,392,802. ELECTRIC FIRELESS COOKER AND RANGE. LESLIE W. SUMMERS, New York, N. Y. Filed Oct. 21, 1919. Serial No. 334,720. 11 Claims. (Cl. 219—35.)



1. In a cooking apparatus, an oven, a movable electrical heating element adapted to be supported in the oven at the various heights, and continuous vertically extending stationary conductors coöperative with said heating element at any height.

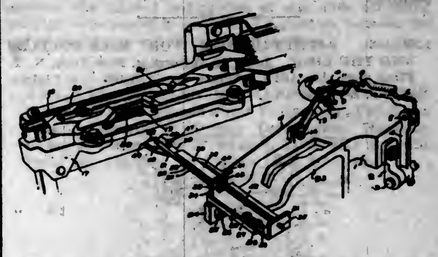
1,392,803. FEELER MECHANISM FOR LOOMS. ISAAC SNOW, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 7, 1919. Serial No. 328,978. 10 Claims. (Cl. 139—85.)



1. In a feeler mechanism for looms, the combination of a feeler movable toward and from the front of the loom, having two feeler tips each mounted for rotary movement in a plane extending longitudinally of the shuttle and held from such movement by the filling on a detecting beat until substantial exhaustion thereof, a feeler tip controller having a portion extending between the two feeler tips and mounted for movement toward and from the front of the loom, connections between the rotary feeler tips and controller for effecting simultaneous frontward movement of the feeler and controller when a working supply of filling is present on a detecting beat and permitting relative movement of the feeler and controller when filling is substantially exhausted, and means operated by relative movement of the feeler and controller for effecting replenishment of filling.

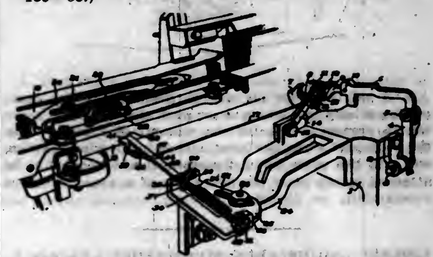
1,392,804. FEELER MECHANISM FOR LOOMS. ISAAC SNOW, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed May 6, 1920. Serial No. 379,265. 6 Claims. (Cl. 139—85.)

1. In a feeler mechanism for looms, the combination of a feeler having engaging end portions extending in opposite directions transversely of the bobbin in the shuttle and laterally separated longitudinally of the bobbin and tending to effect rotation of the feeler on its longitudinal axis under the frontward pressure of a surface within the shuttle on a detecting beat, means for supporting the feeler for longitudinal and rotative movements, and means to effect replenishment of filling when the feeler is rotated on a detecting beat.



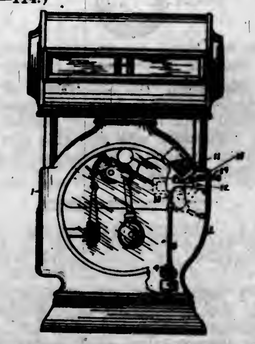
1,392,805. FEELER MECHANISM FOR LOOMS. ISAAC SNOW, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed May 6, 1920. Serial No. 379,266. 12 Claims. (Cl. 139—85.)

1. In a feeler mechanism for looms, the combination of a feeler carrier mounted for movement toward and from the front of the loom, a feeler mounted on the carrier for movement in a direction longitudinally of the shuttle and held from such movement by engagement with the filling on a detecting beat until substantial exhaustion thereof, a gear having a tooth engagement with the feeler, a rack engaged with the gear, a spring acting upon the rack and tending to turn the gear and move the feeler longitudinally of the shuttle under the frontward pressure upon the feeler on a detecting beat, and means for effecting replenishment of filling when the feeler is moved longitudinally of the shuttle.



1,392,806. FEELER MECHANISM FOR LOOMS. ISAAC SNOW, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed May 6, 1920. Serial No. 379,267. 11 Claims. (Cl. 139—85.)

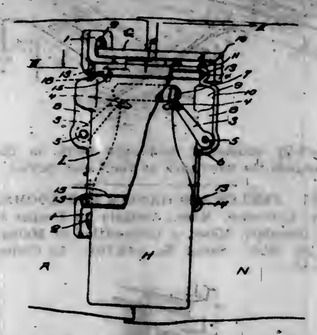
1. In a feeler mechanism for looms, the combination of a feeler carrier mounted for movement toward and from the front of the loom, a rack which is fixed relative to the feeler carrier, a feeler that is mounted on the feeler carrier for bodily movement frontward relative thereto and for movement in a direction longitudinally of the shuttle and which is held from such movements by engagement with the filling on a detecting beat until the filling is



substantially exhausted, and rack teeth on the feeler which engage the fixed rack on the feeler carrier.

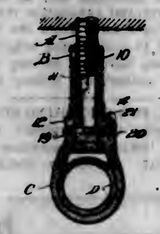
1,392,807. FEELER MECHANISM FOR LOOMS. ISAAC SNOW, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 26, 1920. Serial No. 419,704. 12 Claims. (Cl. 139—85.)

1. In a feeler mechanism for looms, the combination of a feeler that is supported in position inclined to the path of the lay and held from movement longitudinally of the shuttle on a detecting beat by engagement with the filling until substantial exhaustion thereof, and means acting to pry the feeler away from the filling carrier as the feeler is moved in a direction longitudinally of the shuttle on a detecting beat and thereby relieve the pressure of the feeler against the filling carrier.



1,392,808. SIGNAL FOR WEIGHING-SCALES. EDWARD G. THOMAS, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Oct. 13, 1917. Serial No. 196,513. 13 Claims. (Cl. 116—114.)

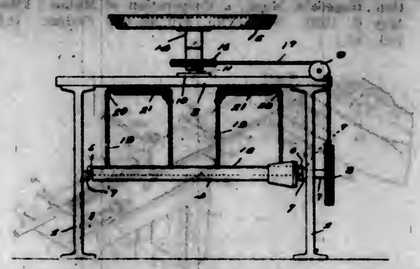
1. The combination with a weighing scale having a frame, of a signal hidden behind a portion of the frame



when the scale is level and means whereby the signal is automatically displayed when the scale is out in level position.

1,392,809. SAFETY-HOLDER FOR MILK-BOTTLES AND THE LIKE. JOHN H. WILHELM, New York, N. Y. Filed Feb. 11, 1919. Serial No. 276,409. 4 Claims. (Cl. 232—42.)

1. A safety holder for milk bottles and the like, comprising a body part and a cover part, the cover part serving to prevent access for the removal of a bottle from the body part when the cover part is in covering position, and said two parts being disconnected and adapted to be attached to relatively movable parts of a house structure substantially as described.

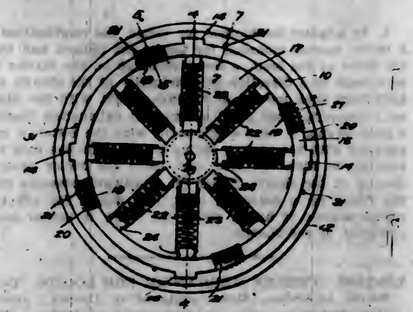


1,392,810. ADJUSTABLE PIPE-HANGER. LOTHAR R. ZIMMANN, Lancaster, Pa. Filed July 26, 1919. Serial No. 313,446. 5 Claims. (Cl. 248—81.)

3. In a pipe hanger, the combination of a threaded sleeve, a carrier rotatably connected thereto, and an element integral with the one part adapted when bent into locking engagement with the other part to prevent relative rotation as well as longitudinal shifting therebetween, substantially as described.

1,392,811. ADVERTISING DEVICE AND PAPER-HOLDER. ALBERT ANDERSON, Miles City, Mont. Filed Apr. 30, 1921. Serial No. 465,871. 1 Claim. (Cl. 211—8.)

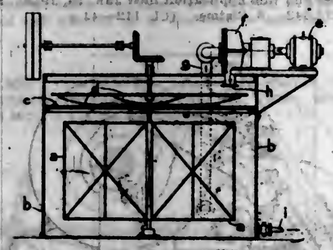
A frame, a paper carrying roller journaled in bearings thereon, a shaft extending through the frame and joined to the roller, a grooved wheel on said shaft, a bearing on the top of the frame, a shaft journaled therein, a grooved wheel secured on said shaft, a disk removably connected to the last mentioned shaft, guide wheels at one end of the frame, and an endless belt trained



around the grooved wheels and guided by the guide wheels, as and for the purpose set forth.

1,392,812. HAIR WAVER AND CURLER. LEOPOLD BERKOVI, London, England, assignor to La Reine Hair Waver and Curler Company Limited, London, England. Filed Dec. 9, 1919. Serial No. 343,622. 1 Claim. (Cl. 132—42.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

An appliance for waving and curling hair, comprising a straight flat bar and a circular perforation at one end of same, an elastic cord or band permanently attached to the perforated end of said bar, an elastic ring at the loose end of said cord, a sheath of flexible material applied to the perforated end of said bar and extending partly over said attached cord while leaving uncovered and forming shoulder at the opposite end of said bar, said ring to fit the uncovered end of the bar and against the covering shoulder thereon, and a turned-over portion of said sheath to fold over upon itself at the attached end of said bar.



1,392,813. SPRING-WHEEL. HORACE L. BUSH and ANDREW J. BRYAN, Graham, Tex. Filed July 13, 1920. Serial No. 395,833. 2 Claims. (Cl. 152—28.)

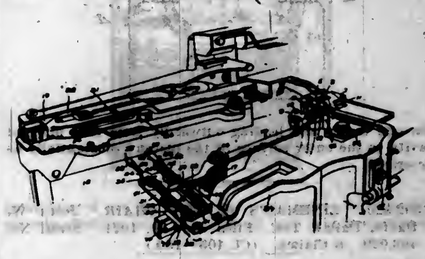
1. A spring wheel comprising a rim, a felly body secured to said rim and formed of mating sections recessed upon their confronting faces to define a slot when assembled, a disk having a central hole for conforming engagement upon an axle and having its outer portion resting within said slot, said disk being formed with openings arranged in a circular series, coil springs disposed within said openings, disks engaging the ends of said springs

with the outer set of disks engaging the inner periphery of the felly, and cover plates connected with the rim and formed centrally with relatively large openings for the passage of a hub and having said openings surrounded by flanges extending toward each other and constituting an abutment for the inner set of disks engaging the springs.

1,392,814. PROCESS FOR THE MANUFACTURE OF CAUSTIC SODA. CARL CRAMER, Zurzach, Switzerland, assignor to Schweizerische Sodafabrik, Zurzach, Switzerland, a Corporation of Switzerland. Filed May 24, 1920. Serial No. 383,902. 1 Claim. (Cl. 23—22.)

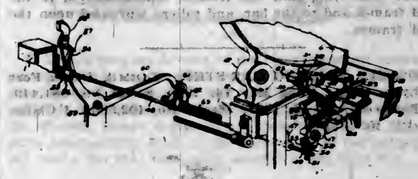
A process for the production of caustic soda (soda lye) consisting in emulsifying a soda solution with lime milk in the cold in a turbomixer comprising at least one turbine wheel, substantially as described.

1,392,815. METHOD OF AND MEANS FOR DETECTING IRREGULARITIES IN TRANSMISSION-LINES. GROSVENOR CRAWFORD, Hoboken, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 15, 1919. Serial No. 330,838. 11 Claims. (Cl. 179—175.)



9. The method of testing a line for a distant irregularity, which consists in comparing a sending current with respect to phase relation with the current reflected back by the irregularity.

1,392,816. CLASP. FRED W. CROCKER, Los Angeles, Calif. Filed July 6, 1920. Serial No. 394,077. 3 Claims. (Cl. 24—251.)

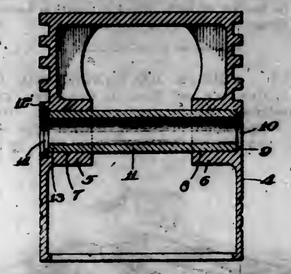


1. In a clasp, a fixed jaw member, a slide bar guided thereon having a tapered end portion, a movable jaw member pivoted on said fixed jaw member having an end flange adjacent its pivot turned toward the fixed jaw member, the tapered end portion of said slide bar being adapted to be moved in and out of a position between the end of said flange and the fixed jaw member.

1,392,817. FEELER MECHANISM FOR LOOMS. EDWARD A. CUNNIFF and JOHN V. CUNNIFF, Fall River, Mass., assignors to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed May 8, 1920. Serial No. 379,786. 12 Claims. (Cl. 139—85.)

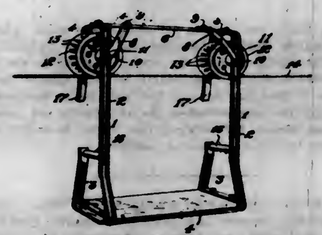
1. In a feeler mechanism for looms, the combination of a feeler that is mounted to enter the side of a shuttle and feel for the filling, a detector bunter carried by the shuttle, a shuttle detector mounted to be engaged by the bunter on a detecting beat of the lay and to be displaced laterally by the bunter when the shuttle is not properly boxed, and means for moving the feeler laterally when the shuttle detector is moved laterally.

1,392,818. FEELER MECHANISM FOR LOOMS. EDWARD A. CUNNIFF and JOHN V. CUNNIFF, Fall River, Mass., assignors to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed May 20, 1920. Serial No. 382,823. 12 Claims. (Cl. 139—85.)



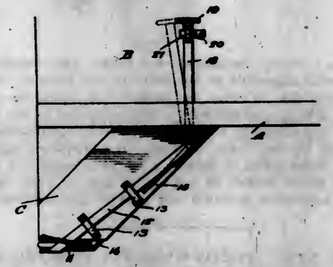
1. In a feeler mechanism for looms, the combination of a feeler supported at the front of the loom on the replenishing side to enter the shuttle and detect the condition of filling, a transferrer, a dog connected to the transferrer, and normally positioned to effect replenishment of filling as the lay beats up, and a dog displacer operated by the feeler when it detects a working supply of filling present in the shuttle on a detecting beat to move the dog to an inoperative position and prevent the transfer.

1,392,819. PISTON-WRIST-PIN CONSTRUCTION. FRANK FOSTER DAVIS, Chester, Pa. Filed Dec. 8, 1919. Serial No. 343,226. 2 Claims. (Cl. 74—108.)



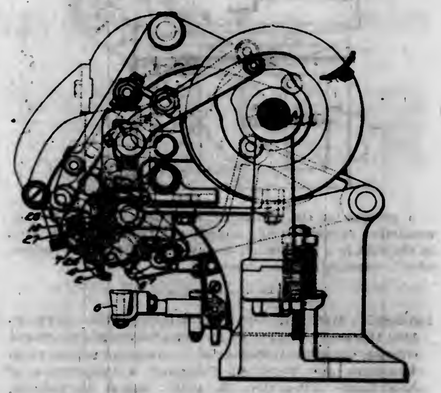
2. A piston having a hole bored through one side and an axially opposed cavity in the other side leading outwardly from the inner surface and terminating in a shoulder; a hollow wrist pin having opposite ends bearing in said hole and cavity whereby one end of the pin abuts said shoulder; and locking means within said hole for

holding the pin in place, said second mentioned side of the piston having a hole of smaller diameter than the



pin and cavity and leading outwardly from said pin and cavity to the outer surface of the piston; substantially as described.

1,392,820. LINEMAN'S SAFETY-CHAIR. JOHN W. DAVIS, Dallas, Tex. Filed Apr. 20, 1921. Serial No. 463,029. 8 Claims. (Cl. 105—150.)

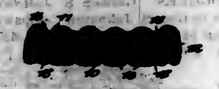


1. In a chair of the class described, the combination of a pair of end frames, a seat formed on said end frames, a bar connecting said end frames, braces secured to the end frames and to the bar, and rollers journaled upon the end frames.

1,392,821. FOLDING CAR-STEP. TOMMIE DAVIS, Fort Lyon, Colo. Filed May 14, 1920. Serial No. 381,449. Renewed Aug. 15, 1921. Serial No. 492,586. 1 Claim. (Cl. 105—448.)

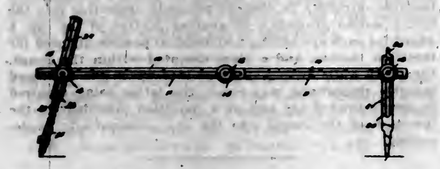
An extension car step comprising an auxiliary step pivotally connected by hangers at the lower end of stationary steps and movable to extend therebelow or to lie flat against the underside of the lowermost step, brackets secured upon the sides of the stationary steps, a longitudinally movable bar slidable through said brackets and rigidly connected with the auxiliary step, the sides of the stationary steps being formed with elongated slots, a cross bar connecting said longitudinally slidable bars and slidable through said slots, a lever connected with one end of said cross bar, a U-shaped bracket carried by said lever, and a stationary bracket secured above the stationary steps and having an offset end adapted to be engaged within said U-shaped bracket whereby to hold said lever against movement.

1,392,822. SEWING-MACHINE. ANDREW EPPLER, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Nov. 27, 1916, Serial No. 133,625. Divided and this application filed Jan. 16, 1918. Serial No. 212,042. 8 Claims. (Cl. 112—41.)



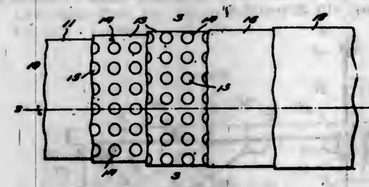
1. A waxed thread sewing machine having, in combination, a looper, a channel guide, a heating body, a looper carrier in contact therewith, a channel guide carrier and a conductive metallic connection for heating the channel guide carrier directly from the heating body.

1,392,823. CUSHION-HEEL FOR SHOES AND THE LIKE. HARRY FABGENSON, Chicago, Ill. Filed July 6, 1918. Serial No. 243,655. 1 Claim. (Cl. 36—75.)



As a new article of manufacture, a reinforcement block for resilient heels comprising an arcuate member and a single lug or tongue rigid therewith, and located centrally thereof and extending in the direction of the concave face of said arcuate member, said lug or tongue lying outside of the space embraced between the planes of the upper and lower surfaces of the arcuate member and being of less width than the length of the arcuate member and serving to provide abrupt shoulders at its sides at the point of junction with the arcuate member, substantially as and for the purpose set forth.

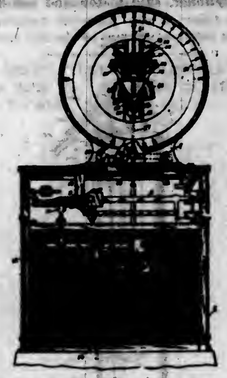
1,392,824. DENTAL BRIDGE. JOSEPH B. FOSTER, Roanoke, Va. Filed Nov. 6, 1920. Serial No. 422,266. 3 Claims. (Cl. 32—12.)



1. A dental bridge comprising a flanged backing for an artificial tooth, and dowel pins secured to the flanges thereof and adapted to be anchored in adjacent natural teeth.

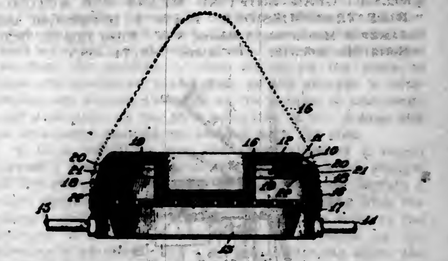
1,392,825. COMPASSES. RAMON GONZALES, Manila, Philippine Islands. Filed Mar. 15, 1920. Serial No. 365,892. 2 Claims. (Cl. 33—158.)

1. A compass embodying a pair of bars slotted substantially throughout their lengths, means extending through the slots of the bars for pivotally and adjustably connecting them together, a slotted leg slidingly and pivotally connected to each of the bars and capable of being arranged parallel or at an angle with respect to the other leg, a needle point carried by one of the legs and a split sleeve carried by the other leg.



1,392,826. INNER TUBE. WILEY P. GORDON, Edgefield, S. C., and THOMAS B. JACOCKS, Tarboro, N. C. Filed May 22, 1920. Serial No. 383,511. 5 Claims. (Cl. 152—13.)

1. The combination with a tube for pneumatic tires, of a plurality of individual compartments provided around the circumference of the tube and arranged in superimposed staggered relation and a filling material within said compartments, said material being adapted to enter and fill a puncture in said tube.

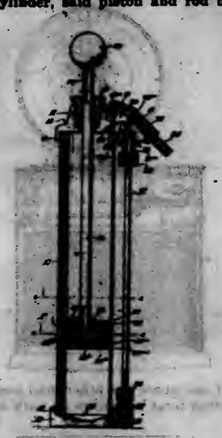


1,392,827. WEIGHING-SCALE. HALVOR O. HEM, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Aug. 14, 1916. Serial No. 114,785. 21 Claims. (Cl. 265—62.)

1. A scale having a beam weighing mechanism and automatic dial indicating weighing mechanism, said beam weighing mechanism and automatic weighing mechanism

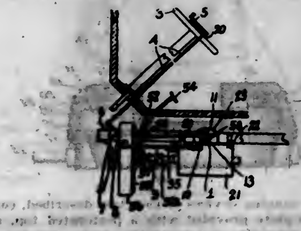
being located one above the other, and means for simultaneously effecting total weighings on both said mechanisms.

1,392,828. HAT-SHAPING DEVICE. AUGUST G. HENKEL, Chicago, Ill., assignor to D. B. Fisk & Co., Chicago, Ill., a Corporation of Illinois. Filed May 21, 1918. Serial No. 235,825. 3 Claims. (Cl. 223—31.)



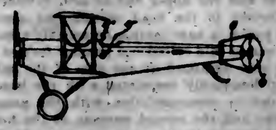
1. In hat shaping devices of the class described, consisting of a hot-plate provided with a perforated top, a hat shaping die superimposed centrally on the hot-plate and a flexible hood secured at the sides of the hot-plate over the die, die-seat means comprising a metallic band of dimensions substantially equal to the dimensions of the hot-plate top, and a flat ring removably secured to the band top.

1,392,829. TIRE-PUMP. FRED HJORTH, Harlan, Iowa. Filed July 17, 1920. Serial No. 396,962. 1 Claim. (Cl. 230—27.)



A pump comprising, a cylinder, a head casting detachably associated with the upper end of the cylinder, a pocket formed in the head casting, a discharge nozzle supported by the head casting and in communication with said pocket, a screw plug closing said pocket, a passage formed in the head casting and effecting communication between said pocket and the upper end of said cylinder, a second passage formed in the head casting and communicating with said pocket, a base casting detachably associated with the lower end of said cylinder, a passage formed in the base casting, a pipe arranged at one side of the cylinder, said pipe being detachably associated with the base and head castings and in communication with the passage of the base casting and the second passage of the head casting, valve seats formed in the passages of the head casting, a rounded portion arranged between said seats, a ball valve movable in said pocket and adapted to engage either of

said cents, a piston movable within said cylinder, and a piston rod connected to said piston and extending exteriorly of said cylinder, said piston and rod being formed



to admit air to said cylinder at a point above the piston as the latter is descending and at a point below the piston as the same is ascending.

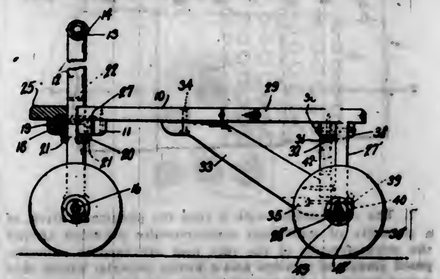
1,392,830. GEAR-SHIFTING MEANS FOR AUTOMOBILE TRANSMISSIONS. Frank J. Hofmeister and James O. Middaugh, Yonkers, N. Y. Filed July 23, 1920. Serial No. 398,378. 14 Claims. (Cl. 74—58.)

1. The combination in gear shifting means, of movable toothed heads equipped to move gears, a laterally-movable selector to coöperate with the teeth of said heads, a tubular shaft on which the selector is laterally shiftable and by which the selector is turned, and a shaft movable endwise in the tubular shaft and by which the selector is shifted laterally on the tubular shaft.

1,392,831. MEANS FOR VARYING THE SPEED AND STOPPING WAY OF AIRCRAFT WITHOUT SLOWING THE PROPELLER. John George Aulsebrook Kitchen, Lancaster, England. Filed July 20, 1920. Serial No. 390,164. 1 Claim. (Cl. 244—29.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

In apparatus for varying the speed or way of aircraft without varying the propeller speed, the combination consisting of a pair of rudders, means for moving the rearward edges of said rudders into contact to form an air pocket, and means for tilting the said rudders in a vertical plane to elevate or depress the air craft, as set forth.

1,392,832. GOGGLES. George S. Johnston, Evanston, Ill., assignor to Geo. S. Johnston Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 15, 1919. Serial No. 323,990. 2 Claims. (Cl. 2—140.)



1. A goggle comprising a frame formed to provide two eyes each having a slotted bridge portion protruding from one side thereof, the frame of the eye being severed at one portion adjacent the bridge to provide an arm having capacity for receding into the slot, the arm carrying on its movable extremity an element normally projecting into the eye, a second projection in another portion of the eye, a guard for each eye having a cylindrical portion adapted for insertion therein, and a glass mounted within the guard, the guard walls having openings into which the fixed and movable projections may enter, the latter being required to recede toward the slot as a condition precedent to the insertion of the guard into the eye, substantially as described.

1,392,833. MERCERIZATION. Samuel Mansfield Jones and Ivan Othma Harlow, North Adams, Mass., assignors to Arnold Print Works, North Adams, Mass., a Corporation of Massachusetts. Filed June 21, 1921. Serial No. 479,414. 10 Claims. (Cl. 8—20.)

9. The method of treating textile fabrics composed of cotton fibers intermixed with artificial silk filaments of viscose for the purpose of mercerizing such cotton fibers without injury to the viscose silk by subjecting the composite fabric thus constituted to a process of mercerization wherein the mercerizing solution of caustic alkali is modified by the addition thereto of potassium acetate dissolved therein to substantially the full extent of its solubility.

1,392,834. TOY VEHICLE. John M. Kramlich, Fox Chase, Pa. Filed Oct. 19, 1920. Serial No. 417,891. 2 Claims. (Cl. 208—165.)

1. In a device of the class described, a body portion, a steering head and steering wheels mounted thereon, a bolster including a plurality of relatively adjustable elements, means for securing the elements when adjusted, a diagonal brace connected with said bolster and with the body of the vehicle, the brace having permanent connection with one part of the bolster and having detachable connection with the other part thereof, and the brace being cut away to permit a portion thereof to pass under one part of the bolster.

1,392,835. MINING-MACHINE TRUCK. Nils D. Levin, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Nov. 21, 1916. Serial No. 132,682. 21 Claims. (Cl. 105—161.)

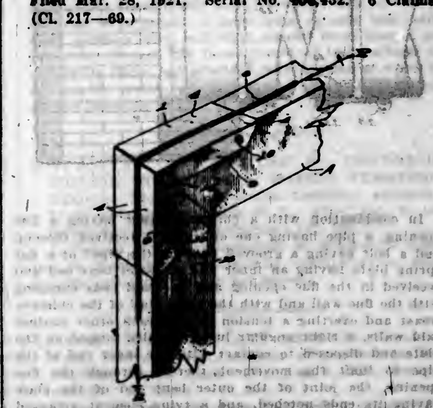
16. In a truck for holding and transporting an elongated mining machine, the combination with a rigid truck frame supported on wheels adapted to travel over the mine tracks, of a supplemental elongated tiltable body frame with which the mining machine has lateral engagement and which is adapted to support said machine in traveling position upon the truck or to guide it to or from positions on the mine floor at either side of said tracks.

1,392,836. MINING-MACHINE TRUCK. Nils D. Levin, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Nov. 21, 1916, Serial No. 132,683. Renewed Apr. 3, 1920. Serial No. 371,148. 12 Claims. (Cl. 105—161.)

11. In a truck mechanism of the class described, having two wheel mounted axles, two vertically tiltable frame sections hinged together, one being a load-carrying frame which when in normal position extends longitudinally backward from the hinge axis over the other frame section and over the rear axle, each frame section being pivoted on its own axle, and the front end of the forward section being normally free to tilt downward when the front end of the rear section tilts upward.

1,392,837. SELF-FILLING FOUNTAIN-PEN. Hyman Lewinson, Erie, Pa. Filed Feb. 21, 1921. Serial No. 446,755. 1 Claim. (Cl. 120—47.)

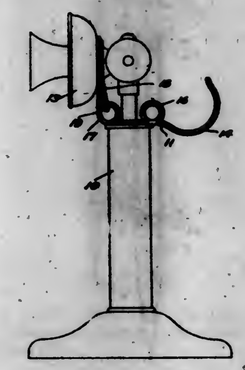
In a self-filling pen, the combination of an outer barrel; an inner barrel surrounded by the outer barrel and communicating at its upper end with the outer barrel and having a feeding passage at its lower end, the inner barrel and the chamber between the barrels being of equal capacity; a plunger between the barrels; and a plunger stem extending out of the top of the outer barrel.



1,392,838. SELF-FILLING FOUNTAIN-PEN. Hyman Lewinson, Erie, Pa. Filed Feb. 21, 1921. Serial No. 446,756. 7 Claims. (Cl. 120—47.)

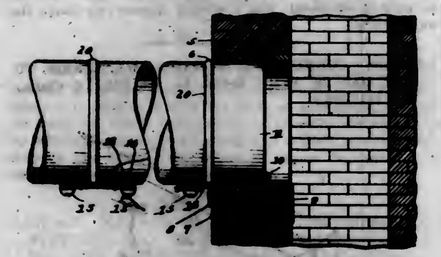
2. In a self-filling pen, the combination of a barrel having a feeding opening in the bottom thereof; a plunger in the barrel, the plunger having an opening therethrough with a locking slot therein; a valve acting on the plunger to close the opening; a stem acting on the valve to close the opening in the plunger as the plunger is withdrawn and to open the same as the plunger is advanced; and a shoulder on the stem operating in the locking slot to detachably connect the plunger with the stem.

4. In a self-filling pen the combination of a barrel having a feeding opening at the bottom; a valve plunger in the barrel; a valve plate at the top of the barrel; a valve operating on the plate; a stem extending from the plunger and actuating the valve to open the same as the plunger is withdrawn and to close the same as the plunger is advanced; and a vented closure cap above the valve plate.



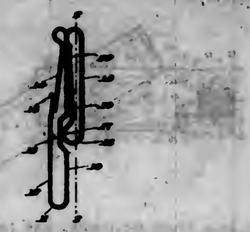
1,392,839. CORNER-BRACE. Jacob Lill, Chicago, Ill. Filed Mar. 28, 1921. Serial No. 456,432. 6 Claims. (Cl. 217—69.)

1. As a new article of manufacture, a corner brace formed of a rectangular sheet of metal bent diagonally



to provide abutting portions, the edge portions of said sheet bent transversely to the abutting portions to form clamping portions.

1,392,840. SANITARY TELEPHONE DEVICE. WILLIAM W. LUKENBACH, Philadelphia, Pa. Filed Sept. 28, 1920. Serial No. 413,393. 2 Claims. (Cl. 179—153.)

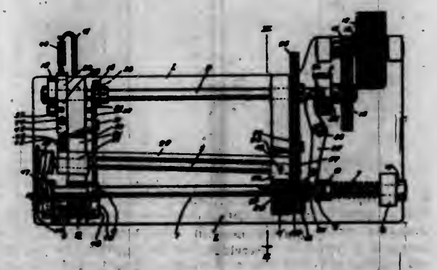


2. The combination with a telephone instrument, of an attachment embodying a transmitter receiving loop, horizontally arranged substantially parallel side bars adapted to rest upon a shoulder provided upon the upper end of the instrument and a receiver seat extending from said arms and disposed upon one side of the instrument.

1,392,841. STOVEPIPE-HOLDER. JOSEPHINE MCCOY, Sandusky, Ohio. Filed Jan. 15, 1919. Serial No. 271,244. 1 Claim. (Cl. 126—318.)

In combination with a chimney breast having a flue opening, a pipe having one of its ends received therein, and a bolt having a grooved head on the pipe; of a flat spring plate having an inner and an outer bent end and received in the flue opening and the said ends engaging with the flue wall and with the outer wall of the chimney breast and exerting a tension toward each other against said walls, a right angular lug integrally formed on the plate and disposed to contact with the inner end of the pipe to limit the movement thereof through the flue opening, the joint of the outer bent end of the plate having its ends notched, and a tying element arranged around said joint, and received in the notches thereof and secured in the grooved head of the bolt on the pipe.

1,392,842. HOLDER. JOHN B. MANALAKIS, Opelousas, La., assignor of one-third to Charles P. Halios and one-third to George J. Cajoleas, Opelousas, La. Filed June 13, 1921. Serial No. 477,244. 1 Claim. (Cl. 24—8.)

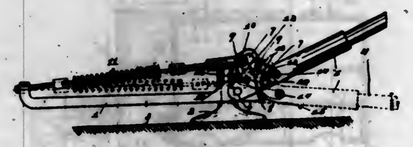


A key ring holder formed from a single strip of metal bent to provide a substantially straight member, overlapping tongues extending from each end of said member and defining a ring receiving loop, a relatively short loop located upon the opposite side of said member, one end of the last mentioned loop extending from and being connected to the substantially straight member, an enlarged extremity formed on the free end of the relatively short loop and a depressed seat formed in said substantially straight member for receiving the enlarged extremity of the last mentioned loop.

1,392,843. BACKBAND-HOOK. WILLIAM C. MARTIN, Memphis, Tenn. Filed Mar. 30, 1921. Serial No. 456,833. 5 Claims. (Cl. 54—58.)

5. A back-band hook comprising a body portion formed with a hook proper and having a slot adapted to receive a fold of the back-band, the end portions of the body adjacent said slot being upturned, and a pin of shorter length than the slot and having tapered ends fitting within said folded portion to secure the hook, said upturned portions and the tapered ends of the pin coacting to cause the folded portion of the back-band to be gathered at the ends thereof, substantially as set forth.

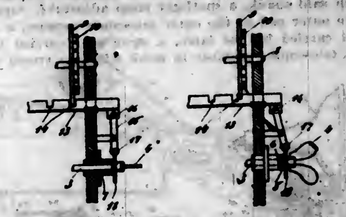
1,392,844. CAP-THREADING MACHINE. AUGUSTUS L. MERELLE, Brooklyn, N. Y., assignor to Leslie R. N. Carvalho, Brooklyn, N. Y. Filed Dec. 23, 1918. Serial No. 268,430. 13 Claims. (Cl. 153—72.)



1. A machine for threading caps and the like comprising a pair of rotatable dies, means for positively rotating both of said dies, means for moving one of said dies in a direction toward and away from the other, means for moving one of said dies in a direction transverse to said first mentioned direction, a holder for holding a cap in a position to receive one of said dies, and means to expel the finished cap from said holder.

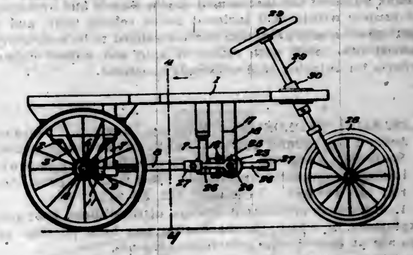
1,392,845. PLOW AND PULVERIZER. AYRES PHILLIPS MERRILL, Natchez, Miss. Filed May 7, 1920. Serial No. 379,607. 3 Claims. (Cl. 97—23.)

1. A device of the character described comprising a wheeled frame provided with draft means, a plow blade carried by the frame, a diagonally disposed horizontally arranged rotary cutter journaled upon the frame forwardly of and above the plow, and means for rotating said cutter, said means comprising a gear mounted upon one of the wheels supporting the frame, and a train of gearing connected with said gear and cutter.



1,392,846. TROLLEY-MOUNT. HUGH J. MURPHY and EDWARD F. MURPHY, Troy, N. Y. Filed Feb. 23, 1921. Serial No. 447,085. 4 Claims. (Cl. 191—88.)

1. In a device of the class described and in combination, a trolley-pole-support; a trolley-pole-base pivotally mounted upon said support and provided with a slot approximately at right angles to the axis of the trolley-pole, said slot being formed with two seats at different distances from the pivot of the trolley-pole-base; a pin movable along said slot and seatable in the respective seats; and a trolley-pole-supporting spring-connection between said pin and said support, acting with less force when the pin is seated in the outer, than when the pin is seated in the inner, of said seats, said pin being automatically shifted from the inner to the outer seat when the trolley-pole is in approximately vertical position.



1,392,847. LOCKING DEVICE IN CALCULATING-MACHINES. VALENTIN JAKOB ODHNER, Stockholm, Sweden. Filed June 11, 1919. Serial No. 303,413. 4 Claims. (Cl. 235—79.)

1. In a calculating machine the combination with calculating wheels, a carriage, registering wheels provided in the said carriage and a rotatable axially movable shaft for returning the said registering wheels to zero, of a catching device and means connecting the said device with the said shaft in such manner that its functionating is dependent on axial movement of the shaft, the said catching device locking the calculating wheels, when the carriage is in proper position and the said shaft is in

wrong position and locking the said shaft when the calculating wheels are in wrong position.

1,392,848. TRICYCLE. GEORGE A. OLSEN, Jersey City, N. J. Filed July 16, 1920. Serial No. 396,862. 1 Claim. (Cl. 208—55.)

A wheeled toy of the character described comprising a platform, a pair of spaced brackets depending from the underside of the platform at its rear end, a transverse shaft journaled through said brackets and carrying ground engaging wheels, a bevel gear on said shaft, a pair of spaced parallel brackets depending from the underside of the platform transversely thereof at the intermediate portion, a shaft journaled through said second named brackets and extending longitudinally of the platform below the center thereof, a bevel gear on the rear end of said second named shaft meshing with said first named bevel gear, a bevel gear on the forward end of said second named shaft, a pair of transversely alined brackets depending from the underside of said platform near the forward end thereof, a crank shaft journaled through said last named transversely alined brackets and provided at its ends with pedals, a bevel gear on said last named shaft meshing with said third named bevel gear, a post journaled through the forward end of the platform and having its upper end provided with a steering wheel and having its lower end forked and carrying a dirigible ground engaging wheel.

1,392,849. MANUFACTURE OF DISPERSOIDS, COLLOID POWDER AND MASSES THEREFROM. HERMANN PLAUSON, Hamburg, Germany, assignor to D. R. Rotman, New York, N. Y. Filed Feb. 8, 1921. Serial No. 443,423. 15 Claims. (Cl. 252.)

1. Process for the manufacture of dispersoids consisting in intensively mechanically disintegrating soluble colloids (gel type) with a non-solvent.

1,392,850. SPOTLIGHT-LAMP BRACKET. FRANK W. RUSS, Seattle, Wash., assignor of one-half to D. H. Hotchkin, Seattle, Wash. Filed Aug. 5, 1920. Serial No. 401,301. 5 Claims. (Cl. 240—7.)

1. In a device of the class described, a normally horizontal tubular shank arranged to be secured to one side

of an inclosed motor vehicle body adjacent the edge of the wind shield, telescoping members extending lengthwise within said shank, a spotlight lamp adjustably supported at the outer end of the outer telescopic member, a crown wheel carried by the lamp, a spur gear carried by the inner telescoping member in mesh with the crown wheel,

crown wheels secured to the inner ends of said telescoping members, an actuating shaft extending crosswise of said shank adjacent the last named crown wheels and arranged to project within said inclosed motor vehicle body, and a spur gear on said actuating shaft arranged to be selectively moved into mesh with either of said last named crown wheels for rotating said telescopic members.

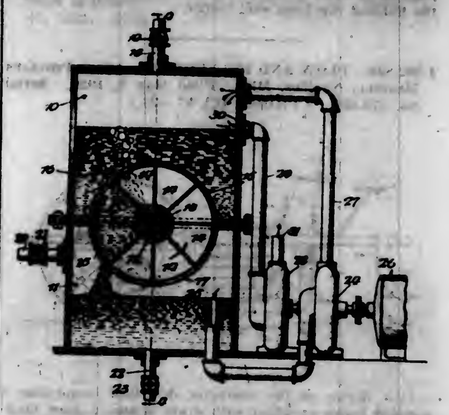
1,392,851. EXPLOSIVE. WILLIAM RINTOUL, THOMAS JOSEPH NOLAN, and OLIVER WARD STICKLAND, Stevenston, Scotland, assignors to Nobel's Explosives Company, Limited, Stevenston, Scotland. Filed Oct. 19, 1920. Serial No. 418,082. 7 Claims. (Cl. 52—13.)

1. Hardened granulated fibrous nitrocellulose shot-gun explosives in which the hardening has been effected by the aid of non-volatile gelatinizing agents.

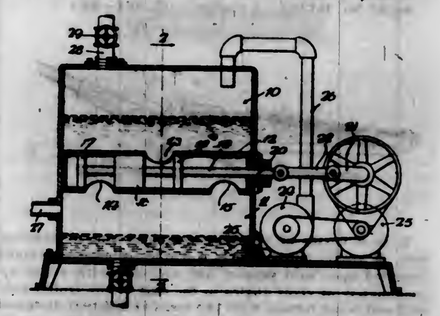
1,392,852. PROCESS OF PREPARING ETHYLENE AND OTHER UNSATURATED HYDROCARBONS. WILLIAM H. ROSS, Washington, D. C., assignor of one-half to William Lloyd Evans, Columbus, Ohio. Filed June 1, 1920. Serial No. 386,700. 14 Claims. (Cl. 23—24.)

(Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. In a process of making unsaturated hydrocarbons, treating a metallic catalyst with hydrogen, then with a less saturated hydrocarbon than that which it is desired to produce and conducting a mixture of hydrogen and the less saturated hydrocarbon in contact with the treated catalyst.



1,392,853. PNEUMATIC TIRE. HENRY HYDES, New York, N. Y. Filed Nov. 12, 1920. Serial No. 423,519. 7 Claims. (Cl. 152—22.)



1. A tube for a pneumatic tire, comprising a plurality of air chambers separated by transverse partitions each provided with an aperture and a pair of valve flaps connected for simultaneous movement associated with each partition and aperture, whereby the tube may be inflated from one point and whereby loss of air is localized to the chamber in which a puncture takes place.

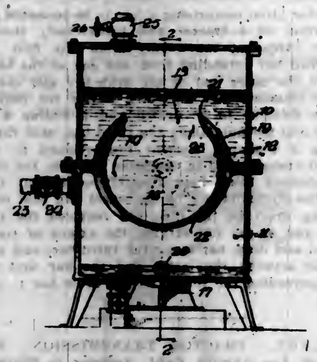
1,392,854. HYDRAULIC AIR-COMPRESSOR AND VACUUM-PRODUCER. BENJAMIN SKIDMORE, Jr., Chicago, Ill. Filed Feb. 21, 1916. Serial No. 219,618. 42 Claims. (Cl. 230—36.)

7. An apparatus of the character described embodying an element, a reservoir for impounding a desired quantity of water at a desired elevation above said element, said element operating to control the discharge of water from the said reservoir, a reservoir for receiving water discharged by the said element, said element also operating to withdraw fluid or vapor from the second recited reservoir and deliver the same into the first recited reservoir, and mechanism for imparting a reciprocating movement to the said element.

1,392,855. HYDRAULIC AIR-COMPRESSOR AND VACUUM-PRODUCER. BENJAMIN SKIDMORE, Jr., Chicago, Ill. Filed Aug. 12, 1918. Serial No. 249,499. 10 Claims. (Cl. 230—16.)

1. An apparatus of the character described embodying a reciprocable element, a reservoir for impounding a desired quantity of water at a desired elevation above said element, said element operating to control the discharge of water from the said reservoir, a reservoir for receiving water discharged by the said element, said element also operating to withdraw fluid or vapor from the second recited reservoir and deliver the same into the first recited reservoir, and mechanism for imparting a reciprocating movement to the said element.

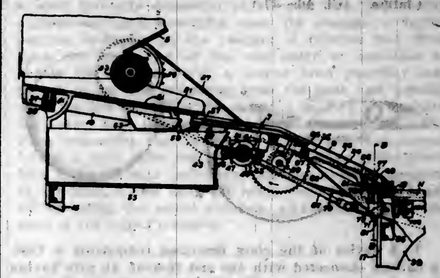
1,392,856. HYDRAULIC AIR-COMPRESSOR AND VACUUM-PRODUCER. BENJAMIN SKIDMORE, Jr., Chicago, Ill. Filed Aug. 12, 1918. Serial No. 249,500. 8 Claims. (Cl. 230—16.)



1. In combination, means embodying a rotatable element for removing a portion of liquid from a supply of liquid, the said element also operating to deliver air or a gaseous fluid into the said supply of liquid to replace

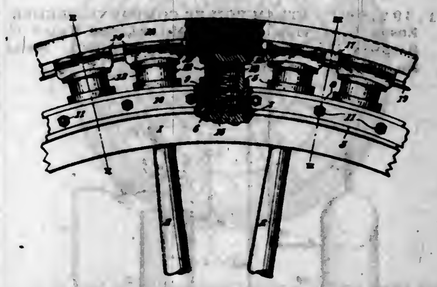
the liquid removed therefrom by the said element, and provisions for inducing circulation of a portion of the said supply or body of liquid against one portion of the

said element and at a tangent thereto, to rotate the element and cause another portion of the element to operate to remove a portion of the liquid.



1,392,857. HYDRAULIC AIR-COMPRESSOR AND VACUUM-PRODUCER. BENJAMIN SKIDMORE, Jr., Chicago, Ill. Filed Aug. 12, 1918. Serial No. 249,755. 11 Claims. (Cl. 230—16.)

1. An apparatus of the character described embodying a rotatable element, a reservoir for impounding a desired quantity of water at a desired elevation above said element, said element operating to control the discharge of water from the said reservoir, a reservoir for receiving water discharged by said element, said element being shaped to withdraw fluid or vapor from the second recited reservoir and deliver the same into the first recited reservoir, and power mechanism connected with the said element for rotating it.

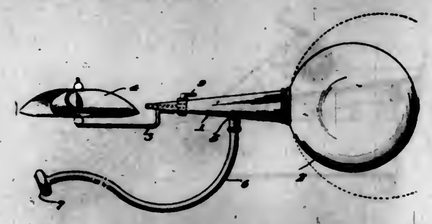


1,392,858. ASSEMBLING-MACHINE. LESTER O. THOMAS, Boston, Mass., assignor to New England Confectionery Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 6, 1917. Serial No. 200,909. 21 Claims. (Cl. 107—46.)

20. A machine of the class described comprising a series of inclines over which pieces gravitate and are assorted, a drive shaft beneath said inclines, a groove cam on the

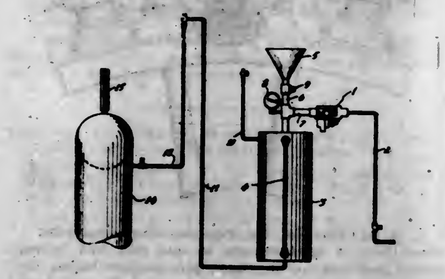
shaft and a pair of followers secured to two such inclines, both coöperating with the groove of the cam.

1,392,859. SPRING-WHEEL. WILLIAM H. SMITH, Bridgeport, Conn. Filed Nov. 24, 1920. Serial No. 426,147. 1 Claim. (Cl. 152—8.)



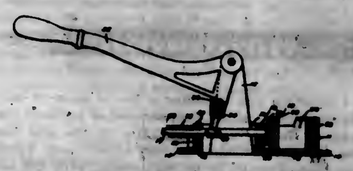
A spring wheel of the type described comprising a wheel felly, a band secured to said felly and having spaced openings therein, cup-shaped members having the inner ends thereof closed and received in said band openings, an outer band having openings therein received on the outer ends of said cup-shaped members, side spacing rings disposed between the felly band and the outer band connecting means between said side rings, plungers within said cup-shaped members, a cushioned tire supported on the outer ends of said plungers, and compression springs extending between said cups and plungers to hold the cups within the band openings and to cushion the tread of the wheel.

1,392,860. FILLING DEVICE FOR FOUNTAIN-PENS. EDWARD PERINA, Port Richmond, N. Y. Filed Mar. 19, 1921. Serial No. 453,579. 2 Claims. (Cl. 120—47.)



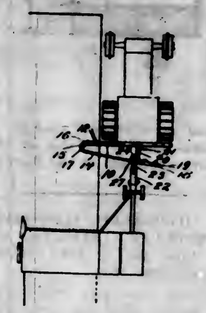
1. A fountain pen including a barrel open at one end and having a bore at its opposite end, a resilient seat at one end of the barrel in proximity to the said bore, a suction plunger movable in the barrel and having a portion thereof normally in engagement with the seat, a stem on the plunger movable into and out of said bore, the bore allowing the movement of the plunger from the exterior of said barrel, and means for holding the said portion of said plunger in engagement with the said seat.

1,392,861. BALLOON TOY. JOHN TABACCO, Rochester, N. Y. Filed July 30, 1920. Serial No. 400,052. 2 Claims. (Cl. 46—37.)



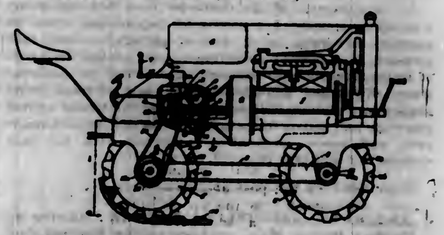
1. A device of the class described comprising a tube, a balloon connected with one end thereof, an arm having one end connected with the tube, a wheel supported by said arm in front of the other end of the tube, a tube having one end connected with the first mentioned tube intermediate its ends, a mouth-piece and check valve carried by said second tube and a valve in the first mentioned tube located between the open end thereof and the connection of the second tube.

1,392,862. STEAM-BOILER-COMPOUND FEEDER. EDSON H. TUTTLE, JOHN C. MILLER, and TRACY C. BALDWIN, Conneaut, Ohio. Filed Apr. 12, 1921. Serial No. 460,853. 1 Claim. (Cl. 210—29.)



Means for feeding a liquid agent to the feed water line of a steam boiler, comprising a supply tank, means for charging said tank, a sight feed regulator, a pipe intermediate of the supply tank and said regulator, and a pipe leading from the sight feed regulator and adapted to be connected with a conduit in the feed water line; the said charging means and the supply tank being also connected with a pressure regulating valve, and said valve being adapted, in turn, to be connected with a pressure line.

1,392,863. CANDY-PRESSING MACHINE. CHARLES WEBER, New York, N. Y. Filed Oct. 12, 1920. Serial No. 416,352. 6 Claims. (Cl. 107—15.)

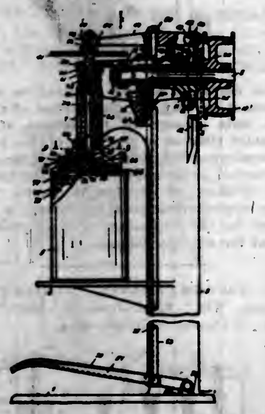


6. A candy pressing machine comprising a frame, said frame including opposed side walls, a bottom, and end walls, a female member arranged upon the bottom and including a substantially cylindrical portion and a substantially semi-cylindrical portion, the latter terminating to provide flanges reposing upon the side walls, a male member arranged to reciprocate within the female member, spaced standards rising from the side walls of the frame, a bell crank lever pivoted between said standards, an operating rod projecting from the male member and associated with one branch of the bell crank lever, whereby said male member is reciprocated, yieldable means for normally holding the male member in a retracted position, the latter mentioned member having a notch and the cylindrical portion of said female member having a slot disposed in aline with said notch for the purpose specified.

1,392,864. TRACTOR-HITCH. CHARLES A. WISE and ELMER B. WISE, Lawrence, Kans. Filed Sept. 11, 1918. Serial No. 253,583. 1 Claim. (Cl. 280—33.8.)

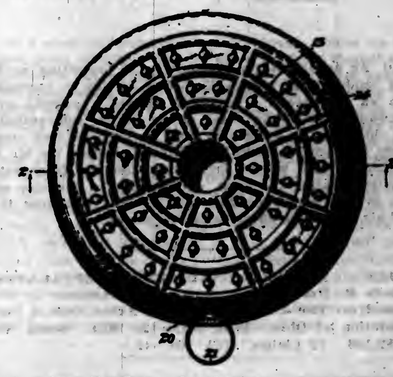
A tractor hitch comprising a bar to be mounted on the rear portion of a tractor and transversely thereof, a draw-bar extending rearwardly from the first named bar, a third bar extending from one end of the bar first named to the outer end of the draw-bar and connected with the elements last named, a device for connection with the machine to be drawn and including a wheel engaging and movable along the third bar, said third bar including a U-shaped element proportioned to receive the wheel and retain it in operative position, the curve of the U element being approximately equivalent to one-half of the circumference of the wheel and said element, permitting draft in the direction required for turning corners, and means for varying the extent of travel of the wheel and draw bar along the third bar, and varying the angle between the latter and the bar first named thereby governing the return of the draw bar to normal position.

1,392,865. TRACTOR TRANSMISSION. SYDNEY CLIFTON, Los Angeles, Calif., assignor to Sherman T. Allen, Los Angeles, Calif. Filed Aug. 28, 1919. Serial No. 320,532. 5 Claims. (Cl. 74—7.)



1. In a transmission gear for tractors, the combination with a motor driven shaft, of a worm fixed on said shaft, a pair of shafts journaled in bearings on opposite sides of said worm, a worm wheel carried by each of said shafts and engaging said worm, a pair of pinions of different sizes fixed on the upper one of the worm wheel carrying shafts, a pinion fixed on the lower one of the worm wheel carrying shafts, a journaled shaft arrranged substantially parallel with the worm wheel carrying shafts and a pair of pinions of different sizes splined upon said last mentioned shaft and adapted to engage the pinions on the worm wheel carrying shafts.

1,392,866. SELF-CLEANING TRACTOR WHEEL AND GEAR. SYDNEY CLIFTON, Los Angeles, Calif., assignor to Leonard M. Allen, Burbank, Calif. Filed Dec. 11, 1919. Serial No. 344,165. 1 Claim. (Cl. 301—41.)

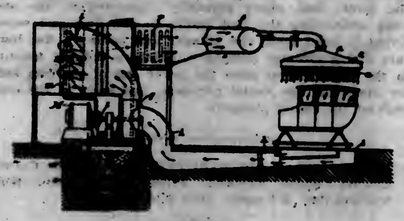


A wheel having the outer face of its rim beveled from one side to the other, teeth formed integral with said rim and projecting outwardly from said beveled outer face, the outer faces of which teeth lie substantially parallel with the axis of the wheel, the side faces of the bodies of the teeth being formed on convergent radial lines so that the bodies of said teeth are substantially wedge shape in cross section, and said side faces also being formed on convergent longitudinal lines so that the bodies of the teeth gradually decrease in thickness toward their higher ends.

1,392,867. FRICTION-TOP CAN-SEALER. FRANK CRAWFORD, Los Angeles, Calif., assignor of one-half to Charles C. Burnett, Los Angeles, Calif. Filed Oct. 27, 1919. Serial No. 333,714. 12 Claims. (Cl. 113—25.)

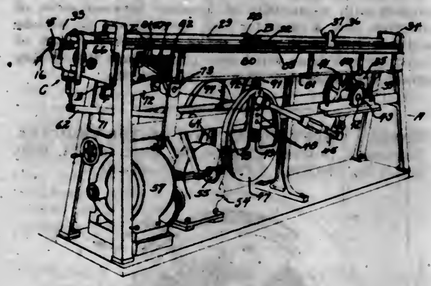
1. A friction top can sealer comprising a base, a post extending upwardly from the base, a platform extending forwardly from the post above the base, a shaft housing pivotally connected to the upper end of the post in a horizontal position, a spring supporting the forward end of the shaft housing, a shaft in the shaft housing, a pulley upon the rear end of the shaft, a friction wheel upon the forward end of the shaft, a bearing bracket extending forwardly from the upper end of the post, a vertical bearing in the bearing bracket, a plunger slidably and rotatably mounted in the bearing, a cam shaft slidably mounted in the plunger and fixed for rotation therewith, a lever pivotally connected at its rear end and having a fork bearing downwardly upon the plunger, a spring bearing upwardly on the plunger, a friction disk fixed upon the upper end of the cam shaft in condition to engage the friction wheel, a second lever pivotally connected to an arm extending from the post and bearing upon the hub of the friction wheel, a bearing plate above the lever, foot levers pivotally connected to the base, links connecting the foot levers to the first and second levers, a head upon the plunger and having a flat lower face and a circular periphery, plungers radially mounted in the head, a cam upon the lower end of the cam shaft for operating the radial plungers, and balls at the outer ends of the radial plungers.

1,392,868. HEAT-DISTRIBUTER. ARTHUR B. CRUICKSHANK, London, England. Filed Aug. 14, 1920. Serial No. 403,499. 3 Claims. (Cl. 126—215.)



1. A heat distributer plate having a concave upper face provided with a plurality of openings between series of concentric ribs, a cover for each opening, and projections extending from each cover so as to direct the path of heated air and flame which may pass through the opening, against the adjacent portion of the said ribs.

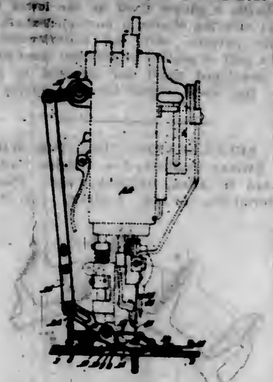
1,392,869. THEFT-SIGNAL FOR MOTOR-VEHICLES. MILLARD J. DOWNEY, Chicago, Ill. Filed July 24, 1920. Serial No. 398,636. 5 Claims. (Cl. 40—61.)



5. In a theft signal for motor vehicles, the combination of a signal body provided with a signal sign, a shutter rotatable upon the body for obscuring or exposing said sign, and locking means carried by the body for securing the shutter in position exposing the sign.

1,392,870. METHOD AND APPARATUS FOR PROTECTING WORKMEN SANDPAPERING AUTOMOBILE BODIES. CHARLES FREELIN, Detroit, Mich., assignor to Fisher Body Corporation, Detroit, Mich., a Corporation of New York. Filed Apr. 7, 1919. Serial No. 288,615. 10 Claims. (Cl. 98—87.)

10. An apparatus for the purpose of protecting workmen sandpapering automobile bodies, having in combination an air shower arranged to deliver a vertical and downwardly traveling sheet of air having substantially the outline of an automobile body in top plan view, registers for location under the body into which the air is exhausted, and means for taking the air from said registers heating the same, eliminating the particles set free by the sand papering operation, and returning the said air under propulsion to the air shower.

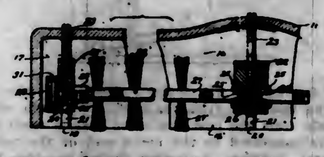


1,392,871. MEASURING AND CUTTING APPARATUS. GLEN B. HEWELFINGER, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 12, 1919. Serial No. 282,136. 12 Claims. (Cl. 164—42.)

1. In an apparatus of the character specified, the combination of a slidably mounted reciprocable gripping device, a rotatable drum, a cable connecting the gripping device to said drum, and means for successively rotating said drum in opposite directions, said means including a crank, and a connecting rod adjustably connected to said crank.

1,392,872. SEWING-MACHINE ATTACHMENT. WILLIAM W. HIRK, Zion City, Ill., assignor of one-half to Richard Feuerman. Filed Feb. 2, 1917. Serial No. 146,220. 2 Claims. (Cl. 112—122.)

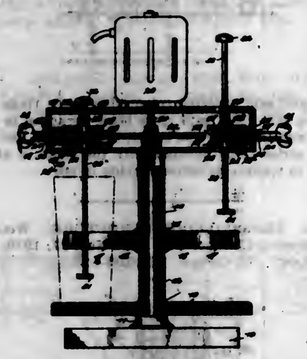
1. The combination with a sewing machine having the usual sewing table and vertical reciprocating needle, of a knife set with its cutting edge to the rear of said needle; and a separating block having a beveled nose and set on



said table to the rear and in the cutting path of said knife, substantially as described.

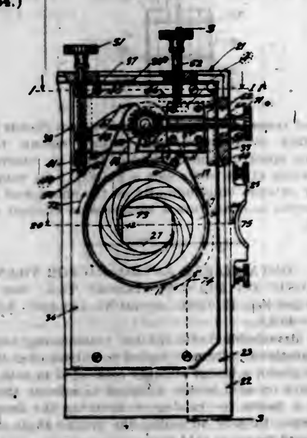
1,392,873. ELECTRICAL CUT-OUT OR CIRCUIT-BREAKER. WILLIAM HENRY ILLINGWORTH, Halifax, England. Filed July 8, 1920. Serial No. 394,822. 6 Claims. (Cl. 200—113.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In an electrical cut-out, actuated by the breaking of a column of mercury, the combination of a carrier containing a main passage for the column of mercury, a metal contact situated at one side of the main passage and communicating therewith through a branch passage, a metal contact communicating with another portion of the main passage, an overflow to receive the mercury thrown by vaporisation when the column is broken, and an air vent for the free escape of vapor produced by the breaking of the mercury column.



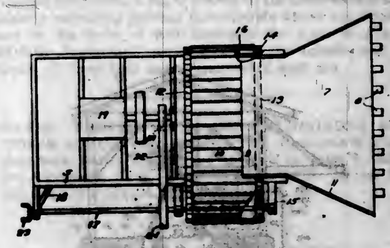
1,392,874. VACUUM-CLEANER. WILLIAM C. JOHNSTON, Milwaukee, Wis. Filed June 14, 1920. Serial No 388,943. 3 Claims. (Cl. 15—60.)

1. A vacuum cleaner in part, comprising a cleaner casing having a brush chamber and a nozzle and wheel chambers at opposite ends of the nozzle, bearing blocks vertically slidably positioned in the end portions and a medial portion of the brush chamber, right and left handed threaded screws threaded through the upper wall



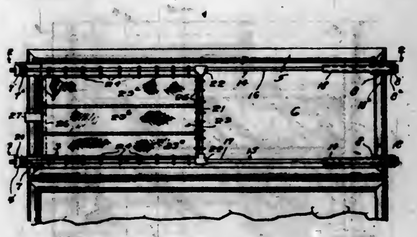
of the brush chamber and into the bearing blocks, short shafts journaled in the end blocks and having sockets on their inner ends and grooved pulleys on their outer ends, horisontally slidable bearings mounted in the opposite side portions of the medial bearing block, a coiled spring interposed between the slidable bearings, brushes within the brush chamber and having their shaft ends removably extending into the medial bearings and into the socketed ends of the short shafts, grooved supporting wheels journaled in the wheel chambers and having belted connections with the grooved pulleys.

1,392,875. DRINK-MIXER. MORRIS LANGHAUS, New York, N. Y. Filed Feb. 7, 1921. Serial No. 443,117. 6 Claims. (Cl. 259—181.)



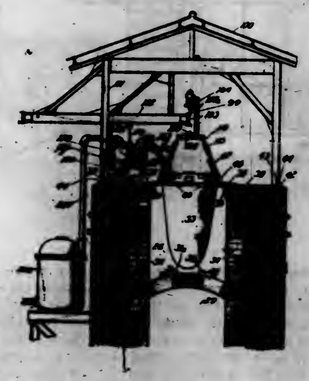
1. In a device of the class described, the combination of a base, a glass stand rotatably mounted thereon, a glass holder secured to for rotation with said stand, and a plurality of agitating devices mounted for movement with said stand and holder.

1,392,876. ADJUSTABLE IRIS FOR CAMERAS. JOHN E. LEONARD, Los Angeles, Calif., assignor, by mesne assignments, to Mitchell Camera Co., a Corporation. Filed Nov. 7, 1919. Serial No. 336,393. 11 Claims. (Cl. 95—64.)



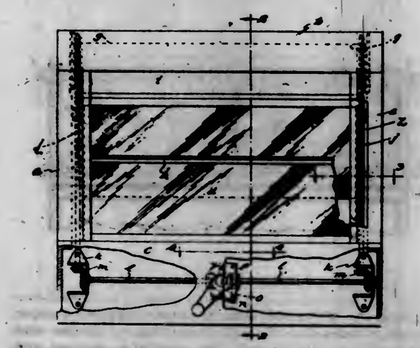
1. A camera having an iris between the photographing lens and the exposure aperture, and means for raising and lowering the iris aperture.

1,392,877. SNOW-REMOVING MACHINE. ERNEST C. MIDGLEY, Wheatland, N. D. Filed Mar. 8, 1920. Serial No. 364,668. 1 Claim. (Cl. 37—25.)



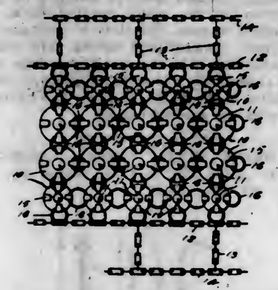
In a snow removing machine, a portable frame, an inclined plate extending entirely across the front thereof and beyond the line of travel of the frame, said plate having upstanding wings at its opposite sides and converging upwardly and rearwardly to come within the confines of the portable frame, a laterally acting horisontal conveyer disposed beneath the upper rear edge of said plate upon said frame and extending in substantial parallelism therewith, the discharge end of said conveyer being extended beyond the line of travel of the front edge of the plate, said conveyer comprising an endless traveling flight and rotative elements over which said flight passes and by means of which movement is imparted to said flight, a shaft supported from the side of the portable frame and outwardly thereof and upon which said rotative elements are mounted and a power imparting element at the rear end of said shaft by means of which motion may be imparted to said shaft from a point outside the portable frame.

1,392,878. DIMMER. ERNEST C. MIDGLEY, Wheatland, N. D. Filed Jan. 28, 1921. Serial No. 440,748. 2 Claims. (Cl. 296—97.)



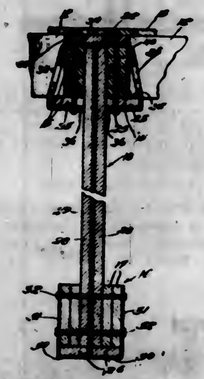
1. A device of the character described comprising upper and lower extensible elements consisting of sleeves and rods slidable in said sleeves, clips adapted to embrace and grip the side members of the frame of a windshield, said clips comprising rearwardly extending notched portions in which said rods and sleeves are received, said sleeves being headed outwardly of said rearwardly extending portions and said rods being provided with threaded portions outwardly of said rearwardly extending portions and thumb nuts upon said threaded portions, a division bar slidable upon said rods, a curtain engaged with said division bar and rings engaging said rod and said curtain.

1,392,879. PROCESS AND APPARATUS FOR COKING PITCH. FRANZ PUENING, Chicago, Ill., assignor to American Tar Products Company, Chicago, Ill., a Corporation of Delaware. Filed Jan. 12, 1918. Serial No. 211,546. 36 Claims. (Cl. 202—4.)



1. A process for coking pitch which consists in charging pitch into a series of receptacles, moving the receptacles successively through a progressively heated passage from the cooler to the hotter end thereof and successively discharging the receptacles of their pitch.

1,392,880. WINDSHIELD CONSTRUCTION. EMORY GLENN SIMPSON, Highland Park, Mich., assignor to Fisher Body Corporation, Detroit, Mich., a Corporation of New York. Filed Aug. 5, 1920. Serial No. 401,369. 3 Claims. (Cl. 296—89.)

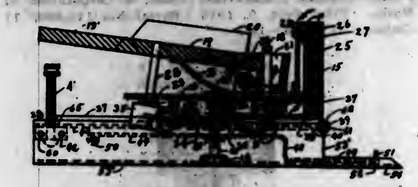


1. In a windshield, the combination of posts provided with window-ways, a header provided with a panel recess, a lower panel secured in place, and an upper panel slidable either into said panel recess to provide an opening between the panels or into overlapping relation with said lower panel to provide a ventilating opening between the upper panel and the header.

1,392,881. ANTISKID-CHAIN. JENNIE M. STARR, Montrose, S. D. Filed Feb. 14, 1920. Serial No. 358,772. 3 Claims. (Cl. 152—16.)

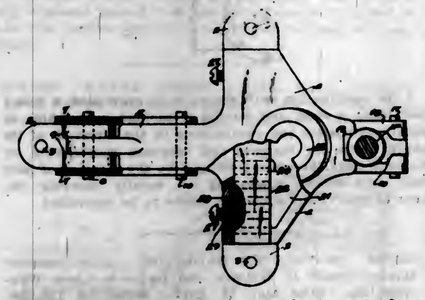
1. An anti-skid covering comprising disks, rings flexibly connecting said disks, said rings being arranged in circumferential and in transverse series, the rings of the circumferential series being substantially the same in size, and the rings in transverse series varying in size.

1,392,882. TRUSSED-ROOF STRUCTURE. WILLIAM J. SUMMERBELL, Chicago, Ill. Filed Nov. 21, 1919. Serial No. 339,642. 15 Claims. (Cl. 108—23.)



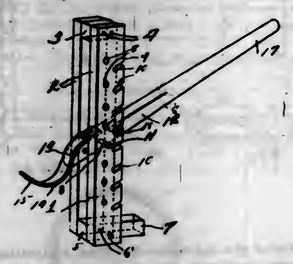
1. A roof truss comprising top and bottom chords and interconnecting compression and tension means, the top chord being upwardly curved and of built up construction and embracing at its lower side a unitary joist supporting ledge that extends longitudinally of the chord and is connected thereto to constitute a compression element of said top chord.

1,392,883. DETACHABLE KEYBOARD FOR TRANSPOSING MUSIC ON PIANOS. ISIDORE TOW, New York, N. Y. Filed Feb. 12, 1921. Serial No. 444,456. 8 Claims. (Cl. 84—446.)



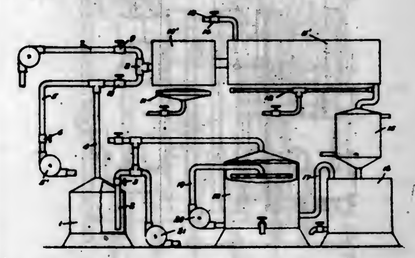
1. In a detachable keyboard for transposing music on pianos, a stationary frame adapted to extend over the keyboard of a piano, a bridge slidably connected to said frame, a set of keys on said bridge, adapted to actuate the piano keys, and a means for raising or lowering the front edge of said frame, thereby adjusting the proper angle of inclination of said frame to said piano.

2. In a detachable keyboard for transposing music on pianos, a pair of supporting members adapted to fit over the end keys of a piano, and having extensions adapted to be inserted into the openings formed in the front of the piano over said end keys, when the latter are depressed, a



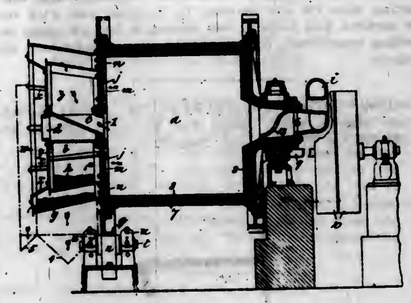
stationary frame connected at its ends to said members, a bridge slidably connected to said frame, and a set of keys on said bridge adapted to actuate the piano keys.

1,392,884. MOLDING APPARATUS FOR BATTERY STRAP-POSTS. GEORGE P. WASHBURN, Los Angeles, Calif. Filed Aug. 25, 1920. Serial No. 405,785. 6 Claims. (Cl. 22—136.)



1. A molding apparatus for articles having spaced projections including a die shiftable to form said articles with different numbers of teeth.

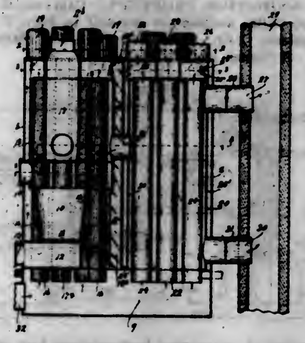
1,392,885. LOG-JACK. PERCY E. BATTELLE, Louisa, Va. Filed June 17, 1919. Serial No. 304,770. 1 Claim. (Cl. 254—131.)



A jack of the character described comprising a standard, said standard being formed from a pair of vertically disposed spaced bars, means for holding said bars in spaced relation to each other, a series of vertically disposed apertures in each bar, the apertures in one of the bars being in alinement with the apertures of the other bar, the rear edges of the bars being provided with downwardly and inwardly extending notches, the bottoms of said notches terminating at points midway between the apertures in a horizontal plane, said apertures being in alinement with their adjacent notches in a plane at substantially 45 degrees, the notches of one vertical bar being in alinement with the notches of the other vertical bar, a lever disposed between the vertical bars and pivoted on a pin extending through alined apertures of the vertical bars and one end of the lever, a log engaging element at one end of the lever, said lever being so proportioned that when a pin is placed in the downwardly and inwardly extending notches immediately above the pivotal point of the lever, it will maintain the lever in a substantially horizontal position when its handle end is allowed to come into engagement with said pin.

1,392,886. PROCESS OF MAKING ALDEHYDES AND OTHER OXIDATION PRODUCTS. CARLISLE H. BIBB, Pasadena, Calif., assignor of one-half to John T. Bibb, Sr., Pasadena, Calif. Filed Oct. 27, 1919. Serial No. 333,633. 6 Claims. (Cl. 23—24.)

1. A process of converting hydrocarbons into alcohols aldehydes and other oxidation products, comprising mixing hydrocarbon, oxygen and a gaseous catalyser containing oxygen, said catalyser being used in quantities substantially less than the quantity of hydrocarbon, heating the mixture, and separating the alcohol aldehydes and other oxidation products from the mixture.

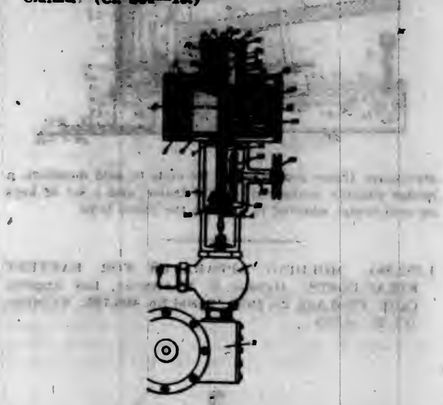


1,392,887. MACHINE FOR GRINDING ORES, MINERAL STONES, AND THE LIKE. JOSEPH RICHARD BROADLEY, London, England. Filed July 15, 1918. Serial No. 245,058. 2 Claims. (Cl. 83—9.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a grinding machine, the combination with a grinding compartment, of a separating compartment arranged at one end of and having communication with the grinding compartment, a screen arranged within the separating compartment, a tube arranged axially of the separating compartment and formed with a return passage opening through the circumference of the trunnion and delivering through the end thereof into the grinding compartment, said tube being also formed with a discharge passage opening through the circumference of the trunnion and delivering through the end thereof remote from the grind-

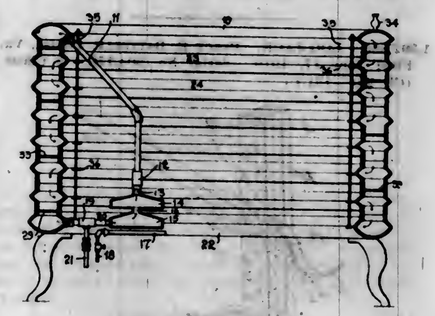
ing compartment, means arranged within the screen to pick up the material not delivered through the screen and directed into the return passage of the tube, and means arranged exteriorly of the screen to receive the material delivered through the screen and directed into the discharge passage of the tube.

1,392,888. HOT-AIR FURNACE. DEWITT A. BRUNETT, Minneapolis, Minn. Filed Feb. 16, 1920. Serial No. 358,813. 5 Claims. (Cl. 126—109.)



1. In a hot air furnace, the combination with an outer primary casing and a secondary outer casing, said two casings having a common base air chamber, of primary and secondary drums respectively within said primary and secondary casings spaced therefrom at the sides, top and bottom, and affording, respectively, primary and secondary combustion chambers, the said two combustion chambers being connected for the passage of hot gases from the former to the latter, primary and secondary air pockets formed respectively over the tops of said primary and secondary combustion chambers, primary and secondary hot air tubes extending respectively through said primary and secondary combustion chambers and connecting with the air chamber in the base and with the air pockets, and primary and secondary hot air pipes extending respectively from said primary and secondary air pockets.

1,392,889. AUTOMOBILE-SURFACING. HENRY B. DAY, Los Angeles, Calif. Filed Apr. 21, 1919. Serial No. 291,740. 4 Claims. (Cl. 296—31.)



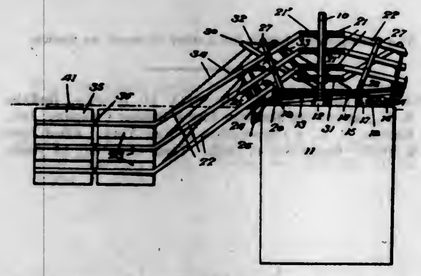
1. A composite automobile body, comprising a metal base; and an exterior covering of normally flexible material fitted and cemented to said metal base over substantially the entire contacting area, to form, when in position, a rigid, protective outer layer impervious to moisture and capable of taking finishing color coats.

1,392,890. CENTRIFUGAL REGULATING DEVICE. WARREN M. FULTON, Knoxville, Tenn., assignor to The Fulton Company, Knoxville, Tenn., a Corporation of Maine. Filed Sept. 5, 1916. Serial No. 118,539. 17 Claims. (Cl. 284—18.)

1. In combination with means to be controlled, a vessel containing a fluid and having a tubular wall which is axially extensible and contractible in the direction of its length under the increase and decrease, respectively, of the centrifugal pressure developed by the rotation of said fluid, and means connecting an axially movable element of said vessel with said means to be controlled.

1,392,891. HOT-WATER RADIATOR. JOHN NEWTON HARDY, HARRY D. WILSON, and DAVID S. LONG, Waycross, Ga. Filed Mar. 31, 1917. Serial No. 158,926. 1 Claim. (Cl. 257—152.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

A radiator of the character described comprising a plurality of coils, including an uppermost coil, a lowermost coil and a plurality of intermediate coils each having parallel longitudinally extending portions and transversely extending end portions, the intermediate coils each being formed at opposite ends with upwardly and downwardly projecting necks, the neck of one coil fitting into the neck of an adjacent coil, the topmost coil being formed with downwardly projecting necks and the lowermost coil being formed with upwardly projecting necks, the coils having septums disposed across said necks at alternate ends of the coils, to thereby cause the circulation of water entirely through one coil before passing into an adjacent coil.

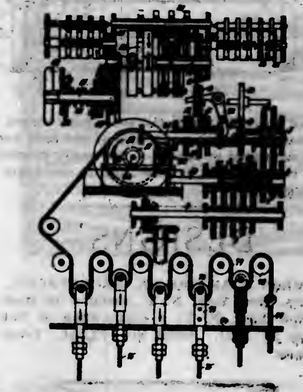


1,392,892. TANK OR RECEPTACLE FOR COMBUSTIBLE OR OTHER LIQUIDS. JACK IMRIE, London, England. Filed Dec. 18, 1918. Serial No. 267,359. 10 Claims. (Cl. 220—88.)

1. A tank for holding combustible liquids comprising a plurality of peripheral members, shaped in correspondence with and adapted to fit in the tank, brace members holding the peripheral members in spaced relation, and angularly related partitions carried by the peripheral members and brace members and formed with openings, and an inclosing shell bearing upon said peripheral members.

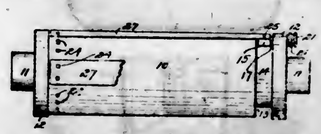
10. The combination with a container, of an interior reinforcement therefor comprising vertically and horizontally disposed spaced rods and splash plates attached to said rods and a protective covering enveloping the container.

1,392,893. WATER-WHEEL. JOHN KING, Williams Lake, British Columbia, Canada. Filed Aug. 30, 1920. Serial No. 406,810. 8 Claims. (Cl. 170—113.)



1. A water wheel comprising a substantially vertical shaft, vertically-spaced sets of blades in different vertical planes, means connecting said blades with the shaft for vertical movement, and means for raising said blades out of the water through part of their movement around said shaft.

1,392,894. PUNCTURE-PROOF INNER TUBE. ROBERT R. LLOYD, Des Moines, Iowa, assignor of one-half to John Griffin, Des Moines, Iowa. Filed Aug. 19, 1920. Serial No. 404,556. 1 Claim. (Cl. 152—13.)



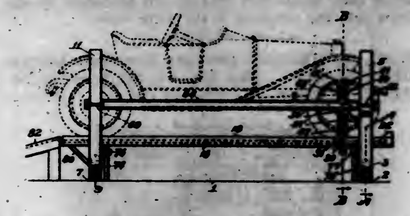
An inner tube adapted to be used in combination with a tire casing comprising a plurality of layers of rubber each of different degrees of elasticity, the outer layer being of less elasticity than the inner layer, the intermediate layer being of pure Pará rubber and having greater elasticity than either the outer or inner layers, said outer layer being comparatively thick in order to form the main body and strain resisting portion of the tube, the inner layer being comparatively thin in order to serve merely as a protective covering for the intermediate layer, whereby the sides of the tire will not stick together upon contact with said side, and whereby the intermediate layer will not crack, said intermediate layer being of such consistency that it will be forced by the pressure into any puncture in the outer layer.

1,392,895. TAXIMETER. HERMANN KARL EMIL LÜBCKE, Lübeck, Germany. Filed Feb. 12, 1921. Serial No. 444,532. 6 Claims. (Cl. 235—30.)

1. In a taximeter, a rope drum, an indicator disk, a pusher, and means operable by the weight upon a seat for turning said drum through an angle corresponding to the number of seats loaded, and the said pusher moved to actuating position relative to said indicator.

1,392,896. PRINTING-PLATE HOLDER. ERVIN E. STRAWN, Des Moines, Iowa, assignor to The Omnigraph Company, Des Moines, Iowa, a Corporation. Filed Jan. 31, 1921. Serial No. 441,407. 5 Claims. (Cl. 272.)

1. A printing plate holder including a printing plate and a printing roller having an annular groove in its surface, means for fastening one end of a printing plate to said printing roller, a slidable member mounted in said grove having means for engaging the fre end of the printing plate, a bolt rotatably mounted in the end of said roller projecting into said groove, having a screw-threaded connection with said member, whereby when the parts are assembled the bolt may be rotated to draw the plate taut on the roller.

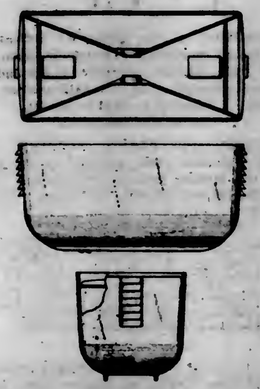


1,392,897. [WITHDRAWN.]

REISSUES.

15,203. ADJUSTABLE AUTOMOBILE-HOLDER. LEMUEL CLAY NICOSON, Alexandria, Ind., assignor to American Trust Company, trustee, New York, N. Y. Filed Dec. 13, 1920. Serial No. 430,575. Original No. 1,288,138, dated Dec. 17, 1918, Serial No. 93,230, filed Apr. 24, 1916. 17 Claims. (Cl. 214—1.)

1. A motor-vehicle holder including a plurality of rocker members, a plurality of girders secured to the rocker

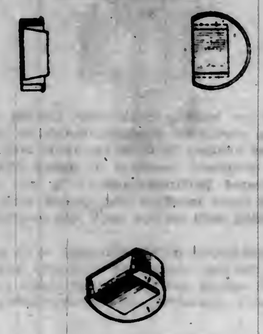


members respectively, two track rails secured upon the girders to support the wheels of the motor-vehicle, means for bodily supporting the body of the motor-vehicle in the absence of a pair of the wheels and above and inde-

pendently of the track rails, the supporting means including a beam to engage the under side of the body and being removably supported by means of the rocker members, and means for clamping the vehicle body to the beam of the supporting means.

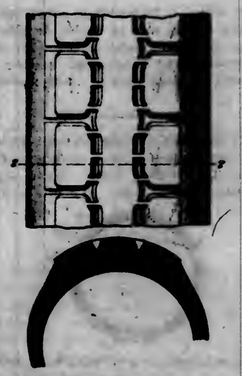
DESIGNS.

59,171. MEAT-LOAF-COOKER RECEPTACLE. HANS ADELMANN, New York, N. Y., assignor to Ham Boiler Corp., New York, N. Y., a Corporation of New York. Filed May 24, 1921. Serial No. 472,264. Term of patent 7 years.



The ornamental design for a meat loaf cooker receptacle, substantially as shown.

59,172. GRAVE-COVER. LEE ANDERSON, Fostoria, Ohio. Filed Oct. 16, 1920. Serial No. 417,527. Term of patent 7 years.



The ornamental design for a grave cover, as shown.

59,173. DOOR-BUMPER. SETH B. ATWOOD, Rockford, Ill. Filed Oct. 29, 1920. Serial No. 420,574. Term of patent 7 years.

The ornamental design for a door bumper, as shown.

59,174. TIRE-CASING. RUSSELL D. BELDEN, Buffalo, N. Y., assignor to Madison Tire & Rubber Company, Inc., Buffalo, N. Y., a Corporation of New York. Filed June 6, 1921. Serial No. 475,442. Term of patent 14 years.

The ornamental design for a tire casing, as shown.

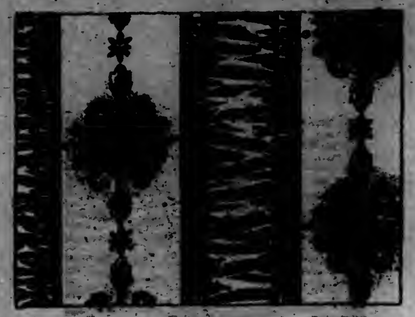
59,175. PAPER DOLL. FLORA BENSON, Angleton, Tex. Filed June 30, 1920. Serial No. 393,185. Term of patent 14 years.

The ornamental design for a paper-doll, as shown.

59,176. PAPER DOLL. FLORA BENSON, Angleton, Tex. Filed June 30, 1920. Serial No. 393,186. Term of patent 14 years.

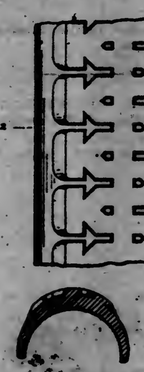
The ornamental design for a paper-doll, as shown.

59,177. TEXTILE FABRIC OR SIMILAR ARTICLE. LUCIEN BIVA, White Plains, N. Y., assignor to Titus Blatter & Company, New York, N. Y., a Corporation of New York. Filed June 16, 1921. Serial No. 478,180. Term of patent 7 years.



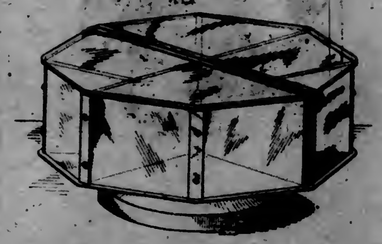
The ornamental design for textile fabrics or similar articles substantially as shown.

59,178. TEXTILE FABRIC OR SIMILAR ARTICLE. LUCIEN BIVA, White Plains, N. Y., assignor to Titus Blatter & Company, New York, N. Y., a Corporation of New York. Filed June 16, 1921. Serial No. 478,181. Term of patent 7 years.



The ornamental design for textile fabrics or similar articles substantially as shown.

59,179. TEXTILE FABRIC OR SIMILAR ARTICLE. Lucien Bing, White Plains, N. Y., assignor to Titus Blatter & Company, New York, N. Y., a Corporation of New York. Filed June 16, 1921. Serial No. 478,162. Term of patent 7 years.

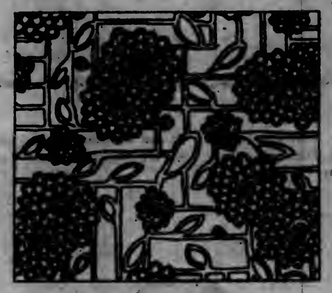


The ornamental design for textile fabrics or similar articles substantially as shown.

59,180. TIRE-TREAD. Arthur L. Breitenstein, Akron, Ohio, assignor to The Giant Tire & Rubber Company, Findlay, Ohio, a Corporation of Ohio. Filed Mar. 29, 1921. Serial No. 456,631. Term of patent 7 years.

The ornamental design for a tire tread substantially as shown.

59,181. GUM AND MINT CASE. Lloyd W. Buchenau, Stockton, Calif. Filed Aug. 10, 1920. Serial No. 402,706. Term of patent 14 years.

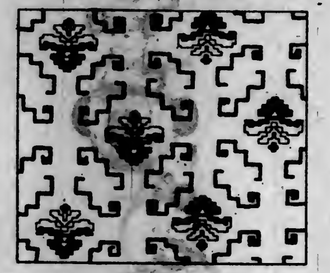


The ornamental design for a gum and mint case, as shown.

59,182. MOVELTY MITTEN. Charles G. Bujarski, Anderson, Ind. Filed July 30, 1920. Serial No. 400,247. Term of patent 14 years.

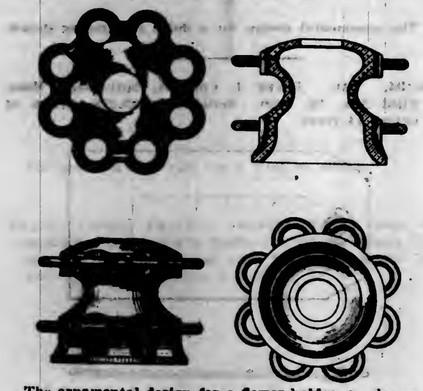
The ornamental design for a novelty mitten, as shown.

59,183. TEXTILE FABRIC. James H. Bunting, New York, N. Y., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed May 28, 1921. Serial No. 473,401. Term of patent 3½ years.



The ornamental design for a textile fabric, as shown.

59,184. TEXTILE FABRIC. James H. Bunting, New York, N. Y., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed May 28, 1921. Serial No. 473,402. Term of patent 3½ years.



The ornamental design for a textile fabric, as shown.

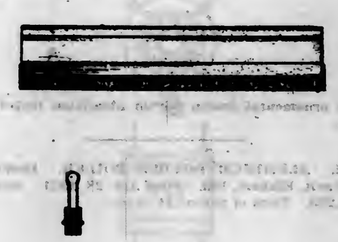
59,185. TEXTILE FABRIC. James H. Bunting, New York, N. Y., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed May 28, 1921. Serial No. 473,403. Term of patent 3½ years.

The ornamental design for a textile fabric, as shown.

59,186. FLOWER-HOLDER. Frederic Carder, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a Corporation of New York. Filed Apr. 9, 1921. Serial No. 460,079. Term of patent 14 years.

The ornamental design for a flower holder, as shown.

59,187. BOTTLE-STOPPER. John P. Casey, Jeannette, Pa. Filed Aug. 21, 1919. Serial No. 319,032. Term of patent 14 years.



The ornamental design for a bottle stopper, as shown.

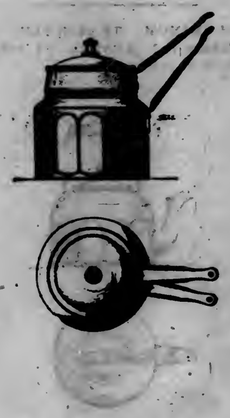
59,188. FINGER-RING. Jass L. Chambers, Kansas City, Mo., assignor to Adelson-Chambers Jewelry Company. Filed July 16, 1921. Serial No. 485,294. Term of patent 7 years.

The ornamental design for a finger ring, as shown.

59,189. GLASS-WIPER. Victor H. Christen, Toledo, Ohio. Filed Dec. 16, 1919. Serial No. 345,146. Term of patent 14 years.

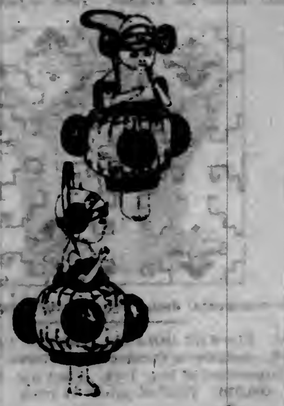
The ornamental design for a glass wiper as shown.

59,190. ALUMINUM TEAKETTLE. Howard A. Church, Elkhart, Ind. Filed Apr. 11, 1921. Serial No. 460,492. Term of patent 14 years.



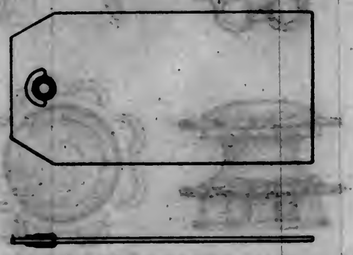
The ornamental design for an aluminum teakettle, as shown.

59,191. ALUMINUM TEAKETTLE. HOWARD A. CHURCH, Elkhart, Ind. Filed Apr. 27, 1921. Serial No. 464,905. Term of patent 7 years.



The ornamental design for an aluminum teakettle, as shown.

59,192. ALUMINUM DOUBLE BOILER. HOWARD A. CHURCH, Elkhart, Ind. Filed Apr. 28, 1921. Serial No. 465,223. Term of patent 14 years.



The ornamental design for an aluminum double boiler, as shown.

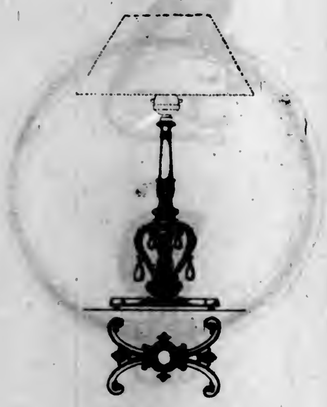
59,193. DOLL'S COSTUME. EDWIN R. CLARK and LEO R. NEUMA, Joliet, Ill. Filed Apr. 11, 1921. Serial No. 460,498. Term of patent 7 years.

The ornamental design for a doll's costume, as shown.

59,194. TAG. JAMES J. COLLINS, Springfield, Mass. Filed Nov. 19, 1920. Serial No. 425,278. Term of patent 14 years.

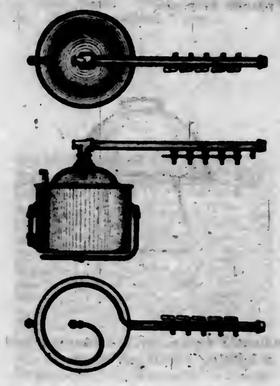
The ornamental design for a tag, as shown.

59,195. RING. VICTOR H. COHN, New York, N. Y. Filed Mar. 5, 1921. Serial No. 450,107. Term of patent 7 years.



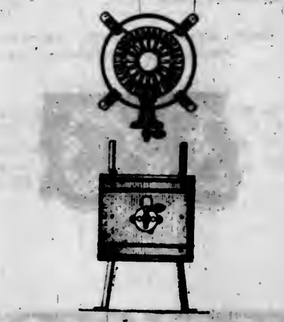
The ornamental design for a ring, as shown.

59,196. RING. VICTOR H. COHN, New York, N. Y. Filed Apr. 26, 1921. Serial No. 464,706. Term of patent 7 years.



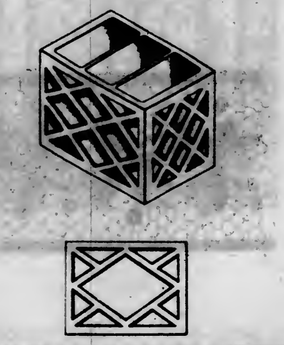
The ornamental design for a ring, as shown.

59,197. LAMP. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed Jan. 12, 1921. Serial No. 436,841. Term of patent 7 years.



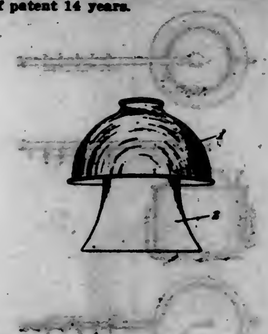
The ornamental design for a lamp, as shown.

59,198. STEAMER. HARRY DALITZ, Cleveland, Ohio, assignor to J. C. Hipp, Cleveland, Ohio. Filed May 16, 1921. Serial No. 470,016. Term of patent 14 years.



The ornamental design for a steamer, as shown.

59,199. GAS-HEATER. HARRY DALITZ, Cleveland, Ohio, assignor to J. C. Hipp, Cleveland, Ohio. Filed May 16, 1921. Serial No. 470,017. Term of patent 14 years.

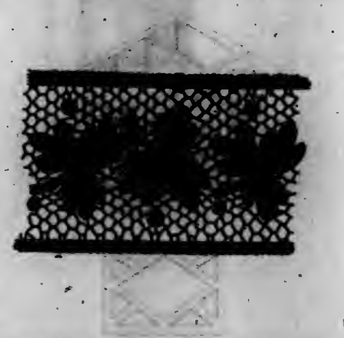


The ornamental design for a gas heater, as shown.

59,200. BATTERY-CASE. EDWARD DAVIS and WALTER E. HOLLAND, Philadelphia, Pa., assignors to Philadelphia Storage Battery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 31, 1921. Serial No. 473,918. Term of patent 14 years.

The ornamental design for a battery case, as shown.

59,201. SHADE, REFLECTOR, OR SIMILAR ARTICLE FOR A LIGHTING FIXTURE. JOHN DOTEN, New York, N. Y. Filed Feb. 5, 1921. Serial No. 442,838. Term of patent 14 years.

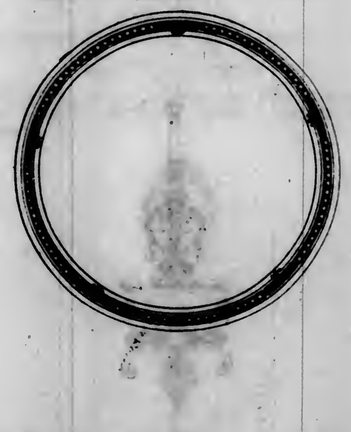


The ornamental design for a shade, reflector or similar article for a lighting fixture, as shown.

59,202. LACE. WALTER DEATCOTT, Alton, R. I., assignor to Richmond Lace Works, Alton, R. I., a Corporation of Maine. Filed Feb. 16, 1921. Serial No. 445,559. Term of patent 3½ years.

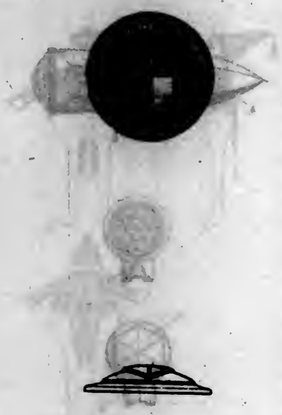
The ornamental design for lace, as shown.

59,203. LACE. WALTER DEATCOTT, Alton, R. I., assignor to Richmond Lace Works, Alton, R. I., a Corporation of Maine. Filed Apr. 12, 1921. Serial No. 460,818. Term of patent 3½ years.



The ornamental design for lace, as shown.

59,204. COMBINED FISHING POLE AND REEL. MILTON S. DUNKELBERGER, Dayton, Ohio. Filed Apr. 28, 1921. Serial No. 465,224. Term of patent 14 years.

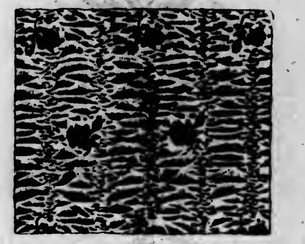


The ornamental design for a combined fishing-pole and reel, as shown.

59,205. PLATE AND SIMILAR ARTICLE. MARTIN M. EISENHARDT, New York, N. Y., assignor to L. Barth & Son, a Partnership composed of Leopold Barth and Harry Barth. Filed July 12, 1919. Serial No. 310,468. Term of patent 14 years.

The ornamental design for a plate or similar article, as shown.

59,206. BUTTON. GEORGE H. FRAGARI, Los Angeles, Calif. Filed Nov. 1, 1920. Serial No. 421,178. Term of patent 14 years.



The ornamental design for a button as shown.

59,207. STATUETTE. MARJORIE PHYLLYS DYRENFORTH FORTUNE, Los Angeles, Calif. Filed Sept. 23, 1920. Serial No. 412,894. Term of patent 3½ years.

The ornamental design for a statuette as shown.

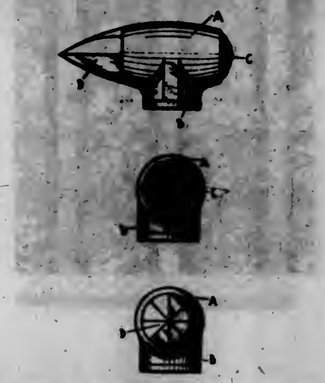
59,208. TEXTILE FABRIC OR ARTICLE OF SIMILAR NATURE. ALFRED FRATI, New York, N. Y., assignor to Titus Blatter & Company, New York, N. Y., a Corporation of New York. Filed June 16, 1921. Serial No. 478,178. Term of patent 7 years.

The ornamental design for textile fabric or article of similar nature substantially as shown.

59,209. TEXTILE FABRIC OR ARTICLE OF SIMILAR NATURE. ALFRED FRATI, New York, N. Y., assignor to Titus Blatter & Company, New York, N. Y., a Corporation of New York. Filed June 16, 1921. Serial No. 478,179. Term of patent 7 years.

The ornamental design for textile fabric or article of similar nature substantially as shown.

59,210. DOLL. Penelope Fyfe, Denver, Colo. Filed Mar. 22, 1921. Serial No. 454,401. Term of patent 7 years.



The ornamental design for a doll, as shown.

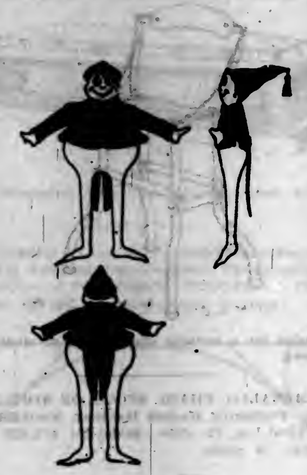
59,211. CHARM OR PENDANT. Morris L. Goldstein, Providence, R. I. Filed Feb. 4, 1921. Serial No. 442,553. Term of patent 14 years.

The ornamental design for a charm or pendant, as shown.

59,212. COWL-LIGHT FOR AUTOMOBILES, &c. Angus R. Gross, Baltimore, Md. Filed Feb. 18, 1921. Serial No. 446,171. Term of patent 14 years.

The ornamental design for a cowl light for automobiles, &c., substantially as shown and described.

59,213. COWL-LIGHT FOR AUTOMOBILES, &c. Angus R. Gross, Baltimore, Md. Filed Feb. 18, 1921. Serial No. 446,172. Term of patent 14 years.



The ornamental design for a cowl light for automobiles, &c., substantially as shown and described.

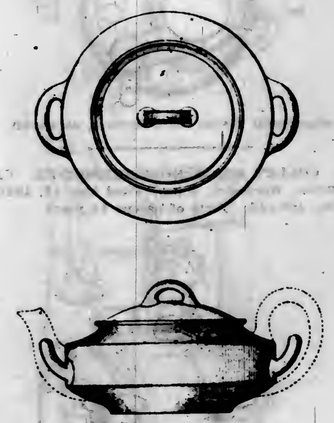
59,214. ELECTRIC FAN AND HEATING DEVICE. George Graff, New York, N. Y., and William A. Kennedy, Leonia, N. J., assignors to Graff, Washbourne & Dunn, a Corporation of New York. Filed June 1, 1921. Serial No. 474,275. Term of patent 14 years.

The ornamental design for an electric fan and heating device as shown and described.

59,215. BROWNIE DOLL. Fred C. Hamill, Los Angeles, Calif. Filed Dec. 22, 1920. Serial No. 432,627. Term of patent 14 years.

The ornamental design for a brownie doll, as shown.

59,216. ELECTRICAL RECEPTACLE FOR CEILING BOXES. Povl Hartmann, Brooklyn, N. Y., assignor to Charles L. Hillits Co., New York, N. Y., a Corporation of New York. Filed May 4, 1921. Serial No. 466,700. Term of patent 14 years.

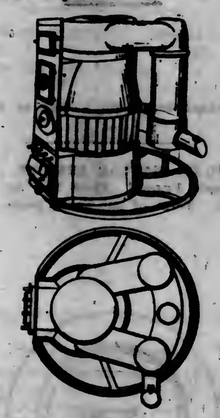


The ornamental design for an electrical receptacle for ceiling boxes, as shown and described.

59,217. DISH OR SIMILAR ARTICLE. George Haviland, Limoges, France. Filed May 16, 1921. Serial No. 470,021. Term of patent 14 years.

The ornamental design for a dish or similar article, as shown.

59,218. BOWL OR SIMILAR ARTICLE. George Haviland, Limoges, France. Filed May 16, 1921. Serial No. 470,022. Term of patent 14 years.



The ornamental design for a bowl or similar article, as shown.

59,219. CUP OR SIMILAR ARTICLE. Charles Haviland, Limoges, France. Filed May 23, 1921. Serial No. 471,980. Term of patent 14 years.

The ornamental design for a cup or similar article, as shown.

59,220. FURNACE. William J. Haynes, Jr., Kansas City, Mo. Filed July 29, 1920. Serial No. 399,906. Term of patent 14 years.

The ornamental design for a furnace, as shown.

59,221. COLLET FOR A HOSE-SUPPORTER. Carl J. Hazelton, Worcester, Mass. Filed May 11, 1921. Serial No. 468,743. Term of patent 14 years.

The ornamental design for a collet for a hose-supporter, as shown.

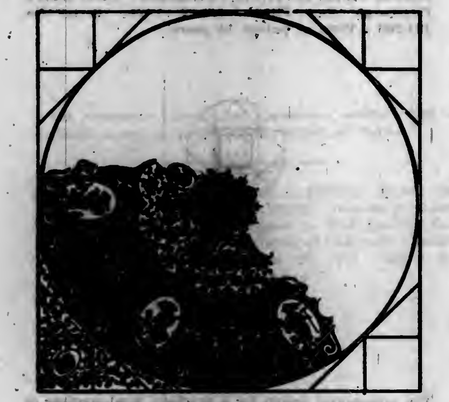
59,222. METALLIC CHAIR, STOOL, OR SIMILAR ARTICLE. Frederick Hagger Headley, Northfield, England. Filed Dec. 22, 1920. Serial No. 432,632. Term of patent 14 years.

The design for a metallic chair, stool, or similar article as shown.

59,223. METALLIC CHAIR, STOOL, OR SIMILAR ARTICLE. Frederick Hagger Headley, Northfield, England. Filed Dec. 22, 1920. Serial No. 432,633. Term of patent 14 years.

The design for a metallic chair, stool, or similar article as shown.

59,224. FLOWER-VASE. Louis H. Hirsch, New York, N. Y. Filed Nov. 20, 1920. Serial No. 425,573. Term of patent 3½ years.

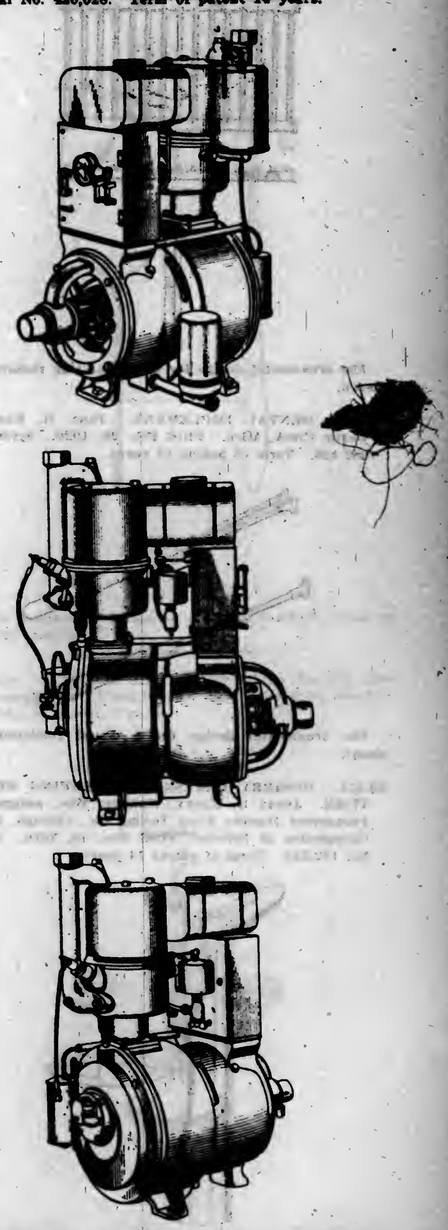


The ornamental design for a flower vase, as shown.

59,225. BURIAL-CASKET. Frederick E. Hollins, Winchester, Mass., assignor to Boston Burial Case Co., West Somerville, Mass., a Copartnership composed of George Heintz and Frederick E. Hollins. Filed Nov. 6, 1920. Serial No. 422,403. Term of patent 14 years.

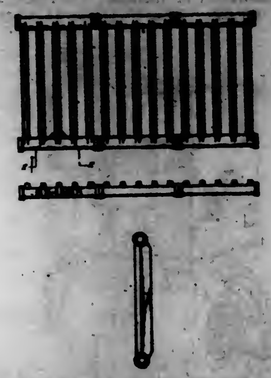
The ornamental design for a burial casket, as shown.

59,226. LACE. George Holt, Philadelphia, Pa., assignor to North American Lace Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 8, 1921. Serial No. 476,102. Term of patent 3½ years.



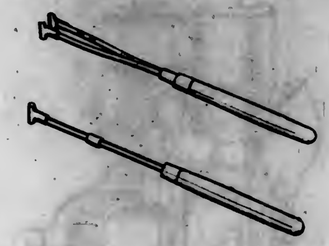
The ornamental design for lace, substantially as shown.

59,227. DOILY. Eugene Holser, Milwaukee, Wis., assignor to Milwaukee Lace Paper Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 30, 1921. Serial No. 457,062. Term of patent 14 years.



The ornamental design for a doily, as shown.

59,228. POWER PLANT. Lee B. Jones, Earl W. Jones, and Robert G. Battin, Evansville, Ind., assignors to Sunbeam Electric Manufacturing Company, Evansville, Ind., a Corporation of Indiana. Filed Oct. 27, 1920. Serial No. 420,026. Term of patent 14 years.



The ornamental design for a power plant, as shown.

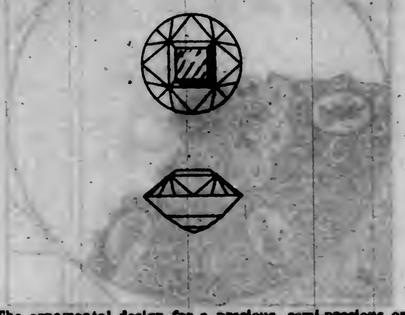
59,229. REFRIGERATING-RADIATOR. August Kuehn, Chicago, Ill. Filed Jan. 26, 1919. Serial No. 273,162. Term of patent 3½ years.

The ornamental design for a refrigerating radiator, as shown.

59,230. DENTAL IMPLEMENT. John H. Kellogg, Battle Creek, Mich. Filed Feb. 28, 1920. Serial No. 362,126. Term of patent 14 years.

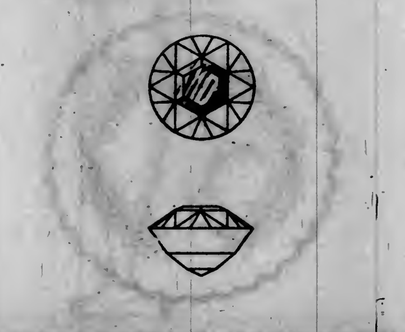
The ornamental design for a dental implement as shown.

59,231. HOSIERY DRYING AND SHAPING STRUCTURE. Jerry H. Kelly, Waupun, Wis., assignor to Paramount Hosiery Form Drying Co., Chicago, Ill., a Corporation of Illinois. Filed Nov. 18, 1916. Serial No. 132,221. Term of patent 14 years.



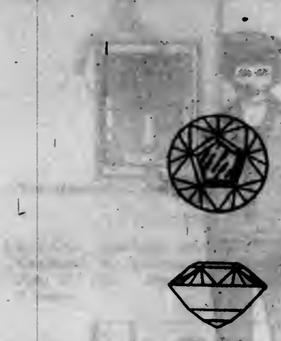
The ornamental design for a hosiery drying and shaping structure, as shown.

59,232. MILK-STRAINER. Floy D. Kincaid, Long Creek, Oreg. Filed July 22, 1920. Serial No. 398,827. Term of patent 14 years.



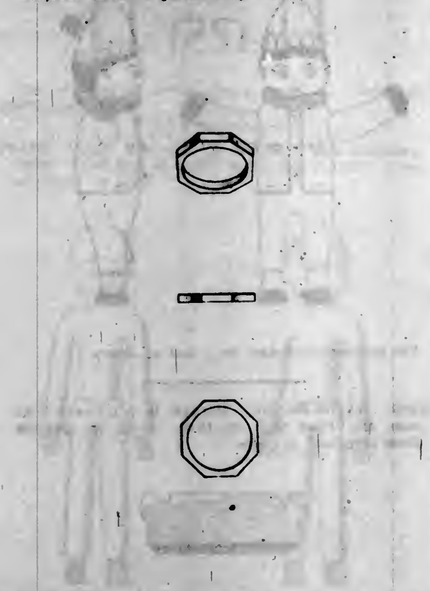
The ornamental design for a milk strainer as shown.

59,233. PRECIOUS, SEMIPRECIOUS OR SYNTHETIC STONE, OR AN IMITATION THEREOF. John Kraus, Pittsburgh, Pa. Filed July 12, 1921. Serial No. 484,203. Term of patent 14 years.



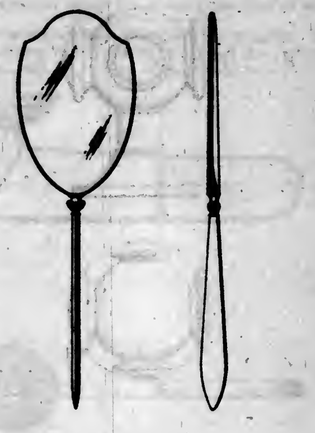
The ornamental design for a precious, semi-precious or synthetic stone, or an imitation thereof, as shown.

59,234. PRECIOUS, SEMIPRECIOUS OR SYNTHETIC STONE, OR AN IMITATION THEREOF. John Kraus, Pittsburgh, Pa. Filed July 12, 1921. Serial No. 484,204. Term of patent 14 years.



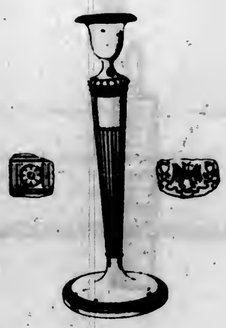
The ornamental design for a precious, semiprecious or synthetic stone, or an imitation thereof as shown.

59,235. PRECIOUS, SEMIPRECIOUS OR SYNTHETIC STONE, OR AN IMITATION THEREOF. John Kraus, Pittsburgh, Pa. Filed July 12, 1921. Serial No. 484,205. Term of patent 14 years.



The ornamental design for a precious, semiprecious or synthetic stone, or an imitation thereof, as shown.

59,236. JEWELRY—NAMELY, A FINGER RING, OR ARTICLE OF SIMILAR NATURE. Isidore H. Lapidus, New York, N. Y., assignor to Elco Jewelry Co., New York, N. Y., a Firm consisting of Isidore H. Lapidus and Lazar Selber. Filed Jan. 20, 1921. Serial No. 438,754. Term of patent 14 years.



The ornamental design for jewelry, namely, a finger ring or article of similar nature as shown.

59,237. BACK OF A MIRROR, BRUSH, OR SIMILAR ARTICLE. Frank H. La Pierre, East Orange, N. J. Filed Feb. 18, 1921. Serial No. 446,187. Term of patent 14 years.

The ornamental design for a back of a mirror, brush or similar article.

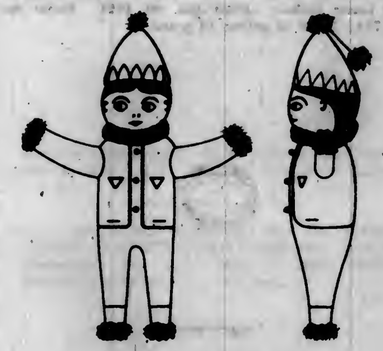
59,238. CANDLESTICK. Frank H. La Pierre, East Orange, N. J. Filed Feb. 18, 1921. Serial No. 446,188. Term of patent 7 years.

The ornamental design for a candlestick as shown.

59,239. AUTOMOBILE PARKING-LIGHT. WILLIAM LEUCHERT, Astoria, N. Y. Filed Mar. 21, 1921. Serial No. 454,296. Term of patent 7 years.

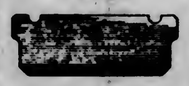
The ornamental design for an automobile parking light as shown.

59,240. CHARM. NATHAN LIEBERFREUND, Passaic, N. J., assignor to Lieberfreund Brothers, New York, N. Y., a Partnership composed of Nathan Lieberfreund and Henry Lieberfreund. Filed Apr. 7, 1921. Serial No. 459,481. Term of patent 7 years.



The ornamental design for a charm as shown.

59,241. CALENDAR-MOUNT. EDWIN R. LOOS, New York, N. Y., assignor to The Blue Jacket Tailoring Company, New York, N. Y. Filed Feb. 12, 1920. Serial No. 358,151. Term of patent 3½ years.

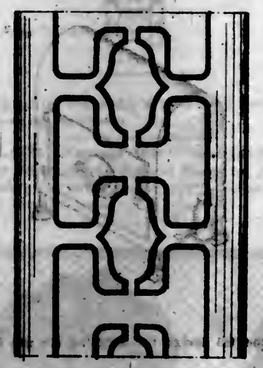


The ornamental design for a calendar mount, as shown.

59,242. DOLL. MARGARET MACDONALD, Davenport, Iowa. Filed May 28, 1921. Serial No. 471,986. Term of patent 14 years.

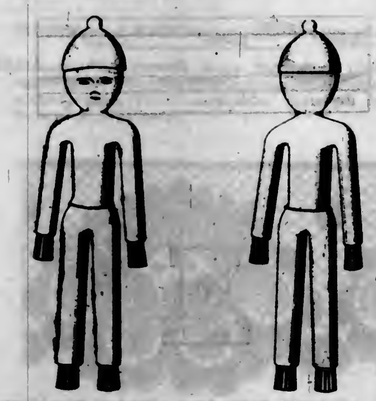
The ornamental design for a doll as shown.

59,243. RAZOR-BLADE. HECTOR P. MACLAGAN, Chicago, Ill. Filed Mar. 28, 1919. Serial No. 285,938. Term of patent 3½ years.



The ornamental design for a razor blade as shown and described.

59,244. WATCH-FOB. JOHN J. MCAVOY, Seattle, Wash. Filed Jan. 20, 1920. Serial No. 355,190. Term of patent 3½ years.



The ornamental design for a watch fob, as shown.

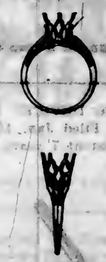
59,245. TREAD FOR AUTOMOBILE-CASINGS. CLARENCE E. MCCORMICK, Youngstown, Ohio. Filed Feb. 21, 1921. Serial No. 446,965. Term of patent 7 years.

The ornamental design for a tread for automobile casings, as shown.

59,246. DOLL. CHARLES T. MCHENRY, San Francisco, Calif. Filed Mar. 9, 1921. Serial No. 450,979. Term of patent 14 years.

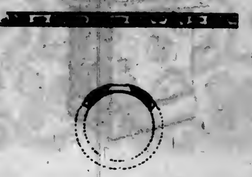
The ornamental design for a doll, as shown.

59,247. WATCHCASE-BOW. JEREMIAH MCGREEVY, Brooklyn, N. Y., assignor to Solidarity Watch Case Company, Brooklyn, N. Y., a Corporation of New York. Filed June 15, 1920. Serial No. 389,240. Term of patent 14 years.



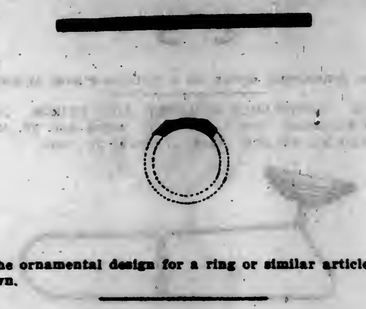
The ornamental design for a watchcase bow, as shown.

59,248. VEGETABLE SCRAPER AND PARER. JOHN MCNAUGHTON, New York, N. Y. Filed Apr. 29, 1921. Serial No. 465,551. Term of patent 3½ years.



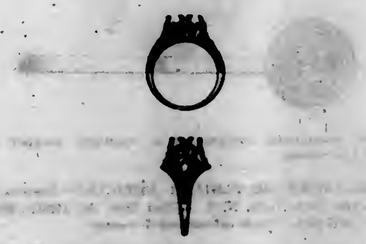
The ornamental design for a vegetable scraper and parer, as shown.

59,249. RING OR SIMILAR ARTICLE. JOSHUA W. MAYER, New York, N. Y. Filed Mar. 30, 1921. Serial No. 457,056. Term of patent 7 years.



The ornamental design for a ring or similar article, as shown.

59,250. RING OR SIMILAR ARTICLE. JOSHUA W. MAYER, New York, N. Y. Filed Apr. 14, 1921. Serial No. 461,425. Term of patent 7 years.



The ornamental design for a ring or similar article, as shown.

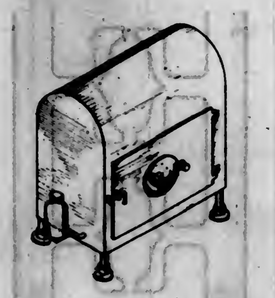
59,251. RING OR SIMILAR ARTICLE. JOSHUA W. MAYER, New York, N. Y. Filed Apr. 14, 1921. Serial No. 461,426. Term of patent 7 years.

The ornamental design for a ring or similar article, as shown.

59,252. RING OR SIMILAR ARTICLE. JOSHUA W. MAYER, New York, N. Y. Filed May 18, 1921. Serial No. 470,617. Term of patent 7 years.

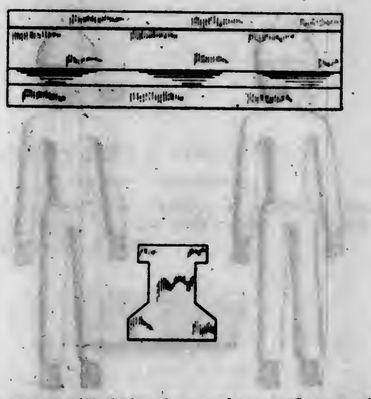
The ornamental design for a ring or similar article, as shown.

59,253. ADVERTISING DEVICE. FREDERIC MERRIMAN, Mill Valley, Calif. Filed Jan. 10, 1921. Serial No. 436,375. Term of patent 7 years.



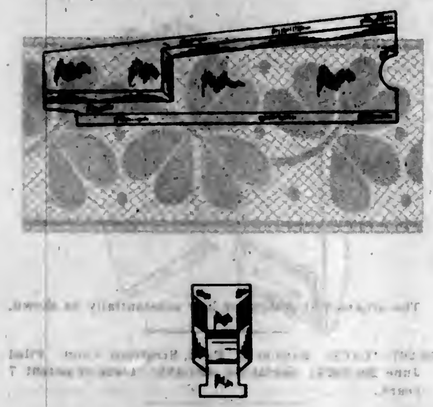
The ornamental design for an advertising device, as shown and described.

59,254. BADGE, PIN, EMBLEM, OR SIMILAR ARTICLE. ARTHUR M. MILLARD, Chicago, Ill., assignor to Central Council, Order of The Builders for Boys, Chicago, Ill., a Corporation of Illinois. Filed Apr. 26, 1921. Serial No. 465,226. Term of patent 14 years.



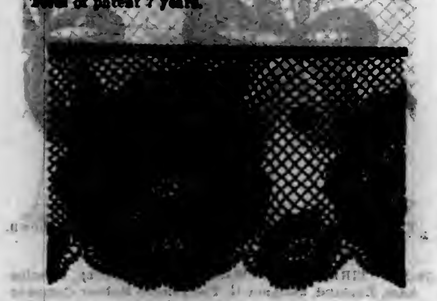
The ornamental design for a badge, pin, emblem, or the like, as shown.

59,255. CASING FOR GAS-HEATERS. JOSEPH MITERA, Plainfield, N. J. Filed Mar. 23, 1920. Serial No. 368,103. Term of patent 7 years.



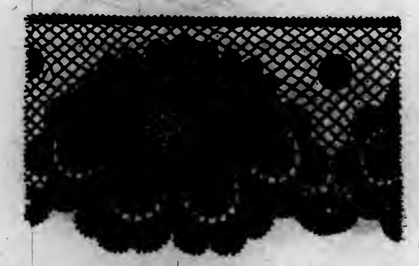
The ornamental design for a casing for gas heaters, as shown.

59,256. REFRACTORY FLOOR MEMBER FOR ELECTRIC FURNACES. FREDERICK W. MOFFAT, Weston, Ontario, Canada. Filed Apr. 8, 1921. Serial No. 459,750. Term of patent 14 years.



The ornamental design for a refractory floor member for electric furnaces.

59,257. REFRACTORY ROOF MEMBER FOR ELECTRIC FURNACES. FREDERICK W. MOFFAT, Weston, Ontario, Canada. Filed Apr. 8, 1921. Serial No. 459,751. Term of patent 14 years.

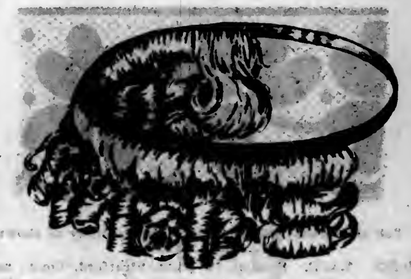


The ornamental design for a refractory roof member for electric furnaces, as shown.

59,258. LACE. THOMAS MONK, Bridgeport, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed June 4, 1921. Serial No. 475,105. Term of patent 7 years.

The ornamental design for lace, substantially as shown.

59,259. LACE. THOMAS MONK, Bridgeport, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed June 4, 1921. Serial No. 475,106. Term of patent 7 years.



The ornamental design for lace, substantially as shown.

59,260. LACE. THOMAS MONK, Bridgeport, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed June 4, 1921. Serial No. 475,107. Term of patent 7 years.

The ornamental design for lace, substantially as shown.

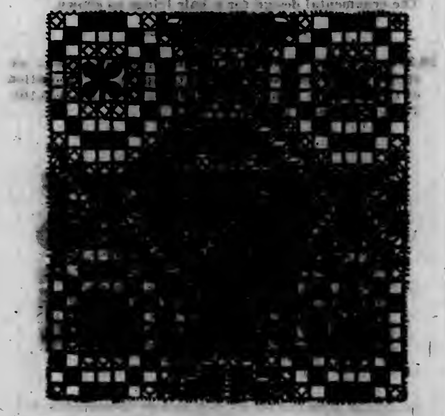
59,261. HAIR FRINGE. MAX MULLER, New York, N. Y. Filed Oct. 4, 1919. Serial No. 328,594. Term of patent 7 years.

The ornamental design for a hair fringe as shown.

59,262. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed June 4, 1921. Serial No. 475,101. Term of patent 7 years.

The ornamental design for lace substantially as shown.

59,263. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed June 4, 1921. Serial No. 475,102. Term of patent 7 years.

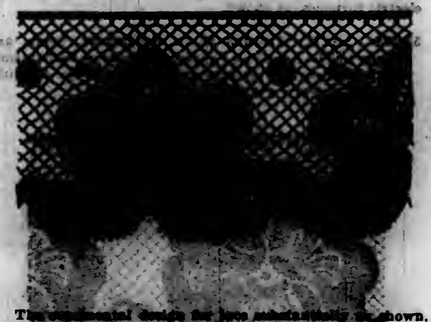


The ornamental design for lace substantially as shown.

59,264. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed June 4, 1921. Serial No. 475,103. Term of patent 7 years.

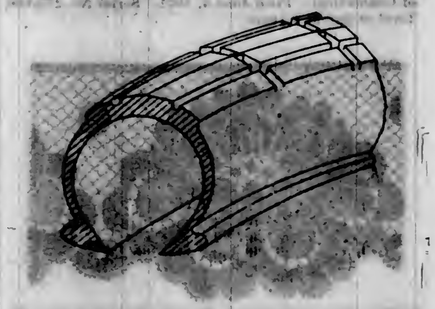
The ornamental design for lace, substantially as shown.

59,265. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed June 4, 1921. Serial No. 475,104. Term of patent 7 years.



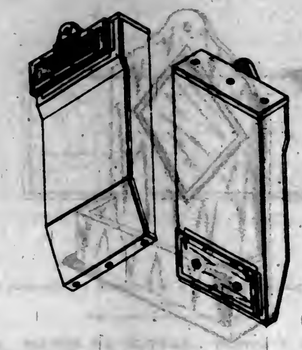
The ornamental design for lace, substantially as shown.

59,266. LACE. SAMUEL H. PAGE, Stratford, Conn. Filed June 20, 1921. Serial No. 481,410. Term of patent 7 years.



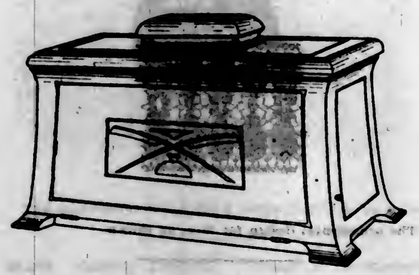
The ornamental design for lace substantially as shown.

59,267. LACE. SAMUEL H. PAGE, Stratford, Conn. Filed June 29, 1921. Serial No. 481,411. Term of patent 7 years.



The ornamental design for lace substantially as shown.

59,268. TIRE-TREAD. WALLACE HENRY PAULL, Birmingham, England, assignor to The Dunlop Rubber Company, Limited, London, England. Filed Feb. 21, 1920. Serial No. 360,413. Term of patent 14 years. (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



The ornamental design for a tire tread as shown.

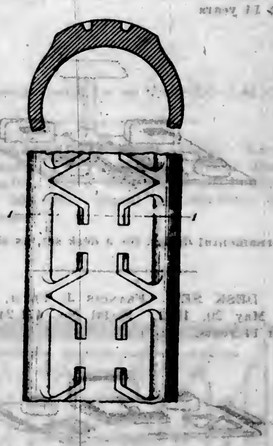
59,269. MAIL-BOX. EDWARD T. FRENCH, St. Paul, Minn. Filed June 27, 1921. Serial No. 480,937. Term of patent 14 years.

The ornamental design for a mail box, as shown.

59,270. PORTABLE CASE HAVING COMPARTMENTS FOR STATIONERY SUPPLIES. EDWARD C. PETERS, Fairfield, Iowa. Filed Sept. 23, 1920. Serial No. 412,390. Term of patent 3½ years.

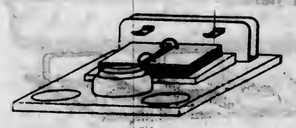
The ornamental design for a portable case having compartments for stationery supplies, as shown.

59,271. LACE. HANS ALBERT PHILIPS, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed June 4, 1921. Serial No. 475,108. Term of patent 7 years.



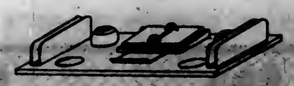
The ornamental design for lace substantially as shown.

59,272. LACE. HANS ALBERT PHILIPS, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed June 4, 1921. Serial No. 475,100. Term of patent 7 years.



The ornamental design for lace substantially as shown.

59,273. PNEUMATIC-TIRE TREAD. ROBERT M. PERSON, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Apr. 12, 1921. Serial No. 460,812. Term of patent 14 years.

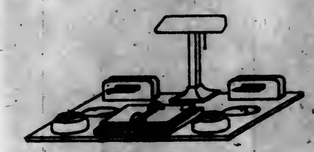


The ornamental design for a pneumatic tire tread as shown.

59,274. DESK SET. FRANCIS J. PLYM, Niles, Mich. Filed May 20, 1921. Serial No. 471,245. Term of patent 14 years.

The ornamental design for a desk set, as shown.

59,276. DESK SET. FRANCIS J. PLYM, Niles, Mich. Filed May 20, 1921. Serial No. 471,246. Term of patent 14 years.



The ornamental design for a desk set, as shown.

59,276. DESK SET. FRANCIS J. PLYM, Niles, Mich. Filed May 20, 1921. Serial No. 471,247. Term of patent 14 years.

The ornamental design for a desk set, as shown.

59,277. DESK SET. FRANCIS J. PLYM, Niles, Mich. Filed May 20, 1921. Serial No. 471,248. Term of patent 14 years.

The ornamental design for a desk set, as shown.

59,278. DESK SET. FRANCIS J. PLYM, Niles, Mich. Filed May 20, 1921. Serial No. 471,249. Term of patent 14 years.

The ornamental design for a desk set, as shown.

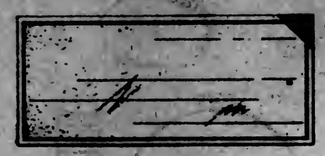
59,279. DESK SET. FRANCIS J. PLYM, Niles, Mich. Filed May 20, 1921. Serial No. 471,250. Term of patent 14 years.

The ornamental design for a desk set, as shown.

59,280. COMB AND BRUSH HOLDER. ALEXANDER P. POLANCHYN, Girardville, Pa. Filed Nov. 9, 1920. Serial No. 422,905. Term of patent 7 years.

The ornamental design for a comb and brush holder as shown.

59,281. LACE. GEORGE RAWSON, Oakland Beach, R. I., assignor to Richmond Lace Works, Alton, R. I., a Corporation of Maine. Filed Apr. 28, 1921. Serial No. 465,227. Term of patent 3½ years.

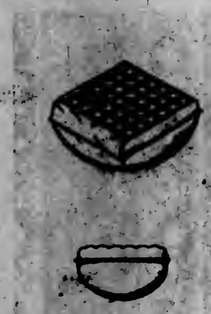


The ornamental design for lace, as shown.

59,282. DOLL. DOROTHY READ, Fort Smith, Ark. Filed May 23, 1921. Serial No. 471,991. Term of patent 14 years.

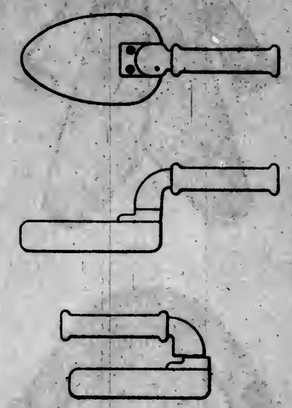
The ornamental design for a doll, as shown.

59,283. BANK-CHECK. ROBERT P. RICKARDS, Great Falls, Mont. Filed Apr. 13, 1918. Serial No. 231,420. Term of patent 14 years.



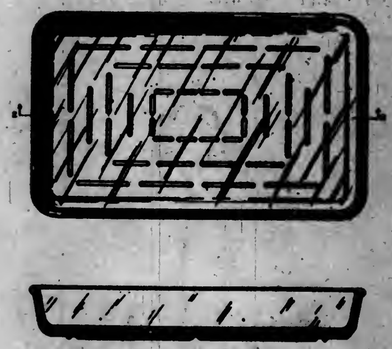
The ornamental design for a bank check, as shown.

59,284. BADGE OR BUTTON. BURTON I. REED, Concord, N. H. Filed Mar. 26, 1921. Serial No. 455,905. Term of patent 7 years.



The ornamental design for a badge or button, as shown.

59,285. CANDY TABLET. THOMAS D. RICHARDSON, Philadelphia, Pa. Filed Feb. 12, 1921. Serial No. 444,607. Term of patent 14 years.



The ornamental design for a candy tablet, substantially as shown.

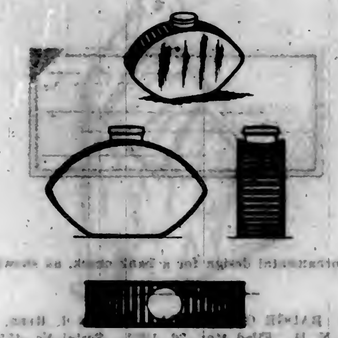
The ornamental design for an electric iron as shown.

59,287. TRANSPARENT GLASS DISH. GEORGE D. SAILER, Jeannette, Pa., assignor to McKee Glass Company, Jeannette, Pa., a Corporation of Pennsylvania. Filed Apr. 26, 1921. Serial No. 464,690. Term of patent 14 years.

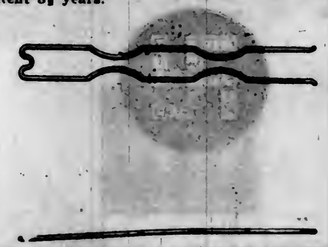
The ornamental design for a transparent glass dish as shown.

59,288. CHILD'S ONE-PIECE FUR GARMENT. SIDNEY S. HAMBURG, Ingwood, N. Y. Filed May 12, 1921. Serial No. 469,383. Term of patent 7 years.



The ornamental design for a child's one-piece fur garment, as shown.

59,289. DOLL. MICHAEL SCHORR, New York, N. Y. Filed Apr. 16, 1921. Serial No. 462,668. Term of patent 7 years.

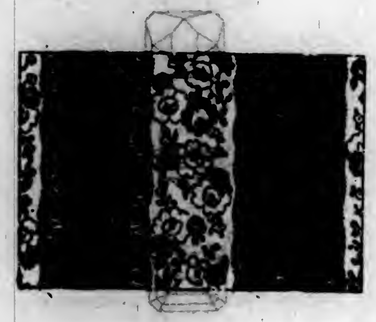


The ornamental design for a doll as shown.

59,290. BOX OR CONTAINER. Charles B. Arndt, Philadelphia, Pa., assignor to Wesley Potter Co., Philadelphia, Pa., a Firm composed of John J. Potter. Filed Sept. 13, 1918. Serial No. 254,015. Term of patent 3½ years.

The ornamental design for a box or container, substantially as shown in the accompanying drawing.

69,291. HAIRPIN. ARTHUR J. SMITH, Tappan, N. Y. Filed Jan. 25, 1921. Serial No. 439,865. Term of patent 3½ years.



The ornamental design for a hair pin, as shown.

59,292. MATTRESS-TICKING. EUGENE SONNTAG, Jr., Astoria, N. Y., assignor to M. Binkovits & Son, New York, N. Y., a Copartnership of New York. Filed June 15, 1921. Serial No. 477,829. Term of patent 3½ years.

The ornamental design for mattress ticking, as shown.

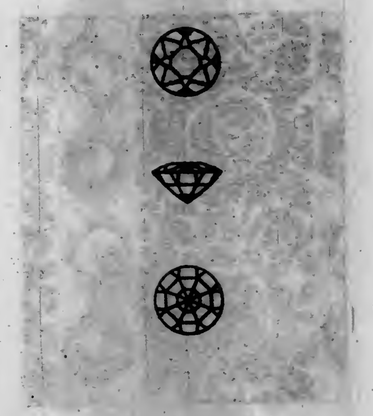
59,293. MATTRESS-TICKING. EUGENE SONNTAG, Jr., Astoria, N. Y., assignor to M. Binkovits & Son, New York, N. Y., a Copartnership of New York. Filed June 15, 1921. Serial No. 477,830. Term of patent 3½ years.

The ornamental design for mattress ticking, as shown.

59,294. MATTRESS-TICKING. EUGENE SONNTAG, Jr., Astoria, N. Y., assignor to M. Binkovits & Son, New York, N. Y., a Copartnership of New York. Filed June 15, 1921. Serial No. 477,831. Term of patent 3½ years.

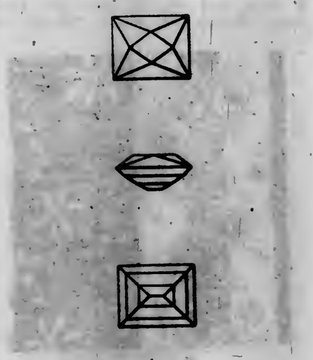
The ornamental design for mattress ticking, as shown.

59,295. MATTRESS-TICKING. EUGENE SONNTAG, Jr., Astoria, N. Y., assignor to M. Binkovits & Son, New York, N. Y., a Copartnership of New York. Filed June 15, 1921. Serial No. 477,832. Term of patent 3½ years.



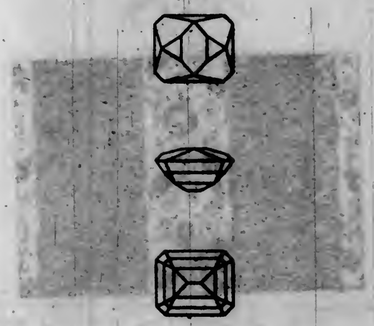
The ornamental design for mattress ticking, as shown.

59,296. MATTRESS-TICKING. EUGENE SONNTAG, Jr., Astoria, N. Y., assignor to M. Binkovits & Son, New York, N. Y., a Copartnership of New York. Filed June 15, 1921. Serial No. 477,833. Term of patent 3½ years.



The ornamental design for mattress ticking, as shown.

59,297. PRECIOUS, SEMIPRECIOUS, OR SYNTHETIC JEWEL. HERMAN D. STEBL, Philadelphia, Pa., assignor to Swiss Jewel Co. S. A., Locarno, Switzerland. Filed Feb. 19, 1921. Serial No. 446,524. Term of patent 3½ years.



The ornamental design for a precious, semi-precious, or synthetic jewel, substantially as shown.

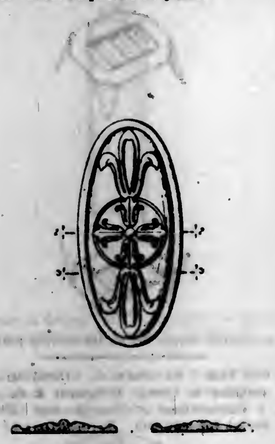
59,298. PRECIOUS, SEMIPRECIOUS, OR SYNTHETIC JEWEL. HERMAN D. STEBL, Philadelphia, Pa., assignor to Swiss Jewel Co. S. A., Locarno, Switzerland. Filed Feb. 19, 1921. Serial No. 446,525. Term of patent 3½ years.

The ornamental design for a precious, semi-precious, or synthetic jewel, substantially as shown.

59,299. PRECIOUS, SEMIPRECIOUS, OR SYNTHETIC JEWEL. HERMAN D. STEBL, Philadelphia, Pa., assignor to Swiss Jewel Co. S. A., Locarno, Switzerland. Filed Feb. 19, 1921. Serial No. 446,526. Term of patent 3½ years.

The ornamental design for a precious, semiprecious, or synthetic jewel substantially as shown.

59,300. RING. WALTER L. STEWART, Kenton, Ohio. Filed Jan. 8, 1918. Serial No. 210,941. Term of patent 3½ years.

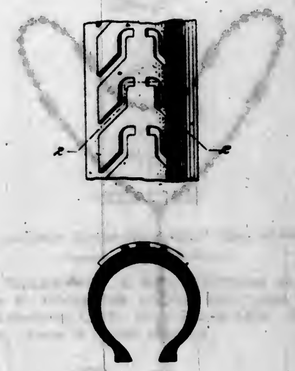


The ornamental design for a ring, as shown.

59,301. FLASHLIGHT. WALTER B. STEPHENSON, Marion, Ind., assignor to Delta Electric Company, Marion, Ind., a Corporation of Indiana. Filed Apr. 14, 1919. Serial No. 290,102. Term of patent 7 years.

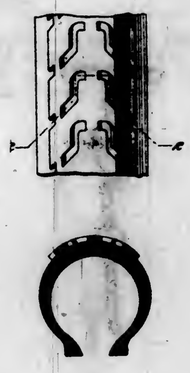
The ornamental design for a flashlight as shown.

59,302. MEDALLION. CHARLES A. STUART, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Mar. 14, 1921. Serial No. 452,838. Term of patent 14 years.



The ornamental design for a medallion as shown and described.

59,303. PICTURE, MIRROR, OR LIKE FRAME. ANTON SWIRNTEK, Chicago, Ill. Filed July 6, 1921. Serial No. 482,856. Term of patent 7 years.



The ornamental design for a picture, mirror, or like frame, as shown.

59,304. TIRE. JOHN TENNEY, Jr., Plainfield, N. J., assignor to Howe Rubber Corporation, a Corporation of Delaware. Filed Jan. 5, 1921. Serial No. 435,279. Term of patent 14 years.

The ornamental design for a tire, as shown.

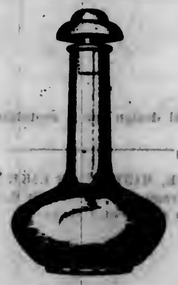
59,305. TIRE. JOHN TENNEY, Jr., Plainfield, N. J., assignor to Howe Rubber Corporation, a Corporation of Delaware. Filed Jan. 5, 1921. Serial No. 435,280. Term of patent 14 years.

The ornamental design for a tire, as shown.

59,306. ROSARY. GUSTAVE TEISSIER, Wyandanch, N. Y. Filed July 13, 1921. Serial No. 485,099. Term of patent 14 years.

The ornamental design for a rosary, as shown.

59,307. WATCH-CHAIN. RICHARD VAN DONLAN, Albuquerque, N. Mex., assignor of one-half to Louis P. Hilderbrand, Cooley, Ariz. Filed Oct. 9, 1920. Serial No. 415,913. Term of patent 14 years.



The ornamental design for a watch chain, as shown.

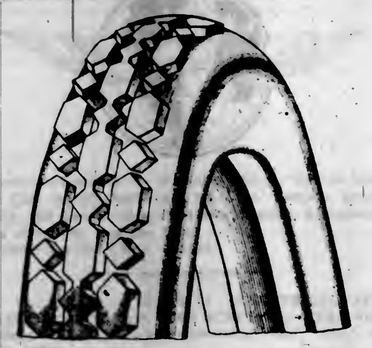
59,308. ICE-CREEPING PLATE. JOHN WEBER, Schoharie, N. Y. Filed Nov. 11, 1920. Serial No. 423,280. Term of patent 14 years.

The ornamental design for an ice-creeper-plate as shown.

59,309. BOTTLE. MATTHEW G. VIDULICH, Jersey City, N. J., assignor to George Borgfeldt & Co., New York, N. Y., a Corporation of New Jersey. Filed Mar. 5, 1921. Serial No. 450,093. Term of patent 14 years.

The ornamental design for a bottle substantially as shown and described.

59,310. VEHICLE-TIRE. REGINALD H. WATERS, Cumberland, Md., assignor to Kelly-Springfield Tire Company, New York, N. Y., a Corporation of New Jersey. Filed June 2, 1921. Serial No. 474,578. Term of patent 14 years.



The ornamental design for a vehicle tire, as shown and described.

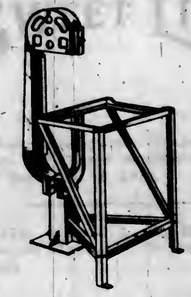
59,311. RECEPTACLE FOR TOILET POWDER AND OTHER COMMODITIES. LOUIS A. WEGENAAR, Brooklyn, N. Y. Filed Sept. 23, 1920. Serial No. 412,403. Term of patent 14 years.

The ornamental design for a receptacle for toilet powder and other commodities substantially as shown.

59,312. TIRE-TREAD. WILSON F. WILEY and ADOLPH REINSBERG, Salt Lake City, Utah. Filed Jan. 5, 1920. Serial No. 349,617. Term of patent 7 years.

The ornamental design for a tire tread, as shown.

59,313. PASTRY-LIFTER. WILLIAM G. WILSON, West Brighton, N. Y. Filed Apr. 25, 1921. Serial No. 464,456. Term of patent 3½ years.

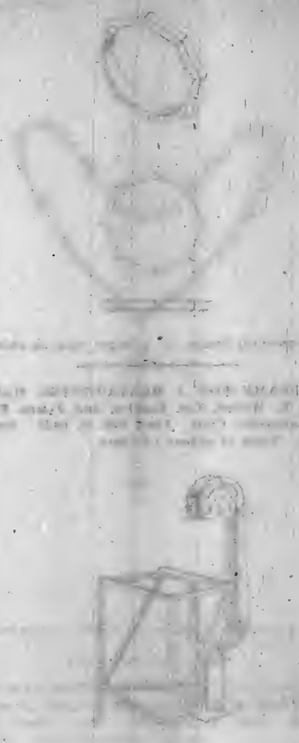


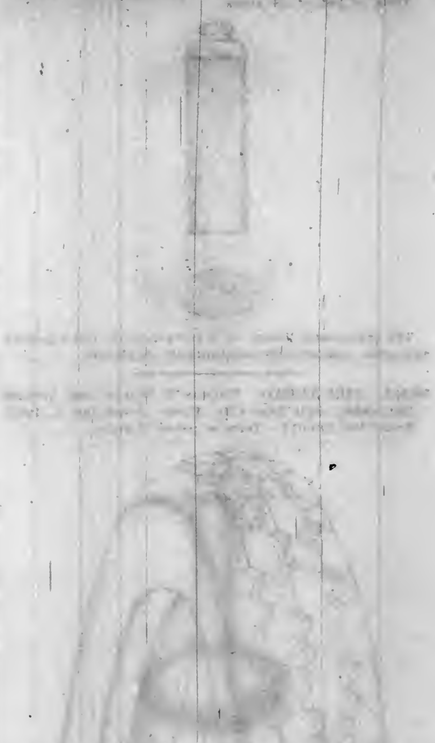
The ornamental design for a pastry lifter, as shown.

59,314. FINGER-RING. JOSH WINSEN, Detroit, Mich. Filed Mar. 14, 1921. Serial No. 452,320. Term of patent 14 years.

The ornamental design for a finger ring, as shown.

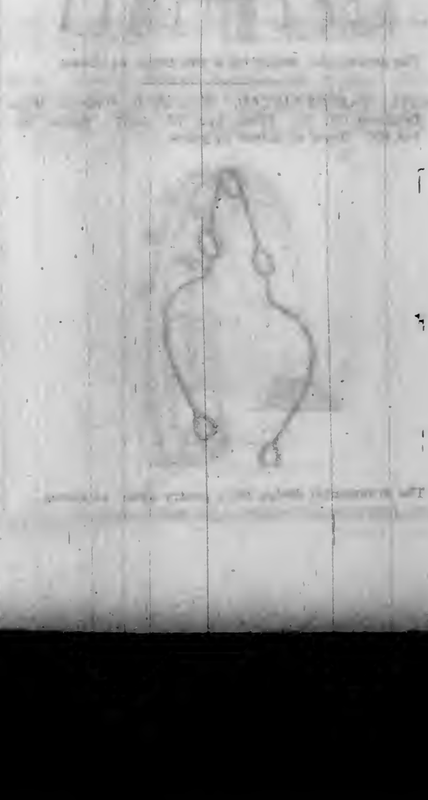
59,315. FRAME FOR A MEAT-CUTTING MACHINE. WILSON R. WOODS, Los Angeles, and JAMES F. LANGSTON, Lancaster, Calif. Filed Feb. 9, 1920. Serial No. 357,363. Term of patent 14 years.





The ornamental design for a frame for a meat cutting machine, as shown.

59,316. JEWELRY — NAMELY, A FINGER-RING OR ARTICLE OF SIMILAR NATURE. FRANK ZOLDO, New York, N. Y. Filed June 17, 1921. Serial No. 478,440. Term of patent 7 years.



The ornamental design for jewelry, namely a finger ring or article of similar nature as shown.

Ser. No. 137,096. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MENLEY & JAMES, LIMITED, New York, New York, N. Y. Filed Sept. 11, 1920.

VOLIDINE

Particular description of goods.—Pharmaceutical Preparations in the Nature of an Antiseptic or Counter-Irritant to be Used Externally.
Claims use since Aug. 2, 1920.

Ser. No. 137,163. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) AKTIEBOLAGET VAPORACKUMULATOR, Stockholm, Sweden. Filed Sept. 14, 1920.

VAPORACKUMULATOR

Particular description of goods.—Steam-Accumulator.
Claims use since Dec. 9, 1919.

Ser. No. 137,207. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CALIFORNIA GROWERS ASSOCIATION, INC., Los Angeles, Calif. Filed Sept. 15, 1920.

SIERRA

Particular description of goods.—Canned Fruits, Except Olives, and Canned Vegetables.
Claims use since Apr. 12, 1920.

Ser. No. 137,218. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WALTER L. EBHARDT, St. Louis, Mo. Filed Sept. 15, 1920.

CARBORENE

ANTISEPTIC GERMICIDE

PREPARED BY
CARBORENE CHEMICAL CO.
ST. LOUIS, MO.

No claim being made to the words "Antiseptic, Germicide, Prepared by, St. Louis, Mo.," apart from the mark as shown.
Particular description of goods.—Antiseptics.
Claims use since Jan. 1, 1919.

Ser. No. 137,562. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) BARNHART BROTHERS & SPINDLER, Chicago, Ill. Filed Sept. 24, 1920.

TENSO

Particular description of goods.—Non-Ferrous Metal Alloys.
Claims use since June 15, 1920.

Ser. No. 138,745. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ANGIER CHEMICAL CO., Boston, Mass. Filed Oct. 25, 1920.

No claim being made to the words "Emulsion de Petroleo," "Marca de Fabrica," "Sin Sabor," "Sin Olor,"

"Tonico," and "Remedio" apart from the mark shown on the drawing.

Particular description of goods.—An Emulsion of Refined Petroleum Used as an Internal Remedy in Affections of the Throat and Lungs, Such as Coughs, Colds, Influenza, Grip, Pneumonia, Diphtheria, and Bronchitis. It Also is Used in Functional Disorders of the Digestive Organs.

Claims use since July 1, 1893.

Ser. No. 138,792. (CLASS 2. RECEPTACLES.) UNION TOOL CHEST COMPANY, Rochester, N. Y. Filed Oct. 25, 1920.

UNION

Particular description of goods.—Tool-Chests.
Claims use since 1906.

Ser. No. 138,842. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FRANÇOIS JOSEPH DE SPOTURNO COTT, Suresnes, France. Filed Oct. 27, 1920.

Particular description of goods.—Face-Powders.
Claims use since 1914.

Ser. No. 138,998. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE OHIO DAIRY CO., Toledo, Ohio. Filed Oct. 30, 1920.

Particular description of goods.—Butter Substitute.
Claims use since Oct. 11, 1920.

Ser. No. 139,316. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) STANDARD CONVEYOR COMPANY, North St. Paul, Minn. Filed Nov. 6, 1920.

No claim being made to the words "Gravity" and "Free Power" apart from the mark shown in the drawing.

Particular description of goods.—Gravity-Conveyors, Slat Power-Conveyors, Belt Conveyors, Incline-Elevators, Automatic Elevators, Spirals, and Parts Thereof.
Claims use since Sept. 18, 1920.

Ser. No. 139,737. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) JOHN J. DOWNEY, Burgettstown, Pa. Filed Nov. 17, 1920.

"Little-Wonder"

Particular description of goods.—Washing Compound.
Claims use since Aug. 15, 1920.

Ser. No. 139,966. (CLASS 2. RECEPTACLES.) EDWARD C. WALLEN, 2d, Batavia, N. Y. Filed Nov. 22, 1920.

PLUMBIZED

Particular description of goods.—Pails, Pans, Vats, Buckets, Scoops, Dippers, Skimmers, and Cans for Holding Refuse and Chemicals.
Claims use since Jan. 1, 1919.

Ser. No. 140,331. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HAWLEY & HOOPS, New York, N. Y. Filed Nov. 29, 1920.

BLACKCAPS

Particular description of goods.—Candy.
Claims use since about 1900.

Ser. No. 140,397. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) NEW ERA OPTICAL CO., Chicago, Ill. Filed Nov. 29, 1920.

Particular description of goods.—Moving-Picture Slides, Amoptiscopes, Eyeglasses, Spectacles, Goggles, Eye-Protectors, Eye-Shields, Bird-Glasses, Field-Glasses, Magnifying-Glasses, Reading-Glasses, Sun-Glasses, Ophthalmic Lenses, Condensing-Lenses, Trial Test-Lenses, Edged Lenses, Uncut Lenses, Lens-Blanks, Trial Frames, Trial Sets, Binoculars, Loupes, Lorgnettes, Test-Type Cabinets, Test-Charts, Test-Cards, Test-Types, Thermometers, Compasses, Stereoscopes, Combined Ophthalmoscopes and Retinoscopes, Ophthalmoscopes, Retinoscopes, Ophthalmometers, Eye-Models, Optometers, Photometers, Prismoptometers, Punctometers, Rotary Prisms, Schematic Eye-Tests, "Ski-Optometer" Automatic Trial Frames, Pedometers, Telescopes, Axis-Marking Instruments, Lens-Centering Machines, Cement-Segment Setters, Scale Bifocal Setters, Eyeglass-Fitting Sets, Calipers, Eye-Plates, Eye-Rests, Lens-Stretchers, Strap-Gages, Millimeter-Gages, Temple-Gages, Lens-Gages, Lens-Measures, Lens-Stops, Millimeter-Rules, Pupillary Measures, Gold-Testing Needles, Gold-Weighing Scales, Neutralizing Sets, Tape-Measures, Muscle-Tests, Bifocal-Lens Holders, and Eyeglass and Spectacle Mountings Consisting of Handles, Frames, Guards, End Pieces, Fronts, Grab-Backs, Temples, Temple-Tubes, Washers, Screws, Studs, Springs, Nose-Rests, Rims, Bridges, Comfort-Pads, Comfort-Pad Nose-Cushions, and Temple Ear-Protectors.
Claims use since on or about Mar. 15, 1913.

Ser. No. 140,420. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) FARRON S. BETTS, Brooklyn, N. Y. Filed Nov. 30, 1920.

Applicant hereby disclaims the exclusive right to the use of word "Albums" apart from the mark shown in the drawing.

Particular description of goods.—An Album for Phonograph-Records.
Claims use since Jan. 1, 1912.

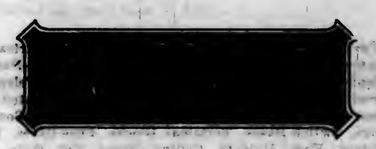
Ser. No. 140,545. (CLASS 15. OILS AND GREASES.) RUSK OIL CO. OF PHILADELPHIA, PA., Philadelphia, Pa. Filed Dec. 2, 1920.

GREFLO

Particular description of goods.—Lubricating Greases.
Claims use since Nov. 11, 1920.

Ser. No. 140,641. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FIGARO CHEMICAL CO., Dallas, Tex. Filed Dec. 6, 1920.

The words "Egg Preserver, Sodium Silicate" are hereby disclaimed except in combination with mark shown.



Particular description of goods.—Egg-Preserving Compound.

Ser. No. 148,503. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NATIONAL ANILINE & CHEMICAL COMPANY, INC., New York, N. Y. Filed June 1, 1921.

ALIZAROL

Particular description of goods.—Dyes, Dyestuffs, and Colors.
Claims use since Apr. 29, 1909.

Ser. No. 148,504. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NATIONAL ANILINE & CHEMICAL COMPANY, INC., New York, N. Y. Filed June 1, 1921.

FLAMINE

Particular description of goods.—Dyes, Dyestuffs, and Colors.
Claims use since May 6, 1910.

Ser. No. 148,505. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NATIONAL ANILINE & CHEMICAL COMPANY, INC., New York, N. Y. Filed June 1, 1921.

AZOGRAPHIC

Particular description of goods.—Dyes, Dyestuffs, and Colors.
Claims use since May 16, 1919.

Ser. No. 148,506. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NATIONAL ANILINE & CHEMICAL COMPANY, INC., New York, N. Y. Filed June 1, 1921.

DUROL

Particular description of goods.—Dyes, Dyestuffs, and Colors.
Claims use since Nov. 17, 1917.

Ser. No. 148,507. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NATIONAL ANILINE & CHEMICAL COMPANY, INC., New York, N. Y. Filed June 1, 1921.

CARBANTHRENE

Particular description of goods.—Dyes, Dyestuffs, and Colors.
Claims use since Oct. 22, 1918.

Ser. No. 148,508. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NATIONAL ANILINE & CHEMICAL COMPANY, INC., New York, N. Y. Filed June 1, 1921.

ALPHAZURINE

Particular description of goods.—Dyes, Dyestuffs, and Colors.
Claims use since Apr. 25, 1919.

Ser. No. 148,535. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) CLAUS AUTOMATIC GAS COCK CO., Milwaukee, Wis. Filed June 2, 1921.

THERMOLATOR

Particular description of goods.—Oven-Temperature Regulators.
Claims use since about December, 1920.

Ser. No. 148,551. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) J. D. RIEDEL, AKTIENGESELLSCHAFT, Berlin-Britz, Germany. Filed June 2, 1921.

Cyarsal

Particular description of goods.—Potash Salt of the Cyan-Mercury-Salicylic Acid.
Claims use since Apr. 20, 1920.

Ser. No. 148,557. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) RINKER-DEAS PAINT CO., Augusta, Ga. Filed June 2, 1921.

Particular description of goods.—Paints, Dry, Ready Mixed, and in Paste Form.
Claims use since 1910.

Ser. No. 148,588. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) R. Y. FOLEY, Fresno, Calif. Filed June 3, 1921.

Foley's SHAMROCK

Particular description of goods.—Fresh Grapes, Dried Fruits, and Fresh Deciduous Fruits.
Claims use since July 1, 1910.

Ser. No. 148,590. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ADOLPH NELSON GAMBLER, St. Louis, Mo. Filed June 3, 1921.

Particular description of goods.—Laxative Pills.
Claims use since Apr. 21, 1921.

Ser. No. 148,591. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GALLOWAY-WEST COMPANY, Fond du Lac, Wis. Filed June 3, 1921.

FONDA

The children represented in the drawing are fanciful.
Particular description of goods.—Evaporated Milk.
Claims use since Mar. 12, 1921.

Ser. No. 148,631. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WILKES & SHAMAN CO., Louisville, Ky. Filed June 3, 1921.

EUREKA

Particular description of goods.—Baking-Powder.
Claims use since March, 1921.

Ser. No. 148,633. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WESTERN CHEMICAL COMPANY, INC., Red Field S. D., and Hutchinson, Minn. Filed June 3, 1921.

IODO-LAV

Particular description of goods.—Antiseptic Solution.
Claims use since Dec. 1, 1919.

Ser. No. 148,635. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WARD BAKING COMPANY, New York, N. Y. Filed June 3, 1921.

VITABRED

Particular description of goods.—Bread.
Claims use since May 17, 1921.

Ser. No. 148,668. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NEW YORK QUEBRACHO EXTRACT COMPANY, New York, N. Y. Filed June 4, 1921.

MYREX

Particular description of goods.—Tanning Extracts.
Claims use since on or about May 7, 1921.

Ser. No. 148,669. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NEW YORK QUEBRACHO EXTRACT COMPANY, New York, N. Y. Filed June 4, 1921.

QUATEX

Particular description of goods.—Tanning Extracts.
Claims use since on or about Apr. 26, 1921.

Ser. No. 148,670. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NEW YORK QUEBRACHO EXTRACT COMPANY, New York, N. Y. Filed June 4, 1921.

CHEMEX

Particular description of goods.—Tanning Extracts.
Claims use since on or about May 7, 1921.

Ser. No. 148,671. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SOLON PALMER, New York, N. Y. Filed June 4, 1921.

MASKUM

Consisting of the word "Maskum."
Particular description of goods.—Hair-Dye.
Claims use since May 28, 1921.

Ser. No. 148,710. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CALIFORNIA CONSERVING CO., San Francisco, Calif. Filed June 6, 1921.

CALIFORNIA HOME

No claim is made to the word "Brand" apart from the other features of the mark shown on the drawing.

No claim being made to the representation of a bottle apart from the trade-mark shown.
Particular description of goods.—Ginger-Ale.
Claims use since May 19, 1920.

Ser. No. 148,836. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) EDWARD F. GREER, Vandalia, Ill. Filed June 8, 1921.

Particular description of goods.—A Preparation for the Treatment of Pyorrhea.
Claims use since June, 1919.

Ser. No. 148,849. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) PACIFIC METAL BEARING COMPANY, San Francisco, Calif. Filed June 8, 1921.

PMB QUALITY

No claim is made to the exclusive use of the representation of a bearing and the word "Quality" apart from the mark shown.

Particular description of goods.—Journal-Bearings.

Claims use since Aug. 18, 1920.

Ser. No. 148,855. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CHARLES T. STORK, Buffalo and New York, N. Y. Filed June 8, 1921.

NOVADELOX

Particular description of goods.—Chemicals Having Oxidizing Properties, Including Hydrogen Peroxid, Metal Peroxids, Salts of Metal Peroxids, Peracids, Esters of Peracids, Metal Salts of Peracids, Organic Peroxids, Organic-Peroxid Compounds, Inorganic-Peroxid Compounds, and Derivatives of the Above-Named Substances.

Claims use since May 15, 1921.

Ser. No. 148,874. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WILLIAM C. DILLMAN, New York, N. Y. Filed June 9, 1921.

ADORISSIMA

Consisting of the word "Adorissima."

Particular description of goods.—Face-Powder.

Claims use since Jan. 1, 1921.

Ser. No. 148,877. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) EDGAR-MORGAN CO., Memphis, Tenn. Filed June 9, 1921.

HAPPY

Particular description of goods.—Mixed Feeds Used for Domestic Animals and Poultry.

Claims use since Jan. 12, 1916.

Ser. No. 148,902. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) CHARLES L. PAINE, Indianapolis, Ind. Filed June 9, 1921.

EAT'EM HOT

"Eat 'Em Hot."

Particular description of goods.—Vending-Machines Provided with Means for Keeping the Contents Hot.

Claims use since about June 1, 1921.

Ser. No. 148,923. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) COMER, FETTERLY & COMPANY, Union Hill, N. J. Filed June 10, 1921.

ORCHIZYL

Particular description of goods.—A Pharmaceutical Preparation, Being an Association of Animal-Gland Substances for Administering in Testicular Insufficiency.

Claims use since May 2, 1921.

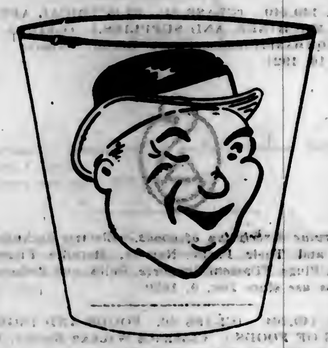
Ser. No. 149,084. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JOSEPH M. KNIGHT, Elfers, Fla. Filed June 13, 1921.

STAYSOUND

The drawing is lined to indicate a red color.

Particular description of goods.—Fresh Oranges, Grapefruit, Lemons, Limes, and All Citrus Fruits.

Claims use since May 1, 1913.



Ser. No. 149,105. (CLASS 16. PAINT AND PAINTERS' MATERIALS.) SUP-R-LAC PRODUCTS CO., Independence, Mo. Filed June 13, 1921.

SUP-R-LAC

Particular description of goods.—Paint and Oils Respectively, Namely,—Varnishes, Varnish-Stain, Cement Putty, Paints in Liquid Form, Linseed-Oil, Dry Colors, Color-Varnishes, Paints in Paste Form, Lead in Oil.

Claims use since on or about May 1, 1920.

Ser. No. 149,130. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) FRANK M. FLEISCHER, Pittsburgh, Pa. Filed June 14, 1921.

The lining on the mouth in the drawing indicates red.

Particular description of goods.—Non-Alcoholic Malt-less Beverage Sold as a Soft Drink and Flavoring for Same.

Claims use since Nov. 30, 1920.

Ser. No. 149,150. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) SHIP OWNERS RADIO SERVICE, INC., New York, N. Y. Filed June 14, 1921.

SORSINC

Particular description of goods.—Cell-Batteries, Storage Batteries, Switches, Switch-Panels, Amateur Radio Apparatus, Commercial Radio Apparatus, Telephone Apparatus, Telegraph Apparatus, Electric Air-Heating Apparatus, Auxiliary Gas-Engine Generating Sets, and Electric Rivet-Heaters.

Claims use since Feb. 1, 1921.

Ser. No. 149,172. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE CALCO CHEMICAL COMPANY, Boundbrook, N. J. Filed June 15, 1921.

Synadren

Particular description of goods.—Pharmaceutical Preparation, Being a Synthetic Product Identical with the Active Principle of Adrenal Glands.

Claims use since May 28, 1921.

Ser. No. 149,181. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) W. H. GRAVES, Pittsburg, Kans. Filed June 15, 1921.

Alkamint

Particular description of goods.—Preparation for Use as a Mouth-Cleanser.

Claims use since June 6, 1921.

Ser. No. 149,186. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) INSECTO MANUFACTURING CO., Cedar Grove, La. Filed June 15, 1921.

DIXIE DRN

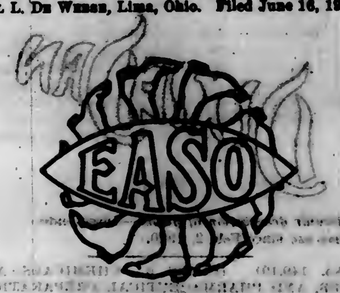
Particular description of goods.—Insecticide.

Claims use since Feb. 2, 1920.

Ser. No. 149,191. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CHARLES E. KIESLING, Canton, Ohio. Filed June 15, 1921.

HEDRELEF

Particular description of goods.—Medicinal Tablets for Headache, Neuralgia, Colds, La Grippe, Aches, and Pains.



Claims use since May 30, 1921.

Ser. No. 149,201. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) THE PLUME & ATWOOD MFG. COMPANY, Waterbury, Conn. Filed June 15, 1921.

Particular description of goods.—Straight and Safety Pins.
Claims use since May 31, 1921.

Ser. No. 149,215. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PAUL L. DE WEESE, Lima, Ohio. Filed June 16, 1921.

Particular description of goods.—Medicated Foot-Powder.
Claims use since July, 1920.

Ser. No. 149,222. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) J. FILIPOWICZ & CO., Baltimore, Md. Filed June 16, 1921.

J. Filipowicz & Co

Particular description of goods.—A Remedy for the Treatment of Rheumatism, Headache, Neuralgia, and Grippe.
Claims use since on or about July 1, 1920.

Ser. No. 149,230. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) HOME ELECTRIC LIGHTING COMPANY, East Orange, N. J. Filed June 16, 1921.

HOMELITE

Particular description of goods.—Electric Generating Plants.
Claims use since July [illegible], 1920.

Ser. No. 149,238. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NATHEN & CIE LABORATOIRES, CAHON, Courbevoie, France. Filed June 16, 1921.

D'ONGE

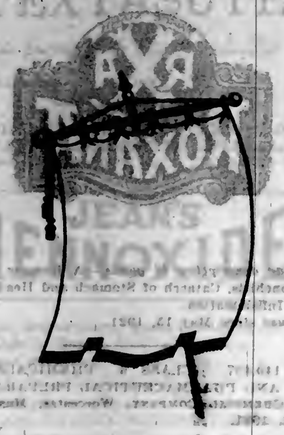
Particular description of goods.—Tooth-Paste, Cold-Cream, Complexion-Powder, Talcum Powder, Shampoo-Powder.
Claims use since Sept. 21, 1920.

Ser. No. 149,240. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) OSRAM G. M. B. H., KOMMANDITGESELLSCHAFT, Berlin, Germany. Filed June 16, 1921.

Particular description of goods.—Electric Incandescent Lamps and Their Parts—Namely, Metallic Filaments, Sockets, Plugs, Filament-Supports, Bulbs, and Reflectors.
Claims use since Dec. 9, 1920.

Ser. No. 149,264. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CLARENCE WALKER BROWN, Philadelphia, Pa. Filed June 17, 1921.

RASCALS



Particular description of goods.—Candies.
Claims use since Jan. 1, 1920.

Ser. No. 149,307. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WORCESTER SALT CO., Silver Springs and New York, N. Y. Filed June 17, 1921. Under ten-year proviso.

WORCESTER

Particular description of goods.—Common Salt—*i. e.*, Sodium Chlorid.
Claims use since Feb. 15, 1889.

Ser. No. 149,308. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WORCESTER SALT CO., Silver Springs and New York, N. Y. Filed June 17, 1921.

Particular description of goods.—Common Salt—*i. e.*, Sodium Chlorid.
Claims use since Feb. 15, 1889.

Ser. No. 149,318. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE COLORADO MILLING & ELEVATOR COMPANY, Denver and Eaton, Colo. Filed June 18, 1921.

RESOLUTE

Particular description of goods.—Wheat-Flour.
Claims use since Mar. 8, 1921.

Ser. No. 149,336. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MARGARET JESSALYN LINDSEY, Muncie, Ind. Filed June 18, 1921.

Particular description of goods.—Face Lotion and Beautifier.
Claims use since Jan. 1, 1921.

Ser. No. 149,347. (CLASS 48. KNITTED, NETTED, AND TEXTILE FABRICS.) ORIGINAL HAIR NET COMPANY, Chicago, Ill. Filed June 18, 1921.

MELBA

The picture of the girl shown on the drawing is merely fanciful, no claim being made for the word "Melba" apart from it shown on the drawing.
Particular description of goods.—Hair-Nets.
Claims use since June 2, 1921.

Ser. No. 149,350. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE FRANK R. PRINA CORPORATION, New York, N. Y. Filed June 18, 1921.

FORTISSIMO

Particular description of goods.—Wheat-Flour.
Claims use since June, 1920.

Ser. No. 149,351. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE FRANK R. PRINA CORPORATION, New York, N. Y. Filed June 18, 1921.

SEAL of AMERICA

Particular description of goods.—Wheat-Flour.
Claims use since April, 1916.

Ser. No. 149,356. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ROCKLAND MILLING COMPANY, Belleville, Ill. Filed June 18, 1921.

RIMCO

Particular description of goods.—Hen Feed, Chick Feed, Laying-Mash, and Cornmeal.
Claims use since Oct. 18, 1920.

Ser. No. 149,379. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE BRYANT ELECTRIC COMPANY, Bridgeport, Conn. Filed June 20, 1921.

Wrinklet

Particular description of goods.—Electric Lamp Sockets and Switches and Parts Thereof.
Claims use since February, 1913.

Ser. No. 149,385. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) COLUMBIA FLOUR MILLS, Pendleton, Oreg. Filed June 20, 1921.

HIDO

Particular description of goods.—Wheat-Flour.
Claims use since Nov. 1, 1920.

Ser. No. 149,394. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ROZANA FILKINS, Traverse City, Mich. Filed June 20, 1921.

RXA ROXANE

Particular description of goods.—A Remedy for Hay-Fever, Bronchitis, Catarrh of Stomach and Head, and for Reducing Inflammation.
Claims use since May 15, 1921.

Ser. No. 149,437. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ARENA CHEMICAL COMPANY, Worcester, Mass. Filed June 21, 1921.

Sans

Particular description of goods.—Toilet Preparation for Preventing, Absorbing, or Deodorizing Perspiration.
Claims use since May 10, 1921.

Ser. No. 149,440. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) COLGATE & COMPANY, Jersey City, N. J. Filed June 21, 1921.

The Unknown Flower

Particular description of goods.—Liquid and Powdered Perfumes.
Claims use since May 28, 1921.

Ser. No. 149,482. (CLASS 50. MERCHANDISE NOT OTHERWISE CLASSIFIED.) THE PANTASOTE LEATHER COMPANY, Passaic, N. J. Filed June 21, 1921.

TEXTASOTE

Particular description of goods.—Waterproof Cloth in the Piece.
Claims use since Jan. 8, 1921.

Ser. No. 149,487. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JEAN SENNOAS, New York, N. Y. Filed June 21, 1921.

JEAN'S HENNOXIDE

Particular description of goods.—Solution for Lightening the Shade of Hair.
Claims use since July 1, 1920.

Ser. No. 149,490. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) AMERICAN APOTHECARIES COMPANY, New York, N. Y. Filed June 22, 1921.

TONIKEL

Particular description of goods.—A General Tonic and Reconstructive to be Used in the Treatment of Nervous Exhaustion, Functional Impotence, Loss of Appetite, Faulty Nutrition, Anemia, and General Debility.
Claims use since about Nov. 14, 1914.

Ser. No. 149,541. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE CLAUSEN ZOLLER COMPANY, St. Louis, Mo. Filed June 23, 1921.

Ferrolix

Particular description of goods.—Blood and Nerve Tonic in Liquid Form.
Claims use since about Nov. 1, 1920.

Ser. No. 149,572. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) WM. ANDERSON TEXTILE MFG. CO., New York, N. Y. Filed June 24, 1921.

Wm Anderson

Consisting of facsimile signature of Wm. Anderson.
Particular description of goods.—Textile Fabrics—Namely, Zephyrs in the Piece, Shirting in the Piece, Voile in the Piece, Poplin in the Piece, Flannel in the Piece, Tissue in the Piece, and Muslin in the Piece.
Claims use since 1911.

Ser. No. 149,580. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) RODOLFO FLORES, Sedalia, Mo. Filed June 24, 1921.

Pulviskin

Particular description of goods.—Powder for Affections of the Skin.
Claims use since Jan. 1, 1920.

Ser. No. 149,599. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) NICK PICCOLI, Paterson, N. J. Filed June 24, 1921.

Dip-Top

Particular description of goods.—Shoe-Polish in Paste, Liquid, and Powdered Form.
Claims use since Mar. 17, 1921.

Ser. No. 149,605. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) TALCUM PUFF CO., Brooklyn, N. Y. Filed June 24, 1921.

Particular description of goods.—Talcum Powder.
Claims use since May 2, 1921.

Ser. No. 149,625. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) P. BEIERSDORF & Co. INC., New York, N. Y. Filed June 25, 1921.

Aolan

Particular description of goods.—Lacto-Albuminous Solution Used for Subcutaneous Injections.
Claims use since May 21, 1921.

Ser. No. 149,706. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) THOMAS B. KANE, Philadelphia, Pa. Filed June 27, 1921.

No claim being made to the word "Beverages" apart from the mark shown on the drawing.
Particular description of goods.—Non-Alcoholic, Non-Cereal, Maltless Beverages Sold as Soft Drinks and Syrups for Making the Same.
Claims use since June 1, 1920.

Ser. No. 149,709. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) JOHN MULHERN COMPANY, San Francisco, Calif. Filed June 27, 1921.

PEERLESS BRAND

No claim being made to the words "Peerless Brand, Quality First" apart from the mark shown on the drawing.
Particular description of goods.—Non-Alcoholic, Non-Cereal, Maltless Beverage Sold as Soft Drinks, and Syrups for Making the Same.
Claims use since May 18, 1917.

Ser. No. 149,826. (CLASS 12. VEHICLES, NOT INCLUDING ENGINES.) THE TORBENSEN GEAR AND AXLE COMPANY, Cleveland, Ohio. Filed June 27, 1921.

Particular description of goods.—Motor-Vehicle Axles and Gear-Casing Constructions Therefor.
Claims use since Mar. 25, 1917.

Ser. No. 149,827. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) SHARON STEEL HOOP COMPANY, Sharon, Pa. Filed June 29, 1921.

ENAMELITE

Particular description of goods.—Steel Plates, Strips, and Sheets.
Claims use since Apr. 20, 1921.

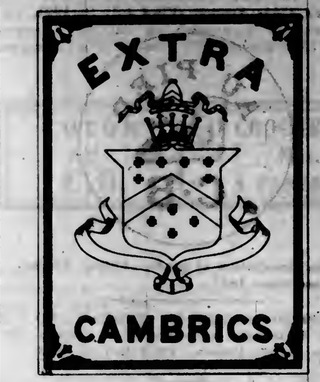
Ser. No. 149,840. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WESTERN INDUSTRIES CO., San Francisco, Calif. Filed June 29, 1921.

WI-ALC

Particular description of goods.—Denatured Alcohol.
Claims use since May 15, 1921.

Ser. No. 149,996. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) ALDRICH MANUFACTURING CO., INC., Buffalo, N. Y. Filed July 5, 1921.

AMCOIN

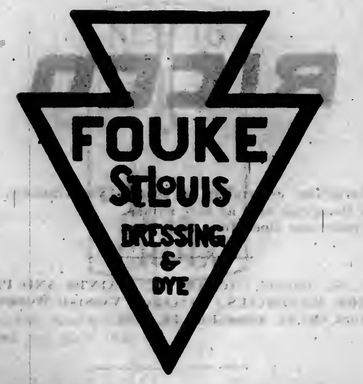


Particular description of goods.—Steam-Tables, Culinary Warmers, Cookers, and Culinary Urns.
Claims use since Jan. 10, 1921.

Ser. No. 150,175. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) BERKELEY COMPANY, Providence, R. I. Filed July 9, 1921. Under ten-year proviso.

Particular description of goods.—Cotton-Sheeting in the Piece.
Claims use since on or before Jan. 1, 1888.

Ser. No. 150,177. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) BERKELEY COMPANY, Providence, R. I. Filed July 9, 1921. Under ten-year proviso.



The cross-lining of the accompanying drawing is for purposes of shading only and does not necessarily represent color.
Particular description of goods.—Cambrics in the Piece.
Claims use since on or before Jan. 1, 1888.

Ser. No. 150,207. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) STANDARD BOTTLING COMPANY, Newark, N. J. Filed July 9, 1921.

ORANGE BLOSSOMS

Particular description of goods.—Non-Alcoholic, Non-Cereal Maltless Beverages Sold as Soft Drinks and Syrups for Making Same.
Claims use since March, 1920.

Ser. No. 150,229. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) FOUKE FUR COMPANY, St. Louis, Mo. Filed July 11, 1921.

No claim is made to the words "St. Louis" and "Dressing & Dye" apart from the mark as shown in the drawing.
Particular description of goods.—Furs, Skins, Hides, and Pelts.
Claims use since May 23, 1921.

Ser. No. 150,236. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) KUHNS BROTHERS, Dayton, Ohio. Filed July 11, 1921.

Consists of the letter "K."
Particular description of goods.—Elbows, T's, Crosses, Caps, Lock-Nuts, Couplings, Reducing Couplings, Eccentric Reduced Couplings, Y-heads, Return-Bends, Reducing Twin Elbows for Hot-Water, Long-Sweep Elbows, Long-Sweep T's, Long-Sweep Crosses, Car-Heating Fittings, Extra Heavy Pipe-Fittings and Special Pipe-Fittings, Cast-Iron Screwed Pipe-Fittings.
Claims use since Dec. 1, 1888.

TROLLIBUS

Particular description of goods.—Electric Omnibuses or Passenger-Vehicles.
Claims use since June 1, 1921.

Ser. No. 150,371. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) THE RICCO COMPANY OF AMERICA, Columbus, Ga. Filed July 14, 1921.

RICCO

Particular description of goods.—Non-Alcoholic, Malt less Beverages Sold as Soft Drinks.
Claims use since June 1, 1918.

Ser. No. 150,375. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) STANDARD VARNISH WORKS, New York, N. Y. Filed July 14, 1921.

KUTKWIK

Particular description of goods.—Paint and Varnish Remover.
Claims use since July 8, 1921.

Ser. No. 150,475. (CLASS 43. THREAD AND YARN.) SOCIETE FRANÇAISE DE COTONS A COUDRE (Societe Anonyme), Paris, France. Filed July 16, 1921.

The star shown being red.
Particular description of goods.—Cotton Thread.
Claims use since 1834.

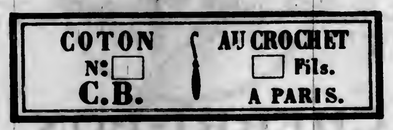
Ser. No. 150,477. (CLASS 43. THREAD AND YARN.) SOCIETE FRANÇAISE DE COTONS A COUDRE (Societe Anonyme), Paris, France. Filed July 16, 1921.

No claim being made to the words "Par 50 Grammes, La Pelote, Paris."
Particular description of goods.—Cotton Thread.
Claims use since 1854.

Ser. No. 150,479. (CLASS 43. THREAD AND YARN.) SOCIETE FRANÇAISE DE COTONS A COUDRE (Societe Anonyme), Paris, France. Filed July 16, 1921.

Particular description of goods.—Cotton Thread.
Claims use since 1867.

Ser. No. 150,480. (CLASS 43. THREAD AND YARN.) SOCIETE FRANÇAISE DE COTONS A COUDRE (Societe Anonyme), Paris, France. Filed July 16, 1921.

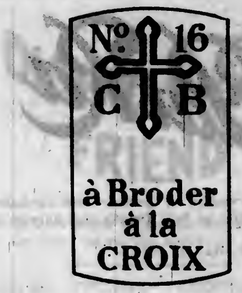


No claim being made to the words "25 Grammes."
Particular description of goods.—Cotton Thread.
Claims use since 1874.

Ser. No. 150,481. (CLASS 43. THREAD AND YARN.) SOCIETE FRANÇAISE DE COTONS A COUDRE (Societe Anonyme), Paris, France. Filed July 16, 1921.

No claim being made to the word "Coton."
Particular description of goods.—Cotton Thread.
Claims use since 1868.

Ser. No. 150,483. (CLASS 43. THREAD AND YARN.) SOCIETE FRANÇAISE DE COTONS A COUDRE (Societe Anonyme), Paris, France. Filed July 16, 1921.



No claim being made to the words "Coton, Paris."
Particular description of goods.—Cotton Thread.
Claims use since 1856.

Ser. No. 150,484. (CLASS 43. THREAD AND YARN.) SOCIETE FRANÇAISE DE COTONS A COUDRE (Societe Anonyme), Paris, France. Filed July 16, 1921.

No claim being made to the word "Paris" or to the expression "Par 45 Metres" apart from the mark shown in the drawing.
Particular description of goods.—Cotton Thread.
Claims use since 1873.

Ser. No. 150,485. (CLASS 43. THREAD AND YARN.) SOCIETE FRANÇAISE DE COTONS A COUDRE (Societe Anonyme), Paris, France. Filed July 16, 1921.

Particular description of goods.—Cotton Thread.
Claims use since 1840.

Ser. No. 150,487. (CLASS 43. THREAD AND YARN.) SOCIETE FRANÇAISE DE COTONS A COUDRE (Societe Anonyme), Paris, France. Filed July 16, 1921.

No claim being made to the words "Moulin Double, Par 47 à 50 Grammes, Paris."
Particular description of goods.—Cotton Thread.
Claims use since 1872.

Ser. No. 150,488. (CLASS 43. THREAD AND YARN.) SOCIETE FRANÇAISE DE COTONS A COUDRE (Societe Anonyme), Paris, France. Filed July 16, 1921.

No claim being made to the words "Coton a Marquer, Grand Teint, Pelotes de 2 à 3 Grammes, Suivant les Numéros Fabricant, Paris."
Particular description of goods.—Cotton Thread.
Claims use since 1839.

Ser. No. 150,566. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) PATTERSON MINERAL WATER & BEVERAGE CO., Chicago, Ill. Filed July 18, 1921.

Particular description of goods.—Non-Alcoholic, Maltless Beverages, Sold as Soft Drinks and Syrups for Making the Same.
Claims use since Mar. 1, 1921.

Ser. No. 150,642. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) TAYLOR-VAN HOUTEN CO., Lansing, Mich. Filed July 19, 1921.

Particular description of goods.—Paint and Varnish Remover.
Claims use since July 2, 1921.

Ser. No. 150,846. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) BAEDER ADAMSON COMPANY, Boston, Mass. Filed July 23, 1921. Under ten-year proviso.

Particular description of goods.—Flint-Paper and Flint-Cloth, Garnet-Paper and Garnet-Cloth, Emery-Paper and Emery-Cloth.
Claims use since 1891.

Ser. No. 150,847. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) BAEDER ADAMSON COMPANY, Boston, Mass. Filed July 23, 1921.

Particular description of goods.—Flint-Paper and Flint-Cloth.
Claims use since November, 1919.

Ser. No. 150,870. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) LIMPERT BROS., INC., New York, N. Y. Filed July 23, 1921.

CHERRI-BON

Consisting of the word "Cherri-Bon."
Particular description of goods.—Non-Alcoholic, Maltless Beverage Flavored with Cherry-Juice, Sold as a Soft Drink.
Claims use since 1913.

Ser. No. 151,137. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) ANHEUSER-BUSCH, INC., St. Louis, Mo. Filed July 30, 1921.

Particular description of goods.—Maltless, Carbonated Chocolate Beverage.
Claims use since Apr. 2, 1921.

Ser. No. 151,504. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) GEORGE BORGFELDT & CO., New York, N. Y. Filed Aug. 6, 1921.

Particular description of goods.—Sewing-Needles.
Claims use since Dec. 5, 1920.

Ser. No. 151,601. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) WESTERN SOAP COMPANY, Spokane, Wash. Filed Aug. 9, 1921.

The picture being fanciful.
Particular description of goods.—Liquid, Laundry, and Grit Soap.
Claims use since January, 1915.

Ser. No. 151,615. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) DOLLFUS-MIEG & CIE. SOCIÉTÉ ANONYME, Mulhouse, Alsace, France. Filed Aug. 10, 1921.

Particular description of goods.—Braids, and Articles of Passementerie Made of Textiles of All Kinds.
Claims use since 1847.

Ser. No. 151,665. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) FITZPATRICK BROS., Chicago, Ill. Filed Aug. 11, 1921.

DISHWASHERS FRIEND

Particular description of goods.—Soaps.
Claims use since about the middle of July, 1921.

Ser. No. 151,667. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) FITZPATRICK BROS., Chicago, Ill. Filed Aug. 11, 1921.

Spring Beauty

Particular description of goods.—Soaps.
Claims use since about January, 1895.

Ser. No. 151,704. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) SIDNEY BLUMENTHAL & CO. INC., New York, N. Y. Filed Aug. 12, 1921.

Moireskin

Particular description of goods.—Pile Fabrics in the Piece.
Claims use since June 24, 1921.

Ser. No. 151,800. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) THE PIONEER TAR SOAP COMPANY, Dayton, Ohio. Filed Aug. 15, 1921.

147,251. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) TEMPLETON MANUFACTURING CO., Hyde Park, Mass. Filed May 6, 1921. Serial No. 147,328.

STERLING

Particular description of goods.—Steam-Traps.
Claims use since Jan. 1, 1906.

147,252. (CLASS 39. CLOTHING.) TRUE SHAPE HOSIERY CO., Philadelphia, Pa. Filed May 2, 1921. Serial No. 147,138.

CROSS STITCH

Particular description of goods.—Hosiery.
Claims use since May, 1915.

147,253. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) WALCOTT LATHE COMPANY, Jackson, Mich. Filed Sept. 17, 1920. Serial No. 137,296.

WALCOTT

Particular description of goods.—Lathes and Shapers and Parts of Lathes and Shapers.
Claims use since 1900.

147,254. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) WEST ELECTRIC HAIR CURLER CO., Philadelphia, Pa. Filed Aug. 11, 1921. Serial No. 151,692.

West Electric Hair Curlers

Particular description of goods.—Hair-Curlers.
Claims use for more than 15 years.

TRADE-MARK REGISTRATIONS RENEWED.

19,402. WALL-PLASTER. Registered April 28, 1891. INTERNATIONAL ROCK PLASTER COMPANY, Jersey City, N. J., and Columbus, Ohio. Renewed April 28, 1921; Rock Plaster Corporation of New York.

19,977. POWDER FOR THE TOILET, NURSERY, AND SIMILAR PURPOSES. Registered August 4, 1891. THE COMFORT POWDER COMPANY, Hartford, Conn. Renewed August 4, 1921; The Comfort Powder Co., Inc.

20,650. A LINIMENT. Registered January 26, 1892. ERNESTINA LANDSMAN, New York, N. Y. Renewed January 26, 1922.

20,654. ICE RACING-SKATES AND RACING ROLLER-SKATES. Registered January 26, 1892. UNION HARDWARE COMPANY, Torrington, Conn., and New York, N. Y. Renewed January 26, 1922.

20,660. ICE RACING-SKATES AND RACING ROLLER-SKATES. Registered January 26, 1892. UNION HARDWARE COMPANY, Torrington, Conn., and New York, N. Y. Renewed January 26, 1922.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

COMMISSIONER'S DECISIONS.

PEIRCE *v.* TRIPP *v.* HOLLERITH.

Decided October 1, 1921.

1. INTERFERENCE—ACCESS TO PRELIMINARY STATEMENTS.
Where there are several parties to an interference and the preliminary statement of one of them fails to overcome the filing date or dates of a senior party or parties, *Held* that he is not, for this reason, to be denied access to the preliminary statement of any party junior to him in that interference.

2. SAME—SAME—RULE 111 CONSTRUED.
The "party or parties" referred to in Rule 111, paragraph 3, means the party or parties only whose filing date or dates has not been overcome by a junior party.

ON PETITION.

DISTRIBUTING-MACHINES.

Mr. D. Anthony Usina for Peirce.

Messrs. Hood & Sohley for Tripp.

Mr. D. L. McGill and *Mr. F. S. Maguire* for Hollerith.

KINNAN, *First Assistant Commissioner:*

This is a petition by the party Tripp for permission to examine the preliminary statement of Peirce sealed against him by the Examiner of Interferences under the provisions of Rule 111.

This is a three-party interference in which Tripp is the senior party as to Peirce, but the junior party as to Hollerith. Tripp has failed to set up in his pleadings a date of conception prior to the filing date of Hollerith, and therefore has no right to inspect the preliminary statement of Hollerith. Tripp is, however, senior to Peirce and is under an order to show cause why judgment should not be rendered against him. It is his view that an inspection of Peirce's preliminary statement may be of use in aiding Tripp in forming an action responsive to the order to show cause. The party Peirce contends that Tripp is no longer a party to this interference and should not be further considered; but it must be borne in mind that he is still a party to the interference until a judgment against him is rendered and the limit of appeal has expired.

It is believed, under the circumstances set forth in the petition, that Tripp should be permitted to inspect the preliminary statement of Peirce. The "party or parties" referred to in Rule 111, paragraph 3, means the party or parties only whose filing date or dates has not been overcome by a junior party.

The petition is granted.

DECISIONS OF THE U. S. COURTS.

U. S. Circuit Court of Appeals—First Circuit.

BECKER *v.* GENERAL CHAIN CO.

Decided May 12, 1921.

[273 Fed. Rep., 419.]

1. PATENTS—ASSIGNEE CAN PROSECUTE APPLICATION IN PATENT OFFICE AND BRING SUIT TO COMPEL ISSUANCE OF PATENT.
Under Revised Statutes, section 4895, (Comp. St., sec. 9430,) which permits a patent to be granted to an assignee and requires that in all cases of an application by an assignee the application shall be made and the specifications sworn to by the inventor, when construed in the light of the enactments from which it was taken, an assignee can prosecute an application in the Patent Office as expressly permitted by the Patent Office rules, and therefore can bring, in his own name the suit to compel the issuance of a patent authorized by section 4915, (sec. 9460,) which suit is in reality a continuation of the prosecution of the original application.

2. STATUTES—REENACTMENT AFTER CONSTRUCTION IS STRONG INDICATION OF INTENT TO ADOPT CONSTRUCTION.
Where Congress reenacted a statute some years after it had been construed and such construction was unquestioned for more than forty years after reenactment, those facts are a strong, if not conclusive, indication of the intent of Congress in the reenactment of the law to adopt the construction.

3. PATENTS—ASSIGNEE OF FULL INTEREST OBTAINS FULL TITLE, REGARDLESS OF HOW PATENT WAS ISSUED.
An assignee of the entire interest in an invention and right to a patent obtains full title when the patent is issued, whether the patent is issued to him on request made in the assignment or issued to the inventor, in the absence of such request in the assignment.

4. PATENTS—AFTER TIME FOR FILING BILL COURT CAN PERMIT ORIGINAL INVENTOR TO BE JOINED AS PLAINTIFF IN ASSIGNEE'S BILL.
Where an assignee of an invention had filed his bill, under Revised Statutes, section 4915, (Comp. St., sec. 9460,) to compel the issuance of a patent to him, within the time prescribed by section 4894, (sec. 9438,) the court could thereafter in its discretion authorize the original

inventor to be joined as a party plaintiff without affecting the right to maintain the suit, though the suit could not be maintained under those circumstances if the inventor was a necessary party to the original bill.

APPEAL from the District Court of the United States for the District of Massachusetts; George W. Anderson, judge.

Suit by Charles A. Becker against the General Chain Company to secure the issuance of a patent. From a decree dismissing the bill plaintiff appeals. Reversed and remanded.

Mr. Edwin J. Prindle (*Mr. Clarence O. McKay, Mr. Russell M. Everett*, and *Mr. Francis J. V. Dakin* on the brief) for the appellant.

Mr. A. D. Salinger for the appellee.

Before BINGHAM and JOHNSON, Circuit Judges, and ALDRICH, District Judge.

BINGHAM, *Cir. J.*:

This is an appeal from a decree of the district court for Massachusetts dismissing a bill in equity brought under section 4915, Revised Statutes, (Comp. St., sec. 9460,) by Becker, assignee through mesne assignments, dated January 26, 1916, and April 7, 1917, of the entire interest in the invention and application of Robert Hauschild, Serial No. 654,658, for Letters Patent filed October 14, 1911. The defendant is the General Chain Company, assignee of the invention and application, Serial No. 679,428, of Eugene Speidel. This assignment was made March 6, 1919, after a decision by the Court of Appeals of the District of Columbia (Mar. 3, 1919) in favor of the Speidel application in an interference proceeding between the two applications. (48 App. D. C., 419.) The Hauschild assignment was made pending the prosecution of his application in the Patent Office. This bill was filed March 2, 1920.

In the court below the defendant moved to dismiss upon the ground that the bill was brought by the assignee, instead of the inventor, Hauschild. The plaintiff filed a motion to amend by making Hauschild a party plaintiff. The latter motion was not made until after the expiration of one year from the last action of the Patent Office on the Hauschild application. The court denied the plaintiff's motion to amend and granted the defendant's motion to dismiss the bill.

It does not appear from the record whether the assignment executed by Hauschild contained a request to the Commissioner of Patents to issue the patent to the assignee. But it does appear that the assignments were duly recorded in the records of the Patent Office and that the plaintiff, after obtaining his assignment, prosecuted the application by taking an appeal from the decision of the Examiners-in-Chief to the Commissioner of Patents, and from his decision to the Court of Appeals of the District of Columbia.

It is contended on behalf of the defendant that the bill was properly dismissed for the reason that an assignee of an application for a patent, which has been denied by the Patent Office, is not a proper party to a bill under section 4915, as he is not an applicant within the meaning of that term as employed in the act; that, while proceedings under section 4915 are not appeals, but independent suits in equity, (*Greenwood* v. *Dover*, 194 Fed., 91; 114 C. C. A., 169,) they are, nevertheless, a part of the application for a patent, (*Gandy* v. *Marble*, 122 U. S., 432; 7 Sup. Ct., 1290; 30 L. Ed., 1223,) and in essence a continuation of the proceedings on the application in the Patent Office; that the provisions of law contained in section 4895, Revised Statutes, (Comp. St., sec. 9439,) and other sections preceding and following it relating to applications for patents, require that the application for the issue of a patent shall be made by the inventor or discoverer, if he is alive; that an assignee cannot make such an application; and that, if he does not come within the meaning of the provisions of law regulating an application in the Patent Office, he is not an applicant within the meaning of that term as employed in section 4915. In other words, its position is that the inventor, if living, is an indispensable party plaintiff in a bill in equity under section 4915.

Section 4915, Revised Statutes, (Comp. St., sec. 9460,) reads as follows:

> SEC. 4915. Whenever a patent on application is refused, either by the Commissioner of Patents or by the Supreme Court of the District of Columbia upon appeal from the Commissioner, the applicant may have remedy by bill in equity; and the court having cognizance thereof, on notice to adverse parties and other due proceedings had, may adjudge that such applicant is entitled, according to law, to receive a patent for his invention, as specified in his claim, or for any part thereof, as the facts in the case may appear. * * *

Section 4895, Revised Statutes, (Comp. St., sec. 9439,) is as follows:

> SEC. 4895. Patents may be granted and issued or reissued to the assignee of the inventor or discoverer; but the assignment must first be entered of record in the Patent Office. And in all cases of *an application by an assignee for the issue of a patent*, the application shall be made and the specification sworn to by the inventor or discoverer; and in all cases of an application for a reissue of any patent, the application must be made and corrected specification signed by the inventor or discoverer, if he is living. * * *

The subject-matter contained in section 4915 first appeared in section 16 of the act of July 4, 1836, (5 Stat. at L., 123.) Section 16 was amended by section 10 of the act of March 3, 1839, (5 Stat. at L., 354,) but not in a manner affecting the question here involved. It was reenacted in section 52 of the act of July 8, 1870, (16 Stat. at L., 205,) in the language now found in section 4915.

The subject-matter of section 4895 was first dealt with by Congress in section 6 of the act of March 3, 1837, (5 Stat. at L., 193.) It then read:

> SEC. 6. *And be it further enacted*, that any patent hereafter to be issued, may be made and issued to the assignee or assignees of the inventor or discoverer, *the assignment thereof being first entered of record*, and *the application* therefor being *duly made*, and *the specification duly sworn to by the inventor*. * * *

In section 33 of the act of July 8, 1870, (16 Stat. at L., 202,) section 6 of the act of 1837 was amended to read as follows:

> SEC. 33. *And be it further enacted*, that patents may be granted and issued or reissued to the assignee of the inventor or discoverer, the assignment thereof being first entered of record in the Patent Office; but in such case the application for the patent shall be made and the specification sworn to by the inventor or discoverer; and also, if he be living, in case of an *application* for reissue.

(1) Under either section 6 or section 33 an inventor could assign his right to obtain a patent, prior to filing an application and specification verified by his oath. Section 33 was amended in the Revised Statutes of 1878, and as now found in section 4895 authorizes an assignee to make application for the issue of a patent, and provides how he shall do it. In such case it requires that the application or petition shall be made—that is, signed—and the specification sworn to by the inventor or discoverer, if he is living. And the further provisions of the section recognize that if he is not living or is insane, the assignee must have the application or petition signed and the specification sworn to by the executor or guardian of the inventor, (section 4896 [Comp. St., sec. 9440.]) This not only plainly appears from section 4895, but is evidently the meaning placed upon it by the Patent Office, for, in this very proceeding the plaintiff, after obtaining his assignment, was permitted to prosecute the application in the Patent Office, and did so during the greater portion of the proceedings in that office. See Revised Statutes, sections 4909, 4910, 4911, act of Feb. 9, 1893, 27 Statutes at Large, chapter 74, section 9, (Comp. St., secs. 9454–9456.)

Then again rule 17 of the Patent Office provides that "an applicant or an *assignee of the entire interest* may prosecute his own case," and rule 5 that "the assignee of the entire interest of an invention is entitled to hold correspondence with the office to the exclusion of the inventor." Under the latter rule it is held that upon the request of such an assignee the inventor shall be excluded from participation in the proceedings. See *Stoddard's Annotated Patent Office Rules*, pages 10, 11.

Instead, therefore, of an assignee being unable to prosecute an application in the Patent Office under section 4895, as the defendant contends, the contrary is true, for the law authorizes and the practice and rules of the Patent Office permit it; and, as a proceeding under section 4915 is in reality a continuation of the prosecution of the original application, there would seem to be no reason why the assignee of the entire right to a patent, who is permitted to prosecute an application in the Patent Office under section 4895, should not be allowed to do so in this court under section 4915.

It is also to be noted that in 1849, Mr. Justice Nelson of the Supreme Court, sitting as circuit justice in the Circuit Court for the Southern District of New York, in the case of *Gay* v. *Cornell*, (10 Fed. Cas., 110, Case No. 5,280,) had under consideration the right of an assignee to prosecute a bill in equity under section 16 of the act of July 4, 1836, as amended by the tenth section of the act of March 3, 1839, the predecessor of section 4915, and that, at the time the case then under consideration arose, the sixth section of the act of March 3, 1837, the predecessor of section 4895, was in existence. And it was held that the assignment was valid and the bill properly brought in the name of the assignee. The decision reads:

> Nelson, Circuit Justice. The sixteenth section of the act of July 4, 1836, speaks of the party making the application for the patent, as the proper person to file a bill in case of a refusal by the Board of Examiners to grant the patent [the chief justice of the District of Columbia was afterward substituted in their place], and, doubtless, referred to the inventor, as no provision then existed authorizing him to assign his interest before the issuing of the patent. But, the sixth section of the act of March 3, 1837, (5 Stat., 193,) provides, that any patent thereafter to be issued, may be issued to the assignee of the inventor, the assignment being first entered of record; the application still to be made in the name of the inventor, and the specification to be sworn to by him. After the assignment of the invention, under this section, by which the inventor divests himself of all interest therein, and transfers it to the assignee, although the application for the patent must be made in his name, in conformity with the statute, still, for all substantial purposes, and in judgment of law, the assignee is the party making the application, and, we think, comes, if not within the letter, at least within the spirit of the provisions of the sixteenth section of the act of 1836, and of the tenth section of the act of March 3, 1839. He would, no doubt, be held liable as such for the expenses mentioned in the latter part of the sixteenth section, and for any other to which the applicant might become subject. * * *
>
> Upon the whole, we think the assignment is valid, and the bill properly filed in the name of the assignee, he being the only real party in interest, and that the averments and facts set forth therein show a sufficient title prima facie in him to the patent, on the ground that Perry was the first and original inventor.
>
> Demurrer overruled.

(2) It is not to be forgotten that, after the lapse of twenty years from the decision of Mr. Justice Nelson interpreting the meaning of the words "applicant" and "application" in section 16 of the act of July 4, 1836, construed in the light of the sixth section of the act of March 3, 1837, Congress, in 1870, reënacted section 16, using the same language, so far as the question here is concerned, and no doubt did so with full knowledge of the meaning which the court had put upon the words twenty years before, and that that construction, so far as we can ascertain, has not been questioned down to the present time. This is a strong, if not conclusive, indication of the intent of Congress in the reënactment of the law. It is also made evident that Congress had in mind the decision of Mr. Justice Nelson when, in the Revised Statutes in 1878, it enacted section 4895, amending section 33, and expressly provided for "an application by an assignee," making the letter of the law comply with its spirit.

(3) It has been held time and again that an assignee of the entire interest in an invention and right to a patent obtains full title, when the patent is issued, and that this is so whether the patent is issued directly to him, a request to that effect having been made in the assignment, or whether it is issued to the inventor, no such request having been made in the assignment. (*Gayler* v. *Wilder*, 10 How., 476, 491–494; 13 L. Ed., 504; *Railroad* v. *Trimble*, 10 Wall., 367; 19 L. Ed., 948; *Wende* v. *Horine*, (C. C.,) 191 Fed., 620; *Individual Drinking Cup Co.* v. *Osmun-Cook Co.*, (D. C.,) 220 Fed., 335; *Colman et al.* v. *American Warp Drawing Machine Co.*, D. C.,) 235 Fed., 531; *Thoma* v. *Perri*, (D. C.,) 205 Fed., 632.)

As the assignee of the entire interest in an invention is the only party directly interested in the prosecution of an application for a patent, there can be no doubt of his right to institute proceedings under section 4915. The court below erred in dismissing the bill.

(4) The bill having been properly brought by the assignee within the time allowed by law, it was

within the discretion of the court to permit the inventor, Hauschild, to be joined as a party plaintiff. If the assignee had not the right to institute the suit, it may be doubtful whether such an amendment could be allowed after the expiration of the time prescribed by section 4894, Revised Statutes, (Comp. St., sec. 9438) in the absence of proof disclosing that the delay was unavoidable. But, as we have no such question here, we refrain from deciding it.

If in *Wende* v. *Horine*, (C. C., 191 Fed., 620,) the inventor was rightly allowed to prosecute a bill under section 4915, it would seem that it must have been upon the ground that he was technically an applicant within the meaning of that section and was under some duty to prosecute the same to protect the interest of the assignee. Apparently the court in that case overlooked certain language contained in section 4895 and reached a conclusion different from what it otherwise might, for in quoting from that section it omitted the clause—"And in all cases of an *application by an assignee* for the issue of a patent"—recognising the right of an assignee to make an application, and only quoted the portion which states that "the application shall be made and the specification sworn to by the inventor or discoverer," which, as previously pointed out, simply shows how "an application by an assignee" shall be made—that is, that the application or petition shall be signed and the specification sworn to by the inventor or discoverer.

The decree of the district court is reversed, and the case is remanded to that court for further proceedings not inconsistent with this opinion, with costs to the appellant.

ADJUDICATED PATENT.

(U. S. D. C. Pa.) The Patton patent, No. 1,301,598, for paper lining for finger-bowls, *Held* valid and infringed. *Patton* v. *Clegg*, 274 Fed. Rep., 118.

Adverse Decisions in Interference.

PATENT NO. 1,359,913.

On September 14, 1921, a decision was rendered that William W. Owen was not the first inventor of the subject-matter covered by claims 1, 3, 5, 6, 18, and 20 of his Patent No. 1,359,913, subject, "Measured-service telephone systems," and no appeal having been taken within the time allowed such decision has become final.

Interference Notices.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., September 27, 1921.

The All in One Tractor Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Stroud Motor Manufacturing Ass'n., Ltd., of 117 East Houston street, San Antonio, Tex., for registration of a trade-mark and trade-mark registered April 22, 1913, No. 91,271, to The All in One Tractor Company, Waterloo, Iowa, and a notice of such interference sent by registered mail to The All in One Tractor Company at the said address having been returned by the post-office undeliverable, notice is hereby given that unless The All in One Tractor Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., September 27, 1921.

H. J. Nice Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Percy Pierce, 445 North Fifth street, Philadelphia, Pa., for registration of a trade-mark and trade-mark registered December 28, 1909, No. 76,281, to H. J. Nice Company, 15 Northeast Fifth street, Minneapolis, Minn., and a notice of such interference sent by registered mail to said H. J. Nice Company at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said H. J. Nice Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., October 7, 1921.

Isaac Newlin, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Simon Levi Company, 715 J Street, San Diego, Calif., for registration of a trade-mark and trade-mark registered April 4, 1911 No. 81,407 to Isaac Newlin of New York, N. Y., and having failed to obtain service upon the registrant, notice is hereby given that unless said Isaac Newlin, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

Amendment to Rules of Practice—Rule 194.

Acting under the provisions of section 483 of the Revised Statutes and with the approval of the Secretary of the Interior, Rule 194 of the Rules of Practice of the United States Patent Office is amended in the following particulars:

In the first sentence thereof the words "certificates of deposit" are canceled.

The third sentence, which reads as follows, is canceled:

"Payment may also be made to the Treasurer, or to any of the Agistant Treasurers of the United States, or to any of the depositaries, national banks, or receivers of public money, designated by the Secretary of the Treasury for that purpose, who will issue a certificate of deposit in triplicate and will forward the original and the duplicate certificates to the Secretary of the Treasury and the Commissioner of Patents, respectively, and will give the triplicate certificate to the depositor."

The rule as amended reads as follows:

194. All payments of money required for Office fees must be made in specie, Treasury notes, national-bank notes, post-office money orders, or certified checks. Money-orders and checks should be made payable to the "Commissioner of Patents." Money sent by mail to the Patent Office will be at the risk of the sender. Letters containing money should be registered. In no case should money be sent with models.

within the discretion of the court to permit the inventor, Hauschild, to be joined as a party plaintiff. If the assignee had not the right to institute the suit, it may be doubtful whether such an amendment could be allowed after the expiration of the time prescribed by section 4894, Revised Statutes, (Comp. St., sec. 9433) in the absence of proof disclosing that the delay was unavoidable. But, as we have no such question here, we refrain from deciding it.

If in *Wende* v. *Horine*, (C. C., 191 Fed., 620,) the inventor was rightly allowed to prosecute a bill under section 4915, it would seem that it must have been upon the ground that he was technically an applicant within the meaning of that section and was under some duty to prosecute the same to protect the interest of the assignee. Apparently the court in that case overlooked certain language contained in section 4895 and reached a conclusion different from what it otherwise might, for in quoting from that section it omitted the clause—"And in all cases of an *application* by an assignee for the issue of a patent"—recognizing the right of an assignee to make an application, and only quoted the portion which states that "the application shall be made and the specification sworn to by the inventor or discoverer," which, as previously pointed out, simply shows how "an application by an assignee" shall be made—that is, that the application or petition shall be signed and the specification sworn to by the inventor or discoverer.

The decree of the district court is reversed, and the case is remanded to that court for further proceedings not inconsistent with this opinion, with costs to the appellant.

Notice.

Through an error in printing, the notice in the OFFICIAL GAZETTE of August 30, 1921, referred to July 1, 1922, instead of 1921. After July, 1921, the monthly indexes for the OFFICIAL GAZETTE will be omitted.

THOMAS E. ROBERTSON,
Commissioner of Patents.

Adverse Decisions in Interference.

PATENT No. 1,359,913.

On September 14, 1921, a decision was rendered that William W. Owen was not the first inventor of the subject-matter covered by claims 1, 3, 5, 6, 18, and 20 of his Patent No. 1,359,913, subject, "Measured-service telephone systems," and no appeal having been taken within the time allowed such decision has become final.

Interference Notices.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., September 27, 1921.

The All in One Tractor Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Stroud Motor Manufacturing Ass'n., Ltd., of 117 East Houston street, San Antonio, Tex., for registration of a trade-mark and trade-mark registered April 22, 1913, No. 91,271, to The All in One Tractor Company, Waterloo, Iowa, and a notice of such interference sent by registered mail to The All in One Tractor Company at the said address having been returned by the post-office undeliverable, notice is hereby given that unless The All in One Tractor Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., September 27, 1921.

H. J. Nice Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Percy Pierce, 445 North Fifth street, Philadelphia, Pa., for registration of a trade-mark and trade-mark registered December 28, 1909, No. 76,281, to H. J. Nice Company, 15 Northeast Fifth street, Minneapolis, Minn., and a notice of such interference sent by registered mail to said H. J. Nice Company at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said H. J. Nice Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., October 7, 1921.

Isaac Newlin, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Simon Levi Company, 715 J Street, San Diego, Calif., for registration of a trade-mark and trade-mark registered April 4, 1911, No. 81,407, to Isaac Newlin of New York, N. Y., and having failed to obtain service upon the registrant, notice is hereby given that unless said Isaac Newlin, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

Amendment to Rules of Practice—Rule 194.

Acting under the provisions of section 483 of the Revised Statutes and with the approval of the Secretary of the Interior, Rule 194 of the Rules of Practice of the United States Patent Office is amended in the following particulars:

In the first sentence thereof the words "certificates of deposit" are canceled.

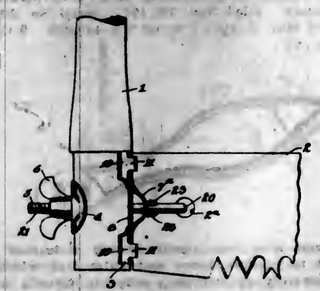
The third sentence, which reads as follows, is canceled:

"Payment may also be made to the Treasurer, or to any of the Assistant Treasurers of the United States, or to any of the depositaries, national banks, or receivers of public money, designated by the Secretary of the Treasury for that purpose, who will issue a certificate of deposit in triplicate and will forward the original and the duplicate certificates to the Secretary of the Treasury and the Commissioner of Patents, respectively, and will give the triplicate certificate to the depositor."

The rule as amended reads as follows:

194. All payments of money required for Office fees must be made in specie, Treasury notes, national-bank notes, post-office money orders, or certified checks. Money-orders and checks should be made payable to the "Commissioner of Patents." Money sent by mail to the Patent Office will be at the risk of the sender. Letters containing money should be registered. In no case should money be sent with models.

Condition of Applications Under Examination at Close of Business October 1, 1921.



Room No.	Divisions, Examiners, and subjects of inventions. (Oldest new case, Oct. 11; oldest amended, Dec 4.)	Oldest new application and oldest amendment actually acted upon by the Patent Office action. New.	Amended.	No. of cases under consideration.
314	1. LOEFFLER, F. S., Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Scattering Implements.	Apr. 28	May 7	744
126	2. BALDWIN, M., Bee Culture; Dairy; Medicines; Pneumatics; Preserving; Presses; Tents, Canopies, Umbrellas, and Canes; Tobacco Treating; Plants and Flowers.	Jan. 3	Feb. 18	1,671

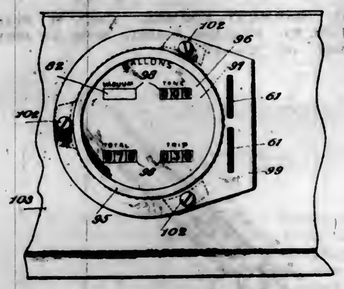
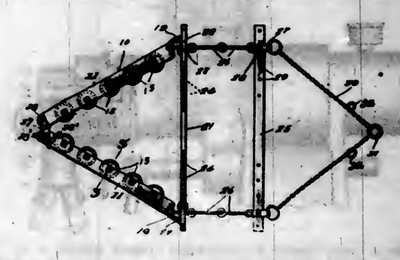
PATENTS



GRANTED OCTOBER 11, 1921.

1,392,898. HANDLE FOR CROSSCUT-SAWS. PERCY C. ABBOTT, Richmond, Va. Filed June 26, 1920. Serial No. 391,974. 4 Claims. (Cl. 145—111.)

1. In a saw handle, a butt plate having parallel arched bosses between its ends extending longitudinally of the plate and an intermediate strip flush with the surface of the plate, said intermediate strip having a perforation for the passage of a bolt adapted to confine the saw blade between the inner side of one of said arched portions and said bolt.

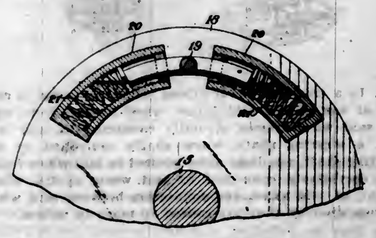


1,392,899. REGISTER. JACOB J. ALBRIGHT, Columbus, Ga., assignor of one-third to James H. Fariah and one-third to B. Crawford Jenkins, Columbus, Ga. Filed Feb. 6, 1918. Serial No. 215,622. 11 Claims. (Cl. 235—94.)

1. In a register, the combination, with a frame, of independent counter groups rotatably sustained by the frame, means for actuating the counter groups for advancing the counter wheels thereof, means for preventing retrograde movement of each of the counter groups, and means connecting the retrograde movement preventing means of the counter groups for rendering the same effective, said connecting means being independent of the frame except through engagement with the retrograde movement preventing means.

1,392,900. BOG-CUTTER, GRUBBER, AND WEEDER. CHARLES ALBERT AMBROSE, Carson City, Nev. Filed Apr. 11, 1921. Serial No. 460,481. 7 Claims. (Cl. 55—62.)

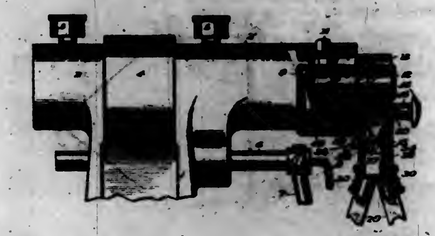
1. A bog cutter, grubber and weeder, comprising a V-shaped frame having side members connected for adjustment angularly with respect to each other, said frames having upright cutters, at the ends thereof and a plurality of rotatable cutters along the inner edges thereof



in opposed relation, and means for advancing the frame in the direction of the ends thereof provided with the upright cutters.

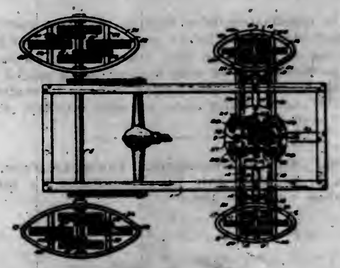
1,392,901. BATHTUB. ELMER ADAIR, Chicago, Ill., assignor of one-fourth to Casper J. Wessel, Chicago, Ill. Filed Feb. 25, 1921. Serial No. 447,725. 4 Claims. (Cl. 4—27.)

1. The combination of a bathtub, a frame resting on the upper edge of said tub, a pipe resting on said frame, a housing supported by said frame and covering said pipe, the inner edge of said housing being spaced away from said frame, said pipe having holes in its walls, and means for passing water under pressure into said pipe.



1,392,902. SHOCK-ABSORBER. ERNIE ADAMSON, New York, N. Y. Filed July 30, 1920. Serial No. 400,046. 3 Claims. (Cl. 64—100.)

1. A driving connection adapted to absorb driving shocks, consisting of a pair of spaced parallel supporting members, arcuate cylinders partially filled with fluid and spaced apart in pairs on one of said members, the cylinders of each pair having reduced openings at their inner adjacent ends, a plunger outstanding from the other member between the cylinders of each pair and having arcuately curved pistons projecting oppositely therefrom and into the said cylinders, the said pistons slidably in-



terfitting the reduced openings of the cylinders and being spaced throughout their lengths from the cylinder walls, and a spring in each cylinder moving in the fluid thereof and engaging the adjacent end of the respective piston.

1,392,903. EDGE SETTING AND BURNISHING MACHINE. OTIS R. ANGELL, Haverhill, Mass., assignor to Hamel Shoe Machinery Company, a Corporation of Massachusetts. Filed Mar. 30, 1918. Serial No. 225,672. 27 Claims. (Cl. 12—78.)

10. In an edge setting machine, in combination, a tool-supporting member, a tool holder mounted for rotation thereon, the opposed surfaces of said parts being provided with alined openings, a spring pressed latch pin slidable in the opening of said holder and arranged to be normally projected into locking engagement with the opening in said member, and an element slidable in said latter opening for disengaging said latch pin therefrom.

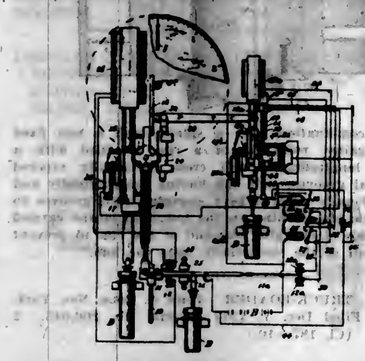
1,392,904. TRACKLESS POWER-DRIVEN VEHICLE. AXEL EMIL ARONS, Peoria, Ill. Filed Feb. 11, 1920. Serial No. 357,967. 2 Claims. (Cl. 180—22.)

1. In a trackless power-driven vehicle, a frame, a cross bar at one end of said frame, wheel-frames, front axles for said wheel-frames pivotally connected to said cross bar, a steering shaft, worm shafts controlled by said steering shaft, auxiliary axles pivoted to said wheel-frames and operatively connected to said worm shafts, wheels for all of said axles, and connection between said wheel-frames whereby they are caused to move in unison.

1,392,905. PROCESS OF MAKING POTASSIUM BROMID. EDWIN O. BARSTOW and COULTER W. JONES, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed May 17, 1917. Serial No. 169,178. 8 Claims. (Cl. 23—13.)

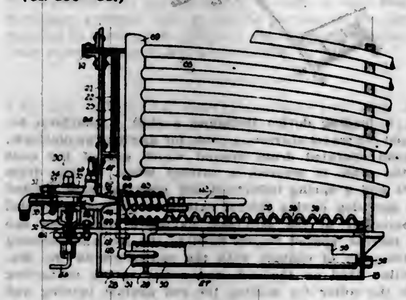
1. In a method of making substantially pure potassium bromid from potassium carbonate containing a relatively small admixture of sodium carbonate, the steps which consist in reacting on such mixed carbonates in solution with free bromin, whereby a solution of mixed bromids is formed; and boiling such solution to a point beyond hot saturation and then cooling to not lower than 50° C., whereupon substantially pure potassium bromid crystallizes out.

1,392,906. INSOLE AND THE METHOD OF MAKING THE SAME. GEORGE H. BLACK, Rochester, N. Y., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 10, 1917, Serial No. 201,378. Renewed Mar. 2, 1921. Serial No. 449,239. 9 Claims. (Cl. 36—22.)



1. A welt shoe sole insole having a leather body channeled to produce inner and outer lips which are turned upwardly against each other to form a sewing rib and to receive the stitches which connect the insole, upper and welt, a fabric reinforcement covering the channeled face of the insole from the heel breast line forwardly and having marginal portions thereof included in the sewing rib, and a lip strengthening element arranged in the toe of the insole between said leather body and said fabric reinforcement and comprising a triangular piece of tough material adhesively connected with the leather body in the point of the toe inside said rib and positioned wholly forward of the ball line and having two upturned portions connected to the inner face of said rib and lying between said rib and and said fabric reinforcement.

1,392,907. GARMENT-FORMER. CECIL H. BOYULS, Louisville, Ky. Filed Mar. 5, 1921. Serial No. 450,045. 7 Claims. (Cl. 223—17.)



1. In a garment former, a body portion, wings at the sides of the body portion, means to move said wings toward and from the body sides, and tail clamps carried by and movable with the wings.

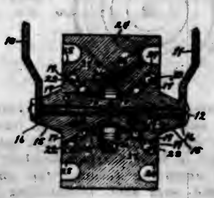
1,392,908. AUTOMATIC SCALE. JAMES W. BATCH, Bloomfield, N. J., assignor to The Computing Scale Company, Dayton, Ohio, a Corporation of Ohio. Filed Jan. 29, 1917. Serial No. 145,132. 21 Claims. (Cl. 265—70.)

1. In a scale, the combination with a movable support for the load, and yielding means to oppose the gravity pull of the load, of means normally inactive but adapted to be put in operation by the movement of said support to exert through said yielding means a counter-pull just sufficient to counterbalance the load.

1,392,909. BURNER. OSCAR F. CARLSON, Chicago, Ill. Filed June 9, 1919. Serial No. 302,735. 10 Claims. (Cl. 158—81.)

1. In combination, a boiler casing, a burner having a vaporizing conduit, a mixing chamber, a nozzle communicating with the vaporizing conduit and discharging into the mixing chamber and an air jacket supplying heated air to the mixing chamber, said air jacket contiguously bordering the burner so as to be immediately subject to the heat generated thereby.

1,392,910. RETAINER FOR MOTION-PICTURE-FILM REELS. ELIJAH M. CHASE, Cheyenne, Wyo. Filed Jan. 11, 1921. Serial No. 436,560½. 4 Claims. (Cl. 206—53.)

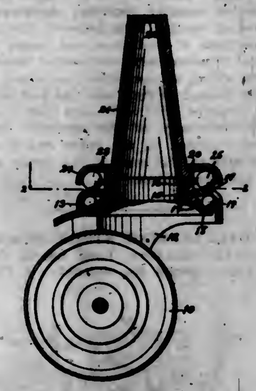


1. A device of the character described including a guide member, a band having one end secured to the guide member and its other end adapted to be removably disposed within the guide member and a spring actuated catch carried by the guide member and adapted to engage the free end of the band to retain the same in position within the guide.

1,392,911. SWIVEL-CASTER. JOHN LOUCIEN CHESNUTT, Long Beach, Calif. Filed Apr. 29, 1921. Serial No. 465,586. 6 Claims. (Cl. 16—21.)

2. A swivel caster, comprising a wheel yoke, a wheel journaled therein, a stem extending upwardly from said yoke, a socket member closed at its upper end and fitting loosely over said stem, means for retaining said stem in said socket member and permitting relative rotary movement of said members on a vertical axis, a series of bearing balls between the upper ends of said stem and socket member receiving downward pressure only, a series of bearing balls between the sides of the lower end portions of said stem and socket member receiving lateral pressure only, said socket member adapted to be received within an apertured load object, said socket member being flanged at its lower end and adapted to be secured and centered relative to said load object by said flange circumferentially of the aperture therein, and resilient means carried by the upper end of said socket member and adapted to contact the inner wall of the aperture of said load object.

1,392,912. BALL-BEARING STRING-PROOF WHEEL. JOHN LOUCIEN CHESNUTT, Long Beach, Calif. Filed Apr. 29, 1921. Serial No. 465,587. 4 Claims. (Cl. 16—46.)

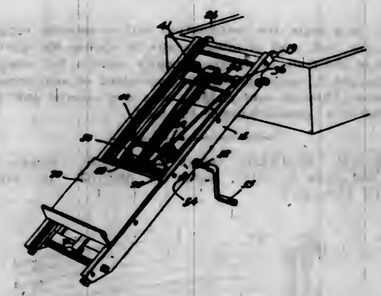


2. A device of the class described, comprising spaced wings, axle members mounted end to end between said wings, a securing member extending through said axle members and wings and binding them rigidly together, an annular tread member rotatably mounted on said axle members, and anti-friction devices between said axle members and the tread member, said axle members being formed with outstanding flanges between their ends, said tread member being formed with laterally extending flanges at its opposite ends overhanging and slightly spaced from the outstanding flanges, said axle members being formed tapering from said outstanding flanges to their outer ends and merging into the lower ends of said wings.

1,392,913. SWIVEL-CASTER. JOHN LOUCIEN CHESNUTT, Long Beach, Calif. Filed Apr. 30, 1921. Serial No. 465,886. 6 Claims. (Cl. 16—21.)

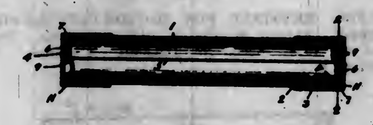
3. In a swivel caster, a wheel yoke, a wheel pivoted therein and trailing relative to the vertical axis of said caster, a retaining member of circular form secured rigidly on said wheel yoke, a shell mounted concentrically of said retaining member and formed with a flange at its lower margin extending beneath said retaining member, a row of bearing balls on said flange and contacting said retaining member, said balls adapted to receive lateral pressure only, a top plate on and secured to said shell, a row of balls on said retaining member in contact with said top plate and receiving vertical pressure only, both rows of balls being of relatively large diameter and extending outside of the vertical plane of the axis of rotation of said wheel.

1,392,914. SWIVEL-CASTER. JOHN LOUCIEN CHESNUTT, Long Beach, Calif. Filed Apr. 30, 1921. Serial No. 465,887. 3 Claims. (Cl. 16—21.)



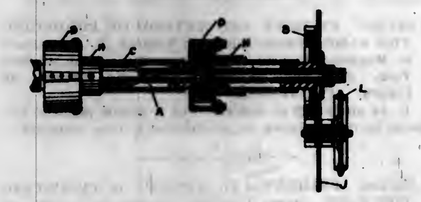
2. A swivel caster, comprising a wheel yoke and wheel pivoted therein, said wheel yoke being formed with a cylindrical body and with an annular plate on the upper end thereof, a load bearing member including a cylindrical shell extending through the annular plate of the wheel yoke, said shell terminating in a downwardly and outwardly projecting flange extending beneath the plate of the wheel yoke, said flange being formed peripherally with an external raceway, an annular row of balls mounted in said raceway and contacting the walls of said shell and annular plate, said shell being formed at its upper end with a flange or shoulder, a hollow stem integrally formed with said shell and extending upwardly from said flange or shoulder, a cupped washer arranged concentrically of said stem and supported rigidly on said flange or shoulder, said stem and cupped washer adapted to support a load object, and an annular row of bearing balls mounted within said cupped washer and resting on the annular plate of the wheel yoke, said last-named balls having a freedom of movement laterally and receiving downward pressure only.

1,392,915. HUB FOR GEARS, PULLEYS, AND TOOLS. JAMES LOUIS CLENDENON, Bessley, Ala. Filed Aug. 5, 1920. Serial No. 401,461. 6 Claims. (Cl. 64—17.)



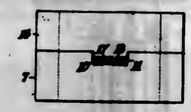
1. The combination with a spindle and a hub fixed thereon against rotation; of a rim provided with a series of longitudinally and cross sectionally tapered longitudinal grooves, said hub having longitudinally and cross sectionally tapered keys engaging said grooves to prevent said rim turning on the hub, and means carried by the hub and engaging one end of the rim to prevent displacement of the rim axially from the hub.

1,392,916. TRUCK-LOADER. JOHN A. COLE, New York, N. Y. Filed Dec. 7, 1917. Serial No. 206,045. 2 Claims. (Cl. 187—10.)



2. A loading device including a skid, a platform arranged for travel thereon, a cable for moving the platform, a hand operated drum around which one of the ends of the cable is secured, a ratchet wheel on the drum shaft and a spring influenced dog engaging said ratchet and said dog having lateral extensions; a rod journaled transversely of the skid and having a handle on one end thereof, spaced fingers fixed to the rod and disposed in the path of contact with the extensions on the dog, a collar fixed on the rod, and a flat spring contacting with the collar for holding the rod against turning and for sustaining the rod in position when the same is turned.

1,392,917. RENEWABLE FUSE. FRANKLIN N. CONANT, Newburyport, Mass., assignor, by mesne assignments, to The Chase-Shawmut Company, a Corporation of Massachusetts. Filed Nov. 22, 1917. Serial No. 203,325. 14 Claims. (Cl. 200—132.)



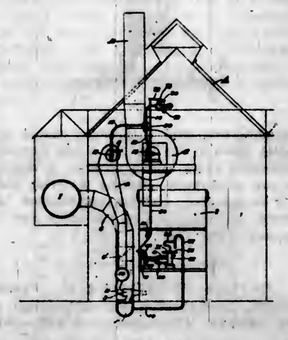
1. In an inclosed electric fuse of the cartridge type, the combination of a casing containing a fuse strip, an externally screw-threaded metal ferrule for the end of said casing having an end wall formed with an aperture having a straight side, wedging means to engage the fuse strip on the straight side of said aperture throughout its width, and means to engage a terminal portion of the fuse strip on the end wall adjoining said straight side, both said engaging means being removable, and an end cap arranged to apply pressure to both of said engaging means to firmly hold the terminal portion of the fuse strip.

1,392,918. CONSTRUCTION OF ROLLING DOORS, SHUTTERS, AND CURTAINS. JOHN M. CORNELL, Seabright, N. J. Filed Nov. 8, 1919. Serial No. 336,768. 2 Claims. (Cl. 189—57.)

1. The combination with a rolling curtain or the like, of a stationary shaft and supporting means, a spring housing loosely mounted on said shaft partly inclosing a counterbalancing spring for said curtain, a removable head or disk for said housing having an annular collar surrounding said shaft forming substantially an elongated hub for one side of said housing, operating means for rotating said housing, an elongated hub associated with said operating means, a tubular sleeve surrounding said shaft for connecting the elongated hubs of the housing and operating means, said sleeve being of such length as to extend just beyond the outer ends of said hubs in operative position and to permit access to the spring housing by a telescopic action of the sleeve and associated hubs after said parts are disconnected.

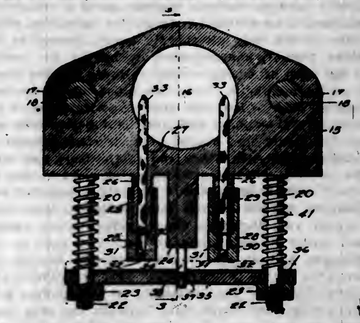
1,392,919. METALLIC-DENTURE-DRAWING DIE. ROBERT M. CRAIG, Wilkinsburg, Pa. Filed June 19, 1919. Serial No. 305,422. 10 Claims. (Cl. 205—26.)

10. Mechanism constructed and arranged to form an I-bar from a primarily plane strip of metal; including a die member having a trough shaped passage with a ridge extending transversely to the length of said passage corresponding with the desired concave configuration of the proximal face of the bar to be drawn; of another die member having a projection registering with said passage, and corresponding with the desired concave configuration of the proximal face of the bar to be drawn; whereby said strip may be reduced to form said I-bar by drawing it through said passage.



1,392,920. CAGE FOR ANTIFRICTION-BEARINGS. CLAYTON A. DANE and ALBERT A. KRAEMER, Philadelphia, Pa., assignors to The Hess-Bright Manufacturing Company, a Corporation of Delaware. Filed Sept. 1, 1920. Serial No. 407,471. 6 Claims. (Cl. 64—59.)

5. A ball retainer comprising a ring of solid metal of substantially rectangular cross sectional formation formed with pockets disposed radially thereof, there being a chanel formed around the mouth of each pocket forming an upstanding flange, the side lines of the ring touching the sides of such flange, there being also a cross channel



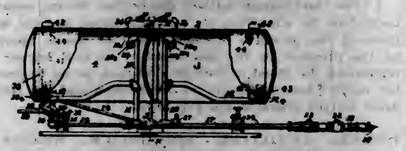
cut in the flange from side to side and a longitudinal channel thereby forming such flange into four lips.

1,392,921. APPARATUS FOR BURNING GASES. AMBROSE N. DIEHL, Duquesne, and FRANK E. LEAHY, McKeesport, Pa. Filed Jan. 22, 1921. Serial No. 439,322. 6 Claims. (Cl. 158—100.)

1. The combination with a gas burner having separate turbo-fans for supplying air for combustion and for withdrawing the products of combustion, of means operated by the pressure of the gas supplied to said burner for regulating the speed of both of said fans, so as to provide the correct amount of air for combustion and the correct draft for the different gas pressures.

1,392,922. AUXILIARY-AIR DEVICE. WILLIAM C. DILLON, Fort Dodge, Iowa. Filed Sept. 14, 1920. Serial No. 410,261. 7 Claims. (Cl. 277—51.)

1. An auxiliary air device, comprising a plate designed to be interposed in the path of travel of the fuel mixture



of an internal combustion engine, said plate having an opening, an extension on said plate, an opening extended through said extension and the body of the plate to said first opening, a cap mounted on said extension, a filtering device mounted in said last opening, said cap having an opening extending through it and a portion forming a valve seat, a ball valve for coacting with said seat, means for closing the passage at the outer end of the cap, said means comprising a bar slidably mounted on said plate.

1,392,923. TIRE-VALVE. GEORGE E. DRAPER, Pittsburg, Kans. Filed Jan. 31, 1921. Serial No. 441,251. 2 Claims. (Cl. 152—12.)

1. The combination with a threaded casing member of an automobile valve or the like, of a cap threaded to engage the threaded valve casing member, a sealing device within the cap comprising yielding material and a shell in which it is mounted, and an anti-friction ball interposed between the outer end of the shell and the inner wall of the end of the cap.

1,392,924. DUPLEX PUMPING-TRAP. FREDERICK C. FARNSWORTH, Conshohocken, Pa. Filed Sept. 30, 1918. Serial No. 256,168. 15 Claims. (Cl. 137—103.)

1. A tilting trap comprising a hollow body member pivoted upon a base to oscillate thereon about a transverse axis and having an automatic means for supplying water and steam to the body alternately under control of the oscillations thereof, characterized by having the hollow body in the form of a long tubular cylinder divided transversely at its middle to form two independent abutting compartments end to end and upon opposite sides of the transverse pivotal support and also having separate sets of pipes for steam and water to each compartment in rigid relation with each other and to the body and moving with the body, said steam and water pipes having independent terminals in alinement with the transverse axis of oscillation of the hollow body member, stationary water supply and discharge pipes having valves therein to permit water flowing freely to and from each of the compartments and in which the terminals thereof for supplying each of the compartments have an opening also in alinement with the pipe terminals on and moving with the body, swing joint connections between the said openings from the two sets of stationary water supply and discharge pipes and the respective water pipe terminals of the two compartments of the body, stationary pipes for supplying steam to the respective steam pipe terminals of the body also in alinement with the axis of oscillation thereof, swing joints between the steam terminals of the body and the respective stationary steam pipes for maintaining continuous open communication while permitting oscillation of the body, and valve devices mechanically operated by the oscillating body for controlling the supply of steam to and venting the air to the atmosphere from the two compartments alternately, whereby one of the compartments is filling with water and discharging the air into the atmosphere while the other compartment is filling with steam and discharging its water content, and vice versa.

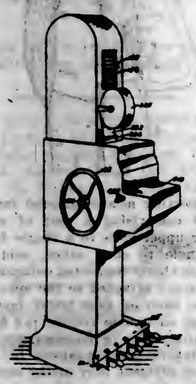
1,392,925. PIGMENT AND METHOD OF PRODUCING THE SAME. PETER FIREMAN, Trenton, N. J., assignor to Magnetic Pigment Company, a Corporation of New York. Filed June 22, 1920. Serial No. 390,809. 10 Claims. (Cl. 134—59.)

1. As an article of manufacture, a yellow pigment produced by the oxidation of precipitated ferrous hydroxid.

1,392,926. PIGMENT AND METHOD OF PRODUCING THE SAME. PETER FIREMAN, Trenton, N. J., assignor to Magnetic Pigment Company, a Corporation of New York. Filed June 22, 1920. Serial No. 390,810. 8 Claims. (Cl. 134—59.)

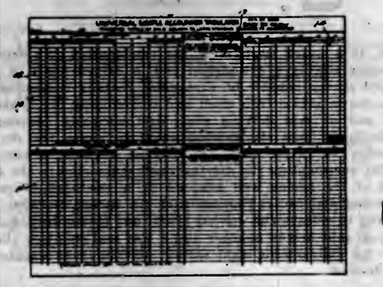
1. As an article of manufacture, a voluminous red-brown pigment produced by the oxidation of precipitated ferrous hydroxid.

1,392,927. PIGMENT AND METHOD OF PRODUCING SAME. PETER FIREMAN, Trenton, N. J., assignor to Magnetic Pigment Company, a Corporation of New York. Filed June 22, 1920. Serial No. 390,811. 9 Claims. (Cl. 134—59.)



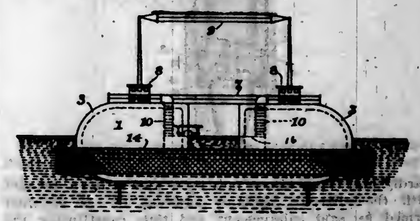
1. As an article of manufacture, a brown pigment in tan shades consisting of an oxidised precipitated ferrous hydroxid.

1,392,928. PUMP. MANTON E. FOSS, Wilder, Minn. Filed June 8, 1920. Serial No. 387,475. 5 Claims. (Cl. 230—27.)



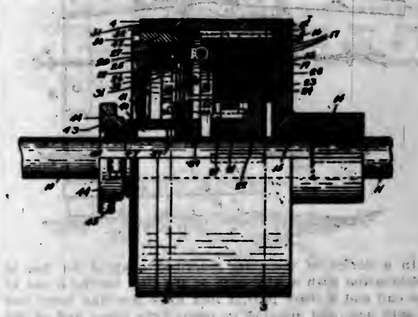
1. A pump comprising a pair of cylinders and a discharge tube arranged between them and having a hose at its upper end, a plunger in each cylinder, means for simultaneously moving the plungers, a check valve at the bottom of each cylinder for admitting air thereto, lateral ports at the ends of the cylinders communicating with the discharge tube, checks at the top of the said tube for permitting the admission of air to the cylinders on the down stroke of the plungers and for preventing the passage of air from the discharge tube to the cylinders and for permitting the passage of air from the cylinders to the hose on the up stroke of the plungers and for preventing discharge of the air to the atmosphere.

1,392,929. MACHINE FOR PRINTING AND ISSUING RAILWAY-TICKETS. FREDERICK L. FULLER, Bridgeport, Conn., assignor to The National Cash Register Company, Dayton, Ohio. Original application filed Oct. 27, 1916, Serial No. 128,008. Divided and this application filed Dec. 18, 1919. Serial No. 345,886. 20 Claims. (Cl. 101—66.)



1. In a machine of the class described, the combination of a plurality of destination devices, means on each destination device adapted to print class designations on tickets, and means for moving the desired device differentially into position to print a designation of the desired class on the ticket.

1,392,930. MEANS EMPLOYED IN ACCOUNTING SYSTEMS. FRED GERTZ, Jr., Ellington, Mo. Filed Oct. 11, 1920. Serial No. 416,072. 2 Claims. (Cl. 283—66.)



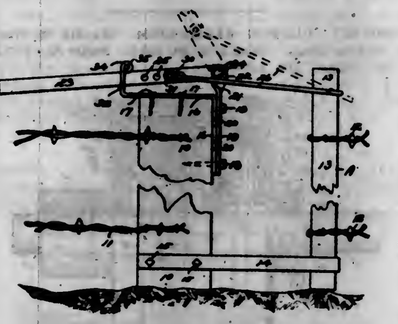
1. Means for book-keeping comprising a sheet for primarily recording transactions and divided into upper and lower sections, one section being appropriately designated for purchases and the other for sales, said sections being divided into corresponding vertical columns, the columns of each section being differentially headed for separate classes of transactions and each having a key character displayed at the top thereof, corresponding columns in the two sections being correspondingly keyed, and a sheet on which to transfer the primarily recorded transactions for permanent record, said last sheet being divided into vertical columns corresponding in number to the number of columns of the first sheet and having corresponding key characters, the purchase and sale columns of the second sheet being grouped together under a single key character, said second sheet being horizontally ruled into daily divisions.

1,392,931. HYDROPLANE-STATION. PAUL GERLI, New York, N. Y. Filed Jan. 21, 1919. Serial No. 272,280. 2 Claims. (Cl. 114—0.5.)

1. A hydroplane station composed of a hull, a superstructure built around three sides of a central open portion below the water-line forming a lagoon with restricted inlet, portions of said hull forming a submerged floor for said lagoon, said superstructure comprising houses for stores and having a deck with stairways leading down to the lagoon.

1,392,932. CLUTCH MECHANISM. HARRIS M. GRIFFIN, Boston, Mass. Filed Oct. 20, 1917. Serial No. 197,707. 8 Claims. (Cl. 192—69.)

1. In a clutching mechanism, a driving element, clutch plates carried thereby, a driven element, clutch plates carried thereby, said clutch plates adapted to be moved into clutching engagement for the conjoint rotation of said elements, an abutment carried by said driven member and spaced from a clutch plate carried by said driven member, said plate and abutment being conjointly rotatable, and operating mechanism for said clutching mechanism including two pressure rings adapted to be moved into engagement with said abutment and clutch plates to connect said driving and driven elements through said clutch plates, and a plurality of toggle links connecting said rings, said pressure rings and toggle links adapted for rotation independent of said driving and driven elements.



1,392,933. SPARK-PLUG. HORACE E. GILL, Yonkers, N. Y., assignor to Fan Flame Spark Plug Co., Yonkers, N. Y., a Corporation of New York. Filed Oct. 9, 1918. Serial No. 257,502. 2 Claims. (Cl. 123—169.)

1. In a spark plug, the combination with a vitreous insulator provided with an integral annular enlargement

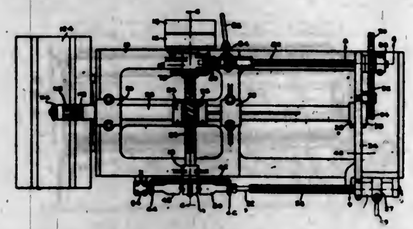
and a two-part shell surrounding the same, of a single gasket interposed between said shell and insulator and comprising an annular metal trough with an elastic packing therein, the exposed face of said packing facing inwardly and being forced into tight and intimate contact with the vitreous insulator adjacent to the shoulder formed by said enlargement and thus constituting the packed joint between the insulator and shell, substantially as set forth.

1,392,934. GATE-FASTENER. WILLIAM F. GLANDT, Stanton county, near Leigh, Nebr. Filed Jan. 8, 1921. Serial No. 434,532. 1 Claim. (Cl. 292—247.)

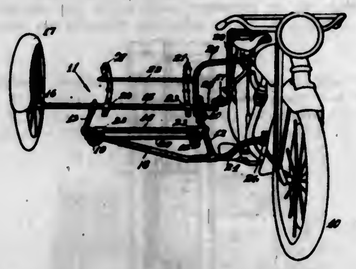
In a device of the class described adapted for use in combination with a wire gate or the like, having a bar at one end and a fence post, a link fixed near the lower end of said post and adapted to receive the lower end of the bar of said gate, means for engaging and drawing the upper end of said bar toward the post and for locking it against movement, said last means including an inverted L shaped bracket having an upwardly extending bearing member fixed thereto, the upper end of said bracket being provided with a portion formed parallel with one side of the bracket, and provided with a notch, a loop formed on the upper end of said last portion, a lever pivotally mounted in said bearing member, said lever being provided with a plurality of openings, a link capable of being selectively received in any of said last openings and capable of pivotal movement therein, said link being formed of a single rod having an eye formed on one end and having its other end screw threaded, said screw threaded end being adapted to extend through said eye and a nut for said screw threaded end for completing and securely holding the link in position, said link being designed to engage the upper end of said bar and when said lever is swung on its pivot, to move said bar toward said post, the lever being received in said notch below said loop, a pin adapted to extend through said loop for locking said lever when in one position against movement, the parts being so arranged that when the lever is in its locked position the link pivoted thereon will pass below center, for normally tending to hold the lever in its locked position.

1,392,935. SUSPENDERS. DAVID GLICKMAN, Chicago, Ill. Filed June 17, 1918. Serial No. 240,350. 1 Claim. (Cl. 2—96.)

Trousers supporting means adapted for wearing under the outer shirt comprising a pair of short suspenders secured at their upper ends to a single fastener and disposed at an angle to each other, said fastener being adapted to be pinchingly connected detachably to the under shirt, and a fastener attached to the lower end of each of said suspenders, each of said latter fasteners having a looped part large enough to receive the body of a button and communicating with a downwardly disposed notch, said latter fasteners being adapted to receive trousers buttons with the adjacent part of the outer shirt gripped thereby.



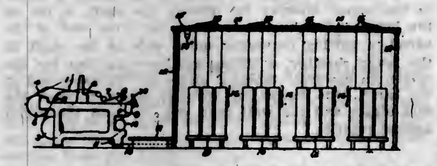
1,392,936. CLUTCH MECHANISM. OTTO W. GREENE, Elyria, Ohio, assignor to The Greene Aeronautical Company, Elyria, Ohio, a Corporation of Ohio. Filed Jan. 22, 1919. Serial No. 272,427. 2 Claims. (Cl. 192—37.)



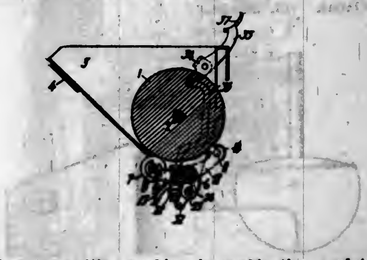
1. In a clutch mechanism, the combination of a driving member having a cylindrical end, a driven shaft, a flat coiled spring capable of expanding radially connected at one end to said driven shaft and surrounding the cylindrical end of said driving shaft and normally contracted radially to grip the driving shaft to cause the driven member to rotate with the driving member, a knurled collar surrounding the driving shaft connected to the free end of the spring and adapted to be operated to cause twisting and radial expansion of the spring to cause the spring to release the driving shaft, and means including a pin on said driven member and a slot and shoulder therefor for maintaining said spring contracted or expanded, as desired.

1,392,937. METAL-WORKING MACHINE. ORAN S. HAMMAGREN, Minneapolis, Minn. Filed Mar. 12, 1920. Serial No. 365,190. 7 Claims. (Cl. 51—31.)

1. A metal working machine comprising a support, a driving shaft mounted on said support, a boring bar, means operated from said driving shaft for longitudinally reciprocating said boring bar, means for rotating said boring bar from said driving shaft at a reduced rate of speed, a rod rotatably and non-slidably mounted in said boring bar, disconnectible means for rotating said rod in said boring bar from said driving shaft at an increased rate of speed, and means on the forward end of said boring bar whereby a tool may be attached for operation thereby or a grinding wheel may be supported for rotation by said rod.

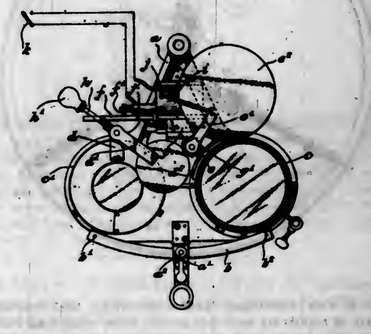


1,392,938. SIDE-CAR ATTACHMENT FOR MOTORCYCLES. CHARLES E. HASTINGS, Chicago, Ill., assignor to National Dairy Machine Company, Goshen, Ind., a Corporation of Indiana. Filed Oct. 30, 1919. Serial No. 334,434. 35 Claims. (Cl. 208—45.)



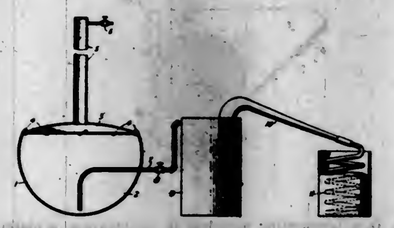
1. The combination with a motor cycle frame, of a side car comprising a frame having a resilient connection with said motor cycle frame, said connection comprising an elliptic spring member having a positive clamping engagement with said side car frame member and pivotally connected with said motor cycle frame member.

1,392,939. CHENILLE-STRIP DISTRIBUTION. EDGAR F. HATHAWAY, Dorchester, Mass., assignor to Mohawk Carpet Mills, Inc., Amsterdam, N. Y., a Corporation of New York. Filed Mar. 8, 1921. Serial No. 450,613. 17 Claims. (Cl. 139—40.)



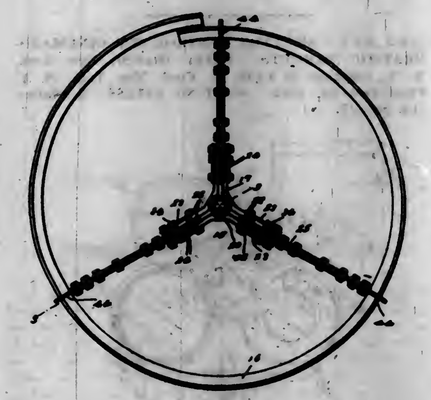
1. Chenille or like strip distributing mechanism comprising in combination, mechanism extending the full width of the chenille forming mechanism to deliver in parallel relation from the said chenille forming mechanism a set of laterally uncontracted strips and constituting substantially a sheet which is of the full width of the mechanism, a series of receiving receptacles in substantial alinement, and means to direct said strips separately into the respective receptacles, whereby each receptacle receives a single strip.

1,392,940. TYPEWRITING-MACHINE. WILLIAM F. HELMOND, Hartford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 27, 1919. Serial No. 279,626. 9 Claims. (Cl. 197—138.)



1. In a typewriting machine, in combination, a platen, front and rear feed-rolls to coöperate therewith, shafts for said rolls, a supporting bar, supporting arms for said shafts, said arms being associated in pairs, each pair including an arm for each of said shafts, the arms of each pair having hubs journaled end to end on said supporting bar and extending from said arms in the same direction along said bar, so that one of said hubs serves to maintain said arms at the desired distance apart, a lug on each arm extending therefrom in the same direction as the hub and lying between the planes of its ends, a fixed support paired with each of said lugs, and a spring between each lug and its support tending to move the former relatively to the latter, said springs thereby tending to cause said rolls to be pressed against said platen.

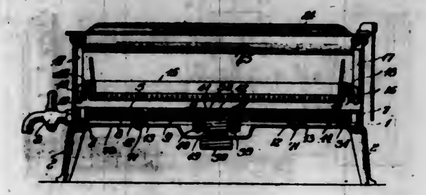
1,392,941. SHUTTER CONTROL FOR CINEMATOGRAPHIC TARGETS. HENRY HIRSCH, New York, N. Y., assignor to Lydia B. Koch, New York, N. Y. Filed Dec. 26, 1919. Serial No. 347,288. 5 Claims. (Cl. 88—17.)



1. A shutter control for cinematographic targets embodying therein the combination with a movable frame carrying a plurality of condensers, of shutters pivotally mounted adjacent and adapted to be moved in relation to the light openings of said condensers respectively, operative connections between said shutters whereby they may be simultaneously actuated, means normally tending to move and hold said shutters from before the light openings of said condensers, and a magnet operatively connected with and adapted to positively actuate said connections, the circuit to said magnet being normally open, whereby upon the closing of said circuit, both shutters will have simultaneous movement imparted thereto, to obscure the light openings of both of said condensers.

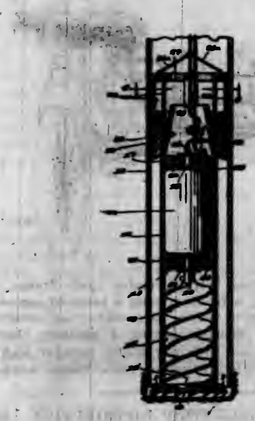
1,392,942. PROCESS FOR THE MANUFACTURE OF DIPHENYLAMIN. ARTHUR HANS HOULEHAN, Wilmington, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a Corporation of Delaware. Filed May 25, 1917. Serial No. 170,868. 10 Claims. (Cl. 23—24.)

1. The process of condensing aniliu to diphenylamin which comprises heating aniliu to a temperature of from about 275 to 300° C. in the presence of water with a small proportion of a halogen-containing substance as the active catalyst, which substance provides a source of a free halogen or the hydrid thereof in the process.



1,392,943. RIM-TOOL. SAMUEL J. HURWITS, Youngstown, Ohio. Filed Oct. 12, 1920. Serial No. 416,358. 5 Claims. (Cl. 157—1.)

1. A rim expanding and contracting tool embodying a pair of relatively movable heads, arms extending radially from said heads and rim engaging elements carried by the outer ends of the arms and means for preventing buckling of the tool and means for connecting the inner ends of the radial arms with the relative movable heads, whereby said arms may be folded in substantially parallel position.

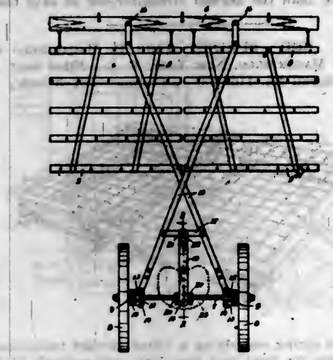


1,392,944. STERILIZER. ALBERT H. JESSUP, Erie, Pa., assignor to American Steriliser Company, Erie, Pa., a Corporation of Pennsylvania. Original application filed July 5, 1917, Serial No. 178,535. Divided and this application filed Feb. 3, 1920. Serial No. 355,910. 7 Claims. (Cl. 219—68.)

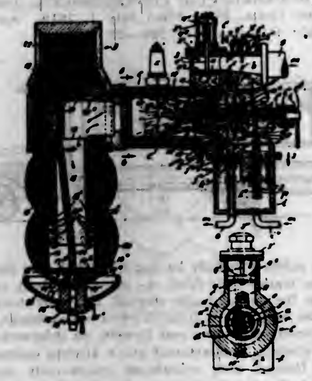
1. An electric heater element comprising a support having tongues at its opposite edges, and an electric resistance strip looped under and across the tongues and traversing but one face of the support in its passage from a tongue at one edge of the support to a tongue at

its opposite edge, said support having face rabbets or recesses making the tongues thinner than the main body of the support and accommodating the tongue crossing portions of the resistance strip loops.

1,392,945. WELL-BORING MACHINE. JAMES M. KELLAR, Sistersville, W. Va. Filed Jan. 25, 1921. Serial No. 439,794. 2 Claims. (Cl. 255—4.)



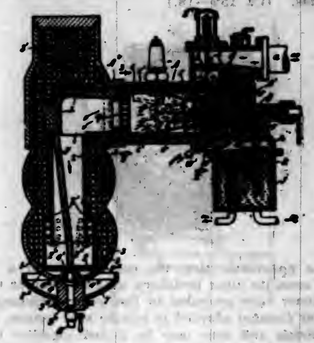
1. A well boring machine including a barrel having an upper chamber and a lower chamber, a vertical shaft rotatable within the center of the barrel, a motor in the upper chamber for driving the shaft, a bit on the lower end of the shaft below the lower end of the barrel, a cutting conveying spiral web on the shaft in the lower chamber, a lifting and lowering line for the barrel, an upwardly tapering nipple on the upper end of the barrel, and means for wedging action between the said nipple and the wall of a well, to hold the barrel against rotation.



1,392,946. HARROW-CART. JOSEPH J. KOVAR, Owatonna, Minn. Filed May 19, 1920. Serial No. 382,520. 5 Claims. (Cl. 55—91.)

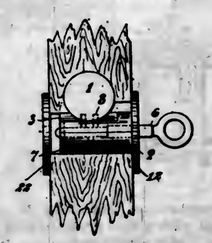
1. A harrow cart comprising an axle having a pair of wheels loosely journaled thereon, boxes on the axle with which the inner ends of the hubs interlock to hold the wheels on the axle, and a pair of crossed drag bars pivotally secured to the boxes and adapted to be attached to a draft bar.

4. A harrow cart comprising an axle having a pair of wheels loosely journaled thereon, a pair of crossed drag bars pivotally secured in respect to the axle and adapted to be attached to a draft bar, a cross link pivotally connecting the drag bars, and a seat-supporting bar having one of its ends supported on the axle and its other end pivotally connected to the cross link.



1,392,947. POWER PLANT. OTTO KRAUS, New York, N. Y., assignor to Kraus Engine Company, New York, N. Y., a Corporation of New York. Filed Mar. 19, 1918. Serial No. 223,264. 10 Claims. (Cl. 60—45.)

1. An oil-burning furnace including a combustion chamber; a flue that extends downwardly therefrom; and a drum into which the flue projects and which is formed with holes in its upper end above the mouth of the flue, said holes permitting the escape of the products of combustion from the drum.



1,392,948. FLAME-MAINTAINING DEVICE. OTTO KRAUS, New York, N. Y., assignor to Kraus Engine Company, New York, N. Y., a Corporation of New York. Original application filed Mar. 19, 1918, Serial No. 223,264. Divided and this application filed Mar. 31, 1919. Serial No. 286,372. 1 Claim. (Cl. 158—28.)

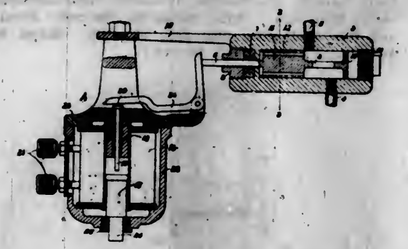
An oil-burning furnace provided with a re-ignition device that fits closely to the walls thereof and that is in the form of a grating having a central opening for the passage of the heated products of combustion and provided with a series of spaced, substantially ring-shaped

elements arranged at varying distances from the central opening, whereby all portions of the stream of combustion products are exposed to the action of said elements.

1,392,949. DOUBLE TUBULAR LOCK. SOFUS ANDREW EMIL LARSEN, Copenhagen, Denmark. Original application filed June 3, 1920, Serial No. 386,280. Divided and this application filed Jan. 13, 1921. Serial No. 437,028. 2 Claims. (Cl. 70—16.)

1. A double cylinder lock, comprising two cylinders disposed with their axes crossing each other at right angles and offset relatively to each other, one of said cylinders having a pair of outwardly-flared lugs on the upper portion of its periphery, and the other cylinder having formed in the lower portion of its periphery a dove-tail notch into which said lugs project and against the opposite side edges of which they bear.

1,392,950. THUMB-TACK. MELVIN G. LAWRENCE, Revere, Mass. Filed Apr. 7, 1920. Serial No. 371,984. 3 Claims. (Cl. 85—16.)

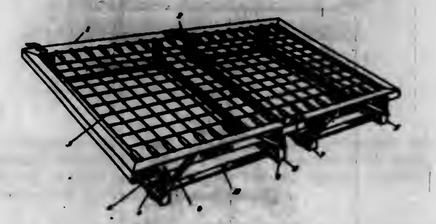


1. A thumb-tack for securing a paper to a board, said thumb-tack having a spike or stem, a head adapted to be grasped between the thumb and finger and a spring element extending from the bottom of the head below the portion which is grasped by the thumb and finger and adapted to engage the paper when the thumb-tack is inserted into a board, thereby yieldingly holding said paper against the board.

1,392,951. PNEUMATIC TIRE. EDWARD W. LEE, Los Angeles, Calif. Filed Nov. 30, 1920. Serial No. 427,265. 4 Claims. (Cl. 152—18.)

3. In a pneumatic tire, the combination of a casing provided upon its inner periphery with an annular tongue, and an inner tube provided in the outer periphery with an annular channel adapted to receive said tongue, whereby the casing and tube may be locked together in predetermined relation.

1,392,952. MAGNETICALLY-OPERATED VALVE. MAXIMILIAN W. LINK, Chicago, Ill., assignor to Crane Company, Chicago, Ill., a Corporation of Illinois. Filed June 1, 1918. Serial No. 237,716. 7 Claims. (Cl. 137—139.)



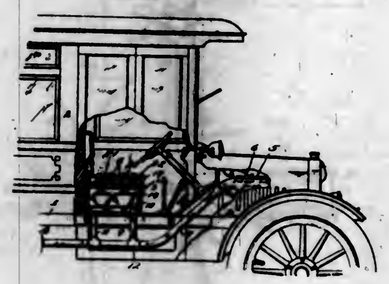
1. A valve mechanism comprising in combination a cylinder provided with a fluid pressure inlet port and with a fluid pressure outlet port intermediate its ends, a piston in said cylinder normally pressure held in a position uncovering both of said ports, a piston rod, a lever having one arm in a position to move said rod in a direction opposed to that of the pressure, and electro-magnetic means acting on the other arm of the lever to move the piston rod and piston to cover the outlet port.

1,392,953. VEHICLE-TIRE. WILLIAM D. MCNAULL, Toledo, Ohio, assignor to Mrs. Macie K. McNaull, Toledo, Ohio. Filed Oct. 29, 1917. Serial No. 198,922. 3 Claims. (Cl. 152—13.)

3. In a vehicle-tire, a tread-member arched transversely as—approximately—a semi-circle, said member having at its margins beads formed of inextensible wires invested in elastic material, combined with retaining devices for said beads, said retaining devices being of greater circumference than the normal circumference of said beads.

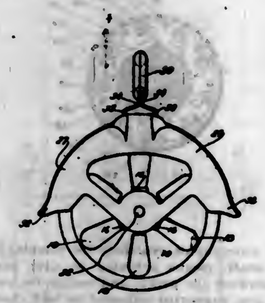
1,392,954. BED-SPRING. JOHN B. MAGARIELLO and JOSEPH MAGARIELLO, New York, N. Y. Filed Sept. 16, 1920. Serial No. 410,618. 2 Claims. (Cl. 5—65.)

1. A bed spring embodying a frame divided transversely intermediate its head and foot into two sections hinged to one another along the line of division, a U-shaped support beneath each end of the head section, a U-shaped support beneath each end of the foot section, which supports are adapted to coöperate with a bedstead for the purpose of supporting the sections individually therein, means for bracing the U-shaped supporting members against longitudinal and lateral strains and tie members connecting the supports to the respective sections.



1,392,955. AUTOMOBILE-BODY WITH TRAVELING AND HOUSEKEEPING CONVENIENCES. ROBERT L. MARTIN, Ocala, Fla. Filed July 1, 1919. Serial No. 307,992. 9 Claims. (Cl. 296—23.)

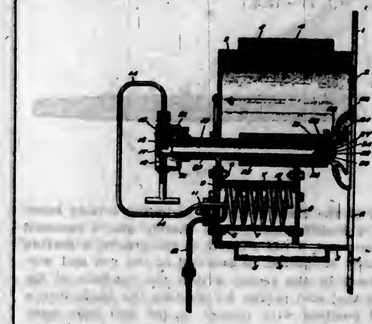
1. An automobile body having front and rear partitions extending transversely from one side of the body partially across to the opposite side thereof, said partitions subdividing the body into a front driver's compartment having a transversely extending seat therein, an intermediate living and sleeping compartment and a kitchen compartment in rear thereof each containing transversely extending seats, a hall extending along one side of the body past the ends of said partitions and seats to provide intercommunication between the different compartments, lavatory and bath compartments in rear of the kitchen compartment and extending partially across the body from the respective opposite sides thereof, forming a middle longitudinal hallway between them which communicates with the kitchen compartment, and a convertible seating and sleeping compartment, extending transversely across the body in rear of the lavatory and bath compartments and communicating with the middle hallway between the latter compartments.



1,392,956. COOKING-STOVE. ROBERT L. MARTIN, Ocala, Fla. Filed July 1, 1919. Serial No. 307,993. 1 Claim. (Cl. 126—20.)

An exhaust gas heated cooking stove for automobiles comprising a closed chamber to entirely inclose cooking vessels, said chamber having a movable lid to cover said chamber and to afford access to the interior thereof, a flat exhaust gas heated coil located in the bottom of said chamber, a heat distributing plate resting on the top of

said coil and serving as a support for the cooking vessels, and means to bear yieldingly on the cooking vessels in said chamber to hold said vessels down on said plate and to hold said plate down on the coil.



1,392,957. PULLEY AND SHEATH THEREFOR. FRANK E. MATTHEWS, Bridgeport, Conn., assignor to Daniel J. Williams and Henry E. Dineson, doing business under the name of The Connecticut Tool and Engineering Company, Bridgeport, Conn. Filed Apr. 28, 1921. Serial No. 465,156. 7 Claims. (Cl. 64—17.)

1. A pulley consisting of a single disk of metal shaped adjacent its margin to provide a pulley groove and constructed at its center to provide a bearing, said bearing comprising an opening in the metal of said pulley and openings in arms struck from said metal and arranged in parallel relation and in alinement with said opening in said metal.

1,392,958. FUEL-OIL BURNER. WILLIAM J. MEAD, Orange, Tex. Filed July 30, 1920. Serial No. 400,117. 5 Claims. (Cl. 158—75.)

1. In an oil burner the combination of an inner tube; an outer tube spaced from said inner tube and adapted to supply air to the exterior of the flame cone; a plug in said inner tube provided with a plurality of helically disposed grooves and a plurality of mixing chambers into which said grooves deliver adapted to atomize said oil and impart thereto a whirling motion; means to admit said finely divided and whirling oil to the fire box from the burner tip; and a flame spreading means surrounding said

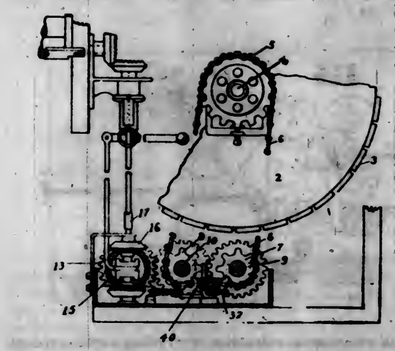
tip adapted to restrict the amount of outside air reaching said atomized oil near said tip, substantially as described.

1,392,959. RANGE AND BEARING INDICATOR. ELMER MEITNER, Brooklyn, N. Y., assignor, by mesne assignments, to Ford Instrument Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 5, 1916. Serial No. 118,405. 16 Claims. (Cl. 235—61.)

1. In an ordnance calculator, a traveling surface, recording means adapted to move at an angle thereto, means for imparting a uniform movement to one of said parts, means for moving the other of said parts in accordance with changes in a function of the target, a rate of change indicator adapted to be set with respect to the recorded line, a range indicator, means for combining a function of the range with the rate of change and means for combining a time correction with the rate of change, whereby the value of the first named function may be predicted.

4. In an ordnance calculator, a traveling surface, a recording carriage adapted to move at an angle thereto, means for moving one of said parts in accordance with changes in a function of the target, and automatic means for resetting said carriage.

8. In an ordnance calculator, a rate of change indicator showing the change in a function of the target, automatic means for indicating the time of flight of a shell in accordance with the range, a settable time device, and means for combining the said rate of change with said two times.



9. In an ordnance calculator, a traveling surface, a recording carriage adapted to move at an angle thereto, means for moving one of said parts in accordance with changes in a function of the target, a limit switch adapted to be actuated by said carriage, and means brought into action by said switch for reversing the direction of travel of said carriage.

1,392,960. REAMING-TOOL. GEORGE MERRILL, Newport News, Va., assignor of one-half to A. T. Merritt, Newport News, Va. Filed Jan. 18, 1921. Serial No. 438,131. 4 Claims. (Cl. 77—73.5.)

1. A tool of the class described including a body member having a longitudinal groove therein and a recessed portion at one end, a rod slidable in the groove, a cutting blade pivotally connected to one end of the rod and normally disposed in the recess within the confines of the body of the tool and means for guiding the blade into a transversed position with respect to the tool body upon reciprocation of the rod.

1,392,961. AUTOMATIC REVERSING DEVICE FOR WASHING-MACHINES. PETER C. MOSSNER, Saginaw, Mich. Filed Apr. 2, 1920. Serial No. 371,025. 1 Claim. (Cl. 74—50.)

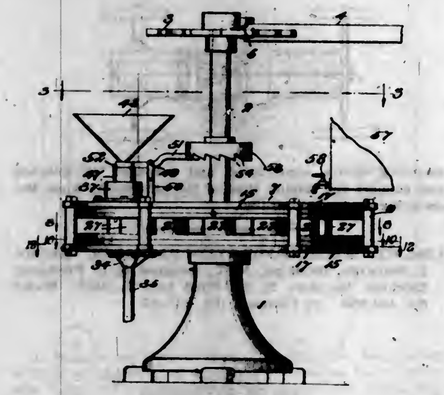
In a washing machine, the combination of a revoluble drum having a shaft, a sprocket on the shaft of said drum, a motor, and drum-actuating means comprising a pair of parallel shafts, a sprocket wheel loose on each shaft, a clutch adapted to releasably secure each sprocket wheel to its shaft, intermeshing gears on said shafts, means for driving one of said gears from said motor, a drive chain engaging said drum shaft sprocket and said loose sprockets, a clutch-shifting device adapted to simultaneously actuate said clutches to engage one and disengage the other of said loose sprockets, and engaging means on said chain adapted to actuate said clutch-shifting device at each complete revolution of said chain, whereby to impart to said drum a plurality of revolutions, first in one direction and then in the opposite direction, for the purpose set forth.

1,392,962. SUPPORT FOR ELEVATOR-CARS. JOHN M. MURPHY, Shamokin, Pa. Filed Feb. 21, 1921. Serial No. 446,693. 4 Claims. (Cl. 187—73.)

4. In a support for elevator cars, a hanger having angularly disposed extensions terminating in downwardly extending flanges whereby the hanger is suspended, a bar guided by the hanger for sliding movement therewith, a

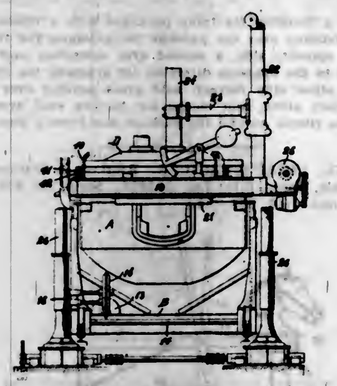
foot pivotally connected to the lower end of the hanger, and a brace pivotally connected to the bar and to the foot.

1,392,963. SPEED-REGULATING DEVICE. GEORGE J. NEFF, Dayton, Ohio, assignor to The Egry Register Company, Dayton, Ohio, a Corporation of Ohio. Filed July 28, 1920. Serial No. 399,522. 17 Claims. (Cl. 273.)



2. In an autographic register, the combination with a horizontal shaft, means actuated by said shaft to continuously advance the paper, and means for rotating said shaft, of a stop supported adjacent to said shaft, a detent movably connected with said shaft, and means for moving said detent into line with said stop and for releasing the same at a point in advance of said stop to permit it to move into an inoperative position, thereby permitting the continuous rotation of said shaft at normal speed and checking the movement thereof if rotated at an excessive speed.

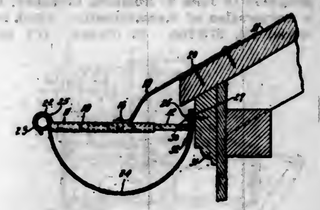
1,392,964. CAN-SOLDERING MACHINE. ALEX W. NIELSEN, Chicago, Ill. Filed July 3, 1919. Serial No. 308,603. 12 Claims. (Cl. 113—32.)



1. The combination, in a machine of the class described, of upper and lower stationary plates, the upper plate being provided with a feed-opening and the lower plate with a discharge-opening, a shaft passing through the plates and provided with means for rotation, a rotatable carrier mounted upon and adapted to move with the shaft and provided with means for supporting cans and conducting them from the feed-opening to the discharge-opening of the machine, a solder-supply located above the upper plate between said feed and discharge-

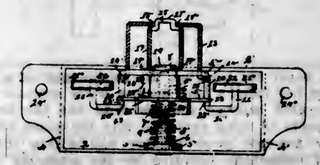
openings, a soldering-means connected with said supply and extending through said upper plate in advance of

the discharge-opening, and means for discharging solder from the soldering-means as cans are successively brought thereunder.



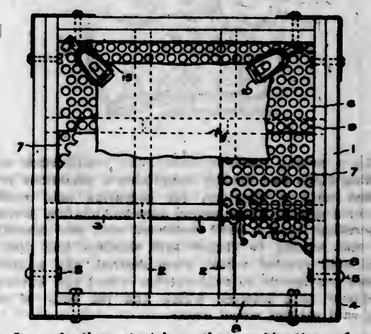
1,392,965. ELECTRIC STEEL-FURNACE. HERMAN F. PRIWER, Springfield, Ohio, assignor of one-half to John E. Galvin. Filed June 15, 1920. Serial No. 389,074. 11 Claims. (Cl. 204—64.)

1. In an electric furnace, the combination of a hearth; and a roof, electrodes and power operating mechanism therefor all arranged so as to be movable together; and means for raising the roof.



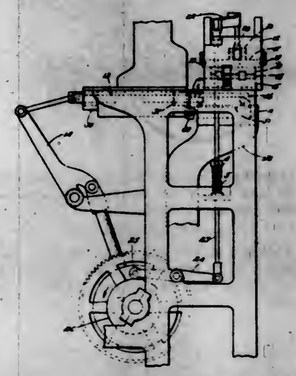
1,392,966. GUTTER-HANGER. MAX RACHLIN, New York, N. Y., assignor to Patented Metalware Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 29, 1920. Serial No. 377,698. 3 Claims. (Cl. 108—29.)

1. A gutter hanger comprising a bar adapted to be placed transversely across the upper open end of a gutter and terminally secured to the upper edge portions thereof said bar being formed of an inner and an outer section slidably secured together, the outer section having



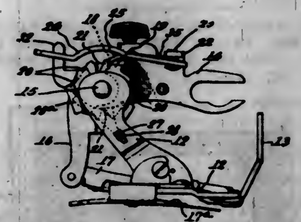
inwardly projecting flanges for bodily supporting the inner section and means for securing the sections in desired adjusted position.

1,392,967. LOCK-LATCH FOR HANDBAGS. BRODIE J. RICHARDSON and CLAIRE S. BARBER, Waterbury, Conn. Filed Mar. 15, 1920. Serial No. 366,001. 3 Claims. (Cl. 70—2.)



1. A lock-latch of the class herein described comprising a housing having an upstanding, shouldered centering-spindle fixed therein; depressible latch-mechanism centered by and operating on said centering-spindle, said latch mechanism including an operating-bolt, an evener, and a spacing medium, the latter positioned between said operating-bolt and said evener, and fitted with a boss extending downwardly through and beyond the evener, and adapted to engage the shoulder afforded by said centering-spindle for limiting the extent of depression of said latch-mechanism.

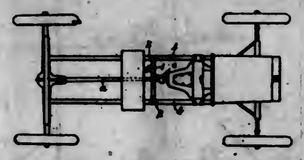
1,392,968. STRETCHER AND DRIER FOR HIDES AND LEATHER. FRANCIS J. ROBINSON, Aurora, Ontario, Canada. Filed Dec. 8, 1920. Serial No. 429,094. 2 Claims. (Cl. 149—21.)



1. In a leather stretcher, the combination of a rectangular frame provided with longitudinal and transverse braces, the outer edge of the frame being of greater thickness than its inner edge and the braces being of substantially the same thickness as the inner edge of the frame; perforated sheet metal at each side of the frame; and filling pieces securing the perforated sheet metal to the frame.

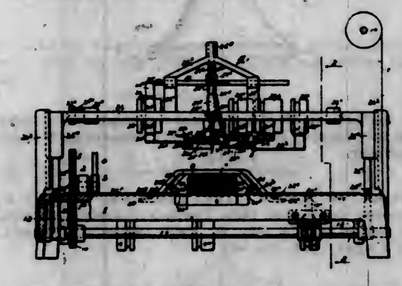
1,392,969. PAPER-BOX MACHINE. JOHN T. ROBINSON, GEORGE B. GOODING, and DOMINICO J. RUSSO, Boston, Mass., assignors to John T. Robinson Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 28, 1919. Serial No. 279,768. 12 Claims. (Cl. 93—55.)

1. In a paper box machine, the combination of a movable hollow box form, a fixed head, a freely movable press member located between the box form and the head, a feeder capable of being projected into the space beneath the freely movable press member and within the box form, and mechanism operated by the actuating mechanism for the box form to secure the movable press member immovably to the fixed head when the box form has reached a predetermined point in its movement toward the fixed head.



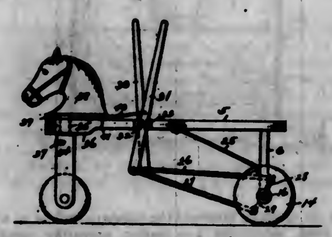
1,392,970. SEWING-MACHINE RUFFLER. HERBERT H. RUSSELL, New Haven, Conn., assignor to The Geist Manufacturing Company, a Corporation of Connecticut. Filed Jan. 6, 1921. Serial No. 435,803. 2 Claims. (Cl. 112—185.)

2. In a sewing machine ruffler, the combination with a ruffling blade and means, comprising a pendulous lever provided with a shoulder, for operating said ruffling blade, of a ratchet-wheel having deep and shallow notches, an operating lever, a pawl connected with said operating lever and serving to engage said shoulder and also to engage said ratchet wheel when desired, and a spring mounted contiguous to said ratchet wheel and having a turned-over part between which and the body of said spring said ratchet wheel works.



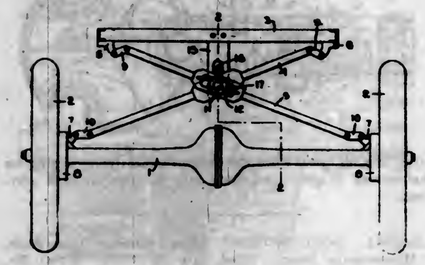
1,392,971. TORSION-TUBE HOIST AND HOLDER. PETER W. SAMUELSON and WILLIAM CHRISTOFFERSON, Pepin, Wis. Filed Dec. 27, 1920. Serial No. 433,218. 4 Claims. (Cl. 254—100.)

1. A device of the class described having in combination a member adapted to extend between and be supported upon the side frame members of an automobile, an elevating device carried by said member at the central portion thereof, and means at the lower end of said



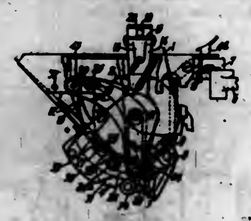
elevating device constructed and arranged to embrace and support the torsion tube of the automobile when the elevating device is operated.

1,392,972. MACHINE FOR TYING PACKAGES. HENRIK J. SCHMIDT, Brooklyn, N. Y., assignor to C. Frederick Raichlen, Bayonne, N. J. Filed Aug. 7, 1920. Serial No. 401,986. 26 Claims. (Cl. 93—93.)



6. In a machine for tying packages with a ribbon, an arm extending over the package for grasping the ribbon on the opposite side, a second arm extending over the package in the opposite direction for grasping the ribbon on the other side thereof, said arms passing over and under each other, and means for moving said arms to draw the ribbon around the package and form a knot.

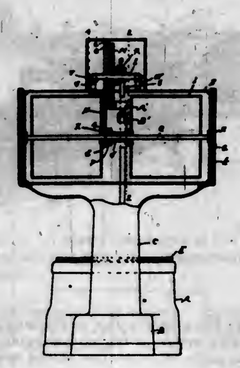
1,392,973. CHILD'S VEHICLE. RICHARD J. SCHNEIDER, Ogallala, Nebr. Filed Jan. 6, 1921. Serial No. 435,889. 3 Claims. (Cl. 208—33.)



1. A device of the character described comprising a flat board like body, a bolster at the rear end thereof, a crank journaled in said bolster, wheels upon said crank, operating handles pivoted to the opposite sides of the body, connecting rods extending from the lower ends of said operating rods to said crank, a rotative head post, a front wheel carried thereby, a foot piece carried by said head post, a horse's head pivoted at its forward portion to the body, and a rod, one end of which is engaged with one of the operating handles and the other end of which engages said head to impart rocking motion thereto.

1,392,974. VEHICLE-SPRING. HERBERT E. SMITH, Manchester, N. H. Filed Apr. 4, 1921. Serial No. 458,251. 2 Claims. (Cl. 267—20.)

1. In a spring suspension for vehicles, the combination with a vehicle body, of an axle, two crossing levers pivotally connected together, the upper end of each lever being pivoted to the vehicle body and the lower end of said levers being pivotally connected to the axle, one of the levers having a slot, a pin rigid with the other lever and extending through said slot, and a spring device acting on one lever and said pin and tending to turn the levers relative to each other in a direction to raise the upper ends thereof.



1,392,975. TYPEWRITING-MACHINE. BURNHAM C. STICKNEY, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 4, 1918. Serial No. 220,124. 36 Claims. (Cl. 197—127.)

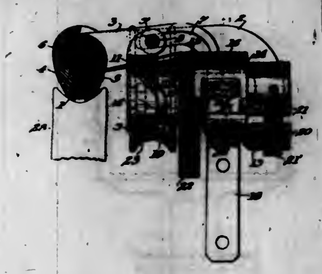
1. In a typewriter, in combination, a revoluble platen, mechanism normally in effective relation to coöperate therewith as means to feed work-sheets thereabout, a normally ineffective work-sheet-holder, and a common operating device for said holder and feeding means, comprising means to render said holder effective to clamp said sheets against said platen, means to render said feeding means ineffective, and means to rotate said holder and platen with said sheets clamped firmly therebetween.

1,392,976. COMPUTING-SCALE. WALTER F. STIMPSON, Detroit, Mich. Filed Aug. 28, 1915. Serial No. 47,741. 20 Claims. (Cl. 265—57.)

1. In a scale, the combination of an indicator including a pivoted member, a second pivoted member, the axes of said members being parallel and extending in the same direction, and flexible connections between said pivoted members for effecting a positive actuation of the pivoted

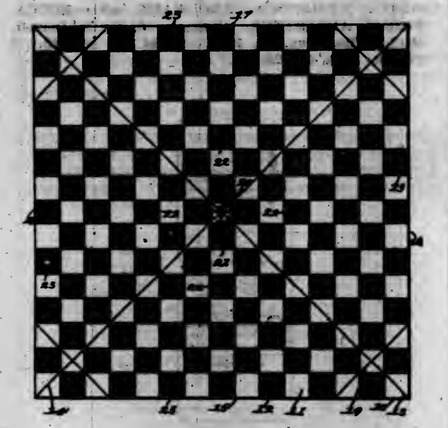
indicating member by the movement of the second pivoted member in either direction.

1,392,977. COMBINED CARD GAME AND EDUCATIONAL APPARATUS. GERTRUDE S. SWAN, Detroit, Mich. Filed Aug. 12, 1920. Serial No. 402,943. 3 Claims. (Cl. 46—25.)



1. An educational game, comprising a plurality of cards each bearing the mark of one of several diverse series, and each card being distinguished by a clef marking and the color thereof as belonging to one or another of the several series, and having associated with said markings a numerical symbol and a musical symbol which correspond in their pairings with the relative order numerically and on the musical scale denoted by that series with the numerical and musical symbols borne by the next adjacent cards of that series.

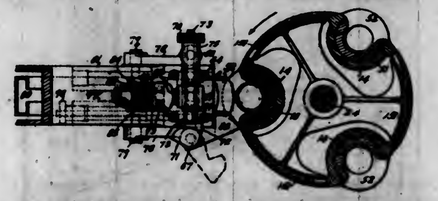
1,392,978. DIFFERENTIAL CLIP FOR AERIAL ROPEWAYS. YUSUKE TAMAMURA, Tokyo-Fu, Japan. Filed Feb. 14, 1921. Serial No. 444,920. 12 Claims. (Cl. 104—208.)



1. In apparatus of the class described, the combination of a hauling rope, a carriage, rope-gripping means con-

nected with the carriage, means for translating the force of gravity acting through the carriage upon the gripping

means to make the grip effective and means operative to vary the gripping action of the said gripping means as a function of the angle of inclination of the hauling rope.

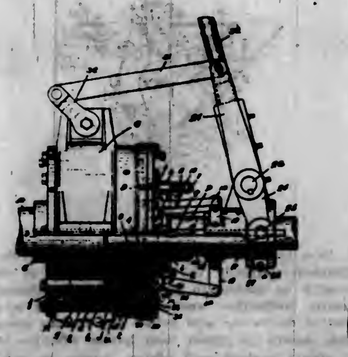


1,392,979. GAME. FRED TAUPER, Meadow Lands, Pa. Filed June 16, 1920. Serial No. 389,520. 2 Claims. (Cl. 46—64.)

2. A game board of the character described comprising a rectangular plate, 225 alternating black and white squares on said plate, diagonal lines dividing said plate into four triangular fields, other lines cutting off the rectangular corner of each field to form an interment zone, each of said fields comprising a captain square marked by crossed arrows, and a dark black square adjoining the neutral or king square of the board, substantially as described.

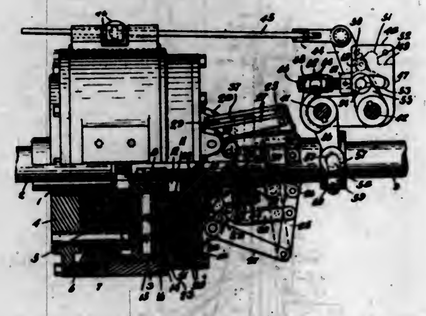
1,392,980. BOTTLE-CAPPING APPARATUS. SAMUEL W. TAYLOR, Baltimore, Md., assignor to The Crown Cork and Seal Company of Baltimore City, a Corporation of Maryland. Filed Nov. 14, 1917. Serial No. 202,015. 20 Claims. (Cl. 226—88.1.)

1. In bottle capping apparatus, a crown feeding chute, capping mechanism having an orbital movement with respect to said chute, a throat carrier having a crown platform included in the capping mechanism and formed with an opening registering with the crown passage of the chute, whereby crowns flow from the chute into said plat-



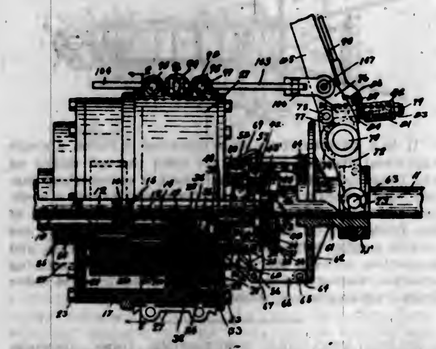
form, and means beyond the chute for positively acting on the crowns to move the same into position in said platform.

1,392,981. DOLL FIGURE. ETHEL GORDON THOMPSON, Minneapolis, Minn. Filed July 24, 1920. Serial No. 398,747. 2 Claims. (Cl. 46—40.)



2. A series of doll figures, integrally connected limb members extending from said figures, and integrally formed coöperating elements on said limb members to detachably secure the figures in succession.

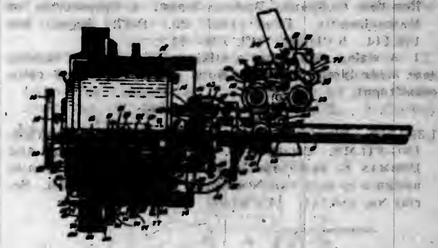
1,392,982. REVERSING-GEARING. HENRY A. TUTTLE, Taunton, Mass. Filed June 18, 1917. Serial No. 175,268. 19 Claims. (Cl. 74—34.)



1. In a reverse gearing, a driving-shaft, a driven-shaft, gearing connecting said shafts including an internal gear and a brake-mechanism to secure reverse drive, clutch-mechanism to secure forward drive including clutch-plates and a clutch operating-member, said plates and operating-member arranged for axial movement on the hub of the internal gear, actuating means for said operating-member, link and lever mechanism connecting said clutch-operating member and actuating-means, means constraining said clutch operating-member and actuating-means for simultaneous rotation upon a reverse drive.

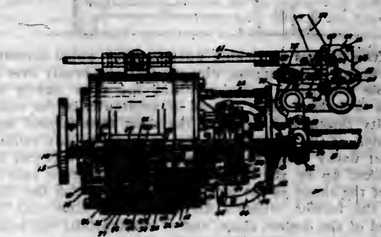
1,392,983. REVERSING-GEARING. HENRY A. TUTTLE, Taunton, Mass. Filed June 25, 1917. Serial No. 176,673. 77 Claims. (Cl. 74—34.)

1. In a reversing gearing, a driving-shaft, a driven-shaft, gearing adapted to connect said shafts for reverse drive, clutch-mechanism adapted to connect said shafts for forward drive, said clutch-mechanism adapted to be disengaged from the driven element in reverse drive position, whereby it will remain stationary.



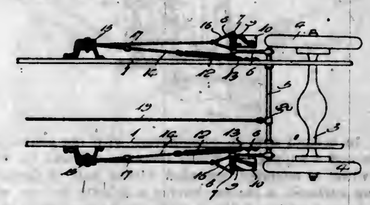
1,392,984. REVERSING-GEARING. HENRY A. TUTTLE, Upton, Mass. Filed Jan. 31, 1919. Serial No. 274,247. 47 Claims. (Cl. 74—34.)

1. In a reversing gearing, a driving shaft, a driven shaft, gearing adapted to connect said shafts for reverse drive, clutch mechanism comprising two clutching elements adapted to engage each other for direct drive and to disengage each other on reverse drive, one of said elements being connected with one of said shafts and means to connect the other element with the other shaft for forward drive and to clutch the elements and operating means for the aforesaid means.



1,392,985. REVERSING-GEARING. HENRY A. TUTTLE, Upton, Mass. Filed Nov. 19, 1919. Serial No. 339,108. 10 Claims. (Cl. 74—34.)

1. A reversing gearing having a driving shaft, a driven shaft, gearing connecting said shafts for reverse drive, and brake mechanism to secure reverse drive comprising a set of clutch plates arranged normally to be free from driving connection with said gearing, a stationary member, a second set of clutch plates carried thereby, and

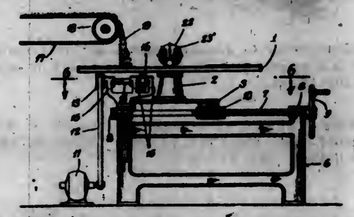


means positively to connect said first set of clutch plates with said gearing and effect the engagement of said sets of clutch plates.

1,392,986. REVERSING-GEARING. HENRY A. TUTTLE, Upton, Mass. Filed Dec. 13, 1919. Serial No. 344,532. 18 Claims. (Cl. 74—34.)

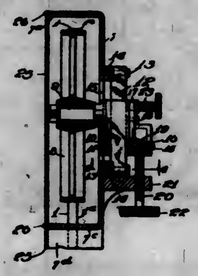
1. In a reversing gearing, a driving shaft, a driven shaft, gearing connecting said shafts, clutch mechanism to secure forward drive including a casing, an axially movable member, a clutch operating member freely mounted on one of said shafts, linkages connecting said operating member with said axially movable member, said clutch member and casing having coöperating components by which they are constrained for conjoint rotation admitting of their relative axial movement.

1,392,987. AUTOMOBILE-BRAKE. ALBERT A. UNRUH, Salem, Oreg. Filed June 14, 1920. Serial No. 388,958. 4 Claims. (Cl. 188—4.)



1. The combination with a chassis having side beams, a rocker shaft extending transversely of the chassis and rotatably connected with the side beams, arms extending forwardly from the rocker shaft and having outstanding pins, mats pivotally mounted upon the pins and having protecting chains extending longitudinally of their underfaces, springs connected with the side beams, guides connected with the side beams, lines connected with the springs and extending about the guides and connected with the pins, and means for rotating the rocker shaft to swing the arms downwardly against the action of the springs and bring the mats into engagement with the ground for passing beneath the wheels.

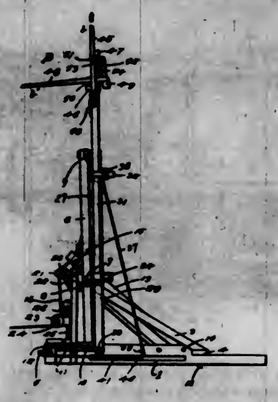
1,392,988. SIZING AND METHOD OF MAKING THE SAME. WILLIAM P. UPHAM, Keene, N. H., assignor to Ros-Aux Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 29, 1917. Serial No. 145,144. 6 Claims. (Cl. 134—21.)



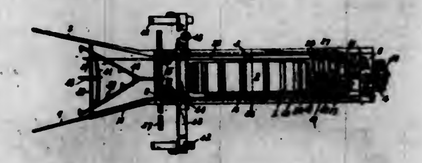
1. A sizing containing a mixture of a starchy constituent hydrolyzed under pressure and a saponified rosin constituent.

1,392,989. PROCESS FOR MAKING FIBROUS FILTERING-FILMS. CHARLES H. VAN NOSTRAND, Orange, and HERMAN E. SCHULER, Jersey City, N. J.; said Schuler assignor to said Van Nostrand. Filed Feb. 8, 1918. Serial No. 216,111. 17 Claims. (Cl. 210—204.)

1. The process of making filtering films which consists in spreading loose, fibrous, filtering material evenly over a suitable supporting surface, rolling the same lightly in places to make a sheet thereof of substantially the same porosity throughout, bringing the sheet thus formed and a former, of the shape of the film to be made, into rolling contact under pressure to cause the filtering material to be picked up by the former and formed thereon into a film of the shape as the former, and withdrawing the film from the former, whereby fibrous filtering films may be formed of the desired shape and of substantially the same porosity throughout.



1,392,990. BAND-SAW. JAY W. VAUGHAN, Chicago, Ill. Filed May 26, 1919. Serial No. 299,718. 7 Claims. (Cl. 143—31.)

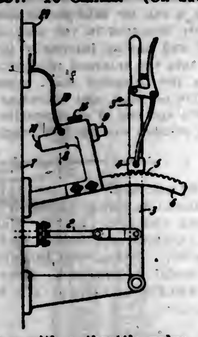


1. In a band saw, in combination with the endless saw blade and a supporting wheel therefor, a frame on which the wheel is mounted, provided with a pair of oppositely facing surfaces, a carrier having a spindle for the wheel and formed with a fulcrum arranged to bear upon one of said surfaces, and an adjustable member on the carrier disposed to bear against the other of said bearing surfaces at a distance from the fulcrum axis.

1,392,991. HAYSTACKER. ALBERT L. VENNER, Idaho Falls, Idaho. Filed May 6, 1919. Serial No. 295,145. 3 Claims. (Cl. 214—141.)

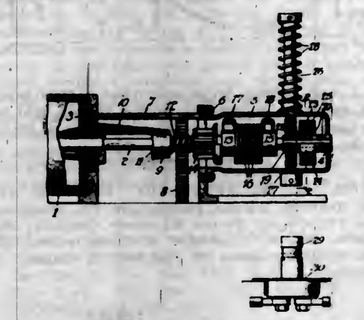
1. In a hay stacker, a main frame, including base and upright portions, a striking frame pivoted intermediate its ends to the upright portion of the main frame, a yieldable connection between the striking and main frames, a stacker frame pivoted to the main frame, a stacker slidably mounted on the stacker frame, connecting means between the stacker and the main frame for adjusting the stacker on the stacker frame and holding it in the required adjusted position, and means between the stacker frame and the main frame for effecting a pivotal movement of the stacker frame and a raising and a lowering of the stacker.

1,392,992. GARDEN-TRACTOR. LEROY JOSEPH WARNER, Toledo, Ohio. Filed May 7, 1919. Serial No. 295,445. 5 Claims. (Cl. 180—19.)



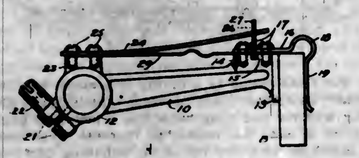
1. In a machine of the class described, a frame, a single bull-wheel disposed between the sides thereof, means on the frame for driving said bull-wheel, a caster-wheel supporting the forward end of said frame and having a steering arm projecting from its fork head longitudinally of the frame, control handles at the rear of said frame one of said handles being mounted for turning movements, and connection between the movable handle and said steering arm for communicating a turning movement to the latter from a turning of said handle.

1,392,993. TWO-PART DISPENSING DESK DEVICE. JAMES V. WASHBURNE, Fulton, N. Y. Filed July 19, 1917. Serial No. 181,586. 3 Claims. (Cl. 211—8.)



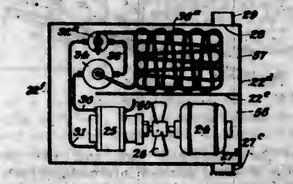
1. A two-part dispensing desk device comprising a base having an outlet and an inverted container mounted on the base and communicating with said outlet, the base having a shield rising therefrom and inclosing the sides of the container, the shield being provided with an upwardly extending slot opening through the upper edge of the shield and the container having a projection on the side thereof extending into the slot, substantially as and for the purpose specified.

1,392,994. THROTTLE-VALVE INDICATOR. LEWIS S. WATERS, Scranton, Pa., assignor of one-half to Robert C. Adams, Forest Hills, N. Y. Filed May 11, 1921. Serial No. 468,657. 10 Claims. (Cl. 116—125.)



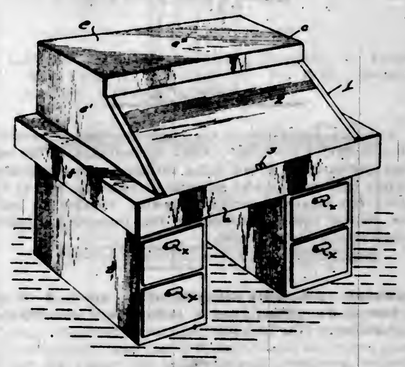
1. In combination with a throttle valve, an operating lever, and a resistance member in the path of said lever, said resistance member having a primary resistance and a secondary resistance, said resistances being adapted to be successively overcome during the closing movement of said lever and indicating successive lever positions.

1,392,995. ENGINE-STARTER. MAURICE P. WHITNEY, Elmira, N. Y., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed Oct. 13, 1919. Serial No. 330,218. 9 Claims. (Cl. 74—54.)



1. The combination of a motor driven rotatable shaft, a driving member mounted thereon for automatic longitudinal movement thereof and for rotary movement therewith, and manually operated mechanism for rotating such shaft, such mechanism including speed controlled means for disabling such mechanism upon excessive speed rotation of the shaft.

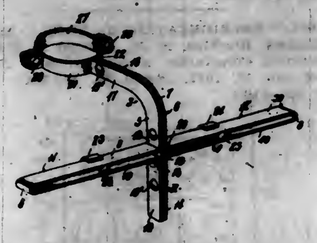
1,392,996. ELECTRIC-GENERATOR BRUSH-HOLDER. CHARLES E. WILLEY, Louisville, Ky. Filed May 27, 1921. Serial No. 473,219. 5 Claims. (Cl. 171—324.)



1. In a brush holder of the class described, an arm arranged for pivotal mounting on a stud, a brush clamp at the free end of said arm, a clamp ring engageable on the stud, a leaf spring having one end fixed to said ring, and means loosely connecting the other end of said spring and the arm adjacent its free end.

1,392,997. REFRIGERATING-MACHINE. EDWARD T. WILLIAMS, Brooklyn, N. Y., assignor to Simplex Refrigerating Corporation, a Corporation of New York. Filed Jan. 17, 1917. Serial No. 142,781. 9 Claims. (Cl. 62—116.)

1. In an apparatus of the class described in combination, a refrigerator, a housing thereon divided into a plurality of compartments, an expansion chamber in the refrigerator, a compressor in one of the aforesaid compartments connected with the expansion chamber to draw vaporised refrigerant therefrom and compress the same, a condenser in another of the compartments connected with the compressor to receive refrigerant therefrom and condense the same to liquid form, a collecting chamber connected with the condenser to receive liquefied refrigerant therefrom and connected to the expansion chamber to deliver refrigerant thereto, a motor having an extended armature shaft connected to the compressor to drive the same, and a fan located upon said shaft intermediate the motor and the compressor adapted to set up a flow of cooling air through the condenser and around the compressor and motor.



1,392,998. METAL DESK. FRANK P. WILLIAMS, Detroit, Mich., assignor to E. E. Gudka Mfg. Co., Detroit, Mich., a Corporation of Michigan. Filed May 10, 1920. Serial No. 380,206. 14 Claims. (Cl. 45—6.)

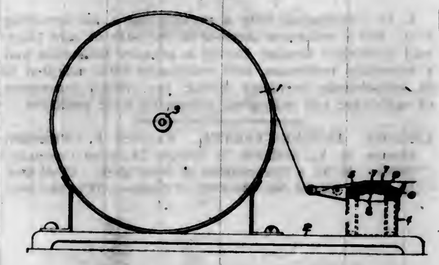
1. A metal desk, comprising a pair of supports, a bed supported thereon projecting at the sides, and an upper cabinet unit having offset channel portions adapted to engage the projecting bed in sliding relation so that the upper cabinet unit may be slid off from the bed to convert the desk from a roll top into a flat top desk, or vice versa.

12. In a sheet metal desk, the combination of sheet metal forming a drawer cabinet provided with a narrow slot in front and an elbow rest formed solely of a piece of sheet metal turned over at the sides and back to form guiding flanges and a stop flange.

1,392,999. TAG-HOLDER. HAROLD E. WILLIAMS, Carthage, Mo. Filed Jan. 4, 1921. Serial No. 434,872. 1 Claim. (Cl. 40—125.)

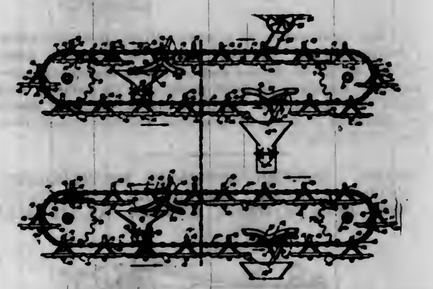
A holder for automobile tags and the like, comprising strips of metal doubled intermediate their ends to form horizontally disposed spaced cross members, said strips having downwardly bent portions of substantial length, and upwardly bent portions at opposite ends, a brace member adapted to fit between and extending parallel with said bent ends of opposing strips and riveted thereto, said brace member and said bent ends forming a stem for the holder and a rest for the license tag, and attaching means on said stem.

1,393,000. FORMOGRAPH. FRANK W. WOODRICH, Evanston, Ill. Filed Aug. 30, 1917. Serial No. 188,930. 12 Claims. (Cl. 33—20.)



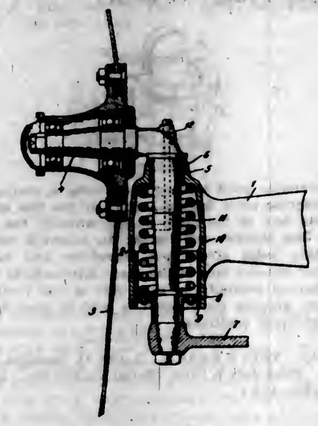
1. In an apparatus of the class described, a support, an arm having universal pivotal connection with the support and carrying at one end a surface-traversing member having universal pivotal connection therewith, and at the other end means, coacting therewith, adapted to mark the contour lines indicated by the traversing member, substantially as set forth.

1,393,001. OIL AND GREASE GUN. LOUIS E. WOOD, Farrell, Pa. Filed June 4, 1920. Serial No. 386,555. 3 Claims. (Cl. 74—40.)



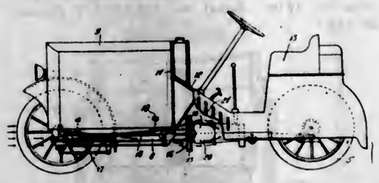
1. A structure of the character described comprising a threaded shaft, a block having an opening slidably receiving the shaft, the opening having its outer end portion enlarged and the block being cut from its outer face to provide a pocket having a countersunk portion forming a seat extending across the bottom of the pocket about said opening, a cap for said pocket carried by said block, plates slidably mounted in the seat upon opposite sides of the shaft and having internally threaded neck extensions fitting into the enlarged end portion of said opening for engaging the threaded shaft when moved inwardly to an operative position, and operating means for moving the plates into and out of an operative position including an actuating element extending through the cap.

1,393,002. STRIP-SERVING DEVICE. FREDERICK S. ANABLE, Brookline, Mass., assignor to National Binding Machine Company, Boston, Mass., a Corporation of Maine. Original application filed Jan. 6, 1916, Serial No. 70,554. Divided and this application filed Aug. 23, 1918, Serial No. 251,066. Renewed Mar. 2, 1921. Serial No. 449,238. 8 Claims. (Cl. 91—14.5.)



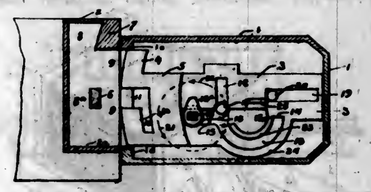
1. A strip serving device comprising a strip support, and a moistener in operative relation thereto, said moistener having spring means to effect separation of the strip and the moistener.

1,393,003. DRYING APPARATUS. ELWOOD B. AYRES and HERMANN BOGATY, Philadelphia, Pa., assignors to The Philadelphia Textile Machinery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 1, 1919. Serial No. 341,664. 4 Claims. (Cl. 34—12.)



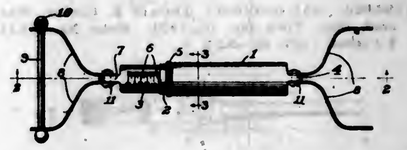
1. The combination in a drying apparatus, of a drying chamber; an endless chain conveyer therein; pans pivoted to the conveyer and hung below the chain, each pan having a lip at each end shaped so that the lip of one pan will interlock with the lip of an adjoining pan; means at each end for discharging the pans; means for releasing the lip of one pan from that of an adjoining pan; and means for feeding material to the pans.

1,393,004. VEHICLE-AXLE SUPPORT. CECIL McCOMB BILLINGS, Brooklyn, N. Y., assignor to Delmore Manufacturing Co., Inc., New York, N. Y., a Corporation of New York. Filed July 29, 1919. Serial No. 314,066. 3 Claims. (Cl. 280—96.2.)



1. In combination with an axle, an upright cylindrical spring housing carried thereby and provided with a bearing at its upper end, a steering spindle journaled in said bearing and having at its upper end a laterally projecting arm carrying a bearing for a road wheel, a piston on the lower end portion of the spindle, said piston having a relatively long skirt portion working in the housing and providing a long sliding bearing for the lower end of the spindle, said spindle projecting below said piston and beyond the lower end of the housing, a steering arm engaged with said exposed lower end of the spindle and a spring within the housing interposed between said piston and the upper end wall of the housing.

1,393,005. MOTOR PARCEL-VEHICLE. CECIL M. BILLINGS, Brooklyn, N. Y., assignor to Delmore Manufacturing Co. Inc., New York, N. Y., a Corporation of New York. Filed Oct. 2, 1919. Serial No. 327,906. 5 Claims. (Cl. 180—1.)



2. A motor vehicle of the class described provided with a downwardly and rearwardly inclined foot board and an internal combustion engine of the opposed cylinder type disposed beneath the foot board with the cylinders transversely of the vehicle and the fly wheel at the forward side thereof, said fly wheel being provided with fan blades for inducing a current of cooling air from beneath the front of the vehicle rearwardly beneath the downwardly inclined foot board and about the cylinders, and the cylinders of said motor having valve pockets at the forward side thereof directly in rear of the fan fly wheel referred to.

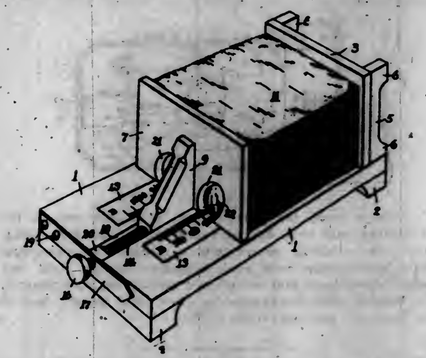
1,393,006. LOCK. ALEXANDER BLOCK, New York, N. Y. Filed July 13, 1920. Serial No. 396,899. 26 Claims. (Cl. 70—46.)

1. In a lock, the combination of a bolt, means for actuating said bolt, key operated mechanism for operating said actuating means, and a spindle key connecting said mechanism with said actuating means, said key being movable in and out of said mechanism and adapted to operate said mechanism to allow said spindle key to operate the bolt actuating means.

1,393,007. EXPERIMENTAL TRUSS UNIT. HUGH E. BROWN, Chicago, Ill., assignor to W. M. Welch Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 25, 1921. Serial No. 447,644. 4 Claims. (Cl. 265—63.)

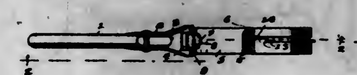
1. An experimental truss unit comprising a combined compression and expansion member, means for indicating the longitudinal stress, either compressive or expansive, to which said member is subjected, and hinge means carried by each end of said member.

1,393,008. ELECTRIC SIGN. MATTHEW J. CARBONI, New York, N. Y. Filed Nov. 12, 1920. Serial No. 423,590. 6 Claims. (Cl. 40—132.)



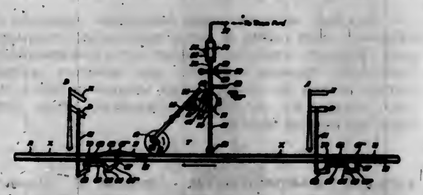
6. In a sign, an exchangeable transparent character, an adjustable light source, a set of substantially longitudinally disposed reflectors, another set of substantially transversely disposed reflectors, said reflectors grouped and set around the character and adapted to reflect the light toward the characters, respectively, from both sides, the top and bottom.

1,393,009. CARD-COUNTER. CHARLES E. CARROLL, Malden, Mass. Filed June 16, 1920. Serial No. 389,511. 5 Claims. (Cl. 33—143.)



1. A counting device for cards and the like comprising a horizontally extended base, a stationary bracket rising from near one end of said base, a bracket slidably carried by said base, means for moving the slidable bracket

toward the stationary bracket, and a scale supported by the base to lie beneath the cards to be stood upon the base, the zero point of said scale being flush with

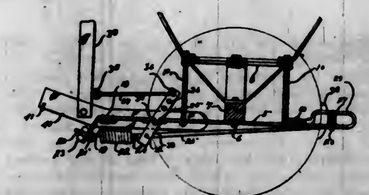


the surface of the stationary bracket next to the cards, whereby the outermost card adjacent the movable bracket will by its position on said scale designate the number of the cards between.

1,393,010. JAR-HOLDER. THOMAS S. CATLIN, Waveland, Ind. Filed Jan. 13, 1920. Serial No. 351,144. 4 Claims. (Cl. 81—3.2.)

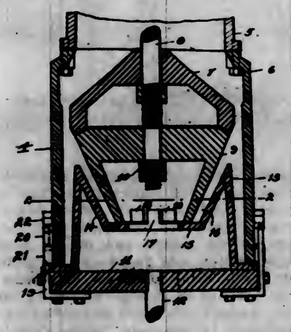
1. The combination, with hand operating levers, of band sections adapted to form a clamping band and each having one end portion engaging the operating levers, one of said sections being formed intermediate its edges with tabs spaced along the section and the other with a slot to permit interlocking of the sections by engagement of one of the tabs with a terminal of the slot, the slot being of sufficient length to accommodate all of the tabs simultaneously.

1,393,011. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. ALBERT V. T. DAY, New Rochelle, N. Y., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Continuation of renewal application Serial No. 193,894, filed Sept. 26, 1917, and a division of application Serial No. 637,773, filed July 10, 1911. This application filed Apr. 4, 1918. Serial No. 226,584. Renewed Aug. 18, 1921. Serial No. 493,432. 7 Claims. (Cl. 246—177.)



6. Railway traffic controlling apparatus comprising means on a vehicle arranged to change gradually toward an ultimate condition, within a given distance traveled by the vehicle, traffic governing apparatus on the vehicle controlled by said means, and devices located in the trackway and responsive to clear traffic conditions in advance for mechanically resetting said means away from ultimate condition before such condition is reached.

1,393,012. SHELF-SUPPORT. CHARLES H. J. DILG, New York, N. Y. Filed Dec. 13, 1917. Serial No. 206,893. 1 Claim. (Cl. 45—54.)



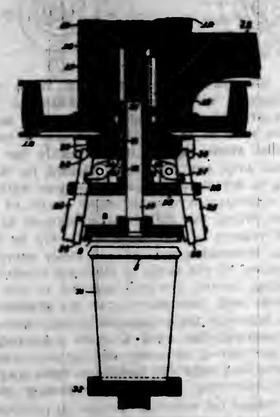
A reversible shelf support comprising a vertical sheet metal bearing plate having a stem or the like extending from one face of the plate in substantially the vertical medial line thereof, and having an eccentric horizontal supporting ledge struck out therefrom and extending from the opposite face of the plate intermediate its ends and disposed partially on each side of the vertical medial line, whereby the support is held in place in either of its reversed positions.

1,393,013. TRUCK-BRAKE. JAMES O. GARRETT, Denver, Colo. Filed July 3, 1919. Serial No. 308,564. 5 Claims. (Cl. 188—119.)

1. In brake mechanism of the class described, the combination of a reciprocable member, a brake bar connected with said member, a spring connecting the member with the vehicle, a pivoted tongue, a lever fulcrumed on a stationary part of the vehicle, one arm of the lever being pivotally connected with the member while the other arm is operatively connected with the tongue to normally support the latter in the raised position.

1,393,014. DIE FOR MAKING ARTICLES OF PLASTIC MATERIAL. ANDREW W. GATES, Monmouth, Ill. Filed June 13, 1919. Serial No. 303,821. 7 Claims. (Cl. 25—11.)

1. A mold for forming earthenware articles, comprising outer and inner die members shaped to form articles hav-

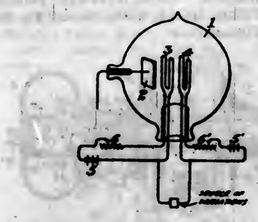


ing cylindrical and conical portions, and means for rotating one of said members and forcing it longitudinally with respect to the other member.

1,393,015. I-BEAM TROLLEY. WILLIAM S. HALSEY, Dover, N. J. Filed Feb. 26, 1921. Serial No. 447,943. 7 Claims. (Cl. 105—154.)

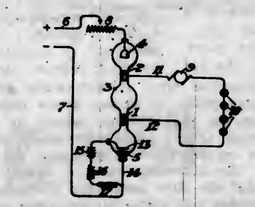
1. The combination with an I-beam supported in elevated position, of a truck having a pair of frame members arranged with their upper portions disposed between the flanges of the I-beam at opposite sides of its web, a pair of rotatable truck wheels, means projecting from the remote sides of said truck frame members and connecting with the truck wheels, said truck wheels being positioned to have a rolling contact with the lower flange of said I-beam, and means connecting the frame members adjacent their lower ends and adapted for connection with a load.

1,393,016. MEANS FOR SEALING RECEPTACLES. CHARLES HAMMER, Queens, N. Y., assignor to American Metal Cap Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 14, 1918. Serial No. 262,524. 13 Claims. (Cl. 226—87.)



1. In a sealing press, a frame, a head mounted to rotate in the frame on a vertical axis, a carrier plate on the head slidable axially therein but rotating therewith, an anvil plate axially carried by the head for vertical movement in the head and carrier but prevented from rotation, a set of arms carried by the carrier and arranged to be raised relative to the carrier when the anvil and carrier are moved upward relative to the head, and sealing rolls carried by the arms arranged to press upward on a closure engaged by the anvil.

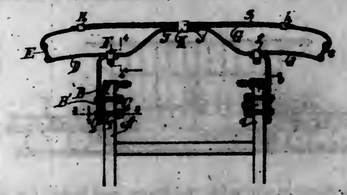
1,393,017. SCALE AND TRANSFER CAR. HENRY C. HETTENBATH and ERNEST K. SCOTT, Oak Park, Ill., assignors to Frank K. Hoover, Chicago, Ill. Filed Oct. 9, 1916. Serial No. 124,549. 18 Claims. (Cl. 265—42.)



1. In combination with the frame and body of a car, a weight indicating device, automatic means having a predetermined range of movement acting normally to reduce the load of the car body on the weight indicating device, and means to overcome the said automatic means and permit the load to be weighed.

1,393,018. RELAY. PETER COOPER HEWITT, Ringwood Manor, N. J. Filed Mar. 9, 1916. Serial No. 83,027. 11 Claims. (Cl. 250—27.)

1. In an evacuated electric apparatus, a container having an anode and a cathode therein, means for heating said cathode, a conducting member acting as a screen inclosed within the container, and adjacent to the said anode and means for heating the said conducting member to a temperature having any desired relation to the temperature of the heated electrode.

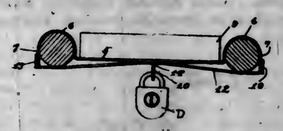


1,393,019. CONSTANT-CURRENT DISTRIBUTION SYSTEM. PETER COOPER HEWITT, Ringwood Manor, N. J. Filed Sept. 12, 1916. Serial No. 119,746. 10 Claims. (Cl. 171—97.)

1. In a system of electrical distribution, the method of controlling the current emissive capacity of an electrode which consists in subjecting said electrode to the influence of a medium carrying current, and maintaining said medium at a predetermined current density.

10. The combination of an electric device, having a positive and a negative electrode, means for causing a current flow therethrough, an electrode in the path of the current flow and means for constituting it a cathode for a second circuit, said cathode having a limited current emissive capacity.

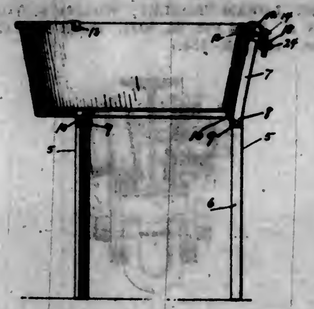
1,393,020. WHEEL-FENDER. Alexander M. Hudson, New York, N. Y. Filed Jan. 29, 1919, Serial No. 273,703. Renewed Mar. 16, 1921. Serial No. 452,722. 5 Claims. (Cl. 296—58.)



1. In a wheel fender, the combination with fender supports, of a main buffer front spring, a rear auxiliary spring, shackles pivotally connecting the outer ends of the main and rear springs and spacing the said ends apart, the said rear spring being bent forward in the middle and arranged in contact with the said front spring, and means for connecting the middle portion of the said front spring with the said rear spring.

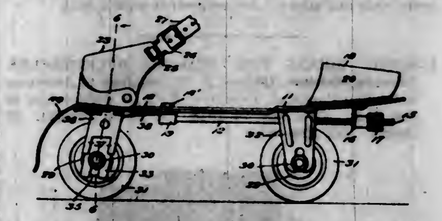
1,393,021. KNOB-LOCK. Louis Huffman, Toronto, Ontario, Canada. Filed Mar. 3, 1919. Serial No. 280,414. 8 Claims. (Cl. 70—92.)

1. In an apparatus of the kind described having two knobs, a locking apparatus, means for moving said locking apparatus to operative position, and means actuated by the turning of one knob for releasing said locking apparatus.



1,393,022. AUTMOBILE-LOCKING DEVICE. Joseph W. Hughes, Bethlehem, Pa. Filed Sept. 29, 1920. Serial No. 413,538. 2 Claims. (Cl. 70—126.)

1. The combination with an automobile including a brake and clutch pedal, of locking means therefor comprising a clamping plate, means carried by the plate for the reception of the brake and clutch pedal, supporting means carried by said plate for engaging the dashboard of the automobile and a second clamping plate embracing the first mentioned plate, means for detachably securing said plates to each other, said plates coöperating with each other through the medium of the supporting means of the first mentioned plate to prevent movement of the brake and clutch pedals.

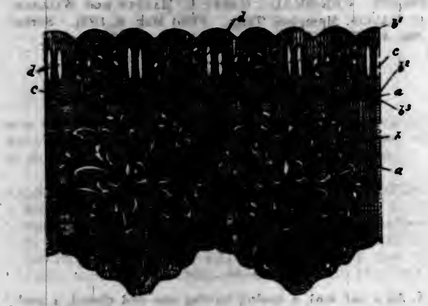


1,393,023. SUPPORT FOR TUBS AND THE LIKE. Charles L. Hyde, Plainfield, N. J. Filed Nov. 26, 1919. Serial No. 340,914. 2 Claims. (Cl. 68—35.)

1. A support for tubs and the like comprising a leg, a shelf on the inner face of the leg for supporting the tub, and a clamp for securing the tub to the support, said clamp consisting of upper and lower jaws, one jaw being extended in a fixed position to the upper end of the leg, and the other jaw being positioned above and movable relatively to the companion jaw and formed with a downturned lip to engage the inner edge of the

tub, and means connecting one jaw with the other and serving to exert a downward and outward drawing action on the upper jaw to draw the tub outward against the fixed lower jaw at the upper end of the leg and clamp it in place.

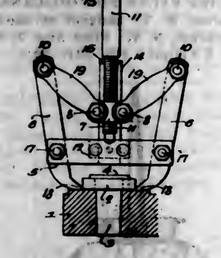
1,393,024. SKATE. William W. Karbo, Great Neck, N. Y. Filed May 4, 1920. Serial No. 378,888. 6 Claims. (Cl. 46—51.)



1. The combination with a skate, of a toe stirrup carried thereby, said stirrup comprising a plate positioned transversely of the skate, a flexible member connecting the ends of the plate to provide a toe receiving loop, headed studs carried by the skate for detachable engagement with key hole slots formed in the plate of the stirrup to detachably connect the same with the skate.

2. The combination with a roller skate, of means for slidably mounting the rollers in a manner to permit of vertical movement of the skate relatively to the rollers, said means comprising a U shaped roller carrying frame, a guide secured to the skate to slidingly receive the roller and a spring having one end secured to the skate and the opposite end secured to the U shaped frame to yieldingly hold the latter against sliding movement.

4. The combination with a skate including separate heel and toe plates, of a rod having one end connected to the heel plate, said rod having a right angularly disposed pin extending through an opening in the heel plate and means for securing the pin in position, whereby the rod may have a horizontal pivotal movement and means for securing the opposite end of the rod to the toe plate.

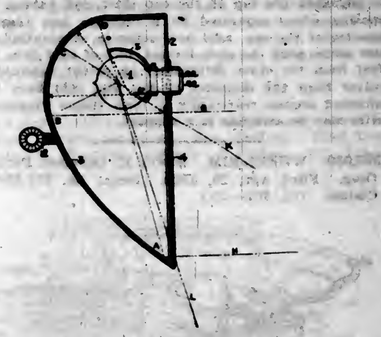


1,393,025. FABRIC. Max Katz, New York, N. Y., assignor to Voss & Stern, New York, N. Y., a Copartnership composed of Philip Voss, Emanuel Voss, and Morris Voss. Filed Apr. 6, 1920. Serial No. 371,671. 1 Claim. (Cl. 2—146.)

A fabric adapted to constitute the upper portion of an underwaist comprising a foundation of decorative design, reinforcements upon said foundation spaced from each other transversely of the fabric and extending in continuous lines longitudinally thereof, said reinforcements being close together and constituting guides between which the foundation of the fabric may be cut

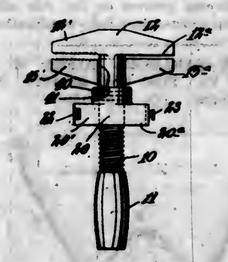
and a plurality of supplemental reinforcements extending between and connecting the first named reinforcements at spaced intervals, any two of said supplemental reinforcements forming the opposite end terminals of said cut.

1,393,026. PULLER FOR CRANK-PINS, &c. Grosvenor G. Keplar, Pottstown, Pa., assignor of one-half to Henry D. Sayler, Pottstown, Pa. Filed Feb. 6, 1920. Serial No. 356,711. 3 Claims. (Cl. 29—96.1.)



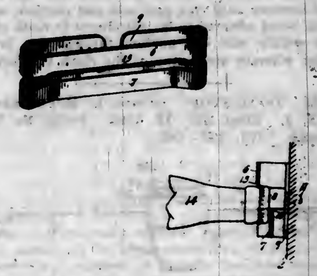
3. The combination in a puller for pins and like objects, of a cross bar; two arms pivoted to the cross bar, each arm having a tapered jaw, each jaw being curved at the edge; a nut; links connecting the nut with the arms; and a screw extending through the nut and bearing upon the cross bar.

1,393,027. LIGHT-PROJECTOR. Harold Kirschberg, Pittsburgh, Pa. Filed Dec. 18, 1916. Serial No. 137,650. 1 Claim. (Cl. 240—41.)



A light projector having a source of light, a primary reflector having a parabolic curve entirely below the source of light, and having a plurality of generated curves extending up from the first-named parabolic curve to a limiting line passing through the source of light and perpendicular to the axis of said parabolic curve, whereby the rays reflected by these generated curves are redirected

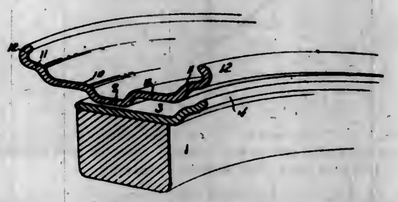
below said axis and out of the reflector, and a secondary reflector forming a screen to shut off all upwardly di-



rected rays from said source of light except such rays as would normally fall on the primary reflector and redirecting such rays on to said primary reflector.

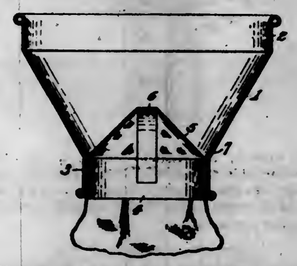
1,393,028. COMBINATION MONKEY AND PIPE WRENCH. Felix Kobis, Worcester, Mass. Filed Apr. 29, 1921. Serial No. 465,461. 3 Claims. (Cl. 81—156.)

1. In a wrench, a threaded shank, a two part nut having a detachable engagement therewith, and a movable jaw element having a swivel connection with said two part nut, said shank being longitudinally slotted to receive said jaw element.



1,393,029. OPENER. Constant J. Kryzanowsky, Mount Washington, Md., assignor to The Crown Cork and Seal Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed May 18, 1917. Serial No. 169,424. 4 Claims. (Cl. 65—46.)

1. As a new article of manufacture, a device for removing crown caps from bottles and the like, comprising

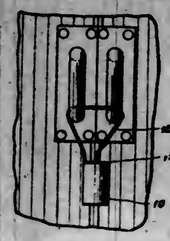


a pair of bars constituting a bearer against which the top of the cap to be removed is forced and a remover for engaging the top of the cap skirt and having their opposing edges separated by a distance less than the diameter of the cap, said bars being in substantially the same plane near the ends thereof, one of said bars being offset from the other throughout an extent substantially greater than the diameter of the cap, said bars being continued around rearwardly to form means whereby the device may be attached to a support.

1,393,030. WHEEL-RIM. HENRY M. LAMBERT, Portland, Oreg. Filed Apr. 29, 1920. Serial No. 377,576. 3 Claims. (Cl. 301—20.)

1. A rim comprising an annular ring-like body having an annular depression of less radius than the radius of said ring-like body, the edges of said ring-like body being extended to form tire holding flanges, said depressed portion having transverse grooves on the side adjacent the center of curvature to pass over felly band buttons.

1,393,031. MILK-STRAINER. ALBERT M. LORENTZ, McMechen, W. Va. Filed Nov. 20, 1920. Serial No. 425,375. 3 Claims. (Cl. 210—159.)



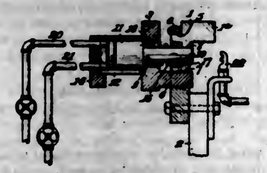
1. A strainer comprising a casing having an open substantially cylindrical lower end portion, a metal ring adapted to be removably disposed within the embrace of said end portion, an upright arch carried by said ring, and a strainer cloth overlying said arch and said ring and clamped between said ring and said end portion, said ring and cloth being adapted to be introduced to cloth clamping position within said end portion through the bottom of the latter whereby stretching of the cloth is effected.

1,393,032. DOOR-STOP. DANIEL L. MCFEEGANS, Newark, N. J. Filed Mar. 16, 1920. Serial No. 366,275. 2 Claims. (Cl. 292—262.)

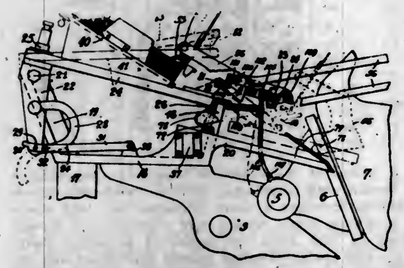
1. A door stop comprising a supporting plate and a cup-shaped member with a top plate thereon, the top plate being swiveled to the supporting plate, the cup-shaped member having a cut away portion at the top, a spring in the cup-shaped member, a latch plate floating on the spring, a rod pivoted at one end and sliding in the cut away portion and in contact with the latch, the rod having a recessed part at its end to receive the latch.

1,393,033. CAR-SEAL. HARRY L. MARTIN and WILLIAM C. WILLIS, Memphis, Tenn. Filed Mar. 9, 1921. Serial No. 451,011. 4 Claims. (Cl. 292—324.)

1. In a car seal, a casing having one end closed, a sealing strip secured to the casing at the open end thereof, a foldable closure flap for the open end of the casing having an opening formed therein, a guide member disposed within the casing, having a portion extending through the opening of the foldable closure and embodying a shoulder engaging the inner face of the foldable closure to prevent inward movement thereof, the portion of said guide extending through the opening of the foldable closure forming a guide whereby the free end of the sealing strip may be introduced to the casing, and means within the casing disposed in the path of the sealing strip adapted when shifted to lock said sealing strip against withdrawal from said casing, said sealing strip embodying a shoulder engaging the outer face of the foldable closure to prevent outward movement thereof.



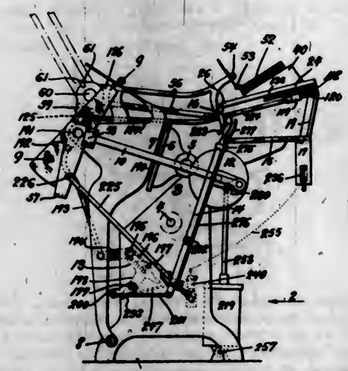
1,393,034. RELIEF-VALVE FOR OIL-CANS. HARRY B. MILLER, Syracuse, N. Y., assignor of one-half to Saul Kauffman, Syracuse, N. Y. Filed Aug. 7, 1920. Serial No. 401,978. 3 Claims. (Cl. 221—59.)



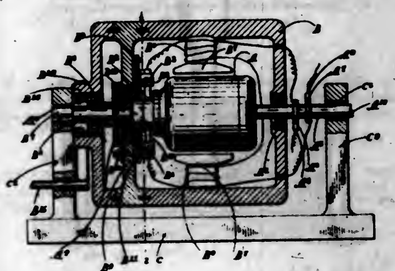
1. The combination with a can and a hollow cap, the latter having corresponding perforations, of a tube extending between said perforations, a valve disposed in said tube, and a spring having sufficient tension to normally hold said valve seated in one of said perforations.

1,393,035. PRESS FOR ARMATURE-COILS. STEPHEN W. MORRIS, Wheeling, W. Va., assignor of one-half to Gen Electric Company, Wheeling, W. Va., a Corporation of West Virginia. Filed Oct. 7, 1920. Serial No. 415,437. 6 Claims. (Cl. 138—10.)

1. A hydraulic press comprising a cylinder, a plunger in said cylinder, a jaw associated with said plunger and adapted to be advanced through outward actuation of the latter, a stationary jaw with which said movable jaw cooperates when the latter occupies its advanced position, guiding means for said plunger including a stem, and tension means carried by said stem and normally holding said movable jaw and said plunger in retracted positions, one of said jaws being offset to provide a seating ledge.

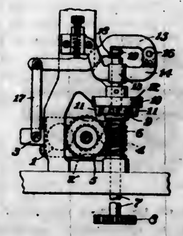


1,393,036. TRANSFER MECHANISM FOR PRINTING-MACHINES. LEWIS E. MORRISON, Newark, N. J., assignor to himself and S. Haines Plum, 2d, Madison, N. J. Original application filed May 29, 1919, Serial No. 300,702. Divided and this application filed Jan. 20, 1920. Serial No. 352,750. 11 Claims. (Cl. 101—287.)



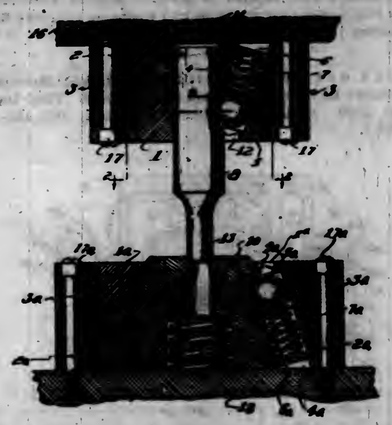
4. The combination with a printing machine, a movable platen, paper supporting means, of a transfer table interposed between the latter and the said platen and mechanism for swinging the said paper supporting means and the said transfer table upward and to one side away from operative relationship with the said platen.

1,393,037. TRIPPING MECHANISM FOR PRINTING-MACHINES. LEWIS E. MORRISON, Newark, N. J., assignor to himself and S. Haines Plum, 2d, Madison, N. J. Original application filed May 29, 1919, Serial No. 300,702. Divided and this application filed Feb. 21, 1920. Serial No. 360,332. 8 Claims. (Cl. 101—299.)



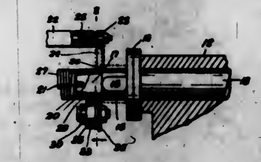
4. The combination of a tripping mechanism, an operating lever therefor, a member mounted on said lever, a spring for holding said member in normal active position, a link having a shoulder adapted to engage said member in its active position to operate said lever, suction means for moving said member into inactive position, means for maintaining said member in inactive position while the said link moves past the same and means on said link for restoring the said member.

1,393,038. ELECTRIC GENERATOR AND MOTOR. ROBERT RANKIN, Leamington Spa, England. Filed Dec. 15, 1920. Serial No. 430,919. 5 Claims. (Cl. 171—221.)



1. In an electric machine, the combination of a rotating armature, a commutator on said armature, brushes engaging said commutator, a field system normally stationary but adapted to revolve freely in one direction and to move through a limited angle in the opposite direction, a spring acting to oppose such limited angular movement, and a brake adapted to hold said field system against rotation, substantially as set forth.

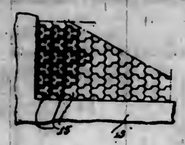
1,393,039. TAKE-UP MECHANISM FOR KNITTING-MACHINES. FRANK P. REYNOLDS, Norristown, Pa., assignor to Ballard Knitting Co., Norristown, Pa., a Corporation of Pennsylvania. Filed May 17, 1920. Serial No. 382,006. 8 Claims. (Cl. 66—9.)



1. In combination in a take-up for knitting machines, a pair of take-up rolls, a movable support therefor, a worm and worm wheel for driving the take-up rolls, a clutch member connected with the worm having an inclined shoulder, a drive shaft extending up through the worm, a clutch member fixed on the drive shaft to move vertically therewith, having a taper pin to coact with the inclined shoulder on the clutch member first mentioned, a lever connected with the movable support of the take-up rolls and operating to effect a positive lifting action on the upper clutch member to release the side face of the taper pin from the inclined shoulder when the support of the take-up rolls moves upwardly, substantially as described.

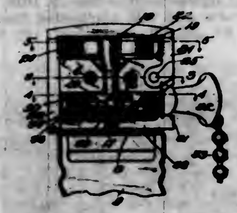
1,393,040. PUNCH AND DIE RETAINER. CLEMENT C. RICHARD, CLARENCE A. RICHARD, and OTIS K. RICHARD, Detroit, Mich. Filed Nov. 19, 1919. Serial No. 339,136. 6 Claims. (Cl. 164—118.)

1. In a retainer for punches, dies and similar tools, a base, a supporting member removably secured thereto and having a central aperture, a tool retainer held in position by the supporting member, the tool retainer having a central aperture, a spring-pressed ball supported by the retainer and normally extending into the aperture therein, the tool being adapted to fit in the aperture and seat against the base and having an arcuate groove of a radius greater than the radius of the ball in the face thereof in which the ball may engage to bind the tool in position.



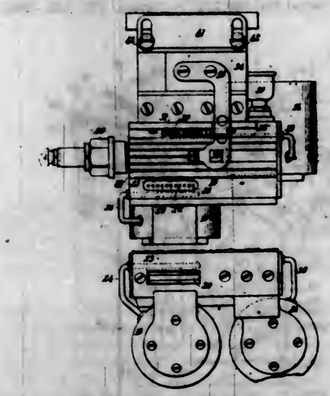
1,393,041. APPARATUS FOR MAKING CHAIN-LINKS. CHARLES ROBERTSON and LOUIS LAUPOT, Stroudsburg, Pa., assignors to Universal Chain Co., Inc., Stroudsburg, Pa., a Corporation of Pennsylvania. Filed Sept. 10, 1919. Serial No. 322,813. 2 Claims. (Cl. 153—65.)

1. An apparatus of the class described comprising a rotatable mandrel, a tensionally operated roller cooperating with said mandrel to form from a rod or wire fed therebetween a spiral coil, said mandrel tapering outwardly, and means movable longitudinally of said mandrel for advancing the separate windings of said coil, when formed, onto the tapered portion of said mandrel.



1,393,042. RADIATOR-CORE. WILLIAM SACKREN, Brooklyn, N. Y. Filed Mar. 24, 1920. Serial No. 368,886. 10 Claims. (Cl. 257—128.)

1. In a device of the character described, the combination of a plurality of tubes of substantially clover-shaped form, each tube having enlarged ends forming a combination of three hexagons, said ends, forming a homogeneous part of said tube, adapted to be united to the enlarged tri-hexagon ends of the adjacent tubes, the substantially clover-shaped portion of said tubes between

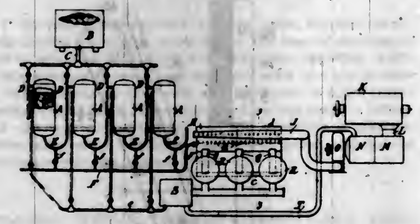


their ends being of smaller cross-sectional area than the ends, thus forming a circulation space around the tubes.

1,393,043. PULL-SOCKET. RALPH A. SCHORNBERG, now by judicial change of name Ralph A. Belmont, New York, N. Y., assignor to Beaver Machine and Tool Co., Inc., Newark, N. J., a Corporation of New Jersey. Filed Apr. 28, 1916. Serial No. 94,141. 5 Claims. (Cl. 173—354.)

2. A device of the character described comprising a body formed with an interior chamber; a circuit-controlling switch including a shaft extending into said chamber; a ratchet wheel within said chamber and loosely mounted on said shaft but connected to rotate therewith; a pull chain extending around said wheel and engaging the latter; a chain-supporting member within said chamber loosely mounted on said shaft and having the inner end of said chain connected therewith; and a spring in said chamber connected at one end with said member and at its opposite end to said body, walls of said chamber serving to hold said wheel and member against movement endwise on said shaft.

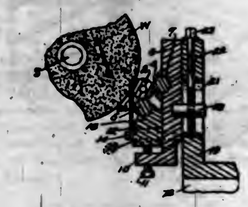
1,393,044. CARBURETER. CARL F. SCHULZ, New York, N. Y. Filed July 27, 1914, Serial No. 853,287. Renewed Feb. 1, 1921. Serial No. 441,640½. 12 Claims. (Cl. 48—62.)



1. A carbureter, the combination with a chamber of variable capacity and means for varying the capacity of

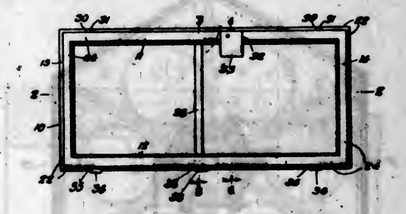
same, means for admitting oil and air into such chamber in amounts sufficient to support partial combustion, means for adjusting the supply of oil and air to increase the same with the expansion of the chamber, means for starting a flame in said chamber in connection with such oil and air, means for atomizing water across the flame, and means for admitting extra air to form a combustible mixture.

12. In a carbureter, the combination with a delivery chamber, having a plurality of separate passages, a series of admission ports to said passages, a valve for controlling the openings to said passages and for controlling the said ports in unison, and adjustable means for admitting extra air to said delivery chamber.



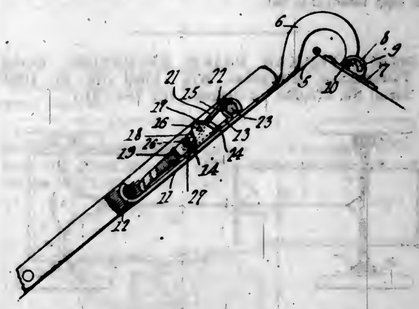
1,393,045. PROCESS FOR PRODUCING SOLUBLE CONCENTRATED COFFEE. JOHN W. SCOTT, Englewood, N. J., assignor to Arbuckle Brothers, New York, N. Y., a Firm composed of William A. Jamison, Catherine A. Jamison, and Christina Arbuckle. Filed Sept. 24, 1918. Serial No. 255,509. 10 Claims. (Cl. 99—5.)

2. The method of producing a coffee concentrate consisting in supplying a liquid to successive vessels containing ground coffee, the liquid when at its highest temperature permeating the most spent mass of coffee, and passing at a lower temperature to masses of coffee of successively increasing strength, whereby to obtain an extract rich in aroma, and atomizing the liquor thus formed into a highly heated blast to accomplish instantaneous concentration and retain the aroma in the product.



7. A method of producing a coffee concentrate consisting in first producing a coffee extract and then atomizing such extract into a highly heated blast containing aromatic and volatile products obtained from coffee roasting.

1,393,046. WRIST-PIN GRINDER. JOSEPH SINGER, Los Angeles, Calif. Filed Jan. 2, 1920. Serial No. 349,012. 8 Claims. (Cl. 51—238.)



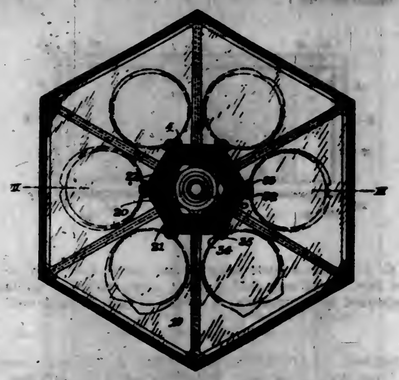
1. In a device for grinding and polishing cylindrical objects, a rotatably mounted grinding wheel and a support for the object to be ground, comprising an adjustable support and a pair of parallel cylindrical members journaled on said support and adapted to receive the object to be ground and polished, one of which cylindrical members is adjustable toward and away from the other.

1,393,047. DOOR. JOSEPH SOSS, New York, N. Y. Filed Jan. 21, 1920. Serial No. 353,037. 7 Claims. (Cl. 189—46.)

6. A motor vehicle door frame work composed of a die cast metal unit and a sheet metal member partially embedded in and forming a facing or part of said unit.

1,393,048. LADDER-HOOK. FRED M. STILES, Norristown, Pa. Filed Sept. 9, 1920. Serial No. 409,088. 3 Claims. (Cl. 228—51.)

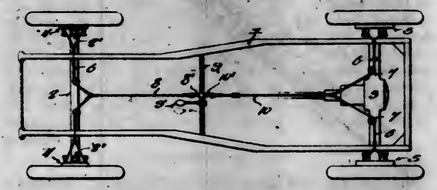
3. A ladder supporting hook including a body portion, a hook member formed at each end thereof, a stationary hook member secured to the body portion intermediate the ends thereof, a lever having pivotal connection with the stationary hook member, curved arms coöperating with the stationary hook member for gripping a ladder rung, and said curved arms having connection with the operating lever, whereby movement of the operating lever moves the curved arms into engagement with a ladder rung.



1,393,049. PROCESS OF MANUFACTURING FERRUGINOUS PREPARATIONS. FRANZ STOHR, Vienna, Austria. Filed Mar. 3, 1921. Serial No. 449,518. 3 Claims. (Cl. 99—11.)

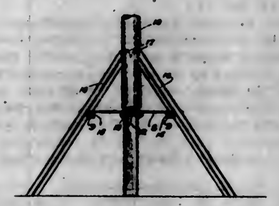
1. A process for manufacturing a ferruginous preparation consisting: in adding to milk a reducing agent, cane sugar, and invert sugar in a larger quantity than cane sugar, in then adding to the mixture commercial ferrisaccharate and an alkali compound of alkaline reaction, whereby any acid reaction of the mixture is removed, and in then heating the mixture in a vacuum, whereby the liquid is evaporated until the desired consistency of the preparation is attained, substantially as described herein.

1,393,050. DISPLAY APPARATUS. JOHN E. TALLEY and JOHN WILMER THOMPSON, Philadelphia, Pa. Filed June 7, 1918. Serial No. 238,688. 4 Claims. (Cl. 211—21.)



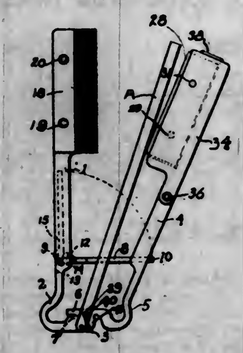
1. In a display fixture, the combination of a base, a transparent casing surmounting said base, a central

pedestal having a plurality of plane surfaces, a removable bar carried by said central pedestal at the junction of



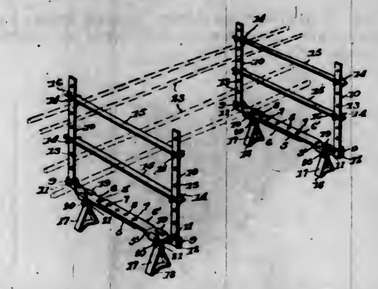
said plane surfaces, and goods supporting means mounted on said removable bar.

1,393,051. VEHICLE BRAKE MECHANISM. FRANK TAMBORELLO, Milwaukee, Wis. Filed Apr. 21, 1920. Serial No. 375,689. 2 Claims. (Cl. 188—31.)



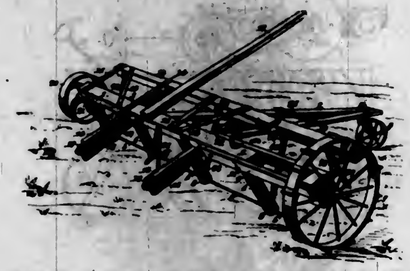
1. In a vehicle having a stationary axle and a wheel mounted thereon, a braking plate provided with notches, a stationary plate carried by the axle, a cylinder carried by said stationary plate, a plunger disposed within said cylinder, a spring for urging the plunger into said cylinder, pulleys mounted upon the sides of the cylinder and cables connected to the plunger and passing over said pulleys for projecting the plunger from the cylinder to engage said notches and lock the braking plate against movement.

1,393,052. SUPPORT. WILLIAM T. TANKING, JR., Racine, Wis. Filed Aug. 5, 1919. Serial No. 315,407. 2 Claims. (Cl. 248—38.)



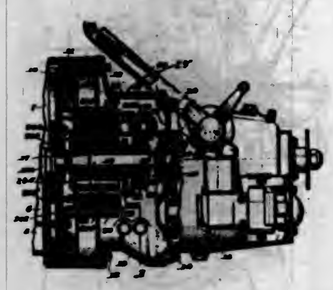
2. A support of the class described, comprising a substantially triangular platform formed of sheet metal and provided with a central aperture and a notched recess at each corner, a pair of spaced ears struck from said platform at each recess, a sheet metal supporting leg disposed in each recess having pivotal engagement with the adjacent pair of ears, said supporting legs being extended upwardly beyond their pivots, a centering pin adapted to be partially driven longitudinally into the base of the member being supported before said member is positioned on said support, the projecting end of said pin being adapted to slip into said aperture, prongs formed on the upper ends of each of said supporting legs and adapted to engage the member being supported whereby said pin may be driven into the base of said member and said member then positioned in said support with said pin projecting through said aperture and the prongs in engagement with the sides of said member, the weight of said member causing said prongs to effectively bite thereinto, and a depending reinforcing flange formed on the side edges of said platform.

1,393,053. HAIR-CUTTING DEVICE. FERDINAND J. TILLMAN, St. Louis, Mo. Filed June 12, 1919. Serial No. 303,807. 9 Claims. (Cl. 30—12.)



1. In a hair cutting device a movable cutting edge, a movable comb, said cutting edge adapted to be moved out of traveling cutting alinement from said comb, and a guiding member extending from said comb to said cutting edge.

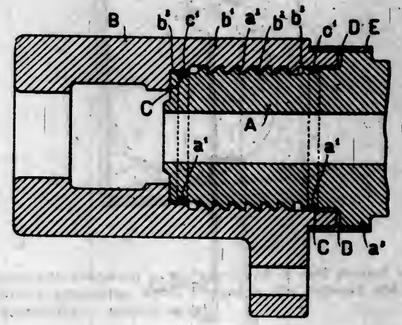
1,393,054. MATERIAL-RACK. GILES M. TURNER, Milwaukee, Wis. Filed Apr. 12, 1919. Serial No. 289,604. 5 Claims. (Cl. 211—14.)



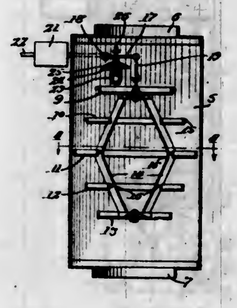
3. A material rack, comprising a transverse member having its opposite side portions adjacent its ends bent upwardly to form U-shape bearings, angular supporting legs clamped to the transverse member, end members pivotally connected to the U-shaped bearing portions and having projections which limit their outward movement, and spacing bars removably connected to the end members.

1,393,055. ROTARY-ROD WEEDER. LOUIS C. VAN PATTEN and JOEL B. WOLFE, Cheney, Wash., assignors to Rotary Rod Weeder and Manufacturing Company, Incorporated, Cheney, Wash. Filed May 8, 1920, Serial No. 379,859. Renewed June 21, 1921. Serial No. 479,312. 17 Claims. (Cl. 97—25.)

1. In rotary rod weeders, a main beam, bearing standards carried thereby, a hitch bar at the rear of said beam, means securing said hitch bar and beam together, draft bars extending forwardly of the main beam in a plane close to that containing the beam and hitch bar, a tiller frame hinged to said beam, a lever for rocking the beam, a rotary rod, driving mechanism for the rod including a traction wheel adjustably carried by the main beam, and means forming a fulcrum for said lever.



1,393,056. CLUTCH. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Original application filed Jan. 31, 1916, Serial No. 75,414. Divided and this application filed Nov. 27, 1918. Serial No. 264,437. 6 Claims. (Cl. 192—113.)

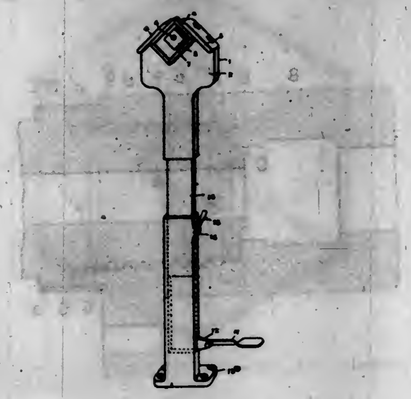


6. In a motor vehicle having a clutch comprising driving and driven members and a casing surrounding the same, means to actuate the clutch including a shiftable element rotatable with one member of the clutch, and a rockable device engaging said element to shift the same, said device being constructed to conduct lubricant from outside the casing to lubricate the contacting surfaces of said device and element.

1,393,057. GUN-BARREL WITH A BREECH-PIECE SCREWED ON AN A-TUBE. JOHN VOLLMER, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Dec. 3, 1920. Serial No. 428,087. 3 Claims. (Cl. 89—16.)

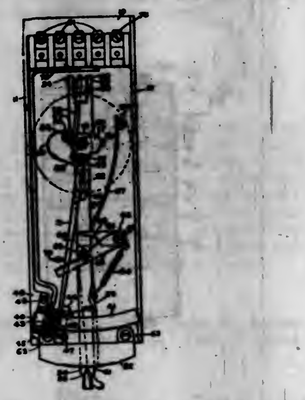
1. A gun barrel and breech-piece screw-threadedly united, said union being formed so as to provide a radial clearance between the parts, said gun barrel and breech-piece being formed with bearing surfaces on both sides of said screw-threads, said surfaces being curved concentrically to the bore axis of the gun barrel and coöperating to maintain said radial clearance when the parts are screwed together.

1,393,058. HUMIDIFIER. JAMES E. WHITACRE, Rockford, Ill. Filed Mar. 12, 1919. Serial No. 282,248. 3 Claims. (Cl. 261—119.)



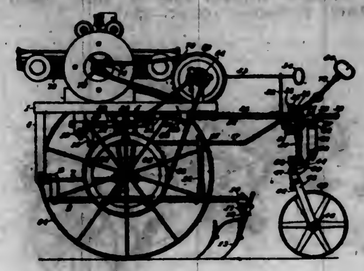
2. A humidifier comprising an inlet air conduit down through which the air passes, a series of relatively shallow water containers within the conduit, each container having a different surface area for evaporation, means for supplying water to said containers, and means for automatically shutting off said supply when a predetermined quantity of water has been delivered to the containers and for replenishing the containers when said quantity through evaporation is lowered.

1,393,059. PICTURE-FRAME VISE. ALBERT JAMES WHITE, Toronto, Ontario, Canada. Filed Jan. 28, 1920. Serial No. 354,706. 3 Claims. (Cl. 144—293.)



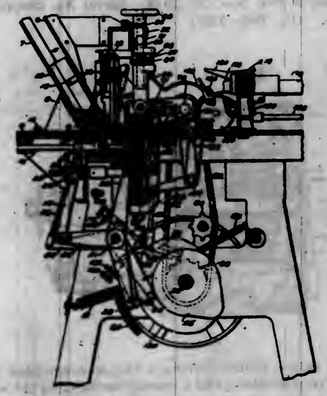
1. A picture frame vise, comprising, a head having a flat face and a pair of flanges projecting from said face and arranged in right angular relation one to the other and

spaced apart, and a block adapted to be moved into engagement with the molding to hold it against said flanges, said



block being supported so as to automatically adjust itself laterally to any inequality of width of molding.

1,393,060. HEAT-REGULATOR. EVERETT H. WHITE, St. Paul, Minn. Filed Sept. 12, 1919. Serial No. 323,394. 6 Claims. (Cl. 200—140.)

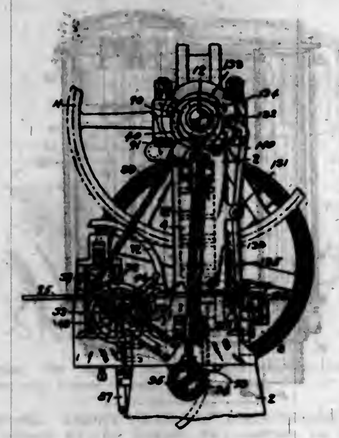


1. A heat regulator comprising a thermostatic member, a movable contact member, operating connections between said thermostatic member and said contact member, fixed contact members adapted to be successively engaged by said movable contact member, a control member adapted to vary the positioning of said movable contact member tively to said fixed contact members for a given room rature, means tending to maintain said control mem- position corresponding to a relatively high room re, and means for locking and rendering said last means inoperative when said control member ally moved to a position corresponding to a temperature, said last mentioned means be- eration by a time controlled device for nd thereby causing said control mem- ally to its first mentioned position.

1,393,061. CULTIVATOR. DALTON K. WILSON, Webster City, Iowa. Filed Dec. 13, 1919. Serial No. 345,612. 10 Claims. (Cl. 97—42.)

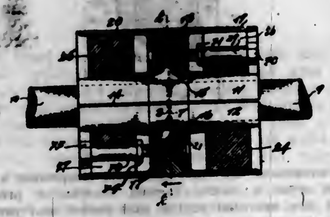
1. In combination, means of transportation, soil-working implements movably supported thereon, interconnected mechanisms for both steering said means of transportation and for variably shifting said soil-working implements and connected releasable means for locking said mechanisms in a certain relation to said means of transportation.

1,393,062. MACHINE FOR OPERATING ON HEEL-LIFTS OR THE LIKE. ERASTUS E. WINKLEY, Lynn, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 29, 1915. Serial No. 69,207. 58 Claims. (Cl. 69—13.)



1. A machine of the character described, having in combination, means for operating on lifts or the like, a support along which the lifts travel after being operated upon by said means, a rotary carrier adjacent said support, and a series of clamps on said carrier successively operative to take the lifts away from said support.

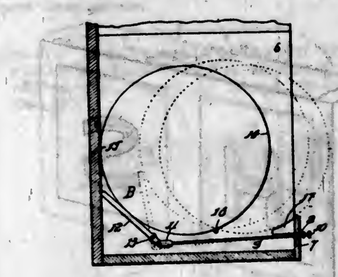
1,393,063. MACHINE FOR MAKING NUTS. ANDREW WOLFRAM, Dermont, Pa. Filed May 28, 1920. Serial No. 385,003. 20 Claims. (Cl. 10—72.)



1. A machine for making nuts comprising a plurality of dies, means for forcing a nut blank vertically through one

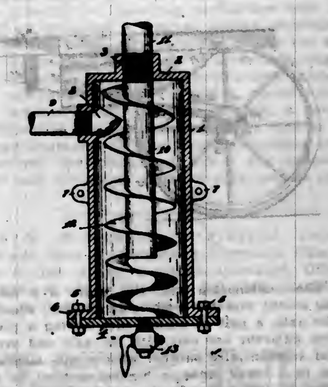
of the said dies and for automatically transferring the said blanks from the said die to another of said dies, the latter

die being laterally displaced from said first die, and means for forcing the said blanks vertically through the said second die.



1,393,064. SHAFT-COUPLING. ARTHUR C. WOODWARD, Cranford, N. J., assignor to The A. & F. Brown Company, Elizabethport, N. J., a Corporation of New Jersey. Filed May 5, 1920. Serial No. 379,010. 14 Claims. (Cl. 287—114.)

1. A shaft-coupling comprising two shaft-engaging sleeves having their exterior surfaces tapered toward their ends, an outer shell surrounding the sleeves, two sleeve-engaging collars interposed between the sleeve and outer shell, and means bearing on the outer faces of said collars to inwardly wedge each collar separately between the sleeves and outer shell.

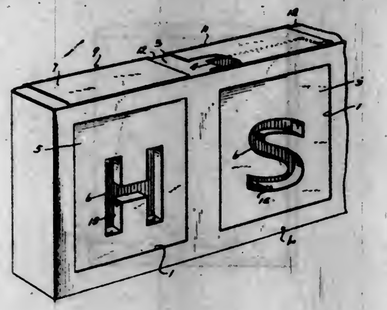


1,393,065. INDIVIDUAL-RECORD EJECTOR FOR GRAPHOPHONE-CABINETS. WALTER J. YOUNG, St. Louis, Mo. Filed Sept. 17, 1920. Serial No. 410,910. 1 Claim. (Cl. 211—16.)

A device of the character described comprising in combination with a graphophone cabinet, a compartment having a plurality of partitions, a pivotally mounted arm located in the bottom of each space between the partitions, a hurdle pivot extended through the entire series of partitions, an operating rod located in each compartment and

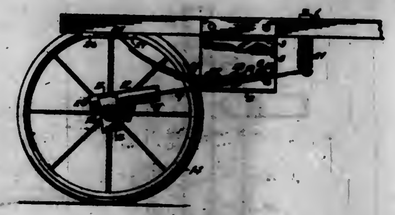
pivotally connected to the lower end of said pivoted arm, and a supporting wedge located in the forward end for supporting an ejected record.

1,393,066. WATER-TRAP FOR AIR-LINES. CHARLES E. ATKINSON, South Bend, Ind. Filed Apr. 12, 1920. Serial No. 373,295. 2 Claims. (Cl. 183—81.)



1. A water trap for air conducting lines comprising a casing, an outlet pipe extending downwardly into and terminating short at the bottom of the casing, a spiral baffle member encircling said outlet pipe from a point adjacent the upper end of the casing to its lower end, the lower end of said spiral baffle member extending below the lower end of the outlet pipe, thereby forming means for conducting the water downwardly to a point below the lower end of the outlet pipe and an inlet pipe connected to the casing adjacent its upper end.

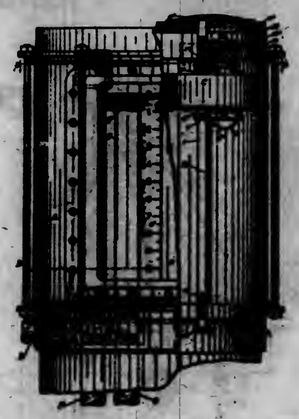
1,393,067. SIGN. WILLIAM BACH, Atlantic City, N. J. Filed Apr. 25, 1921. Serial No. 464,080. 3 Claims. (Cl. 40—133.)



1. A sign of the class described comprising a casing provided with a reflecting rear wall, a front plate provided with an opening defining a sign character, a stripping de-

fining the opening, said stripping being substantially at right angles with the plate, and an illuminating element

positioned in close proximity to but entirely to one side of the opening, said illuminating member being inwardly of the plate.



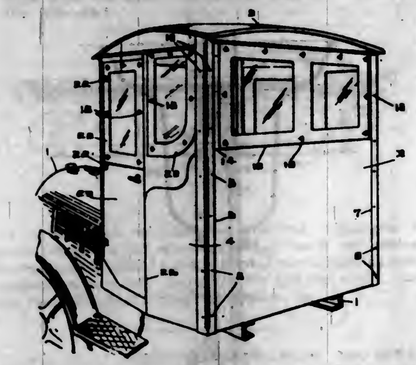
1,393,068. SPRING-MOUNT FOR VEHICLES. HASTINGS BULLEN BACON, Virginia, Minn. Filed July 24, 1920. Serial No. 398,610. 4 Claims. (Cl. 267—19.)

4. The combination with the frame of a vehicle of a spring mount therefor comprising an axle, wheels carried by the axle, a pair of beams, each having a pivotal connection adjacent one end with the axle and arranged to extend substantially parallel with a side member of the frame in a lower plane, a bracket secured to each side member of the frame to depend therebelow, means for pivoting each beam intermediate its length to said bracket, tension means connecting the free end of said beam with the side member of the frame, a leaf spring disposed between that portion of each beam extending between the bracket and the axle and the side member of the frame, and a guideway secured to the under surface of said side member of the frame, said guideway being adapted to receive the adjacent end of said leaf spring and to permit slidable movement of the latter therealong.

1,393,069. FLOAT-REGISTER. LINNAEUS E. BAKER, Fort Wayne, Ind., assignor to Wayne Oil Tank and Pump Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Nov. 24, 1919. Serial No. 340,842. 3 Claims. (Cl. 235—94.)

1. A device of the class described comprising a container, a float adapted to rest by its buoyancy at all times on the surface of the contained liquid and move vertically therewith; fixed vertical guides secured within the container; guide wheels upon the float in rolling contact with said fixed guides; and counting mechanism

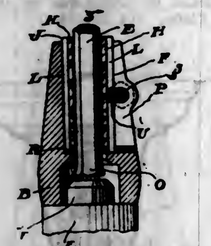
operated by and registering the vertical movements of the float.



1,393,070. WRENCH. JOSEPH L. BARNES, Pittsburgh, Pa. Filed May 18, 1920. Serial No. 382,218. 5 Claims. (Cl. 81—111.)

1. A wrench of the class described comprising a head provided with a socket formed therein, a pivotally mounted jaw mounted within said socket and provided with an elongated arm, a spring engaging the lower end of said arm and mounted within said socket for normally holding said arm in a vertical position, said jaw provided with a plurality of inwardly extending fingers adapted to overhang said head whereby the jaw will be held against swinging movement when engaged by a nut, and an adjustable jaw cooperating with said swinging jaw.

1,393,071. TRUCK-CAB. KENNETH S. BAXTER, Bryan, Ohio, assignor, by mesne assignments, to The Sheet Steel Products Co., Michigan City, Ind., a Corporation of Indiana. Filed Nov. 12, 1918. Serial No. 262,125. 3 Claims. (Cl. 296—102.)

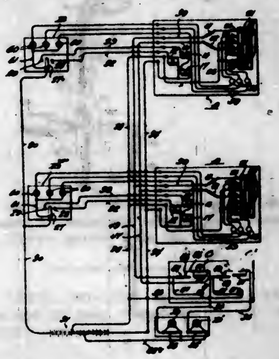


1. The combination with a vehicle seat having sides, a back extending between said sides and forming corners therewith, of a cab top for attachably mounting therewith, said top having lodge portions resting on the seat sides and back and further provided with embracing means extending downward from the upper portion of

the top over the back and adjoining side at the respective corners of the seat, and holding means for at-

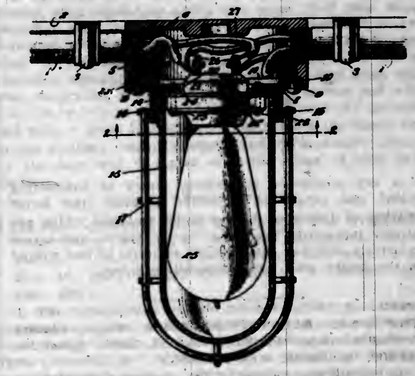
taching the top to the seat by anchoring the corner embracing means to said seat.

1,393,072. FRONT HEAD FOR ROCK-DRILLS. LEWIS CONDICT BAYLES, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed July 6, 1920. Serial No. 394,193. 2 Claims. (Cl. 121—32.)



1. A front head construction for a rock drill of the hammer type, said front head provided with a bore adapted to receive a renewable bushing having a uniform bore through which the shank of the drill still is adapted to extend, said bushing being formed from a hollow cylindrical sleeve having the metal of its walls at diametrically opposite points weakened and split apart along longitudinal lines to form two substantially symmetrical sections adapted to fit together along the roughened split surfaces and remain firmly in contact when the shank of a drill steel is inserted in the said split bushing, and means for holding said split bushing in the bore of the front head, whereby the bushing affords resistance to side thrust and permits removal of a drill steel which has been upset at the end.

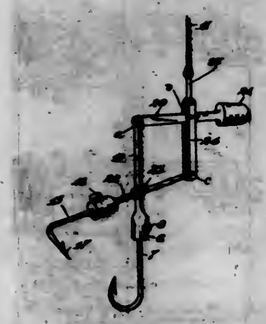
1,393,073. DROP-HAMMER. LOUIS GARFIELD BAYNES, Hartford, Conn., assignor to The Billings & Spencer Company, Hartford, Conn., a Corporation of Connecticut. Filed July 26, 1920. Serial No. 399,128. 6 Claims. (Cl. 78—29.)



1. In a machine of the character described, the combination with a frame, an active member of a board clamp slidably mounted therein, and a toggle between said frame and active member, of an operating lever pivoted to the frame and engaged with said toggle at a point between its connections with said frame and active board clamp member.

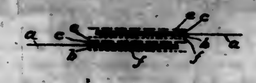
1,393,074. ELECTRICALLY-OPERATED VOTING APPARATUS. AARON C. BOCHER, Milwaukee, Wis. Filed Dec. 18, 1918. Serial No. 267,393. 3 Claims. (Cl. 235—52.)

1. A voting apparatus comprising a main station including a plurality of indicating mechanisms each provided with a plurality of circuit closing members, a plurality of substations each including means for actuating the circuit closing members of a corresponding indicating mechanism, a plurality of circuits each including branches associated with corresponding circuit closing members, resistance units in said branches, a pair of meters differential in nature, associated with each of said circuits and calibrated to give identical readings under normal current conditions, and means for controlling current in said circuits to maintain such normal conditions.



1,393,075. ELECTRIC-LIGHT FITTING. JOHN C. BOTTON and ORIS H. NICKERSON, Cleveland, Ohio, assignors to The Adapti Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 11, 1918. Serial No. 262,026. 4 Claims. (Cl. 240—11.)

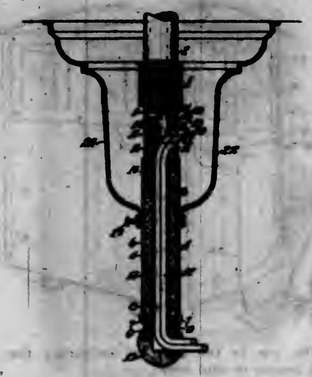
1. In combination, a receptacle having an open side, and a self-contained unit applied to and closing the



open side of the receptacle and comprising a supporting element, a lamp socket applied to the supporting element, the supporting element having a flange surrounding the lamp socket, and a guard sustained by the flange.

1,393,076. FISH-GRAPPLE. HORACE L. BRADY, Los Angeles, Calif. Filed Nov. 6, 1919. Serial No. 336,062. 1 Claim. (Cl. 43—37.)

A fish grapple comprising a supporting bar attachable at its upper end to a line and normally depending vertically, a rockable bar pivoted adjacent the upper end of said bar and having a weight on the outer end thereof, a depending shank pivoted on the outer end of the rockable bar and depending therefrom, a bait hook carried on the lower end of said shank, a bar pivoted intermediate its ends on said shank and pivoted at its lower end on the lower end of the supporting bar, and a gaff hook carried by said last named bar having a downwardly extending barb, said bars and shank forming collectively a toggle link and the weight operating to normally maintain the toggle link open and the gaff hook elevated.

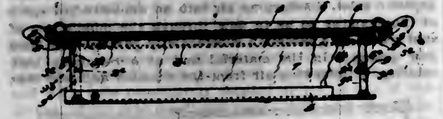


1,393,077. ELECTRICAL CONDENSER. WILLIAM C. BAINBON, Jr., Kennett Square, Pa., assignor, by mesne assignments, to Philbrin Corporation, Kennett Square, Pa., a Corporation of Delaware. Filed Oct. 8, 1918. Serial No. 257,419. 6 Claims. (Cl. 250—41.)

1. A dry condenser comprising layers of conducting material and layers of dielectric material, the latter consisting of layers of homogeneous material which are relatively inherently hard and incompressible and layers of relatively soft and compressible material of less weight than the harder and less compressible layers.

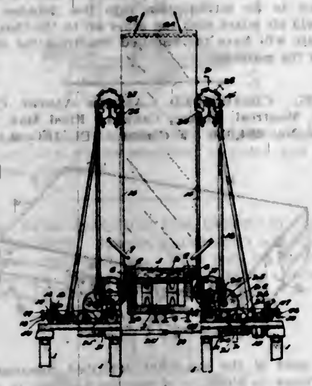
1,393,078. ELECTRIC FIXTURE. FRANK LOWELL BUTLER, Chicago, Ill. Filed Nov. 11, 1920. Serial No. 423,400. 6 Claims. (Cl. 240—85.)

1. In an electric fixture of the character described, a tubular stem having an obliquely extending opening through its wall at a spaced distance from one end thereof, and a spring guiding clip arranged in the bore of said stem for guiding through the opening a flexible



member passed through the bore from the other end of the stem.

1,393,079. ELECTRIC FIXTURE. FRANK LOWELL BUTLER, Chicago, Ill. Filed Nov. 26, 1920. Serial No. 426,495. 1 Claim. (Cl. 240—85.)

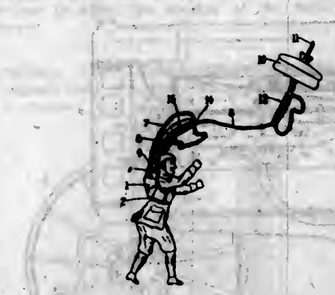


In an electric fixture, the combination of a fixed support, a tubular insulating member threaded interiorly adjacent one end, means for securing the other end of said insulating member to the fixed support, a bushing having a portion engaging the interiorly threaded portion of the insulating member, a second tubular member having one end thereof abutting against said bushing, and means connecting with said bushing and extending through said second named tubular member for maintaining the latter in adjusted position relative the bushing and for supporting any suitable electric lighting fixture arranged to depend therefrom, said last named means comprising a rod screwing into the bore of the bushing and being formed adjacent its opposite end into an open link, said link having its side members fashioned to provide shoulders adapted to abut against the adjacent end wall of said second named tubular member.

1,393,080. COLLAPSIBLE LIGHT AND RAIN SHIELD FOR VEHICLES. EUGENE B. BURTE, Chicago, Ill. Filed July 23, 1920. Serial No. 398,549. 2 Claims. (Cl. 296—66.)

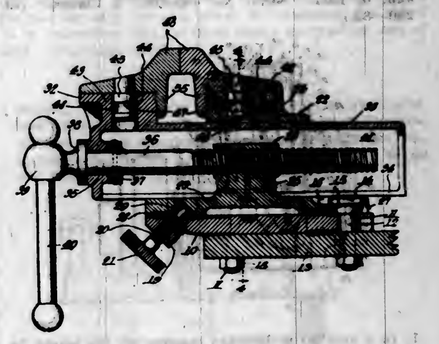
1. A shield of the character described, comprising a casing member, a bar extending parallel with said casing member, non-detachable and adjustable bar supporting connections between said casing member and bar, and a curtain secured to said casing member and bar.

1,393,081. SHEET-GLASS-DRAWING MACHINE. ROBERT P. CALLARD and CLARENCE A. RHONEMUS, Charleston, W. Va., assignors to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed May 21, 1919. Serial No. 298,066. 15 Claims. (Cl. 49—17.)



9. In a sheet glass drawing machine, the combination of a pot for molten glass having oppositely-disposed overflow portions, an endless series of sheet glass drawing devices movable vertically past said overflow portions on each side of the machine, a common drive shaft actuating each of said series of drawing devices, and a motor for driving said shaft.

13. In a continuous sheet glass drawing machine, the combination of a receptacle for molten glass having oppositely disposed overflow portions, and sheet drawing and width maintaining means, comprising an endless series of edge molding devices movable vertically past each of the overflow portions, for forming the sheet edges and holding them out laterally while simultaneously drawing the sheet upward.

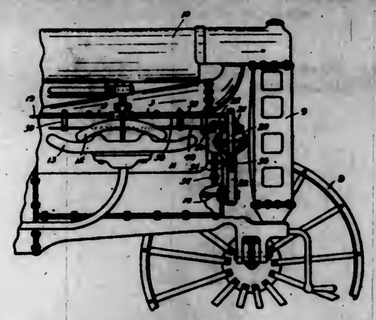


1,393,082. PARACHUTE. EVERARD RICHARD CALTHROP, London, England, assignor to E. R. Calthrop's Aerial Patents Limited, London, England. Filed Sept. 8, 1919. Serial No. 322,497. 4 Claims. (Cl. 244—21.)

1. In a parachute launching device the combination with a main or load supporting parachute and a container therefor of means for attaching said container to the aircraft a knapsack positively carried upon the person of

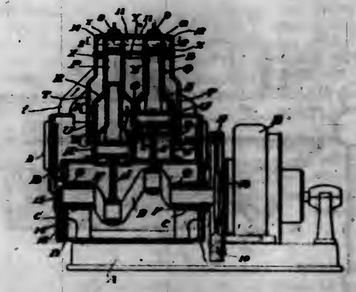
the aviator as auxiliary parachute nested in said knapsack and means for launching said auxiliary parachute as the aviator throws himself from the aircraft.

1,393,083. VISE. WILLIAM A. CAMPBELL, Pittsburgh, Pa. Filed Apr. 25, 1921. Serial No. 464,076. 2 Claims. (Cl. 81—32.)



1. In a vise, a base provided near one end with a headed stud extending above the same, said base being provided near its opposite end with an inclined screw-threaded opening, extending upwardly toward the headed stud, a clamping screw engaging within the screw-threaded opening, a vise to be secured to said base, said vise comprising a base portion provided at one end with a notch to receive the headed stud and near its opposite end with a lower inclined recess to receive the upper end of the inclined clamping screw, and guide means carried by the base and engaging over the edges of said base portion.

1,393,084. CENTRIFUGAL GOVERNOR FOR FORDSON TRACTORS. GEORGE E. CANFIELD, Minneapolis, Minn., assignor to James M. Dobson, Minneapolis, Minn. Filed Feb. 13, 1920. Serial No. 358,521. 6 Claims. (Cl. 123—106.)



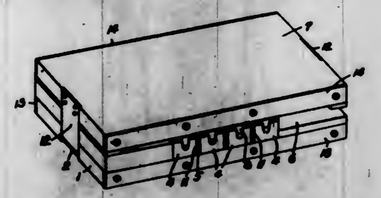
1. The combination with a tractor having an internal combustion engine, of a throttle valve for controlling the fuel supply thereto, of an upright governor shaft driven from a running part of the engine, a centrifugal governor carried by said shaft, a lever subject to said governor, a spring acting directly upon one side of said lever, a casing inclosing said shaft, said governor and said spring

pressed lever, and an operating rod connected to said throttle valve and extending into said governor casing and

provided with a connection therein to said spring pressed lever whereby said throttle valve will be automatically operated from said governor.

1,393,085. COMPRESSOR. ALLAN O. CARPENTER, Corning, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Jan. 6, 1921. Serial No. 435,479. 3 Claims. (Cl. 230—32.)

1. In a vertical multi-stage compressor, the herein described unitary cylinder construction comprising duplex differential cylinders constructed in block form in one piece, the low pressure cylinder bores of larger diameter being arranged side by side and having a cylinder wall partly in common, the high pressure cylinder portions of smaller diameter being connected to the low pressure portions by inclined walls, the said differential cylinders being provided with an integral outer casing conforming substantially to their contour and forming a water jacket for the cylinders, common inlet and common discharge chambers for the low pressure cylinder portions located at the said inclined connecting walls, and a removable head forming a closure for the high pressure cylinder ends and having common inlet and common discharge chambers for the high pressure portions of the cylinders.



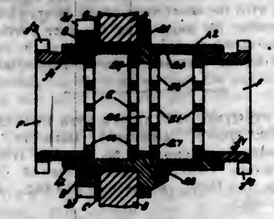
1,393,086. METHOD OF AND APPARATUS FOR DRYING, CONDITIONING, AND REGULATING THE MOISTURE CONTENT OF HYGROSCOPIC MATERIALS. WILLIS H. CARRIER, Buffalo, N. Y., assignor to Carrier Engineering Corporation, Buffalo, N. Y. Filed Mar. 27, 1917. Serial No. 157,074. 16 Claims. (Cl. 34—19.)

8. The herein described method of regulating the physical condition of materials, consisting in disposing the material in a chamber so as to leave substantially unobstructed connecting spaces in the chamber at three adjoining sides of the material, two of which sides are opposite each other and are connected by the third side, and so as to provide air flow passages through the material extending in a direction from one to the other of said opposite sides, discharging air into an unobstructed space of the chamber so as to flow through the middle one of said spaces in a direction substantially parallel with said flow passages in the material and at a relatively high velocity, withdrawing air from the chamber adjacent that

side of the material at which the air is discharged into the chamber, whereby the circulation of a relatively larger volume of other air in the chamber is induced, the incoming air mixes and circulates with the other air before flowing through the material and the circulating mixed air is caused to flow through the material, and regulating the condition of the relatively small volume of incoming air prior to its introduction into the chamber so that when said air mixes with the other air in the chamber, the mixed air will have the required condition for the treatment of the material.

1,393,087. CIGAR-MOLD. ARTHUR ALBERT CHARBONNEAU, Montreal, Quebec, Canada. Filed Mar. 8, 1920. Serial No. 364,016. 5 Claims. (Cl. 131—9.)

1. A mold of the character described comprising two half portions; a plurality of recesses provided in one portion of said mold; a plurality of suitably shaped projecting members provided on the other portion of said mold and adapted to fit in said recesses in the aforesaid portion of said mold, said projecting portion having sharp edges; and a plurality of protecting members provided adjacent said projecting members substantially as described.

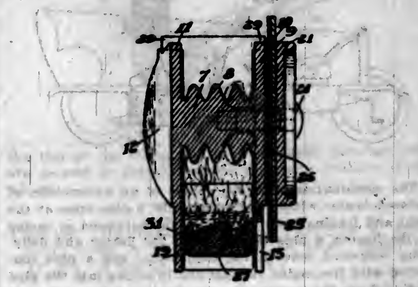


1,393,088. VEHICLE-SPRING. FELIX R. CHAUDET, St. Louis, Mo. Filed Oct. 23, 1920. Serial No. 419,022. 1 Claim. (Cl. 267—16.)

In combination with a vehicle frame, a main bowed spring connected at one end to the frame, a toggle joint

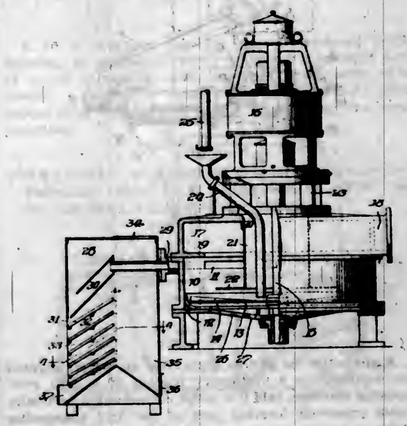
comprising a pair of toggle links hinged at one end on opposite sides of the frame member, a hinge pin connecting the opposite ends of the links, a forked toggle link comprising a sleeve or tubular cross member hinged to said pin and fork arms leading from the ends of the sleeve between the toggle links aforesaid, a hinge pin coupling the outer ends of the fork arms to the adjacent end of the main spring, and an auxiliary spring comprising two sections each having an intermediate coil wrapped about the sleeve mounted on the hinge pin of the toggle, and extensions leading from said coil in opposite directions and with ends respectively secured at the points of connection of the first mentioned toggle links with the frame, and at the points of connection of the main spring with the arms of the forked toggle link aforesaid, said auxiliary spring responding to the closing and opening movements of the toggle joint.

1,393,089. MULTIPLE-CABLE GLAND FOR BULKHEADS AND THE LIKE AND PLASTIC FILLING COMPOUND THEREFOR. JAMES HUNTER COLLIE, Birkenhead, England. Filed Jan. 13, 1919. Serial No. 270,971. 3 Claims. (Cl. 247—18.)



2. The device of claim 1 in which the plastic compound is composed of a fibrous absorbent material, and a fluid incorporated therewith.

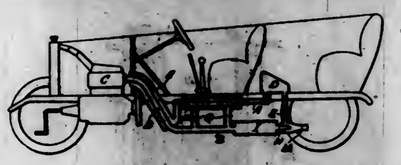
1,393,090. FUEL-INJECTOR FOR INTERNAL-COMBUSTION ENGINES. SAMUEL P. COWARDIN and HARRY A. COWARDIN, Richmond, Va. Filed July 9, 1917. Serial No. 179,491. Renewed Dec. 8, 1919. Serial No. 343,742. 14 Claims. (Cl. 123—131.)



3. A fuel oil injector for internal combustion engines having oil and air chambers in which oil and air are maintained under constant equal pressures, oil and air passages supplied by said chambers, valves controlling said respective passages, movable pressure responsive elements for controlling the operations of said valves, the first of said elements being subject to the pressure in but one of said chambers and serving to operate the second element which is subject to the pressures in both chambers in effecting the opening of the valve controlled by said second element, and means for periodically operating the first element to effect the opening of the valve controlled thereby.

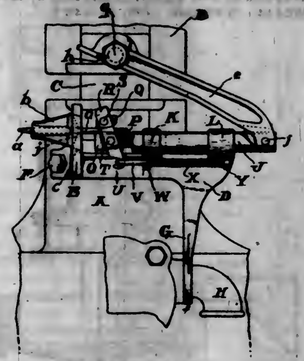
1,393,091. VULCANIZER. POWEL CROSLEY, Jr., Cincinnati, Ohio. Filed Mar. 22, 1920. Serial No. 367,914. 6 Claims. (Cl. 18—18.)

1. In a vulcanizer, a vulcanizing plate having a plurality of vulcanizing faces, a heat absorbing and conveying bar integrally connecting said vulcanizing faces, means for heating said bar and means for clamping the object to be vulcanized and the vulcanizing material on one of said vulcanizing faces.



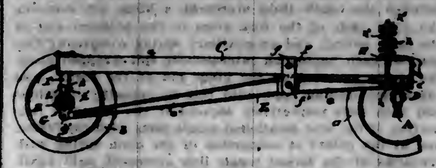
1,393,092. METHOD OF AND MEANS FOR RECLAIMING MOLDING-SAND. JAMES C. DAVIS, Hinsdale, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed May 2, 1918. Serial No. 232,114. 5 Claims. (Cl. 83—46.)

1. An apparatus for reclaiming used molding sand, including in combination, a casing, a horizontally rotatable fan therein, means for delivering the used sand to said fan near the center thereof, a horizontally disposed flange extending inwardly of said casing above said fan, said flange defining an opening of less size than the casing, the casing having an exit opening immediately beneath said flange and also an exit opening above said flange, means for driving said fan, the latter driving the sand



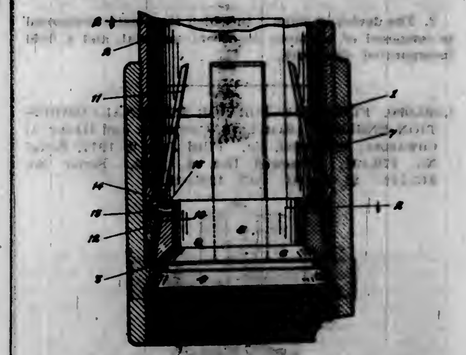
against the walls of the casing, and giving the cord an upward helical motion whereby the cord is driven against said flange and outwardly over said lower exit.

1,393,093. HEATING DEVICE FOR AUTOMOBILES. ADRIAN DENMAN-JONES, Holloway, London, England. Filed Feb. 4, 1920. Serial No. 356,162. 1 Claim. (Cl. 237—12.3.)



The combination with the engine of an automobile, of a closed heater within the automobile, a pipe open at the front and leading from the engine compartment or casing to the heater, a pipe leading from the heater and delivering rearward beneath the automobile, and a pipe connected with the engine exhaust and injecting into the pipe leading from the heater, the organization being such that hot air from around the engine is led through the heater without discharging into the interior of the automobile and is discharged from the heater by the injected exhaust gases entering the discharge pipe from the heater.

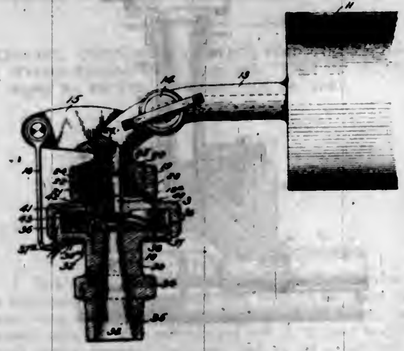
1,393,094. PIN-PULLER. JESSE DITSON, Littleton, Colo., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed July 6, 1920. Serial No. 394,246. 11 Claims. (Cl. 29—36.1.)



1. A pin puller for pulling a pin from an object, adapted to be mounted on a stationary portion of a drill steel sharpening machine, said pin puller comprising a vertically movable crosshead forming part of the drill sharpening machine, a stationary abutment, a jaw carrying member adapted to move toward and away from said abutment, a pin gripping jaw fixedly carried by said member, another pin gripping jaw pivotally attached to said first mentioned jaw and means connected in operative relation with said crosshead of the drill sharpener for actuating said jaw carrying member toward and away from said abutment by the movement of said crosshead, said means being adapted to be disconnected to render said pin puller inoperative.

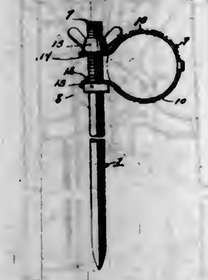
1,393,095. COMBINED SPRING AND SPRING AND LEVER SUSPENSION FOR VEHICLES. CHARLES DRAKE, Cleveland, Ohio. Filed Aug. 17, 1920. Serial No. 115,374. 17 Claims. (Cl. 267—16.)

1. In a vehicle, a load-carrying member, a front axle, a rear axle, and a spring interposed between the load-carrying member and the front axle for supporting the front end of the load-carrying member, in combination with a pair of levers of the first class having arms of unequal length fulcrumed to the load-carrying member, the fulcrum points of said levers being forwardly of the transverse medial line of the load carrying member, with the long arms of the levers extending from their fulcrums to the rear axle and secured thereto, and resilient means coöperating with the short arms of the levers and the load-carrying member for supporting the rear portion of the load-carrying member, said rear portion of the load carrying member being otherwise without substantial support.



1,393,096. FISHING APPLIANCE FOR USE IN DRILLING OPERATIONS. DENNIS L. DRISCOLL, Coalinga, Calif., assignor of one-half to Bunting Iron Works, San Francisco, Calif., a Corporation of California. Filed May 22, 1920. Serial No. 383,462. 4 Claims. (Cl. 294—90.)

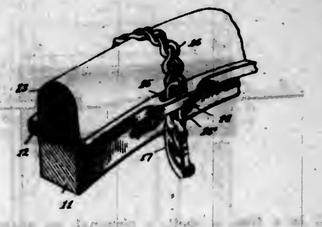
1. A fishing tool for the described purpose, the same comprising a ring, a plurality of relatively flat straight spring arms extending upwardly therefrom at an incline toward each other, and secured thereto at their lower ends, and a tubular shell provided on its interior with a supporting seat and formed with an interior diameter above said seat slightly greater than the exterior diameter of the ring and within which said ring and spring arms are removably positioned as a unit.



1,393,097. GREASE-CUP. WILLIAM HENRY DUPEE, Vicksburg, Miss. Filed Mar. 30, 1920. Serial No. 369,940. 14 Claims. (Cl. 184—105.)

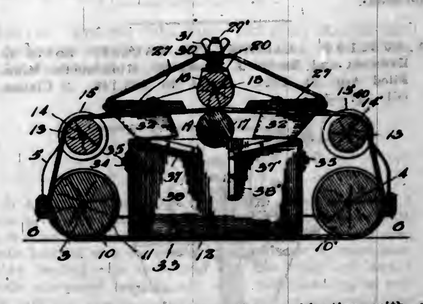
14. In a grease cup, a body including a head and a stem, the stem having a longitudinal passageway, the head being substantially cup-shaped, a cap also substantially cup-shaped and forming with the head a valve chamber, said cap having an aperture, a valve in the chamber normally closing said aperture, the passageway communicating with the bottom of the valve chamber, said bottom having a circular series of spaced projections extending upwardly, said valve having a plurality of legs which are spread apart and engage between certain of

the spaced projections at the bottom of the valve chamber for holding the valve away from the passageway while permitting the same to move away from the aperture, said projections also preventing the valve from turning, the valve normally being seated against the under side of the cap.



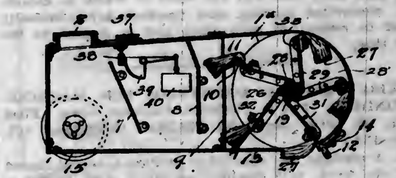
1,393,098. NOZZLE-HOLDER. JOSEPH EASTMAN, Manitowoc, Wis. Filed Nov. 8, 1920. Serial No. 422,484. 2 Claims. (Cl. 248—20.)

2. An article of the class described comprising a spindle, having one end pointed and the opposite end threaded, a circular skeleton clip body adapted to surround a nozzle, the clip body having apertured feet extending therefrom through which the threaded end of the spindle projects, a shoulder carried by the spindle for engagement with one of the feet, and a nut in threaded union with the spindle for engagement with the other foot, whereby the clip may be predeterminately contracted.



1,393,099. ATTACHING MEANS FOR ANTISKIDDING CHAINS. GEORGE H. EBERT and EARNEST R. EBERT, Burlington, Iowa. Filed Nov. 18, 1920. Serial No. 424,997. 3 Claims. (Cl. 152—2.)

1. An anti-skid device comprising a chain adapted to be engaged transversely across the tire, and coöperating securing means on the chain and rim of the wheel constructed to automatically loosen and tighten the chains upon the tire as the chains approach the ground and their uppermost position, respectively, said coöperating securing means embodying terminal links which are long and straight, and openings formed radially through

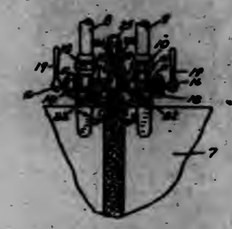


the rim of the wheel and in which said terminal links are secured to permit endwise movement radially of the wheel.

1,393,100. MOPPING-MACHINE. FRANKLIN A. ESPELAND, Oakes, N. D. Filed Sept. 18, 1920. Serial No. 411,101. 5 Claims. (Cl. 15—14.)

1. In a mopping machine the combination with a housing, an endless mopping belt and a wringer device, of a pair of troughs above said belt at the sides of said device, a reservoir beneath the device, and delivery spouts from said troughs to said reservoir for the purpose described.

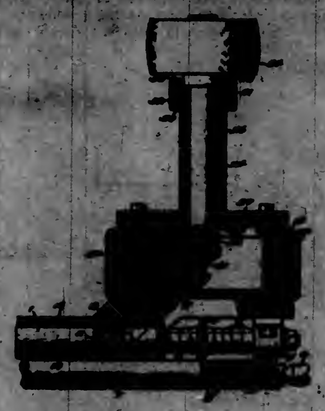
1,393,101. SCRUBBING-MACHINE. FRANKLIN A. ESPELAND, Oakes, N. D. Filed Oct. 29, 1920. Serial No. 420,345. 1 Claim. (Cl. 15—14.)



The combination in a scrubbing machine of a casing having an open top end wall and a ledge thereon, a partition adjacent to said wall extending from the top of the casing and terminating near the botttom thereof, a section attached to said casing having an open bottom, a rotor journaled in said section forming a series of buckets, a wiper attached at the free edge of each bucket adapted to flop over said ledge and pass through said open bottom, and means for revolving the rotor.

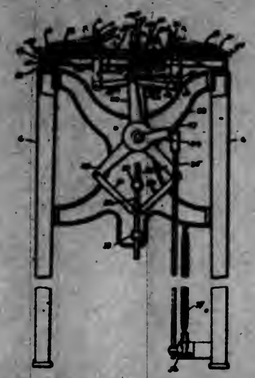
1,393,102. PIPE-TERMINAL-ATTACHING APPARATUS. ALVAH L. HARRIS, Chicago, Ill. Filed May 16, 1919. Serial No. 296,446. 12 Claims. (Cl. 269—242.)

1. In a fuse, a shell, a terminal, an anchoring member, and means for clamping the anchoring member upon the shell; said terminal having longitudinally presented abutments, a cylindrical portion between said abutments, and a non-cylindrical portion; and said anchoring member comprising a portion adapted to embrace the non-cylindrical portion of the terminal to resist rotation of the latter, and members movable into and out of embrace with the cylindrical portion and between said abutments, and thereby resisting longitudinal movement of the terminal.



1,393,105. LAUNDRY-TUB FAUCET. EDWIN G. EVENSEN and HENRY J. ARNEMANN, Minneapolis, Minn. Filed Apr. 21, 1921. Serial No. 463,140. 3 Claims. (Cl. 277—18.)

1. A faucet structure comprising a body tube with hot and cold water pipe connections and coöperating valves at its ends, a swinging nozzle connected to the intermediate portion of said body tube, and a tub engaging clamp made up of two brackets one of which is integral with said body tube and the other of which is detachably connected thereto, said brackets being laterally off-set in respect to each other and in respect to the body tube.



1,393,104. DRIVING MECHANISM FOR MACHINE-SPINDLES. FAY O. FARWELL, Dubuque, Iowa. Filed Jan. 23, 1919. Serial No. 272,743. 15 Claims. (Cl. 10—154.)

15. A machine tool adapted to produce a helical thread upon the work, said machine having a work holder, a tool spindle, a spindle gear on said spindle, a driving gear, two intermediate shafts having gears at both ends, the gears at one end engaging opposite sides of the spindle gear and the gears at the opposite ends engaging the opposite sides of the driving gear, a unitary structure forming a bearing for all of said gears and for the spindle, said structure being adapted to prevent lateral movement of the spindle but permit lateral movement of one of the other gears mentioned for equalizing the torque applied to the two different sides of the spindle gear, and a bearing for said unitary structure adapted to permit the latter to vary the angle of the tool relatively to the

axis of the shaft to thereby vary the helical angle of the thread produced upon the work.

1,393,103. SOLE-MARKING MACHINE. MARK E. FERNALD, Saugus, Mass. Filed Oct. 8, 1915. Serial No. 54,871. 19 Claims. (Cl. 33—189.)

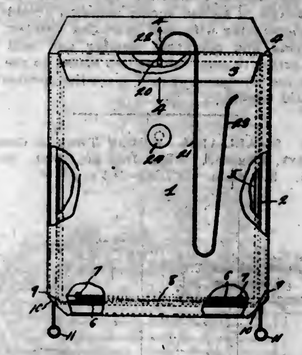
1. A sole marking machine, having, in combination, a support for the sole; and a forepart marker, a heelpart marker, and a shank marker for marking the location of the sole tacks on the sole; and means governed by the sole for shifting the shank marker into different positions for right and left soles, substantially as described.

1,393,106. SOUND-REPRODUCER FOR PHONOGRAPHS. JOHN W. FOSDICK, San Francisco, Calif. Filed Apr. 8, 1920. Serial No. 372,280. 2 Claims. (Cl. 274—35.)

1. A sound reproducer for phonographs comprising a sound box, a diaphragm connected thereto, a pair of lugs carried by the box, an arm pivotally connected to the said lugs and connected to the center of the diaphragm at its other end, a needle carrying arm pivotally mounted in said lugs, a strut between one end of the needle carrying arm and the diaphragm arm and a screw for adjusting the position of the needle carrying arm and diaphragm to vary the sound produced.

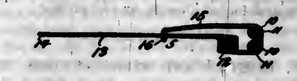
1,393,107. CONNECTING DEVICE FOR WIRES. JESSE WATSON FULLER, Little Rock, Ark. Filed Feb. 3, 1921. Serial No. 442,122. 2 Claims. (Cl. 24—136.)

1. In a device of the class described, the combination of a sheet-metal casing provided with teeth on its inner face and being split longitudinally throughout its length, said casing provided with an enlarged slot in its split portion, said casing tapering from one end to its other end, a wedge provided with teeth and with a lug on one side in said casing, and said lug extending into the slot and through the casing, substantially as shown and described.



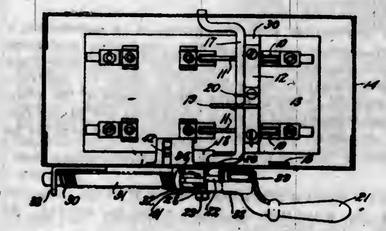
1,393,108. DAYLIGHT X-RAY-FILM-DEVELOPING TANK. JOHN B. GARRETT, Troy, N. Y. Filed Aug. 24, 1920. Serial No. 405,739. 5 Claims. (Cl. 95—90.)

1. A developing tank comprising a developing compartment, means for supporting a film container above said compartment and means extending downwardly and upwardly in said compartment and adapted to be connected with the film within the film container by means of which the film may be pulled from the film container into the developing compartment.



1,393,109. FILM-ENVELOP. JOHN B. GARRETT, Troy, N. Y. Filed Aug. 24, 1920. Serial No. 405,740. 6 Claims. (Cl. 95—66.)

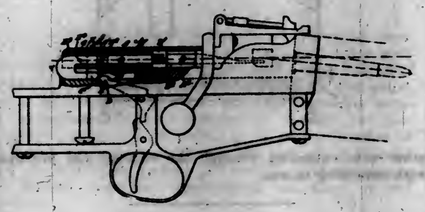
1. A film container comprising an envelop adapted to receive a film, crossed envelop severing members disposed in the lower end of the envelop and having their ends connected to a film, said severing members having their



other ends extending through the envelop and provided with attaching means.

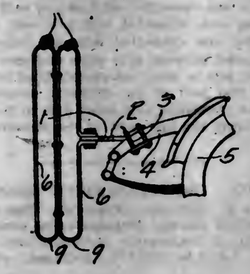
1,393,110. SPRING FOR PIN-SETTING MACHINES. JACOB GESSERT, Buffalo, N. Y. Filed Aug. 4, 1919. Serial No. 315,118. 2 Claims. (Cl. 267—1.)

2. A spring constructed from wire and comprising a base having two attaching eyes which are connected with each other, a coil connected with one of said eyes, a long main bearing arm connected with said coil, a short auxiliary bearing arm connected with the other eye and a guide interposed between said arms and operating to permit said long arm to move independently of said short arm during the first part of the stressing movement of said long arm but compelling said short arm to move with said long arm during the last part of the stressing movement of the latter.



1,393,111. INCLOSED-SWITCH CONSTRUCTION. BENJAMIN E. GETCHELL, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed Aug. 16, 1919. Serial No. 317,879. 7 Claims. (Cl. 200—67.)

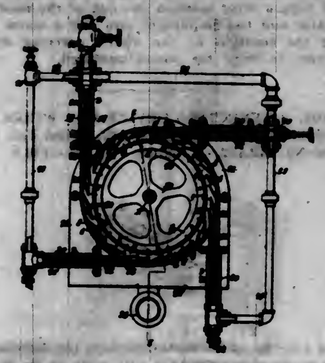
1. In an inclosed switch, a switch box, a base mounted in said box, a plurality of stationary contacts mounted on said base, a plurality of movable switch blades for coöperation with said stationary contacts, a crankshaft mounted in said box and having a lost motion connection with the movable switch blades, a spring inside said box for con-



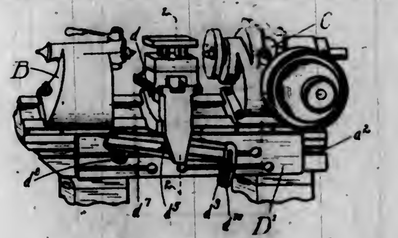
meeting said crank and said movable switch blades, a handle mounted outside of said box, an operating member having a lost motion connection between said handle and said crankshaft, a second spring mounted outside of said box and coöperating with said operating member, said external spring and operating member and said interior spring co-acting to snap said switch blades to the off position when the movement of said operating member is initiated by said handle.

1,393,112. SMALL-ARM. PHILIP THOMAS GODSAL, Ingcoyd Park, England. Filed July 30, 1920. Serial No. 400,044. 3 Claims. (Cl. 42—16.)

1. In a block bolt action, the combination of a carrier, a striker formed in two parts screwed together and working in the carrier and a detachable plug fitting the rear of the carrier and locked therein by the striker.



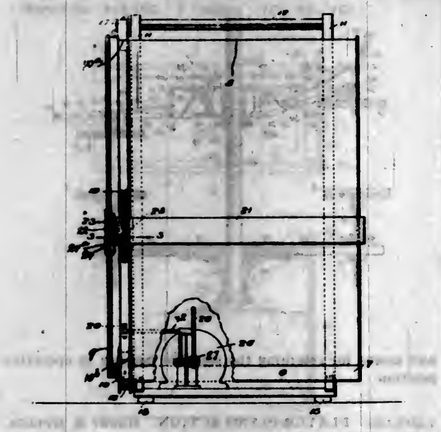
1,393,113. BUMPER AND TIRE-CARRIER. DANIEL B. GOSS, Cuyahoga Falls, Ohio. Filed Aug. 4, 1921. Serial No. 489,796. 2 Claims. (Cl. 293—55.)



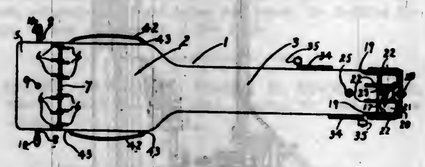
2. In combination with the springs of an automobile, a combined bumper and tire carrier, comprising horizontal arms with clamps for securing to the springs, said arms being bent inwardly on a horizontal plane as required; looped vertical elements at the opposite ends of the arms, said loops being hinged at their lower ends and having fastenings at their upper end, and being thus adapted to hold spare tires.

1,393,114. STEAM-TURBINE. JOHN F. GEBY, New Orleans, La. Filed Mar. 29, 1921. Serial No. 456,716. 29 Claims. (Cl. 253—45.)

1. In a rotary motor, a rotary drum having peripheral steam channels separated from one another by longitudinal partitions having passage ways through the same from one channel to the next adjacent channel, tangentially located blades in said channels and spaced with their inner edges free from the bottom of the channels to leave annular steam passage ways between the bottom of the channels and the blades, means to introduce steam into one of said channels, said blades being all arranged to direct the steam around the drum in one continuous direction, and a housing for the drum having provisions for the passage of exhaust fluid.



1,393,115. TURNING AND FACING LATHE. WILLIAM F. GROSSE, Cincinnati, Ohio, assignor to The R. K. Le Blond Machine Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 1, 1920. Serial No. 362,227. 6 Claims. (Cl. 82—2.)

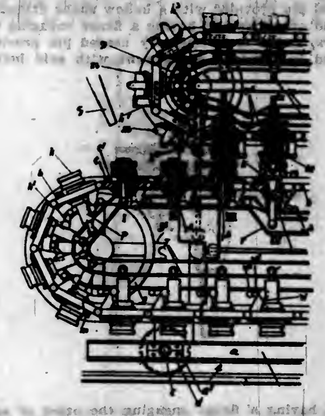


1. In a lathe the combination of a lathe bed having three sets of longitudinal ways, a carriage mounted in one of the ways, a turning tool support mounted upon the carriage, a facing tool carriage mounted in a second one of the ways and having in it transverse ways, a facing tool support mounted in the transverse ways, means for imparting longitudinal movement to the first mentioned carriage and means for imparting transverse movement to the facing tool comprising a carriage mounted in a third one of the ways, means for reciprocating said last mentioned carriage upon the lathe bed, an angularly adjustable slide mounted upon the last mentioned carriage, a shoe mounted upon the slide and means for transmitting the vertical movement of the shoe into a transverse movement of the facing tool support.

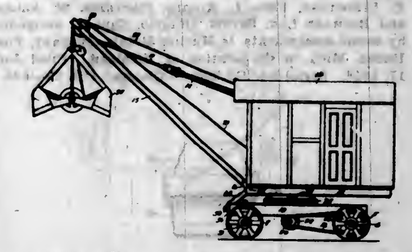
1,393,116. TYPIST'S COPY-STAND. CHARLES F. GUTHRIDGE, Los Angeles, Calif. Filed Jan. 28, 1920. Serial No. 354,721. 5 Claims. (Cl. 120—34.)

3. In a copy-holder, a table to support material to be copied, having a supporting shoulder at one end, a plurality of rollers carried by the table, one of which rollers is positioned adjacent said supporting shoulder, and an endless conveyer mounted on said rollers, a guide element slidably mounted adjacent said table for movement longitudinally of the table, and means carried by the guide element to engage the endless conveyer, said shoulder serving as a rest for copying material and also to limit the movement of the guide element in one direction when automatically disengaged from the endless conveyer by passing beyond engaging limit of the conveyer over one of the rollers.

1,393,117. AMUSEMENT DEVICE. HERBERT HALFPENNY, Brantford, Ontario, Canada. Filed Feb. 7, 1921. Serial No. 443,193. 4 Claims. (Cl. 9—18.)



1. An amusement device comprising, a buoyant main plane adapted to support the operator in the prone position, propelling means carried at the rear end thereof and adapted to be operated by the feet of the operator, steering means suitably mounted at the rear end of the device, a diving plane transversely hinged to the front end of the main plane and extending longitudinally forward therefrom, a transversely disposed operating bar pivoted centrally of its length to the diving plane, handles at the ends of said bar, connections between said bar and the steering means at the rear for operating said steering means as the bar is rotated about its pivot point, said bar adapted to incline the diving plane with respect to the main place when the handles are depressed.



1,393,118. MANUFACTURE OF GLASS ARTICLES. ROBERT FREDERICK HALL, Birmingham, England. Filed Jan. 15, 1919. Serial No. 271,223. 10 Claims. (Cl. 49—10.)

1. A machine for the manufacture of blown glass articles comprising two endless carriers, one above the other and arranged to move in opposite directions, one of said carriers having a series of blowing heads and associated parts and the other carrier having a series of coöperating molds.

7. A machine for the manufacture of glass articles comprising a supporting frame, an upper and a lower elongated endless carrier supported in the frame and parallel to each other, said carriers having their opposite faces in proximity to each other during a portion of the travel, means for concomitantly moving said carriers in opposite directions whereby the opposed faces move together throughout a portion of their travel, a series of molding devices on the lower carrier comprising parison and finishing molds, a series of upper mold sections on the upper carrier and adapted to coöperate with the finishing and parison molds, and automatic means for operating the parison molds and upper mold sections for forming glass articles during the portion of travel when the finishing and upper mold sections are moved together in opposed relation.

1,393,119. STEERING MECHANISM FOR SELF-PROPELLED CRANE-TRUCKS. HOLLIS H. HARRIS, Lorain, Ohio, assignor to The Thew Shovel Company, Lorain, Ohio, a Corporation of Ohio. Filed Mar. 14, 1919. Serial No. 282,551. 6 Claims. (Cl. 180—80.)

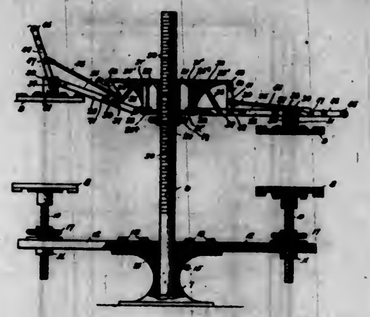
1. A truck frame having steering wheels mounted on individual steering knuckles, means connected with the steering knuckles, an operating lever connected with said means, a superstructure carried by the frame and adapted to turn thereon, and means connecting the lever to the superstructure through a lost motion connection to turn the wheels consequent upon the turning of the superstructure.

1,393,120. DENTAL ENGINE. GEORGE D. HECK, Prince Bay, N. Y., assignor to The S. S. White Dental Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 11, 1920. Serial No. 365,000. 6 Claims. (Cl. 32—22.)

6. In a dental engine, the combination with a supporting head having a notched bearing lug provided with an aperture, an oscillatable tool-carrying arm having de-

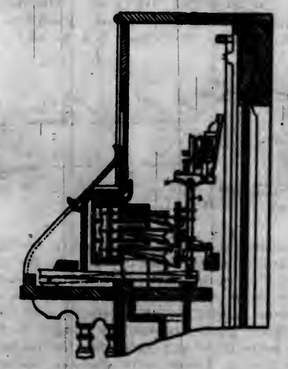
pending ears embracing said bearing lug, and having apertures alined with the aperture in said lug, said ears being joined forwardly to form a pocket whose forward wall is provided with an opening, a pulley rotatably mounted on said arm, carrying a belt, a pintle extended through the apertures in said lug and ears, and projecting laterally beyond the limits of said belt, and comprising a headed pin provided with a hollow shank extending through said apertures and having a flange engaging one of said ears, and a complementary headed pin provided with a stud in threaded engagement with said hollow

shank, and having a flange engaging the other of said ears, a detent engaged in said pocket and having its opposite ends extended substantially normal to its intermediate portion with one of its projecting ends extended through said opening, and the other directed toward the periphery of said head, a spring tending to engage said detent with a notch in the periphery of said head, a detachable plate disposed in said pocket and arranged to retain said detent in its operative position, and a screw engaging said plate in said pocket and arranged to engage a notch on said head.



1,393,121. BLANK FOR AND METHOD OF MAKING FUSE-BODIES. CARL G. HEIDT, JOHN BURKAM, DAVID E. LINDQUIST, FRED L. RIGGIN, EBENEZER W. ALLEN, and RICHARD LAU, Sarnia, Ontario, Canada, assignors, by mesne assignments, to Mueller Metals Company, Port Huron, Mich., a Corporation of Michigan. Filed Jan. 17, 1918. Serial No. 212,226. 5 Claims. (Cl. 29—148.)

1. As a new article of manufacture, a blank for fuse bodies and the like having between its ends a chucking surface which is adapted to be machined off or finished after the blank has been subjected to other finishing operations.

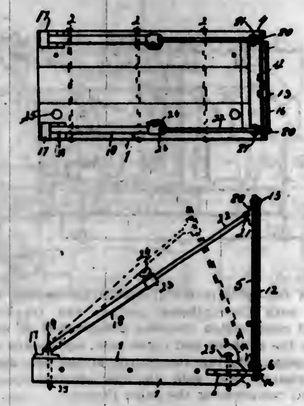


1,393,122. MACHINE FOR SEALING BOXES. BERG HEINRICHS, Anderson, Ind., assignor to Mid-West Box Company, Anderson, Ind., a Corporation of Indiana. Filed Oct. 6, 1920. Serial No. 415,077. 9 Claims. (Cl. 93—36.)

1. In a box sealing machine, the combination of a pair of coacting press members, a support, a connection between one of the press members and said support which permits said member to move vertically and laterally relatively to the other member to provide free access thereto,

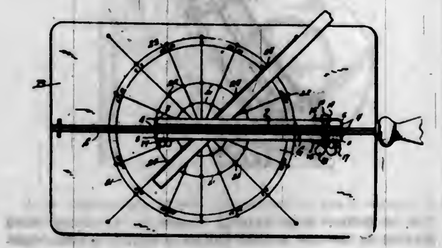
and means for retaining the movable member in operative position.

1,393,123. PLAYER-PIANO ACTION. HENRY R. HELLER, New York, N. Y., assignor, by mesne assignments, to Auto Pneumatic Action Co., a Corporation of New York. Filed Oct. 23, 1919. Serial No. 332,637. 1 Claim. (Cl. 84—68.)



In a player piano having a self-contained piano and player action, projections and stops upon the abstracts of said piano action and projections from the pneumatics of said player action adapted to travel in the path of said first mentioned projections for operating said piano action directly and pneumatically, each of said abstract projections having a longitudinal passage for a screw adapted to secure the same to said abstract and a transverse passage for another screw adapted to penetrate said first mentioned screw and for regulating the position of the stop of said projection with reference to said pneumatic projection.

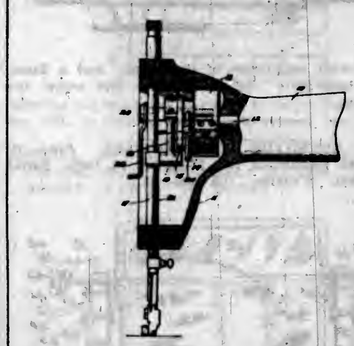
1,393,124. NON-INFLAMMABLE VOLATILE LIQUID. ALBERT HENNING, Leytonstone, London, England. Filed Aug. 9, 1920. Serial No. 402,313. 2 Claims. (Cl. 23—5.)



1. A liquid comprising a mixture of ethyl chlorid and methyl chlorid with double the quantity of methyl bromid.

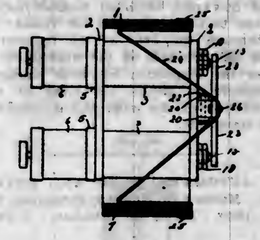
1,393,125. ADJUSTABLE TEMPLET-FORM HOLDER FOR SELF-CENTERING TEMPLET-HOLDERS. JOHN D. HENON, Philadelphia, Pa. Filed Dec. 22, 1919. Serial No. 346,762. 2 Claims. (Cl. 33—180.)

1. In a device of the character described, a base, means for securing said base to a floor, said base having one of its ends beveled from each face to a point intermediate said faces to provide clearance, strips secured to the sides of the base at the beveled end and projecting beyond said end, an adjustable member hinged between said strips and adapted to move about the beveled end, tubes pivoted to the base, rods pivoted to the adjustable member, said rods telescoping in said tubes and means for holding the rods in any adjustment in the tubes.



1,393,126. SAW-GAGE. FRANCIS E. HINDS, Lansing, Kans. Filed Feb. 12, 1921. Serial No. 444,542. 4 Claims. (Cl. 143—90.)

1. A saw gage comprising a base, guide members extending upwardly from the base and in transverse alinement, said members being in duplicate, each of said members being substantially in the form of an inverted U, said guide members being provided with vertically directed loops open at their upper ends, and means coacting with the upper portions of the guide members for moving the same one relative to the other in a transverse direction.

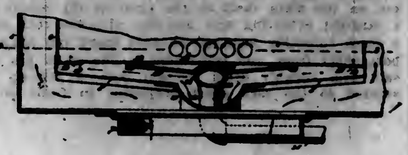


1,393,127. SEWING-MACHINE TAKE-UP MECHANISM. RICHARD K. HOHMANN, Peru, Ind., assignor to Hohmann Sewing Machine Company, Peru, Ind. Filed Aug. 25, 1919. Serial No. 319,723. 1 Claim. (Cl. 112—241.)

In a family sewing machine having a frame with a hollow head, a main shaft, a needle bar reciprocable in two bearings in the head a rock shaft disposed parallel to the main shaft in rear of the needle bar, a crank pin on the main shaft at the right of the needle bar, a straight actuating arm movable with the rock shaft, a block rotatably mounted on said crank pin having a bore offset from, and transverse to, the crank pin axis, said arm slidably fitted in said bore, a take-up arm secured to the rock shaft projecting in front of the

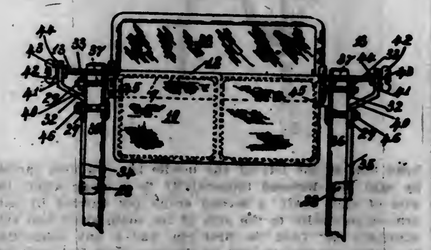
head and at the left of the needle bar, an arm carried by said pin disposed tangentially to a circle about the axis of said shaft, a second crank pin carried by said arm eccentrically to the axis of the main shaft and substantially 90° from the first pin, and a link connecting the latter crank pin and needle bar, said link movable in a vertical plane between the actuating arm and needle bar.

1,393,128. AUTOMATIC LUBRICATING SHACKLE-BOLT. SAMUEL HOUGH and WILLIAM LOHR, Philadelphia, Pa. Filed Jan. 15, 1920. Serial No. 351,566. 1 Claim. (Cl. 267—54.)



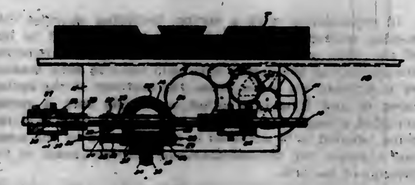
In combination with a spring, including shackles connecting sections of said spring, a lever pivoted to one of the links of said shackle, a spring toggle connecting the sections of the spring with said lever in such manner as to actuate the latter when the sections of the spring move to and from each other, a shackle bolt, a spring actuated plunger rod fitted to said shackle bolt, said rod being adapted to be actuated in one direction by the lever, and a grease cup for automatically feeding grease to the interior of the bolt.

1,393,129. STOVE AND RANGE. ERNEST O. HOWLE, Nashville, Tenn., and JOSEPH E. LEONARD, Cedar Rapids, Iowa. Filed July 8, 1920. Serial No. 393,929. 4 Claims. (Cl. 126—36.)



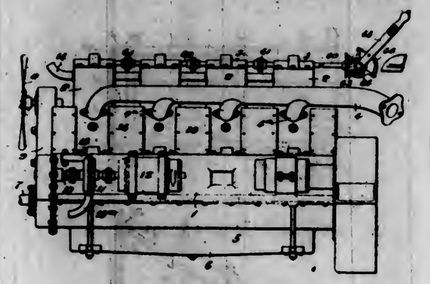
4. An oven for ranges, comprising an outer and an inner chamber, spaced apart for the passage of products of combustion the inner chamber having a double bottom,

of which the lower has a middle trough or depression, with sides upwardly inclining therefrom, a tubular gas-



burner mounted lengthwise of the trough, and a flame-spreading baffle-plate over the burner and below the upper bottom.

1,393,130. SUNSHADE FOR VEHICLES. JOHN P. HUMPHREY, Springfield, Ill. Filed Dec. 24, 1920. Serial No. 432,964. 1 Claim. (Cl. 296—95.)



A sun shade usable in conjunction with wind shield standards and a wind shield supported thereon, comprising a fabric-covered visor frame having at each end a laterally extended bolt-end in line with the upper edge of the visor frame; right and left brackets each having ears, lateral extensions, holes to receive bolts for connecting the brackets with the respective wind-shield standards, and an outwardly, upwardly and forwardly inclined and upwardly extended member having an eye to receive one bolt-end of the visor frame; strap bolts extending through the eyes of the respective brackets and securing said brackets on the wind-shield standards; and nuts on the respective bolt-ends engaging the respective brackets to secure the visor at variable inclinations relative to the wind shield supported on the wind shield standards.

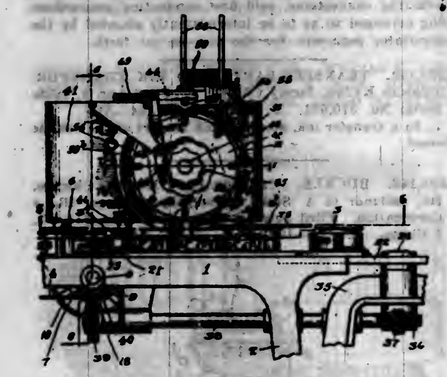
1,393,131. AUTOMATIC FEED AND REVERSE FOR LATHES. MONROE G. HUSTED, Bridgeton, N. J. Filed Sept. 17, 1920. Serial No. 410,948. 7 Claims. (Cl. 82—21.)

1. A device of the class described, comprising a stationary rack, a movable housing, a train of gears mounted in said housing and meshing with said rack, a pair of shiftable gears, telescoping members, a spring interposed between said members, and means for compressing said spring to cause said telescoping members to shift the movable gears.

1,393,132. INTERNAL-COMBUSTION ENGINE. JOS HUTCHINSON, Brooklyn, N. Y. Filed Mar. 21, 1919. Serial No. 283,466. 22 Claims. (Cl. 123—74.)

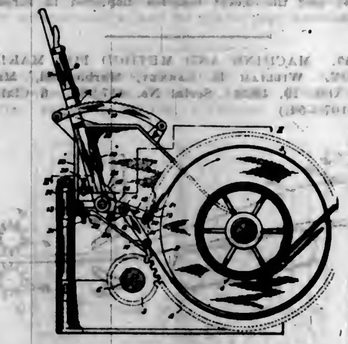
1. In a two-cycle internal combustion engine, the combination with the cylinder, piston, and crank-case, of an initial compression chamber independent of and separate from the cylinder and crank-case, and means operated by said piston during its return stroke for drawing a gaseous charge into said chamber during its working stroke and compressing the same therein.

1,393,133. SCRUBBING-MACHINE. LEON JASSEN, Chicago, Ill. Filed Oct. 6, 1919. Serial No. 328,674. 5 Claims. (Cl. 15—51.)



1. A hollow fluid holding handle, a scrubbing head pivoted on one end of said handle, a flexible conduit operatively connecting the interior of said handle and head, manually operated means for permitting fluid to drain out of the handle, and means operated by a hand grip projecting from the opposite end of the handle for returning the fluid through said flexible conduit to the handle.

1,393,134. APPARATUS FOR TRUING CAN-BODIES AND POSITIONING ENDS THEREUPON. AXEL JOHNSON, Oakland, Calif., assignor to American Can Company, San Francisco, Calif., a Corporation of New Jersey. Filed Mar. 20, 1917. Serial No. 156,746. 33 Claims. (Cl. 113—27.)

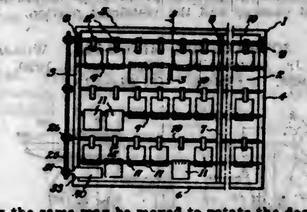


1. In a machine for the described purpose, a holder adapted to contain a stack of inverted can ends, a device co-acting with said holder for cutting out the lowermost end of the stack of ends contained therein, continuously

moving conveying means for removing the cut out end, reversing the position thereof and applying the same

to the open end of a positioned can body, and means for truing and clamping said can body in position to receive the can end.

1,393,135. DIFFERENTIAL BRAKE. HOWARD F. JOHNSON, Cleveland, Ohio, assignor to The Browning Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 7, 1919. Serial No. 336,454. 5 Claims. (Cl. 188—82.)

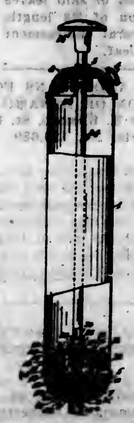


1. A differential brake, comprising a brake drum; a brake band; and means for tightening and releasing said brake band automatically, including a pivotally supported member, a link pivotally secured to said member and pivotally secured to one end of said brake band, and a second link pivotally secured to the other end of said brake band and pivotally secured to said first link intermediately of the two pivotal connections of the latter.

1,393,136. MUSTER-CHECK BOARD. ROSAMOND L. JOHNSON, Port Orchard, Wash. Filed Nov. 19, 1918. Serial No. 263,227. 3 Claims. (Cl. 40—67.)

1. A muster check board of the character described, comprising a frame, a plurality of horizontal rods mounted in said frame, a plurality of checks spaced apart and pivotally suspended by their upper ends from each alternate rod, latch dogs mounted on alternate rods above each check to engage and retain the ends of the checks when the latter are swung upwardly to inverted position,

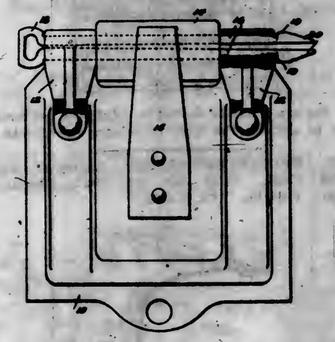
a lever fixed to each of the dog supporting rods, a rod connecting all of said levers and a handle on said rod



whereby the same may be moved to rotate the dog supporting rods to actuate the dogs to release the checks.

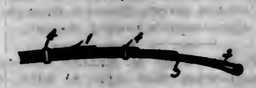
1,393,137. BEDCLOTHES-CLAMP. LOUISE T. KERNE, Corning, Calif. Filed Jan. 24, 1921. Serial No. 439,490. 1 Claim. (Cl. 5—22.)

A bed-clothes clamp comprising a bar, arms having their corresponding extremities permanently secured to the bar at spaced points and curved to substantially C-shape in parallel planes perpendicular to the bar, bosses formed at the ends of the arms opposite those secured to the bar, and tension screws threaded through the bosses and directed approximately toward the bar.



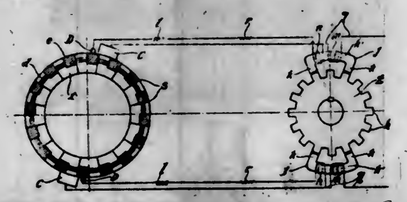
1,393,138. PUMP. JOHN M. KELLEY, Rochester, N. Y. Original application filed Apr. 8, 1918, Serial No. 227,368. Divided and this application filed Aug. 30, 1918. Serial No. 252,108. 7 Claims. (Cl. 299—94.)

1. A pump comprising a cylinder provided with a discharge passage having a restricted portion, a piston



operating in said cylinder, means for closing the discharge passage, and an air compression chamber leading from said discharge passage between the closed portion of the said passage and the restricted portion.

1,393,139. JOURNAL-BOX HINGE-PIN. WILLIAM F. KIESEL, Jr., Altoona, Pa. Filed Aug. 16, 1920. Serial No. 403,928. 5 Claims. (Cl. 64—23.)



5. The combination with a journal box and lid therefor having alined cylindrical openings, of a hinge pin for pivotally securing the lid to the box, said pin comprising a cylindrical bar split longitudinally to form two spaced resilient arms integrally connected at one end, said arms being arranged in said openings and having their outer surfaces yieldingly engaging said walls, each of said arms at its free end being provided with a shoulder and a head on the opposite end of said pin, said head and shoulders serving to restrict longitudinal movement of said pin in said openings.

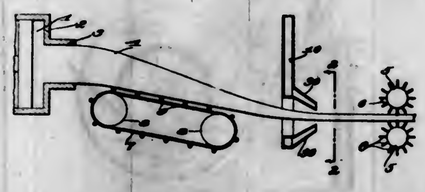
1,393,140. SHOCK-ABSORBING SPRING. JOHN Y. KING, Lansdowne, Pa. Filed Apr. 10, 1920. Serial No. 372,785. 4 Claims. (Cl. 267—45.)

1. A semi-elliptic leaf spring comprising a plurality of leaves, the lowermost of said leaves spaced from the adjacent leaf a portion of its length, said leaf being provided with an integral enlargement bearing directly against said adjacent leaf.

1,393,141. METHOD AND MEANS FOR IMPROVING THE COMMUTATION OF DYNAMO-ELECTRIC MACHINES. JAROSLAW K. KOSTKO, St. Louis, Mo. Filed Sept. 18, 1916. Serial No. 120,689. 5 Claims. (Cl. 171—228.)

4. In a dynamo-electric machine, an armature having armature coils, a commutator connected to said armature coils, sets of brushes bearing on said commutator, a conducting connection between certain of said brushes, and a conducting connection between certain of said brushes and in inductive relation with said first conducting connection, and resistances and reactances in one of said conducting connections, said first conducting connections being arranged so as to be intermittently shunted by the commutator segments, for the purpose set forth.

1,393,142. TRANSFER-PAPER AND INK THEREFOR. HERMAN KRUSE, Jersey City, N. J. Filed Apr. 1, 1920. Serial No. 370,531. 5 Claims. (Cl. 134—31.)

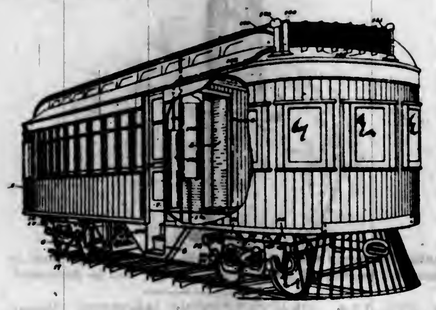


1. In a transfer ink, stearin pitch as part of the vehicle thereof.

1,393,143. BUCKLE. CHARLES PAUL KUHRN, Chicago, Ill., assignor to A. Stein & Company, Chicago, Ill., a Corporation. Filed July 18, 1919. Serial No. 311,852. 1 Claim. (Cl. 24—191.)

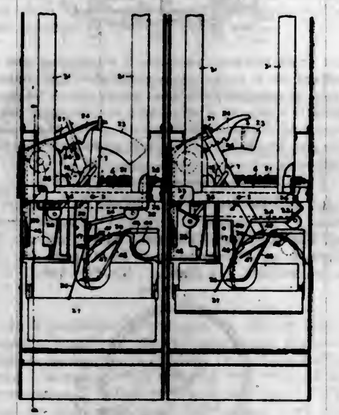
A buckle of the character described, comprising the combination with a body portion, of a clamp lever having a transverse slot, the metal removed in forming said slot being divided to form separate tongues and being pressed backward from the face of the clamp lever, and a depending flexible pad having its upper portion arranged against the back of said clamp lever and held between said slot and the metal tongues displaced in forming said slot.

1,393,144. MACHINE AND METHOD FOR MAKING CANDY. WILLIAM B. LASSEY, Marblehead, Mass. Filed Oct. 19, 1920. Serial No. 417,986. 6 Claims. (Cl. 107—54.)



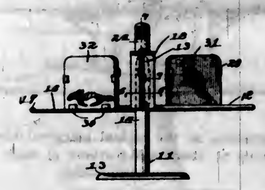
1. The method of forming candy which consists in pulling down warm pulled candy and stopping the reduction in size by chilling it.

1,393,145. BOBBIN-HOLDER FOR SHUTTLES. SAUL R. LIBERTY, Pawtucket, R. I., assignor to The Liberty Company, Pawtucket, R. I. Filed Dec. 9, 1920. Serial No. 429,883. 6 Claims. (Cl. 139—27.)



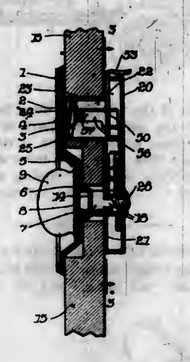
1. A shuttle having a bobbin recess, a spindle pivoted at one end therein, a U-shaped member secured about the pivoted end of the spindle with its arms extending alongside the latter above and below the same to form upper and lower bobbin gripping arms, and fixed means between the arms for separating the arms by and during movement of the spindle from the recess.

1,393,146. RAILWAY MOTOR-CAR. WILLARD C. LIPE, Syracuse, N. Y., and LAURENCE H. KIRK, Havre de Grace, Md. Filed Apr. 15, 1916. Serial No. 91,391. 66 Claims. (Cl. 105—62.)



1. In a motor car, the combination of a car body, a truck supporting the body and movable about a vertical axis relatively thereto, a multicylinder engine extending lengthwise of the body, and a change speed gearing connected between the engine and a wheel of the truck, and including a portion carried by the body in line with the engine, and a vertical portion connected to a wheel of the truck, substantially as and for the purpose described.

1,393,147. VENDING-MACHINE. DAVID ALEXANDER MCCOWAN, Toronto, Ontario, Canada. Filed June 30, 1919. Serial No. 307,766. 6 Claims. (Cl. 194—88.)

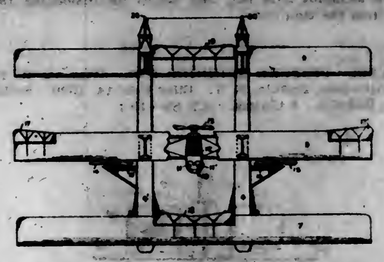


1. In a vending machine, the combination with means for delivering packages one at a time, of a bar pivotally supported and operatively connected with the delivery means and having a slot therethrough extending upwardly from the pivot and a transverse slot in one side intersecting the aforesaid slot, an arm mounted upon said pivot within the slot in said bar and having a slot therein adapted to register with the transverse slot in said bar and adapted to receive a coin, said arm having a longitudinal slot intersecting the coin slot therein, manually operated means for swinging said arm on its pivot and through a coin swinging said bar, and means for dislodging the coin from the coin slots.

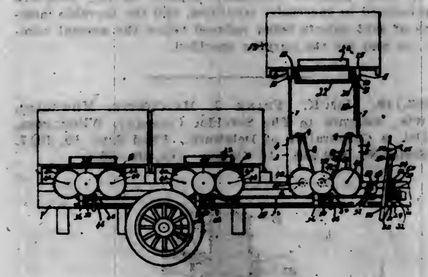
1,393,148. PICTURE SPINNING-TOP. WILLIAM H. D. MCQUARRIE, Buffalo, N. Y. Filed Feb. 14, 1920. Serial No. 358,636. 8 Claims. (Cl. 88—19.)

4. In an optical illusion device, a plurality of pictures and means for bringing said pictures successively into view, said pictures including objects having members represented in successive positions, and the movable members of said objects being reduced below the normal number, as and for the purpose specified.

1,393,149. LOCK. FRANK J. MATCHETTE, Milwaukee, Wis., assignor to The Servidor Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 10, 1917. Serial No. 190,440. 10 Claims. (Cl. 40—66.)



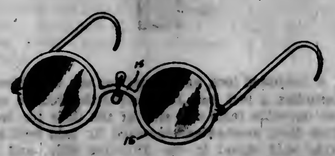
10. A combined lock and signal for use in cabinet doors and including a lock bolt for locking the door, a signal, a member operable from one side of the door for operating said lock bolt, mechanism operated by said lock bolt for operating said signal in one direction only, and manual means operable from the other side of the door for operating said signal in the other direction.



1,393,150. AEROPLANE. CHAUNCEY C. MEDBERY, New York, N. Y. Filed Feb. 28, 1919. Serial No. 279,925. 2 Claims. (Cl. 244—14.)

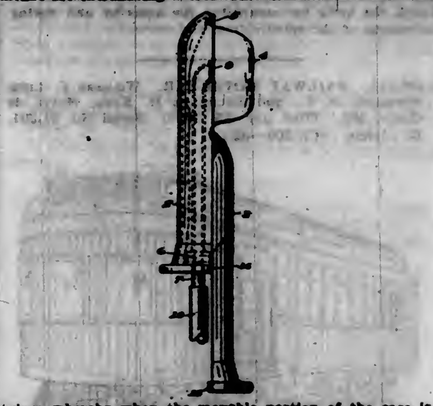
1. In a machine of the class described, fore and aft aerofoils and a substantially midway intermediate aerofoil above said fore and aft aerofoils, said fore and aft aerofoils being distanced longitudinally from said intermediate aerofoil greater than the depth of any of said

aerofoils, all of said aerofoils of substantially the same length laterally, and in combination with said intermediate aerofoil, ailerons at the lateral margins thereof, and movable portions at about mid-sections of said fore and aft aerofoils.

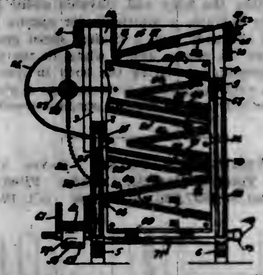


1,393,151. DUMPING HOIST-VEHICLE. HARRIS H. MILLER, Philadelphia, Pa. Filed Sept. 20, 1919. Serial No. 327,960. 2 Claims. (Cl. 298—9.)

1. In a vehicle of the character described, a drive shaft, means for revolving said drive shaft in either direction from the power plant of the vehicle, a timing disk, means for revolving said disk from the drive shaft, and means acting in conjunction with the timing disk for shutting off power between the drive shaft and the power plant.



1,393,152. NOSE-GUARD FOR SPECTACLES. WILLIAM G. MILLER, Raynham, Mass. Filed May 20, 1921. Serial No. 471,150. 4 Claims. (Cl. 88—55.)

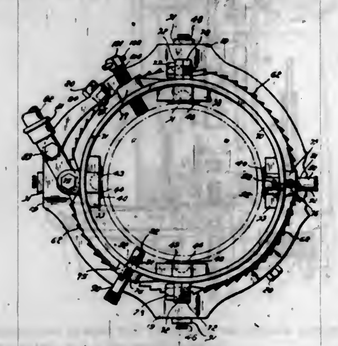


1. A nose-guard for spectacles comprising a plate adapted to be attached to the center portion of the bridge member and set transversely thereof, said plate being provided with a finger or clip to frictionally engage the bridge.

1,393,153. DEVICE FOR TREATMENT BY TEMPERATURE. JOHN FOX MOSHER, Peoria, Ill. Filed Jan. 14, 1921. Serial No. 437,267. 5 Claims. (Cl. 128—385.)

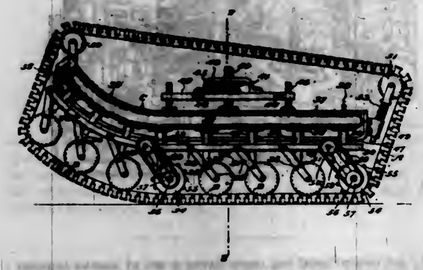
1. In a treatment device the combination of a relatively inflexible case having a movable portion, a relatively flexible treatment medium container in said case, and means for introducing a treatment medium into the container whereby when the movable portion of the case is moved a portion of the flexible container will be distended.

1,393,154. GRAIN-CLEANING MACHINE. HENRY MORTON, Wood Bay, Manitoba, Canada. Filed July 6, 1920. Serial No. 394,388. 6 Claims. (Cl. 130—15.)



1. In a grain cleaning machine, a supporting and guiding structure for a reciprocable grain shoe comprising opposing sets of vertically disposed guide rollers engageable with opposite sides of a shoe and horizontally disposed supporting rollers extending entirely across the space between the two sets of vertical rollers and at the lower ends of the latter.

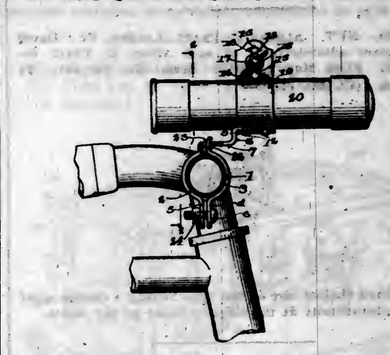
1,393,155. PRESSURE-GAGE. RALPH M. NELSON and EMERSON L. ASCHENBACH, Sellersville, Pa., assignors to United States Gauge Company, New York, N. Y., a Corporation of Pennsylvania. Filed Aug. 24, 1920. Serial No. 405,633. 11 Claims. (Cl. 73—109.)



1. In a gage, an indicator, an arm for moving said indicator, a Bourbon tube, a link pivotally connecting said Bourbon tube and arm, and means engaging said link when a predetermined pressure has been reached for stopping the relative movement between said arm and link whereby the latter elements will move as a unit.

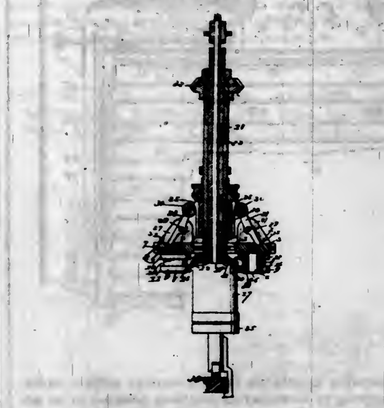
1,393,156. PIPE-CUTTER. IRA W. NONNEMAN, Warren, Ohio, assignor to The Borden Company, Warren, Ohio, a Corporation of Ohio. Filed Nov. 8, 1920. Serial No. 422,411. 9 Claims. (Cl. 81—192.)

1. In a pipe cutter, an annular frame comprising detachable sections, each section having a portion cut away at its inner circumferential edge at one end and at its outer circumferential edge at the other to form tongues, the outer tongue of each section overlapping the inner tongue of the adjacent section, and means for securely fastening said overlapping tongues together, said sections being adapted to be separated radially when the connecting means is removed.



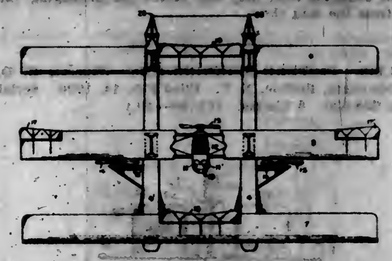
1,393,157. PROPELLER MECHANISM. JOCELYN EMILE OLLIVIER, La Vignette, St. Gervais les Bains, France. Filed May 7, 1918. Serial No. 233,136. 9 Claims. (Cl. 305—9.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a propelling mechanism, an endless track, rollers forming a guide rail for said track and adapted to roll thereupon as successive portions thereof are laid upon the ground, a flexible envelop inflated with air, and means for associating said rollers with said envelop so that the air within the same will cause the rollers to bear with equal pressure against the track.



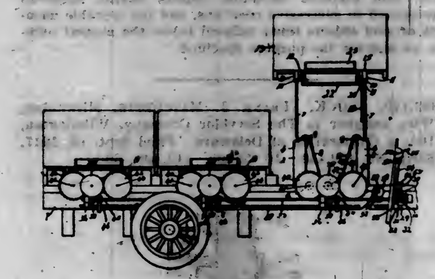
1,393,158. FLASHLIGHT-BRACKET FOR BICYCLES. EWALD F. PAWSAT, Sheboygan, Wis., assignor to Wald Manufacturing Company, Sheboygan, Wis., a Corporation of Wisconsin. Filed Aug. 5, 1919. Serial No. 315,474. 1 Claim. (Cl. 248—3.)

In a flash light bracket, a handle bar clamping member provided with a forwardly extending arm, upwardly offset at an intermediate point, and provided with a transversely concave end portion, in combination with another handle bar clamping member, means for securing the barrel of a flash light to the concave portion of said arm, said barrel engaging means comprising a flexible band having



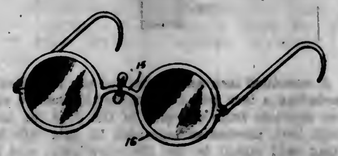
upwardly extending end portions, each provided with a plurality of apertures adapted to receive a clamping bolt, said band being sufficiently flexible to be drawn into conformity with flash light barrels of differing size by the clamping bolt inserted through the appropriate set of apertures.

1,393,159. MACHINE FOR CUTTING CAN-TOPS. CLARK PERCY, South Bellingham, and WILLIAM MILLS, Anacortes, Wash., assignors of one-third to Clarence H. Kent, Seattle, Wash. Filed Sept. 9, 1920. Serial No. 409,274. 4 Claims. (Cl. 30—3.)



1. In a machine for cutting can tops, can supporting means, a stationary pressure resistance member fitting within the flange of the top of the can, a frame revoluble about the stationary pressure resistance member, carriers mounted in guides of said frame and movable radially toward the center of the pressure resistance member, and cylindrical cutters movable with the carriers, said cutters having annular grooves for the reception of the flange of the can, the upper and lower walls of the grooves having upper and lower right angle cutting edges engaging immediately below the flange of the can top diagonally opposite the margin of the resistance member, the frame revolving about the pressure resistance member whereby the cutting edges of the cutters may roll upon and cut the wall of the

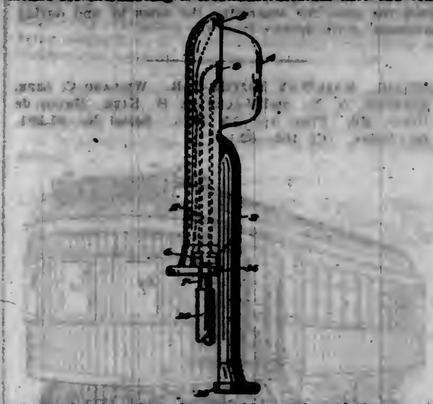
aerofoils, all of said aerofoils of substantially the same length laterally, and in combination with said intermedi-



ate aerofoil, ailerons at the lateral margins thereof, and movable portions at about mid-sections of said fore and aft aerofoils.

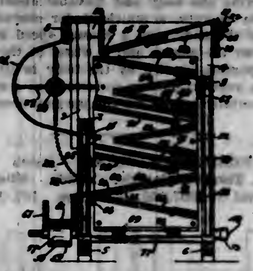
1,393,151. DUMPING HOIST-VEHICLE. HARRIS ST. MILLER, Philadelphia, Pa. Filed Sept. 30, 1919. Serial No. 327,866. 2 Claims. (Cl. 298—8.)

1. In a vehicle of the character described, a drive shaft, means for revolving said drive shaft in either direction from the power plant of the vehicle, a timing disk, means for revolving said disk from the drive shaft, and means acting in conjunction with the timing disk for shutting off power between the drive shaft and the power plant.



1,393,152. NOSE-GUARD FOR SPECTACLES. WILLIAM G. MILLER, Raynham, Mass. Filed May 20, 1921. Serial No. 471,150. 4 Claims. (Cl. 88—55.)

1. A nose-guard for spectacles comprising a plate adapted to be attached to the center portion of the bridge member and set transversely thereof, said plate being provided with a finger or clip to frictionally engage the bridge.



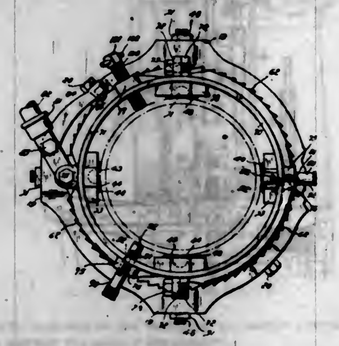
1,393,153. DEVICE FOR TREATMENT BY TEMPERATURE. JOHN FOX MOORE, Peoria, Ill. Filed Jan. 14, 1921. Serial No. 437,267. 5 Claims. (Cl. 128—355.)

1. In a treatment device the combination of a relatively inflexible case having a movable portion, a relatively flexible treatment medium container in said case, and means for introducing a treatment medium into the con-

tainer whereby when the movable portion of the case is moved a portion of the flexible container will be distended.

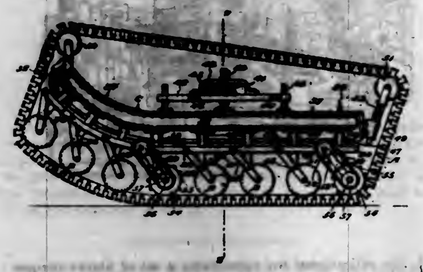
1,393,154. GRAIN-CLEANING MACHINE. HENRY MORTON, Wood Bay, Manitoba, Canada. Filed July 6, 1920. Serial No. 394,388. 6 Claims. (Cl. 130—16.)

1. In a grain cleaning machine, a supporting and guiding structure for a reciprocable grain shoe comprising opposing sets of vertically disposed guide rollers engageable with opposite sides of a shoe and horizontally disposed supporting rollers extending entirely across the space between the two sets of vertical rollers and at the lower ends of the latter.



1,393,155. PRESSURE-GAGE. RALPH M. NELSON and EMERSON L. ARCHENBACH, Sellersville, Pa., assignors to United States Gauge Company, New York, N. Y., a Corporation of Pennsylvania. Filed Aug. 24, 1920. Serial No. 405,633. 11 Claims. (Cl. 73—109.)

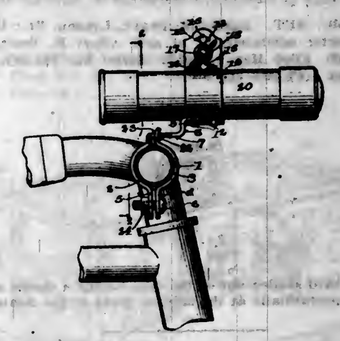
1. In a gage, an indicator, an arm for moving said indicater, a Bourbon tube, a link pivotally connecting said



Bourbon tube and arm, and means engaging said link when a predetermined pressure has been reached for stopping the relative movement between said arm and link whereby the latter elements will move as a unit.

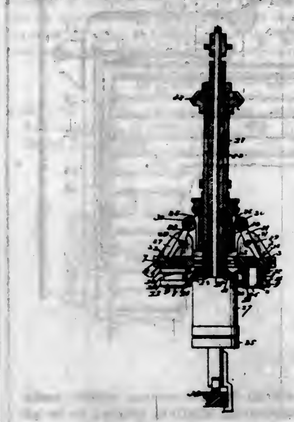
1,393,156. PIPE-CUTTER. IRA W. NONNEMAN, Warren, Ohio, assignor to The Borden Company, Warren, Ohio, a Corporation of Ohio. Filed Nov. 8, 1920. Serial No. 422,411. 9 Claims. (Cl. 81—102.)

1. In a pipe cutter, an annular frame comprising detachable sections, each section having a portion cut away at its inner circumferential edge at one end and at its outer circumferential edge at the other to form tongues, the outer tongue of each section overlapping the inner tongue of the adjacent section, and means for securely fastening said overlapping tongues together, said sections being adapted to be separated radially when the connecting means is removed.



1,393,157. PROPELLER MECHANISM. JOCELYN EMILE OLLIVIER, La Vignette, St. Gervais les Bains, France. Filed May 7, 1918. Serial No. 233,136. 9 Claims. (Cl. 305—9.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

7. In a propelling mechanism, an endless track, rollers forming a guide rail for said track and adapted to roll thereupon as successive portions thereof are laid upon the ground, a flexible envelop inflated with air, and means for associating said rollers with said envelop so that the air within the same will cause the rollers to bear with equal pressure against the track.



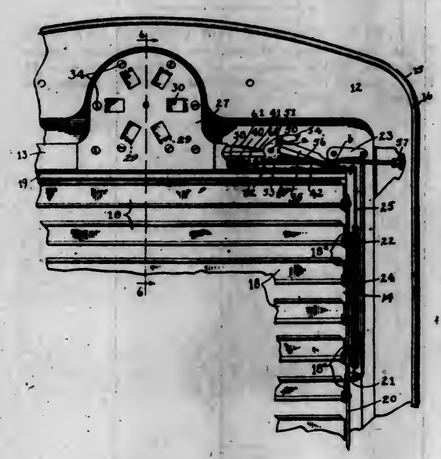
1,393,158. FLASHLIGHT-BRACKET FOR BICYCLES. EWALD F. PAWSAT, Sheboygan, Wis., assignor to Wald Manufacturing Company, Sheboygan, Wis., a Corporation of Wisconsin. Filed Aug. 5, 1919. Serial No. 315,474. 1 Claim. (Cl. 248—3.)

In a flash light bracket, a handle bar clamping member provided with a forwardly extending arm, upwardly offset at an intermediate point, and provided with a transversely concave end portion, in combination with another handle bar clamping member, means for securing the barrel of a flash light to the concave portion of said arm, said barrel engaging means comprising a flexible band having

upwardly extending end portions, each provided with a plurality of apertures adapted to receive a clamping bolt, said band being sufficiently flexible to be drawn into conformity with flash light barrels of differing size by the clamping bolt inserted through the appropriate set of apertures.

1,393,159. MACHINE FOR CUTTING CAN-TOPS. CLARK PERCY, South Bellingham, and WILLIAM MILLS, Anacortes, Wash., assignors of one-third to Clarence H. Kent, Seattle, Wash. Filed Sept. 9, 1920. Serial No. 409,274. 4 Claims. (Cl. 30—3.)

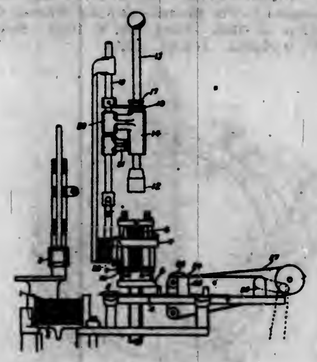
1. In a machine for cutting can tops, can supporting means, a stationary pressure resistance member fitting within the flange of the top of the can, a frame revoluble about the stationary pressure resistance member, carriers mounted in guides of said frame and movable radially toward the center of the pressure resistance member, and cylindrical cutters movable with the carriers, said cutters having annular grooves for the reception of the flange of the can, the upper and lower walls of the grooves having upper and lower right angle cutting edges engaging immediately below the flange of the can top diagonally opposite the margin of the resistance member, the frame revolving about the pressure resistance member whereby the cutting edges of the cutters may roll upon and cut the wall of the



can, the cylindrical surface below either one of said cutting edges, when the cutters are reversed, being parallel with the surface of the can, thereby preventing indenting the wall of the can.

1,393,160. NUT. ALBERT B. PRATT, Lyndon, Vt.; David E. Porter administrator of said Albert B. Pratt, deceased. Filed May 9, 1919. Serial No. 296,041. 11 Claims. (Cl. 99—11.)

1. A hard shelled nut of the type having a double meat kerfed substantially at the meeting plane of the meats.

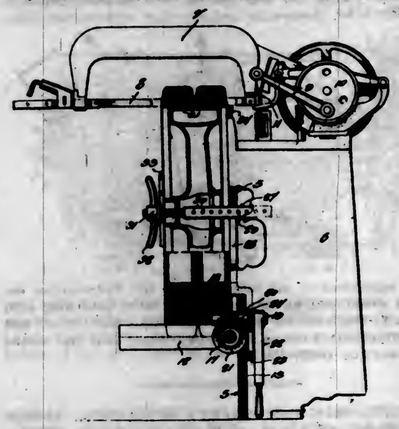


1,393,161. SHUTTER APPARATUS FOR RADIATORS. JAMES F. RALEIGH, Chicago, Ill., assignor to Pines Manufacturing Company, a Corporation of Delaware. Filed Mar. 1, 1920. Serial No. 362,620. 16 Claims. (Cl. 236—35.)

15. A shutter apparatus for automotive vehicle radiators comprising in combination shutters adapted to be adjusted to vary the flow of air through the vehicle engine radiator, means arranged when operated to lock the shutters in closed position, and vibratory means actuated by vibrations incidental to the operation of the engine or running of the vehicle for automatically unlocking the shutters.

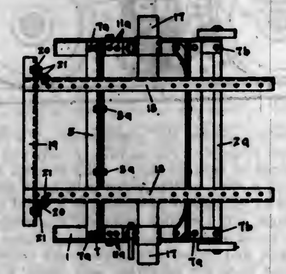
1,393,162. ENVELOP-MAKING MACHINE. JOHN PATERSON RAMAGE, Liberton, Scotland. Filed July 21, 1920. Serial No. 398,035. 6 Claims. (Cl. 93—61.)

1. A machine for applying transparencies to envelop blanks comprising a feed table, a picker, a reciprocated feed conveyer adapted to receive the blanks from said picker, an elevating table to which said blanks are transported by said conveyer, a fixed magazine for the transparencies above said table, means for retaining the transparencies in the magazine a self-adjusting clutch-controlled pressure block adapted to descend upon the transparencies, and a conveyer on a plane above said feed conveyer.



1,393,163. EDUCATIONAL TOY. WARREN M. RASELY, Worcester, Mass. Filed Feb. 3, 1919. Serial No. 274,793. 9 Claims. (Cl. 46—35.)

1. An educational toy comprising a set of blocks impressionistically representing in miniature prominent buildings of a given city or other associated objects of interest without being architectural models thereof, which are adapted to be grouped according to a ground plan to suggest said city or association of objects.

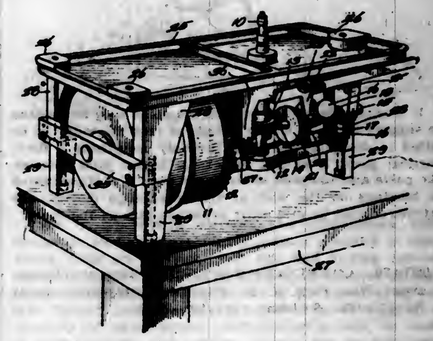


1,393,164. TIRE-CUTTING MACHINE. WILLIAM C. REINHARDT and OSCAR H. BANKER, Racine, Wis., assignors to Racine Tool & Machine Co., Racine, Wis. Filed Sept. 2, 1919. Serial No. 321,136. 6 Claims. (Cl. 29—73.)

1. A machine of the class described comprising a support, a vertically movable and horizontally reciprocating cutting member carried by and extending laterally from the top of the support, a work holding table carried by and extending laterally from the support below the cutting

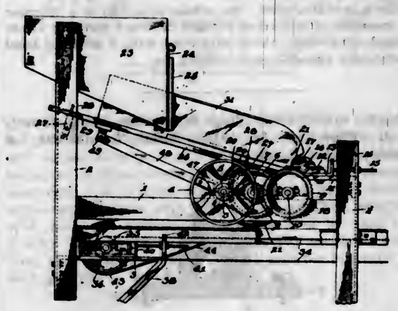
member, and means for clamping an article seated on the table against the side of the support.

1,393,165. ADJUSTABLE STAND. THOMAS H. REDMON, Meadville, Pa. Filed Nov. 7, 1919. Serial No. 336,322. 4 Claims. (Cl. 29—89.)



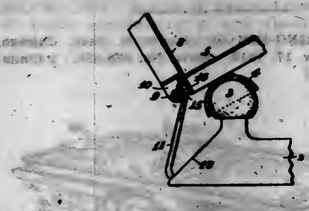
1. In an adjustable stand, the combination of a frame comprising side standards; a swinging work support; trunnions extending from the support; and clamp bearings for the trunnions permitting rotary and axial movement of the trunnions when released whereby the support may be tilted and adjusted in width.

1,393,166. HOLLOW METAL CROWN FOR ARTIFICAL TEETH. JEAN LOUIS PHILIPPE ROUMEGUERE, Auch, France. Filed Aug. 24, 1920. Serial No. 405,600. 1 Claim. (Cl. 89—9.)



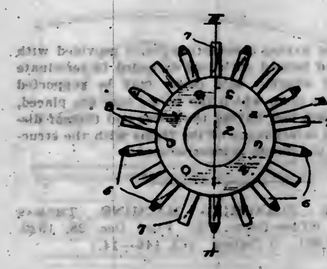
A hollow crown for artificial teeth, having its grinding face and its lateral faces which are visible when the crown is mounted on the artificial tooth, formed completely of metal and shaped to conform approximately to those of a natural tooth of the corresponding type; said crown having its edges bent backward and toward its interior in order to permit the plastic material of the tooth, when the crown is being fitted on a tooth of rubber or other suitable material, to be tightly compressed by said edges.

1,393,167. SPRING-MOTOR. HENRY G. SAAL, Chicago, Ill. Filed Nov. 17, 1919. Serial No. 338,554. 1 Claim. (Cl. 248—30.)



A spring motor having a mounting frame provided with a top portion and formed with legs extended to terminate below the motor whereby said motor may be supported clear of a support upon which the frame legs are placed, one or more of said legs having the lower end thereof displacable to avoid interference of the frame with the structure with which the motor is incorporated.

1,393,168. NUT - BLANCHING MACHINE. THOMAS SANGIULIANO, Wilkes-Barre, Pa. Filed Dec. 28, 1920. Serial No. 433,601. 5 Claims. (Cl. 146—14.)

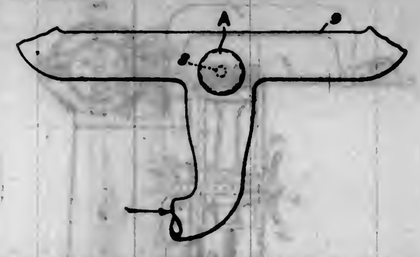


4. A nut blanching machine including a pair of rolls having yieldable contacting surfaces, one of said rolls being provided with annular grooves and the other of said rolls with a smooth unbroken surface, means for rotating said rolls and means whereby the smooth surfaced roller is rotated at a higher rate of speed than the grooved roller.

1,393,169. DUMPING-BODY FOR TRUCKS, &c. GUSTAV SCHLATTER, Steinach, and PAUL BOSSHART, Arbon, Switzerland, assignors to Société Anonyme Adolphe Saurer, Arbon, Switzerland, a Corporation of Switzerland. Filed Oct. 9, 1920. Serial No. 415,780. 4 Claims. (Cl. 298—18.)

1. The combination of a truck chassis, a body and means to support the body on the chassis so that the body can be tilted to discharge the load, the body comprising a floor, vertical posts, a wall, a detachable hinged joint between the posts and the wall at its upper edge, a shaft mounted in bearings on the wall at the lower edge thereof and latches carried by said shaft to engage lugs on the floor.

1,393,170. COMBINATION-STENCIL. JOSEPH SCHMIDINGER, New York, N. Y. Filed Mar. 21, 1921. Serial No. 453,935. 6 Claims. (Cl. 101—29.)



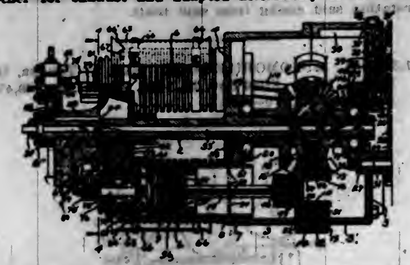
1. In a marking tool, the combination with a circular body member, of radiating cutting dies and striking heads arranged alternately about said head with a striking head diametrically opposite each cutting die.

1,393,171. COUPLING. JOHN SCHNEIDER, Elizabethport, N. J. Filed Dec. 18, 1919. Serial No. 345,891. 4 Claims. (Cl. 287—20.5.)

1. In a device of the class described, in combination, the tubular member threaded near its end, with a tubular unthreaded extension, a fitting having a tubular threaded part, and a base having a socket containing a headed post provided with a constricted recess, said parts being adapted to be connected together so that the screw threaded parts are in engagement, and the unthreaded part of said conduit occupies the constricted recess in said fitting.

1,393,172. SUPPLEMENTAL AIR-INTAKE DEVICE FOR GAS-ENGINES. JAMES H. SENN, Philadelphia, Pa. Filed Aug. 4, 1917. Serial No. 184,475. 1 Claim. (Cl. 123—124.)

A supplemental air intake device for hydrocarbon engines comprising an air conduit, a valve governing said conduit, thermostatic means controlling said valve, and gravity operated means adapted to render said first means substantially ineffective.



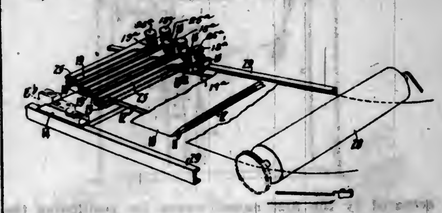
1,393,173. RAILROAD SAFETY APPLIANCE. EDWARD E. SHEAR and WILLIAM G. WAECHTLER, Kingston, N. Y.; said Waechtler assignor to said Shear. Filed June 13, 1919. Serial No. 304,076. 2 Claims. (Cl. 246—170.)

1. In a safety device, the combination of a car truck having wheels adapted to run on rails, a body and springs, a car supported on said springs, a train air pipe having a valve therein, a shoe carried below said truck body, normally extending over one of said rails, at a slight elevation above the same, and yieldable upwardly relatively to said truck, a bell-crank pivoted to said car, connections between said bell-crank and valve, and connections between said bell-crank and shoe for operating said valve when said shoe moves upwardly relatively to said truck body, said last named connections including a vertically disposed link pivotally connected to said bell-crank, an arm rigidly secured to said shoe and extending upwardly therefrom, and a short horizontally disposed link pivotally connected to the lower end of said first named link and the upper end of said arm, the upper end of said arm being arranged to abut against said first named link as a stop, upon any substantial upward movement of said short link about the lower end of said first link as a pivot.

1,393,174. HYDROCARBON-ENGINE. WILBUR L. SHEPARD, Elmwood, Conn., assignor of one-fourth to H. C. Hart, Unionville, and one-fourth to A. N. Pierson, Cromwell, Conn. Filed June 20, 1919. Serial No. 305,532. 1 Claim. (Cl. 123—43a.)

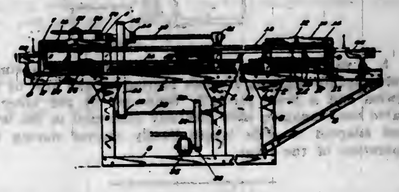
An engine of the class described comprising a rotary carrier, a plurality of cylinders supported by the carrier, pistons in the respective cylinders, cages set in the outer heads of the respective cylinders, a valve extending through each cage and seated when closed against the inner end thereof, means for operating the valves as the carrier rotates, to effect supply to and exhaust from the respective cylinders, a fixed bearing having a conical surface, the carrier having a similar conical surface to engage and turn on the surface of the bearing, passages extending through the bearing one for supply and the other for exhaust and adapted alternately to communicate with the respective cages as the carrier turns, spark means including an electrode extending through each valve, the bearing having means to cause the operative action of the electrodes as the carrier turns.

1,393,175. SHOE-HEEL. OLIVER E. SHEPARD, Emmett, Idaho. Filed Sept. 27, 1920. Serial No. 413,106. 2 Claims. (Cl. 36—41.)



1. In a heel of the character described; a retaining element adapted for being fixedly secured under the heel seat of a shoe, the said element consisting of a metal plate having a portion at the outer end and a portion at the inner end, said portions constituting transversely disposed hook members and a heel composed of a hollow metal body having a transversely extended groove on the inner face of the rear end and a like groove on the outer face of the front end for coengaging with the back and front hook members on the retaining element, the said heel having a limited free slidable contact with the retaining element, the top of the heel body being channeled to receive the retaining plate and having an offset that constitutes a stop shoulder for engaging the rear end of the retaining element, the latter having a bent down member, and a set screw adjustably mounted on the heel body adapted for engaging the bent down member on the retaining element whereby to draw the hollow body and retaining element plate in fixed interlocked connection.

1,393,176. WIRE FENCE. GEORGE L. SMITH, Washington, D. C., assignor to United States Ordnance Company, Washington, D. C., a Corporation of Virginia. Filed May 3, 1919. Serial No. 294,518. 1 Claim. (Cl. 256—32.)

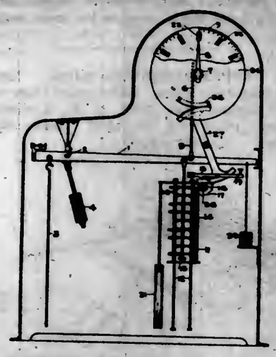


A fence section interposed between two posts having the upper and lower longitudinal members thereof bent gradually toward each other from either end of said section and held in this relation by a plurality of parallel transverse members, said members increasing in length from the center of the section to its outer ends.

1,393,177. TYPEWRITING-MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 28, 1917. Serial No. 209,247. 22 Claims. (Cl. 197—126.)

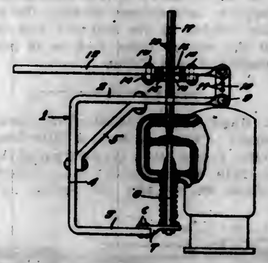
1. In a typewriting machine, the combination with means for feeding a web formed with a plurality of plies whose folds are all along one side and having carbon-sheets interleaved between said plies, of a series of supports extending from front to rear of the machine, on one side thereof, said supports being of different heights, a plurality of superimposed carbon-sheet-holders on each of said supports, and spacers between the superimposed holders, the heights of the supports and the thickness of each of the spacers being such as to provide proper vertical spacing of said holders.

1,393,178. BALE-TIE MACHINE. JOHN SOMMER, Peoria, Ill., assignor to Keystone Steel & Wire Company, South Bartonville, Peoria, Ill., a Corporation of Illinois. Filed Jan. 28, 1919, Serial No. 273,586. Renewed Aug. 27, 1921. Serial No. 496,132. 10 Claims. (Cl. 140—73.)



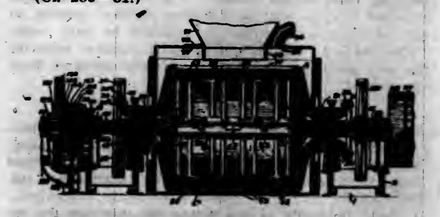
1. In a bale-tie-machine, in combination, a bed including two sets of spaced rails, one above the other, each of said upper rails provided at predetermined points with racks, an endless member movable on said bed, means for operating said endless member, a plurality of carriages connected to move with said endless member, gearing on said carriages arranged to be actuated by said racks, a wire cutting, looping and gripping member operated from said gearing, and a twisting member operated from said gearing.

1,393,179. DIAL-SCALE. MORTON H. STARR, St. Johnsbury, Vt., assignor to E. and T. Fairbanks and Company, St. Johnsbury, Vt., a Corporation of Vermont. Filed Aug. 17, 1920. Serial No. 404,267. 8 Claims. (Cl. 265—48.)



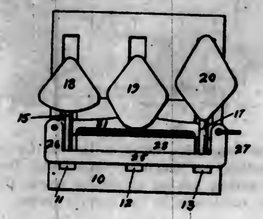
1. In a dial scale having means for changing the capacity through successive ranges, a movable dial bearing a plurality of series of numbers, the corresponding terms in the several series representing total weight values for a given range of capacity, a fixed apertured shield in

front of the movable dial adapted to expose only the corresponding terms of the series of numbers, and connections



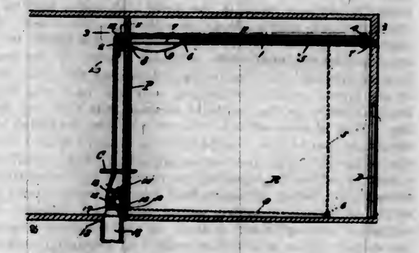
actuated by the first named means for positioning the movable dial to expose the proper numbers for each range of capacity of the scale.

1,393,180. VALVE-LIFTER. CHARLES T. STUBBS, Milwaukee, Wis. Filed Nov. 26, 1920. Serial No. 426,469. 3 Claims. (Cl. 29—86.3.)



1. A valve lifter comprising a U-shaped frame, having a valve spring-engaging member carried by one arm of the frame and a lever pivotally connected to the other, a valve head-engaging stem pivotally connected to the lever and adapted to slide longitudinally thereof during the operation of the lever.

1,393,181. MIXING-MACHINE. THOMAS J. STURTEVANT, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed June 10, 1921. Serial No. 476,457. 50 Claims. (Cl. 259—51.)

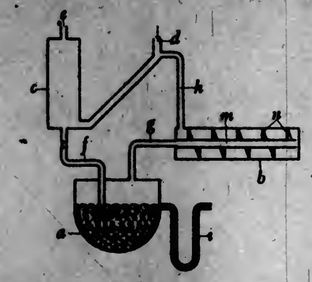


1. A machine for mixing materials, comprising, in combination, a rotary casing having a mouth disposed between the ends of the casing for receiving and discharging materials, hubs projecting from opposed ends of said casing, bearings supporting said hubs, a shaft projecting through said rotary casing and hubs, bearings for said shaft, mixing elements carried by said shaft, means to rotate said shaft, and a speed reduction transmission for rotating said casing from said shaft.

1,393,182. AUTOMOBILE-LOCK. EARL T. TANNER, Des Moines, Iowa. Filed Nov. 20, 1919. Serial No. 339,477. 1 Claim. (Cl. 70—126.)

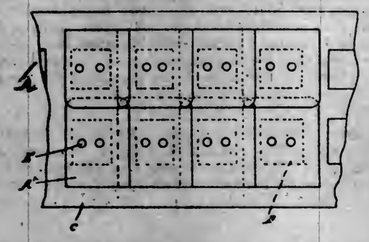
A locking device for a plurality of pedal controls comprising a rear bar, an arm extending forwardly from said bar at each end thereof, a flange on said bar extending forwardly and terminating short of said bar for leaving a space between said arms and said flange for receiving a pedal control lever in each space, a locking bar pivoted to one of said arms, and adapted to rest against the other of said arms, means for locking together the free end of said locking bar and the free arm, said locking bar being provided with a notch intermediate of its ends whereby a pedal control may be received therein, the parts being so arranged that slight movement of the levers may be had in order to accommodate any inaccuracy in spacing of lever control pedals.

1,393,183. BURGLAR-TRAP. JOSHUA ALEXANDER TATE, St. Louis, Mo. Filed July 29, 1919. Serial No. 314,093. 3 Claims. (Cl. 43—59.)



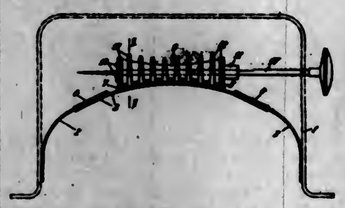
3. A device of the class described including a curtain, a support for the curtain, a weight normally supported, means to release the weight and means operated by the weight, when released, for lowering the curtain and moving it bodily in one direction.

1,393,184. PRODUCTION OF PETROL. FRANK TINKER, Erdington, Birmingham, England. Filed Feb. 18, 1920. Serial No. 359,662. 2 Claims. (Cl. 196—25.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat L., 1313.)



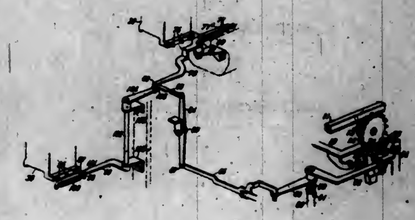
1. In the production of petrol from hydrocarbon oils by means involving a still, a cracking or superheating device, and a fractionating column, mixing superheated vapor with the main stream of the original oil at a position between the cracking device and the fractionating column,

delivering the resultant vapor into the fractionating column and the liquid into a still, generating vapor in



the still, and superheating said vapor in the superheating device for subsequent mixture with the main stream of oil, substantially as described.

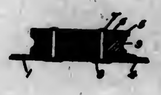
1,393,185. PUNCTURE-PROOF SHOE FOR PNEUMATIC TIRES. SAMUEL J. TODD, Detroit, Mich., assignor of one-fourth to Hilliard N. A. McLean and one-fourth to Ralph M. Tate, Detroit, Mich. Filed Jan. 10, 1921. Serial No. 436,026. 2 Claims. (Cl. 152—18.)



1. The combination with a pneumatic tire, of a protecting shoe therefor comprising a series of resilient metallic plates covering the tread portion of the tire and overlapping each other, a fabric member to which said plates are secured for holding each in a fixed location, a cushioning material between said fabric member and plates, and rigid members embedded in said cushioning material to which the plates are respectively secured.

1,393,186. HAT-FASTENING DEVICE. ALBRECHT ULLI, Le Locle, Switzerland. Filed Apr. 10, 1919. Serial No. 288,912. 3 Claims. (Cl. 132—62.)

1. A hat fastening device comprising a fixed cone member, a comb member having teeth curved about the periphery of said cone member and spaced therefrom, and means for rotating said comb member to rotate the teeth thereof about the periphery of the cone member.

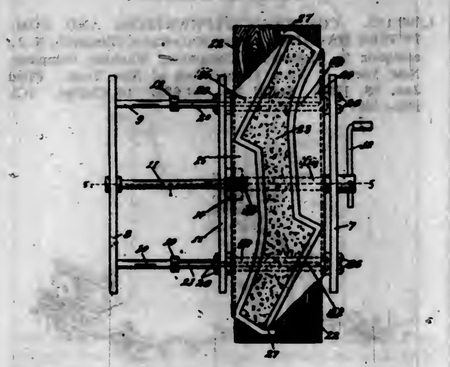


1,393,187. COMBINED TYPEWRITING AND COMPUTING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Jan. 28, 1920. Serial No. 354,681. 10 Claims. (Cl. 235—59.)

1. In a combined typewriting and computing machine, in combination, a traveling carriage, a cross-totaliser, means to cause said cross-totaliser to travel intermittently with said carriage, and punctuation-skipping means adapted to be controlled by said cross-totaliser when the latter is traveling with said carriage.

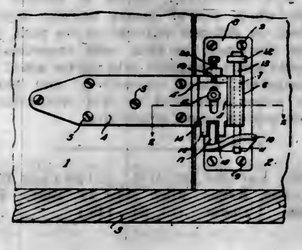
3. In a combined typewriting and computing machine, in combination, a traveling carriage, a cross-totaliser comprising a series of computing wheels arranged in groups with punctuation spaces at suitable intervals, a master wheel, pick-up means whereby said carriage may effect, in different portions of its path, a relative traveling movement between said cross-totaliser and said master wheel, to enable said master wheel to engage said computing wheel successively, and punctuation-skipping means controlled by said cross-totaliser each time said pick-up means is effective.

1,393,188. LACING DEVICE. ALLEN CLAY WHITEMAN, La Crosse, Kans. Filed May 24, 1921. Serial No. 472,089. 1 Claim. (Cl. 24—149.)



In a device of the class described, coöperating wings; guides disposed upon the wings, each guide embodying pulleys having grooved treads provided with transverse ribs; and a flexible element extended between the pulleys of each guide and coöperating with the threads and the ribs thereof.

1,393,189. BLOCK-FORMING MACHINE. ALFRED WICKSTROM, Minneapolis, Minn., assignor of one-fourth to Frederick Bain and one-fourth to James E. Bain, Minneapolis, Minn. Filed July 24, 1920. Serial No. 398,802. 7 Claims. (Cl. 25—121.)



1. In a device of the class described, a suitable platform on which may be supported a building block, two

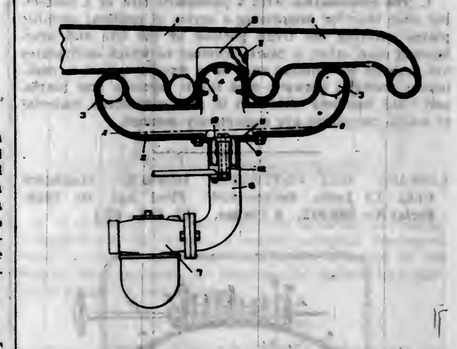
forms positioned on said platform and adapted to mold said block, means for retracting one of said forms from

said block, and means for subsequently moving said platform away from the other form toward the first mentioned form.

1,393,190. GRAVITY-HINGE. WALTER W. WOOD, Seattle, Wash. Filed May 9, 1921. Serial No. 467,892. 2 Claims. (Cl. 16—154.)

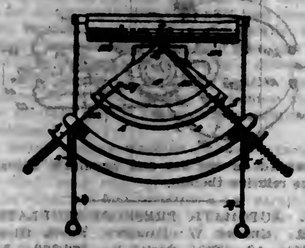
1. A gravity hinge comprising a jamb plate having a projection formed thereon with an upwardly inclined cam surface, a door plate pivoted to said jamb plate and adapted for vertical movement with respect thereto, a supporting plate slidably mounted on the door plate, a roller carried by said supporting plate and adapted to engage said cam surface, means for locking the supporting plate with respect to the door plate and separate means carried by the door plate for adjusting the supporting plate with respect thereto.

1,393,191. PROCESS FOR THE MANUFACTURE OF ETHEREAL SALTS OF ETHYLENIC HALOGENHYDRINS. JEAN ALTWEGG and JOANNY LANDRIVON, Lyon, France, assignors to Societe Chimique des Usines du Rhone (Anciennement Gilliard, P. Monnet et Cartier), Paris, France. Filed June 13, 1919. Serial No. 303,976. 2 Claims. (Cl. 23—24.)



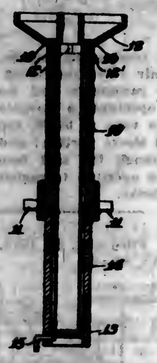
1. A process for the manufacture of ethereal salts of ethylenic-halogenhydrins, consisting in passing gaseous ethylene oxid through a heated acidyl halid.

1,393,192. WINDOW-GUARD. JAMES E. BAKER, Watertown, N. Y., assignor of one-half to Joseph W. Taggart, Watertown, N. Y. Filed Oct. 20, 1920. Serial No. 418,279. 3 Claims. (Cl. 20—52.1.)



1. The combination with a window frame having a pocket and a vertically movable sheet of glass disposed in line with the pocket, of a pair of plates rigidly mounted at the opposite sides of the pocket, one of said plates being provided with hinge loops, a leaf pivoted to the latter plate and adapted to close the mouth of the pocket when the glass is in its lowermost position and to partially close the pocket when the glass is in its uppermost position, and a spring exerting a constant tension for moving said leaf toward the mouth of the pocket.

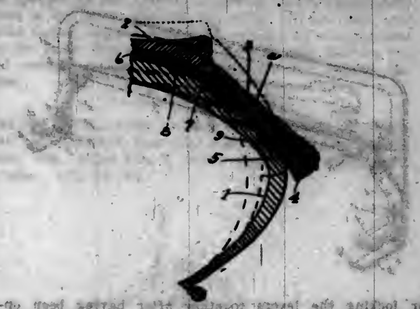
1,393,193. VAPORIZER FOR INTERNAL-COMBUSTION ENGINES. GEORGE N. BARCUS, Wabash, Ind., assignor to Gets Manufacturing Co., Andrews, Ind., a Corporation of Indiana. Filed June 1, 1918. Serial No. 237,826. 2 Claims. (Cl. 123—122.)



1. In combination with an internal combustion engine, an exhaust manifold, an intake manifold, a mixture conveying pipe leading from the carbureter into the intake manifold substantially at right angles thereto, a valve controlled restricted opening at the junction between the pipe and manifold, and a dome extending from the intake manifold into the exhaust manifold at a point opposite the said opening.

1,393,194. TYPEWRITER. EDUARD BERGMANN, Leipzig, Germany. Filed June 6th, 1920. Serial No. 386,214. 5 Claims. (Cl. 197—35.)

1. In a typewriter in combination, a type carrier, means for imparting to said carrier a straight line movement, a quadrant-shaped guide for said carrier, an arm arranged below said carrier in parallel therewith and fixed thereto and a quadrant-shaped guide for said arm.



1,393,195. BILLET-CASTING. ROSS EDWARD BRADLEY, Roland Park, Md. Filed Mar. 20, 1920. Serial No. 367,525. 3 Claims. (Cl. 22—170.)

1. The method of casting a hollow billet for use in tube drawing which consists in pouring the molten metal into a mold about a resilient metallic core supported vertically on one of its ends and restrained as to its two ends so that it cannot expand beyond a predetermined maximum but will freely yield to the pressure of the surrounding casting as to its periphery to an extent corresponding to the contraction of the billet upon cooling, and, after the metal of the billet has sufficiently set, removing said billet from the mold with the core therein.

1,393,196. DETACHABLE TIRE-PROTECTOR. BERT E. BERITWEISER, Wichita, Kans. Filed Oct. 19, 1920. Serial No. 418,090. 2 Claims. (Cl. 152—17.)

2. An annular tire-protector of curved transverse section, and comprising a rubber body having a tread and a pair of lateral beads; the side walls of the body increasing in thickness gradually toward said beads; ring-wires embedded in said beads, a wire wound in a flattened coil, looped around the ring wires and embedded in the rubber body, a pair of rubber filling-rings vulcanized within the loops of said wound wire and against the respective ring-wires, and a fabric strip wrapped spirally around said wound wire, said strip also being embedded in the rubber body; substantially as described.

1,393,197. MANUFACTURE OF ARTIFICIAL SILK. EMILE BRONNERT, Mulhouse, Alsace-Lorraine, France. Filed July 10, 1920. Serial No. 395,360. 2 Claims. (Cl. 18—54.)

1. A step in the process of making artificial silk which permits of predetermining the fineness of the thread to be produced, which comprises treating viscose in a coagulating bath containing a salt and an acid, the proportion of the latter to the whole being approximately inversely proportional to the square root of the thread size.

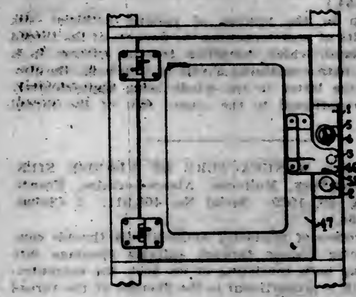
1,393,198. MANUFACTURE OF VISCOSE SILK. EMILE BRONNERT, Mulhouse, Alsace-Lorraine, France. Filed Aug. 30, 1920. Serial No. 406,911. 3 Claims. (Cl. 18—54.)

1. The process of producing artificial silk threads comprising forcing viscose through suitable openings into a coagulating bath consisting of an acid, the concentration of which is proportional to the fineness of the thread desired.

1,393,199. MANUFACTURE OF ARTIFICIAL SILK. EMILE BRONNERT, Mulhouse, Alsace-Lorraine, France. Filed Sept. 14, 1920. Serial No. 410,141. 1 Claim. (Cl. 18—54.)

The process of producing viscose threads of any desired fineness from raw viscose of various consistencies, which comprises forcing the viscose through suitable openings into an acid precipitating bath, the concentration of which is increased proportionately to the increase in the fineness of the thread desired to be produced, the increase in the consistency of the viscose used, and the increase in the size of the openings through which the viscose is forced.

1,393,200. DEMOUNTABLE BAGGAGE-RACK FOR AUTOMOBILE-RUNNING BOARDS. CHARLES M. BUNDEN, Portland, Oreg., assignor to Phillip P. Buehne, Portland, Oreg. Filed Sept. 26, 1919, Serial No. 326,662. Renewed Aug. 10, 1921. Serial No. 491,292. 10 Claims. (Cl. 224—29.)



1. A device of the character described comprising a U-shaped frame provided with a laterally projecting clamping jaw at each end, an adjustable clamping member carried by each end of the frame, each clamping member having a companion clamping jaw, levers pivoted to the ends of the frame and adapted for arranging their free ends in alinement, the upper ends of said

clamp members being pivoted to said levers, the levers being operatively connected with each other, and means

for locking the levers together after having been operated to place said clamping members in their clamping position.

1,393,201. COIN-CONTROLLED LOCK MECHANISM. RALEIGH B. BUZZARD, Washington, D. C., assignor, by mesne assignments, to Davis Automatic Equipment Corporation, New York, N. Y., a Corporation of New York. Filed July 17, 1920. Serial No. 397,120. 13 Claims. (Cl. 194—1.)

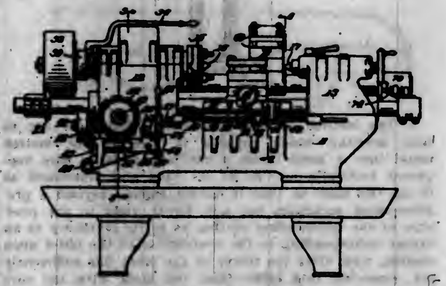
1. The combination of a coin-controlled lock lockable only upon deposit of a coin and having manually operated means to produce the locking, a door to be locked, and auxiliary means to prevent locking of the lock while the door is open.

1,393,202. DINING-ROOM TURNTABLE. CARL CLAUS, Philadelphia, Pa. Filed Sept. 10, 1920. Serial No. 409,316. 6 Claims. (Cl. 45—26.)

2. A dining room turn table comprising a base, said base including a metallic cap portion having a depending flange at its outer edge, rotatable top supporting devices secured to the said base, and non-metallic means having connection with the said flange for contacting with the table or other support upon which the said turn table is situated.

1,393,203. CALIPERS FOR PIVOT TESTING, TRUING, AND POISING OF BALANCE STAFFS AND WHEELS. CARL CULMAN, Maplewood, Mo. Filed Nov. 23, 1917. Serial No. 203,641. 20 Claims. (Cl. 33—203.)

1. A tool of the character described, including a pair of mutually pivoted jaws having pivot bearings in their extremities, a pin passing through the pivotal centers of the jaws, an index bar rotatably mounted upon said pin and longitudinally adjustable thereon, and an index

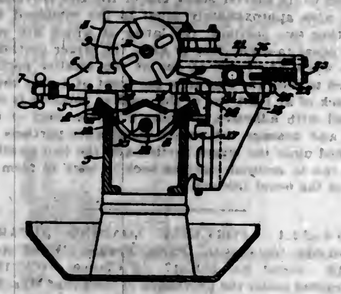


pointer carried on the bar and angularly adjustable in two planes relative thereto.

1,393,204. AUTOMATIC PRESSURE-REGULATED AIR-VALVE. GEORGE W. DAGGETT, North Girard, Pa. Filed Mar. 16, 1920. Serial No. 366,320. 3 Claims. (Cl. 251—125.)

1. In internal combustion engines, an automatic pressure regulated air valve positioned substantially intermediate of the carbureter and manifold, involving a housing having openings; a movable element within the housing having a vane or blade, together with an apertured cylindrical sleeve portion; and an air intake member inserted through the said housing and cylindrical sleeve, having an aperture to register with the aperture formed in said sleeve.

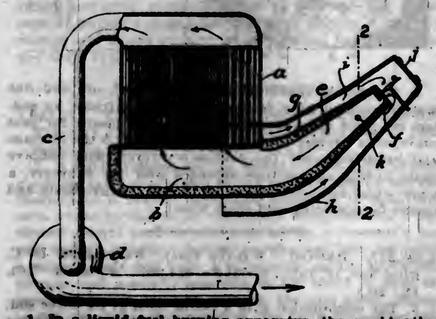
1,393,205. AUTOMATIC LATHE. LEE G. DANIELS, Rockford, Ill. Filed Aug. 28, 1918. Serial No. 251,700. 25 Claims. (Cl. 82—2.)



1. In a lathe, the combination of a bed, means for revolving a blank, a bar mounted centrally on the bed to slide longitudinally, a tool carrier adapted to be moved longitudinally by said bar, an oscillatory bar mounted on the bed in parallel relation with and at the rear of the central bar, a tool carrier fixed to the oscillatory bar and adapted by oscillation thereof to carry its tools toward and from the axis of the revolving blank, and means operating between said bars for oscillating the one by longitudinal movement of the other.

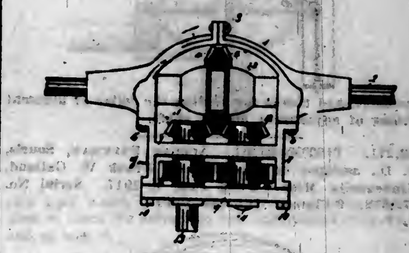
10. In a metal working machine, the combination of a suitable frame, a work spindle revolubly mounted thereon, a bar mounted on said frame parallel with the work

spindle and adapted to move axially, a tool carriage mounted upon and carried by said bar so as to be moved lengthwise of the spindle axis by similar movement of said bar, a rack on said bar, a gear meshing with said rack, mechanism for driving said gear to impart feed movement to said tool carriage, means for automatically disconnecting said driving mechanism from said gear, and means constantly urging said gear to revolve in a direction for returning the tool carriage to a starting position, whereby upon disconnection of said driving mechanism the bar and its tool carriage will be automatically returned to a starting position.



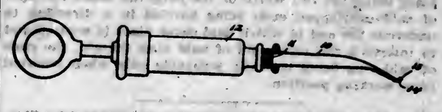
20. In a metal working machine of the character described, the combination of a bed carrying a head stock and a tail stock upon and between which the work is adapted to be supported and revolved, a bar parallel with the work axis and mounted adjacent to its ends for lengthwise sliding movement in bearings at the head and tail stock ends of the machine, a turning tool carriage mounted on said bar between the head and tail stocks and adapted to be fed lengthwise of the work by similar movement of said bar, a back facing tool carriage mounted to move crosswise of the bed toward and from the work, and means operated by lengthwise feed movement of said bar for feeding the back facing tool carriage toward the work.

1,393,206. LATHE. LEE G. DANIELS, Rockford, Ill. Filed Mar. 19, 1919. Serial No. 283,490. 6 Claims. (Cl. 82—2.)



1. In a lathe, the combination of a bed, a tool carriage movable longitudinally thereon, a back facing tool slide movable crosswise of the bed, a rack on the tool slide, a gear meshing with the rack, a cam-actuable member meshing with the gear, and a cam on the carriage for actuating said member through longitudinal movement of said carriage to thereby feed the tool slide crosswise of the bed.

1,393,207. OIL-BURNING APPARATUS. FRANCIS I. DU PONT, Wilmington, Del. Filed Nov. 7, 1919. Serial No. 336,350. 3 Claims. (Cl. 158—29.)

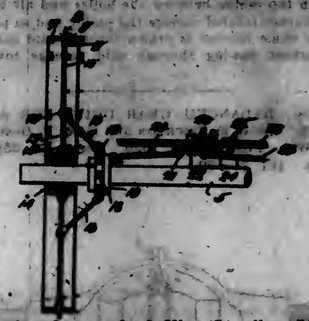


1. In a liquid fuel burning apparatus, the combination with the boiler, of a casing affording a fuel passage extending toward the boiler and provided with an air inlet, a fuel sprayer in the vicinity of the air inlet, there being a hole in the casing between the boiler and air inlet, and a pilot burner located outside the casing and so positioned that the flame thereof is drawn through said hole by the fluid current flowing through said passage toward the boiler.

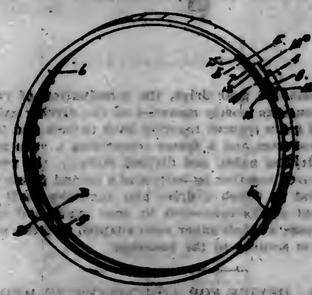
1,393,208. BALANCED-GEAR DRIVE FOR AUTOMOBILES. OSCAR F. ERICKSON and HANS P. OLSON, Madison, Wis. Filed Feb. 5, 1920. Serial No. 356,463. 1 Claim. (Cl. 74—99.)

In a balanced gear drive, the combination of two bell-shaped housings loosely mounted on the driving axle, with two bevel gears secured together back to back and fastened to said housings and a frame comprising a yoke mounted on said driving axles, and divided midway, the two parts being secured together by bolts and a second frame secured to the first in which a drive and auxiliary shaft is journaled, said shafts connected by spur gears and carrying bevel pinions at their inner ends adapted to mesh with the bevel gears secured to the housings.

1,393,209. DEVICE FOR ADMINISTERING MEDICINE. WILLIS J. EVANS, New York, N. Y. Filed Feb. 2, 1920. Serial No. 355,621. 5 Claims. (Cl. 128—266.)



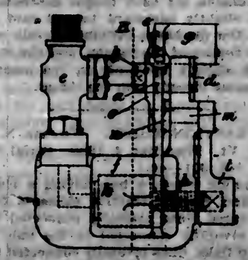
1. A device for administering medicine comprising a tube having a wide thin discharge end bent away from the axis of the tube to act as a tongue depressor, said end being curved slightly backward toward said axis at its tip, whereby the discharge opening therein will not be closed by the tissues of the tongue, and the medicine will be discharged slightly upwardly in the mouth avoiding spraying the same directly into the throat.



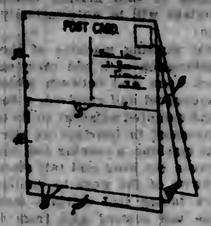
1,393,210. TRACTION-WHEEL. WILFRID N. FLORENCE, Middlebury, Vt. Filed Mar. 4, 1920. Serial No. 363,143. 2 Claims. (Cl. 301—46.)

1. In a traction wheel, a hub having a rim, said rim having apertures therein, traction elements operating in the said apertures, links pivotally connected to the said spikes, links pivotally connected to the hub and to the first mentioned links, links pivotally connected to the inner and outer links at their junctions, a sleeve, a shaft on which the sleeve is splined, means for pivotally connecting

the instrumentality thereof, as either attached to the shaft for holding the sleeve in different positions of adjustment, and means for holding the collar at different positions of adjustment on the shaft.

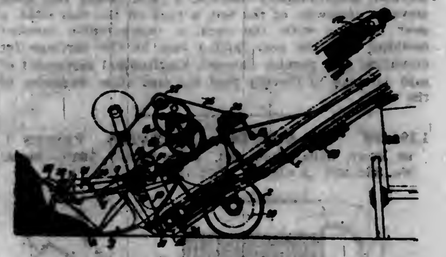


1,393,211. PISTON-RING. ARTHUR FRYKMAN, Souris, N. D., assignor of one-fourth to Frank W. Galland, Minneapolis, Minn. Filed June 4, 1917. Serial No. 172,572. 2 Claims. (Cl. 72—107.)



1. A piston ring having transversely undercut overlapped ends, and an independently formed cover plate secured to the inner surface of one of said ends and overlapping the inner surface of the other end of said ring, said cover plate being the full width of the ring, the engaging edges of said overlapped ends being beveled in a direction to undercut the end to which said cover plate is secured and to interlock the other end of said ring thereto, the ends of said ring being laterally separable only when removed from working position.

1,393,212. SAFETY DEVICE FOR OIL-BURNING APPARATUS. JAMES SANDFORD GARDNER, Forest Gate, England. Filed Mar. 3, 1920. Serial No. 367,724. 5 Claims. (Cl. 158—28.)



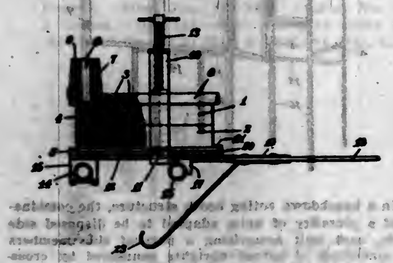
1. In oil burning apparatus an oil supply cock to the burner, means for retaining the burner in position, means for operating the burner, and means for interlocking the control of the cock, the retaining device and the guard so that the guard cannot be raised till the cock is shut off.

1,393,213. POST-CARD. ARTHUR GRIMMER, Birmingham, England. Filed Jan. 6, 1919. Serial No. 270,971. 4 Claims. (Cl. 229—92.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A post card comprising a rectangular sheet of material of about half the usual thickness to allow of the taking of a carbon copy of written or typewritten matter thereon, the sheet being divided into at least three portions by two parallel division lines which pass across the sheet parallel to its shorter sides, one of the end portions being of an area approximately equal to the combined area of the other two portions, the latter of which are substantially equal to each other in area, the larger portion being blank while the front of one of the smaller portions is marked to indicate that it is the front of a post card, and the back of at least one of the smaller portions is entirely covered with adhesive, whereby a carbon copy of the address and message written on the smaller portions can be obtained upon the larger portion and the two smaller portions can be secured together back to back to form a post card of the usual thickness.

1,393,214. PORTABLE LOADING APPARATUS. ADOLPHE GRAFFENRAN, Paris, France. Filed Aug. 24, 1918. Serial No. 251,317. 3 Claims. (Cl. 198—9.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

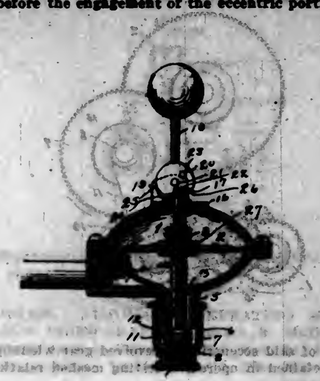
1. A portable apparatus for loading coal, ore and like materials, comprising, in combination: a carriage, an endless conveyor on said carriage, operating means for said conveyor, a circular receiving basin mounted on the carriage and extending over the endless conveyor, said concave basin having an aperture arranged over the conveyor, a blade wheel rotatably supported in said concave basin and means for operating said blade wheel.



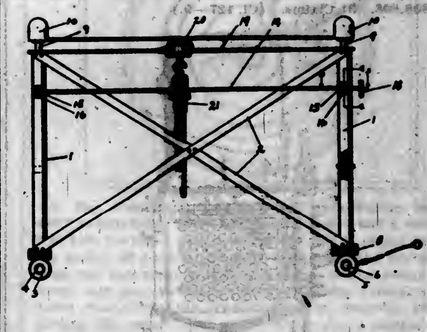
1,393,215. BROOM. WALTER GRAY, Washington, D. C. Filed Nov. 12, 1920. Serial No. 424,967. 4 Claims. (Cl. 15—20.)

3. The combination with a casing open at its lower end, a pair of pivots within said casing and positioned adjacent opposite sides thereof for changing broom straws in place,

and means for moving said jaws toward each other; of connecting means between said jaws and the sides of said casing, and spring means for outwardly bulging the sides of said casing when the jaws are released.



1,393,216. CASTING APPARATUS. ERNEST GUTMUELLER, Woodhaven, N. Y., assignor to Doehler Die Casting Company, Brooklyn, N. Y., a Corporation of New York. Filed June 11, 1920. Serial No. 388,362. 5 Claims. (Cl. 22—91.)

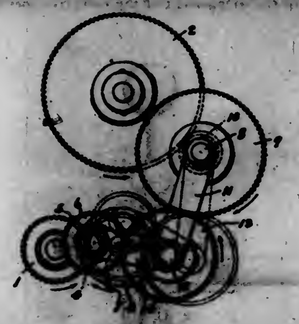


1. In a casting apparatus, the combination of a mold having a mold cavity arranged therein and a gate opening extending through the upper surface of the mold, a pivotal support for said mold beneath the same, a second support upon which said mold is adapted to rest, and a handle member adapted to extend from a side of said mold adjacent to said second support, by which the mold may be swung upwardly about said pivotal support, said handle member having a stop member secured thereto, adapted to engage said second support when the mold has been swung upwardly to a sufficient height.

1,393,217. GAS REGULATOR AND SAFETY DEVICE. TIMOTHY HALEY, Springfield, Ohio. Filed Jan. 2, 1920. Serial No. 349,120. 4 Claims. (Cl. 50—4.)

1. A fluid pressure control device, of the type wherein a control valve is actuated to and from its seat by the fluctuations of a flexible diaphragm subjected to fluid pressure, characterized by an oscillatory weighted arm, a cam shaped pivotal head for said arm having a concentric portion and an eccentric portion merging one into the other, a notch in said cam head, a valve stem carried by the diaphragm and normally engaging in the notch to hold the weighted arm in upright position, the arm being adapted to fall upon the withdrawal of the valve stem from said notch, whereupon the concentric portion of the pivotal cam head first causes idle movement of the valve stem during the initial movement of the arm, and then upon the engagement of the eccentric portion of the cam head which thereupon positively actuates the valve stem to force the valve into firm engagement with its seat and so lock it.

1,393,218. PORTABLE HOIST. WILLIAM J. HERSBOLD, Kalamazoo, Mich. Filed June 19, 1920. Serial No. 389,221. 3 Claims. (Cl. 212—84.)

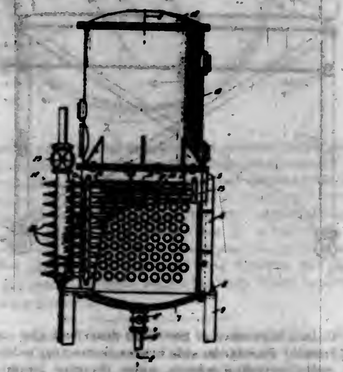


1. In a structure of the class described, the combination of tubular standards, side braces connecting said standards in pairs, carrying wheels, axles therefor mounted on the lower ends of said standards, lifting screws disposed within said standards, bearing blocks arranged within said standards to slidably support said screws, screw driving nuts supported within said standards by said bearing blocks, driving shafts mounted on the outer sides of the standards, driving worms mounted on said shafts and projecting through openings therein to mesh with said nuts, screw heads mounted on said screws, a track mounted centrally on said screw heads, and a trackle running on said track.

1,393,219. INTERMITTENT-MOTION MECHANISM. GIDEON I. HEIL, Newark, N. J. Filed Jan. 11, 1921. Serial No. 436,482. 20 Claims. (Cl. 74—7.)

1. An intermittent motion mechanism comprising an eccentrically revolved gear, transmission gear, a swinging frame pivoted to oscillate from the axis of said transmission gear, an idler gear rotatably mounted on said swing-

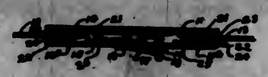
ing frame to mesh with said transmission gear, and means compelling said frame to oscillate synchronously with the



movement of said eccentrically revolved gear whereby the latter is retained in operative driving meshed relation to said idler gear.

1,393,220. PAINT. ALBERT C. HOLZAPFEL, New York, N. Y. Filed May 20, 1921. Serial No. 471,191. 4 Claims. (Cl. 134—39.)

2. An acid proof paint comprising a vehicle including a rubber solution and a pigment including titanium oxid.



1,393,221. EVAPORATOR. BURTON S. HUGHES, Buffalo, N. Y., assignor to Zaremba Company, Buffalo, N. Y., a Corporation of Maine. Filed July 5, 1919. Serial No. 308,896. 31 Claims. (Cl. 127—9.)

17. In an evaporator the combination of oppositely disposed side plates and tube sheets forming a rectangular shell, a bottom secured to said shell, a vapor chamber above and communicating with said shell, a plurality of rows of tubes supported in and extending through said tube sheets to the outside of the shell, a manifold for each row of tubes, removable nipples connecting the tubes of each row to the corresponding manifolds and means for supplying a heating medium to said manifolds.

1,393,222. BELT-BUCKLE. LOUIS JAROLL, New York, N. Y., assignor to Cohan-Epner Co., New York, N. Y. Filed May 27, 1921. Serial No. 473,149. 6 Claims. (Cl. 24—230.)

1. In a belt buckle a handle piece and a socket piece, each having an integral front, a pair of flanges in the rear of said socket piece, a pair of slots in said flanges, a pair of elastic spurs in the rear of said handle piece, said spurs

being adapted to engage said slots by the motion of handle piece toward said socket piece, and a means for disengaging said spurs from said slots.

1,393,223. PROCESS OF RECLAIMING USED LUBRICATING-OILS. WALTER L. JORDAN, Glendale, Calif., assignor to Calite Products Company, Los Angeles, Calif., a Corporation of California. Filed Nov. 21, 1916. Serial No. 132,631. 3 Claims. (Cl. 87—9.)

1. The process of reclaiming used lubricating oils which consists in mixing finely divided kieselguhr therewith and subjecting the mixture to filtration under pressure.

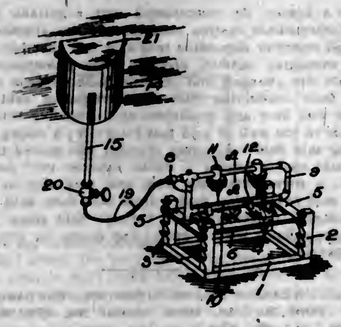
1,393,224. KNOCKDOWN VOTING-BOOTH. WILLIAM H. JOY and HARRY G. PORTER, Lansing, Mich. Filed June 9, 1921. Serial No. 476,907. 8 Claims. (Cl. 20—8.)

2. In a knockdown voting booth structure, the combination of a plurality of units adapted to be disposed side by side, each unit comprising a pair of side members each consisting of corner uprights connected by cross-pieces, a top tie bar pivotally mounted on the top cross-bar of one of said unit side members and detachably connected to the top cross bar of the other side member, a rear tie bar pivotally mounted on the rear upright of one side member of each unit and detachably connected to the rear upright of the other side member of the unit, doors hinged to the front upright of one side member of each unit to close against the front upright of the other side member and adapted to collapse against the side member to which it is hinged, and clamping members for securing the rear uprights of adjacent units together.

1,393,225. HEAT-INSULATING FORMED BODY AND METHOD OF MAKING SAME. ARTHUR H. KRINGEL, Los Angeles, Calif., and WALTER L. JORDAN, New York, N. Y. Filed Nov. 28, 1919. Serial No. 341,228. 6 Claims. (Cl. 106—18.)

1. A heat insulating body comprising finely divided diatomaceous earth bonded by substances such as accumulated therein from the filtration of sugars, formed into the desired shape and dried.

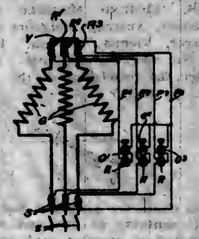
1,393,226. COOLING APPARATUS. HENRY E. LEAVITT, Berkeley, Calif. Filed May 7, 1919. Serial No. 295,439. 2 Claims. (Cl. 62—169.)



1. In a cooling apparatus, a chamber for containing material to be cooled, a partition of porous material

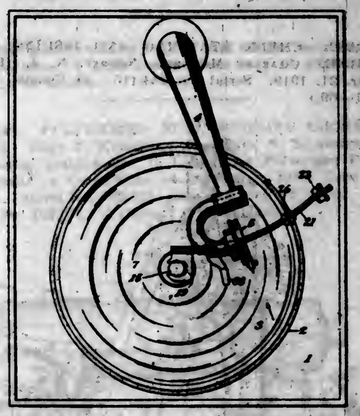
extending across the top of and directly exposed throughout to the interior of said chamber, means for supplying moisture to said partition, means spaced from said parti-

tion and independent of said chamber for forming with said porous partition a vacuum chamber, a vacuum pump communicating with said vacuum chamber and means for operating said pump.



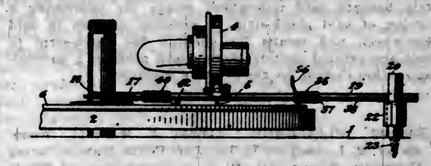
1,393,227. GAS HEATING APPARATUS. JOSEPH LEDUC and NAPOLEON GORBILLE, St. Hyacinthe, Quebec, Canada. Filed Jan. 16, 1919. Serial No. 271,409. 2 Claims. (Cl. 158—63.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a gas heating apparatus, the combination of a polygonal base provided at each corner with an upstanding post formed with a vertical series of teeth; a supporting frame adjustably engaged with said teeth; and a generating pipe mounted on said base and having fuel supply means connected to it.



1,393,228. PROTECTIVE DEVICE FOR ALTERNATING-CURRENT ELECTRIC SYSTEMS. ALBERT EDWARD MCCOLL, Dumbarton, Scotland, assignor of one-half to The General Electric Company Limited, Birmingham, England. Filed Dec. 31, 1919. Serial No. 348,676. 6 Claims. (Cl. 175—294.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In combination, an alternating current circuit, series transformers placed at each end thereof, pilot wires and relays, operation of which is forcibly prevented until the current flowing into said circuit exceeds the current flowing out by an amount which is a definite percentage

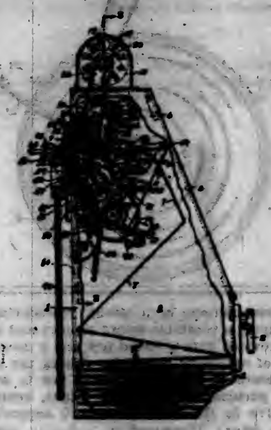


independently of the quantity and direction of the flow of power.

1,393,229. AUTOMATIC REPEATING MECHANISM FOR PHONOGRAPHS. LESLIE R. MCDONALD, Montreal, Quebec, Canada. Filed Mar. 24, 1920. Serial No. 368,264. 14 Claims. (Cl. 274—15.)

1. The combination, in a sound reproducing instrument embodying a rotatable record support and a movable tone-arm provided with a sound box and a record following needle, of automatic means for raising the sound box from the record to permit the sound box to swing outward, and pneumatically checked means, centrally disposed relative to the rotatable record support, for retarding the return descent of such raising means.

1,393,230. AUTOMATIC REPEATING MECHANISM FOR PHONOGRAPHS. LESLIE R. MCDONALD, Montreal, Quebec, Canada. Filed Apr. 10, 1920. Serial No. 372,814. 8 Claims. (Cl. 274—15.)



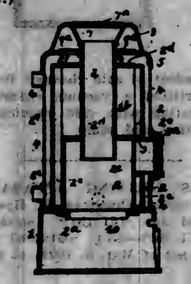
1. The combination, in a sound reproducing instrument, embodying a rotatable record support, movable tone-arm, sound box, and needle, of rotatable, rod-raising means, a slidable and inclinable tone-arm returning rod provided with tone-arm stops, and means adjustably connecting said rod raising means and said rod.

1,393,231. DEVICE OR ARRANGEMENT FOR THE CONTINUOUS MOVEMENT OF ROLLING OR SLIDING BODIES. EDMUND MAGNOLE and HERMANN MARTINEK, Vienna, Austria, assignors of one-third to Adolf Voglmayer, Vienna, Austria. Filed June 10, 1914. Serial No. 844,260. 1 Claim. (Cl. 172—290.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

A device of the character described comprising in combination, a coil, contacts at one end of said coil, a rolling body adapted to connect said contacts, and to close a circuit for exciting the coil, said coil tending to draw said body toward its center, and said contacts forming the pathway for the rolling body and being arranged at such a distance apart that the center of the rolling body is located but slightly above the upper surfaces of the contacts for effecting a rolling of said body at a low rate of speed only, substantially as described.

1,393,282. CHECK STAMPING AND ISSUING MACHINE. CHARLES MAJESKE, Newark, N. J. Filed Mar. 21, 1919. Serial No. 284,115. 18 Claims. (Cl. 101—69.)

1. A check printing and issuing mechanism comprising a type-wheel, a rotary inking roller, an ink-ribbon running over said inking roller and said type-wheel, means for rotating said inking roller to shift said ink ribbon on said type-wheel, means for supporting a portion of a check-strip beneath said type-wheel, means for impressing a portion of said check-strip in printing relation to said type-wheel, and means for shifting the check-strip to eject the printed portion thereof and position a succeeding portion thereof for the printing operation.



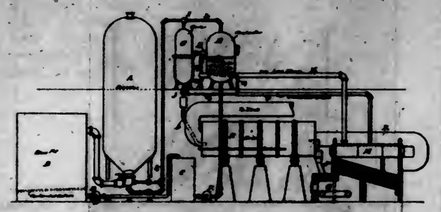
1,393,283. PLUG-GAGE. ALBERT A. MANSELL, Woonsocket, R. I., assignor to The Taft-Peirce Manufacturing Company, Woonsocket, R. I., a Corporation of Rhode Island. Filed Apr. 15, 1918. Serial No. 228,606. 7 Claims. (Cl. 33—178.)

1. As an article of manufacture a gage comprising a body portion a standard gage head on said body portion, a limit gage head on the body portion adjacent the standard gage head, and a pilot head also on the body portion said pilot head comprising a member spaced apart from

the standard gage head and having its work surface comprising a portion of a sphere the diameter of which is slightly less than the diameter of the standard gage head.

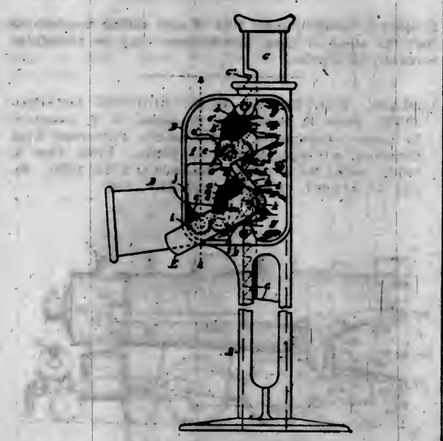
1,393,284. HEATER. FRANK W. MERRITT, Duluth, Minn. Filed Oct. 10, 1919. Serial No. 329,675. 2 Claims. (Cl. 122—157.)

1. In a heater, the combination with a suitable base, of an intermediate casting containing a fire chamber, a hard fuel reservoir depending into said fuel chamber, vertically extending radially disposed flues communicating with said fire chamber and open at their opposite ends, and a fluid conducting chamber surrounding said fire chamber and flues and magazines and extending between said flues to the wall of said fuel reservoir; a casing surrounding said fluid conducting chamber and spaced therefrom, said casing having a smoke exhaust port formed therein; a cover extending from said magazine to said casing, said cover being spaced from said flues, said flues being adapted to communicate through said space with said smoke exhaust port; a grate; and means for covering said magazine.



1,393,285. GLASS. ADOLPH MITROVICH, San Antonio, Tex. Filed May 10, 1919. Serial No. 296,120. 2 Claims. (Cl. 65—13.)

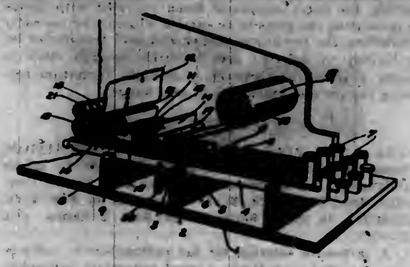
1. A cocktail glass comprising an inner and a flangeless outer receptacle, the inner receptacle having a flat circ-



ular bottom and an outwardly flaring upper portion, the outer receptacle having a flat circular bottom adapted to engage the upper end of the outer bottom and an outwardly flaring upper portion adapted to engage the outer surface of the upper portion of the inner receptacle

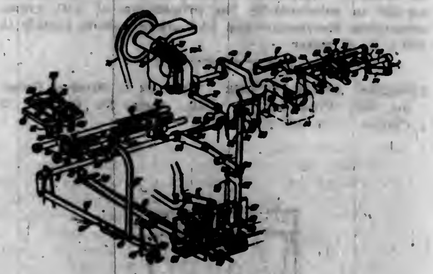
off sulfur dioxid under suitable conditions of temperature and pressure, whereby the lignin and other resinous mat-

ters are precipitated, and using the steam and sulfur dioxid thus produced for cooking wood pulp in a digester.



1,393,242. LIFTING-JACK. ADOLPH PETERLEIN, Freeport, N. Y. Filed Mar. 25, 1920. Serial No. 368,779. 5 Claims. (Cl. 254—111.)

1. A lifting-jack having a toothed lifter-bar, a holding detent having a stationary pivot and side stud, a hand-lever, with lifting-pawl pivoted thereon, a bell-crank journaled upon the pivot of the detent a having a long arm and spring to hold the detent in an inoperative position and a short arm for actuation, a reverse crank extended by the side of the lifting-pawl and having a multiplying arm much longer than that upon the bell-crank to multiply the movement of the bell-crank, a stud projected from the lifting-pawl into the plane of the reverse crank and operating when the pawl is moved downward to press upon the reverse crank and turn its multiplying arm against the arm of the bell-crank, all constructed and operated substantially as set forth.

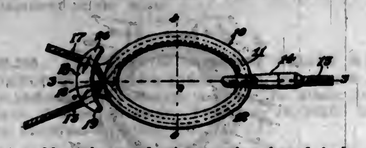


1,393,243. PERFORATOR. EDWIN H. PIERSEN, Topeka, Kans., assignor to The Piersen Manufacturing Company, Topeka, Kans., a Corporation of Kansas. Carved out of the application on which Patent No. 1,289,900 was granted on Dec. 31, 1918, and filed after grant of that patent. Renewed Aug. 25, 1921. Serial No. 495,262. 6 Claims. (Cl. 164—112.)

1. A perforator comprising a plurality of digitally operated levers, each lever having character indicia on one end and a corresponding character on the opposite end, a complementary die member cooperating therewith,

and means for conducting a tape between the die members.

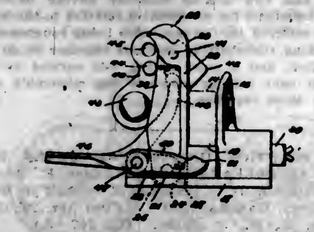
1,393,244. COMBINED TYPEWRITER AND COMPUTING MACHINE. HENRY L. PITMAN, Elizabeth, N. J., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Apr. 11, 1918. Serial No. 227,976. 83 Claims. (Cl. 235—59.)



1. The combination with a traveling carriage, of type-keys, means operated by the keys to cause letter-feeding movements of said carriage, means rendered effective by said carriage for returning said carriage to its initial position, and means for preventing the return of said carriage during the actuation of said keys.

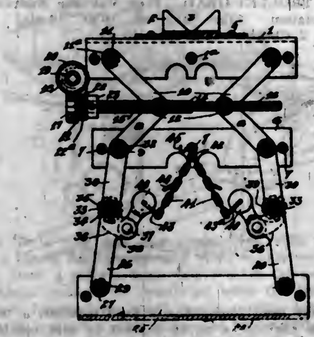
20. In a combined typewriting and computing machine, the combination with a traveling carriage, of a totaliser traveling with said carriage, and comprising computing wheels arranged in groups to provide punctuation spaces, a master wheel cooperating with said computing wheels, means for returning said carriage to its initial position, and means for preventing the return of said carriage when said master wheel is opposite one of said punctuation spaces.

42. In a combined typewriting and computing machine, the combination with a carriage, of a decimal-tabulating mechanism for said carriage, a plurality of keys whereby said decimal-tabulating mechanism may be actuated, means for automatically returning said carriage to its initial position, and means for preventing the return of said carriage when a key is in actuated position.



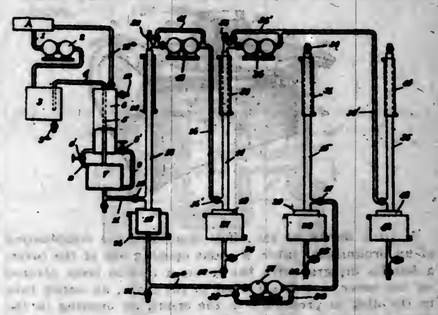
83. In a combined typewriting and computing machine, the combination with a carriage, of tabulating means for positioning said carriage, means, including a manually-operable key, for causing a return movement of said carriage to its initial position, and means for preventing the return of said carriage when said key is operated during the actuation of said tabulating means.

1,393,245. CABLE-HOLDING DEVICE. JOHN HENRY ROSENBERRY, Elmira, Idaho. Filed Nov. 27, 1920. Serial No. 426,800. 3 Claims. (Cl. 24—129.)



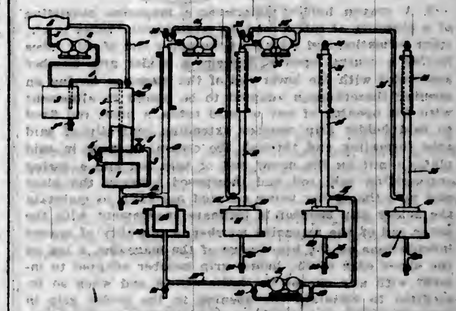
3. A cable take-up having a ring-shaped body provided with an integral outwardly projecting extension presenting a substantially flat surface for the crossed extensions of a cable loop, said body having a peripheral groove for the reception of a cable loop at one side of the said crossed extensions, and a transverse guide at the outer end of said extension having its ends projecting beyond opposite sides of the extension to receive therebeneath the extensions of the cable loop at the opposite side of said crossed extensions thereof.

1,393,246. AUTOMATIC SAFETY SPRING-LATCH. NEIL E. SALSICH, Bethlehem, Pa. Filed May 14, 1920. Serial No. 381,340. 15 Claims. (Cl. 70—128.)



15. In a locking mechanism for switch levers the combination with a guide member of a latch supporting member spaced therefrom to receive the lever arm, an automatic latch on said supporting member movable thereon to a limited extent and normally resting by the action of gravity at one limit of its movement in position to lock the lever arm against upward movement but moving freely to admit the lever arm, a foot lever for moving said latch to open position freely movable therewith in either direction but having a part which moves upwardly into the path of said lever arm just above the lower limit of its movement as the latch approaches the limit of its opening movement.

1,393,247. LIFTING-JACK. JOHN GEO. SAUER, Rochester, N. Y. Filed Feb. 16, 1920. Serial No. 359,500. 7 Claims. (Cl. 254—126.)



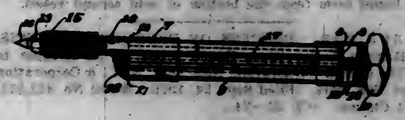
1. In a lifting jack, a lifting member formed of two angle irons arranged in spaced relation, each having a flange projecting outwardly in a plane with the outwardly projecting flange of the other member, a supporting frame, a toggle connecting the supporting frame with the lifting member, and a block detachably secured to the flanges of the lifting member and formed with intersecting notches.

1,393,248. PROCESS OF PRODUCING OLEFINS. HAROLD F. SAUNDERS, Bound Brook, N. J., assignor to The Glycyn Corporation, New York, N. Y., a Corporation of New York. Filed May 6, 1920. Serial No. 379,318. 1 Claim. (Cl. 23—24.)

The process of producing propylene, comprising, subjecting a liquid containing paraffins with higher olefins and propylene and inert gases held in solution therein to a pressure of from 15 to 20 atmospheres in a vessel the lower end of which is maintained at a temperature of about 80° C. while the upper end is maintained at a temperature of about 10° C., passing the gas which separates from the liquid into another vessel which is maintained at the same pressure as the first vessel and at a temperature varying from about 0° C. at the bottom to minus 70° C. at the top, and drawing off propylene in liquid form from the bottom of said second vessel.

1,393,249. PROCESS OF PRODUCING OLEFINS. HAROLD F. SAUNDERS, Bound Brook, N. J., assignor to The Glycyn Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 24, 1920. Serial No. 412,511. 2 Claims. (Cl. 23—24.)

1. The process of producing propylene, comprising, subjecting a liquid containing paraffins with higher olefins and propylene and inert gases held in solution therein to a pressure of from 25 to 35 atmospheres in a vessel the lower end of which is maintained at a temperature of about 80° C. while the upper end is maintained at a temperature of about 10° C., to separate the liquid into a liquid portion and a gaseous portion, passing the



liquid portion into another vessel, which is maintained at a pressure between 1 atmosphere and 25 atmospheres, and at a temperature grading from between 0° C. and 30° C. at the bottom to between about 25° C. and 0° C. at the top, and drawing off propylene in gaseous form from the top of said second vessel.

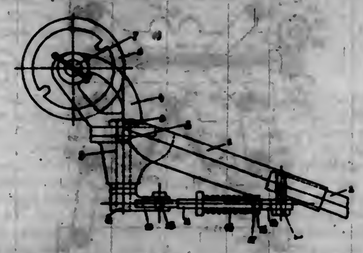
1,393,250. SAFETY MILK-CAN SPOUT. Wilson F. Shamhaven, Wheeling, W. Va. Filed May 6, 1920. Serial No. 379,321. 8 Claims. (Cl. 221—23.)

1. In a device of the class described, the combination of an ornamental cover, a spout opening out of the cover, a handle integral with the cover, a release lever pivoted on the cover, a disk attached to the cover, an outlet tube in the disk in proximity to the spout, an opening in the disk, stoppers mounted on the release lever and normally closing the outlet tube and the aforesaid opening in the disk, resilient means normally holding the release lever in closed position, and a cam penetrating shaft having an auger member on its lower end and a turning knob on its upper end.

1,393,251. MAGAZINE-CRAYON. Frank E. Small, Jamaica, N. Y. Filed Mar. 25, 1920. Serial No. 368,480. 11 Claims. (Cl. 120—14.)

8. A crayon holder comprising a magazine consisting of a plurality of tubes, ferrules retaining the tubes in circular formation and a plate at the upper end of said tubes having a central opening therein, a holder grip member associated with the lower end of the magazine having an opening therethrough adapted to be placed in alinement with the opening of any of said tubes, a pivot rod fixed to said holder grip member extending centrally of said tube formation and through the central opening in said plate, a nut on the upper end of said rod and a spring surrounding said rod and interposed between the plate and nut, the spring being adapted normally to maintain the holder grip member in intimate engagement with the lower end of the magazine member, a plurality of spaced indentations on the lower edge of the magazine, a lug on the upper edge of the holder grip member adapted to interfit with any one of the indentations and when so interfitted to maintain the opening in the holder grip in alinement with one of said tubes, a supplemental indentation on said magazine spaced between a pair of said before-mentioned indentations adapted to receive said lug and when interfitted with said lug to maintain the opening in the holder grip member out of alinement with any of the tubes, the interfitting lug and indentations being of such contour as to permit the holder grip member to be moved against the resistance of the aforesaid spring to disengage the lug and an indentation.

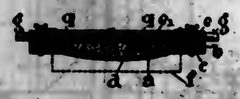
1,393,252. FLEXIBLE MUD-LEG. Frank M. Syvrud, Forsyth, Ill. Filed Apr. 8, 1920. Serial No. 372,204. 1 Claim. (Cl. 152—14.)



A flexible mud leg consisting of a tread device having a concaved plate for engaging the tread of the tire, the opposite ends of which are slotted, two flexible links, one mounted in each of said slots, two slotted plates flexibly connected to each link and adapted to be disposed upon opposite sides of the tire, the outer faces of which are roughened, and two locking members having flattened and slotted terminals for companative relation to the outer faces above referred to, the same also being roughened, a bolt for locking the abutting portions together in an adjusted position, and a quick acting lock carried by the terminals of said locking members for removably connecting the same together.

1,393,253. SOLUTION-IDENTIFYING MEANS FOR MEDICINAL PREPARATIONS. Millard F. Thompson, Washington, D. C., assignor of one-half to Helge O. H. Murray, Washington, D. C. Filed Apr. 23, 1915. Serial No. 23,471. 2 Claims. (Cl. 167—3.)

1. A tablet of soluble material for use in forming antiseptic solutions or washes, and a tag embedded in the tablet of a material insoluble in the solution and unaffected by the ingredients of the tablet, said tag being adapted to remain in the solution, and bearing a legend which serves to identify the solution, and also to warn against accidental ingestion of the tablet.

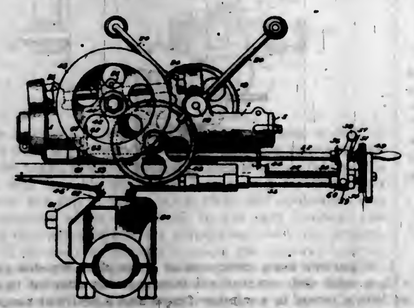


1,393,254. TROLLEY-HEAD. Ivan Van der Straeten, Liege, Belgium. Filed May 24, 1920. Serial No. 383,878. 2 Claims. (Cl. 191—60.1.)

1. A trolley head comprising a fixed member, a member rotatable thereon, a pulley carried by said rotatable member, and resilient means connecting said fixed and rotatable members adapted to return said rotatable mem-

ber to normal position when displaced therefrom, the point of connection of said resilient means with said rotatable member varying according to the direction of angular displacement of the latter.

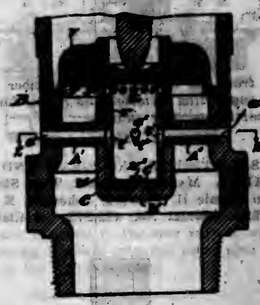
1,393,255. PROCESS OF FORMING RELIEF MAPS, PICTURES, AND THE LIKE. Karl Wenschow, Berlin-Lichterfelde, Germany, assignor to Albert Deichmann, Cologne, Germany. Filed July 14, 1919. Serial No. 310,872. 6 Claims. (Cl. 41—24.)



1. The process of forming relief maps, etc., which consists in mounting the pattern in a frame, moistening it to render it stretchable, pouring a plastic mass on the back of the pattern, and molding the stretched pattern according to the image thereon.

1,393,256. BICYCLE-PEDAL. Chester D. Wright, Denver, Colo. Filed Aug. 12, 1919. Serial No. 317,291. 2 Claims. (Cl. 280—70.)

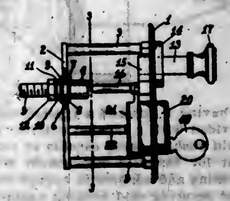
1. In a bicycle of the character described, the combination of the rotary driving shaft, a coaster transmission between the shaft and the driven wheel, and oppositely extending unequally weighted pedal cranks at the ends of the shaft.



1,393,257. ROCK-DRILL. James C. Wright, Colorado Springs, Colo. Filed Aug. 26, 1919. Serial No. 319,884. 10 Claims. (Cl. 255—42.)

1. In a rock drill the combination with a drill-steel, of a chuck for holding said steel, a hammer for driving the steel, a main driving shaft, means for actuating said hammer operatively connected with the main shaft, a power transmitting shaft, worm gearing connecting said shafts, a driving gear upon said transmitting shaft, and a driven gear, surrounding the drill chuck for rotating the same by engagement with said driving gear.

9. A rotatable chuck for drill castings comprising in combination an outer cylindrical chuck member, an inner chuck member reciprocally mounted within said outer member and adapted to rotate therewith, a compression spring interposed between shouldered surfaces upon both chuck members, and a perforated closure for the rear end of said outer chuck member.



1,393,258. SAFETY-VALVE. Alfred B. Carbart, Winchester, Mass., assignor to Crosby Steam Gage & Valve Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 18, 1919. Serial No. 337,760. 4 Claims. (Cl. 137—53.)

1. In a safety-valve of the plural seat class, the combination of escape apertures communicating with the inner seat-aperture, a tubular extension on the valve disk provided with means directly associated with said escape apertures, to constrict their effective cross-section as the valved disk rises and means associated with said

---

1,393,259. BATTERY SWITCH-LOCK. Victor Carosso, Oakland, Calif. Filed Jan. 24, 1920. Serial No. 353,870. 1 Claim. (Cl. 200—44.)

A switch lock including a front and a rear plate connected together, socket contacts on said rear plate, a stud reciprocatively mounted in said front plate, a bus bar mounted on said stud, pins on said bus bar in alinement with said socket contacts, and a lock mounted on said front plate, said lock including a swinging arm adapted to be swung into the path of said bus bar to prevent the introduction of said pins into said socket contacts.

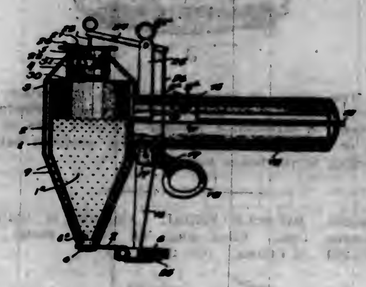
1,393,260. TOOL-CHUCK. James Carr, Syracuse, N. Y. Filed July 29, 1920. Serial No. 399,691. 4 Claims. (Cl. 279—6.)

1. A tool chuck comprising a head having a diametrically extending opening therethrough, a tool-supporting member slidable endwise in said opening and provided with a lengthwise groove, a ribbed member movable in an opening in the head at one side of said member and projecting into said groove to hold the tool-supporting member against

turning, a set screw movable in the threaded opening in the head for tightening and releasing the ribbed member

against and from the tool-supporting member for clamping said tool-supporting member, and means for adjusting the tool-supporting member endwise.

1,393,261. SELF-TIGHTENING GEAR AND PULLEY ATTACHMENT. MARION R. CASEY, Ware Shoals, S. C., assignor to Mamie H. Flowers, Asheville, N. C. Filed Nov. 6, 1920. Serial No. 422,272. 4 Claims. (Cl. 287—52.)

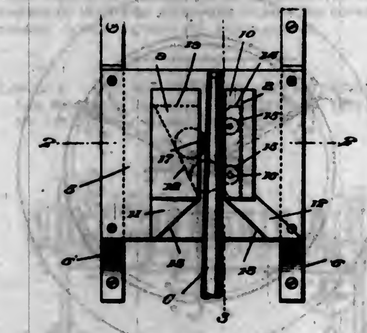


1. A wheel having a hub and a tapered central opening, a bushing provided with a tapered exterior and split longitudinally, said bushing being capable of rotation in said opening, a nut for threaded engagement with the small end of said bushing and adapted to engage the face of said hub, means for securing said bushing against rotation on a shaft, and means for securing said nut to said hub.

1,393,262. NECKTIE-HOLDER. JOHN T. CLARK, Provo, Utah. Filed Nov. 9, 1920. Serial No. 422,842. 3 Claims. (Cl. 24—57.)

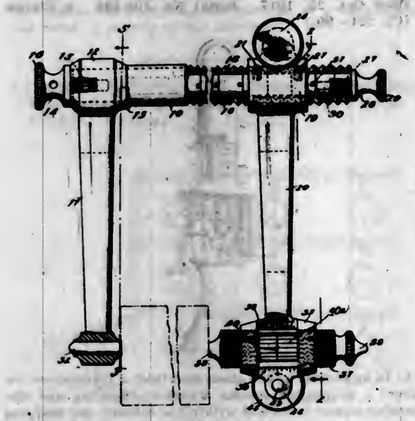
2. A necktie holder comprising a piece of spring wire having a button engaging loop medially therein, said loop containing oppositely located bends adapted to straddle the stem of the collar button, and one or more side loops in each free end of the wire, and resilient means connecting a pair of said side loops.

1,393,263. WAX MELTING MACHINE AND SEAL MAKER. JESSE ALEXANDER CLIFTON, Orangeburg, S. C. Filed June 21, 1920. Serial No. 390,573. 9 Claims. (Cl. 120—116.)



8. A wax melting machine and seal maker comprising a container for wax, said container having a restricted outlet and having a handle extending laterally therefrom, a closing plate for the restricted outlet, a pivotally mounted bell crank, one of the arms of the bell crank having a finger piece for swinging said bell-crank and the other carrying a seal supporting member, the closing plate being connected with the seal supporting member to be actuated therewith, and means controllable at will for heating the wax.

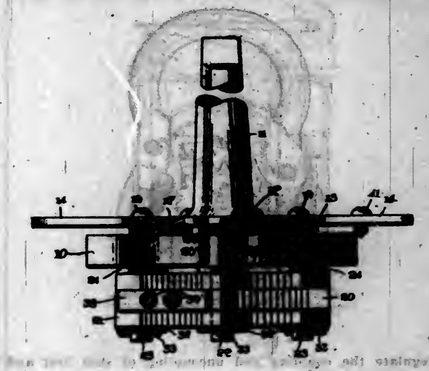
1,393,264. COMBINED PARTING-BEAD AND WEATHER-STRIP. WARREN W. COLE, Portland, Me., assignor to The E. T. Burrowes Company, Portland, Me., a Corporation of Maine. Filed July 24, 1918. Serial No. 246,580. 3 Claims. (Cl. 20—52.4.)



1. A parting bead, composed of a one-piece wooden rail with a solid and non-resilient inner portion adapted to be set into a recess in a window frame and a resilient tongue projecting outward from said solid portion and integral therewith, said tongue having a cushion strip fixed at one side thereof and extending the length of the bead to constitute a weather strip, said resilient tongue serving as a sash retaining means, and said inner solid portion having another projection outward therefrom at the opposite side of said tongue from said cushioning strip to serve as a guard and protector for said tongue.

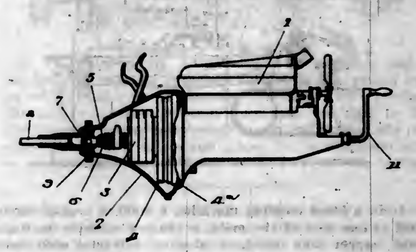
1,393,265. BILLIARD-CUE HOLDER. ARTHUS E. COOPER, Beacon, N. Y. Filed Mar. 22, 1921. Serial No. 454,599. 3 Claims. (Cl. 24—244.)

1. A holder of the kind described having rollers supported in vertically spaced positions for the engagement of a cue or stick, and a gravity member opposite to said rollers for binding against said cue or stick and clamping it against said rollers.



1,393,266. MICROMETER-CALIPER. GEORGE COUSINS, Oswego, N. Y. Filed Dec. 10, 1919. Serial No. 343,738. 3 Claims. (Cl. 33—165.)

1. A micrometer caliper comprising a beam, a pair of caliper legs, one of which is rigidly mounted in connection with the beam, and the other of which is adjustable on the beam, said movable leg having a threaded bearing at its free end, one side of which is cut away and calibrated, and a micrometer screw adjustable in the said bearing, and having indicating means for coöperation with the calibrations of the bearing exposed through the cutaway portion of the bearing, said bearing being split to permit of readily shifting the screw into and out of place, and clamping means normally holding the split portions in operative relation for adjusting movement of the screw.

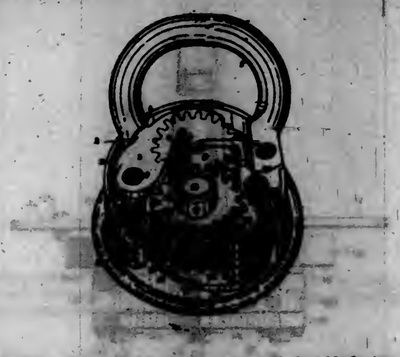


1,393,267. STAYBOLT-CHUCK. GEORGE COUSINS, Oswego, N. Y. Filed Dec. 23, 1920. Serial No. 432,736. 7 Claims. (Cl. 81—53.)

1. A chuck of the type described including a face plate having cam slots, jaw forming members consisting of toothed arms in endwise overlapping relation at the front surface of the face plate, pivot pins extending through the overlapping ends of the jaws and certain of which pins are

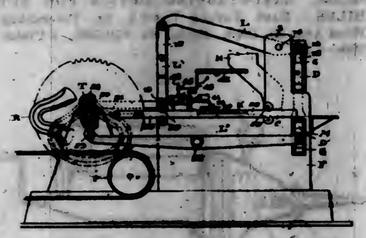
extended rearwardly through the cam slots of the face plate, and means adjacent to the rear surface of the face plate and engaging the said extended pivot pins for shifting the latter in the face plate slots.

1,393,268. EASY-STARTING DEVICE FOR AUTOMOBILES. EARL TAYLOR CROWN, St. Petersburg, Fla. Filed Aug. 25, 1919. Serial No. 319,538. 1 Claim. (Cl. 290—1.)



The combination of an engine, a transmission gearing having a socket member, a magneto, part of which is carried by said gearing, a propeller shaft, a universal joint connected to said propeller shaft and having a stub fitted removably in said socket member, and a ring fitted removably on said stub to shift said socket member and part of the magneto, to hold the parts of the magneto close together when starting the engine.

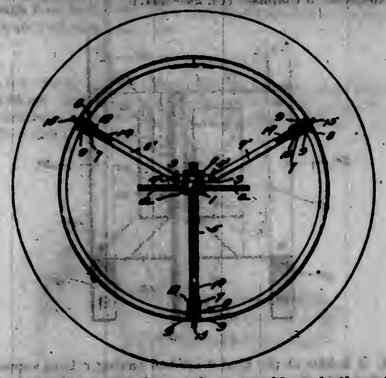
1,393,269. PERMUTATION-LOCK. EUGÈNE MAURICE OCTAVE DESCALLES, Paris, France, assignor to D. O. T. Societe Anonyme pour l'Exploitation des Brevets Descalles, Liege, Belgium. Filed Nov. 14, 1919. Serial No. 337,933. 5 Claims. (Cl. 70—112.)



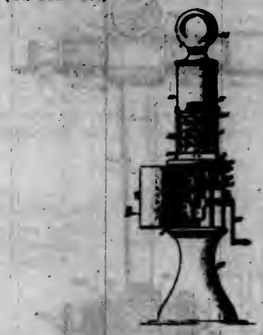
1. In a permutation lock, the combination, with a shackle and a locking element engageable therewith; of a permutation mechanism for controlling the engagement and disengagement of the locking element, comprising a series of superposed wheels, an operating knob connected to one permutation wheel, a projection on said wheel, a slide carried by another permutation wheel and having teeth for engagement by said projection to

releasably couple the first and second wheels together, means for controlling the movements of the shaft to

regulate the coupling and uncoupling of said first and second wheels, and means for releasably coupling the second wheel to a third permutation wheel.



1,393,270. BLOCK-MOLDING MACHINE. JAMES S. DOWNARD, Ardmore, Okla. Filed Dec. 1, 1920. Serial No. 427,605. 6 Claims. (Cl. 25—103.)



1. In a block molding machine, a mold, a hopper above and at one side of the mold, a charger movable between said hopper and mold, a shutter movable with said charger in a manner to prevent a discharge of material from said hopper when the charger is displaced from the discharge end of the hopper, a carriage mounted for reciprocating movement and operatively connected to said shutter and charger, a rake mounted for reciprocating movement within the charger, and means mounted on said carriage for actuating said rake.

1,393,271. COMBINATION LIFTING-JACK AND TIRE EXPANDER AND CONTRACTOR. JOHN DEHNE and LAWRENCE A. OLMACHENK, Mispah, Minn. Filed Aug. 11, 1919, Serial No. 316,695. Renewed July 12, 1921. Serial No. 484,192. 2 Claims. (Cl. 157—1.)

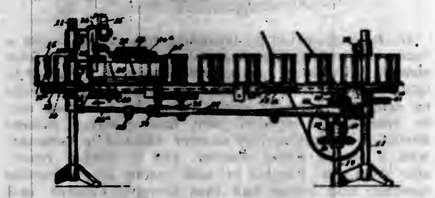
In a device of the character described and in combination, a threaded collar having a circumscribing groove, a threaded bar held in said collar, a hand held to said collar comprising two similar half sections each having two apertured ends, a pin in each of said ends, an arm pivotally held on each of said pins, a threaded stem passing through the outer end of each of said arms and said threaded bar, two oppositely positioned right angular ears, held on said stems, a head fixed to said ears, each head having a set of two outwardly directed supporting ears with an intervening step shoulder, a pin in each

end of each, a finger held on each of said pins, each finger ending in a clasping ear, a rod on the ends of said stems

to hold said ears and a spring on said projecting stem ends each spring forcing one of said fingers outwardly against a step shoulder, as and in the manner set forth.

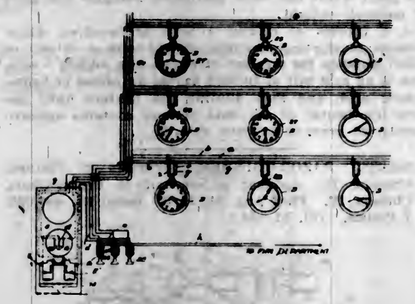
1,393,272. LIQUID MEASURING AND DISPENSING APPARATUS. WILLIAM H. DUTTON and CLAYTON H. SHOUP, Cedar Rapids, Iowa, assignors to The Tokheim Oil Tank and Pump Company, a Corporation of Indiana. Filed Oct. 25, 1917. Serial No. 198,493. 8 Claims. (Cl. 221—90.)

1. In apparatus of the class described, a transparent receiver; a supporting column therefor; charging and discharging means contained within the column, the charging means having a movable part; and a hood having pendant members and adapted to shield the receiver, said members being adapted to contact with the movable part of the charging means whereby the hood becomes elevated as the receiver is charged.



1,393,273. SUITCASE. RAMFORD ELLIOTT, Worcester, Mass. Filed Jan. 21, 1921. Serial No. 438,867. 5 Claims. (Cl. 190—54.)

1. As an article of manufacture, a suitcase having a frame and a covering, a binding covered along and cover-

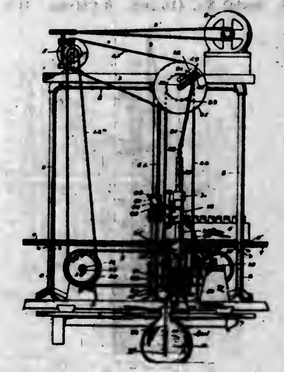


ing the edge of said covering, and a tipping sewed to the binding and covering, projecting inwardly over the outer edge of the frame, and being secured to the inner surface of the frame all around to hold the covering and binding tightly against the frame outside.

1,393,274. ART OF FORMING CONTAINERS. JOHN LEE FERGUSON, Joliet, Ill. Filed July 16, 1919. Serial No. 311,247. 44 Claims. (Cl. 93—55.)

1. In apparatus for producing an assembly of container-forming elements and wherein a cap is adhesively secured to one of the open ends of a tubular body portion member, a continuously traveling support for the member, means for supplying the adhesive to the traveling member, means for rotating the member during application of adhesive, a cap-supplying station through which the member travels and wherein the cap is located on the member, and means for rectifying the position of a mispositioned cap prior to setting of the adhesive.

1,393,275. ANNUNCIATOR. HECTOR ALBERT FRANE, Hood River, Oreg. Filed Nov. 1, 1919. Serial No. 335,663. 4 Claims. (Cl. 161—2.)

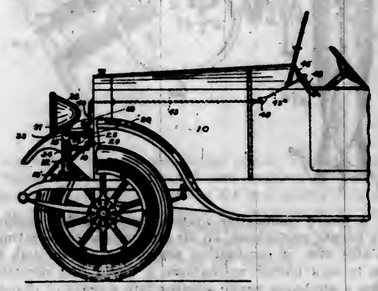


1. A device of the character described comprising a series of open circuits, a second series of open circuits, a plurality of signal stations interposed in said circuits, means for alternately closing the first mentioned series of circuits at one point and the second mentioned series of circuits, a plurality of signal stations interposed in said circuits, means carried by each station for closing one of the circuits of the first mentioned series at another point, and means for simultaneously closing all of said circuits at all points.

1,393,276. FILLING-MACHINE. AUBREY V. FULLER, New York, N. Y. Filed Mar. 16, 1920. Serial No. 366,245. 13 Claims. (Cl. 226—99.)

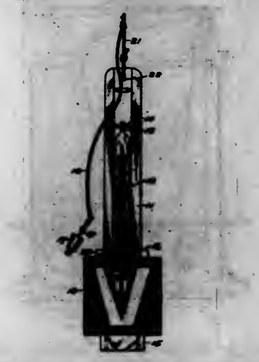
1. In a filling machine, the combination of means for moving the receptacles to be filled, said means consisting

of a conveyer, and a tray carried thereby, means for engaging the tray and arresting the movement thereof, and



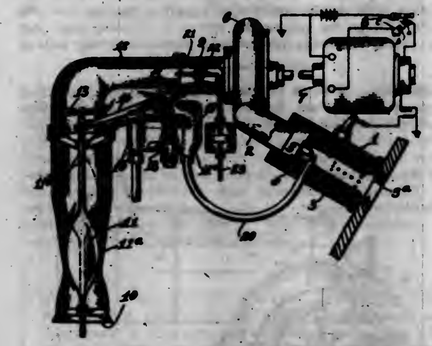
means for discharging measured quantities of a liquid into said receptacles.

1,393,277. PLATEN-CLUTCH FOR TYPEWRITING-MACHINES. CARL GABRIELSON, Syracuse, N. Y. Filed Feb. 5, 1919. Serial No. 275,175. 9 Claims. (Cl. 197—123.)



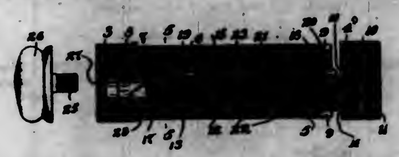
1. The combination with a typewriter platen and a ratchet ring thereon of rollers carried by the platen and on which said ring is mounted and means for crowding the rollers in their raceway to clamp the ring to the platen, said means comprising a part extending into the race between the rollers and means for turning said part to exert separating pressure on and crowd the rollers.

1,393,278. MOTOR-VEHICLE HEADLIGHT. FOREST G. GAUNTT, Fort Wayne, Ind. Filed Dec. 18, 1919. Serial No. 345,713. 9 Claims. (Cl. 240—61.)



5. The combination with a vehicle, of a plurality of headlights pivotally supported on the vehicle, means having connection with the headlights for rotating them simultaneously laterally, and means having connection with each headlight for causing the same to tilt as it is rotated and being adjustable to control the direction of said tilting movement independently of the other headlight.

1,393,279. TEMPERATURE-INDICATING DEVICE. ALBERT L. GRASDORFF, Bartlesville, Okla. Filed Oct. 12, 1920. Serial No. 416,366. 6 Claims. (Cl. 73—52.)

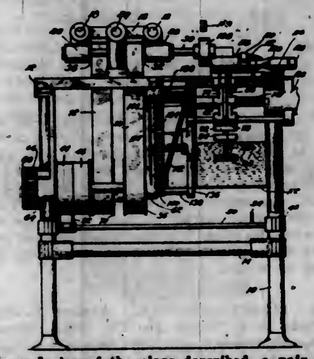


5. In a device of the kind described, a hollowing casing formed of heat insulating material having an opening in the top thereof, a plug frictionally engageable in said opening to close the same, a suspension cord connected to and adapted to withdraw said plug, a thermometer extending through the wall of the casing, and a flexible strand connecting cord and a fixed part of the device and arranged to be loose when the plug is engaged in said opening.

1,393,280. BURNER-REGULATION SYSTEM. JOHN GOOD, Garden City, N. Y., assignor to Good Inventions Co., New York, N. Y., a Corporation of New York. Continuation in part of application Serial No. 86,455, filed Mar. 24, 1916. Patent No. 1,267,760, dated May 28, 1918. This application filed Jan. 4, 1918, Serial No. 210,298. Renewed Mar. 5, 1921. Serial No. 449,744. 16 Claims. (Cl. 158—28.)

1. A forced combustion system for liquid fuel comprising a burner mechanism, an air pipe, means for creating a regulable flow of combustion supporting air through the same to said burner mechanism, a liquid fuel receptacle having a discharge nozzle opening into a space or chamber in communication with said air pipe so as to be subject to the pressure condition therein and a transfer pipe conducting liquid fuel from said chamber separately from the air flow in said air pipe to said burner mechanism, the said parts being organized and arranged to discharge liquid fuel to said transfer pipe in a predetermined and substantially constant proportion to the rate of air flow in said air pipe.

1,393,281. ELECTRIC FUSE. FRANK E. WILLEY, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Nov. 16, 1916. Serial No. 131,690. 17 Claims. (Cl. 200—131.)

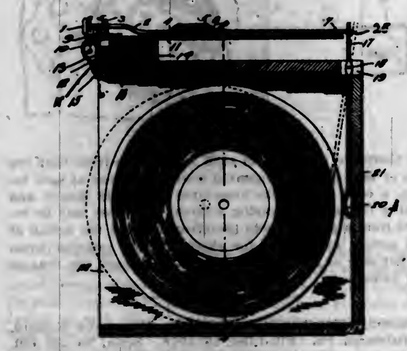


10. In combination, an insulating fuse casing having a conducting end member adapted to coöperate with a socket member, a unitary fuse carrying element disposed in said casing and reciprocable therein, a fuse thereon, means on said fuse carrying element whereby said fuse may be renewed or replaced, said fuse carrying element having a conducting end member adapted to coöperate with a second socket member, and a member removable from the exterior of said casing for connecting together said casing and fuse carrying element, said fuse carrying element being constructed and arranged to expose said means whereby the fuse element may be renewed or replaced upon removal of said member and withdrawal of said fuse carrying element from said casing.

1,393,282. PRESERVATIVE FOR MILK. GEORGE GRINDROD, Kent, Wash., assignor to Carnation Milk Products Co., Seattle, Wash., a Corporation of Maine. Filed Jan. 7, 1918. Serial No. 210,617. 5 Claims. (Cl. 99—1.)

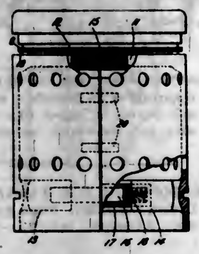
3. A process of making a milk preservative which consists in heating a mercuric chlorid with sodium chlorid and the desired amount of water, then adding a solution of fuchsin hydrochlorid acidified with hydrochloric acid, sufficient to make approximately one per cent. of fuchsin in the finished product, and then diluting the mixture to the point where one cubic centimeter contains one gram of mercuric chlorid.

4. A process of making a milk preservative, which consists in treating mercuric chlorid with a chlorid of alkali metal in the presence of water, then adding a solution of an acid salt of fuchsin having an excess of hydrochloric acid, and then diluting the mixture until one cubic centimeter of the final product contains approximately one gram of mercuric chlorid.



1,393,283. RAZOR-GRINDER. STEPHEN O. HEINDL, Chicago, Ill., assignor of one-half to Ernest Zeits, Chicago, Ill. Filed Aug. 21, 1920. Serial No. 406,060. 7 Claims. (Cl. 51—84.)

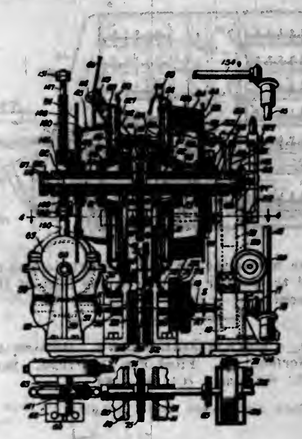
2. In a device of the class described, a pair of grinding wheels, a carriage adapted to carry a piece of work



to and fro between said wheels, automatic cam means for reciprocating said carriage, and manual means for limiting the reciprocatory displacement of said carriage simultaneously with its operation.

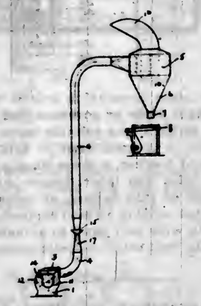
1,393,284. PHONOGRAPH-RECORD-CABINET ATTACHMENT. GEORGE M. HENRY, Pullman, Wash. Filed Nov. 9, 1920. Serial No. 422,788. 1 Claim. (Cl. 211—16.)

In a phonograph record attachment, the combination of a cabinet adapted to be inserted in the record compartment of a phonograph, said cabinet having a series of closely spaced vertical partitions, forming compartments each of which is of suitable size for one disk record, a series of ejecting levers, pivotally mounted at the rear of the cabinet one for each compartment, and a spring-controlled and forwardly pressed forked rod slidably mounted on the top of the cabinet adapted to releasably engage any one of the ejecting levers and operate same.



1,393,285. PISTON. JOHN ROBERT HOBBS, London, England. Filed June 15, 1920. Serial No. 389,193. 5 Claims. (Cl. 74—108.)

1. A piston comprising a head formed with a tubular sleeve and a detachable slipper formed in two parts, each part of the slipper having a pin projecting therefrom to seat in the tubular sleeve.

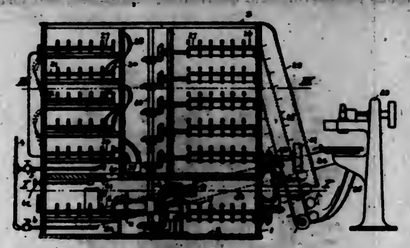


1,393,286. REELING-MACHINE. WILLIAM F. HOSFORD, Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 3, 1918. Serial No. 210,135. 12 Claims. (Cl. 242—25.)

1. In a continuously operating wire reeling machine, a continuously driven supporting member, a pair of receiving reels removably mounted for replacement upon said supporting member, a material distributing means, means for shifting said distributing means back and forth

from a full to an empty reel in the operation of the machine, and a gripping means associated with each of said reels to secure the wire to the empty reel at each shift of said distributing means.

1,393,287. APPARATUS FOR CAP-STEMMING RAISINS. THOMAS B. HUNTER, San Francisco, Calif. Filed Nov. 22, 1920. Serial No. 425,593. 5 Claims. (Cl. 146—5.)



1. Apparatus for cap stemming raisins and the like, comprising a duct constructed and adapted to receive raisins therein, means for forcing air and raisins through said duct, a receptacle of relatively large capacity into which the duct is adapted to discharge the air and raisins, and a surface over which the raisins are forced whereby the capstems are separated from the raisins.

1,393,288. CANNING MACHINERY. FRANK O. HUTTON, Sacramento, Calif. Filed June 30, 1920. Serial No. 393,007. 9 Claims. (Cl. 126—272.)

1. A combined exhausting and cooking machine comprising a pair of annular compartments one superimposed above the other and both within a steam chamber, can con-

veying means in each compartment, an inlet and outlet for each compartment and means external to said chamber

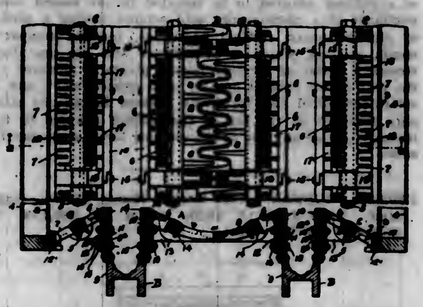
adapted to receive the can from the outlet of one compartment and to transfer said can to the inlet of the other compartment.

1,393,289. CENTRIFUGAL BRAKE. HOWARD A. JOHNSON, Norfolk, Va. Filed Feb. 16, 1920. Serial No. 359,073. 8 Claims. (Cl. 188—184.)

5. A centrifugal brake or governor, comprising, a housing adapted to be fixed to a suitable support and having a transverse plate, a bearing fixed to said plate, a roller journaled on said bearing, a drum fixed to said plate and provided with outer and inner flanges, a brake-band contacting with one of said flanges, an annular support for said band, pivoted weights on said support, means connecting said weights with said band to actuate the same, and a part connecting said roller and said support to rotate the latter.

1,393,290. TREATMENT OF METALS AND THEIR SURFACES. BELA A. KELLER, Newark, N. J., assignor of one-third to Marion E. Messersmith, Newark, N. J., and one-third to Moses E. Stern, New York, N. Y. Filed May 28, 1919. Serial No. 300,273. 6 Claims. (Cl. 91—68.)

1. A method of treating the surface of a base of metal, which consists in treating the surface of said base of metal, first to a solution of shellac, denatured alcohol and ether, and secondly, to a solution of celluloid or analogous material, and acetone.



1,393,291. REAR SIGNAL DEVICE FOR VEHICLES. FREDERICK C. S. KNOWLES, Freeport, N. Y. Filed June 28, 1920. Serial No. 392,394. 3 Claims. (Cl. 116—64.)

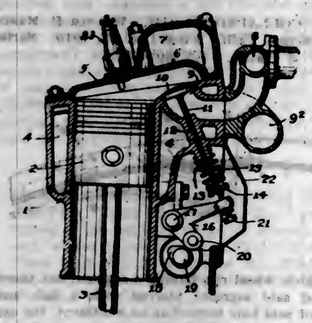
1. A rear signaling device for vehicles comprising a casing adapted to be mounted in conspicuous location at the rear of the vehicle, a rotatable post having bearings in said projecting from said casing, a significative wing-like plate carried by said post, a sheave within said casing, means which at the same time connect said sheave and said post and serve to retain said post in its bearings in said casing, a spring adapted to yieldingly retain said sheave

and therefore said post in such rotative position that the edge of said plate is presented toward the rear of said vehicle, a cord or the like associated with said sheave and passing through said casing whereby said post may be rotated from a point remote therefrom against the action of said spring, and means for checking such rotation when the flat side of said plate is presented toward the rear of said vehicle.

1,393,292. UNDERFEED STOKER. FREDERICK KOSSIE, Pittsburgh, Pa. Filed Dec. 19, 1918. Serial No. 267,480. 6 Claims. (Cl. 110—44.)

5. In an underfeed stoker, the combination of a grate, a feed trough constructed to provide a means of support for said grate and having an upper edge portion disposed in contiguity with but removable independently of said grate.

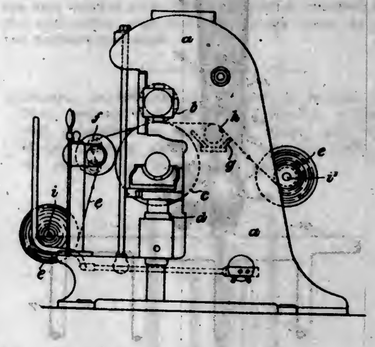
1,393,293. REPRODUCER FOR TALKING-MACHINES. WILLIAM T. LAKIN, Long, Md. Filed Apr. 18, 1919. Serial No. 291,068. 8 Claims. (Cl. 274—35.)



1. In a reproducer, a frame, a needle bar, fulcrum means therefor carried by the frame, axially opposing adjustable flexible bar-supporting pins, and intermediate elements carried by the needle bar and engaged by said pins.

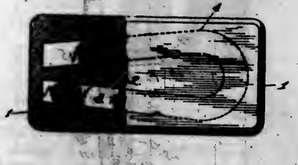
1,393,294. FOLDING LUGGAGE-CARRIER. LAURENCE LOUIS LAMOOMA, Sioux City, Iowa. Filed Mar. 6, 1920. Serial No. 365,901. 5 Claims. (Cl. 224—39.)

1. A folding luggage carrier comprising running board clamp, uprights pivotally connected with the running board clamps above the running board, a readily collapsible rack connected to the uprights, and bars pivotally connected to each other and to the uprights and clamps to form sides for the carrier, said rack being prevented by the sides from swinging below the running board.



1,393,295. INTERNAL-COMBUSTION ENGINE. VINCENT LINK, Detroit, Mich., assignor to The Studebaker Corporation, a Corporation of New Jersey. Filed Jan. 29, 1919. Serial No. 273,754. 6 Claims. (Cl. 123—173.)

1. In an internal combustion engine a cylinder provided with a cylinder head inclined with reference to the bore of the cylinder, a portion of said cylinder head being water jacketed, in combination with means to deliver the unvolatilized portion of the explosive fluid to the water jacketed surface of the cylinder head.



1,393,296. FINISHING OR LUSTRING TEXTILE FABRICS. JOSEPH BOLTON-LOMAX, Furness Vale, near Stockport, England. Filed Apr. 10, 1920. Serial No. 372,866. 3 Claims. (Cl. 26—2.)

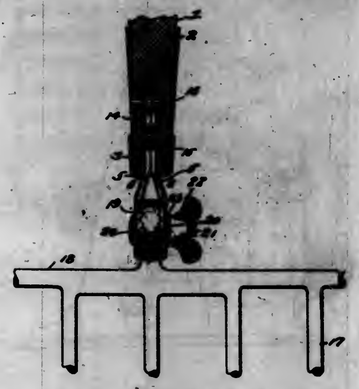
1. The process of finishing textile fabrics which consists in passing the same between a plurality of rollers under high pressure and heat and while hot applying thereto a boiling finishing liquor while retaining the fabric under

tension, and winding said fabric into a roll while in hot conditions.

1,393,297. RAZOR-HONE. THOMAS A. MCCULLEY, San Francisco, Calif., assignor of forty-five one-hundredths to Maude B. Deane, San Francisco, Calif. Filed Aug. 16, 1920. Serial No. 403,938. 2 Claims. (Cl. 51—211.)

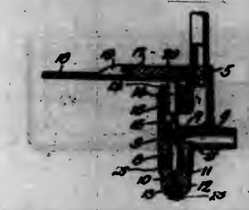
1. A razor hone having an abrasive body; and a magnet embedded in said body.

1,393,298. STEAM-SEPARATOR. THOMAS H. MCGRAW, Jr., Oakmont, Pa. Filed Jan. 16, 1919. Serial No. 271,896. 3 Claims. (Cl. 183—75.)



4. A steam separator comprising a number of perforated vertical tubes nested together in abutting relation into parallel longitudinal and lateral rows.

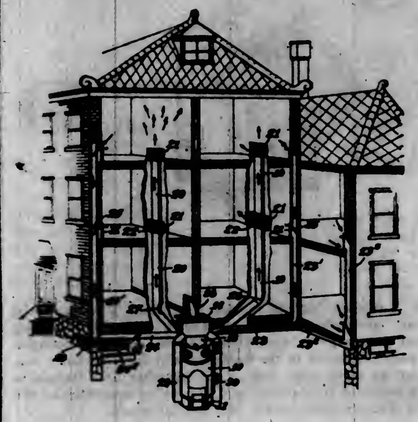
1,393,299. REVERSIBLE FORK AND RAKE. THOMAS JAMES MCINTOSH, Dalzell, S. C. Filed Feb. 9, 1921. Serial No. 443,576. 2 Claims. (Cl. 306—17.)



1. In a device of the class described, the combination with a handle, of a cap carried by said handle and provided with an elongated slot having inwardly-extending exten-

sions at opposite sides, a pair of ratchet plates extending through said slot and into said handle and engaged by said

inwardly-extending extension of the cap, and a tool adjustably supported between the ratchet plates.



1,393,300. DISPENSING-FAUCET. LAWRENCE E. MCNUTT, Toledo, Ohio, assignor to The Allen Filter Company, Toledo, Ohio. Filed Apr. 9, 1920. Serial No. 372,607. 1 Claim. (Cl. 226—128.)

A faucet of the character described, comprising a nozzle, an arm associated with the nozzle having an annulus formed on its outer end, a valve housing connected to said nozzle having inlet and discharge ports therein, a wall formed in said housing having a port therein and positioned between said inlet and discharge ports, a spring pressed valve in the housing normally engaged over the port in said wall, a pin slidable in the housing having one end engaged with the valve and its other end extended from the housing for a distance and engaged by the arm whereby to be operated thereby, and adjustable means in the housing for regulating movement of said valve by said pin.

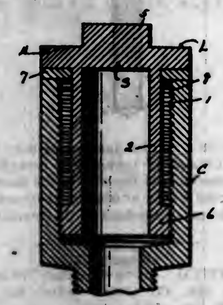
1,393,301. HOT-AIR HEATING SYSTEM. CHARLES MCVEETY, Cheltenham, Pa. Filed Feb. 24, 1921. Serial No. 447,385. 1 Claim. (Cl. 237—48.)

In a hot air heating system for buildings, the combination of an air recirculating and a pipeless system, comprising a furnace, having an outer casing, an inner casing and an air thoroughfare therebetween, means forming a vertical warm air conduit therefrom, a register directly above said conduit, means forming a cool air conduit about said warm air conduit, warm air pipes extending laterally and then vertically from said furnace through the partition walls of the building, cool air ducts paralleling the outer casing of said furnace and in spaced relation thereto, connections between said ducts and the base of said furnace and with the cool air conduit from the said register, whereby cool air is admitted to said thoroughfare, extensions to said ducts extending laterally and then vertically through the partition walls of the building, means to admit air from the floor levels of the rooms in said buildings and from the outside thereof, to said exten-

sions whereby the cool air descends through said ducts to said thoroughfare and is heated therein by radiation from the inner casing of said furnace and ascends through the said hot air pipes and the conduit from said furnace and means to regulate the direction and volume of the flow of the ascending warm air, substantially as described.

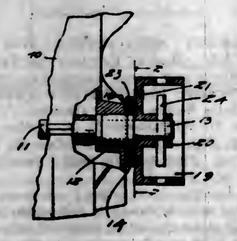
1,393,302. COLLAPSIBLE RIM. WALTER E. MARQUART, San Francisco, Calif. Filed Dec. 27, 1919. Serial No. 347,728. 2 Claims. (Cl. 301—32.)

1. A vehicle wheel rim having a segment cut therefrom, one end of said segment pierced with a hole and one boundary of said hole formed as an abutment, the opposite end of said segment formed to engage a substantially similar abutment formed in a coöperating link, a coöperating link having an abutment formed on each end, and adapted to coöperate with the segment and with the rim, the ends of the link fitting within a recess formed in the body of the rim and the body of the segment, and retaining means comprising hinge members having portions to engage the link ends and segment and formed to lie flat upon the rim, said means securing the alinement of the abutments.



1,393,303. AUTOMATIC WATERING-BOWL OR DRINKING-FOUNTAIN. WILLIAM L. MARTIN, Harvard, Ill. Filed Dec. 1, 1920. Serial No. 427,468. 7 Claims. (Cl. 119—80.)

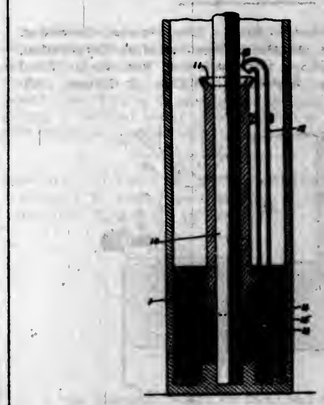
1. A device of the character described having in combination a bowl provided with hollow, cylindrical, longitudinal edges; a supporting frame for said bowl having perforate lugs or eyes, depending therefrom spaced apart



to admit the cylindrical edges and rods passing through the cylinders and respective eyes to hold the bowl in place.

1,393,304. GREASE-CUP. JACOB H. MILLER, Cresson, Pa. Filed Jan. 29, 1921. Serial No. 441,015. 1 Claim. (Cl. 184—38.)

In combination with a grease cup having its inner wall threaded and provided at its outer end with an inwardly directed stop shoulder, a lid for said cup including a tubular body extending within the cup, the inserted end of the body having an outstanding flange in threaded engagement with the internal threads of the cup, the inserted end of the tubular body being open, and a wall of said body being provided with a slot extending longitudinally thereof, the outer end portion of the lid being provided with a permanent flange coacting with the cup to limit the movement of the lid inwardly of the cup.



1,393,305. THRUST-BEARING FOR FORD MOTOR-SHAFTS. JOHN C. MULLINS, Jr., Coeburn, Va., assignor of one-half to Charles O. Ramsey, Coeburn, Va., and one-fourth to Isaac N. Kelley, Big Stone Gap, Va. Filed Sept. 24, 1919, Serial No. 325,918. Renewed Jan. 21, 1921. Serial No. 439,051. 2 Claims. (Cl. 64—49.)

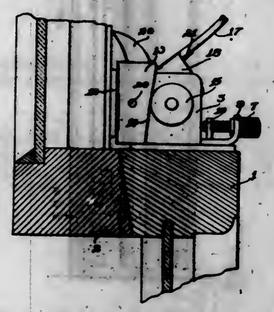
1. The combination with the timing gear housing and motor shaft of a Ford motor, the former of which has a

series of connecting bolts and the forward end of which motor shaft projects slightly beyond the timing gear housing, of a bearing plate disposed on the shaft and secured to the timing gear housing by means of the said bolts of the latter, a lower fan belt pulley secured upon the projecting end of the shaft and having its inner wall opposing said bearing plate, and anti-friction members between the said pulley wall and the bearing plate, as and for the purpose described.

1,393,306. POWER-HEAD. PHILIP A. MYERS, Ashland, Ohio, assignor to F. E. Myers & Brother, a Copartnership consisting of Francis E. Myers and Philip A. Myers, Ashland, Ohio. Filed Aug. 30, 1920. Serial No. 407,025. 5 Claims. (Cl. 184—27.)

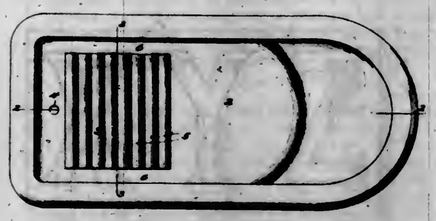
2. In a power head, the combination with a casing adapted to contain a quantity of lubricant, rotatable operating mechanism therein, and a vertical guide within the casing, of a slide mounted on said guide adapted to reciprocate and having means for connection with an apparatus to be operated thereby, an operating connection between said slide and the rotatable actuating mechanism within the casing, and an oil pumping tube connected with said slide and adapted to deliver oil from the casing to the upper end of the slide.

1,393,307. ART OF MAKING TYPE AND TYPE-HOLDERS. CARY A. NEYLAND, Spokane, Wash. Filed Mar. 6, 1921. Serial No. 450,819. 5 Claims. (Cl. 101—398.)



2. The combination in a die of a slotted holder, a rule extended through the slotted holder and conforming to the walls of the slot in the holder, and a pattern frictionally engaging the inner walls of the rule.

1,393,308. ART OF MAKING TYPE AND TYPE-HOLDERS. CARY A. NEYLAND, Spokane, Wash. Filed Mar. 9, 1921. Serial No. 450,820. 2 Claims. (Cl. 101—398.)

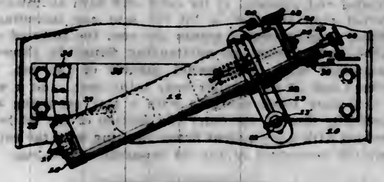


1. The combination in a die of a holder having a slot therein, a rule conforming to the walls of and in frictional contact with said holder in the slot, and a filling of loose material packed in said slot within the rule between the upper and lower faces of said holder.

1,393,309. SASH-HOLDER. EMIL OLSON, Rochester, N. Y., assignor to Olson Manufacturing Corporation, Rochester, N. Y., a Corporation of New York. Filed Nov. 24, 1920. Serial No. 426,286. 2 Claims. (Cl. 292—200.)

1. A sash holder comprising a supporting frame, a wedging member cooperating with said frame to move vertically thereon and also to rock so as to cooperate properly with a flat face of a sash, and a penetrator having its penetrating point lying slightly in rear of the engaging face of the wedging holding member and adapted to swing with said member into engagement with the sash to lock the latter against movement in the direction of opening if the sash is forced.

1,393,310. BATHTUB. ELEANORE L. DEDERICK PALMER, New Brighton, Pa. Filed Sept. 3, 1920. Serial No. 407,990. 3 Claims. (Cl. 4—27.)



1. A bath tub provided with a seat section and a foot section, transverse corrugations cast integrally in the foot section and extending only part way across the bottom of the tub, and a drainage section connecting the corrugations with the drain pipe of the tub.

1,393,311. METHOD AND MEANS FOR FACILITATING SEALING DEEP WELLS. HARRY C. PENDLETON, Piedmont, Calif. Filed Sept. 1, 1920. Serial No. 407,357. 17 Claims. (Cl. 166—1.)

1. The steps, in a method for sealing deep wells against water, which consist of lowering a frangible container, charged with cement, into the well to the desired level, and then stamping the whole to destroy the container so that its fragments become embedded in the cement.

1,393,312. SWITCH. ARTHUR HENRY PERRY, De Witt, Ark. Filed Apr. 17, 1920. Serial No. 374,615. 4 Claims. (Cl. 200—52.)

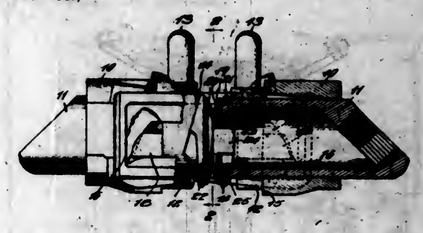
1. In a device of the character described, a normally closed circuit, and means for breaking said circuit, including a cylinder pivoted to swing vertically, locking means to maintain the cylinder in any predetermined position, weights freely movable within the cylinder, contact means mounted upon one end of the cylinder, and a spring pressed plunger normally closing said contact means.

1,393,313. SAFETY ATTACHMENT FOR RAILWAY-CAR TRUCKS. CARL L. PITTMAN, De Leon, Tex., assignor, by direct and mesne assignments, to Pittman & Company, De Leon, Tex., a Joint-Stock Association consisting of John Nabors, N. T. Haskins, C. L. Pittman, L. C. Bills, B. Williamson, T. S. Holden, T. I. Fitzgerald, R. F. B. Logan, W. J. Bradley, W. H. Williams, and J. B. Pool. Filed Jan. 19, 1921. Serial No. 438,360. 7 Claims. (Cl. 246—171.)

6. The combination of a railway car truck having side frames provided with downwardly removable journal boxes, a pair of safety shoes extending longitudinally of the truck, each having a solid middle section overlying the adjacent rail and bifurcated ends straddling the wheel, said ends being removably secured to the corresponding ends of the side frames, a pivoted lever extending beneath each journal box, means on the side frames to limit the downward movement of the respective levers and support the wheels when the latter are derailed and the shoes engage the

track, brake valve mechanism carried by the truck, and means connecting the said levers with the brake valve mechanism to set the brakes when the truck is derailed and the journal box or boxes move downward.

1,393,314. GRADOMETER. RUTHERFORD B. POTTER, Brighton, Colo. Filed Feb. 14, 1918. Serial No. 217,090. 9 Claims. (Cl. 33—210.)

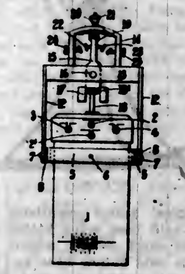


1. The combination with a gradometer, of a mounting for the same comprising an open frame, means for connecting the gradometer casing with said frame to occupy a position with the front face thereof extending substantially flush with the front face of the frame and for adjusting movement of the gradometer casing relatively to the frame, and means for adjusting the gradometer casing relatively to the frame and for maintaining the gradometer casing in adjusted position, said adjusting means being operable from the front of the frame.

1,393,315. ETCHING APPARATUS. ROBERT R. ROBERTSON, Berkeley, Calif. Filed May 11, 1920. Serial No. 380,522. 6 Claims. (Cl. 41—9.)

1. An etching apparatus comprising a receptacle adapted to contain a quantity of etching liquid and provided with an air inlet passage extending downwardly into said receptacle and an outlet adjacent the top of the receptacle, means for supporting a plate to be etched in said receptacle, and rotatable sprayers in said receptacle adapted to discharge sprays of said liquid against said plate and for maintaining a circulation of fresh air through the receptacle.

1,393,316. HOSE-COUPLING GASKET. EDWARD N. ROTH, Chicago, Ill., assignor to Roth Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 18, 1919. Serial No. 283,291. 8 Claims. (Cl. 285—66.)

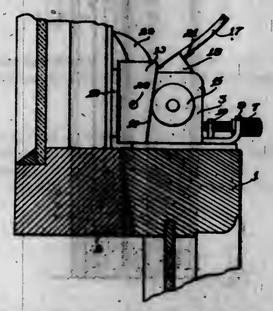


1. The combination with a coupler comprising a head adapted to engage with a mating coupling member, a gasket holding member and means for forcing said gasket holding member against the mating coupling member; of a gasket associated with said gasket holding member comprising a resilient metal element which is stressed when said coupler is engaged with the mating coupler member.

1,393,317. AUTOMATIC TYPE-CABINET. WILLIAM S. RUSSELL, St. Louis, Mo. Filed Feb. 3, 1921. Serial No. 442,072. 2 Claims. (Cl. 211—42.)

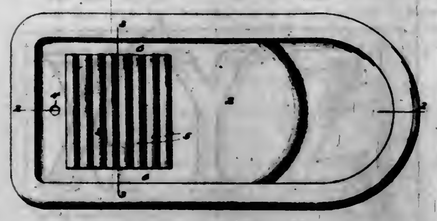
1. A type-magazine having its front end cut off at such an angle that the angular front end will stand in a vertical plane when the magazine is inclined downwardly both from its rear end to its front end and laterally from edge to edge, a rectangular stopblock in the said angular front end, and a roller mounted in a recess in said stopblock and projecting into the path of the type as they gravitate to said stop-block.

1,393,318. MEANS FOR INDICATING DIRECTION APPLICABLE FOR USE WITH AIRCRAFT SUCH AS AEROPLANES. THOMAS WILLIAM SAXTON, Barham, England. Filed Oct. 29, 1919. Serial No. 334,351. 4 Claims. (Cl. 200—52.)



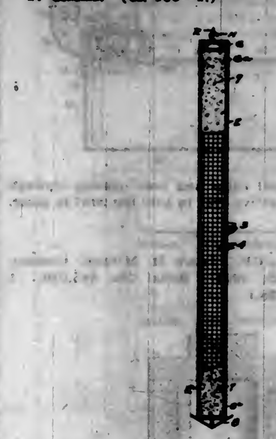
1. In a device of the kind described, a controller, a post thereon, a pair of spaced contacts, a contact plate, a swinging contact maker movable between said contacts and provided with a contact in constant engagement with said plate, a pair of contacts on said contact maker and a guide on said contact maker engaging said post.

1,393,306. ART OF MAKING TYPE AND TYPE-HOLDERS. CARY A. NEYLAND, Spokane, Wash. Filed Mar. 9, 1921. Serial No. 450,629. 2 Claims. (Cl. 101—396.)



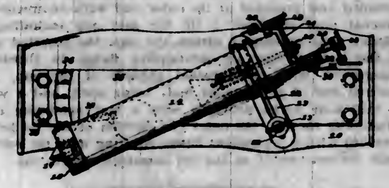
1. The combination in a die of a holder having a slot therein, a rule conforming to the walls of and in frictional contact with said holder in the slot, and a filling of loose material packed in said slot within the rule between the upper and lower faces of said holder.

1,393,309. SASH-HOLDER. EMIL OLSON, Rochester, N. Y., assignor to Olson Manufacturing Corporation, Rochester, N. Y., a Corporation of New York. Filed Nov. 24, 1920. Serial No. 426,286. 2 Claims. (Cl. 292—200.)



1. A sash holder comprising a supporting frame, a wedging member cooperating with said frame to move vertically thereon and also to rock so as to cooperate properly with a flat face of a sash, and a penetrator having its penetrating point lying slightly in rear of the engaging face of the wedging holding member and adapted to swing with said member into engagement with the sash to lock the latter against movement in the direction of opening if the sash is forced.

1,393,310. BATHTUB. ELEANORE L. DEDERICK PALMER, New Brighton, Pa. Filed Sept. 3, 1920. Serial No. 407,990. 3 Claims. (Cl. 4—27.)



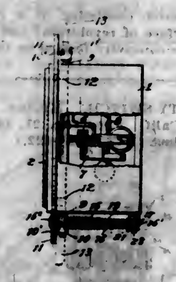
1. A bath tub provided with a seat section and a foot section, transverse corrugations cast integrally in the foot section and extending only part way across the bottom of the tub, and a drainage section connecting the corrugations with the drain pipe of the tub.

1,393,311. METHOD AND MEANS FOR FACILITATING SEALING DEEP WELLS. HARRY C. PRESSERTON, Piedmont, Calif. Filed Sept. 1, 1920. Serial No. 407,357. 17 Claims. (Cl. 166—1.)

1. The steps, in a method for sealing deep wells against water, which consist of lowering a frangible container, charged with cement, into the well to the desired level, and then stamping the whole to destroy the container so that its fragments become embedded in the cement.

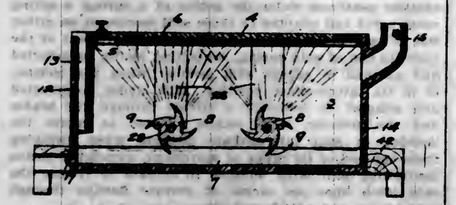
1,393,312. SWITCH. ARTHUR HENRY PERRY, De Witt, Ark. Filed Apr. 17, 1920. Serial No. 374,615. 4 Claims. (Cl. 200—52.)

1. In a device of the character described, a normally closed circuit, and means for breaking said circuit, including a cylinder pivoted to swing vertically, locking means to maintain the cylinder in any predetermined position, weights freely movable within the cylinder, contact means mounted upon one end of the cylinder, and a spring pressed plunger normally closing said contact means.



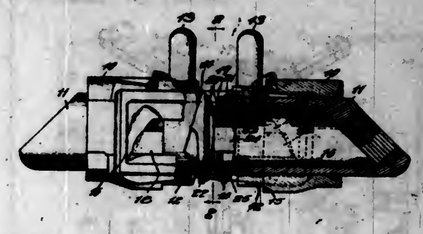
1,393,313. SAFETY ATTACHMENT FOR RAILWAY-CAR TRUCKS. CARL L. PITTMAN, De Leon, Tex., assignor, by direct and mesne assignments, to Pittman & Company, De Leon, Tex., a Joint-Stock Association consisting of John Nabers, N. T. Haskins, C. L. Pittman, L. C. Bills, B. Williamson, T. S. Holden, T. I. Fitzgerald, R. F. B. Logan, W. J. Bradley, W. H. Williams, and J. B. Pool. Filed Jan. 19, 1921. Serial No. 438,360. 7 Claims. (Cl. 246—171.)

6. The combination of a railway car truck having side frames provided with downwardly removable journal boxes, a pair of safety shoes extending longitudinally of the truck, each having a solid middle section overlying the adjacent rail and bifurcated ends straddling the wheel, said ends being removably secured to the corresponding ends of the side frames, a pivoted lever extending beneath each journal box, means on the side frames to limit the downward movement of the respective levers and support the wheels when the latter are derailed and the shoes engage the



track, brake valve mechanism carried by the truck, and means connecting the said levers with the brake valve mechanism to set the brakes when the truck is derailed and the journal box or boxes move downward.

1,393,314. GRADOMETER. RUTHERFORD B. POTTER, Brighton, Colo. Filed Feb. 14, 1918. Serial No. 217,000. 9 Claims. (Cl. 33—219.)

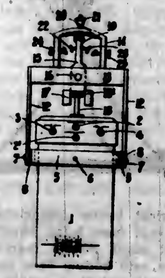


1. The combination with a gradometer, of a mounting for the same comprising an open frame, means for connecting the gradometer casing with said frame to occupy a position with the front face thereof extending substantially flush with the front face of the frame and for adjusting movement of the gradometer casing relatively to the frame, and means for adjusting the gradometer casing relatively to the frame and for maintaining the gradometer casing in adjusted position, said adjusting means being operable from the front of the frame.

1,393,315. ETCHING APPARATUS. ROBERT R. ROBERTSON, Berkeley, Calif. Filed May 11, 1920. Serial No. 380,522. 6 Claims. (Cl. 41—9.)

1. An etching apparatus comprising a receptacle adapted to contain a quantity of etching liquid and provided with an air inlet passage extending downwardly into said receptacle and an outlet adjacent the top of the receptacle, means for supporting a plate to be etched in said receptacle, and rotatable sprayers in said receptacle adapted to discharge sprays of said liquid against said plate and for maintaining a circulation of fresh air through the receptacle.

1,393,316. HOSE-COUPLING GASKET. EDWARD J. NOTH, Chicago, Ill., assignor to Roth Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 18, 1919. Serial No. 283,291. 8 Claims. (Cl. 285—66.)

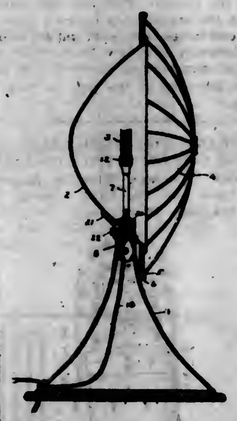


1. The combination with a coupler comprising a head adapted to engage with a mating coupling member, a gasket holding member and means for forcing said gasket holding member against the mating coupling member; of a gasket associated with said gasket holding member comprising a resilient metal element which is stressed when said coupler is engaged with the mating coupler member.

1,393,317. AUTOMATIC TYPE-CABINET. WILLIAM S. RUSSELL, St. Louis, Mo. Filed Feb. 3, 1921. Serial No. 442,072. 2 Claims. (Cl. 211—42.)

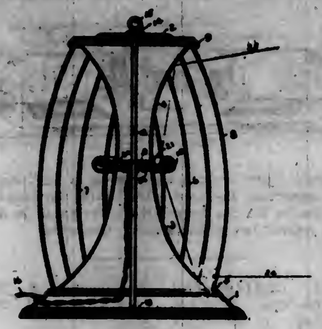
1. A type-magazine having its front end cut off at such an angle that the angular front end will stand in a vertical plane when the magazine is inclined downwardly both from its rear end to its front end and laterally from edge to edge, a rectangular stopblock in the said angular front end, and a roller mounted in a recess in said stopblock and projecting into the path of the type as they gravitate to said stop-block.

1,393,318. MEANS FOR INDICATING DIRECTION APPLICABLE FOR USE WITH AIRCRAFT SUCH AS AEROPLANES. THOMAS WILLIAM SAXTON, Barham, England. Filed Oct. 29, 1919. Serial No. 334,351. 4 Claims. (Cl. 200—52.)



1. In a device of the kind described, a controller, a post thereon, a pair of spaced contacts, a contact plate, a swinging contact maker movable between said contacts and provided with a contact in constant engagement with said plate, a pair of contacts on said contact maker and a guide on said contact maker engaging said post.

1,393,319. COMBINED TIRE-CARRIER AND RIM SPREADER AND CONSTRICTOR. OSCAR CHARLES SCHLEUNES, Hereford, Tex. Filed Aug. 30, 1920. Serial No. 406,781. 3 Claims. (Cl. 224—29.)



1. A device of the character described comprising, a casing, arms extending radially from the casing, rim embracing members slidable on the arms, a cog wheel rotatable within the casing, rods connected eccentrically to the cog wheel and pivotally connected to said members, a worm meshing with the cog wheel and journaled in the casing, a ratchet wheel rotatable with the worm, an actuating lever pivotally mounted on the ratchet wheel, pawls carried by the lever and engageable with the ratchet wheel, means for moving either of said pawls to engaging or disengaging position with respect to the ratchet wheel, and means for locking said lever to said casing.

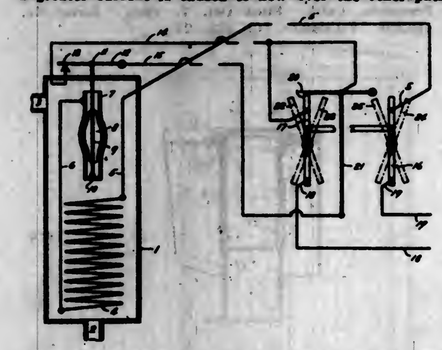
1,393,320. ADJUSTABLE ELECTRIC HEATER. MILTON H. SHOENBERG and GEORGE J. HENRY, San Francisco, Calif. Filed Oct. 1, 1919. Serial No. 327,710. 4 Claims. (Cl. 219—34.)

1. In an electrical heater comprising a reflector and a base member, said base being hollow; a swivel joint having horisontal pivot wheels therein mounted about an opening to the said hollow base and having a linear opening through said swivel, a hollow stem mounted on the swivel and carrying also said reflector and an electrical resistance heat radiating element mounted on the other end of the stem and substantially about the focus of the reflector, an electrical circuit connection through the base the swivel and the stem adapted to energise the said element.

1,393,321. RADIANT HEATER. MILTON H. SHOENBERG and GEORGE J. HENRY, San Francisco, Calif. Filed Oct. 1, 1919. Serial No. 327,711. 17 Claims. (Cl. 219—33.)

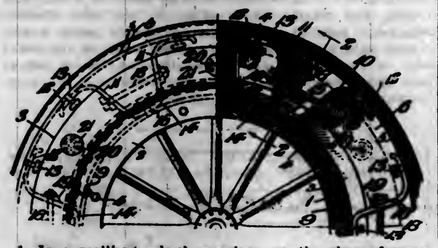
1. A radiant heater consisting of a reflector formed with a concave surface of revolution; and a heat element disposed within the concavity formed by the reflector.

1,393,322. SAFETY-SWITCH. MILTON H. SHOENBERG, San Francisco, Calif. Filed Dec. 27, 1919. Serial No. 347,732. 4 Claims. (Cl. 200—122.)



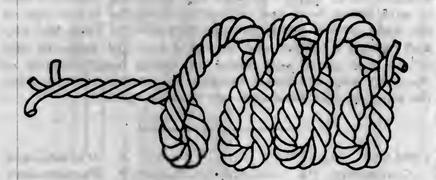
1. In an electrical safety switch, an oscillating member adapted to snap about a central pivot into each of two extreme positions under the action of a spring, a spring constructed and adapted to cause said movement on either side of said pivotal means on a reverse movement of the opposite end of said spring, contacting blades constructed and adapted to engage said member when the member is in its intermediate position, said blades constructed and adapted to complete a circuit through the blades and the member, latch means adapted to retain the member in said intermediate position when swinging from one end of its range of movement, associated means controlling said latch adapted to actuate to release the said latch upon an excess of current flowing through said blades and switch member.

1,393,323. METHOD OF ELECTRIC THERMAL CONTROL. MILTON H. SHOENBERG, San Francisco, Calif. Filed Dec. 27, 1919. Serial No. 347,735. 2 Claims. (Cl. 219—20.)



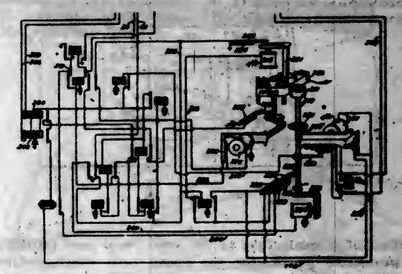
1. A method of electric thermal control consisting of energising a thermal device through two parallel paths and a return, one of said paths adapted to be interrupted

on an excess of heat in said terminal device whereby a greater current is caused to flow over the other path



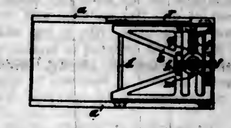
to thereby cause in a remote device in said other path actuation to release a spring actuated switch to open the energising circuit.

1,393,324. RESILIENT WHEEL. CLIFFORD SMITH, Philadelphia, Pa. Filed Sept. 22, 1920. Serial No. 411,971. 2 Claims. (Cl. 152—88.)



1. In a resilient wheel, members on the circumference thereof, consisting of inner and outer channel-shaped rims, the outer rim being placed laterally within the inner rim and being movable relatively thereto radially and circumferentially, resilient means interposed between the peripheral wall of the outer rim and the inner rim of the wheel, said resilient means consisting of a spring substantially U-shaped, its limbs being secured to said peripheral wall and its crown being secured to said inner rim, and a bolt-like member adapted to pass freely through slots in said limbs and having its opposite members engaging the outer faces of the latter to prevent spreading thereof.

1,393,325. ELECTRIC HEATING ELEMENT. LUTHER D. SMITH, Toledo, Ohio. Filed Feb. 24, 1919. Serial No. 278,899. 7 Claims. (Cl. 219—63.)

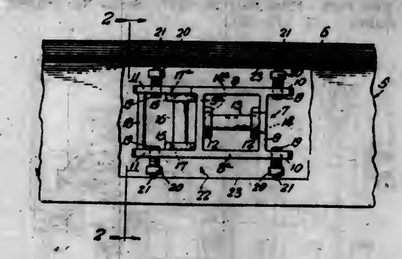


1. An electric resistance heating element composed of a plurality of conductors, combined side by side in intimate contact and having different physical properties.

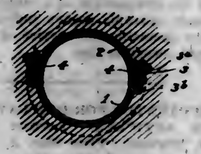
1,393,326. TELEPHONE SYSTEM. ARTHUR B. STRONG, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 26, 1917. Serial No. 182,967. 9 Claims. (Cl. 179—50.)

1. In a telephone system, an operator's position, an incoming line leading to said position, a plurality of out-going lines leading from said position, an indicating device at said position controllable from a distant point for indicating the designation of a wanted out-going line, and continuously movable means individual to said incoming line for operating said device to indicate the designation of said incoming line.

1,393,327. APPARATUS FOR DISPLAYING GARMENTS AND LIKE ARTICLES. ARTHUR WALTER TAYLOR, Manchester, England. Filed Mar. 2, 1920. Serial No. 362,652. 1 Claim. (Cl. 211—16.)



The combination, with a show case, of guide rails arranged in the show case, a frame provided with rollers which run on the said guide rails, a vertical standard journaled in the frame and provided with supports for articles, a notched disk secured to the standard, a spring-pressed slide slidable in the frame crosswise of the rails and arranged above the said rollers and the tops of the rails, said slide being adapted to engage with the notched disk, and a stop bar secured to the top of one of the said rails opposite the end of the slide and extending in the show case, said stop bar operating to prevent the slide from being retracted to free the notched disk and standard until after the frame has been withdrawn from the show case and the slide has been moved past the outer end of the stop bar.

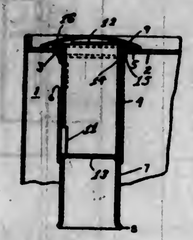


1,393,328. LEVEL DEVICE. CHRISTOPHER F. THULLEN, Chicago, Ill., assignor to Fred Ohde, Christopher F. Thullen, and August A. F. Dreyer, Chicago, Ill., Copartners doing business as On-The-Dot-Level Device. Filed Mar. 25, 1920. Serial No. 368,679. 1 Claim. (Cl. 33—214.)

A level device of the kind described, comprising an integral frame consisting of a pair of parallel long bars, and a pair of parallel shorter bars arranged transversely of and connecting said long bars together at points intermediate their ends, and a post connecting the pair of long bars together at one end of the frame, each pair of bars being provided with opposed seats to receive a spirit

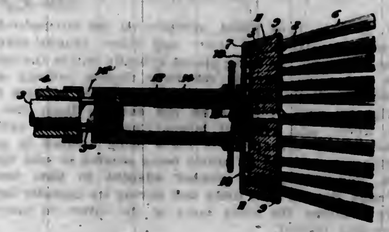
tube, one of said seats of each pair of bars communicating with an opening in the bar having such seat for the insertion of a spirit tube in the seats, said post providing a protective guard, for the spirit tube which extends parallel therewith.

1,393,329. DRAIN-TILE. EMORY E. TROWBRIDGE, Kansas City, Kans. Filed Apr. 5, 1920. Serial No. 371,272. 8 Claims. (Cl. 61—11.)



1. In drain tiles, the combination with a pair of abutting tubular members, of an enlarged flange portion secured to the end of one tile member and fitting around the abutting end of the other tile, a cup shaped portion carried by said flange and adapted to collect the moisture from the subsoil and permit the seepage through the tiles into the system.

1,393,330. ELECTRICAL INSULATOR. WALTER J. WELCH and ATLEE H. TRACY, Chicago, Ill., assignors to H. M. Byllesby & Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 17, 1919. Serial No. 290,851. 1 Claim. (Cl. 287—113.)

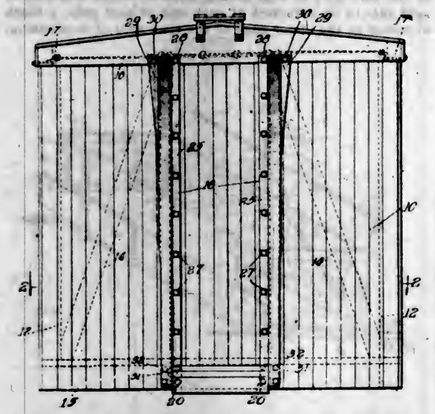


A coupling comprising a cylindrical shell of even diameter throughout its length and consisting of two similar longitudinal segments, said shell being provided with a bore adapted to receive the ends of the parts to be connected, said bore being provided with shoulders extending entirely around the shell and constructed and arranged to interlock with corresponding shoulders on said parts to be connected, a cylindrical ferrule fitted to the exterior of said coupling shell and having a flange at one end thereof of a width to extend over an end of said coupling shell and leave an opening sufficiently large to pass over the shouldered end of either of the members to be connected, and lugs on the opposite end of the ferrule adapted to be bent over the other end of the coupling shell to secure the ferrule in engagement with the shell and said shell in engagement with the coupled parts.

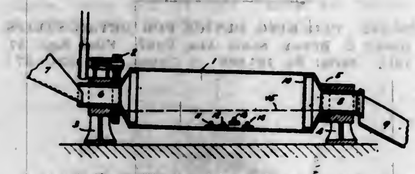
1,393,331. COMBINED SPOUT AND VALVE FOR LIQUID-CONTAINERS. WALTER W. WILSON, San Francisco, Calif. Filed Oct. 7, 1920. Serial No. 415,851. 2 Claims. (Cl. 221—27.)

1. In combination with a liquid container having a wall provided with an opening therein, of a tubular casing secured to said wall and extending through said opening into the container, said tubular casing having an opening in one side thereof, a tubular spout member rotatably and longitudinally movably mounted within said casing and having an opening in one side thereof adapted to register with the opening in said casing, a wall closing said tubular spout at a point adjacent the lower edge of the opening and spaced from the lower end of said spout member and means for preventing the withdrawal of the spout from the casing.

1,393,332. ROTARY BRUSH. HUGO WIMMER, Bath, Me. Filed Oct. 18, 1920. Serial No. 417,787. 3 Claims. (Cl. 15—37.)



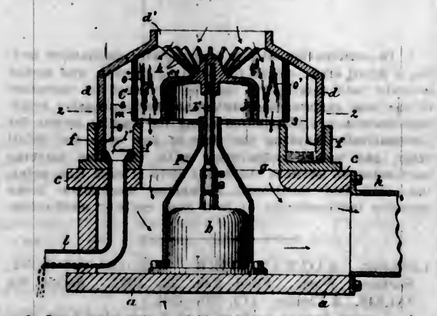
2. A rotary brush comprising a stub shaft, a tapered cup-shaped brush cap having the base thereof rigidly secured to one end of said shaft, a tapered brush head adapted to fit tightly in said cap, brushing elements held to said brush head and projecting from the larger end of the head, and a screw passing through the head and cap and having its inner end threaded into the adjacent end of the stub shaft, said screw extending longitudinally of the shaft and detachably holding the head in the cap with the sides of said head and cap in close contact.



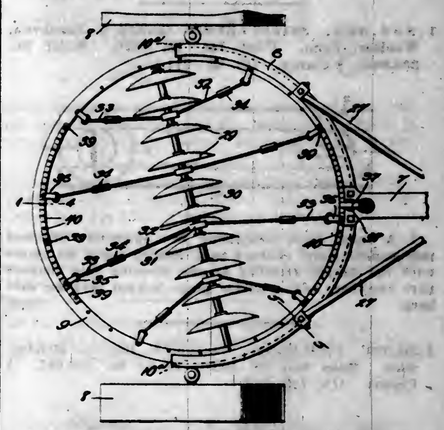
1,393,333. RAILWAY-CAR. FRANK W. WOLFF, New Kensington, Pa., assignor to Walter P. Murphy, New York, N. Y. Filed Apr. 29, 1919. Serial No. 293,405. 14 Claims. (Cl. 105—411.)

1. A metal reinforcement for the wooden end wall of a railway car, comprising a pair of substantially upright

reinforcing members of maximum depth and minimum width at the bottom and maximum width and minimum depth at the top, and means for anchoring said members to the under frame and roof frame of the car.

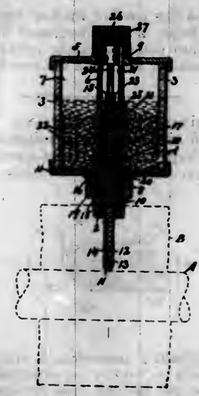


1,393,334. GRINDING-MILL. LLEWELLYN T. BACHMAN, Santa Cruz, Calif., assignor to Santa Cruz Portland Cement Co., San Francisco, Calif. Filed Feb. 7, 1920. Serial No. 356,962. 2 Claims. (Cl. 83—9.)



1. A grinding mill comprising a drum adapted to rotate and within which the material to be ground is subjected to the action of grinding bodies, and grinding bodies consisting of a substantially equal number of approximately spherical members and short cylindrical members which are of softer material and of greater specific gravity than said spherical members.

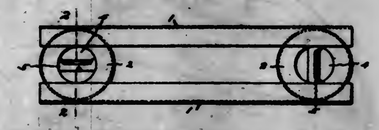
1,393,335. PROCESS AND APPARATUS FOR SEPARATING MOISTURE FROM GAS. WILLIAM J. BALDWIN, Brooklyn, N. Y. Filed Mar. 23, 1921. Serial No. 454,683. 12 Claims. (Cl. 183—4.)



1. In a gas purifier, a hollow carrier having hygrometric material fixed upon its wall, means for introducing the gas within the carrier, and means for rotating the carrier with the material to propel the gas against the said material by centrifugal force.

1,393,336. DISK HARROW OR TERRACER. JONATHAN G. BARNES, Laredo, Tex. Filed July 10, 1920. Serial No. 395,296. 3 Claims. (Cl. 55—73.)

3. An agricultural machine having a main frame of substantially semi-circular shape, a circular frame revolving within the main frame, registering slots through the frames and fastening means extending through the slots, said means having friction rollers engaging the inner surface of the circular frame permitting free revolving movement thereof.



1,393,337. LUBRICATOR. WILLIAM J. BEAGLE, Syracuse, N. Y., assignor of one-half to John M. Stever, Syracuse, N. Y. Filed Nov. 6, 1920. Serial No. 422,197. 3 Claims. (Cl. 184—75.)

3. In a lubricator of the character described, the combination of a container having its inner and outer end heads provided with openings therethrough, the inner head having means for attachment to one of the parts to be lubricated, a tubular member extending into said openings and connecting said heads, an oil feeding-tube adjustable endwise in the inner opening and extending to a point in proximity to the bearing to be lubricated, said

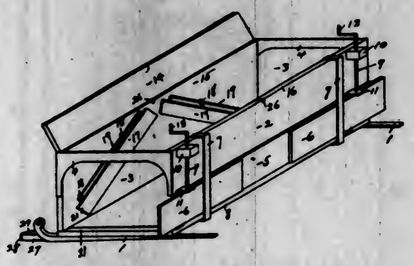
oil feeding-tube also extending outwardly into the tube which connects the heads, means movable in the outer end of the head-connecting tube and engaged with the outer end of the oil-feeding-tube for adjusting the latter axially, and a screw cap engaging the outer end of the head-connecting tube and normally covering the outer end of the adjusting means for the oil-feeding-tube.

1,393,338. SPIRIT-LEVEL. GEORGE Q. BEDORTHA, Windsor, Conn. Filed Jan. 20, 1920. Serial No. 352,664. 8 Claims. (Cl. 33—211.)

1. A spirit level comprising two oppositely disposed, independent metal channel bars, flanged metal tie plates with the flanges attached to and securing said channel bars together, and a bubble glass located between said bars.

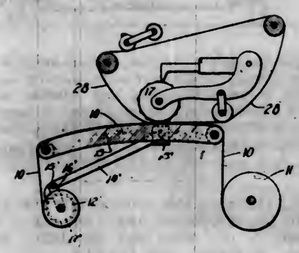
1,393,339. FISH-POND. ORLANDO F. BENTON, Mendon, Ohio. Filed May 18, 1921. Serial No. 470,687. 4 Claims. (Cl. 119—5.)

1. An extended fish pond of shallow depth, and a reservoir of greater depth, with underground ducts connecting the pond at spaced points with the reservoir at different heights, and means for supplying the reservoir with water.



1,393,340. OPHTHALMIC MOUNTING. FREDERICK R. BISHOP, North Attleboro, Mass., assignor to The Bishop Company, a Corporation of Massachusetts. Filed Apr. 6, 1921. Serial No. 459,190. 3 Claims. (Cl. 88—42.)

1. In an ophthalmic mounting, a rim provided with an oblong opening, a bridge, an attaching plate on the bridge seated in the opening, and diverging lips on the plate engaging the rim.

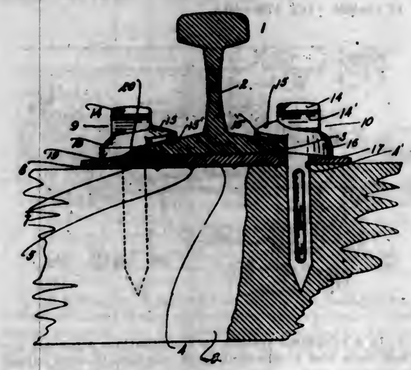


1,393,341. ROAD-BUILDING MACHINE. THOMAS F. BOWER, Farmdale, Ohio. Filed Feb. 12, 1921. Serial No. 444,349. 2 Claims. (Cl. 94—44.)

1. In a device of the class described, a rectangular hopper shaped casing provided with open ends and a closed bottom, runners located underneath the outer ends of said rectangular casing, a gate secured at the lower side of the rear wall of said casing, slidable wings attached to said gate, a lip attached at each end of said gate, a block attached at the upper edge of the rear wall of said casing,

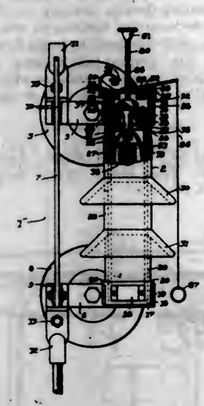
a screw operating in internally threaded openings of said blocks, slidable inclined planes secured to the front wall of said casing, a deflecting board secured at the upper edge of the front wall of said casing, a bracing member secured to the upper ends of said casing, substantially as described for the purpose set forth.

1,393,342. CLOCKING DEVICE FOR DETAIL-STRIPS. HARRY C. BURKE, Santa Ana, Calif. Filed Sept. 17, 1917. Serial No. 191,688. 2 Claims. (Cl. 234—57.)



1. In combination with a cash register mechanism having a detail strip, means for printing thereon, and means whereby said detail strip may be advanced by operation of the cash register mechanism so that successive printings thereon are distributed along its length; means for automatically marking the time of day upon the detail strip, and means cooperating with the time marking mechanism to advance the detail strip at each time printing, said last mentioned advancing mechanism being operable independently of said cash register mechanism.

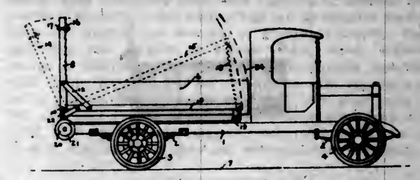
1,393,343. RAILWAY-SPIKE. WILLIAM C. CLARK, Spokane, Wash. Filed Feb. 26, 1921. Serial No. 447,948. 2 Claims. (Cl. 238—366.)



1. A spike having a shank, and a retaining head comprising an inwardly projecting rail lug and an outwardly

projecting plate flange, and said head projecting bodily beyond the cross area of the shank, the under portion of

the plate flange having angular faces for contact with a tie plate.



1,393,344. METHOD OF AND MEANS FOR SWITCHING. NICHOLAS J. CONRAD, Chicago, Ill., assignor to Schweitzer & Conrad, Chicago, Ill., a Corporation of Illinois. Filed Sept. 24, 1917. Serial No. 192,870. 19 Claims. (Cl. 175—294.)

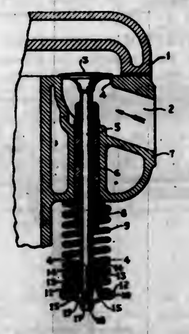
17. In combination, a high tension line, an air brake switch permanently connected in the line and a liquid quenched switch in parallel with the air brake switch and automatically opened upon operation of said air brake switch.

1,393,345. TRUCK-LOADING DEVICE. WILLIAM J. CONWAY, San Francisco, Calif. Filed Aug. 27, 1920. Serial No. 406,350. 2 Claims. (Cl. 214—77.)

1. In a loading device for trucks and the like, a vertically disposed lever pivoted at its lower end on each side of said truck, a truss between said levers, a horizontally disposed member on each side and carried by the aforesaid pivots and connected as a bell crank with the corresponding lever, operating means for said members whereby the levers are rotated about their pivots through an

angular movement whereby a load suspended from said truss may be raised or lowered, wherein the truss is vertically adjustable to various positions on the levers.

1,393,346. INSULATING COMPOSITION OF MATTER. FRANK J. COOK, Cleveland, Ohio. Filed Aug. 19, 1920. Serial No. 404,650. 2 Claims. (Cl. 106—14.)



1. A composition of matter comprising substantially ten parts of pulverized soapstone, one part of feldspar, one part of flint, one-half part of ball clay, to which is added a binder.

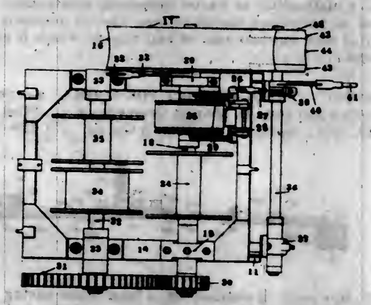
1,393,347. SPRING-SUPPORT FOR LOOMS. SAMUEL H. COOKE and JOHN O. MILLER, Greenville, S. C. Filed Mar. 22, 1921. Serial No. 454,598. 6 Claims. (Cl. 139—73.)

1. In a loom, in combination, a loom frame having front and rear rails, a support, the said support being formed of relatively adjustable sections and secured to the said rails, and means on said support for attaching springs thereto.

1,393,348. VALVE ATTACHMENT. GEORGE R. DAVENPORT, Detroit, Mich., assignor to The Studebaker Corporation, a Corporation of New Jersey. Filed Aug. 8, 1919. Serial No. 316,016. 10 Claims. (Cl. 251—144.)

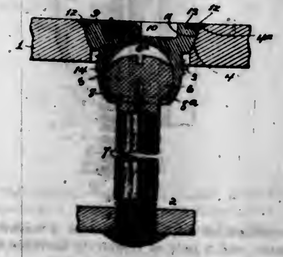
1. In combination with a valve-stem, a washer surrounding the same, and a pair of relatively movable spring clips for securing the washer to the valve-stem.

1,393,349. AUTOMOBILE-WINDLASS. MARION A. DAVIS, Sherman, Tex. Filed Mar. 9, 1921. Serial No. 450,907. 1 Claim. (Cl. 242—95.)



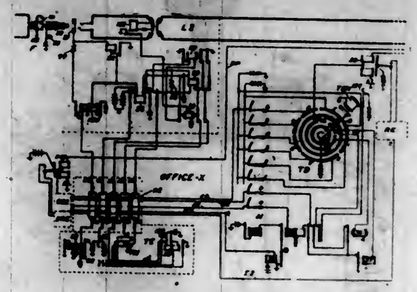
The combination in an automobile windlass of a horizontally disposed tubular section right and left hand threaded

interiorly at its respective ends adapted for engagement with an annular flange exteriorly threaded and outwardly



extending from the hub flange of a wheel at either side of a car.

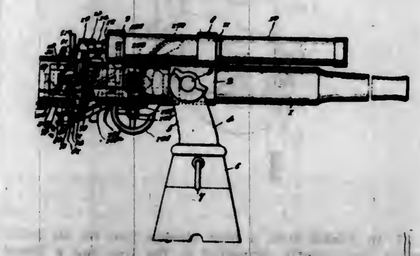
1,393,350. WELL-DRILLING MACHINE. EDWARD L. DILLON, St. Louis, Mo., assignor to Lorenzo Norvell, trustee, St. Louis, Mo. Filed Jan. 2, 1919. Serial No. 269,188. 2 Claims. (Cl. 74—26.)



1. In a well drilling machine, the combination with a band wheel having a convex tread adapted to contact with a flat driving belt, of a friction wheel having a concave tread, means for moving said wheels into and out of contact, a reversing wheel having a part of its tread concave and another part convex, and means for moving said reversing wheel into and out of contact with said band and friction wheels.

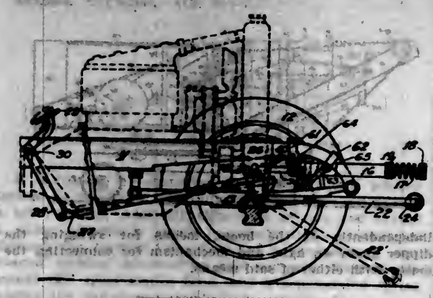
1,393,351. STAYBOLT STRUCTURE. ETHAN I. DODDS, Pittsburgh, Pa., assignor to Flannery Bolt Company, Pittsburgh, Pa. Filed Jan. 20, 1920. Serial No. 352,695. 6 Claims. (Cl. 85—1.5.)

1. In a staybolt structure, a bearing member having an internal seat for the head of a staybolt, said bearing member having an annular unthreaded outer end portion and having its inner end portion rounded lengthwise of the member, said bearing member also having an exterior threaded portion between said annular unthreaded outer end portion and the said rounded portion.



1,393,352. TELEPHONE SYSTEM. WILLIAM L. DOBON, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 22, 1919. Serial No. 325,518. 17 Claims. (Cl. 179—50.)

1. In a telephone system, in combination, a plurality of trunk lines and a signaling path common thereto extending between two stations, means at one station for transmitting over the signaling path code signals individual to the different trunk lines, each code signal comprising a plurality of current impulses, means common to the trunk lines for determining the character of some of the impulses of each code signal, and means individual to each trunk line and controlled thereby for determining the character of another of the impulses of each code signal.



16. In a signaling system, in combination, a plurality of trunks extending between two stations, a signaling path common to said trunks, a rotatable sending distributer at one station, a rotatable receiving distributer at the other station, and signaling devices common to said trunks and associated with the receiving distributer and selectively responsive to like predetermined permutations of impulses transmitted by the sending distributer depending on whether the distributers are rotating in unison or whether the receiving distributer is leading or lagging behind the sending distributer.

1,393,353. SEMI-AUTOMATIC GUN. LOUIS L. DRIGGS, New York, N. Y. Filed June 9, 1917. Serial No. 173,808. 7 Claims. (Cl. 89—4.)

1. The combination with a gun mount provided with a yoke swiveled thereto and inclined rearward therefrom, of a slide trunnioned in said yoke, a shoulder bar connected to said slide, a gun body slidably mounted in said slide and provided with an upwardly projecting lug near the breech thereof, a recoil cylinder secured to said slide above said gun body, and a recoil cylinder piston, and piston rod, the said piston rod having its outer end secured to said lug, a segmental rack fast to said slide provided with worm teeth, a bracket carried by said yoke, a worm journaled in said bracket and engaging said rack teeth, and means for turning said worm, substantially as described.

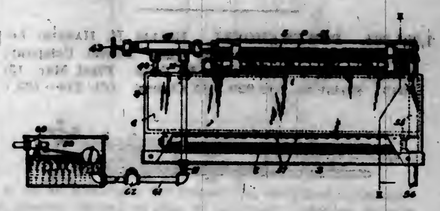
1,393,354. SPRING-BUMPER. HARRY W. DYER, East Orange, N. J. Filed Oct. 2, 1919. Serial No. 327,696. 10 Claims. (Cl. 293—67.)

1. In a bumper of the class described the combination of a semi-elliptical spring supported at three points in a horizontal position, one of said supports applied at the middle and one at each end of said spring and all of said supports being yieldable on compression.

1,393,355. COATED ARTICLE. JOHN CHARLES EMHARDT, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Feb. 25, 1918. Serial No. 219,091. 14 Claims. (Cl. 91—68.)

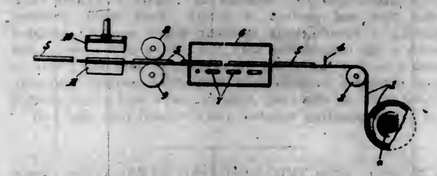
11. An article having a coating comprising a layer of cellulose ester coating composition, and a covering layer of a composition containing a substance which will absorb heat by chemical change when subjected to heat or fire.

1,393,356. FLUER AND METHOD OF MAKING THE SAME. EDWARD B. FEASTER, Boston, Mass. Filed Sept. 7, 1920. Serial No. 408,557. 17 Claims. (Cl. 118—57.)



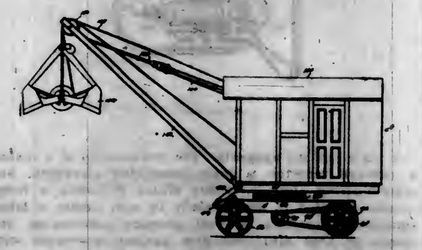
1. In a flier, in combination, a solid metal member comprising an arm having a substantially straight lower portion and a curved upper portion, a supporting member attended from said curved upper portion and a shorter curved arm extending from said supporting member and provided at its free end with a lug and having its portion near said supporting member of greater thickness than said free end portion, a hollow sheet metal member having a substantially straight lower portion provided with a lug coöperating with the lug on said shorter arm and a curved upper portion welded to said short arm, a hub extended through said supporting member and provided with an upwardly tapering bore, and a key carried by said supporting member and extended into said hub.

1,393,357. ELECTRIC LIGHTING APPARATUS. JOHN H. GEORGE, Bridgeport, Conn., assignor to Ellsworth A. Hawthorne, Bridgeport, Conn. Original application filed Mar. 16, 1916, Serial No. 222,975. Divided and this application filed Nov. 28, 1916. Serial No. 263,904. 7 Claims. (Cl. 240—44.)



1. In a lighting apparatus, the combination of a casing, a concave reflector, a lamp associated therewith, and lamp-focusing and controlling means including a lamp-carrier mounted to move axially in said casing, a lamp-controller projecting laterally through said casing, and means to hold said controller against movement with said carrier axially of said casing.

1,393,358. COMBINED BURNER AND GAS-GENERATOR UNIT. ALBERT E. GRANT, New York, N. Y. Filed Aug. 21, 1919. Serial No. 318,991. Renewed Jan. 10, 1921. Serial No. 436,392. 7 Claims. (Cl. 158—56.)



1. A heating unit adapted to heat the fire chamber of a furnace or boiler, comprising the combination of a flame forming burner, injector means in advance of said burner and adapted to mix oil and steam, an oil supply having a constant level below said injector means, a steam generator, independent of the furnace or boiler, heated by said burner flame and adapted to draw up automatically said oil to said injector, vaporize it and feed it to said burner, means for maintaining a substantially constant steam flow from said generator to said injector while said burner is in operation, and means for stopping the flow of steam to the injector when the burner flame ceases.

1,393,359. PANEL. HARRY J. HAON, Newburgh, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed May 1, 1919. Serial No. 294,023. 9 Claims. (Cl. 296—44.)

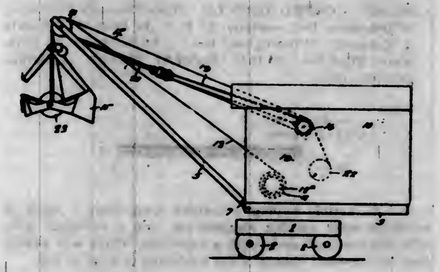
1. A door panel blank prepared by applying an adhesive material and then a separate plate of cardboard to an advancing web of artificial leather, partially drying, then calendering and then cutting to the approximate size of said plate.

1,393,360. SPRING-TRUCK. HOLLIS H. HARRIS, Lorain, Ohio, assignor to The Thew Shovel Company, Lorain, Ohio, a Corporation of Ohio. Filed Mar. 14, 1919. Serial No. 282,550. 13 Claims. (Cl. 280—106.5.)

1. In a truck, the combination of longitudinal structural side members, an intermediate longitudinal member between the side members, transverse castings fitted between the intermediate member and the side members, axles below said transverse members, wheels on the axles, and springs seated on the axles and fitted to the side and transverse members.

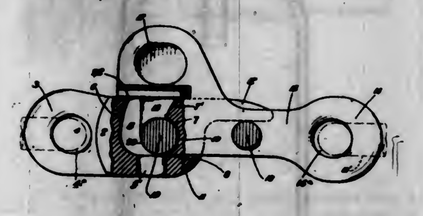
1,393,361. POWER-SHOVEL. HOLLIS H. HARRIS, Lorain, Ohio, assignor to The Thew Shovel Company, Lorain, Ohio, a Corporation of Ohio. Filed Mar. 15, 1919. Serial No. 282,929. 15 Claims. (Cl. 214—135.)

1. In a boom construction, the combination of a pair of structural side frame members, a plurality of wood blocks secured side by side between the side frame members adjacent each end thereof leaving an intermediate opening, guides adapted to embrace a dipper stick, and mounted on the structural side members.



1,393,362. POWER-SHOVEL. HOLLIS H. HARRIS, Lorain, Ohio, assignor to The Thew Shovel Company, Lorain, Ohio, a Corporation of Ohio. Filed Mar. 15, 1919. Serial No. 282,930. 9 Claims. (Cl. 214—138.)

1. The combination, with a power shovel, having a frame, an inclined boom adjustably supported thereby with its upper end at the approximate level of the upper portion of the frame, and a dipper, of a motor, means for moving the dipper toward and away from the frame

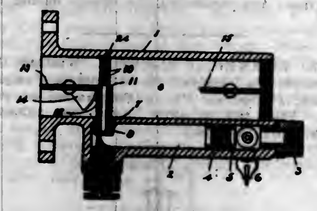


independently of the boom, means for swinging the dipper about an axis, and mechanism for connecting the motor with either of said means.

1,393,363. CONVERTIBLE EXCAVATING-MACHINE. HOLLIS H. HARRIS, Lorain, Ohio, assignor, by mesne assignments, to The Thew Shovel Company, Lorain, Ohio, a Corporation of Ohio. Filed Mar. 17, 1919. Serial No. 282,999. 9 Claims. (Cl. 214—132.)

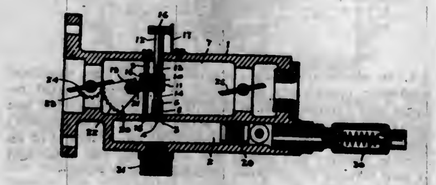
1. In an excavating machine, alined drums, means for rotating the drums independently in opposite directions, and means for connecting the drums together whereby they may be rotated as a unit.

1,393,364. CAR-COUPLING. WILLIAM ALLEN HAYWORTH, Universal, Ind. Filed Dec. 18, 1920. Serial No. 431,649. 8 Claims. (Cl. 213—45.)



1. A car coupler comprising in combination separable links arranged to coact in interlocking engagement one with the other and having means for attachment thereof to the cars, one link having a cavity therein and having fingers on one end thereof, and the other link having projecting pins on opposite sides thereof, arranged to enter said cavity and other projecting pins arranged to engage the under surface of said fingers in securing the links in interlocking engagement.

1,393,365. TOOL FOR REMOVING CORES AND VALVE-CORE STOOLS FROM TIRE-VALVES. JOHN HEIL, Melrose Park, Ill. Filed Aug. 21, 1920. Serial No. 405,154. 3 Claims. (Cl. 81—3.)

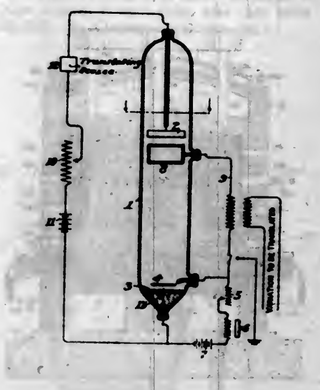


1. A tool of the character described having a portion formed to provide a longitudinally extending rod having a spear-shaped, relatively thin head at one end having a width sufficiently small to permit it to be inserted through the tubular valve body of a tire valve, a cup-shaped member surrounding said rod and disposed adjacent this spear-shaped head, and a compression spring urging the cup-shaped member over the head.

1,393,366. CARBURETER. ROBERT IRWIN HENDERSON, Toronto, Ontario, Canada. Filed June 23, 1920. Serial No. 391,075. 1 Claim. (Cl. 261—41.)

In a carbureter, the combination with the body having an air passage therethrough and a throttle controlling said passage, of a tubular nozzle extending transversely of said passage and having discharge openings through the wall thereof, a sleeve encircling a portion of said nozzle within the air passage and slidable thereon and adapted to control said discharge openings, and means rigid with said throttle arranged within the air passage and directly engaging said sleeve to move it longitudinally on the nozzle as the throttle is turned.

1,393,367. CARBURETER. ROBERT IRWIN HENDERSON, Toronto, Ontario, Canada. Filed Sept. 20, 1920. Serial No. 411,576. 4 Claims. (Cl. 261—41.)

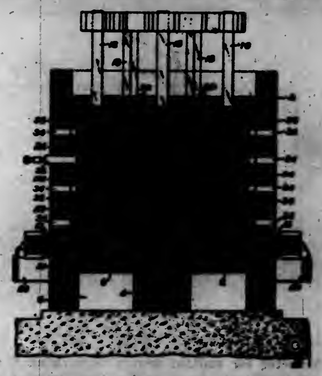


1. In a carbureter having a fuel nozzle entering the air passage and a throttle, a guide arranged diametrically in the air passage adjacent to the nozzle, a valve slidably supported on said guide and adapted to control the flow of fuel from the nozzle, and means arranged within the air passage and directly engaging the throttle and said valve to slide said valve on said guide in relation to the movement of the throttle.

1,393,368. RADIANT REFLECTOR. GEORGE J. HENRY, San Francisco, Calif. Filed Mar. 10, 1920. Serial No. 364,769. 6 Claims. (Cl. 219—34.)

1. A reflector for radiant energy comprising a smooth surface of hyperbolic form, and a heat element located substantially about the focus of the curve surface in combination with a supplementary reflector of cusp form located within the first named reflector and adjacent to the heat element.

1,393,369. APPARATUS FOR TRANSLATING ELECTRICAL VARIATIONS. PETER COOPER HEWITT, Ringwood Manor, N. J. Filed Mar. 12, 1915. Serial No. 13,873. 14 Claims. (Cl. 179—171.)

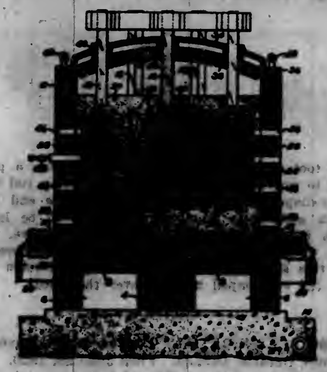


1. In an apparatus for translating electrical variations, an electric device having a potential terminal located therein and completely covered with insulating material, said insulated potential terminal being separately mounted in said device.

1,393,370. PROCESS OF MAKING ALUMINUM NITRID AND OTHER CHEMICAL SUBSTANCES. WILLIAM HOOPES, Pittsburgh, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 19, 1919. Serial No. 324,764. 24 Claims. (Cl. 204—31.)

2. A process involving chemical reactions between gaseous and solid bodies particularly applicable to bodies which are nonconducting when cold characterized by interposing a pervious mass of the solid bodies between suit

able electrodes providing a resistant conducting body between the electrodes indirectly preliminary to heat said



mass and passing an electric current between said electrodes during penetration of said mass by the gaseous body.

1,393,371. APPARATUS FOR MAKING ALUMINUM NITRID AND OTHER CHEMICAL SUBSTANCES. William Hoopes, Pittsburgh, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 19, 1919. Serial No. 324,765. 26 Claims. (Cl. 204—64.)

4. An apparatus of the class described comprising a container having electrodes at either end thereof adapted to receive a charge between them, means at the sides of the chamber receiving current from said electrodes to heat a charge in the chamber, said means arranged to be withdrawn to provide a gas receiving space about the charge.

1,393,372. PROCESS OF MAKING ALUMINUM NITRID AND OTHER CHEMICAL SUBSTANCES. William Hoopes, Pittsburgh, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 19, 1919. Serial No. 324,766. 22 Claims. (Cl. 204—81.)

1. A process involving chemical reactions between solid and gaseous bodies, which comprises passing an electric current through a charge comprising a mixture of the solid materials to take part in the reaction to generate throughout said charge the heat necessary for the reaction; per-

meating the charge with the gaseous body to take part in the reaction; and insulating the charge during the reaction.

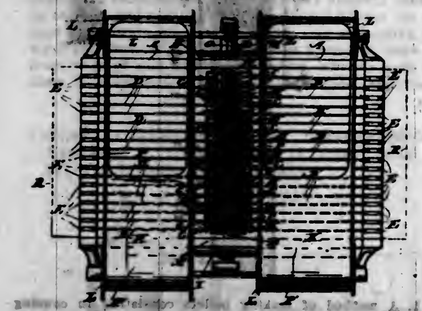
1,393,373. ELECTRICAL RESISTOR. William Hoopes, Pittsburgh, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 2, 1919. Serial No. 327,954. 27 Claims. (Cl. 219—19.)

1. In combination, an electrical resistor; an electrical conductor electrically connected to one end of said resistor and extending substantially axially thereof but not electrically connected to the other end of said resistor; means for connecting said conductor to one terminal of an electric circuit; and means for connecting the other end of said resistor to the other terminal of said circuit.

1,393,374. SHOCK-ABSORBER. Hermann J. Howaldt, Cleveland, Ohio. Filed Oct. 25, 1920. Serial No. 419,230. 8 Claims. (Cl. 188—130.)

1. In a shock absorber, the combination of a casing, a lever, a shaft mounted to rock in said casing and connected at one end to said lever, a drum connected to said shaft to rock therewith, said drum having a pair of oppo-

sitely tapered peripheral recesses, a movable clutch element in each of said pair of recesses, a pair of clutch rings loosely mounted on said drum, and a pair of brake bands arranged for contact with said clutch rings whereby when



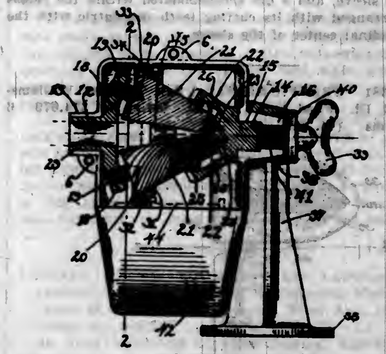
said drum is turned in one direction one of said clutch rings will be turned and frictionally engage one of said brake bands and when the drum is turned in the other direction the other of said clutch rings will be turned and frictionally engage the other in said brake bands.

1,393,375. THERMO-COUPLE. Matthew A. Hunter, Troy, N. Y., assignor to Driver-Harris Company, Harrison, N. J., a Corporation of New Jersey. Filed Feb. 17, 1920. Serial No. 359,466. 6 Claims. (Cl. 171—78.)

2. In a thermo-couple, two elements producing when heated or cooled a substantially linear electromotive force temperature curve, one of said elements consisting of an alloy of copper, nickel and chromium, which is refractory and highly resistant to oxidation and with the other element results in approximately straight line electromotive force temperature curves.

1,393,376. THERMALLY-OPERATED DEVICE. William E. Irish, Cleveland, Ohio. Filed Nov. 14, 1919. Serial No. 338,135. 15 Claims. (Cl. 60—23.)

1. In thermally operated mechanism, a frame, a multiple number of thermal strips, secured at one extremity to said frame, a common ratchet shaft with which the opposite extremities of the said strips engage, means for periodically applying heat to said thermal strips, and means for alternately cutting off the supply of heat thereto.

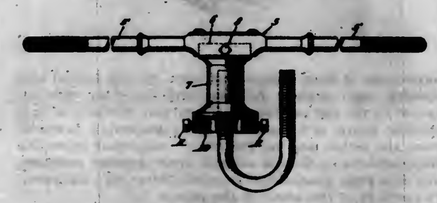


1,393,377. SPRING-CUSHION DEVICE FOR VEHICLE-TIRES. Martin Julazan, Cranston, R. I. Filed Mar. 21, 1921. Serial No. 454,218. 2 Claims. (Cl. 152—12.)

2. In an attachable spring-cushion tread device for vehicle-tires, the combination with two base members adapted to be bolted together to extend longitudinally of the tire and encircle the same, each of said base members comprised of a pair of pivotally united sections having slidable shaft support members provided with slidable shafts projecting from the outer faces thereof, and also slidable guard rail members provided with tubes and slidably mounted upon the end portions of said slidable support members, coil springs encircling said shafts and

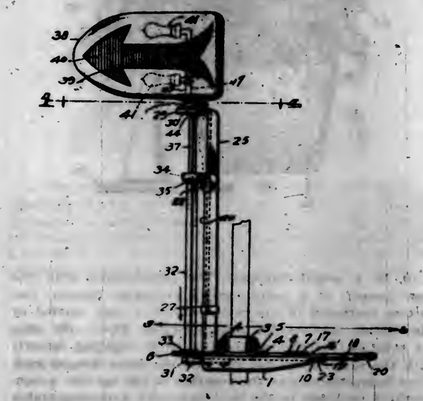
having one of their ends secured upon the top face of said slidable shaft support members and the other ends attached to the end portions of the tubular members of said slidable guard rail members, hooks projecting inwardly from the latter, and having strap connections extending from said hooks to said slidable shaft support members, and also strap connections from the latter for attachment to the felly of the wheel of the vehicle.

1,393,378. PENCIL-SHARPENER. William C. Johnson, New Haven, Conn. Filed Mar. 13, 1920. Serial No. 365,305. 11 Claims. (Cl. 120—86.)



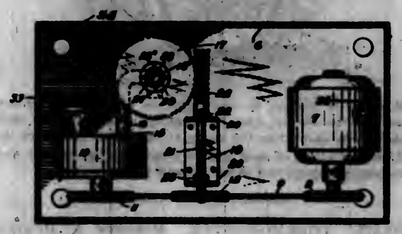
10. In a pencil-sharpener, the combination with the case thereof, of a cutter-carrier journaled therein, two cutters journaled in the cutter-carrier, a gear carried by the carrier, an annular gear mounted within the case for rotation therein and having teeth engaging directly with the said cutters for rotating the same toward each other independently of the rotation of the carrier, a handle-shaft mounted in the said case, and a driving-pinion connected with the said handle-shaft and meshing directly into the gear of the cutter-carrier and into the said annular gear.

1,393,379. CLEVIS. EDWARD F. KELLEY, Bridgeport, Conn., assignor to The Raybestos Company, Bridgeport, Conn., a Corporation of Connecticut. Filed June 19, 1920. Serial No. 390,120. 9 Claims. (Cl. 287—1.)



1. A clevis of the character described, comprising a tube from which extend a pair of slotted ears, both said ears being located on the same side of the axis of the tube.

1,393,380. STOCK. GARLAND F. KIGHT, Norfolk, Va. Filed Apr. 9, 1920. Serial No. 372,620. 3 Claims. (Cl. 10—123.)



3. In a die holder, a body having an annular recess in one face thereof and also provided with laterally disposed handles, a sleeve increased in diameter at its opposite ends and having one of said ends accommodated within the recess and fixed to rotate with the body, the opposite end of the sleeve being provided with an annular recess of greater diameter than the middle portion of the sleeve, and a die accommodated within the recess and afranged with its cutting teeth concentric with the longitudinal center of the sleeve.

1,393,381. TRAFFIC-SIGNAL. SAM T. KING, Williamsfield, Ill. Filed Apr. 17, 1920. Serial No. 374,679. 6 Claims. (Cl. 116—47.)

1. In a traffic signal, a bracket adapted to be fixed to the wind shield frame of an automobile, an upright support, said support comprising fixed and sliding sections, a tubular shaft mounted in bearings of the fixed section, a shaft section mounted in bearings of the slidable section and carrying an indicator on its upper end and being telescopically united with the shaft of the fixed section, a slide bar mounted in guides of the bracket and being operatively connected with the first shaft, and means operatively connected with the slide bar, whereby the first shaft may be rocked in one direction or the other.

1,393,382. PNEUMATIC ALARM. SAMUEL KUSHNER, New York, N. Y. Filed May 26, 1921. Serial No. 472,771. 7 Claims. (Cl. 116—65.)

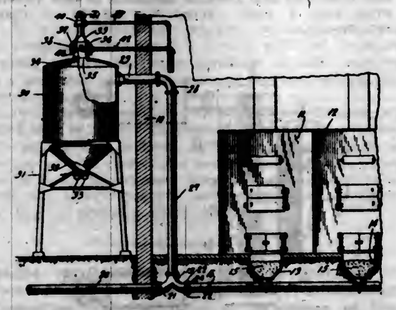
1. In a pneumatic whistle, a rotary air compressor, a whistle connected to the outlet of the compressor, a motor, and an operative connection between said motor and compressor.

1,393,383. METHOD AND APPARATUS FOR MAKING SMALL BALLS OR PELLETS. CHARLES E. LINEBARGER, Chicago, Ill. Filed Apr. 8, 1920. Serial No. 372,340. 9 Claims. (Cl. 83—91.)

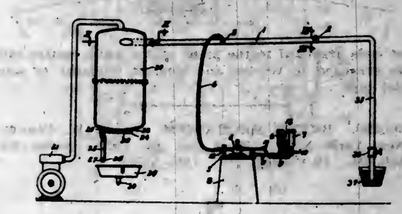
1. A method of making pellets consisting in causing drops of the substance of which the pellets are to be made to be formed in a relatively warm layer of liquid, and to move freely through said liquid into a cooler layer of liquid.

1,393,384. VALVE FOR WATER-TANKS. OTTO LIENSTADT, Madison, Nebr. Filed July 28, 1920. Serial No. 399,521. 2 Claims. (Cl. 137—104.)

1. In combination with a water tank having an inlet pipe an extension pipe, a threaded sleeve connecting the inlet pipe and the extension pipe, arms fixed to the sleeve, a valve controlling lever pivotally mounted on said arms, a weight member adjustably connected to the valve controlling lever, a float connected to the valve controlling lever, a valve releasably mounted on the free end of the extension pipe, and a long rod fixed to said valve and extending into the inlet pipe to keep the valve from becoming misplaced under the pressure of water whereby the valve will be automatically closed by the rise of water in the tank and opened when the water in the tank drops below a predetermined height.



1,393,385. COMBINED ROAD GRADING AND LEVELING MACHINE. JAMES D. LYTTLE, Fenn, and SOLOMON CLARK, Grangeville, Idaho. Filed Jan. 19, 1920. Serial No. 352,605. 9 Claims. (Cl. 37—42.)



1. A grading and leveling machine having parallel supporting runners, transverse members hingedly connected thereto, and auxiliary runners extended from the rear ends of, and hingedly connected to, said supporting runners, and manually operable means connected with the inner ends of said auxiliary members, whereby said auxiliary members may be tilted, for the purpose described.

1,393,386. CONVEYING SYSTEM. EDWARD F. MCCABE, Maplewood, N. J. Filed Apr. 11, 1918. Serial No. 227,954. 1 Claim. (Cl. 302—20.)

In an apparatus of the character described, a conduit having communication with an ash pit, an ash receiving receptacle having the bottom thereof normally closed, a nozzle supported on the receptacle and having communication therewith, a steam conducting jet disposed within the nozzle and extended toward the outer end thereof, whereupon steam passing therethrough and exhausting from the nozzle a vacuum will be created in the receptacle to carry the ashes through the conduit and into the receptacle.

1,393,387. MILKING-MACHINE SYSTEM. HERBERT MCCORNACK, Glen Ridge, N. J., assignor to Empire Cream Separator Company, Bloomfield, N. J., a Corporation of New Jersey. Filed Feb. 7, 1918. Serial No. 215,775. 13 Claims. (Cl. 31—73.)

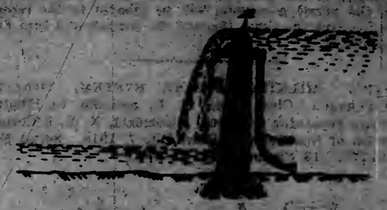
1. In a milking system having teat cups, a milk-receiving vessel and connections therebetween, the combination of a vacuum reservoir and a vacuum main draining thereinto, said reservoir and main being independent of the milk-receiving parts of the system except for a vacuum connection therewith.

7. In a milking system the combination of milk-extracting and receiving devices, a vacuum main adapted to be connected therewith or with a source of flushing fluid, a vacuum tank, and means for maintaining a vacuum in said tank, said vacuum main discharging tangentially into the upper part of the tank.

11. In a milking system, the combination of a vacuum tank and a vacuum main discharging tangentially thereinto, said main having a flushing pipe connected therewith.

12. In a milking system, the combination of a vacuum tank and a vacuum main connected therewith at one end and adapted to be connected to the milk-extracting and receiving devices of the system, said main being connected at its other end with a flushing pipe, said tank being provided with draining means.

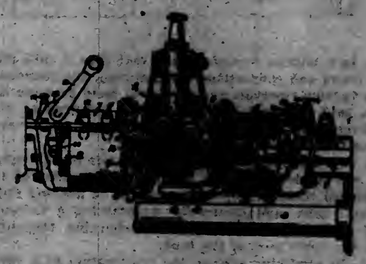
13. In a milking system, the combination of a vacuum tank and a vacuum main connected therewith at one end, said main being connected at the other end with a flushing pipe, said tank having a drain orifice at the bottom thereof provided with a closure adapted to be held closed so long as a vacuum is maintained in the tank but to open automatically upon the breaking of the vacuum.



1,393,388. ALLOY. FOSTER MILLIKEN, Lawrence, N. Y., assignor to Foster Milliken, S. Fullerton Weaver, and James M. Repplier, as trustees. Filed Aug. 18, 1920. Serial No. 404,377. 1 Claim. (Cl. 75—1.)

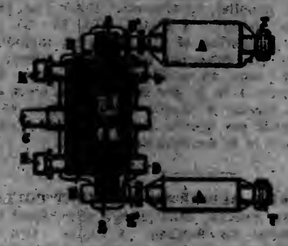
An alloy consisting of the following ingredients in substantially the following proportions: copper, 60 to 70 per cent.; zinc, 19 to 24 per cent.; nickel, 9 to 12 per cent.; iron, 1 to 2½ per cent.; and a trace of manganese and having a tensile strength from 45,000 to 183,000 pounds per square inch as the hardness varies from dead soft to 16 numbers hard.

1,393,389. DEBRIS OR SEDIMENT COLLECTOR. ALEXANDER PARKER, Etna Mills, Calif. Filed Dec. 16, 1919. Serial No. 345,286. 1 Claim. (Cl. 61—2.)



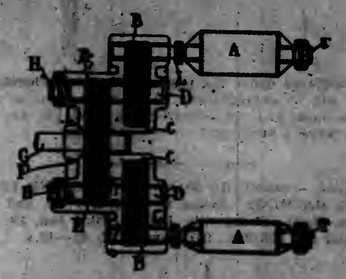
The combination of a dam, a suction outlet pipe having its end projecting into the water overflowing said dam, a plurality of downwardly extending feeder pipes having

their corresponding upper extremities communicating with one end of said suction pipe, said feeder pipes with their



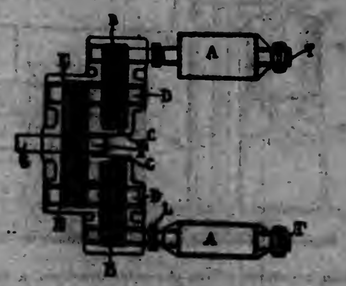
inlet ends arranged to the plane of the water course said ends arranged to receive and conduct sediment to said outlet pipe.

1,393,390. BRAKE MECHANISM. Clark W. Parkin, New York, N. Y. Filed Dec. 13, 1920. Serial No. 430,204. 16 Claims. (Cl. 188—204.)



5. The combination of a pair of alined shafts and means for rotating them, a casing therefor having a cover plate, a disk-brake for each shaft mounted on the cover plate and comprising a short shaft journaled in the cover plate and an arm attached to said short shaft outside the casing, a toggle member for said arms embodying shanks adjustable endwise in the ends of the arms and having cam surfaces at their adjacent ends, pins mounted in said adjacent ends, links connecting said pins, a spring normally holding said cam faces together and the brakes inoperative, and means to swing the toggle members to cause the brakes to operate.

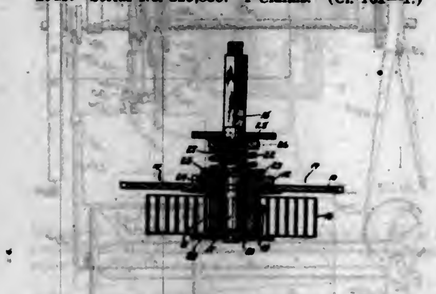
1,393,391. GEARED TURBINE SYSTEM. Charles Algernon Parsons, Stanley Smith Cook, and Louis Mortimer Douglas, Newcastle-upon-Tyne, England; said Cook and said Douglas assignors to said Parsons. Filed Feb. 12, 1919. Serial No. 276,561. 2 Claims. (Cl. 74—7.)



1. In a double reduction geared turbine installation the combination of a turbine, a single helical pinion driven thereby, a single helical wheel engaged by the said pinion and partly taking up the steam thrust of the turbine, a thrust block also partly taking up said steam thrust, a main driving shaft, an intermediate shaft carrying said single helical wheel, and a double helical pinion and gear wheel connection between the intermediate shaft and main driving shaft, the two complementary helices of the double helical pinion and gear wheel connection being of different widths and taking up the end thrust of the intermediate shaft, substantially as described.

1,393,392. GEARED TURBINE SYSTEM. Charles Algernon Parsons, Stanley Smith Cook, and Louis Mortimer Douglas, Newcastle-upon-Tyne, England; said Cook and said Douglas assignors to said Parsons. Filed Sept. 6, 1920. Serial No. 408,276. 1 Claim. (Cl. 74—7.)

In a double-reduction geared turbine installation, the combination of an axial-thrust turbine, a shaft driven thereby, a thrust-block co-acting with said shaft and taking a part of the thrust of said turbine, a single helical pinion mounted on said shaft, a main driven shaft, a single helical wheel mounted thereon, an intermediate shaft, a single helical pinion mounted on said intermediate shaft and gearing with said wheel on said main driven shaft, a single helical wheel mounted on said intermediate shaft gearing with said pinion on said turbine shaft and receiving the balance of the thrust of said turbine and a thrust-block co-acting with said intermediate shaft to receive the thrust thereof due to said single helical wheels mounted thereon.



1,393,393. GEARED TURBINE SYSTEM. Charles Algernon Parsons, Stanley Smith Cook, and Louis Mortimer Douglas, Newcastle-upon-Tyne, England; said Cook and said Douglas assignors to said Parsons. Filed Sept. 4, 1920. Serial No. 408,276. 1 Claim. (Cl. 74—7.)

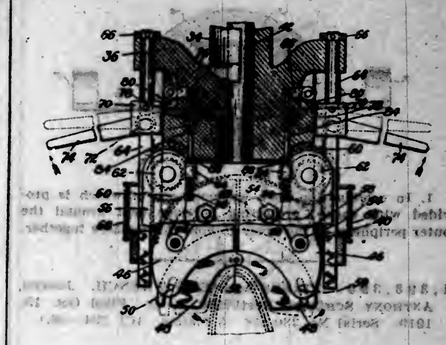
In a double reduction geared turbine installation the combination of a turbine, a single helical pinion driven

thereby, a single helical wheel engaged by the said pinion and partly taking up the steam thrust of the turbine, a thrust block also partly taking up said steam thrust, a main driving shaft, an intermediate shaft carrying said single helical wheel, a secondary pinion and gear of the single helical type connecting the intermediate shaft with the main driving shaft, the teeth of the primary gear wheel and secondary pinion respectively being inclined at different angles.

1,393,394. TIMING MECHANISM. Ross M. G. Phillips, New Haven, Conn., assignor to The Phillips Time Switch Co., Shelton, Conn., a Corporation. Filed Oct. 10, 1919. Serial No. 329,855. 4 Claims. (Cl. 161—1.)

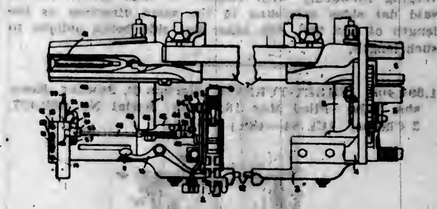
4. In a timing mechanism, the combination with the winding arbor, of a hub mounted thereon, a main timing wheel and a ratchet wheel connected with the said hub, a main spring having one end connected with the hub, means mounted on the arbor for frictionally locking the arbor to the timing wheel, whereby the main spring may be wound and the arbor turned backward without unwinding the main spring.

1,393,395. ELECTRIC MACHINE. Otto Pletscher, Albisrieden, Switzerland. Filed Apr. 14, 1917. Serial No. 162,147. 6 Claims. (Cl. 171—209.)



1. In a magneto-electric machine, arcuate permanent field magnets, spaced apart to form a gap that increases in width toward the outer periphery of said magnets and a pole shoe connecting poles of like sign on opposite sides of said gap.

6. In a magneto-electric machine, field elements arranged side by side, each element composed of substantially semi-circular magnets having a gap between them widening toward their outer peripheries, and pole shoes common to all the magnets connecting the opposed poles of like sign of said magnets, said pole shoes of less thickness than the minimum width of said gaps.



1,393,396. END-LASTING MECHANISM. Charles F. Pym, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 13, 1919. Serial No. 270,884. 31 Claims. (Cl. 12—14.)

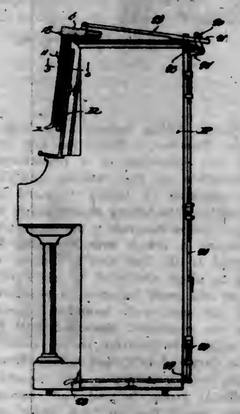
1. In mechanism of the class described, the combination with end embracing wipers, of operating means and connections between said means and the wipers for closing them inward laterally of a shoe, said connections being constructed and arranged to permit relative [illegible] closing

movement of the wipers independently of said operating means to adjust them to the shoe, and additional means controlled by the operative movement of the wipers for retaining the wipers in adjusted relation.

1,393,397. FEELER MECHANISM FOR LOOMS. Alonzo E. Rhoades, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Feb. 2, 1920. Serial No. 355,978. 4 Claims. (Cl. 139—85.)

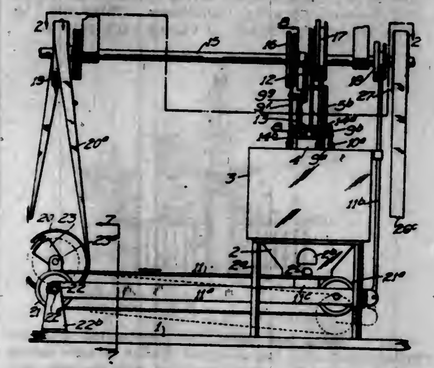
1. An automatic filling replenishing loom comprising a vibrating weft hammer, a feeler movable into abnormal position upon the detection of a predetermined degree of filling exhaustion on the running shuttle, a pivoted latch, means operated by bodily forward movement of the latch to initiate the filling replenishing action of the loom, a rod journaled for rotary movement on the loom frame and having a crank arm engaging the latch, a spring connected to the rod and acting to rock the rod in a direction to allow the latch to move out of position to be struck by the weft hammer, a connection between said rod and the said weft hammer whereby the weft hammer upon its rearward vibration will rock the rod to move the latch into position to be struck by the weft hammer on its forward vibration, a dog pivoted adjacent the feeler and provided with a cam groove, and a pin projecting radially from the rod and engaging the said groove, the dog being free to rock under normal conditions but being restrained from rocking by the feeler when in abnormal position.

1,393,396. INSULATOR. HOWARD N. RICHARDS, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 19, 1921. Serial No. 446,306. 12 Claims. (Cl. 191—42.)



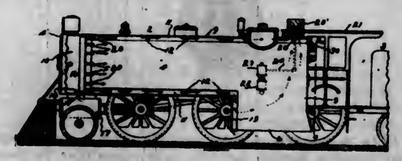
1. In combination, two washers, one of which is provided with spaced projecting portions bent around the outer periphery of the other to hold the washers together.

1,393,399. PLIERS AND END WRENCH. JOSEPH ANTHONY SCHLEBR, Northville, S. D. Filed Oct. 13, 1919. Serial No. 330,358. 3 Claims. (Cl. 294—36.)



1. An open-ended nut gripping and turning tool comprising a pair of handle-carried jaws, narrowed substantially to points at their front ends, the opposed sides of said jaws being flat throughout their areas and converging forwardly with respect to each other, one of said flat sides extending in the same direction as the length of the tool, the other flat side being oblique to such length.

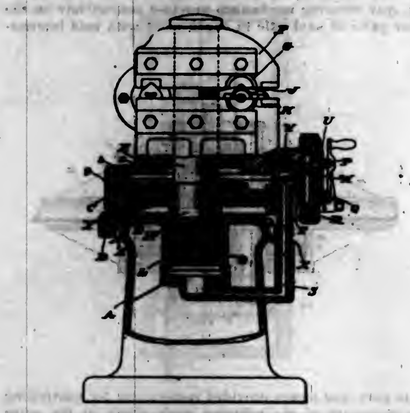
1,393,400. SHEET-TURNER. GEORGE B. SEMLEY, Kenosha, Wis. Filed May 18, 1920. Serial No. 382,427. 3 Claims. (Cl. 84—488.)



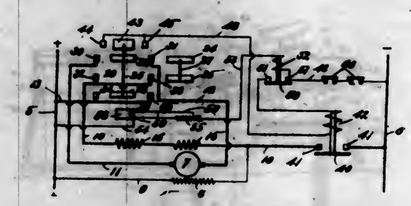
1. In a mechanism of the class described, a normally inactive turning arm pivoted intermediate its ends, a weight on one of said ends, a pivoted latch bar having a groove receiving a portion of the arm to retain the same in inactive position, and means for rocking the latch bar to release the arm and to move the same toward an active position, the weight completing the movement of the arm from its inactive to its active position.

1,393,401. COATING AND FORMING MACHINE. IRA SHAFER and CHARLES A. SMALL, San Diego, Calif. Filed Jan. 20, 1920. Serial No. 352,828. 15 Claims. (Cl. 91—2.)

3. A coating machine, including a candy center conveyer, means for supporting said center, means for forcing coating substance below and above said center and means engaging the outer surface of said coating all operated in their proper sequence and means intermittently and upwardly and downwardly operated for supporting and conducting said center and coating.



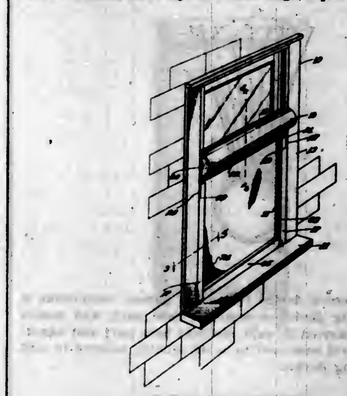
1,393,402. LOCOMOTIVE. WILBUR L. SHEPARD, Elmwood, and EDWARD A. BEALS, Hartford, Conn. Filed Oct. 14, 1919. Serial No. 330,645. 1 Claim. (Cl. 122—75.)



The combination in a steam engine, comprising a boiler, a jacket around and spaced from the boiler, and means for causing the exhaust steam from the engine to pass along said space and at the same time to cause the waste gases of the boiler to travel said space.

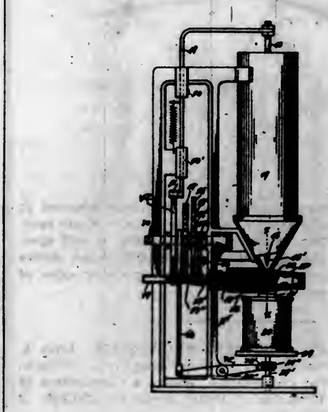
1,393,403. DRILL-SHARPENER. WILLIAM A. SMITH, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Apr. 1, 1920. Serial No. 370,553. 2 Claims. (Cl. 121—31.)

1. A drill sharpener having a stationary die member, a reciprocating die member, a cylinder, a piston therein connected to operate the reciprocating die member, fluid actuating means for said piston, a recess or pocket at the upper end of the cylinder adapted to receive a projecting portion on the piston for cushioning the piston on the up stroke, ports through the lower wall of the cylinder affording communication between the interior of the cylinder and the atmosphere, and means forming part of the piston for closing communication through said ports when the piston approaches the end of its down stroke, whereby air is trapped below the piston to form a cushion.



1,393,404. SAFETY DEVICE FOR ELECTRICALLY-OPERATED SYSTEMS. WILLIAM S. SMITH, Cambridge, Mass. Filed Aug. 3, 1918. Serial No. 248,176. 17 Claims. (Cl. 172—179.)

2. The combination with an electrical system comprising a motor and manually operated means for controlling said motor, of a switch in the motor circuit normally open, means including a second normally open magnet operated switch in the operating circuit of the first mentioned magnet operated switch and for closing said switch to close the motor circuit, said means being operated by said controlling means and being so arranged that whenever there is a failure of current in the system and said switch has returned to open position the said means remains inoperative until the manually operated controlling means has been returned to a neutral position.

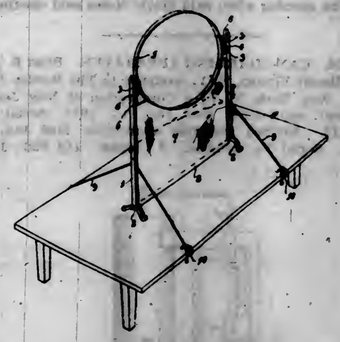


1,393,405. SCREEN. LOUIS C. SOTEROS and JOHN S. CAVALIERES, Gary, Ind. Filed Oct. 14, 1920. Serial No. 417,027. 5 Claims. (Cl. 156—39.)

2. The combination with an inclosure having an opening, of a screen for said opening, a housing, means for detachably securing said housing to the sides of said opening, a roller rotatably mounted in said housing, a screen fabric having one end secured to said roller, spring means carried by said roller tending to coil said fabric around said roller, a pair of guide rollers for said fabric, said guide rollers being rotatably mounted in said housing, a pair of reinforcing wires for each of the side edges of said fabric, the inner wire for each side edge having said fabric looped over it, clips disposed along each of said side edges for securing said inner wires to said fabric, the outer wires for each side edge being secured to the outer end of the clips disposed along the respective side edge, a pair of guideways

for said fabric, said guideways being each secured to a side of said opening and comprising a pair of strips coacting with said clips, a bar secured to the free end of said fabric, and means for holding said bar in contact with the end of the opening when said fabric closes said opening.

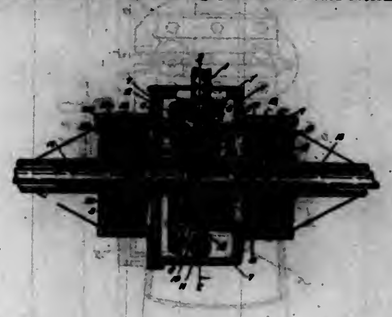
1,393,406. CAN-CHARGING APPARATUS. BURT E. TAYLOR, Mount Vernon, N. Y., assignor to The Borden Company, New York, N. Y., a Corporation of New Jersey. Original application filed Dec. 13, 1919, Serial No. 344,713. Divided and this application filed Jan. 10, 1921. Serial No. 436,063. 5 Claims. (Cl. 226—116.)



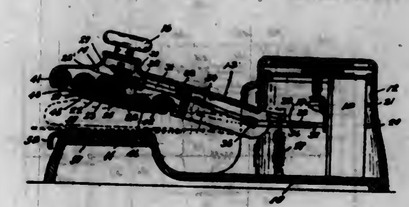
1. In apparatus for charging a flowing material into a container, a receptacle for the material having adjacent its bottom a downwardly delivering outlet; a reciprocable valve member within said receptacle coöperating with said outlet; an oscillatory valve below said receptacle also cooperating with said outlet, and containing an air-duct and also a by-pass for the material, and means to oscillate said last mentioned valve and thereby bring said air-duct and said by-pass alternatively into communication with said outlet.

1,393,407. SHUTTLECOCK DEVICE FOR USE IN GAMES. Fred Tenney, Buckingham, England. Filed Oct. 25, 1919. Serial No. 332,700. 16 Claims. (Cl. 46—59.)

1. A shuttlecock device for use in games, comprising a flight steadying device, a resilient base part, and means permanently carried by said resilient base part and adapted to enable said base part to be detachably secured to said flight steadying device.



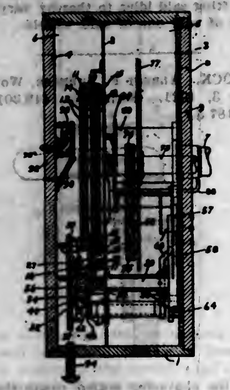
1,393,408. GAME. Fred Tenney, Doncaster, England. Filed Oct. 25, 1919. Serial No. 332,791. 9 Claims. (Cl. 46—59.)



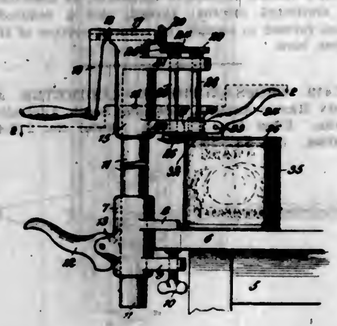
1. A game apparatus comprising a barrier adapted to be set up between players of opposing sides, a single aperture in said barrier, means whereby the size of said aperture may be varied as desired, and a shuttlecock device adapted to be exchanged between the opposing sides of players through said aperture.

1,393,409. TRACTOR DRIVING MECHANISM. John A. Thompson, Sedro Woolley, Wash., assignor to Perfecto Gear Differential Co., Seattle, Wash., a Corporation of Washington. Filed Jan. 8, 1919. Serial No. 270,165. 3 Claims. (Cl. 180—17.)

1. A transmission of the class described comprising a three-part axle, a fixedly and a rotatably mounted disk on the intermediate part of said axle, said rotatably mounted disk having clutch recesses formed between the geared outer and shouldered inner part thereof, pinion gears mounted for rotation on said fixedly mounted disk disposed to mesh with the gear on the shoulder of said rotatably mounted disk, a ring gear in mesh with said pinion gears, means for driving said rotatably mounted disk, a fixed axle housing, clutch recesses formed in the periphery of said housing, clutch elements on both sides of said ring gear, means for shifting said ring gear to selectively lock the same to said rotatably mounted disk or to said axle housing, gear reducing mechanism provided respectively on the outer parts of said axle in engagement with said intermediate part, and means provided respectively for controlling the movement of the reducing mechanisms on the outer parts of said axle whereby said outer parts can be rendered operative or inoperative collectively or independently.



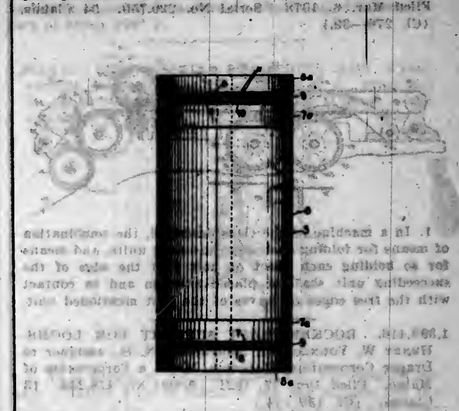
1,393,410. TIME-STAMP. Robert H. Thompson, Brookline, Mass. Filed July 25, 1917. Serial No. 182,783. 7 Claims. (Cl. 234—54.)



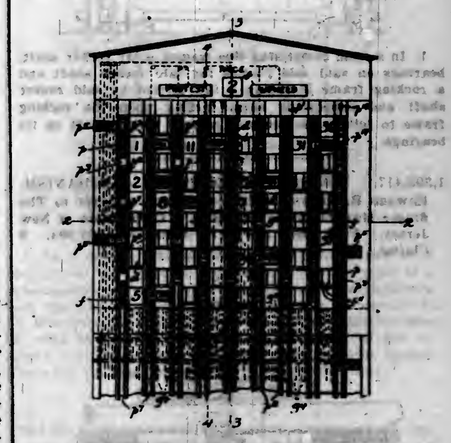
2. A time stamp including a base, an anvil carried thereby, a clock mechanism arranged on said base remote from said anvil, an arm pivoted to said base and extended above said anvil, a printing die carried by said arm above said anvil adapted to be rotated by said clock mechanism, said arm movable to and from said anvil to record an imprint of said printing die, a drive shaft connecting said printing die and a rotatable component of said clock mechanism for the rotation of said die by said clock mechanism, and a universal joint interposed in said shaft, whereby said shaft may be flexed during a movement of said arm for the imprint of said printing die and drive said printing die in such flexed condition.

1,393,411. MULTIPLE-VIEW CAMERA. Perry B. Wright and Charles H. Ahrens, Dayton, Ohio, assignors to The Vemograph Company, Dayton, Ohio, a Corporation of Ohio. Filed May 12, 1919. Serial No. 296,585. 52 Claims. (Cl. 88—16.)

12. In a mechanism of the character described, a lens, a carriage mounted for movement transversely to said lens and adapted to support a sensitized plate, a toothed member connected with said carriage, a pair of pawls cooperating with said toothed member to move said carriage in opposite directions, and means to render one of said pawls inoperative during the movement of said carriage in one direction and to render the other pawl inoperative during the movement of said carriage in the opposite direction.



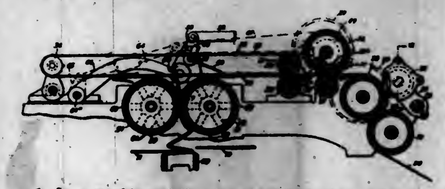
1,393,412. CAN-OPENER. Robert Henry Waller, Nashville, Tenn., assignor, by mesne assignments, to Quicksafe Manufacturing Company, Nashville, Tenn., a Corporation of Tennessee. Filed June 16, 1920. Serial No. 389,391. 5 Claims. (Cl. 30—3.)



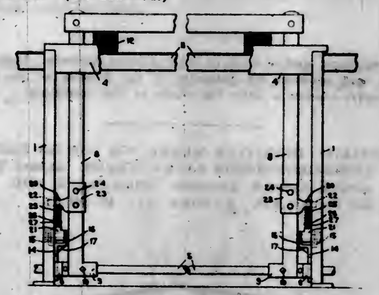
1. In a can opener, a rotary cutter or knife, a roller for engagement with the inside of the bead of the can, means for permitting swinging of the roller about a horizontal axis elevated with respect to the roller means for swinging the roller against the bead and holding it there, whereby the roller exerts a pressure on the bead to force the can against the knife, and means for positively turning both the rotary cutter and the roller irrespective of the thickness of the interposed bead to effect opening of the can.

1,393,413. CONTAINER. Frank Wallertz, Chicago, Ill. Filed Sept. 22, 1919. Serial No. 325,904. 2 Claims. (Cl. 220—5.5.)

1. A container of fibrous material the longitudinal walls whereof are formed from a blank of suitable dimensions, closures for the ends thereof, each comprising two elements having right angle lateral flanges adapted to contact and assemble with the longitudinal walls of the container; said elements being arranged face to face in juxtaposition with their flanges extending in opposite directions, and a bead of cementitious material disposed at and between the juncture of the flanges of the two closure elements with the walls of the container.

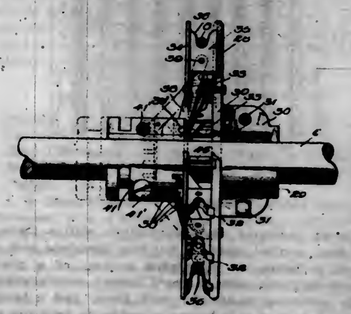


1,393,414. INDICATOR MEANS FOR USE ON RECREATION-GROUNDS OR RACE-COURSES. Albert Watkinson, Kyneton, Australia. Filed Nov. 8, 1919. Serial No. 335,458. 6 Claims. (Cl. 40—65.)



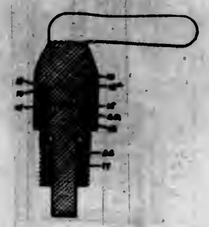
2. In an indicator, the combination with a frame divided into vertical rows of separate divisions and each division including an open-faced pocket; of a gravity-actuated indicator plate for each pocket, counterweighted flexible actuating means for each plate, and a latching device for each of said means to normally hold the plate concealed behind said frame above its pocket and means to automatically release all of the latches.

1,393,415. MACHINE FOR PRODUCING INTERFOLDED PAPER-PACKAGES. SETH WHEELER, Castleton, N. Y. Filed Mar. 6, 1918. Serial No. 220,759. 54 Claims. (Cl. 270—39.)



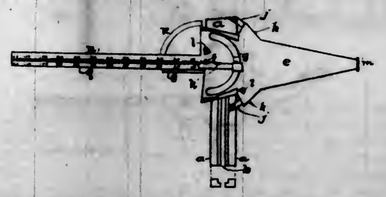
1. In a machine of the class described, the combination of means for folding successive sheets or units, and means for so holding each sheet or unit that the edge of the succeeding unit shall be placed between and in contact with the free edges or leaves of the first mentioned unit.

1,393,416. ROCKER-SHAFT SUPPORT FOR LOOMS. HENRY W. YOUNGQUIST, Manchester, N. H., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed June 17, 1921. Serial No. 478,282. 18 Claims. (Cl. 139—74.)



1. In a loom comprising side frames, a lay rocker shaft, bearings on said side frames for said rocker shaft and a rocking frame including a lay carried by said rocker shaft and supporting means acting upon the rocking frame to relieve the pressure of said rocker shaft on its bearings.

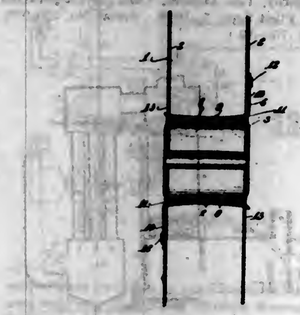
1,393,417. POWER-TRANSMITTING MECHANISM. EDWARD B. ALLEN, Bridgeport, Conn., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Dec. 20, 1917. Serial No. 207,994. 9 Claims. (Cl. 64—8.)



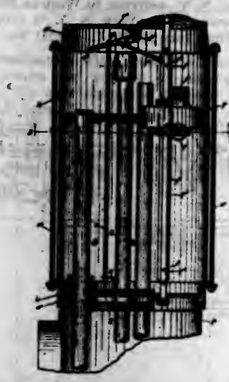
1. In a variable speed, power-transmitting mechanism, in combination, a driven wheel, a driving wheel, a belt connection between said wheels, an idler for said belt, one of said wheels being expansible and contractible to vary its effective circumference, and manually controlled means for shifting said idler to thereby vary the effective circumference of said one of said wheels.

1,393,418. COCK. ALBERT F. AUDIBERT, Wolfeboro, N. H. Filed Mar. 3, 1921. Serial No. 449,301. 1 Claim. (Cl. 123—187.5.)

A cock of the character stated comprising a tubular body member, adapted for attachment as a conduit to a container, and having an annular valve seat at its outer end surrounding its bore, said bore extending from end to end of the body member, and including an enlarged portion adjacent to the valve seat, having a mutilated internal screw thread, and a reduced portion extending from the enlarged portion to the inner end of the body member; and an elongated closing member including an enlargement forming a valve portion having an annular face formed to close upon said seat, and a stem having an enlarged outer portion provided with a mutilated external-screw thread, formed to coöperate, as described, with said mutilated internal thread, and a reduced inner portion formed to occupy the reduced portion of the body member bore.



1,393,419. CROSS-SECTIONAL CLINOMETER. ARTHUR JOHN HENRY ARTHUR, Adelaide, South Australia, Australia. Filed Jan. 27, 1919. Serial No. 273,414. 5 Claims. (Cl. 33—46.)

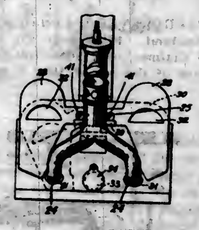


1. A cross-sectional clinometer including a vertical pillar having graduations, a member pivoted to the pillar and having a graduated extension projecting from the pillar, a vertically adjustable slide mounted on the pillar and coöperating with the graduations thereof and a horizontally adjustable member carried by the slide and provided with a graduated extension and a batter rod adjustably mounted on the said horizontally adjustable member.

1,393,420. FILM-REEL. THOMAS ASH and AUGUSTUS J. FRAME, Columbus, Ohio. Filed Jan. 5, 1921. Serial No. 435,090. 3 Claims. (Cl. 242—70.)

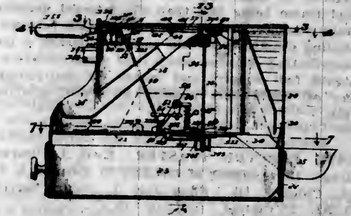
3. A film reel clamping appliance comprising a hub structure having spaced vertically disposed heads secured to the ends thereof, a leaf spring disposed to extend between said heads and normally disposed in engagement with the outer periphery of the hub structure, a laterally offset end formed upon said spring, lugs carried by one of said heads and arranged to receive the offset portion of said spring, and the free end of said spring being disposed to lie in contiguity with an opening provided in the other of said heads and capable of being exteriorly manipulated to withdraw the spring substantially from engagement with the hub structure.

1,393,421. MECHANICAL CUT-OUT FOR FLOAT METERS. LINNAEUS E. BAKER, Fort Wayne, Ind., assignor to Wayne Oil Tank and Pump Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Dec. 16, 1919. Serial No. 345,417. 4 Claims. (Cl. 235—94.)



1. In combination with a float meter having a rack gear, fixed upright guiding means upon which said float meter rises and falls, an upright rack adapted to mesh with the rack gear while the meter is in operation, and means for moving the rack backwardly out of mesh with the rack gear when metering is to be avoided.

1,393,422. PROCESS FOR THE MANUFACTURE OF GRAPE AND OTHER FRUIT JUICES. RUSSELL W. BRIDGES, Detroit, Mich. Filed Mar. 27, 1919. Serial No. 285,555. 3 Claims. (Cl. 99—11.)



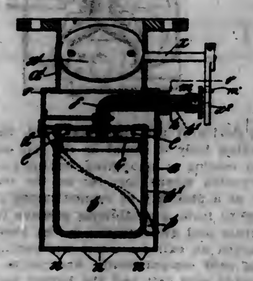
3. The process of preparing grape and other fruit juices, which consists in commingling in a container fruit, sugar and hot water in about the proportion of two quarts of fruit, one pound of sugar and enough water to approximately 210° F. to fill a two gallon container, thereby forming a dilute hot sugar solution to make the skins and cell walls permeable and promote osmosis, then sealing the container, cooling and subjecting the contents to osmotic action until diffusion or extraction of the juice has been effected, then filtering and sterilising the resulting juice, sealing in a container and again sterilising at a temperature of about 160° F.

1,393,423. SELF-HEATING SMOOTHING-IRON. FERDINAND M. EUGENE BLASS, East Orange, N. J. Filed May 20, 1919. Serial No. 298,387. 12 Claims. (Cl. 158—23.1.)

2. In a device of the class described, the combination with a hollow body of metal or the like suitable for the purpose of ironing or smoothing, having gas and air inlet with controlling means therefor on the rear side of the iron only, of a plurality of compartments connected with each other to form a continuous passage for the heating gas, a burner and air entrance in the lowermost of said compartments, an exit for waste gas arranged in the uppermost of said compartments, and means for automatically covering said exit and the burner and air entrance upon the removal of said burner, said means being also operative to engage said burner with said iron.

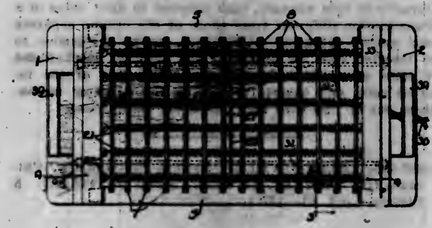
1,393,424. CHANGE-MAKING MACHINE. GEORGE J. BROCKHAGEN, Brooklyn, N. Y. Filed Jan. 15, 1919. Serial No. 271,230. 17 Claims. (Cl. 133—2.)

1. In a change making machine the combination of a plurality of coin ejectors, each adapted to eject coins of a denomination different from those of the others, separate coin ejector actuating mechanisms, means responsive to an inserted coin for operating the actuator mechanisms of coins of a lower denomination than that of the inserted coin, and means for moving the actuator mechanisms out of line with their operating mechanisms.



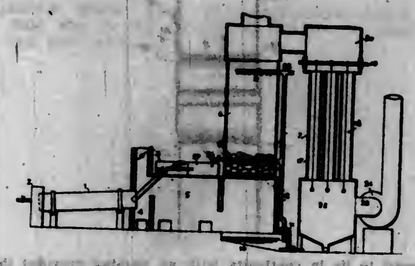
1,393,425. BELT-BUCKLE. SAMUEL BUCHSBAUM, Chicago, Ill. Filed Oct. 14, 1920. Serial No. 416,931. 5 Claims. (Cl. 24—170.)

1. A device of the character described, comprising a front plate, a gripping element pivotally carried by said



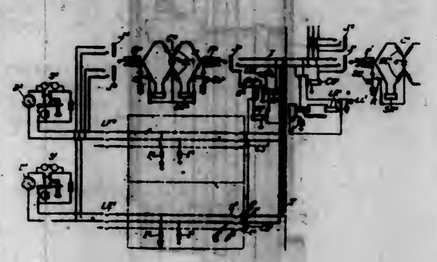
front plate and adapted to grip a free belt tongue and hold it in place against the rear face of said front plate, said gripping element extending across substantially the entire width of said front plate, and consisting of two separated gripping surfaces, and upstanding side walls and a belt clamping structure pivotally carried by said gripping element at its side walls, said belt clamping structure including a plate-like element and a clamp pivotally carried thereby.

1,393,426. CARBURETER. LESLIE STUART CAMPBELL, Brighton, England. Filed Sept. 20, 1920. Serial No. 411,588. 5 Claims. (Cl. 261—100.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. A carbureter for internal combustion engines comprising a chamber the upper part of which is adapted to be put in communication with the induction pipe of the engine, an air inlet in the bottom of said chamber, a frame located within said chamber, a distributing chamber mounted on the top of said frame, an absorbent jacket on the exterior of said frame the exterior diameter of the jacketed frame being less than the internal diameter of the main chamber, means of communication between said distributing chamber and said absorbent jacket, a port in said distributing chamber which is in communication with the liquid fuel supply, and means for controlling the amount of liquid fuel passing into said distributing chamber.

1,393,427. ELECTRIC TOASTER. EMIL A. CHRISTOPH, Chicago, Ill., assignor of one-half to Edward A. Christoph, Chicago, Ill. Filed July 1, 1920. Serial No. 393,392. 18 Claims. (Cl. 219—19.)

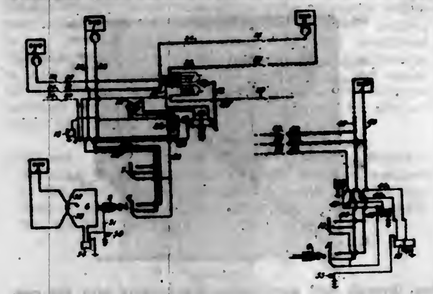


1. In a toaster, the combination of a toasting surface comprising an open frame and having a heating element, a plurality of grid sections extending across said frame, and means for removably securing said grid sections to said frame, said means permitting the removal of said grid sections independently of said heating element.

1,393,428. PROCESS AND APPARATUS FOR RECOVERING METALLIC VALUES FROM ORES. FRANCHOT B. CHURCH, Azusa, Calif., assignor to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed Sept. 5, 1919. Serial No. 321,922. 6 Claims. (Cl. 75—27.)

1. In the art of recovery of metallic values from ores by chloridising volatilisation, the method of recovery of chlorin contained in gaseous constituents produced in the volatilising operation, which consists in passing such constituents in contact with a basic absorbing medium.

1,393,429. TELEPHONE SYSTEM. HENRY P. CLAUSEN, Mount Vernon, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 12, 1917. Serial No. 180,172. 4 Claims. (Cl. 179—27.)

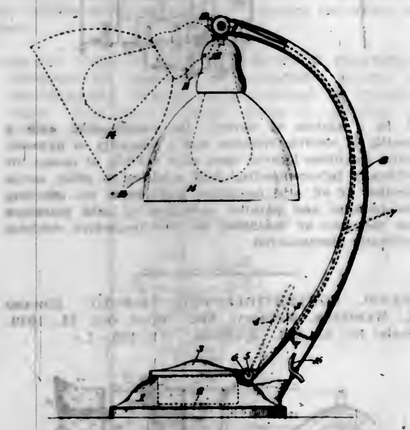


1. In a telephone system, an exchange, a branch exchange, a two-wire trunk extending between said exchange and said branch exchange, a visual call-indicating device individual to said trunk at the exchange end thereof responsive to the initiation of a call at the branch exchange end thereof, cord circuits including supervisory relays at said exchange, and means at the branch exchange for differently actuating said device and said supervisory relays.

1,393,430. TELEPHONE SYSTEM. HENRY P. CLAUSEN, Mount Vernon, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 4, 1918. Serial No. 210,267. 6 Claims. (Cl. 179—27.)

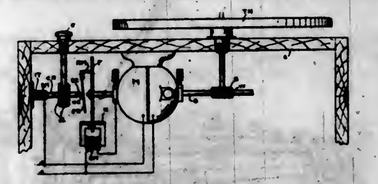
1. In a telephone system, a central office, a telephone line terminating in said office, a plurality of automatic switches having access to said line, an operator's switchboard at said office, a plurality of multiply connected jacks at said switchboard normally disconnected from said line,

a plurality of manually operable link circuits at said switchboard, and means including a relay effective when



one of said switches is not connected to said line to connect any one of said link circuits through any one of said jacks to said line.

1,393,431. LOCALIZER. CLARENCE CURTIS CULVER, U. S. Army. Filed Sept. 4, 1920. Serial No. 408,819. 5 Claims. (Cl. 244—1.)



2. In combination with an aircraft body, a fixed coil receiving means for guiding a pilot to ground, said coil having its axis obliquely disposed with respect to said aircraft body.

1,393,432. LAMP. EDWARD J. DAILEY, Jr., New York, N. Y. Filed Nov. 18, 1919. Serial No. 338,896. 2 Claims. (Cl. 240—4.)

1. A lamp consisting of a base, an arm and a light source, the base being provided with a hinged cover containing a mirror, such cover being connected to means extending through the arm and connected to the light source for rotation thereof when the mirror is positioned for use.

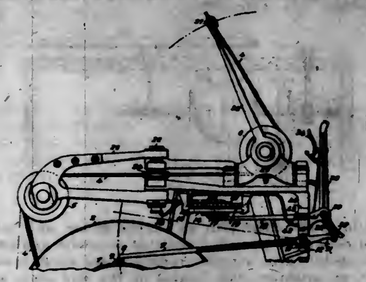
1,393,433. MOTOR-GOVERNING DEVICE. WILLIAM W. DEAN, Wilmette, Ill., assignor to Efficiency Electric Corporation, New York, N. Y., a Corporation of New York. Filed May 16, 1919. Serial No. 297,628. 10 Claims. (Cl. 171—229.)

1. In combination with an electric motor, of a set of speed responsive contacts associated therewith and adapted to operate upon a predetermined motor speed, a motor shaft, an armature disk rotated by the said shaft when the motor is operated, a field electro-magnet for the said armature, opposing poles therefor disposed on either side of an edge thereof, said magnet adapted when energized to retard the speed of rotation of the said armature, said speed responsive contacts when operated causing the energization of the said field magnet.

1,393,434. PHONOGRAPH SOUND-BOX. ALFRED A. DENNIS, Grand Rapids, Mich. Filed June 21, 1920. Serial No. 390,352. 8 Claims. (Cl. 274—27.)

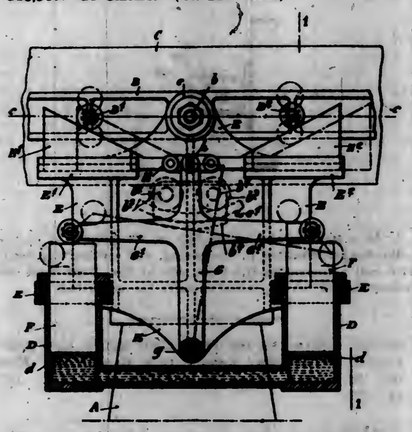
1. In a phonograph sound box or reproducer, a casing, a diaphragm mounted in the casing, and a relatively heavy wire coil attached to the rear side of the diaphragm and extending therefrom, substantially as described.

1,393,435. PROCESS OF TREATING PEAT AND SIMILAR SUBSTANCES. FRED T. DOW, Bangor, Me. Filed Oct. 24, 1919. Serial No. 332,912. 5 Claims. (Cl. 44—27.)



4. The process of treating peat which consists in draining the water from the peat by gravity, alternately forcing air through the drained peat to loosen it up and partially dry it and drawing air through the loosened peat in a direction opposite to that in which it was forced through the peat.

1,393,436. WINCH. GAETANO FERIANI, Rome, Italy, assignor to Societa Brevetti Feriani, Rome, Italy. Filed Mar. 8, 1920. Serial No. 363,976. 5 Claims. (Cl. 242—158.)



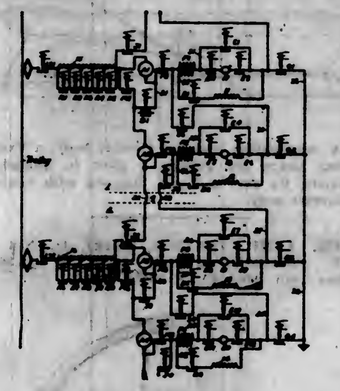
1. In a winch, means for the automatic distribution in regular windings of the cable upon the winch drum,

said means being characterised by the combination of an arm provided with a wedge contacting with the cable threads upon the drum, with a swinging frame for distributing the cable in regular windings, the movement of

this frame being synchronised with the movements of the arm, said movements being transmitted from one member to the other by means of suitable positive driving connections.

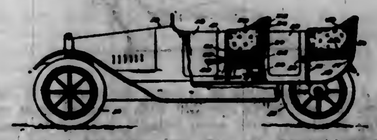
1,393,437. STABILIZING APPARATUS FOR SIGHTING INSTRUMENTS. VICTOR HONORÉ GODILLON, Paris, France, assignor to Société d'Optique et de Mecanique de Haute Précision, Paris, France, a Joint-Stock Company. Filed Dec. 22, 1919. Serial No. 346,589. 13 Claims. (Cl. 114—191.)

1. In stabilising apparatus for sighting instruments mounted on unstable objects, a support fixed to the unstable object, a rockable carrier for the sighting instrument mounted on said support, a tank containing mercury mounted on said support to assume the deviations of the unstable object, the mercury being free to flow to its normal level during the deviations of the tank, and means controlled by the movement of the mercury during deviations of the unstable object for moving the rockable carrier to return the sighting instrument to its initial horizontal position when displaced from the same by deviation of the unstable object.



1,393,438. TRAP. ALBERT P. GRIMM, Toms River, N. J. Filed Nov. 1, 1919. Serial No. 335,161. 4 Claims. (Cl. 43—65.)

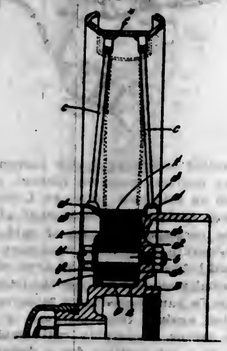
1. In a trap, the combination of a foraminous circular body, a partition extending diagonally through the body and dividing it into a lower entrance compartment, and an upper confining compartment, and a non-return lead open-



ing through said partition and extending into the confining compartment.

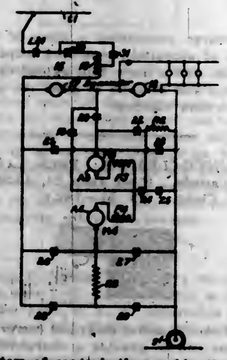
1,393,439. SYSTEM OF CONTROL. ARTHUR J. HALL, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 5, 1918. Serial No. 210,520. 7 Claims. (Cl. 172—179.)

1. In a system of control, the combination with a plurality of electric vehicles, and a plurality of dynamo-electric machines located upon each vehicle, of means for electrically interconnecting said vehicles to effect series operation of all said machines, and means for effecting series-parallel and parallel operation of said machines with the sets of machines on the respective vehicles electrically disconnected.



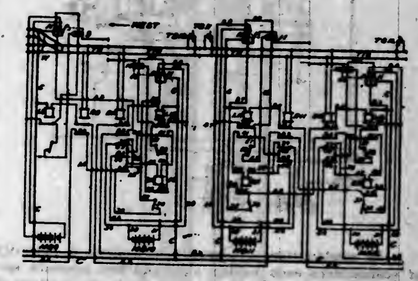
1,393,440. CONVERTIBLE VEHICLE-BODY. EDWARD L. HAMILTON, McCrory, Ark. Filed Oct. 31, 1919. Serial No. 334,836. 3 Claims. (Cl. 155—7.)

1. A convertible vehicle body including a front seat having a hinged back and a removable cushion provided



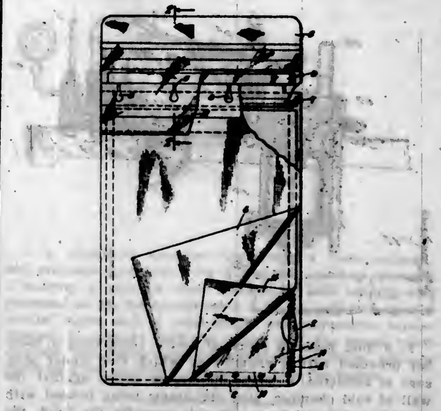
with a rigid backing, partitions traversing the body and forming a compartment below said seat, an auxiliary cushion having a yieldable side and a rigid backing hinged directly to the forward partition, brackets within said compartment for supporting the auxiliary backing in an inverted position beneath said first mentioned cushion whereby the yieldable side of the auxiliary cushion is entirely free when within the compartment, and means on the vehicle body immediately adjacent the forward partition to support the auxiliary cushion in advance of the first named cushion.

1,393,441. DETACHABLE WIRE-SPOKED WHEEL. WILLIAM HENRY HEALES, Coventry, England, assignor to The Dunlop Rubber Company, Limited, London, England, a British Company. Filed Jan. 3, 1921. Serial No. 434,672. 5 Claims. (Cl. 301—9.)



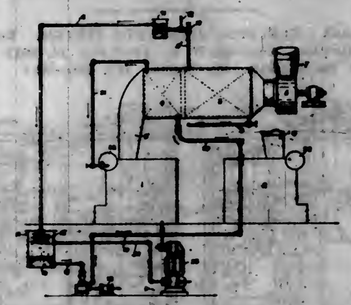
1. A detachable wire spoked wheel in which the boss consists of a circular sheet metal box-like portion of approximately the same width as the boss of an ordinary detachable wooden or pressed steel wheel and having a central hole fitting the cylindrical part of the axle, outwardly directed peripheral flanges on said circular portion to which the inner ends of the wire spokes are connected and a circular series of sleeves situated within said circular box-like portion and adapted to register with the existing attaching bolts for retaining the wheel in place.

1,393,442. CONTROL SYSTEM. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 27, 1916. Serial No. 122,375. 2 Claims. (Cl. 172—179.)



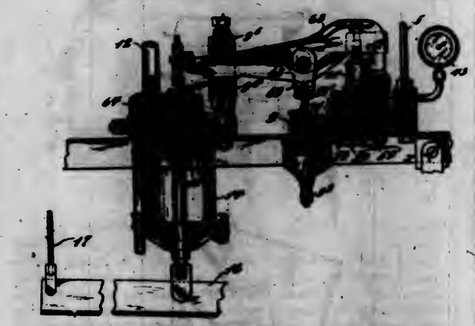
1. In a system of control, the combination with a supply circuit, and means for generating different voltages lower than that of said supply circuit, comprising a dynamo-electric machine having a plurality of armature windings, of a plurality of motors connected in series relation, means for connecting said armature windings in parallel relation to the respective motors and means for subsequently connecting the motors in parallel relation.

1,393,443. ELECTRIC SIGNALING SYSTEM. ROBERT J. HEWETT, Westfield, N. J. Filed Apr. 14, 1917. Serial No. 161,948. 89 Claims. (Cl. 246—33.)



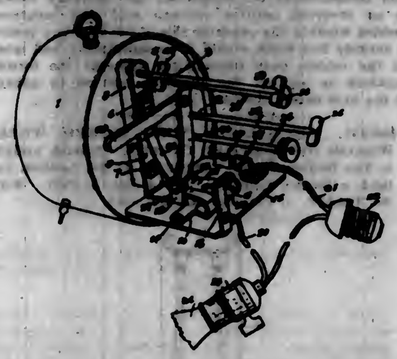
4. In a signaling system, the combination of a stretch of track; a signal; a control circuit for said signal arranged when closed to cause the signal to give one indication and when open to give another indication; a normally-energised relay having neutral and polar contacts in said circuit; means operable by an east-bound train when it has reached a certain point in said stretch for closing said circuit at one of said contacts; and means operable by a west-bound train when it has reached a point farther east in said stretch for opening said circuit at the other of said contacts.

1,393,444. STENCILING MATERIAL. EDWARD W. HILL, Chicago, Ill., assignor to A. B. Dick Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 27, 1920. Serial No. 361,714. 20 Claims. (Cl. 41—8.5.)



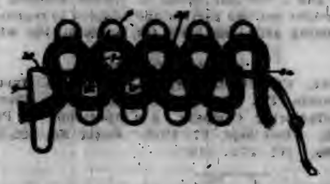
1. In stenciling material, the combination of a hard flexible entirely non-absorbent carrier-sheet, a stencil-sheet of dry but hygroscopic character, and an absorbent backing-sheet adapted to be inserted between said stencil and carrier sheets, said stencil and carrier sheets being adapted and arranged for ready and repeated attachment to and detachment from each other.

1,393,445. STEAM-BOILER ECONOMIZER SYSTEM. DAVID S. JACOBUS, Jersey City, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Feb. 27, 1918. Serial No. 219,269. 14 Claims. (Cl. 122—421.)



1. In combination, a plurality of boilers, a plurality of economizers each having high and low pressure sections, means for maintaining the water in the sections of each economizer at different pressures, individual tanks arranged to permit the escape of air or gas from the water and serving as detectors to indicate the formation of steam, means for conducting the water heated in the low pressure sections to said tanks, a common tank and means for conducting the water from said individual tanks to said common tank, and means for distributing the water from said common tank to the several high pressure sections of the economizers and from the latter to the boilers.

1,393,446. FLUID-PRESSURE OPERATING DEVICE. DAVID S. JACOBUS, Jersey City, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Oct. 16, 1918. Serial No. 258,430. 8 Claims. (Cl. 236—36.)

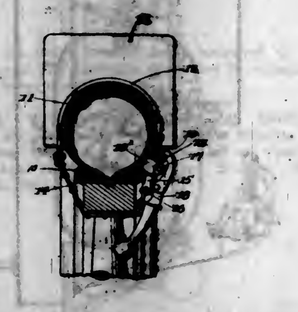


1. A fluid pressure operated device, comprising a member provided with a chamber to which fluid under pressure is admitted, a metal diaphragm sealed against the wall of said chamber, said diaphragm being formed with a central depression on the side opposite the fluid, the depression being surrounded by a corrugation presenting a concave surface to the fluid, a controlling mechanism, a strut seated in said depression and connected to said controlling mechanism, and stops for limiting the movement of said diaphragm in both directions to a narrow range thereby keeping the stresses set up in the diaphragm within the elastic limit of the diaphragm material.

1,393,447. AUTOMATIC CLOCK-CONTROLLED SWITCH-OPERATING DEVICE. GUSTO JANSSONIUS, Winnipeg, Manitoba, Canada. Filed Dec. 19, 1919. Serial No. 346,604. 1 Claim. (Cl. 200—39.)

A time controlled switching device comprising a base plate, stationary contacts mounted thereon, an L shaped bracket mounted on said base plate, an L-shaped contact having the lower horizontal arm thereof pivotally supported upon the corresponding arm of said bracket and arranged to cooperate with said stationary contacts, a spring interposed between the vertical arms of the bracket and contact normally tending to force the latter outwardly from the bracket, a handle operative to move the bracket to a set position against the resistance of said spring, and releasable means engageable with said bracket to hold the same in a set position for a definite period of time adapted to automatically release the contact at a predetermined time.

1,393,448. DEVICE FOR WAVING HAIR. ADOLF KERN, Cleveland, Ohio. Filed Mar. 16, 1921. Serial No. 451,263. 2 Claims. (Cl. 132—42.)



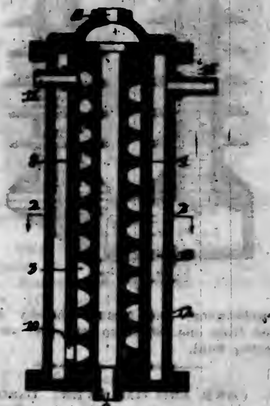
1. A hair waver comprising a piece of wire bent to form a series of oppositely presented loops arranged in zig-zag relation, and a draw tape extending transversely across the loops and movable to draw the same together to bind hair wound thereon.

1,393,449. KNIFE-CLEANER. PETER LAMB, Winnipeg, Manitoba, Canada. Filed June 24, 1920. Serial No. 391,889. 1 Claim. (Cl. 51—182.)

A device of the character described comprising a handle reduced at one end to provide a sharpened spur at the lower side thereof and a shoulder portion above the spur, a rubbing head impaled on the spur and abutting said shoulder portion and a split clamping band extending around the rubbing head in clamping engagement therewith and having the ends thereof fastened to the sides of the handle.

1,393,450. MUD-LUG FOR AUTOMOBILE-WHEELS. FRANCIS W. MCGANN, Baltimore, Md. Filed Oct. 20, 1920. Serial No. 418,144. Renewed Sept. 3, 1921. Serial No. 496,535. 1 Claim. (Cl. 152—14.)

A locking means for the mud lug of an automobile wheel comprising a flexible element connected with the lug, a block pivotally connected with the flexible element, a lever pivotally connected with the block, and a hook pivotally connected with the lever and engageable with the lug, said block being formed with a nose for engagement with a portion of the wheel to prevent inward pivotal movement of the parts when inward pressure is exerted against the said parts.



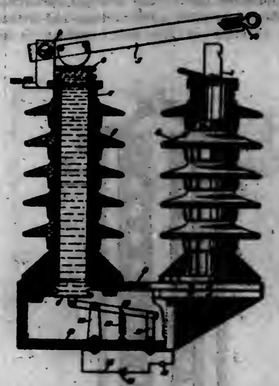
1,393,451. PACKAGE FOR BELT-HOOKS. WILLIAM T. NICHOLSON, Blackpool, England. Filed July 6, 1920. Serial No. 394,346. 2 Claims. (Cl. 1—56.)

1. A package for wire belt hooks comprising a sheet of flexible material provided with a series of slots into which the looped ends of the belt hooks can be placed, separate strips of corrugated sheet material so positioned and attached to the said sheet adjacent to the said slots as to allow the corrugations to receive the arms of the hooks when the same are positioned within said slots, and ends on said sheet material adapted to be folded around the ends of the hooks and secured to hold the hooks in position within the package.

1,393,452. HEAT-INTERCHANGER. MAX VON RECHENBERG, New York, N. Y., assignor to Air Reduction Company, New York, N. Y., a Corporation of New York. Filed Feb. 27, 1917. Serial No. 151,158. 2 Claims. (Cl. 257—246.)

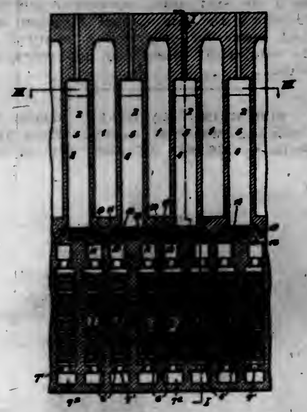
2. A heat interchanger comprising a central conduit consisting of a metal which is a relatively good conductor of heat, said conduit having a spiral passageway formed upon the exterior thereof, means for supplying a cold or a liquefied gas to the passage through the said conduit, a tubular member surrounding and fitting closely against the exterior of the said conduit to close the outer sides of the said spiral passageway and to support and reinforce the said conduit to resist internal pressure and means for delivering a relatively warm fluid to the said spiral passageway and conveying the same therefrom.

1,393,453. SCRUBBING-MACHINE. ALFRED HENRY ROWE, Winnipeg, Manitoba, Canada. Filed Apr. 26, 1920. Serial No. 376,698. 3 Claims. (Cl. 15—14.)



2. A scrubbing machine comprising a main supporting platform provided with a vertical aperture forming a bearing, a vertical shaft slidable in said bearing and equipped at its lower end with a brush, a motor geared to the upper end of said shaft, and adjustable means serving to support both the motor and the brush shaft whereby the latter may be adjusted vertically without disturbing its operative connection with the motor.

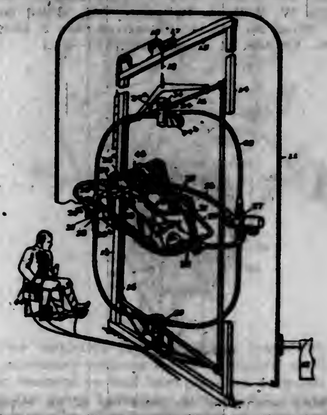
1,393,454. DISCONNECTING-SWITCH. BERTRAND P. ROWE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 9, 1920. Serial No. 415,860. 7 Claims. (Cl. 200—50.)



1. An insulator comprising an expansible tubular member having a body of fluid confined therein.

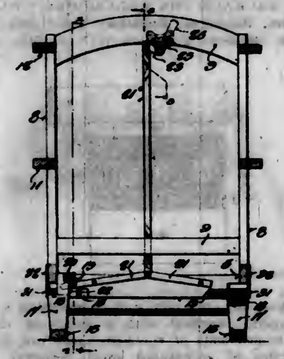
4. In combination, a main-circuit switch, an auxiliary-circuit switch, a confined body of insulating fluid inter-

posed therebetween, and means whereby movement is transmitted from one switch to the other switch through the insulating fluid.



1,393,455. COKE AND GAS OVEN. DANIEL M. RUGG, Cleveland, Ohio, assignor to The Gas Machinery Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 30, 1917. Serial No. 188,924. 2 Claims. (Cl. 202—9.)

1. In apparatus for the production of gas and coke, the combination of a coking chamber; heating units respectively located upon opposite sides of said chamber and each consisting of two connected combustion chambers; a pair of regenerator sections, one of said combustion chambers of each such heating unit being provided with an outlet; ducts arranged to connect each of the other chambers of said heating units with each of said regenerator sections; and means independent of said ducts for introducing fuel gas into said last-named combustion chambers.



1,393,456. ORIENTATOR. WILLIAM GUY RUGGLES, New York, N. Y. Filed Sept. 9, 1918. Serial No. 253,218. 28 Claims. (Cl. 244—1.)

1. A gimbal ring construction having one of its rings mounted for rotary movement about an axis in the plane of said ring, and power driving means providing for said mounting, said means including a support, a main shaft disposed concentric with said axis and loosely journaled in said support, a stub shaft constituting an extension of said main shaft and rotatable relative thereto, a power shaft carried by said support, a driving slip

clutch between said power shaft and said stub shaft, a planetary gear connection between said stub shaft and said main shaft, said ring loosely mounted on said main shaft and a gear connection between said main shaft and said ring whereby the ring is rotated from said power shaft.

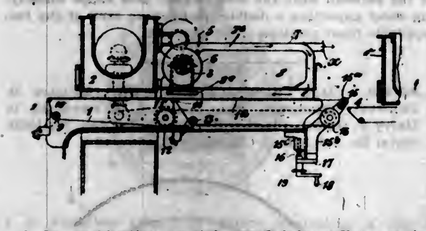
1,393,457. ADJUSTABLE CHAIR. OSCAR H. SCHRAM, Oshkosh, Wis. Filed Apr. 26, 1920. Serial No. 376,652. 3 Claims. (Cl. 155—105.)

1. A chair comprising a seat member, support legs for said seat member movable relative thereto, a pair of levers pivotally connected with the seat member and engaging said support legs, a common control lever, link means connecting said common control lever and said pair of levers and means for holding said common control lever against movement.

1,393,458. CATENARY TROLLEY-CLAMPING BAR. PAUL G. SCHWARM, Indianapolis, Ind., assignor to Dow Electric and Manufacturing Company, Indianapolis, Ind., a Corporation. Filed Dec. 22, 1919. Serial No. 346,628. 6 Claims. (Cl. 191—41.)

4. A catenary trolley-wire hanger, comprising a pair of wire clamping members, a suspensory strap fixed per-

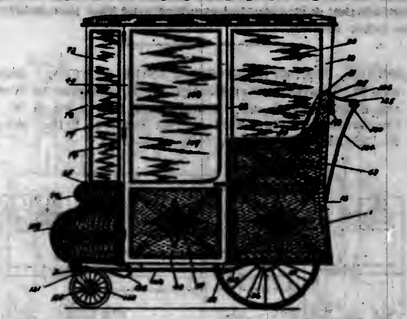
manently at one end to one of said members and detachably engaged at its opposite end with the other



member, the latter member being narrowed at its strap engaging end and rotatably connected in clamping union with the other member.

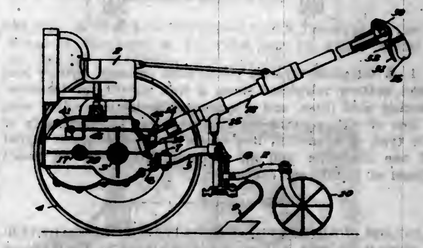
1,393,459. WING-NUT. BENJAMIN H. SMITH, Turtle Creek, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 16, 1919. Serial No. 271,436. 6 Claims. (Cl. 85—32.)

1. In a clamping device, the combination with a screw-threaded member and a frangible member, of a nut device for coöperation with said screw-threaded member comprising an interiorly-threaded body member, a yieldable washer for engagement with said frangible member, and a relatively-thin washer of pliable material mounted rotatably on said body member having a portion bent into holding relation to said yieldable washer.



1,393,460. MACHINE FOR COATING CHOCOLATE BONBONS. ASBJORN SONSTHAGEN, Leytonstone, England. Filed Mar. 25, 1920. Serial No. 368,603. 8 Claims. (Cl. 91—3.)

1. In combination, receiving and intermediate moving surfaces arranged to provide receiving faces; a discharge surface at the discharge end of the intermediate moving surface and arranged to provide a carrying face off-set below said receiving faces; and means disposed above said receiving and discharge faces for coating bodies carried on said moving surfaces.

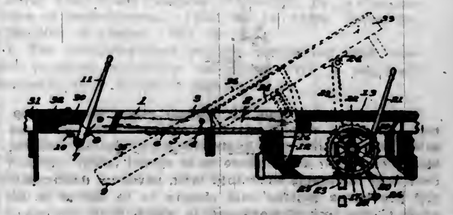


1,393,461. CONVERTIBLE ROLLING CHAIR. CHARLES BREWSTER STEELE, Philadelphia, Pa. Filed Dec. 16, 1919. Serial No. 345,868. 22 Claims. (Cl. 155—30.)

6. A rolling-chair having traction-wheels and a body provided with foundational structure; side and rear upright structure provided with means adapted to hold closures; front vertical structure provided with means adapted to hold closures; doorway openings intermediate the front and side vertical structure; seat structure adjacent the side and rear vertical structure protruding into the doorway openings thereby providing enlarged area within the seat structure; traction-wheels of enlarged diameter within the enlarged seat structure area, and door structure fitting the doorway openings projecting in extent be-

yond the protrusion of the seat structure provided with means adapted to hold closures.

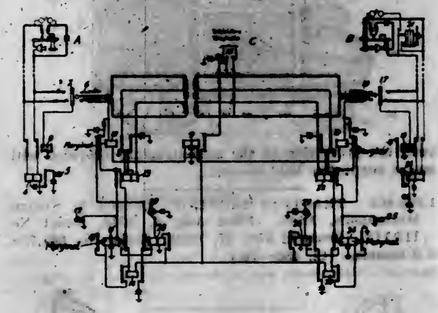
1,393,462. TRACTION-MACHINE. GEORGE T. STRITE, Minneapolis, Minn. Filed Aug. 4, 1916, Serial No. 113,112. Renewed Feb. 27, 1920. Serial No. 361,720. 9 Claims. (Cl. 180—70.)



1. A traction machine comprising a frame, a source of motive power thereon, traction means for said frame, a crank shaft operated from said source of motive power, a gear having a driving connection with said crank shaft and provided with friction surfaces, clutch members having independent driving connections with said traction means and mounted to engage said friction surfaces respectively for driving said means from said gear, and mechanism for operating said clutch members.

1,393,463. EXPLOSIVE. WILLIAM BAYARD STURGIS, Chicago, Ill., assignor to General Explosives Company, Chicago, Ill., a Corporation of Missouri. Filed May 16, 1921. Serial No. 470,106. 17 Claims. (Cl. 52—7.)

10. As a new composition of matter, an explosive containing dinitrotoluol, a perchlorate, an oxidising agent, a sulfid of a metal and a reducing substance.



1,393,464. WAGON-DUMP. HARRY E. SURFACE, Bloomington, Ill. Filed Sept. 13, 1920. Serial No. 409,956. 6 Claims. (Cl. 214—49.)

1. In a wagon dump the combination of a sectional dump log, a hinge connection between the sections thereof,

means for raising the section of the dump log while the other section is lowered, and means for raising the section of the dump log independently of the movement of the other section.

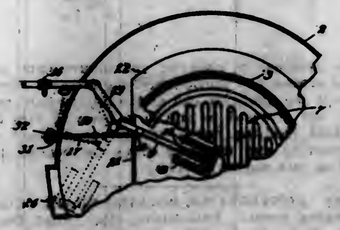
1,393,465. TELEPHONE-EXCHANGE SYSTEM. DAWSON M. TAGGART, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 4, 1919. Serial No. 321,704. 11 Claims. (Cl. 179—73.)

1. A telephone system comprising common battery and local battery telephone lines, a link circuit for interconnecting said lines, and a signaling device controlled over a line of either character and operating independently of the type of connected line to furnish a disconnect signal of one character and an automatically sustained recall signal of a different character.

1,393,466. PNEUMATIC-DESPATCH-TUBE CARRIER. FRED E. TAISEY, Lowell, Mass., assignor to The Lamson Company, Boston, Mass., a Corporation of New Jersey. Filed June 12, 1917. Serial No. 174,369. 8 Claims. (Cl. 243—35.)

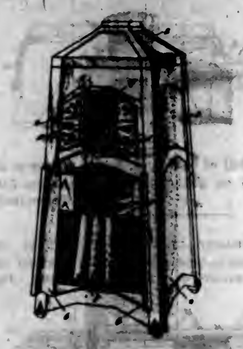
8. A carrier for despatch systems comprising a receptacle having a closure attached thereto, latch parts for said closure to retain it in its receptacle closing position, means to permit said closure to be moved bodily outward from said receptacle when said latch parts are disengaged, and provisions causing said closure to be moved at an angle to the line of movement in which it travels when being moved bodily outwardly.

1,393,467. PROCESS FOR PRODUCING SEPARATORS. CHARLES J. TRAUTMANN, New York, N. Y. Filed Dec. 26, 1918. Serial No. 268,536. 8 Claims. (Cl. 204—29.)



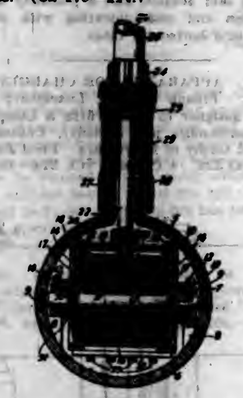
1. The method of producing a separator member, which consists in immersing a suitable material in a liquid mixture of a substance capable of forming a gelatinous medium and a coagulant therefor, said mixture gelatinizing within said material after an appreciable lapse of time.

1,393,468. UNDERGARMENT. BURT W. THAYER, Minneapolis, Minn. Filed June 28, 1920. Serial No. 391,669. 1 Claim. (Cl. 2—144.)



A garment of the class described having a central vertical opening with overlapping edges, and means for securing said edges together, of an underlying sheet having one portion thereof permanently secured inside of the front portion of the garment at one side of its vertical opening, and the remaining portion of the sheet projecting beyond the vertical opening line of the garment, and provided with means for securing its face edge to the inside wall of the garment near the side thereof, said single underlying sheet imparting a double thickness to each of the two separable front portions of the garment.

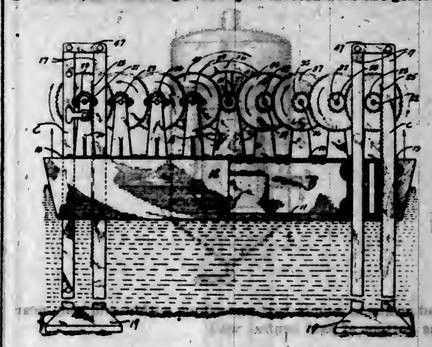
1,393,469. COAL-FURNACE LIGHTER. RICHARD B. TOWNLEY, Cincinnati, Ohio, assignor of two-fifths to Harry F. Graber, Cincinnati, Ohio. Filed Jan. 22, 1920. Serial No. 353,151. 6 Claims. (Cl. 158—10.)



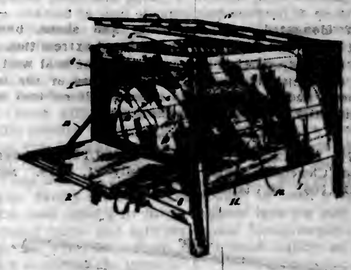
1. A coal or coke lighter within a furnace comprising a vertically perforated U-shaped member, a pivotally mounted gas tube connected to said U-shaped member and having perforations adjacent thereto, a pivotal connection between said tube and the gas supply pipe, a pivoted handle adapted to swing said gas burner on its pivot outwardly in position for lighting the gas and then inwardly to near the center of the space for lighting the coal or coke.

1,393,470. PHONOGRAPH-CABINET. JACOB H. WEISS, Brooklyn, N. Y. Filed Aug. 14, 1920. Serial No. 403,606. 4 Claims. (Cl. 274—2.)

1. A phonograph comprising a cabinet having opposite lateral walls converging above the same, and sound reproducing and amplifying means operatively supported within the cabinet.



1,393,471. SUBMARINE SIGNALING. RAYMOND L. WHOEL, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 9, 1919. Serial No. 329,453. 16 Claims. (Cl. 170—114.)



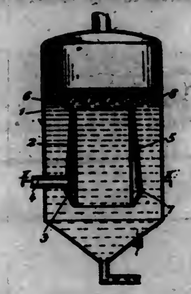
1. A vibration responsive device comprising a container adapted to be submerged, and a vibration responsive element mounted therein, said element comprising electromagnetic means responsive to movement of the container in one direction and unresponsive to movement of the container in another direction.

1,393,472. TIDE-MOTOR. HARRY WILLIAMS, Reburn, Va. Filed Feb. 28, 1920. Serial No. 362,045. 4 Claims. (Cl. 290—42.)

1. A tide motor comprising a plurality of spaced pairs of standards, a barge slidably mounted on the standards, oppositely disposed rack bars formed on the inner faces of the standards, an operating shaft rotatably carried by the barge, rotatable shafts carried by the barge and arranged intermediate the rack bars, pinions meshing with the rack bars, and carried by the second mentioned shaft, speed advancing mechanism operatively connecting the second mentioned shafts with the operating shaft, a generator, means operatively connecting the shaft with the generator, and a storage battery connected with the generator, an electric motor operatively connected to the shaft, and means electrically connecting the battery with the motor.

1,393,473. MATRIX-SCORCHING OVEN. SAMUEL TULLY WILLSON, Brooklyn, N. Y. Filed Aug. 11, 1919. Serial No. 316,757. 9 Claims. (Cl. 34—18.)

1. In a matrix scorching oven, a housing having a baking compartment therein, a closing member provided for the baking compartment, a semi-cylindrical member within the compartment formed with an arcuate holding surface, means for heating the said compartment and semi-cylindrical member, means for holding a matrix in place on the semi-cylindrical member, and means for causing the holding means and the semi-cylindrical member to be always in position to receive a matrix when the closing member is open.



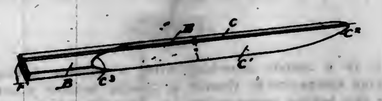
1,393,474. MANUFACTURE OF LEAD ARSENATE. ROBERT E. WILSON, Cambridge, Mass., assignor to Pittsburgh Plate Glass Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 1, 1919. Serial No. 280,164. 8 Claims. (Cl. 23—12.)

1. The hereindescribed product comprising lead arsenate particles intimately associated with a relatively chemically inert colloid of organic origin.

1,393,475. HEAT-INTERCHANGE DEVICE. ELIAS WIESE-PEST, Aarau, Laurenzvorstadt, Switzerland. Filed Nov. 1, 1919. Serial No. 336,027. 3 Claims. (Cl. 257—236.)

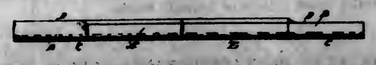
2. A heat interchange device having a vertical axis comprising a vessel, a hollow annular heating body within

said vessel having a conical wall and a cylindrical wall and narrower in cross-section at the top than at the bottom,



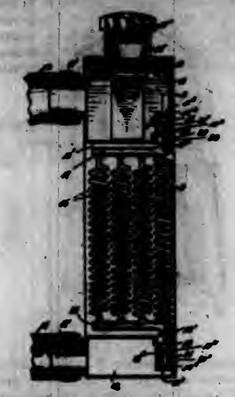
and means to supply heating medium within said body near the bottom of said conical wall.

1,393,476. WELTING. ERNEST A. YOUNG, Cleveland, Ohio. Filed Feb. 14, 1919. Serial No. 276,974. 18 Claims. (Cl. 36—78.)



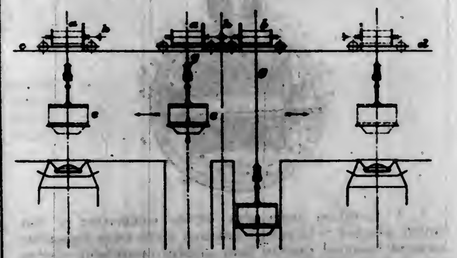
7. An elongated welt for boots and shoes, having straight edges and flat faces, and reduced extremities, one edge of the body portion and extremities of said welt retaining substantially the original thickness of the body throughout, and each extremity of said welt reduced upon a substantially longitudinal, median plane.

1,393,477. PROCESS FOR MAKING WELTS. ERNEST A. YOUNG, Cleveland, Ohio. Filed July 21, 1919. Serial No. 312,166. 16 Claims. (Cl. 12—146.)



1. The hereinbefore described method of producing a multiple number of welts each welt having reduced extremities, from an elongated integral welt having straight sides and edges, consisting in, dividing said welt at intervals by cuts in median planes, longitudinally directed therein, the extremities of said cuts emerging in opposite longitudinal surfaces of said welt, then separating the welts thus formed and forming a longitudinal groove upon the freshly cut surfaces of the extremities of each welt, said grooves traversing the original surfaces of the bodies of said welts.

1,393,478. WELT OR RAND. ERNEST A. YOUNG, Cleveland, Ohio. Filed Apr. 5, 1921. Serial No. 458,672. 12 Claims. (Cl. 36—78.)



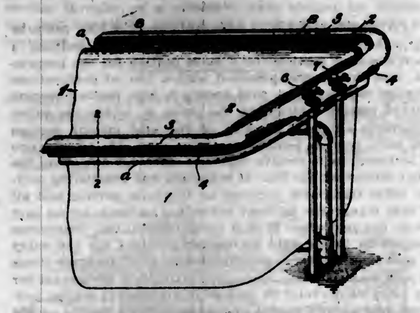
1. A strip of welting comprising a prismatic body portion and reduced substantially prismatic end portions extending from the body portions, the two ends being projections of different parts of the cross-section of the body portion.

1,393,479. RADIATOR FOR MOTOR-VEHICLES. ROBERT M. SABUCHA, Waterbury, Conn. Filed June 26, 1920. Serial No. 391,992. 3 Claims. (Cl. 257—129.)

1. In a radiator for motor vehicles, a pair of superposed tanks each formed in front with an inwardly projecting rib having a number of independently controllable circulation passages, nozzles projecting outwardly from said passages, a corresponding number of circulation units, each composed of two superposed horizontal tubes the rear ends of which are closed and the front ends are open and removably joined to said nozzles, and a plurality of coils extending between and communicating with each superposed pair of said horizontal tubes.

1,393,480. APPARATUS FOR CHARGING SHAFT-FURNACES. PIERRE RENDEL, Luxemburg-Hollerich, Luxemburg, assignor to Paul Würth & Compagnie (Societe en Commandite par Actions), Luxemburg-Hollerich, Grand Duchy of Luxemburg. Filed July 5, 1918. Serial No. 243,325. 4 Claims. (Cl. 214—18.)

1. The combination with two independently transportable hoisting drums, a charge vessel suspended from each drum, a separate driving shaft for each drum, and coupling members for connecting said shafts when the drums are brought together, whereby the weights of the vessels are balanced during the raising and lowering thereof.



1,393,481. GAS-COOKER. HARALD ALBRECHTSEN and SØREN IVAN IVARSEN, Copenhagen, Denmark. Filed Mar. 2, 1920. Serial No. 363,661. 1 Claim. (Cl. 158—117.)

In a gas-cooker, a gas-pipe fitted to the body of the gas-cooker, at the inner end of said gas-pipe a vertical burner-tube, around said burner-tube a second burner-tube telescoping thereon, and carrying at its upper end the burner proper, said second burner-tube having at its lower end a flange, a bell-crank pivoted to the body of the gas-cooker, the forked inner end of said bell-crank engaging under said

flange, an eccentric segment coupled to the stem of the gas-valve, said eccentric segment acting on the outer end of the said bell-crank.

1,393,482. BATHTUB. MICHAEL ABRAHAM and LEONARD JOSEPH DENNIS, Toronto, Ontario, Canada. Filed Jan. 21, 1921. Serial No. 439,041. 5 Claims. (Cl. 4—27.)

1. A bathtub having the upper part of its wall bent to form an overflow channel extending around the top of the tub, said channel being open at top, and the outer wall of the channel extending above its inner wall and means for admitting water to said channel; whereby the walls of the tub may be warmed by hot water overflowing from the channel without having to fill the tub, and whereby the walls may be flushed after the tub has been used, substantially as described.

1,393,483. ELECTRODE. JOSEPH M. ASKIN, Chicago, Ill., assignor to Stuart Products Corporation, Chicago, Ill., a Corporation of Illinois. Filed Dec. 5, 1919. Serial No. 342,818. 8 Claims. (Cl. 204—38.)

1. An electrode for a battery comprising a carbon core, depolarising material surrounding said core and an envelop surrounding said depolarising material, said envelop being of a material presenting relatively low resistance to the flow of current therethrough and having the property of permitting moisture to pass therethrough for rendering the same active, but preventing the escape therethrough of solid particles of the depolarising material.

1,393,484. AUTOMOBILE WINDOW-OPERATING DEVICE. EMRY BALOUGH, Poughkeepsie, N. Y. Filed Oct. 29, 1920. Serial No. 420,437. 1 Claim. (Cl. 268—4.)

An automobile door having a window opening and including an outer door panel and an inner lining board spaced from said panel, a window pane slidably arranged in relation to said opening and adapted to be brought out of alinement with the same into the space between said panel and lining board, a vertically extending frame secured to the inner face of said lining board, a vertically extending screw-threaded bodily stationary spindle journaled in said frame, a nut fixed to and projecting below said pane in mesh with said spindle, a transverse frame member rigidly secured to said first-mentioned frame, a shaft extending through and beyond said lining board rotatably mounted in said first-mentioned frame and in said transverse frame member, a bevel pinion fixed to said spindle, a bevel gear fixedly attached to said shaft in mesh with said pinion, said bevel gear being disposed between said first-mentioned frame and said transverse frame member and held by the latter in position, and a crank-handle on said shaft for actuating the latter.

1,393,485. SECTIONAL BURIAL-VAULT. JOHN D. BARBER, West Park, Ohio. Filed Mar. 3, 1919. Serial No. 280,297. 1 Claim. (Cl. 72—7.)

A burial vault comprising separate end, side and bottom sections adapted to be assembled and cemented together, the end and side sections having each a right angled recess along its upper inner edge and provided with inwardly and downwardly sloping upper edges outside of said recesses and inclined thereto, and a slab forming a cover for said vault having a sloping top surface at its ends and sides corresponding to the slope of the edges of the sides and ends and relatively lower than the outer edges of the said side and end slabs, and which, together with the sloping edges of the side and end slabs, form a broad continuous shallow sealing gutter above the joint line between said parts.

1,393,465. METHOD OF MAKING SHOES. Ernest C. Beaumont, Boston, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 21, 1918. Serial No. 263,536. 11 Claims. (Cl. 12—142.)

1. That improvement in methods of making shoes which consists in assembling upon a last an upper and an innersole having its margin projecting beyond the bottom of the last, staple lasting the toe and heel portions of the upper to the innersole, removing the last, stitching the shoe upper to the shoe along the sides of the shoe, reinserting the last, and completing the shoe in the usual manner.

1,393,467. NECK-YOKE FASTENER. Frank W. Berghs, Willow Lakes, S. D. Filed May 21, 1919. Serial No. 298,741. 1 Claim. (Cl. 278—51.)

In combination with a draft pole or tongue and neck-yoke, a neck-yoke fastener comprising a metallic member secured upon the end of the pole or tongue and having a downwardly extending projection spaced from the end thereof, a resilient member secured upon the pole or tongue and extending along the under side thereof in spaced parallel relation thereto and engaging against the end of said projection, the forward end of said resilient member being curved upwardly and rearwardly to define a lip engaging against the under side of said metallic member forwardly of and adjacent the projection thereon, and a forwardly extending handle formed on the forward extremity of said resilient member adjacent its point of contact with said metallic member, said lip being engaged by the attaching ring of the neck-yoke when a forward pull is exerted and said projection being engaged by the ring when a rearward pull is exerted upon the neck-yoke.

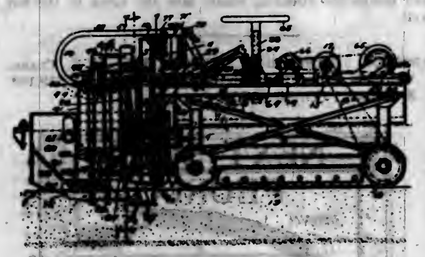
1,393,488. FUSELAGE. Archibald Black, Brooklyn, N. Y., assignor, by mesne assignments, to L-W-F Engineering Company, Inc., College Point, Long Island, N. Y., a Corporation of New York. Filed Mar. 21, 1917. Serial No. 156,339. 16 Claims. (Cl. 244—30.)

2. An annular bracing means having alternating forwardly and rearwardly directed tongues at its outer edge.

2,393,469. SERVICE CHECK AND RECEIPT. Abram M. R. Bean, New York, N. Y. Filed Apr. 28, 1920. Serial No. 230,653. 2 Claims. (Cl. 283—60.)

1. A service check for restaurants and the like, comprising a body bearing suitable printed matter defining a guest's receipt portion and a main portion for the proprietor, said check being provided with a line of perforations between said portions, said guest's receipt portion bearing printed matter instructing the guest to retain the same, transverse adjacent portions of the said receipt portion and main portion being disposed at each side of said line of perforations to receive duplicate markings one above the other indicating the time of beginning and completing service, other transverse portions on the main portion and all of said transverse portions extending entirely across said check, the side edges of said check constituting transverse limitations to the said transverse portions for the entry of said time markings and for the entry of separate items on said main portion, spaces approximately designated for the entry of the total on said main and guest's receipt portions, said guest's receipt and main portions having each a space for a corresponding waiter's number and corresponding spaces for like check numbers, and a protective band extending longitudinally of the face of the check being of less width than the check to provide blank longitudinal rows of spaces at the opposite ends of said transverse portions and at opposite sides of said band.

1,393,490. ANTISLAP DEVICE FOR PISTONS. Charles F. Bradley, Hobart, Ind. Filed Oct. 2, 1920. Serial No. 414,229. 1 Claim. (Cl. 74—109.)

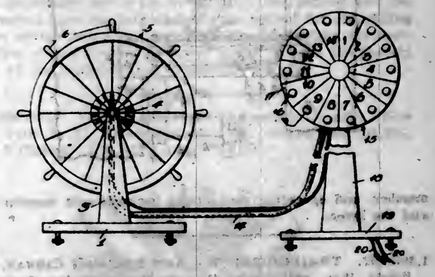


The combination with a piston provided with a piston ring groove and a piston ring mounted therein, of a substantially circular resilient split band positioned within the piston ring groove behind the piston ring and having its extremities curved inwardly and spaced apart and abutting one wall of the piston ring groove, the bowed parts being normally flexed and adapted, when the piston reaches a point in the cylinder where the piston will have side play, to assume their normal position to move the piston ring against the cylinder to prevent the piston from movement laterally.

1,393,491. TROLLEY-HANGER. Leland F. Brabrook, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 30, 1920. Serial No. 400,691. 4 Claims. (Cl. 191—42.)

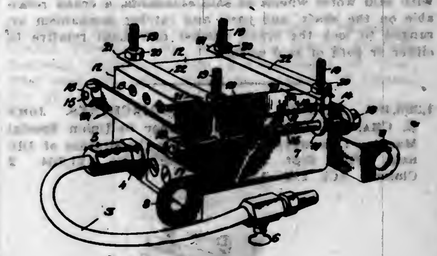
2. The combination with a stud or bolt and a lock washer therefor, of a yieldable plain washer for holding the lock washer in position and permitting the latter to transmit its locking movement therethrough.

1,393,492. FILTER-CLEANING APPARATUS. Harry A. Brooks, Glendale, Calif., assignor to Blaisdell Company, Los Angeles, Calif., a Corporation. Filed Mar. 23, 1917. Serial No. 156,020. 12 Claims. (Cl. 210—128.)



1. In a filter cleaning apparatus, a caisson containing a chamber open at its lower end and adapted to rest on the surface of a filter bed, carriage means for moving the caisson over the surface of the filter bed, sand cleaning appliances in and beneath said caisson, both the caisson and the cleaning appliances being mounted on the carriage means to be vertically movable thereon independently of each other.

1,393,493. OPEN-HEARTH FURNACE. Vern B. Browne, Tarentum, Pa. Filed June 28, 1919. Serial No. 307,469. Renewed Aug. 6, 1921. Serial No. 490,809. 6 Claims. (Cl. 263—45.)

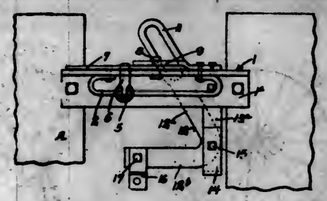


1. The combination with a hearth, of regenerators arranged to be alternately utilized and central walls each provided with a through port to form separators between said hearth and said regenerators.

1,393,494. AMUSEMENT DEVICE. Henry D. Shuart, Springfield, Mass. Filed Dec. 9, 1919. Serial No. 343,462. 1 Claim. (Cl. 46—56.)

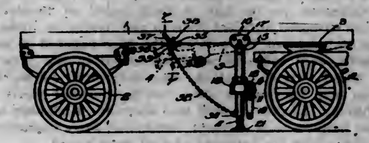
A device of the class described, a rotatably mounted wheel, a contact carried by an extension, having a sleeve-like extension on its hub, a flash board of insulating material disposed adjacent thereto and having an annular series of insulated contacts on the face opposed to said extension, said contacts being arrranged in the path of said wheel carried contact, an electrically connected tension arm carrying a shoe bearing on said sleeve, a dial having one face divided into segments, a number and a light bulb on each segment, conductor wires connecting said lights and the contacts of said flash board.

1,393,495. VULCANIZER. George H. Bunnell and Elias E. Titus, Midway, Utah. Filed Apr. 11, 1921. Serial No. 460,180. 4 Claims. (Cl. 18—18.)



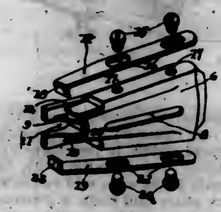
1. In a vulcanizer, the combination with the exhaust of an engine, a pipe communicating therewith at one end, a vulcanizer secured rigidly to the engine and having its vulcanizing chamber communicating with the other end of said pipe, a plate fitting upon said vulcanizing chamber, a clamping block above said plate, a clamping frame for securing said block in position, and a valve or cock in said pipe for controlling the heat to said vulcanizing chamber.

1,393,496. SWITCH-THROW. Peter Burlesca, Library, Pa. Filed Apr. 22, 1921. Serial No. 463,728. 5 Claims. (Cl. 246—410.)



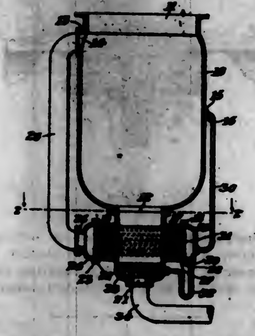
1. In a device of the character described, a supporting plate, an operating lever rockably mounted on said plate, a rod mounted in spaced relation to one face of the plate and extending at opposite sides of the pivot of the lever,

a member traveling on said rod, resilient connections between said member and the lever, a switch operating



member, and operating connections between said member and the lever.

1,393,497. TRAILER-TRUCK. ADDI BENJAMIN CADMAN, Beloit, Wis., assignor to Warner Manufacturing Company, South Beloit, Wis., a Corporation of Wisconsin. Filed Jan. 28, 1918. Serial No. 214,092. 10 Claims. (Cl. 254—86.)



1. In combination with a trailer truck comprising a frame mounted upon a single pair of wheels, a standard at each side of the frame comprising an outer section connected with the frame, an inner section slidable within the outer section, a worm wheel threaded on the inner section and rotatably mounted within the outer section, an operating shaft having a worm on each end meshing with said worm wheels of said standards, a crank rotatable on the shaft, and pawl and ratchet mechanism arranged to lock the crank against movement relative to either or both of said worms.

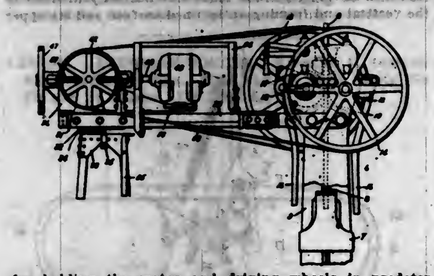
1,393,498. BINDER FOR SEWING-MACHINES. JOHN E. CHALMAN, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 23, 1916. Serial No. 121,764. 2 Claims. (Cl. 112—138.)

1. A binder including in combination a body portion having a guiding slot for folding a binding strip, the delivery end of said binder having inclined edges disposed so as to invert said binding strip as it is led to the stitching mechanism and guiding fingers adjustable longitudinally of the binder, said guiding fingers having wide ends positioned so as to cross the inclined edges in all adjusted positions, whereby the binding strip will be engaged and the respective edges thereof guided at its inverting point.

1,393,499. CONDENSING APPARATUS. EVI W. CHESTERN, Gowanda, N. J., assignor to Wheeler Condenser and Engineering Company, Carteret, N. J., a Corporation of New Jersey. Filed June 19, 1920. Serial No. 390,078. 5 Claims. (Cl. 257—24.)

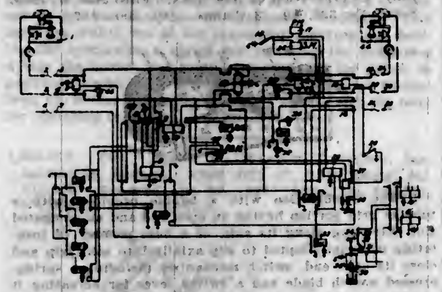
1. In a condenser apparatus and in combination, a condenser, a hot well associated therewith, a plurality of tubes extending through the body of the hot well, devices in the hot well discharge for maintaining the condensate in the hot well at such a level as to submerge the tubes, and means for directing steam into the tubes in the hot well.

1,393,500. INDICATING DEVICE. EDWARD B. CLARK, Golconda, Ill. Filed Feb. 25, 1919. Serial No. 279,158. 3 Claims. (Cl. 40—63.)



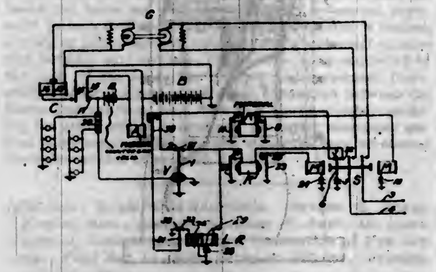
1. In an indicating device the combination of a curtain having display indications thereon, rollers upon which said curtain may be wound, gearing for alternately driving said rollers in a direction to wind the curtain thereon, means for shifting said gearing into engagement for driving either of said rollers, a yielding connection in the shifting means whereby a portion thereof may be fully operated to operate the balance when proper driving relations are established, means for driving the gearing and means controlled by the position of the curtain for stopping the driving means.

1,393,501. DROP-HAMMER. OTIS R. CLARK and CHARLES H. FRANKLIN, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Jan. 31, 1919. Serial No. 274,273. 16 Claims. (Cl. 78—29.)



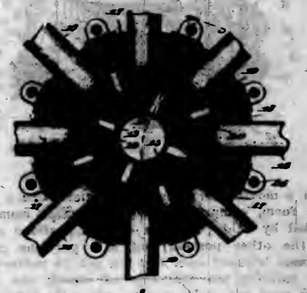
1. In an apparatus of the character described, the combination of a hammer, a stationary supporting and guiding frame therefor, a pair of actuators mounted on the frame and arranged to raise and release the hammer, mechanism for moving the actuators which includes driving or driven wheels and yielding means to absorb the shock between the driving wheels and the actuators, an

electric motor connected to the driving wheels, means having one end fastened to and supported by the frame



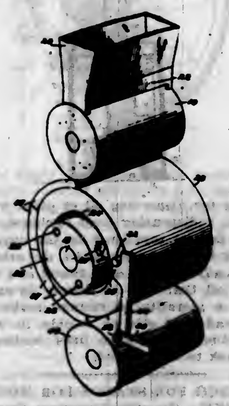
for holding the motor and driving wheels in predetermined position with respect to the driven wheels, and an auxiliary support for the other end of said means.

1,393,502. MACHINE-SWITCHING TELEPHONE SYSTEM. HENRY P. CLAUSEN, Mount Vernon, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 26, 1917. Serial No. 208,844. 12 Claims. (Cl. 179—18.)



1. In a telephone system, telephone lines, a call bell associated with each of said lines, selective switches controlled by a calling subscriber for establishing connections between said lines, and means under control of either of two lines involved in a connection for operating the call bell of the other.

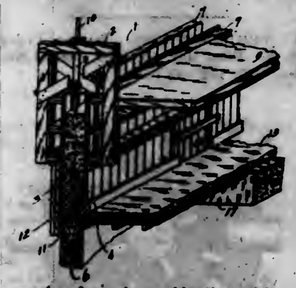
1,393,503. ELECTRICAL SYSTEM. HENRY P. CLAUSEN, Mount Vernon, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 19, 1918. Serial No. 250,509. 5 Claims. (Cl. 171—314.)



1. In a battery charging system, in combination, a battery to be charged, a source of energy for charging the battery, a switch for associating the source of energy with the battery, electromagnetic means in circuit with the battery and dependent solely upon the voltage thereof for controlling the operation of the switch, an electroresponsive device in circuit with the battery and dependent upon the rate of discharge thereof for controlling the switch and additional means for preventing the operation of said electroresponsive device in case the battery is at its predetermined maximum potential.

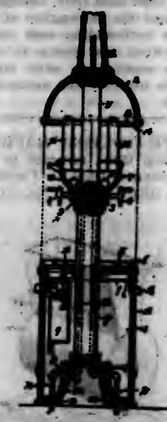
1,393,504. VEHICLE-WHEEL. DANIEL COLLINS, New York, N. Y. Filed Mar. 15, 1920. Serial No. 365,853. 5 Claims. (Cl. 152—48.)

3. A vehicle wheel including a felly, a hub, spokes extending inwardly from said felly, cushion means arranged between the hub and the extremities of said spokes, loose resilient members surrounding said cushion means and being disposed between said spokes, in contacting relation therewith, plates secured to said hub, members connecting said plates together and normally contacting said resilient members.



1,393,505. PASTE-APPLYING MACHINE. FREDERICK COATES, Wyoming, Ohio, assignor to Federal Products Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 25, 1920. Serial No. 412,884. 7 Claims. (Cl. 91—50.)

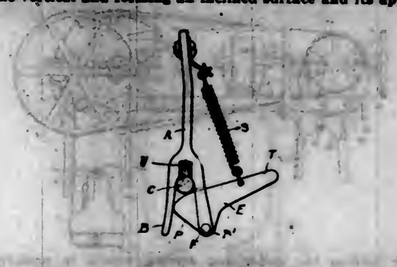
1. In a machine of the class described, a paste tank, a continuously revolving paste feeding roll coacting with the tank and receiving paste therefrom, an intermittently revolving paste distributing roll beneath the feeding roll and receiving paste therefrom, means to prevent and pos-



suit the revolution of the last mentioned roll, and a pinion roll meeting with the distributing roll and actuated by the revolution of said distributing roll.

1,393,506. MOVING FORM FOR CONCRETE CONSTRUCTION. HARRY L. COPELAND, Walla Walla, Wash. Filed Sept. 21, 1920. Serial No. 411,066. 7 Claims. (Cl. 25—131.)

1. In a moving form, in combination with a yoke and jack, a form, comprising two portions of equal length, connected by said yoke, one of said portions extendible below the other portion and said portions containing apertures.



1,393,507. OIL SERVICE-FOUNTAIN. FRED CORNELL, Los Angeles, Calif. Filed Sept. 15, 1919. Serial No. 323,965. 8 Claims. (Cl. 221—80.)

1. Apparatus for dispensing oil or other fluids, having in combination, a dispensing head combined with an exhibition head, faucets supported by the dispensing head portion, exhibit bottles supported by the exhibition head portion, one in adjacency to each faucet and containing a sample of the oil that may be drawn through such adjacent faucet, a plurality of storage tanks for storing the various grades of oils or liquids to be dispensed through the faucets, and pipe lines leading one from each storage tank to each faucet.

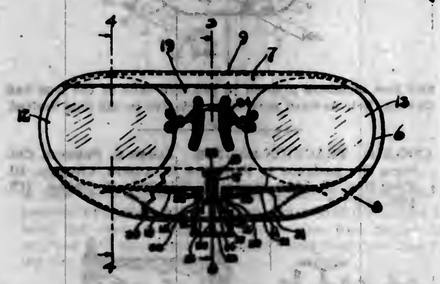
1,393,508. CATCH FOR STANDS FOR MOTORCYCLES AND THE LIKE. CHARLES LEIGHTON CROFT, Balham, London, England, assignor of one-half to David Stott Cooper, London, England. Filed Jan. 26, 1920. Serial No. 354,132. 8 Claims. (Cl. 280—79.)

1. In a catch for motor cycle stands, the combination of a fork-shaped fitting to receive the end of the motor cycle stand, an arm pivotally mounted at its lower end in a centrally disposed slot in one leg of said fitting, said arm having its lower inner side normally inclined to the vertical and forming an inclined surface and its upper

inner side of cam shape, said arm projecting rearwardly from said slot and terminating in a trigger for the purpose of operating the arm and also for the attachment of one end of a spring for locking said arm in functioning position, for the purposes described.

1,393,509. ELECTRIC SWITCH. FRANK C. DE RAMEE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 6, 1919. Serial No. 336,090. 3 Claims. (Cl. 200—157.)

1. The combination with a handle provided with a tubular grip portion having an open end and an elongated slot extending along its side, of a base member of insulating material adapted to slip axially into said grip and close its open end, switch mechanism including a spring-pressed switch blade and a switch lever for actuating it carried by said base member, and an actuating lever pivoted in said elongated slot and having a part with which the switch lever engages when the base member is slipped into said tubular grip portion.



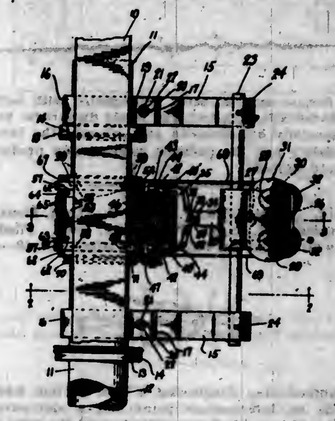
1,393,510. GUARD FOR PUNCH-PRESSES. MICHAEL J. DUBINSKY, Rockford, Ill. Filed Feb. 24, 1921. Serial No. 447,876. 4 Claims. (Cl. 74—105.)

1. In safety means of the character specified, a pivot member, a gear wheel loose on the pivot member, a sweep

in cooperative relation with the gear wheel, a rack bar in meshing relation with the gear wheel, and a guide mounted on the pivot member and engaging the rack bar to maintain the same in proper working position.

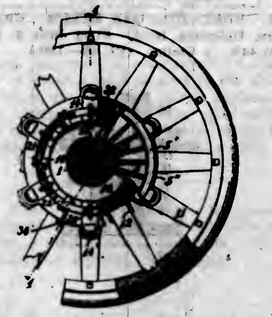
1,393,511. EYEGLASS-HOLDER. VINCENT E. DUNCANSON, Lynchburg, Ohio. Filed Nov. 15, 1919. Serial No. 338,278. 5 Claims. (Cl. 206—5.)

1. A holder for eyeglasses comprising a substantially flat body portion having the opposite longitudinal edges thereof turned inwardly and spaced apart, adapted to form spaces for the reception of eyeglasses, resiliently held members within one of the spaces for engaging and holding the eyeglasses, a clutch for retaining the eyeglasses within the holder, and means for retaining the clutch in position to release the glasses to permit removal thereof from the holder and means extending out through the body for operating the clutch.



1,393,512. TOY. HIRAM F. DUNNING, Turtleford, Saskatchewan, Canada. Filed July 22, 1919, Serial No. 312,598. Renewed Apr. 22, 1921. Serial No. 463,573. 8 Claims. (Cl. 280—42.)

1. In combination, a wheeled frame, a hobby-horse mounted thereon for rocking movement, a connection between the horse and said frame whereby a forward movement is imparted to the latter, when the horse is rocked, a steering rod comprising two sections, a universal connection between said sections, one section being connected to the body of the horse for rotation and movement therewith, a squared sleeve, a universal connection between the sleeve and the front axle, and said sleeve slidably receiving the other section of said rod, the latter mentioned section being squared whereby the structure may be steered upon the turning of said rod.



1,393,513. STAMPING-MACHINE. ERNEST H. DUVAL, Monroe, Mich., assignor to George W. Swift, Jr., Incorporated, Bordentown, N. J., a Corporation of New Jersey. Filed Mar. 13, 1920. Serial No. 365,564. 7 Claims. (Cl. 101—245.)

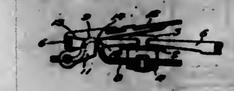
1. A revolving platen, a normally stationary printing roll therefor, means actuated by a sheet to be printed for bringing the printing roll to impression position when the sheet is arranged between the roll and platen, means for holding the printing roll against the influence of the sheet after an impression has been made thereon and after the

printing surface of the roll has been brought away from the sheet, and means for returning the printing roll to initial position after the printed sheet has been brought from between the roll and platen.

1,393,514. PNEUMATIC VEHICLE-WHEEL. ADOLPH W. ECKHARDT, New York, N. Y. Filed Feb. 27, 1920. Serial No. 361,779. 20 Claims. (Cl. 152—42.)

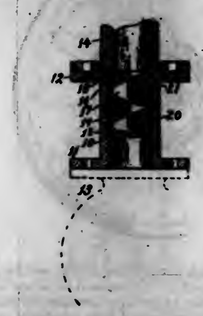
3. A vehicle wheel comprising a hub section, a rim section, a pneumatic cushion interposed between said sections and normally holding them in a concentric position, locking devices carried by one of said sections and movable relatively thereto lengthwise of the wheel axis, and adapted to be projected to a position in which they engage the outer edge of the other section, while normally said locking devices are in an inactive position, and means, operated by the shifting of the hub section to an eccentric position, for moving said devices from their normal retracted position to their projected locking position.

1,393,515. DIAPHRAGM AND METHOD OF MAKING SUCH DIAPHRAGMS. HENRY C. EGERTON, Passaic, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 4, 1918. Serial No. 210,200. 4 Claims. (Cl. 181—32.)



1. A diaphragm composed of a phenolic condensation product reinforced with three or more superposed layers of

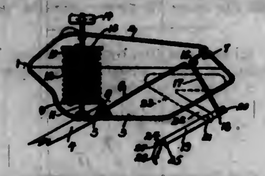
woven fibrous material of two or more different areas, the two outer layers being of area substantially coextensive with the area of the diaphragm as a whole and inclosing one or more layers of smaller area, the interstices of said



woven fibrous material being impregnated with said phenolic condensation product, the whole diaphragm forming a substantially homogeneous unit wherein the layers of woven fabric and the phenolic condensation product are intimately united.

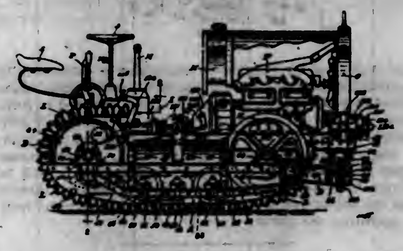
1,393,516. ANIMAL-TRAP. JOHN R. ELDER, Sioux City, and GEORGE W. ELDER, Forest City, Iowa. Filed Aug 24, 1920. Serial No. 405,676. 1 Claim. (Cl. 43—93.)

An animal trap comprising a base portion having a hump at an intermediate point and a slot extending through said hump and outwardly beyond the same, a pan having an arm extending radially beyond the same and disposed and movable in the said slot and hinged to the base portion at a point outwardly beyond the hump and having above and inwardly from the hinge point a bifurcated portion, in combination with a swinging jaw arranged to be removably disposed in and held by said bifurcated portion, and spring means to close the said jaw.



1,393,517. FUEL-OIL-GAS MIXER. CHARLES OSCAR ERICSON, Helmetta, N. J. Filed June 3, 1919. Serial No. 301,448. 1 Claim. (Cl. 48—180.)

A structure of the kind described comprising a pipe connection having its intake end reduced and with a recess therein forming a seat, a stationary perforate cylinder extending longitudinally of the pipe and having a flange fitting in the aforesaid recess whereby the cylinder body is spaced apart from the wall of the pipe connection, and a stationary imperforate helical blade extending longitudinally through the cylinder.



1,393,518. SWIMMING FROG. WILLIAM H. EISENWEIN, Bellevue, Pa. Filed June 8, 1920. Serial No. 387,440. 6 Claims. (Cl. 46—40.)

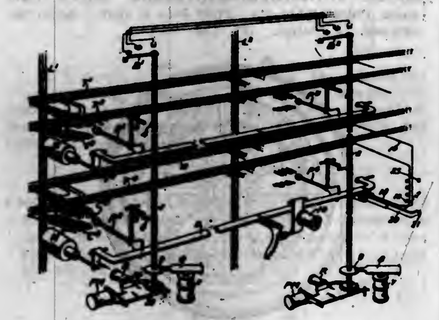
1. In a swimming toy, a body, a member of substantially inverted U-shape pivotally connected to the body for rocking movement on a horizontal axis, the arms of said member forming legs, means for rocking said U-shaped member

and foot members pivoted to the free ends of the legs and having their upward movement relative to the legs limited.

1,393,519. TRACTION-ENGINE. JAMES C. FRENCH, Chicago, Ill., assignor to Frederick C. Austin, Chicago, Ill. Filed Nov. 25, 1918. Serial No. 264,023. 15 Claims. (Cl. 180—9.2.)

1. In a traction engine, the combination, of a chassis, a motor mounted on said chassis at the forward end thereof, a gear casing at the rear end of said chassis, gearing in said gear casing, said gearing being operatively connected to said motor, there being depending from said gear casing a pair of bearings, a fixed axle mounted in said bearings and extending beyond the sides of said chassis, a pair of trucks pivotally mounted upon said fixed axle at their rear ends, traction means mounted in said trucks, said traction means being operatively connected to said gearing, said traction means including a pair of driving sprockets, each sprocket comprising a hub, a dished plate on said hub, a ring, said ring being removably bolted to the inner face of said dished plate at the peripheral margin thereof, secured to said dished plate, said ring having its inner periphery provided with gear teeth, the outer periphery of said ring being provided with sprocket teeth, a driving shaft operable by said gearing, said driving shaft having gear pinions engaging said internal gears, said driving sprockets having at their inner sides non-rotatable disks closing said sprocket wheels, each of said disks being constructed of two similar halves, bolted together at their transverse margins, said disks being fixedly connected to said fixed axle and having each an opening for the passage of said driving shaft, the connection of said disk to said axle including a two-part journal box in which the truck-frame is constructed to oscillate, the members of said journal box being formed each with one half of a cup-shaped element, said element having a laterally extending flange, and screws in said flange by which the cup-shaped element is removably secured to said two-part disk.

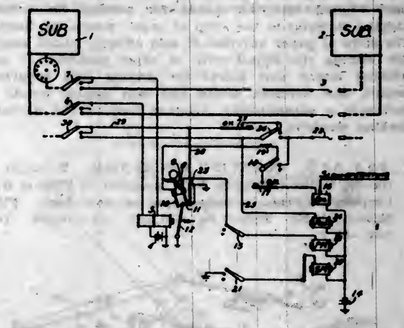
1,393,520. INCLOSED ARC DEVICE AND THE METHOD OF STARTING THE SAME. ERNST FRIEDRICH, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed Oct. 13, 1914. Serial No. 866,438. 21 Claims. (Cl. 176—1.)



16. The combination of an electric device comprising a sealed container, electrodes therein arranged to enable a

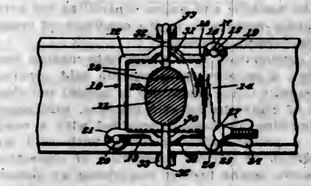
plurality of electric discharges to be operated therebetween, the electrodes acting as the cathodes consisting of material adapted to support said discharges at incandescence while remaining substantially intact, a filling of material

in said container having at the operating temperature a gaseous pressure high enough to cause said discharges to have the characteristics of electric arcs and means for starting said discharges individually and thereupon operating the discharges in series.



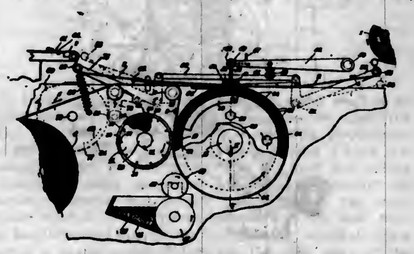
1,393,521. MACHINE-SWITCHING TELEPHONE SYSTEM. CHARLES L. GOODRUM, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 27, 1917. Serial No. 164,670. 5 Claims. (Cl. 179—18.)

1. In a telephone system, telephone lines, groups of extending circuits, selective switches for interconnecting said lines and said circuits comprising terminals in which said lines terminate, terminals arranged in operative relation to said line terminals in which said circuits terminate, a means for causing the operative interconnection of said line and said circuit terminals individual to each said group of extending circuits, means common to said groups for controlling said means and means for selectively operating said first means.



1,393,522. TELEPHONE-EXCHANGE SYSTEM. CHARLES L. GOODRUM, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 25, 1918. Serial No. 259,629. 9 Claims. (Cl. 179—18.)

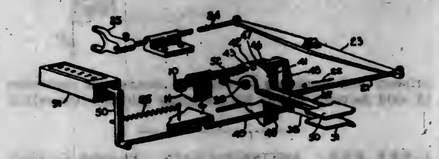
2. In a telephone exchange system including incoming and outgoing lines, a selector switch for extending an incoming line toward an outgoing line, a line relay associated with said selector switch, primary and secondary means for controlling the operation of said switch, a single movable means arranged in operative relation to said line relay for controlling the operation of said



primary and secondary means, and means also controlled by said movable means for releasing said selector switch.

1,393,523. ANTISKID-CHAIN. FRANCIS C. GRAY, College Corner, Ohio. Filed Apr. 5, 1919. Serial No. 287,768. 3 Claims. (Cl. 152—14.)

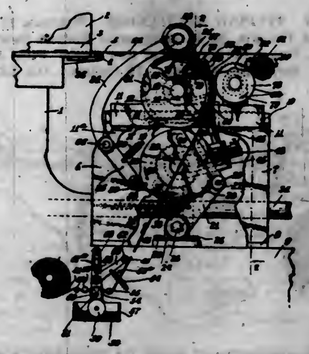
1. A clamp comprising a substantially L-shaped member, a pair of pivoted arms secured to the opposite ends of said member, opposed filler blocks adjustably secured within the clamp and coöperating with said arms to receive the article to be clamped, and means for detachably connecting the arms and forcing said blocks together.



1,393,524. TIPPING MECHANISM. WILLIAM F. GRUPE, Hudson Heights, N. J., assignor to Endless Belt Corporation, Inc., a Corporation of New York. Filed July 12, 1919. Serial No. 310,361. 14 Claims. (Cl. 131—39.)

1. The combination of means for progressing a strip of paper, means for supplying tipping material, said two means operating at different speeds, means for applying under pressure the supplied tipping material to the paper strip and means for substantially equalising the speed of the portion of the paper strip to which the tipping material is being applied to the speed of supply of said tipping material.

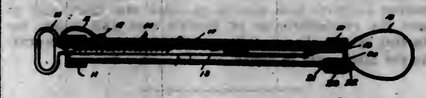
14. The combination with a cigarette making machine, of means for supplying a strip of paper, means for supplying a length of tipping material, means for severing said tipping material, means for affixing the severed tipping material to the strip of paper, means for looping the strip of paper anterior of said affixing means, means for looping the tipped strip of paper posterior of said affixing means and means for driving said supplying means, said severing means and said looping means to maintain a substantially constant feed to the cigarette making machine.



1,393,525. COUNTING MECHANISM. WILLIAM F. GAUPP, Hudson Heights, N. J., assignor to Endless Belt Corporation, Inc., a Corporation of New York. Filed Nov. 4, 1919. Serial No. 335,580. 13 Claims. (Cl. 131—39.)

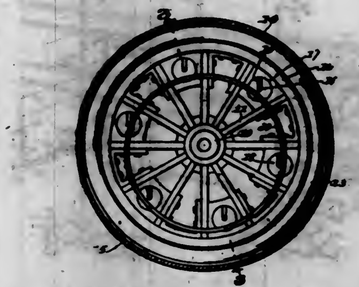
1. The combination with a cigarette making machine of a counter for indicating the number of cigarettes produced by the machine and means controlling the actuation of said counter responsive to the condition of production of normally formed cigarettes.

13. The combination with a cigarette making machine, of a counter, a member for actuating said counter, and means responsive to the conditions of normal and abnormal production of cigarettes by said machine, said responsive means comprising an element provided with a recess arranged in a predetermined relation with said member under condition of normal production of cigarettes and said responsive means further comprising an element for moving said recess out of said predetermined relation under the condition of abnormal production of cigarettes.



1,393,526. TIPPING MECHANISM FOR CIGARETTE-MACHINES. WILLIAM F. GAUPP, Hudson Heights, N. J., assignor to Endless Belt Corporation, Inc., a Corporation of New York. Filed July 16, 1920. Serial No. 396,710. 10 Claims. (Cl. 131—39.)

1. The combination of means for feeding tipping material in successive portions, means for rotating said feeding means, means for feeding a strip of paper, adhesive supplying means, means for affixing under pressure the tipping material successively to said strip of paper at determined spaces thereof, means for supporting said rotating tipping material feeding means and means for reciprocating said supporting means at a speed which with the speed of rotation of said feeding means imparts a speed to the foremost portion of tipping material substantially equal to the speed of said paper strip during the affixing stage.

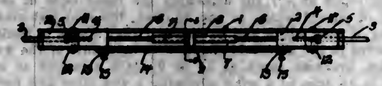


10. In combination with a cigarette rod-forming machine, of mechanism for applying tipping material to the paper, said tipping mechanism being disposed anterior of the rod-forming mechanism of the cigarette machine, said tipping mechanism comprising a rotary member for feeding spaced portions of tipping material toward and in register with the paper, means for moving said member to move its portion most closely adjacent the cigarette paper substantially parallel to the direction of travel of the cigarette paper and oscillatory means for applying pressure to the paper and the fed tipping material portions while rotating said rotary member.

1,393,527. DEVICE FOR HOLDING HOGS. GROVER GUTHRIE, Massena, Iowa. Filed Aug. 25, 1920. Serial No. 405,794. 2 Claims. (Cl. 119—153.)

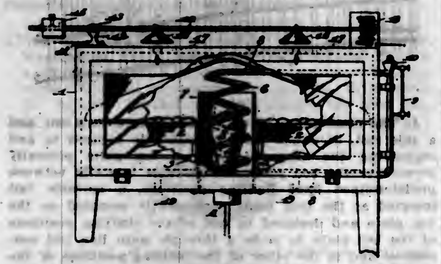
1. A holder of the class described having a holder, a removable cap thereon, a noose slidable through said cap, a draw rod for the noose in said holder, and means anchoring the noose to both the cap and holder to prevent accidental detachment of the cap.

1,393,528. AUTO-WHEEL PROTECTOR. JOHN F. HALBACH, Philadelphia, Pa. Filed June 5, 1919. Serial No. 301,946. 9 Claims. (Cl. 152—85.)



1. A wheel having a rim member and a shoe member capable of relative movement in a plane perpendicular to their axes, and orbitally movable interlocking means having complemental elements relatively movable in parallelism with and carried respectively by said members for communicating rotary motion from one to the other.

1,393,529. METHOD OF SAWING TAPER LOGS. ARTHUR L. HALEY, Seattle, Wash. Filed Mar. 31, 1921. Serial No. 457,409. 2 Claims. (Cl. 144—309.)



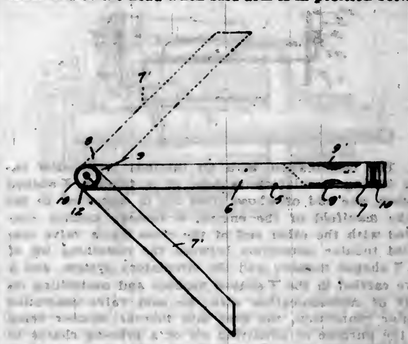
1. The method of sawing logs which consists in sawing two adjacent sides by first cutting parallel with the respective faces of the log and then squaring the log by sawing therefrom on lines which are parallel with the opposite sides of the log.

1,393,530. TROLLEY-WIRE EXTENSION-SPLICE. MIKE W. HRABAN, Bulger, Pa. Filed Mar. 18, 1921. Serial No. 453,507. 4 Claims. (Cl. 191—44.1.)

1. In a device of the character described, a casing, blocks mounted in said casing and adjustable toward and away from each other, means for simultaneously adjusting said blocks, and means for securing the blocks in adjustment and for forcing them into tight contact with the casing.

1,393,531. ELECTRIC INCUBATOR. JOHN A. HOWARD, Sr., West New Brighton, N. Y., assignor to Camward Engineering Co., Inc., a Corporation of New York. Filed July 3, 1920. Serial No. 393,845. 7 Claims. (Cl. 219—19.)

1. In a device of the class described, the combination of an electrically operated heating element, a water coil heated thereby, egg trays, and a chimney permitting air to pass into said device and into contact first with said water coil and then with said egg trays.

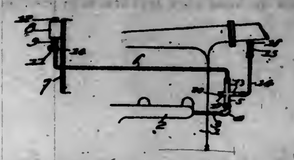


1,393,532. ELECTRIC FLOOR MOP OR BRUSH. JOHN A. HOWARD, Sr., West New Brighton, N. Y., assignor to Camward Engineering Co., Inc., a Corporation of New York. Filed July 3, 1920. Serial No. 393,846. 1 Claim. (Cl. 15—14.)

A mop comprising a base, a tufted member rotatably supported by said base, a motor operable for rotating said tufted member, and spring brackets for removably supporting said motor as and for the purpose set forth.

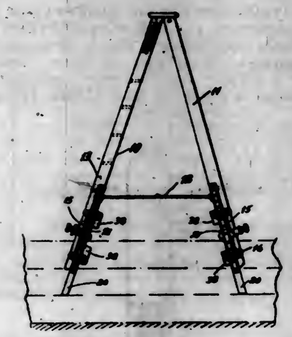
1,393,533. COMBINATION LEVEL AND BEVEL. WILLIAM C. HOYT, South Bend, Wash. Filed July 19, 1919. Serial No. 312,012. 2 Claims. (Cl. 33—116.)

1. A square of the character described comprising a pair of spaced side members connected at one end to form a head, the inner end wall of the head being cut on an angle between said side members, a pivot member mounted for rotation through the opposite ends of said side members, said pivot member having a squared central portion, an arm mounted on said squared central portion and having an angularly cut free end for engagement with the said inner end of the head when said arm is in position between



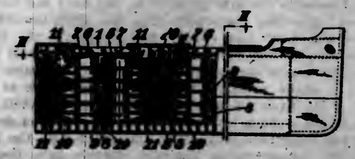
said side members, means for retaining said pivotal member in position in said side members, and means carried by said pivotal member and one of said side members to indicate the angular position of said arm.

1,393,534. CONSTRUCTION OF ADJUSTABLE SPANNERS, WRENCHES, CLAMPS, PIPE-CUTTERS, PIPE-GRIPS, AND THE LIKE. FRANK HUMPHRIS, Boscombe, England. Filed July 17, 1919. Serial No. 311,676. 2 Claims. (Cl. 81—169.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In a device of the class specified, a metal shell of U-shaped form with one extremity wider than the other, the wider extremity having lateral jaw-engaging projections, the shell forming inclosing means and having a fixed jaw secured between the said projections, the fixed jaw having a shank extending materially into the shell toward its narrow extremity and closely fitting against the front portion thereof, the narrower extremity of the shell having handle means secured to its extremity, a slidable jaw having a shank mounted between the rear edge of the shank of the fixed jaw and the rear wall of the shell, the shank of the slidable jaw also having an operating device extending therefrom, and means associated with the handle means for operating the said slidable jaw, the depending shank of the fixed jaw bracing the front portion of the shell and serving as a guiding bearing for contact therewith of the front edge of the shank of the slidable jaw.

1,393,535. FUEL-SAVER AND PRIMER. ALEXANDER GEO. HUNT, St. Louis, Mo. Filed Mar. 18, 1919. Serial No. 282,892. 2 Claims. (Cl. 123—25.)

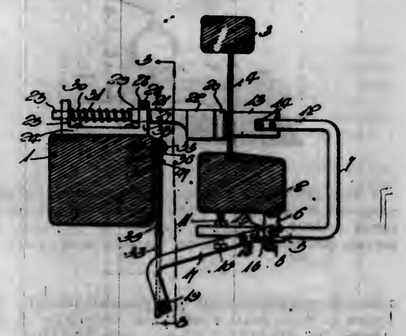


1. The combination with an internal combustion engine having circulatory system, of a tubular T-shaped member, one end of whose cross leg is connected to the intake manifold of the engine, a tubular member connected with the other end of the cross leg, a valve controlled tubular connection between the remaining leg of the T-shaped member and the circulatory system, and a valve carried in the T-shaped member and controlling its point of communication with the said valve controlled tubular connection, the first said tubular member being for the purpose of admitting air or a priming charge to the said T-shaped member for the useful purpose specified.

1,393,536. LADDER ATTACHMENT. HOMER HUNT, Hartford, Conn. Filed July 12, 1920. Serial No. 395,465. 8 Claims. (Cl. 228—60.)

1. A ladder attachment comprising a plate, means for securing said plate to a ladder leg, an extension leg, means for securing the extension leg to the plate, and lugs eccentrically pivoted upon the plate and bearing against the ladder leg to determine the angular relation of the ladder leg to the extension leg.

1,393,537. NAVIGABLE VESSEL. CHARLES PETER MITCHELL JACK, Glasgow, Scotland. Filed Feb. 16, 1921. Serial No. 445,497. 7 Claims. (Cl. 114—74.)



1. A tank ship having tanks comprising in combination bulkheads each end of which extends toward the side of the ship in a pair of curved wings diverging away from one another and thereby forming with the sides of the vessel a chamber, a vertical web-plate (such as 7) for joining each wing to the side of the vessel, another vertical web-plate (such as 7ª) for attaching the inner ends of each pair of curved wings to one another, the said web-plates being of such width and so disposed that access is readily afforded in the aforesaid chamber to the joints of the web-plates, brackets (such as 11 or 9) each attached at one end to an edge of a wing adjoining a web-plate and forming a virtual continuation of the wing to which it is attached, and stringers (such as 10 or 8) which tie the other end of each bracket to an opposed end of another bracket directed toward it.

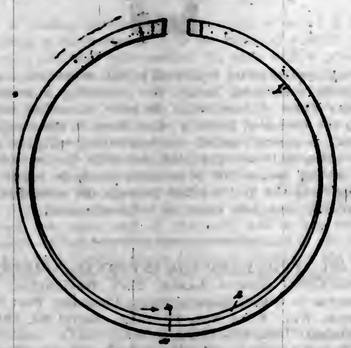
1,393,538. SWITCH-RAIL. ERNEST N. JOHNSON, Winnipeg, Manitoba, Canada. Filed Dec. 19, 1919. Serial No. 345,890. 4 Claims. (Cl. 246—387.)

1. The combination with a main line, a turn out and a side rail, of a bed plate permanently secured to and supporting the aforesaid rails, a top plate pivotally secured to the bed plate and movable laterally between predetermined fixed limiting positions, a movable rail inserted at the frog point permanently mounted on the top plate and designed in one of the limiting positions of the bed plate to make a through main line rail connection and in the other of the limiting positions of the top plate to make a through connection between the turn out and side rails, a pair of locking bolts carried by the top plate and adapted alternately to lock the top plate against movement in its extreme positions of travel and reversible means for effecting in one controlling movement the initial unlocking of the locking bolt, the subsequent turning of the plate to its other limiting point of travel and the final locking of the plate by the other of the bolts against movement in such latter position.

1,393,539. THREAD-CUTTER FOR LOOMS. LOUIS JOURDAIN, Lowell, Mass. Filed June 21, 1920. Serial No. 390,452. 3 Claims. (Cl. 139—35.)

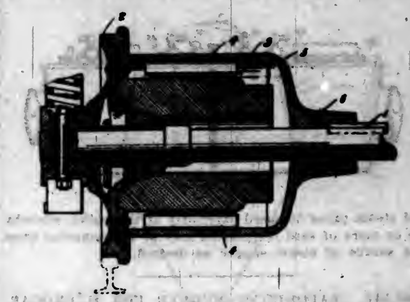
1. The combination with a loom structure including a breast beam, a lay beam and a reed, of a rocker shaft rotatably mounted beneath the lay beam, a U-shaped bracket having a lower arm provided with an opening receiving the rocker shaft, means to releasably lock the bracket upon the rocker shaft, an adjusting screw carried by the lower arm for engaging the lay beam and limiting swinging movement of the bracket in one direction, a cutting blade carried by the upper arm of the bracket and moving through the reed when the rocker shaft is rotated in one direction, means connected with the breast beam for holding a block in operative relation to the cutting blade, an abutment connected with the breast beam and movable into and out of an operative position, a lever arm mounted upon the rocker shaft, and an abutment carried by the lever arm for engaging the abutment of the breast beam and swinging the lever to rotate the rocker shaft and move the blade carried by said bracket through the reed into engagement with the block when the abutment of the breast beam is in an operative position.

1,393,540. DESICCATING FOOD. JOHN F. KELLY, Pittsfield, Mass. Filed Aug. 4, 1919. Serial No. 315,297. 2 Claims. (Cl. 99—5.)



1. In the desiccation of raw succulent vegetable and fruit products the process which comprises applying a solution containing a reducing sugar to cut surfaces and thereafter desiccating in the usual way.

1,393,541. STRUCTURAL ELEMENTS. ROBERT KEMP, Washington, D. C., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Original application filed May 26, 1916, Serial No. 99,995. Divided and this application filed Jan. 25, 1919. Serial No. 273,075. 5 Claims. (Cl. 18—55.)



1. A method of making structural elements that comprises superimposing layers of fibrous material impregnated with a binder to form an elongate tubular body, disposing a mandrel of substantially stream-line shape in cross section upon the exterior of said layers, superimposing additional impregnated material about the tubular body and mandrel engaging it and subjecting the structure thus formed to heat and pressure in a mold.

1,393,542. PACKING-RING. HERMAN KIESTNER, Elizabeth, N. J., assignor, by mesne assignments, to Victory Hammered Piston Ring Company, Newark, N. J., a Corporation of New Jersey. Filed May 12, 1919. Serial No. 296,324. 1 Claim. (Cl. 74—109.)

A metal packing ring consisting of a split ring having the metal at its edges compacted to form an eccentrically arranged inner beveled edge, the bevel of which is greatest at the region opposite the split and decreases in both directions.

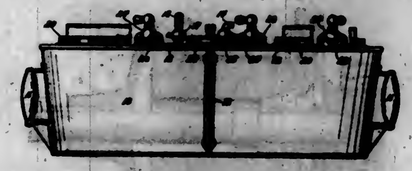
1,393,543. VEHICLE-DRIVE. WILLIAM C. KLEIN, Allentown, Pa. Filed Jan. 26, 1921. Serial No. 440,164. 1 Claim. (Cl. 105—53.)

A vehicle drive comprising a shaft, a wheel journaled thereon, a shell having a hub secured to said shaft at a distance from said wheel, said shell intermediate the hub and wheel being relatively large and open adjacent the wheel and terminating relatively close to the wheel, armature means and field means within said shell, one of said means being secured to the wheel and the other of said means being secured to said shell.

1,393,544. TOY. JAMES HARMER KNIGHT, Westtown, Pa. Filed Dec. 12, 1919. Serial No. 344,441. 4 Claims. (Cl. 105—38.)

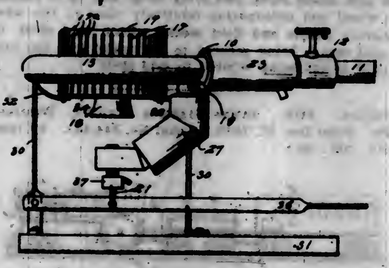
4. A toy comprising units coupled in train, a motor mounted upon one of said units, a tank containing fluid motive medium, a pipe connecting said tank with the motor; and a coupling in the length of the pipe and located between the unit and comprising a plurality of sections, each containing a valve, a stop, yieldable means associated with said stop, and means for connecting and securing the members together when properly assembled.

1,393,545. CONCRETE PILE. EDWIN C. KNUTH, Milwaukee, Wis. Filed June 28, 1919. Serial No. 307,384. 4 Claims. (Cl. 61—59.)



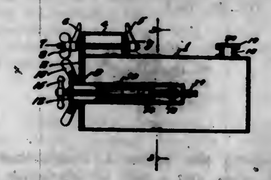
4. A reinforcing pile having a cross-section similar to the Greek cross, and a pair of reinforcing skeleton structures penetrating each other at the center of the pile and extending out into the wings of the pile, as and for the purpose specified.

1,393,546. STEAM-COOKER. USHIA KOLCHINSKY, Philadelphia, Pa. Filed Sept. 11, 1920. Serial No. 409,598. 4 Claims. (Cl. 53—2.)



4. A steam cooker comprising a boiler constituting a source of steam supply, a top for said boiler, a plurality of food receptacles depending from said top within the boiler, a plurality of covers associated with the receptacles and said top, a plurality of steam pipes within the

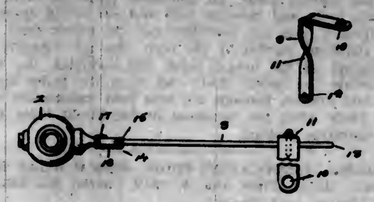
boiler and projecting through said top for establishing interior communication between the feed receptacles and said source of steam supply, and controlling cocks for



said steam pipes disposed exteriorly of the boiler whereby one or more of said receptacles may be disconnected from said source of steam supply as desired.

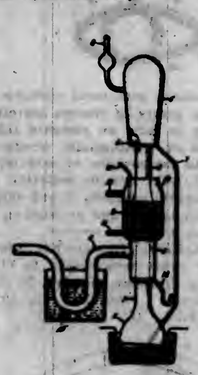
1,393,547. VAPORIZING-BURNER FOR HYDROCARBON FUELS. MERNARD H. KOERNER, Tulsa, Okla., assignor to Edward B. Kemp, Tulsa, Okla. Filed Oct. 6, 1920. Serial No. 414,966. 1 Claim. (Cl. 158—69.)

A liquid fuel burner construction including a frame having standards, brackets extending from the standards, an annular retort mounted by the standards, a burner construction surrounded by the retort and mounted by the brackets, a fuel supply conduit extending from the retort below the burner and having a discharge valve therein, and means mounted by one of the standards to control said valve.



1,393,548. CHIMNEY-CLEANER. JOHN G. KOUDELKA, Antigo, Wis. Filed Oct. 22, 1920. Serial No. 418,807. 3 Claims. (Cl. 15—41.)

1. A device of the character described comprising a container and means for holding the same in a fire opening, means for creating a pressure within said container, and breakable means at one end of the container for releasing the same when a certain pressure is reached.

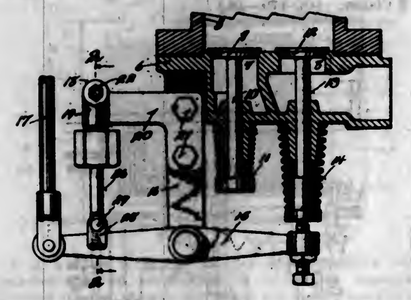


1,393,549. RADIATOR-DRAINING ATTACHMENT FOR AUTOMOBILES. GEORGE J. KRUEGER, Port Washington, Wis. Filed Mar. 29, 1921. Serial No. 456,849. 1 Claim. (Cl. 137—130.)

The herein described drain cock attachment for automobiles, comprising a rock shaft having at one end a coupling head provided with a flange to abut against the edge of a cock-plug handle and parallel spaced portions reaching forwardly from one edge of the flange and having free ends whereby the head is adapted to straddle the plug and said portions are adapted to be hooked around the handle of the plug and confine said handle against the

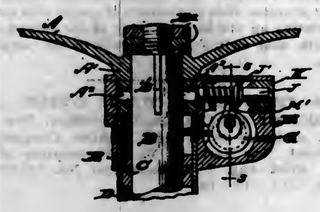
flange and couple the rock shaft to the plug, in combination with a right angle bracket with a pendent twisted arm in which the rock shaft is journaled, and a horizontal arm apertured for fixture on the pendent portion of a lamp standard.

1,393,550. METHOD OF AND MEANS FOR OBTAINING HIGH VACUA. IRVING LANGMUIR, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 3, 1916. Serial No. 76,054. 14 Claims. (Cl. 230—13.)



3. An apparatus for obtaining a high vacuum in a closed receptacle comprising means for producing a stream of mercury vapor, a condensing chamber, a conduit through which the stream of mercury vapor flows to the condensing chamber, a second conduit communicating with the receptacle which is to be exhausted and with the first conduit and cooling means for preventing mercury vapor from flowing from the first conduit through the second conduit toward the receptacle which is to be exhausted.

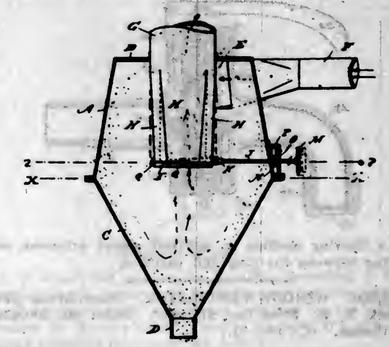
1,393,551. FUEL-PUMP FOR INTERNAL-COMBUSTION ENGINES. GEORGE LARGE, Port Washington, Wis., assignor to Gilson Manufacturing Company, Port Washington, Wis. Filed Nov. 17, 1919. Serial No. 338,541. 2 Claims. (Cl. 123—139.)



1. In an internal combustion engine, the combination with a cylinder head of a tappet valve including a stem projecting from the cylinder head, a pivot arm on the cylinder head, a tappet lever intermediately pivoted on said arm and having one end engageable with the valve stem, means pivoted to the opposite end of the lever for

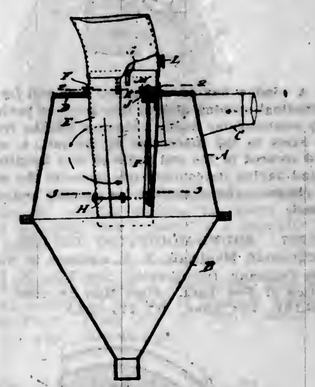
actuating the same; fuel pump including a casing, an arm supporting the casing and secured to said pivot arm, and a

piston plunger extending into the pump casing and pivotally connecting it with the tappet lever between its fulcrum and the actuating means.



1,393,552. AUTOMOBILE-LOCK. FRANK B. LEONARD, Los Angeles, Calif., assignor of one-half to Alfred E. Beasley, Toronto, Ontario, Canada. Filed Sept. 17, 1920. Serial No. 410,822. 2 Claims. (Cl. 70—129.)

1. A locking device for the steering wheel of a vehicle including a casting secured to the steering column, a slidable bolt provided intermediate its ends with a projecting rib and housed in the said casting and adapted to enter a plurality of apertures in the hub of the steering wheel, said casting being provided at its outer side with a bore of sufficient size to permit the slidable bolt with the projecting rib to pass through it, a spring sleeved on the inner portion of the bolt and bearing against the rib and the inner wall of the casting to force the bolt out of locked relation with the steering wheel hub, a bushing filling the said bore and closed at its outer end and slidably supporting the outer end of the bolt, and a key actuated rotatable cylindrical lock mechanism housed in the casting and having a locking finger arranged to engage the rib for positively moving the bolt into its locked position.

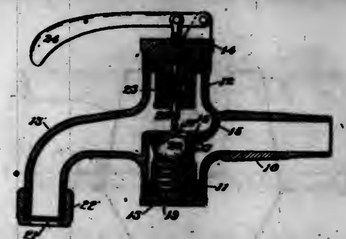


1,393,553. ADJUSTABLE DUST-COLLECTOR. MARTIN W. LEONHARDT, Chattanooga, Tenn. Filed Mar. 3, 1921. Serial No. 449,881. 5 Claims. (Cl. 183—86.)

1. A cyclone dust collector comprising a tangential inlet pipe, and a central tubular depending outlet pipe having its lower end divided upward from the bottom into a plurality of segmental tongues adapted to be variably compressed circumferentially and overlap each other so as to form a variable cone diminishing downward, and means

to effect said varied compression of said tongues and consequent varied area of said outlet pipe.

1,393,554. ADJUSTABLE DUST-COLLECTOR. MARTIN W. LEONHARDT, Chattanooga, Tenn. Filed June 13, 1921. Serial No. 477,270. 8 Claims. (Cl. 183—86.)

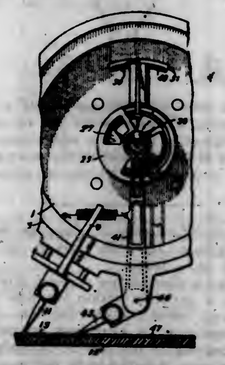


1. A cyclone dust collector comprising a tubular discharge pipe having a divided lower end forming over lapping tongues, adjusting means for said tongues adapted to vary the degree of overlap, and means located within said discharge pipe to operate said adjusting means.

1,393,555. FAUCET. ROBERT H. LOCKYER, San Francisco, Calif. Filed Sept. 16, 1920. Serial No. 410,657. 2 Claims. (Cl. 251—167.)

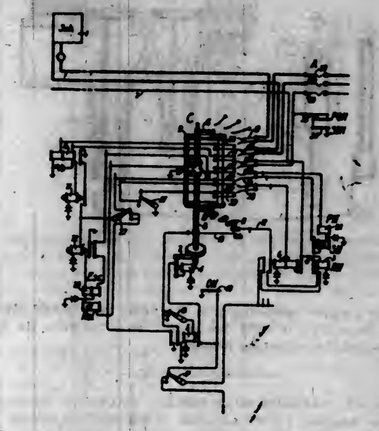
2. In a faucet, a pipe having opposite laterally projecting extensions, a partition within the pipe between said extensions, a cage screw threaded into one of said extensions, and comprising an apertured cylindrical wall, a seat on the inner end of the cage to fit against the partition within the pipe, a ball within the cage, cooperating with the seat, a spring within the cage to press the ball into engagement with the seat, a plug screw threaded into the other extension on the pipe, a stem extending through

the plug, and coöperating with the ball, means to actuate the stem whereby to depress the ball and unseat the same,



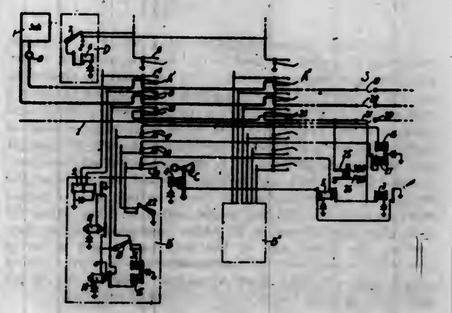
and a filtering medium in said last named extension extending between the plug and partition.

1,393,556. WINDOW-VENTILATOR. JOHN LYNN, New York, N. Y. Filed Dec. 31, 1917. Serial No. 209,634. 5 Claims. (Cl. 98—31.)



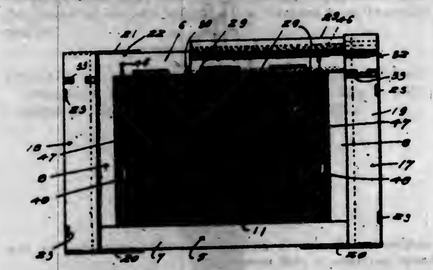
3. A window having the bottom sash rail formed with a longitudinal opening divided into sections having substantially semi-circular bases, a channel leading from between said bases to the inner side of the rail, a semi-circular shield secured in the end walls of said longitudinal opening and having its concave side opposite the opening into said channel, and a shutter for opening and closing said channel.

1,393,557. SOUND-MODIFYING DEVICE. JAMES L. MCQUARRIE, Montclair, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 18, 1918. Serial No. 223,181. 10 Claims. (Cl. 274—27.)



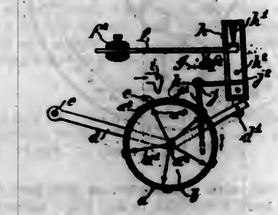
1. In combination, a sound conveyer, a record, a sound box intermediate the conveyer and record, a sound modifier within the sound box, an automatic means controlled by said record for adjusting the modifier.

1,393,558. TELEPHONE-EXCHANGE SYSTEM. JAMES L. MCQUARRIE, Montclair, N. J., and CHARLES L. GOODRUM, New York, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 7, 1919. Serial No. 315,827. 6 Claims. (Cl. 179—18.)



1. In a telephone system, groups of selector switches, groups of connector switches, impulse relays for each group less in number than the switches thereof and common to such switches, and electromagnetic means automatically actuated upon the seizure of one of said switches for associating an idle impulse relay of the corresponding group with said switch to coöperate in the setting of the same.

1,393,559. TELEPHONE-EXCHANGE SYSTEM. JAMES L. MCQUARRIE and CHARLES L. GOODRUM, New York, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 7, 1919. Serial No. 315,828. 6 Claims. (Cl. 179—18.)



1. In a telephone exchange system, a calling line, a plurality of selector switches to which said line may be extended, sets of contacts for each switch, means for pre-alloting one set of contacts to its associated switch, and electromagnetic controlling apparatus common to a plurality of sets of contacts including the pre-allotted set for controlling the operation of the switch with which said pre-allotted set is associated.

1,393,560. WINDOW-SCREEN. BURTON J. MARRIOTT, Petrolia, Ontario, Canada. Filed May 26, 1920. Serial No. 384,367. 12 Claims. (Cl. 156—14.)

2. A window screen comprising a substantially rectangular metallic frame having reticulated material mounted therein, the side and upper portions of the frame having rearwardly extending flanges formed thereon, and a hood formed of a plurality of slidable leaves pivotally secured to the side flanges and arranged to partially cover the screen, when the same is in its lowered position and to engage the top flange when the same is in its collapsed position, and means for raising and lowering said hood.

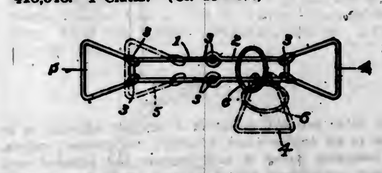
1,393,561. APPARATUS FOR DELIVERING MATERIALS. FERNAND PAUL MARTIN, Paris, France. Filed Mar. 28, 1919. Serial No. 285,836. 3 Claims. (Cl. 249—19.)

1. In an apparatus for delivering material in measured quantities, a lever adapted to oscillate about a fixed pivot, a measuring drum pivoted to said lever and comprising a plurality of compartments for the material to be measured, means for supplying the material to said compartments, lugs formed on the periphery of said drum, a fixed pawl adapted to engage said lugs, a lever pivoted above said drum having a weight slidably mounted thereon, a link connecting said levers, said drum being adapted to move out of contact with said pawl as the material in one of said compartments overbalances said weight, and means for initiating the return of said lever and drum to rest position after the contents of one of said compartments has been discharged.

1,393,562. SAND-BLAST NOZZLE. JOSEPH L. MATTHEWS, Highland Park, N. J., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 8, 1920. Serial No. 415,495. 2 Claims. (Cl. 51—11.)

1. In a sand blast nozzle, a lining of ceramic material.

1,393,563. SPARE-TIRE HOLDER. ANTON MAURER and JAMES J. BROSSOIT, Salt Lake City, Utah. Filed Feb. 25, 1919. Serial No. 279,154. 9 Claims. (Cl. 224—39.)

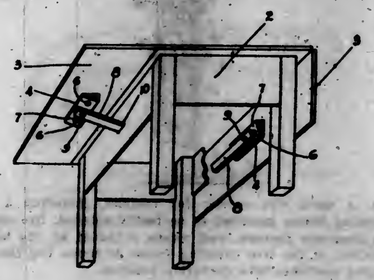


1. A spare tire carrier for vehicles, including a tire carrying frame mounted to be bodily rotated, tire engaging elements thereon, and means actuated by the bodily rotation of the tire carrying frame to move the tire engaging elements into operative position.

1,393,564. METHOD OF MAKING CURRENT-COLLECTOR RINGS. CHESTER B. MILLS, East McKeesport, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 10, 1918. Serial No. 249,846. 3 Claims. (Cl. 29—155.5.)

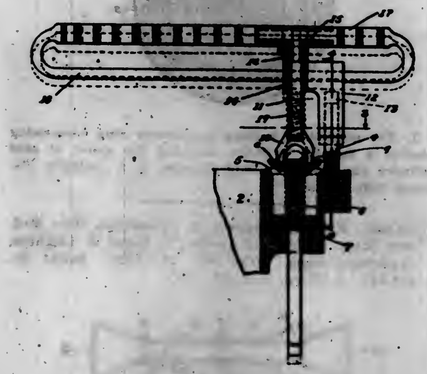
1. The method of making a collector ring comprising casting a metallic cylinder, working the metal of said cylinder and attaching said cylinder to a centrally disposed body portion.

1,393,565. PUZZLE. GEORGE A. PARMENTER, West Medford, Mass., assignor of one-half to Henry B. Leighton, Cambridge, Mass. Filed Oct. 21, 1920. Serial No. 418,348. 1 Claim. (Cl. 46—41.)



A puzzle comprising four links of equal ultimate length, the two central links having straight elongated side portions, a short end portion, the ends of the side portions of each link being joined to each other to form straight lines from end portion to end portion, and a ring surrounding one of said links.

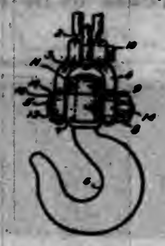
1,393,566. TABLE-LEAF SUPPORT. JOHN PETERSON, Faribault, Minn. Filed Nov. 22, 1920. Serial No. 425,737. 1 Claim. (Cl. 45—47.)



A table having side frame members and side leaves hinged to the table for folding down over the side frame members, an elongated bearing block secured to the under side of each leaf and having its under face beveled out-

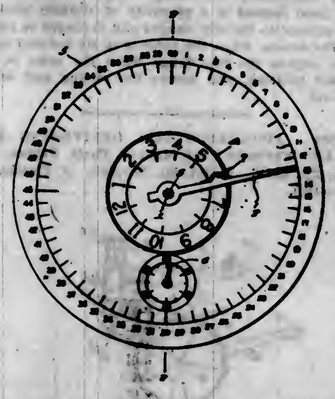
wardly toward the outer edge of the leaf, and a brace pivoted at one end to the beveled face of the bearing block for swinging downwardly in the plane of the beveled face to engage the adjacent side member and thereby hold the respective leaf in its operative position, said brace adapted to be housed between the folded leaf and its

opposed side member and held against swinging beyond the lower edge of the leaf by the beveled face of the block the angle of which being such as to effect engagement of the brace with the outer edge portion of the leaf upon swinging movement of the same beyond its normal folded position.



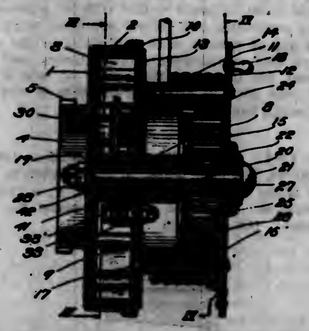
1,393,567. VALVE-GRINDER. NIELS JULIUS PETERSON, Minneapolis, Minn. Filed Jan. 30, 1920. Serial No. 355,255. 4 Claims. (Cl. 51—29.)

1. A valve grinder including a support adapted to be secured to an engine block adjacent two opposed valves, studs rotatably borne in said support and adapted each to engage one of said valves, a gear affixed to each stud in adjacent spaced relation, and a rack bar presenting teeth on opposed sides adapted to be inserted between said spaced gears whereby, upon reciprocation of the bar, the gears are simultaneously rotated and the valves thereby ground to their respective seats.



1,393,568. CHAIN-SHACKLE. ARTHUR S. REMBERG, Lakewood, Ohio, assignor to The Chisholm-Moore Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 12, 1920. Serial No. 416,462. 9 Claims. (Cl. 59—93.)

1. In a hook coupling, the combination of two intergaging members, one of them having an integral extension passed into an opening in the other, said extension being adapted to be embraced by a chain link intermediate the



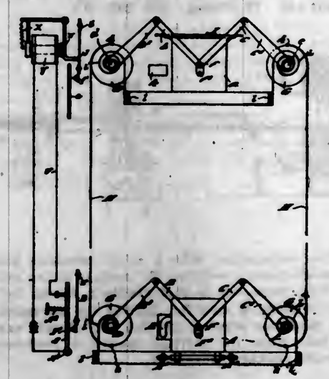
members, and a hook swivel removably supported by the lower portions of said members.

1,393,569. DIAL. ALBERT J. RICHARDSON, Joplin, Mo. Filed Feb. 14, 1921. Serial No. 444,961. 2 Claims. (Cl. 58—126.)

2. In combination with a time-piece, a dial part connected with the hour arbor and having hour indicating numerals thereon, a minte hand having a projection thereon coöperating with the numeral for indicating the hour and a dial coöperating with the minute hand and divided into sixty minutes.

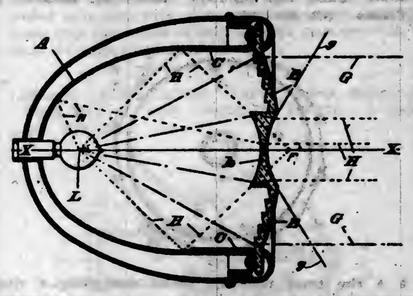
1,393,570. TROLLEY-CATCHER. JAMES R. RICKETTS, Kansas City, Mo. Filed Apr. 30, 1919. Serial No. 293,750. 12 Claims. (Cl. 191—95.)

1. In a trolley catcher, the combination with a drum and a trolley rope secured thereto, of a freely movable



pawl on the drum, a detent normally holding the pawl against movement, and a rigid member to be engaged by the pawl, said pawl moving into locked engagement with the detent by its own weight when released from the rigid member.

1,393,571. COMBINED FLY-SWATTER AND BRUSH. CONSTANCE A. RISK, Hermann, Mo. Filed May 2, 1921. Serial No. 466,065. 3 Claims. (Cl. 43—137.)

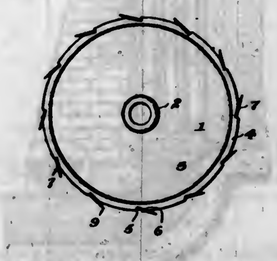


1. A fly-swatter having a swatting-body made of broom-corn straws bound together intermediate of their ends, to form a handle thereat; and a corner-brush formed at the end of said handle that is opposite the end to which said swatting-body is connected.

1,393,572. PANTOGRAPH APPARATUS. FOSTER RITCHIE, Ealing, England. Filed Jan. 24, 1916. Serial No. 74,044. 1 Claim. (Cl. 33—23.)

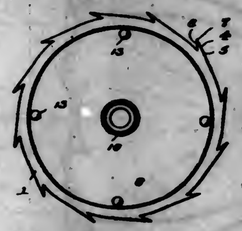
A photograph comprising entirely separate and distinct tracing and reproducing ends; said pantograph having at each of said ends two pairs of articulated links, a pair of axially fixed spindles to which corresponding links of the two pairs are connected, and a pen or tracer connected to the junction of the other links of the two pairs; pulleys upon said spindles, flexible driving means connecting the corresponding pulleys at the two ends, and volute springs acting on the corresponding spindles at the two ends for maintaining tension on said flexible driving means.

1,393,573. HEADLAMP. JOHN A. EITTER, Lansdowne, Pa. Filed Oct. 21, 1920. Serial No. 418,896. 4 Claims. (Cl. 240—41.)



1. In a headlight, the combination of an elliptical reflector, a source of light located substantially at the inner focus of the reflector, a lens covering the mouth of the reflector and located near the outer focus of the reflector, said lens having a central concave portion which receives all the reflected rays and issues them in a parallel beam of light and a plurality of arcuate concentric prisms which receive the greater portion of direct rays and transmit them in a parallel cylindrical beam of light.

1,393,574. SPOON-HOLDER. ALDACE P. ROHMILLER, Mapleton, Iowa. Filed Feb. 24, 1920. Serial No. 360,687. 1 Claim. (Cl. 65—65.)

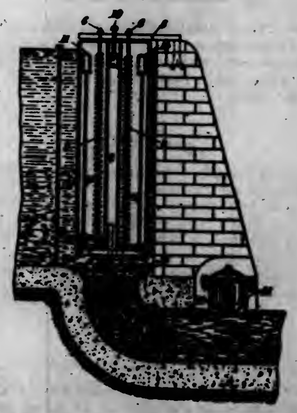


In a device of the class described, a receptacle the side wall of which is outwardly turned to form an external flange along one edge, a portion of the edge of the said wall being inwardly deflected to form an inwardly turned flange, said flange being cutaway and the cutaway portion having under cut walls, for forming an engaging device for a spoon or the like.

1,393,575. TIRE-TREAD-REMOVING DEVICE. JOHN M. ROLL, Correctionville, Iowa, assignor of one-half to Carl Jacobs and one-fourth to E. E. Jacobs, Correctionville, Iowa. Filed July 2, 1920. Serial No. 393,717. 1 Claim. (Cl. 29—105.)

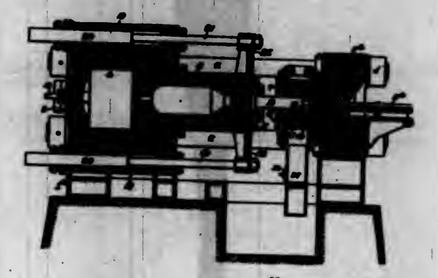
A tire tread removing device comprising a wheel having a relatively broad rim provided at spaced points with recesses, and a blade detachably mounted in each recess, and having a beveled edge spaced a pre-determined distance from the rim, said edge being of an arcuate shape to conform to the periphery of a tire.

1,393,576. TIRE-TREAD-REMOVING DEVICE. JOHN M. ROLL, Correctionville, Iowa, assignor of one-half to Carl Jacobs and one-fourth to E. E. Jacobs, Correctionville, Iowa. Filed Aug. 14, 1920. Serial No. 403,587. 4 Claims. (Cl. 29—103.)



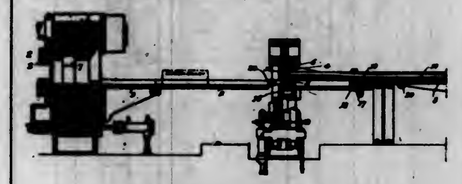
4. A tire tread removing device comprising a ring formed with a plurality of blades and having inwardly projecting lugs, and upper disks bolted to the lugs, and each having a hub section.

1,393,577. NAPKIN-CLASP. SAMUEL M. BYASON, Oquawka, Ill. Filed May 18, 1921. Serial No. 470,560. 2 Claims. (Cl. 24—253.)



1. A clasp comprising pivotally connected members each having a flat gripping jaw provided with an angularly deflected lip, and means yieldably holding the members swung upon their pivot with the said jaws and lips of the members in mutual contact.

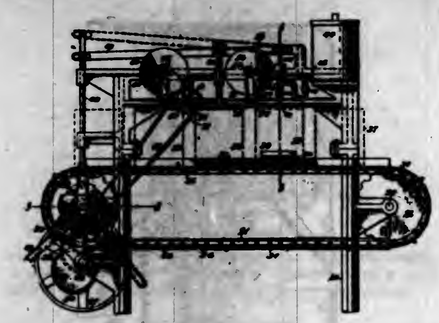
1,393,578. TUBULAR FLOOD OR SLUICE GATE. PIERRE SAMAIN, Cusy, France. Filed Aug. 26, 1919. Serial No. 320,053. 4 Claims. (Cl. 61—22.)



1. A flood or sluice gate comprising in combination a tubular body closed at the bottom forming a float, communicating means between the reservoir and said float, communicating means between said float and the down stream, valves controlling the flow of water in and out of said float whereby the position of said float is regulated and a tube extending from bottom to top of said tubular body to connect the underside of the float with the atmosphere.

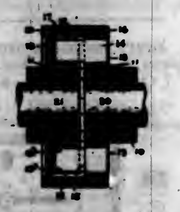
1,393,579. METAL-EXTRUSION PRESS. FREDERICK GEORGE SCHRANS, Philadelphia, Pa. Filed Aug. 4, 1920. Serial No. 401,115. 29 Claims. (Cl. 207—9.)

1. The combination, in a metal extruding press, of a cylinder, a piston therein, a cross-head carried by said piston, auxiliary pistons connected to said cross-head, cylinders for the same, means for directing pressure to the several cylinders; the pressure in said auxiliary cylinders being constant, and means for exhausting pressure from the main cylinder whereby the constant pressure of the auxiliary cylinders may actuate the auxiliary pistons to retract the cross-head and the main piston.



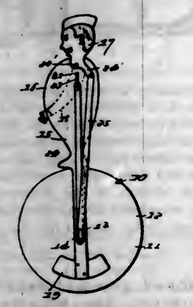
1,393,580. BILLET AND ROD HANDLING MEANS FOR METAL-EXTRUSION PRESSES. FREDERICK GEORGE SCHRANS, Philadelphia, Pa. Filed Aug. 4, 1920. Serial No. 401,116. 18 Claims. (Cl. 207—9.)

13. The combination, with a metal extrusion press, of a die and die-block, a reciprocable carriage for an extruded rod or tube connected to said die-block, means for moving said carriage, a stop for limiting its movement, and a shear blade for serving the stub end of said extruded rod or tube when the carriage reaches a predetermined point in its outward movement.



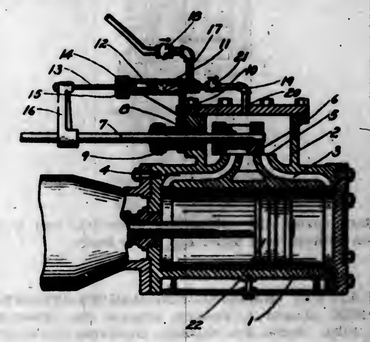
1,393,581. LABELING-MACHINE. OGDEN S. SELLS, Buffalo, N. Y. Filed June 28, 1920. Serial No. 392,205. 1 Claim. (Cl. 216—9.)

A labeling machine comprising a conveyer adapted to transport the articles to be labeled, means for depositing a quantity of adhesive on that part of each article intended to receive the label including a delivery nozzle arranged above the path of the articles, an adhesive reservoir, a pump cylinder having its inlet connected with said reservoir and its outlet connected with said nozzle, a



plunger movable in said cylinder, and a rock lever for operating said plunger, and means for delivering labels to the adhesive coated surface of said articles.

1,393,582. SHAFT-COUPLING AND METHOD OF MAKING SAME. CHRISTIAN STENSTRUP, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 1, 1919. Serial No. 335,036. 5 Claims. (Cl. 29—148.)



1. The method of making a coupling which comprises fastening two flanges in engagement with each other, cutting slots in their edges and fastening driving keys in the slots of one flange which keys project into the slots of the other flange.

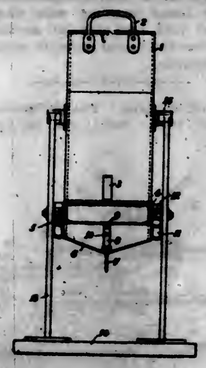
1,393,583. TOY. ENOCH B. STEVERSON, Portsmouth, Va. Filed Jan. 29, 1920. Serial No. 355,006. 1 Claim. (Cl. 46—45.)

A toy having a rolling base comprising sections separated at their adjacent ends to form an intervening space and connected by a spindle having a crank arranged in said space, a figure having standards extending into said space and pivotally mounted upon the said spindle, said standards being provided with a counter-balancing weight and said figure being provided with pivotal members, cranks connected with said movable members, and links connecting the cranks of said movable members with the crank of said spindle.

1,393,584. LUBRICATOR. FRANK STONE, Slater, Mo. Filed Mar. 22, 1920. Serial No. 367,670. 2 Claims. (Cl. 184—27.)

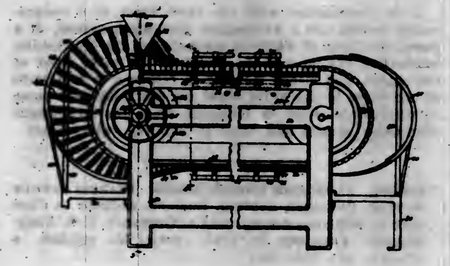
1. In combination with the valve chest of a reciprocatory engine and a hydrostatic lubrication system, of a pump, the inlet of which is connected to the hydrostatic lubrication system and the outlet to the valve chest of the engine, and means movable in response to movement of the valve in the valve chest for operating said pump to alternately draw in lubricant from the hydrostatic lubrication system and expel it into the valve chest.

1,393,585. FUSE FOR PROJECTILES. FRANCIS ARTHUR SUTTON, Oakhurst, Ashford, England, assignor to Clarence C. Williams, Acting Chief of Ordnance, U. S. Army, trustee. Filed Oct. 18, 1917. Serial No. 197,250. 8 Claims. (Cl. 102—39.)



2. A fuse for projectiles, comprising in combination a detonating mechanism; locking means for holding said mechanism in safe condition; means for ejecting said locking means through an opening in the fuse as the projectile leaves the gun; and means for closing said opening.

1,393,586. NAIL-CONTAINER AND NAIL-DELIVERING DEVICE. ARTHUR REGINALD WEDGWOOD TANNER, Little Sutton, England. Filed June 10, 1920. Serial No. 387,947. 1 Claim. (Cl. 1—6.)

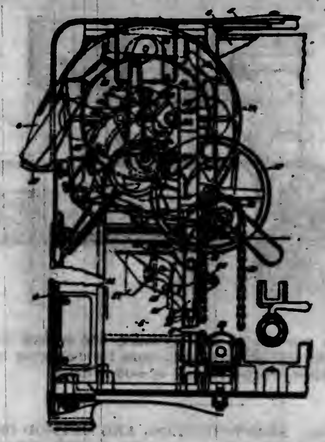


A nail holder comprising a standard, an upper container pivoted thereon, a lower slotted box connected with the

upper box, a spring at the end of said slot, means to allow the lower box to slide freely with respect to said

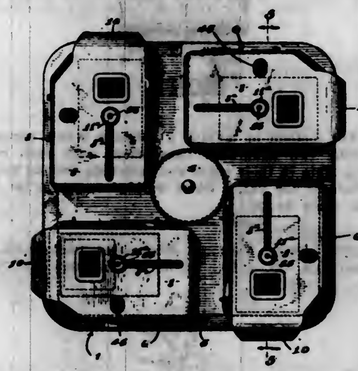
standard during the nail-sorting operation, and a connection between said upper and lower boxes.

1,393,587. MACHINE FOR MAKING ICE-CREAM CONES. JAMES T. TURNER, Atlanta, Ga. Filed Feb. 28, 1920. Serial No. 362,069. 25 Claims. (Cl. 107—58.)



1. In a device of the character described, a conveyer and means for moving the same, said conveyer being composed of links pivoted together, said links having open-sided recesses in their sides, means for closing and opening such recesses and male members coacting with the recesses when closed.

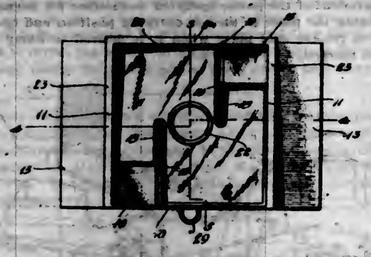
18. In a device of the character described, a series of split female mold members, a pair of parallel continuous tracks, one being adapted for each end of said members, male dies pivoted to said female mold members, means for separating said female mold members, a roller at the free end of each male die and a third track adapted to receive said rollers and periodically guide said male dies toward and away from said female mold members to permit charging the molds with dough and extracting the baked product therefrom.



1,393,588. DISPENSING-MACHINE. WILLIAM R. TUTTLE, Rochester, N. Y. Filed Feb. 27, 1917. Serial No. 151,196. 4 Claims. (Cl. 211—8.)

1. In a dispensing machine, the combination of a container having a discharge opening in the upright sides thereof, a plurality of holders in the container for the packages to be dispensed, a receptacle for a preserving medium, the holders being arranged in upright position around the receptacle, means associated with each holder for feeding the articles upwardly toward the upper end of the holder, and a delivery member at the upper end of each holder and beneath the top of the container,

the container being formed with a sight opening in the top thereof through which the contents about to be delivered by said members, are visible, substantially as and for the purpose described.

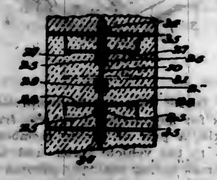


1,393,589. DISPENSING-MACHINE. WILLIAM R. TUTTLE, Rochester, N. Y. Filed Aug. 17, 1917. Serial No. 186,700. 7 Claims. (Cl. 211—8.)

1. In a dispensing machine, a magazine for the articles to be dispensed, a dispensing member reciprocally movable and having a rack associated therewith, means for feeding the articles from the dispensing member comprising a gear connected to said mechanism and meshing with the rack and a one way clutch mechanism operating to transfer the motion of the dispensing member to the pinion during movement of the dispensing member in one direction, substantially as and for the purpose specified.

1,393,590. MOUSE AND RAT POISONER. WILLIE T. VADEN, Jr., Dayton, Tex. Filed Apr. 2, 1920. Serial No. 370,676. 3 Claims. (Cl. 43—131.)

1. A device of the character described comprising a rectangular casing provided with entrance openings, a cover normally closing said casing, a door pivoted adjacent each entrance opening and adapted to swing in a



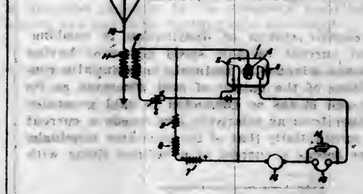
vertical plane for closing the opening when the casing is excessively tilted in a certain direction, and a tray within said casing adapted to contain bait and poison.

1,393,591. CONTAINER. ROBERT WALTER, St. Louis, Mo. Filed Feb. 28, 1921. Serial No. 448,319. 7 Claims. (Cl. 217—51.)

1. A container having a wall construction comprising a plurality of spaced staves and a band directly secured to each of said staves and extending across the staves upon the interior of the container, said band having a plurality of free intermediate U-shaped spring loop portions extending outwardly between adjacent staves.

1,393,592. CONCRETE STRUCTURE HAVING WATER-PROOFING REINFORCEMENT. JEROME W. WELCH, Sergeant Bluff, Iowa. Filed Feb. 18, 1919. Serial No. 277,791. 9 Claims. (72—50.)

1. In concrete construction, a cementitious body, a plate of sheet metal embedded therein between and parallel with the side faces thereof and substantially co-extensive therewith, a plurality of anchoring members extending from each face of the plate adjacent the side and end edges thereof, and other anchoring members extending laterally from each face of the plate intermediate the edges thereof.

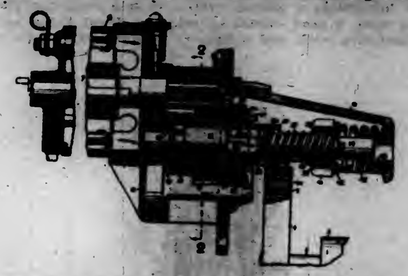


1,393,593. INTERNAL-COMBUSTION ENGINE. PORTIUS R. WHEELER, Peoria, Ill. Filed Sept. 25, 1918. Serial No. 256,544. 3 Claims. (Cl. 123—66.)

1. In an internal combustion engine the combination of a cylinder structure, a cylindrical piston mounted therein and connected to operate a crank shaft, a stationary piston head mounted in said cylindrical piston, a tubular support for said stationary piston head, a carrying member for said support and attached to said cylinder structure, a tube passing through said tubular support for introducing a cooling medium to said stationary piston head, a head carried by said cylindrical piston and coöperating with said stationary piston head to form a

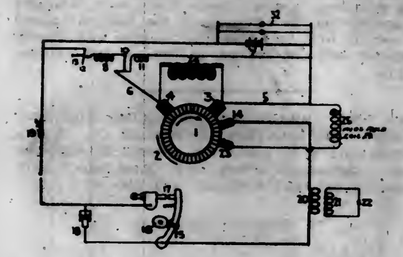
charging cylinder, an inlet and transfer port communicating with said charging cylinder and a valve controlled inlet passage for the admission of the fuel, an exhaust port opening from the combustion chamber and adapted to register with an exhaust passage of said cylinder structure.

1,393,594. MEANS FOR PRODUCING HIGH-FREQUENCY OSCILLATIONS. WILLIAM C. WHITE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 3, 1918. Serial No. 237,845. 8 Claims. (Cl. 250—8.)



6. The method of operating an electron discharge device having an electron emitting cathode, an anode and discharge controlling grid inclosed in an evacuated receptacle and having a plate circuit and a resonant grid circuit associated therewith which consists in generating high frequency oscillations in said grid circuit independently of any transfer of energy to said grid circuit from other circuits.

1,393,595. ENGINE-STARTING APPARATUS. LIONEL M. WOLFFSOHN, (now by judicial change of name Lionel M. Woolson,) Hoboken, N. J., assignor, by mesne assignments, to Bijur Motor Appliance Company, a Corporation of Delaware. Filed Aug. 2, 1916. Serial No. 112,662. 25 Claims. (Cl. 74—7.)

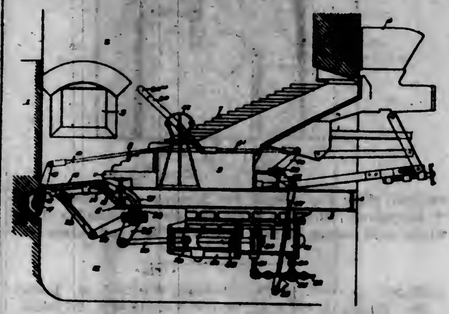


1. In apparatus of the class described, in combination, an engine, a motor, an engine-driven gear, a friction clutch, a pinion driven from said motor through said friction clutch and axially movable into mesh with said

gear, an axially movable member upon which said pinion is mounted, means adapted to exert a cushioning effect

to cushion and limit the axial movement of the pinion into engagement with the gear, and means for tightening the clutch when engagement has been effected.

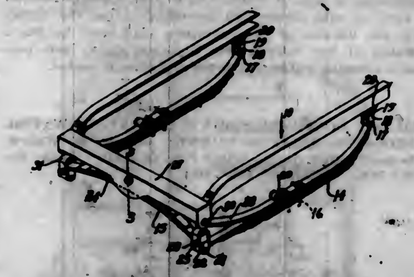
1,393,596. ELECTRIC SYSTEM FOR MOTOR-VEHICLES AND THE LIKE. LIONEL M. WOLFFSOHN, (now by judicial change of name Lionel M. Woolson,) Union, N. J., assignor, by mesne assignments, to Bijur Motor Appliance Company, a Corporation of Delaware. Filed Apr. 30, 1917. Serial No. 165,307. 29 Claims. (Cl. 290—41.)



1. In an electric system of distribution in combination, a direct current variable speed generator having terminals, means adapted to maintain substantially constant a function of the output of said generator as its speed varies and means so connected to said generator as to draw therefrom at relatively low speeds a current of a voltage substantially that of the generator terminals, and at higher speeds a current of a voltage rising with such speed.

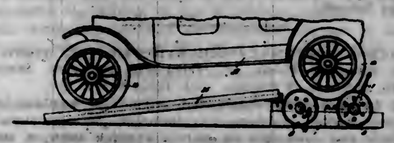
1,393,597. PROCESS OF PRODUCING TETRA-SUBSTITUTED UREAS. TALBOT J. ALBERT, Jr., Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 25, 1918. Serial No. 255,562. 11 Claims. (Cl. 23—24.)

1. The process of producing tetra-substituted ureas which comprises treating a secondary amin with carbonyl chlorid in the presence of an aqueous solution of a basic inorganic compound capable of neutralizing hydrochloric acid which results from the reaction between the carbonyl chlorid and the secondary amin.



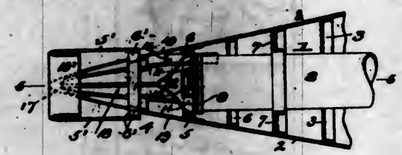
1,393,598. DUMPING APPARATUS FOR STOKERS. MAXWELL ALPERN, Philadelphia, Pa., assignor to American Engineering Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 27, 1918. Serial No. 268,453. 11 Claims. (Cl. 110—33.)

1. The combination in an underfeed stoker of an inclined grate; a dumping plate at the lower end of said grate; power operated mechanism for moving the plate independently of the grate; a hand-operated member for controlling said mechanism; and a manually controlled device independent of the power operated mechanism for normally retaining the plate in an ash carrying position and operative to release said plate when it is desired to dump the ashes thereon.



10. The combination in a stoker of an inclined grate; a bridge wall; a dumping plate pivotally mounted in a position to normally support a body of ash between said wall and the grate; with a power actuated device including means operative to raise said plate to its normal ash supporting position and also to cause it to swing above such position to break up clinkers.

1,393,599. VEHICLE-FRAME SUSPENSION. CHRISTIAN ANDREASON, Sacramento, Calif., assignor of fifty per cent. to Louis A. Morrison, Marysville, Calif. Filed Nov. 29, 1920. Serial No. 426,905. 4 Claims. (Cl. 267—46.)



1. A vehicle frame suspension, comprising a pair of spring members for supporting a vehicle frame upon the rear vehicle axle, a pair of spring members secured by their rear ends to the vehicle frame and near the front thereof, and a cross spring centrally pivoted to the vehicle frame and pivotally connected to the forward ends of the front springs.

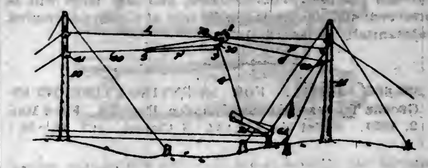
1,393,600. AUTO-TREADMILL. CLAUS EDWARD ANDERSON, Superior, Wis. Filed Apr. 10, 1920. Serial No. 372,790. 2 Claims. (Cl. 74—106.)

1. An auto treadmill, comprising a base, a pair of shafts having a rotary mounting in the base, pulleys fixed to the shafts and located outside of the base, an angle bar at one end of the base having its ends projecting beyond the sides of the base and having openings in its end portions, runways, pins on the under faces of the runways at one end adapted to be positioned in said openings and form inclined tracks to direct the wheels of an automobile onto said pulleys, and means for taking power from one of said shafts.

1,393,601. SUBMARINE TORPEDO-BOAT. JOSEPH BARAJA-FRAUENFELDER, Bridgeport, Conn., assignor to The Lake Torpedo Boat Company, Bridgeport, Conn., a Corporation of Maine. Filed Sept. 5, 1919, Serial No. 321,952. Renewed July 28, 1921. Serial No. 488,237. 10 Claims. (Cl. 114—17.)

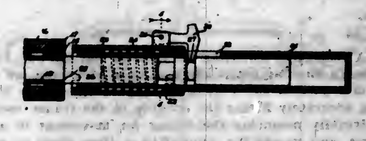
1. A submarine torpedo boat, having a torpedo tube opening through the stern thereof, a closure for the muzzle end of the tube, and a cylindrical tubular section formed in the stern section of the boat and open at both ends to the surrounding body of water.

1,393,602. ELECTRICAL CONDENSER. ERNEST ARTHUR BAYLES and HAROLD HIGHAM, Helsby, England, assignors of one-third to Ernest Richard Royston, Liverpool, England. Filed Dec. 22, 1919. Serial No. 346,778. 6 Claims. (Cl. 250—41.)



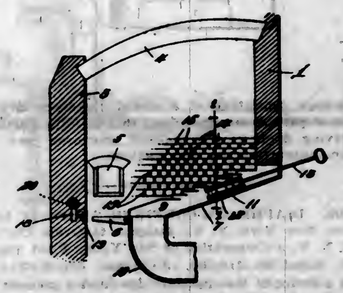
1. An electrical condenser comprising a plurality of condenser units, each unit made up of a series of spaced longitudinally alined condenser bodies electrically connected, a container and means in the container for separately supporting the units.

1,393,603. METHOD OF SEPARATING SODIUM CARBONATE AND POTASSIUM CHLORID FROM NATURAL ALKALINE BRINES. JOHN W. BECKMAN, Berkeley, Calif. Filed July 23, 1919. Serial No. 312,760. 1 Claim. (Cl. 23—22.)



A method of separating sodium carbonate and potassium chlorid from natural alkaline brines consisting of subjecting the brines to solar evaporation until the residual deposit is of a semi solid or slushy consistency, then leaching out said deposit in boiling water, removing the leach liquor containing dissolved potassium chlorid to leave a slush residue containing sodium carbonate, evaporating the solution, primarily by solar heat and subsequently by artificial heat, to a point where crystallization takes place in the evaporator, agitating the drained off solution and filtering it while hot, cooling the liquor passing through the filter to recover the potassium chlorid by crystallization, then adding to the slush residue of the treatment a suitable amount of water containing one third of a ton of a sodium bicarbonate containing liquid in the shape of carbonated slime to each ton of slush treated, agitating the mixture at a maintained temperature of approximately 40 degrees centigrade, then filtering and washing the mixture and drying and calcining the resultant product.

1,393,604. SLACK-PULLER FOR CABLEWAYS. KNUTE BERGH, Seattle, Wash., assignor to Washington Iron Works, Seattle, Wash., a Corporation of Washington. Filed Dec. 20, 1920. Serial No. 431,992. 3 Claims. (Cl. 212—98.)



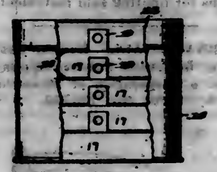
1. The combination with a sheave carried by a cableway carriage, a hoist rope passing over said sheave, a block carried by the hoist rope between the carriage and the head end of the cableway, and a slack pulling rope extending from the carriage through said block and back with its end secured at the carriage.

1,393,605. PACKING-TOOL. KARL BERGSKAUG, Brooklyn, N. Y. Filed Feb. 9, 1921. Serial No. 443,732. 10 Claims. (Cl. 81—3.)

7. A packing tool including a sleeve, handle and stem movable with respect to each other, said sleeve being formed with a reduced portion in its inner face, said handle being formed with a shoulder, a spring arranged within the reduced portion of said sleeve, and having one of its ends bearing against the shoulder of said handle, its opposite end bearing against the inner end of the reduced portion whereby to normally tend to force said handle in a direction opposite to the tendency imparted to said sleeve, and means for limiting said movement.

1,393,606. FURNACE-WALL. ERNEST ERSNITZ, Boston, Mass., assignor to Bernitz Furnace Appliance Company, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 12, 1916. Serial No. 136,535. 8 Claims. (Cl. 110—75.)

8. In a furnace for sustained operation at high temperatures, a fuel support, fixed walls for confining the fuel on the support, said walls being made of non-metallic refractory material with fuel contacting faces of said material having a multiplicity of apertures therethrough in the fuel confining area, and with interior air supply passages



formed entirely by the non-metallic refractory material of said walls and communicating with said apertures, and means for supplying relatively cool air under pressure to said passages and apertures whereby said air will be forced under pressure into the body of supported and confined fuel through the fuel confining faces, and said faces will be preserved and the formation thereon of clinkers prevented, substantially as described.

1,393,607. DEVICE FOR MOUNTING TIMEPIECES. GEORGE THOMAS BLUNDEN, London, England. Filed Mar. 2, 1921. Serial No. 449,192. 4 Claims. (Cl. 58—56.)

1. A time piece mounting for vehicles and the like, comprising an annular frame adapted to be secured to an appropriate part of the vehicle, a comparatively deep bezel casing accurately fitting the opening in the frame, means for pivotally mounting the casing for movement in said opening, and means for supporting a time piece in said casing.

1,393,608. ARTICLE OF MERCHANDISE. WILLIAM R. BOYCE, New York, N. Y. Filed Feb. 24, 1920. Serial No. 360,730. 1 Claim. (Cl. 206—46.)

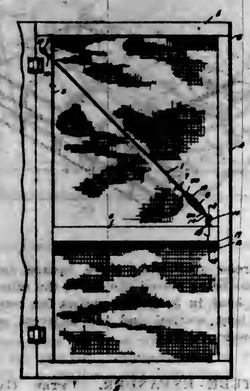
A package consisting of a closed container inclosing portions of packed substance, and thin metallic partitions each having diametrically opposed apertured ears, said partitions separating the said portions.

1,393,609. DIAPHRAGM-CONFINER. KATHLYN LOGAN BURNS, New York, N. Y., assignor to Ovida Co., New York, N. Y., a Corporation of New York. Filed Aug. 19, 1919. Serial No. 318,500. 3 Claims. (Cl. 2—75.)

1. In a device of the character described a garment provided with a band of flexible material of a substantially uniform width and having a length to extend entirely around the person using the device with sufficient material to provide overlapping ends whereby a double ply front is presented, said front being arranged centrally and at the front of the person using the device, said band when in position extending a short distance below the waist line and a short distance above the waist line for presenting a bearing structure to the body at the point

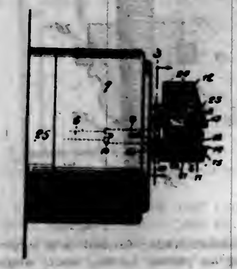
where it contacts therewith and fastening means for securing the respective ends to the band adjacent the point where they contact with the band.

1,393,610. MACHINE ELEMENT. ZENAS P. CANDEE, Waterbury, Conn., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed Apr. 15, 1920. Serial No. 374,149. 8 Claims. (Cl. 287—52.)



1. Mechanism of the character described, having a control member; a plurality of sections grouped together and around said central member, means for holding said sections in a fixed relation to said central member against centrifugal force, means for holding said section against lateral movement relative to said central member, and means independent of said sections for securing said central member.

1,393,611. DOOR AND GATE BRACE. HARRY S. CARLS, Chicago, Ill. Filed Oct. 21, 1919. Serial No. 332,260. 1 Claim. (Cl. 20—26.)

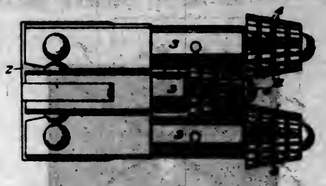


A brace attachment for a closure consisting of a bushing disposed in a transverse opening in the closure, a flange on one end of the bushing abutting one face of the closure, a rod having a portion journaled in the bushing

and provided with a head impassable through the bushing and engaging the flanged end, said rod extending across

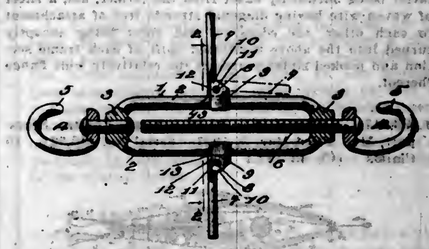
the other end of the bushing, and the other face of the closure, and securing means engageable with said rod and the closure at a distance from the bushing.

1,393,612. ELECTRIC SWITCH. HOYT CATLIN, Fairfield, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Mar. 2, 1921. Serial No. 449,058. 4 Claims. (Cl. 200—167.)



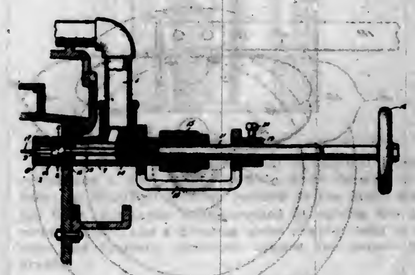
1. A rotary snap switch comprising a one-way rotary snap switch mechanism, legends for indicating the connections established by the switch, a handle having a one-way connection with the switch mechanism, an associated pointer coöperating with the indicator legends, and spring means for returning said handle and pointer to predetermined position with respect to the switch mechanism after rotation of said handle in opposition to said one-way connection.

1,393,613. CUTTER FOR TUBE-CLEANERS AND OTHER PURPOSES. WILLIAM S. ELLIOTT, Pittsburgh, Pa. Filed Nov. 22, 1918. Serial No. 263,685. 2 Claims. (Cl. 83—64.)



1. As a new article of manufacture, a cutter for the purposes described, said cutter comprising a frusto-conical body having peripheral teeth extending longitudinally thereof, some of said teeth being staggered with respect to

others thereof and said body being composed of a plurality of separate endwise abutted sections having inter-



locking engagement with each other, whereby the sections are maintained in fixed relation to rotate as a unit about a common axis, substantially as described.

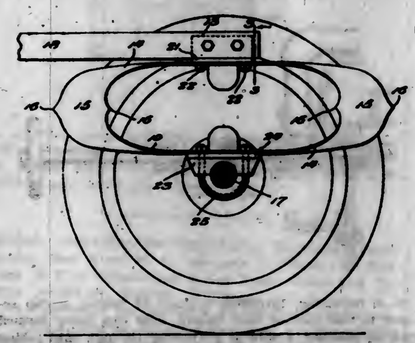
1,393,614. TURNBUCKLE. SALVATORE PERRAGANO, Santa Barbara, Calif. Filed Feb. 4, 1921. Serial No. 442,460. 5 Claims. (Cl. 85—36.5.)

1. A turnbuckle comprising a supporting or connecting frame, an engaging device carried by said frame, means for permitting the relative movement of said frame and engaging device, and an operating device including a handle pivoted to said frame and adapted to be swung outwardly, whereby the frame can be easily turned.

1,393,615. REGULATOR. IRVING J. FOLTZ, Seattle, Wash. Filed May 1, 1920. Serial No. 378,207. 4 Claims. (Cl. 251—154.)

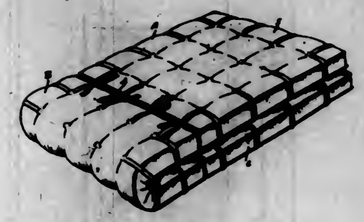
4. A regulator, including a piece of tubing, a cap secured to one end of said tubing, said cap being formed with an opening, a spindle projecting through said tubing and cap, the outer end of said spindle extending through said opening, said spindle being triangular in cross section adjacent its inner end portion, such triangular portion contacting with the inner face of said cap whereby to hold the said spindle centrally with respect to the cap opening and tube.

1,393,616. ADJUSTABLE WINDOW-SCREEN. SAMUEL G. POSTEN, Westfield, N. J. Filed Feb. 25, 1921. Serial No. 447,696. 5 Claims. (Cl. 156—14.)



3. An adjustable window screen comprising a frame formed of adjustably connected frame sections, each frame section being hollow and of substantially rectangular form in transverse section with one side longitudinally split to form relatively wide and narrow side flanges, the latter being outwardly offset from the former, and a sheet of woven wire having diagonal strands free of attachment to each other, the edges of said sheet being abruptly turned into the above mentioned split of each frame section and hooked slidably around the relatively wide flange thereof.

1,393,617. ARTIFICIAL BAIT. JOHN FRAMB, Searsport, Me. Filed Mar. 3, 1921. Serial No. 449,321. 10 Claims. (Cl. 43—47.)



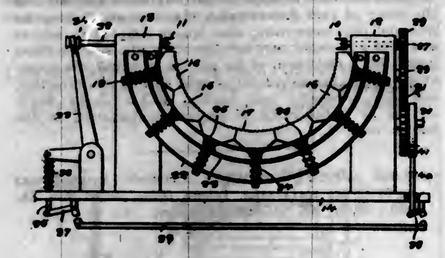
1. An artificial bait having a laterally flexible tail portion, a drum in said bait, elements winding in opposite directions on said drum and connected with said tail, and an element winding on said drum and adapted to connect with a fish line.

1,393,618. SPRING. ROY EDW. GAINES, Evansville, Ind. Filed June 4, 1920. Serial No. 386,456. 4 Claims. (Cl. 267—36.)

2. A spring embodying a substantially elliptical shaped body having a central opening therein and bent to provide spaced bowed resilient members and resilient end members connecting the bowed members at one side edge of the latter and attaching lugs extending from the opposite side edges of the bowed members.

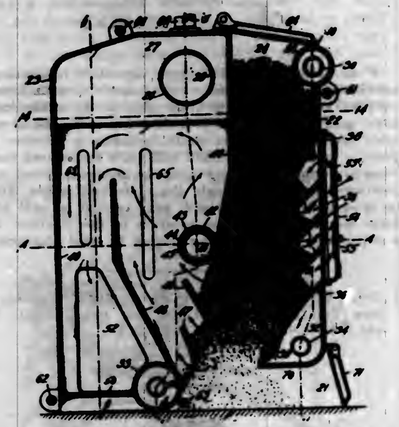
1,393,619. MATTRESS. PATRICK GARDNER, Brooklyn, N. Y. Filed Apr. 7, 1921. Serial No. 460,431. 2 Claims. (Cl. 5—13.)

1. A mattress comprising three square sections, two of said sections being placed one above the other, the third section being bent in half, and means for connecting the ends of the bent section and the adjacent ends of the upper and lower sections.



1,393,620. TUBE-EXPANDER. PETER GAVIN, Vancouver, British Columbia, Canada. Continuation of application Serial No. 268,657, filed Dec. 28, 1918. This application filed July 15, 1921. Serial No. 485,007. 1 Claim. (Cl. 153—80.)

A sectional tube expander formed in a large number of sections meeting on planes having acute angles to each other, and having a bore provided with a squared thread extending throughout its length and having projecting flanges at one end, the said sections having a rounded nose at one end adapted to enter the tube to be expanded, and a recessed flange at the opposite end of larger diameter than the nose, a correspondingly threaded and tapered pin fitting said bore and rotatable therein, said pin being so fitted to the bore as to spread the expander sections at all points of its travel therethrough, means formed upon one end of said pin whereby rotation may be imparted thereto, a rubber ring engaging the said recessed flange, and a second rubber ring engaging the projecting flanges of the expander adapted to retain them in operative position on the pin.



1,393,621. OIL-EXTRACTING APPARATUS. VINCENT GIAMPIETRO, Baltimore, Md. Filed Jan. 12, 1920. Serial No. 356,973. 4 Claims. (Cl. 146—9.)

1. An apparatus of the class described having an arcuate flexible knife consisting of a plurality of independently movable yieldingly sustained blades provided with serrated faces, and means for revolubly supporting fruit

in surface contact with the operative faces of said knife blades.

1,393,622. BOILER. FRANK B. HOWELL, Buffalo, N. Y., assignor to American Radiator Company, Chicago, Ill., a Corporation of New Jersey. Filed Oct. 23, 1914, Serial No. 868,193. Renewed Mar. 8, 1921. Serial No. 450,672. 4 Claims. (Cl. 110—30.)

1. In a boiler, a grateless fuel receptacle having an unobstructed discharge outlet, and an ash pit positioned below said receptacle and communicating with said discharge outlet; said fuel receptacle comprising a burning portion of substantially uniform cross-sectional area, and a downwardly-tapering ash portion communicating with said burning portion and with said ash pit whereby to provide a constant volume of ash for supporting the fuel in said receptacle during the process of transmutation thereof into ash, and means for providing a draft transversely through the burning portion of said receptacle, substantially as specified.

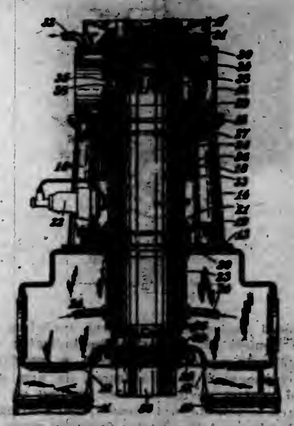
1,393,623. PROPELLENT SMOKELESS-POWDER CHARGE. CLARENCE I. B. HENNING, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Jan. 16, 1920. Serial No. 351,894. 15 Claims. (Cl. 52—4.)

1. A propellent charge comprising a progressive burning nitrocellulose powder of the surface treated type associated with a supplementary priming charge consisting essentially of an easily ignitible propellent powder.

1,393,624. SPEED-INDICATING INSTRUMENT OR THE LIKE. HAROLD WALTER HENKE, Lewisham, London, England. Filed Jan. 29, 1920. Serial No. 354,867. 2 Claims. (Cl. 264—20.)

1. A speed indicating instrument including an indicator, an element for actuating the indicator, a carrier frame rotatively responsive to speed, a centrifugal control device mounted in said frame, an arm projecting from said control device, a table pivoted on said arm and adapted to actuate said element, and gearing intermediate said table and the carrier frame to move the table on its pivotal mounting to maintain it in a position substantially at right angles to said element in all positions of the control device.

1,393,625. TOOL FOR GRINDING INTERNAL CYLINDRICAL SURFACES. JOHN ROBERT HOBBS, London, England. Filed June 15, 1920. Serial No. 389,192. 8 Claims. (Cl. 51—206.)

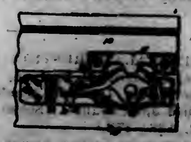


1. A tool for grinding internal cylindrical surfaces, comprising a body, cages held in ways formed in the body, an abutment member secured to the lower end of the body, the cages being recessed to receive the abutment member, and a grinding stone slidably held in each cage and normally projected toward the article being ground.

1,393,626. INTERNAL-COMBUSTION ENGINE. KARL OTTO KELLER, Sunderland, England, assignor of one-half to Robert Pile Doxford, Sunderland, Durham, England. Filed Jan. 6, 1921. Serial No. 435,353. 2 Claims. (Cl. 123—173.)

1. For an internal-combustion engine the combination with a cylinder located upon supports so arranged as to permit it to expand lengthwise, and a water-jacket cas-

ing surrounding it but free from it at places where the cylinder and casing are permitted lengthwise movement in relation to one another due to differences of expansion between the casing and the cylinder, of an entablature that is separate from the said cylinder and the said casing, carries the weight of and the stresses set up in

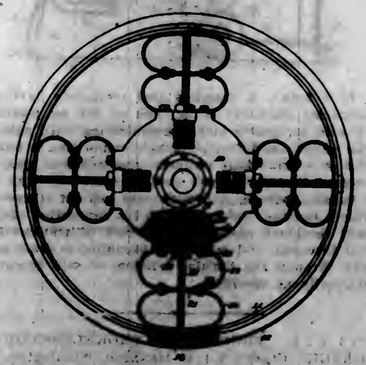


and by the standing upper portion of the engine structure, and diverts through itself away from the lower parts of the cylinder and casing to the standing lower portion of the engine structure the lateral stresses, that otherwise would travel down to said standing lower portion by way of said lower parts of the cylinder and casing.

1,393,627. CINDER-GUARD. CHARLES WILLIAM KENNON, Tampa, Fla., assignor of one-half to William W. Pemble, Leesburg, Fla. Filed July 1, 1921. Serial No. 481,881. 3 Claims. (Cl. 105—350.)

1. An improved cinder guard comprising a body portion adapted to receive cinders, a screen over the body part, and a flue communicating with the body part and adapted to convey the cinders therefrom below the line of a car window, substantially as described.

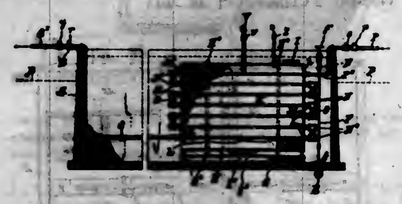
1,393,628. WINDOW OR KEY LOCK. BENJAMIN LEICHTER, Brooklyn, N. Y. Filed June 25, 1920. Serial No. 391,644. 1 Claim. (Cl. 292—210.)



A locking device for a window or door lock, comprising a base having means whereby it may be secured in position adjacent to the member to be locked, and a member hinged to the base and having a pair of spaced fingers at one end, one of said fingers relatively short and flat and the other of said fingers relatively long and having its free end bent outwardly, said fingers adapted to receive and hold a movable part between them, the shorter finger permitting a movement of the part to be locked, the longer finger preventing movement of said part in one direction, and said outwardly bent portion of the longer finger serving as a fingerhold to permit manipulation of the hinged member.

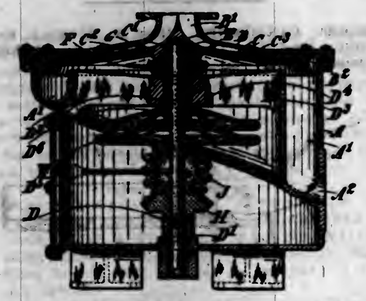
1,393,629. MERRY-GO-ROUND. ANTHONY LEWANDOWSKI and MICHAEL KATAFIASZ, Toledo, Ohio. Filed Nov. 18, 1920. Serial No. 424,966. 1 Claim. (Cl. 46—27.)

A merry-go-round of the type described comprising a mounting base, a bearing block secured to said base, a vertical shaft projecting from said block, a horizontal bevel gear upon the end of said shaft, a platform rotatably mounted upon the shaft including a circular top plate, a spider frame beneath said plate and spaced therefrom by suitable spacing blocks, the horizontal bevel gear positioned between the said top plate and spider frame in mesh with a vertical bevel gear carried by said platform means for imparting rotation to the platform and a depending band sheathing carried by said platform.



1,393,630. SPRING-WHEEL. ANDREW F. MCGRATH, New York, N. Y. Filed Feb. 16, 1921. Serial No. 445,401. 2 Claims. (Cl. 152—28.)

2. A wheel of the class described including a hub section, a rim separate from the hub section, resilient spokes movable axially relatively to the hub, and adapted to flex laterally, springs acting on the inner ends of said spokes, the outer ends of the spokes being secured to the rim, springs disposed at opposite sides of each spoke and secured at their inner ends to the hub, additional springs

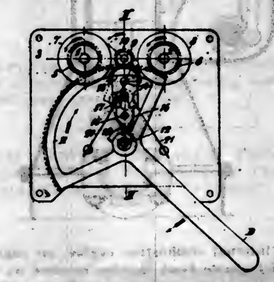


placed radially outward from the second-mentioned springs, collars slidable on the spokes, and means fastening the adjacent ends of the second-mentioned and third-mentioned springs to said collars.

1,393,631. APPARATUS FOR COOLING OIL OR OTHER HEATED LIQUIDS. RALPH A. METZ, Baton Rouge, La. Filed Feb. 19, 1920. Serial No. 359,951. 8 Claims. (Cl. 257—240.)

1. Apparatus for cooling oil or other hot liquid, comprising a reservoir, means for delivering water to said reservoir and for conveying it away therefrom when it reaches a predetermined level in said reservoir, with means for draining said reservoir when desired, a closed cooling tank mounted in said reservoir and normally submerged in the water contained therein, the said tank being provided with separate passages for the flow of the hot oil and the cooling water, with means for delivering the hot oil to one set of such passages, and the cooling water to the other set, substantially as described.

1,393,632. APPARATUS FOR MAKING EMULSIONS. GEORGE MITCHELL, London, England. Filed Nov. 1, 1920. Serial No. 420,956. 14 Claims. (Cl. 259—7.)



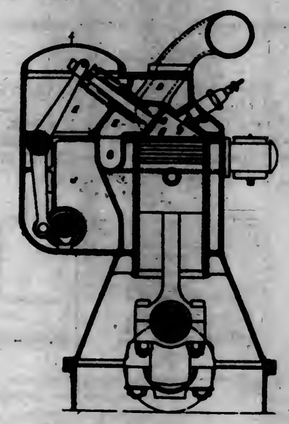
1. An apparatus for making emulsions, comprising two members spaced apart face to face, means for producing relative movement between said members, and means for introducing material between said members and for discharging the material at their margins, at least one of said members having corrugations on the inner face thereof disposed obliquely to the direction of relative movement between the members the troughs of said corrugations diminishing in depth toward the discharge margin at which a narrow gap is afforded, substantially as described.

1,393,633. METHOD OF AND APPARATUS FOR PICKLING RODS, PIPES, AND THE LIKE. JAMES T. MOLTRUP, Beaver Falls, Pa. Filed July 10, 1920. Serial No. 395,940. 14 Claims. (Cl. 266—7.)

1. The herein described method of pickling, which comprises placing the articles to be pickled in a carrier, moving the carrier bodily through a pickling bath, and causing the articles to move within the carrier during their progress through said bath, substantially as described.

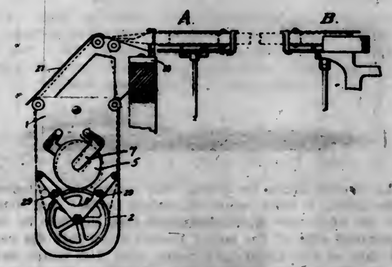
1,393,634. MACHINE FOR GRINDING SHAVING MACHINE BLADES. MORTEN WILHELM MÖLLER and ALBERT EJNAR HARMS, Copenhagen, Denmark, assignors to Mekanisk Industri-Company Ltd., Copenhagen, K, Denmark. Filed Aug. 1, 1918. Serial No. 247,895. 5 Claims. (Cl. 51—36.)

1. Grinding apparatus for safety razor blades, comprising a frame, a pair of grinding rollers carried by said frame, gear wheels provided on said rollers, a pivoted member comprising a cam member, toothed segment engaging with said gear wheels and an oscillating handle attached to the pivoted member whereby said pivoted member may be manually oscillated, a blade holder and means adapted to contact with said cam for maintaining the blade in contact with the rollers during their oscillation and for oscillating the blade holder.



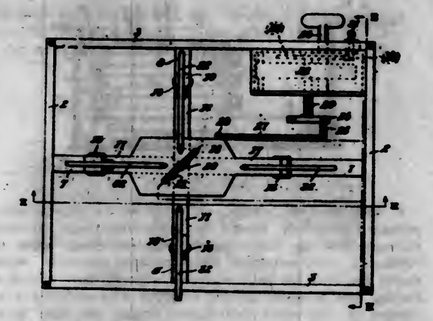
1,393,635. ELECTRICAL BRUSH. HELEN R. MONDY, Atlantic City, N. J. Filed Feb. 12, 1921. Serial No. 444,621. 1 Claim. (Cl. 219—21.)

An electric brush for drying hair comprising a hollow body having a metal plate of convex surface and fitted into the open face of the body and held in place by the overturned edge of the body; bristles fitted into the convex face of the metal plate with their free outer ends forming the working surface of the brush; a tubular handle adapted to be screwed into the end of the body of the brush, a metal core extending through the handle into the body of the brush, a plug secured in the outer end of the handle, and a heating element formed of resistance wires passing through the plug into the core to heat the body of the brush and the convex plate carrying the bris-



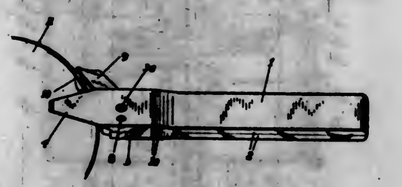
tion, a second plug to which the outer ends of the resistance wires are fastened and which is adapted to be screwed onto a wall socket to obtain the current for transmission to the bristles, all as and in the manner substantially as described and shown.

1,393,636. CYLINDER OF COMBUSTION-ENGINES. THOMAS BLACKWOOD MURRAY, Scotstown, Scotland. Filed Oct. 31, 1918. Serial No. 260,526. 4 Claims. (Cl. 123—193.)



1. In an internal combustion engine, an engine cylinder and a detachable head therefor recessed on its inner face to afford a combustion space of the conoidal or ungulate form described, in combination with inlet and exhaust valves arranged in the side wall of said recess forming the combustion space, and with their axes so inclined that they may be withdrawn through said space in the cylinder head when the latter is detached together with a valve-operating means arranged at the side of the cylinder in the main cylinder casing and below said removable head to permit the ready detachment of the latter.

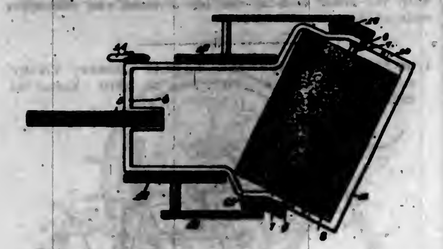
1,393,637. COATING-MACHINE. HYDESABURO OHASHI, New York, N. Y., assignor to Hydesaburo Ohashi & Co., Inc., New York, N. Y., a Corporation of Delaware. Filed Sept. 21, 1917. Serial No. 192,530. 7 Claims. (Cl. 91—50.)



1. A coating machine comprising a movably mounted container for a coating substance, the said container having perforations therein for the discharge of said substance therefrom and an automatically controlled ring directly operating relatively of the discharge perforations to cause a discharge of the substance from said container when the latter is in motion, the said ring through its eccentric relation to the walls of the container serving to close the perforations at the base of the container as and for the purpose set forth and means bearing against the ring for holding the base thereof against the walls of the container at a point below the horizontal axis of the latter.

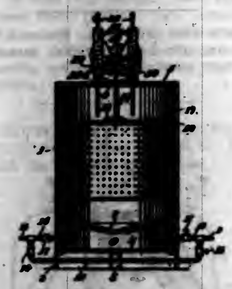
1,393,638. MECHANICAL TOY. FRANK OLKOWSKI, Three Lakes, Wis. Filed Feb. 10, 1921. Serial No. 443,910. 2 Claims. (Cl. 46—40.)

1. A mechanical toy comprising a casing, fixed supports within the casing, a pair of crossed sliding members within the casing moving in directions at right angles to each other, figure toys including supporting frames pivoted to the fixed supports and the sliding members, a spring motor mechanism, a pitman connection between the motor mechanism and one of said slides and a pin and slot connection between the slides.



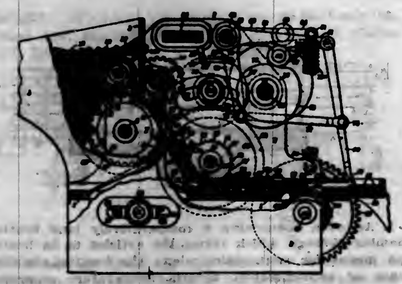
1,393,639. CAN-OPENER. GOFF N. NUTWELL, Fresno, Calif. Filed Jan. 12, 1920. Serial No. 350,826. 1 Claim. (Cl. 30—3.)

A can opener comprising a relatively flat forked handle, an arm pivoted immediately under the topmost fork-member and provided with a downwardly pointing cutting element at its outer end, said element projecting beyond the fork, a can-engaging ratchet fixed between the forks under the arm, and a broad extension projecting from the upper fork member and adapted to rest on top of the can to maintain the handle and cutter in proper alinement relative to the can-top.



1,393,640. SIDEWALK SNOW-SWEEPER. JOSEPH PANTALEONE and MICHAEL ZODA, Trenton, N. J. Filed Nov. 5, 1920. Serial No. 422,106. 1 Claim. (Cl. 15—17.)

A cleaner including a frame, non-alined wheels mounting and balancing said frame, a shaft journaled to said frame, a cleaning element encircling said shaft, bevel gears mounted to each end of said shaft, bevel gears associated with said frame and meshing with said first-mentioned bevel gears, sprocket wheels associated with said last-mentioned bevel gears, further sprocket wheels asso-



ciated with each of said non-alined wheels, and driving chains connecting said sprocket wheels adapted to drive said cleaning element on both ends.

1,393,641. CLEANING APPARATUS. THOMAS H. RICHARDSON, Lexington, N. C. Filed June 14, 1921. Serial No. 477,483. 8 Claims. (Cl. 8—8.)

2. Clothes cleaning apparatus comprising a tank having a steam chamber adjacent the lower end thereof, means for supplying steam to said chamber, a perforated tumbler reciprocal in said tank, a rod connected to the upper end of said tumbler and extending through the upper end of the tank, a cross head adjustably secured to said rod above the tank, a power shaft journaled above the tank, a disk secured to said power shaft, and operative connections between said disk and rod.

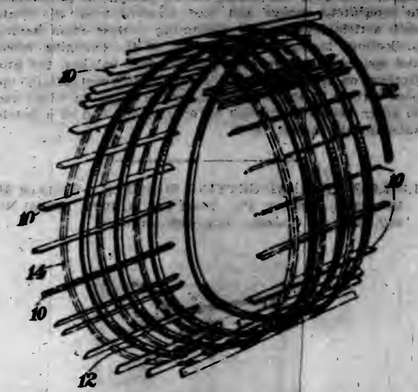
1,393,642. APPARATUS FOR FEEDING, OR BOTH FEEDING, AND COUNTING, CIGARETTES FOR PACKETING, APPLICABLE ALSO TO ANALOGOUS PURPOSES. WILLIAM ROSE, Gainsborough, England. Filed Jan. 8, 1921. Serial No. 435,914. 3 Claims. (Cl. 226—5.)

1. In a machine of the character described, a hopper, a chute, means for feeding articles such as cigarettes from the hopper to the chute, a rotatable engaging wheel associated with said chute and having peripheral projections to separately engage and feed forward from the chute each article therein, and a coacting endless chain having projections facing the projections on the engaging wheel and spaced to separate the articles into batches, the projections on the chain being arranged to substantially oppose certain of the projections on the engaging wheel and to enter between adjacent articles at the end of a batch, substantially as set forth.

1,393,643. THREAD-CUTTING SHUTTLE. WILLIAM M. ROSSITER, Sunbury, Pa. Filed Feb. 3, 1921. Serial No. 442,190. 11 Claims. (Cl. 139—46.)

9. A cutting device for a shuttle comprising a stationary cutting element, and a swinging guiding element carried by said stationary cutting element.

1,393,644. METHOD OF MAKING PNEUMATIC-TIRE SHOES. FLOYD W. RUSSELL, Akron, Ohio. Filed Apr. 4, 1916. Serial No. 88,785. 3 Claims. (Cl. 154—14.)

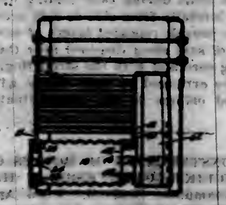


2. That improvement in methods of making a structure for incorporation in a tire-shoe which consists in folding a single unitary tubular sheet of textile fabric, consisting of a plurality of strength-giving cords extending in parallelism, said sheet being of sufficient diameter entirely to encompass the structure and form a complete layer of the structure to be built during each folding operation, folding said sheet laterally from side to side across a forming core to thereby provide repeated layers of said fabric with the fold lines of said sheet disposed near the lined edges of said forming core and with the strength-giving cords of alternate layers arranged at right angles with respect to each other and oblique to the longitudinal line of the structure.

1,393,645. CONSTRUCTION OF BODIES OF FLYING-BOATS AND LIKE LIGHT VESSELS. HUBERT SCOTT-PAINE, Southampton, England. Filed Apr. 10, 1920. Serial No. 373,365. 3 Claims. (Cl. 114—66.5.)

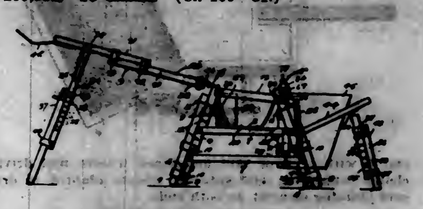
1. In a body for flying-boats and like light vessels, the combination of longitudinal stringers set edgewise, hoop-

timbers formed as a continuous spiral inside said endangers extending across and secured to all of them, bent-timbers



outside said stringers and secured to all of them, and a skin outside the bent-timbers.

1,393,646. LIQUID-FUEL FITTING FOR FURNACE FRONTS. LANCELOT EUSTACE SMITH, South Shields, CORNELIS ZULVER, London, and HERBERT ALEXANDER THOMPSON, North Shields, England. Filed Sept. 6, 1919. Serial No. 322,211. 2 Claims. (Cl. 110—22.)



1. In combination, a furnace front having a firing opening, front and rear plates secured about the opening, a saddle plate connecting said front and rear plates and forming therewith an air heating chamber about the firing opening, said air heating chamber being in controlled communication with the atmosphere, burners held in said front plate and projecting through the air heating chamber, air cones mounted in said rear plate and setting up communication with the interior of the furnace and said air heating chamber, the inner ends of the burners lying in said air cones, and regulating cones fitted within said air cones, substantially as described.

1,393,647. ARCH FOR FIREBOXES. FRANK J. SPILLANE, Brooklyn, N. Y. Filed Apr. 2, 1920. Serial No. 370,689. 5 Claims. (Cl. 110—97.)

1. An arch for an oil burning fire box, comprising top sections joined at their upper ends on a vertical center line, bottom sections joined at their lower ends on the said vertical center line, and side sections slidably joined with the lower ends of the top sections and the upper ends of the lower sections.

1,393,648. CORN-HUSKING TABLE. ROBERT THOMPSON, Bakerstown, Pa. Filed May 23, 1919. Serial No. 299,082. 16 Claims. (Cl. 100—31.)

1. A corn husking table including a frame, pivoted corn stalk receiving arms carried by the upper ends of said frame, and resilient means for normally holding the arms in raised position.

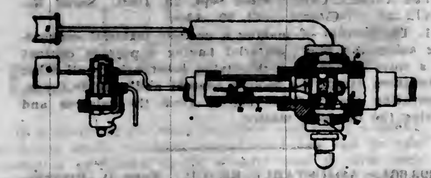
1,393,649. ELECTRIC SWITCH. WILLIAM DAN THROOP, Norwich, Conn. Filed Apr. 6, 1920. Serial No. 371,690. 7 Claims. (Cl. 200—76.)

1. A pendant switch, comprising a supporting block of non-conducting material, two pairs of electric contacts on said block, a sliding plate of non-conducting material guided on the block, contact blocks carried by the plate and movable into engagement with the contacts, a sliding button having longitudinal movement relative to the block and at one side thereof and having spaced relationship to the block, a pivoted ball engaging the plate, and a spring connecting the free end of the ball with said button.

1,393,650. OVEN. SAMUEL THOOS, Pittsburgh, Pa. Filed Sept. 24, 1920. Serial No. 412,975. 19 Claims. (Cl. 25—142.)

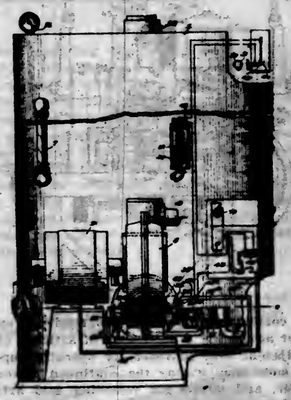
1. An oven comprising a comparatively long heating chamber through which travel the articles to be heated, and means for maintaining along the heating chamber zones of approximately uniform temperature separated by zones of changing temperature, substantially as described.

1,393,651. RESILIENT WHEEL. ANDREW TOURTELL, Santa Ana, Calif. Filed May 27, 1920. Serial No. 384,603. 6 Claims. (Cl. 152—32.)



2. A resilient wheel comprising a hub portion; cushioning means surrounding said hub portion; a tread portion surrounding said cushioning means; side plates fixed relative to said hub portion and received against the sides of said tread portion; said tread portion and said side plates having cooperating slots therein; fingers extending through said slots and engaged by said side plates, and spring connections between said fingers and said tread portion.

1,393,652. ADJUSTABLE HAT-LINING OR BANDEAU. MAXIME L. VAN HUELE, New York, N. Y. Filed Jan. 31, 1921. Serial No. 441,267. 6 Claims. (Cl. 2—113.)

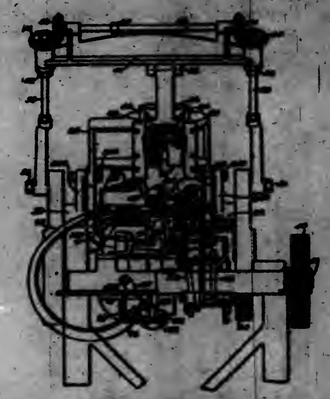


1. In combination, a hat lining or bandeau having a continuous ring-shaped piece of flexible material provided with an inner hem and an outer hem, a constricting member in the said inner hem to permit of adjusting the said piece of flexible material, and a strip of spring material contained in the said outer hem, and points on the said strip for fastening the hat lining or bandeau to a hat, at least one of the said points being slidably mounted on the said strip.

1,393,653. VENT-VALVE. JOHN ULRICH, St. Louis, Mo. Filed Apr. 30, 1920. Serial No. 378,644. 7 Claims. (Cl. 303—41.)

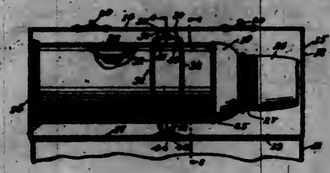
1. In an air brake of the character described, in combination, a brake cylinder, a triple valve, a pipe connection between said triple valve and said brake cylinder, a check valve interposed in said pipe connection, said pipe connection having an opening to the atmosphere intermediate said check valve and said triple valve, and a valve controlling said opening and connected to said check valve, all as and for the purposes set forth.

1,393,654. AUTOMATIC HEATING SYSTEM. NATHANIEL B. WALES, Boston, Mass., assignor, by mesne assignments, to The Wales Company, Kalamazoo, Mich., a Corporation of Michigan. Filed Feb. 17, 1921. Serial No. 445,640. 3 Claims. (Cl. 236—9.)



1. In a heating system of the type described, a heating appliance, a fuel-burning nozzle connected thereto, a motor-actuated blower having a continuously open discharge conduit connected to said nozzle, a source of gaseous fuel connected to said nozzle and a valve therefor, and means operating to open or close the gas supply valve in response to the static pressure in said nozzle, said valve being located exterior to said conduit.

1,393,655. BOWLING-PIN. ROBERT J. WILKIN, Newton, Mass., assignor to Stowe & Woodward Company, Newton Upper Falls, Mass., a Corporation of Massachusetts. Filed Mar. 8, 1921. Serial No. 450,782. 4 Claims. (Cl. 46—66.)



1. A bowling pin made of wool felt and having a binder of relatively soft rubber.

1,393,656. TRIMMING-MACHINE. Reastus B. Wheeler, Lynn, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 19, 1916. Serial No. 137,836. 44 Claims. (Cl. 12—68.)

32. The combination, with a progressively operating conveyer for advancing a succession of articles, of means disposed adjacent said conveyer for operating upon said articles in succession during the continued movement of the conveyer, and means for removing said articles in turn from the conveyer at one station and restoring them thereto after being operated upon at another station.

1,393,657. LUNCH KIT. Gnosen P. Altenbaugh, Cincinnati, Ohio, assignor to The Icy-Hot Bottle Company, Cincinnati, Ohio, a Corporation of West Virginia. Filed Feb. 8, 1919. Serial No. 275,877. 3 Claims. (Cl. 220—22.)

1. In a lunch kit, the combination of a cover arranged to receive a heat-insulated bottle, a substantially stiff strap pivoted to one wall of said cover and extending across the bottle-position to hold the bottle in said cover, and a latch for said strap on the opposite wall of said cover, said latch and substantially stiff strap comprising coacting means limiting movement between said latch and strap and between the opposite walls of said cover, in opposite directions lengthwise of said strap.

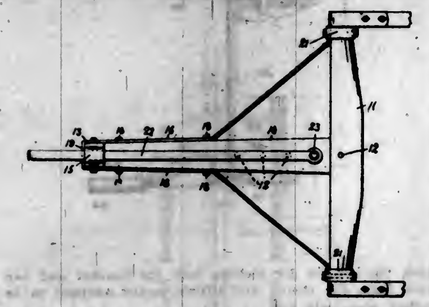
1,393,658. HEEL. Sam Armishaw, Portland, Oreg. Filed Aug. 14, 1919. Serial No. 317,555. 1 Claim. (Cl. 36—30.)

A heel for shoes comprising a hollow metal body portion, open at its upper end and having an inturned shoe engaging flange, an annular shoulder formed at the lower end of said body, a circular tread holder adapted for rotatable engagement with the annular shoulder of said body, a tread secured in said tread holder, a rigid extension rising centrally of said holder and projecting upwardly of said body portion to an opening formed in the bottom wall thereof, a fastening screw passed upward through said tread and said holder and threaded into engagement with the lower end of said rigid extension, a pin disposed diametrically of the upper end of

said rigid extension, and a coiled spring surrounding said rigid extension, and interposed between the bottom wall of said body portion and said pin, whereby to retain said tread holder tensioned in adjusted position on said annular shoulder.

1,393,659. WASHING-MACHINE. John M. Baker, Columbus, Ohio. Filed Apr. 21, 1919. Serial No. 291,659. 1 Claim. (Cl. 68—20.)

A washing machine comprising a casing, including a bottom and a perpendicular side wall, a plurality of conduit elements mounted stationarily on the inner face of said side wall, said elements being formed to provide open lower ends which are spaced from said bottom and restricted nozzle forming upper ends, the latter terminating in inclined walls having angularly formed ports provided therein capable of directing a stream downwardly into the casing, flanges projecting from the lower portions of said elements, a perforated supplemental bottom member mounted within said casing and seated upon said flanges in spaced relation from said bottom, said bottom member serving to define a heating chamber which is in direct communication with the open lower ends of said conduit elements, and a perforated ring support for said bottom member lying within said heating chamber and serving to support the central portions of said supplemental bottom member and to entrap foreign matter.



1,393,660. PECTOUS MATERIAL AND PROCESS OF MAKING THE SAME. Franklin G. Butlin, Glendale, Calif., assignor of one-half to Noah W. Schwartzlose, Los Angeles, Calif. Filed Sept. 23, 1920. Serial No. 412,218. 4 Claims. (Cl. 99—11.)

1. The process of making a pectous material comprising subjecting plant material having a pectous content to a solvent capable of dissolving substantially all other substances except the pectous content and cellular tissue, separating the insoluble matter from the solution and drying the insoluble matter.

1,393,661. ADJUSTABLE REACH. Fred H. Bittner, Bottineau, N. D. Filed Aug. 14, 1920. Serial No. 403,445. 1 Claim. (Cl. 280—15.)

A reach device including a transverse head member and a forwardly directed bar, said bar having a plurality

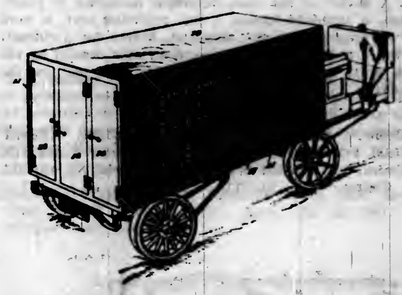
of pin receiving apertures in spaced relation, a ferrule device bearing over the forward end of the bar and including upper and lower guide loops, a U-shaped brace bearing over the forward end of the ferrule and the bar and along the sides of the bar and branching laterally

and attached to the transverse head member, and a clevis device in elongated U-shape slidable through the loops of said guide member and a pin engaging through the sides of the clevis member and through the apertures of the bar.

1,393,662. AUTOMATIC SWITCH-POINT-LOCKING DEVICE. John R. Burress, Tulsa, Okla. Filed Apr. 20, 1920, Serial No. 375,306. Renewed Mar. 3, 1921. Serial No. 449,490. 3 Claims. (Cl. 246—374.)

1. In combination, a railroad switch connecting main and side tracks, switch actuating means, a car actuated member pivotally mounted on the side track, tension means supporting said car actuated member, a locking lever connected to the car actuated member, a shoulder formed on said locking lever, and a notched block secured to the switch actuating means and adapted to receive the shoulder for preventing operation of the switch actuating means when the car actuated member is depressed.

1,393,663. FOUNTAIN-FEED ROTARY BRUSH. Wilfred A. Carver, Buffalo, N. Y. Filed May 1, 1918. Serial No. 231,854. 1 Claim. (Cl. 15—37.)



In a device of the class described comprising a casing, a driven shaft rotatably mounted at one end in said casing, a perforated brush, a solid head integral with said brush carried on the opposite end of said shaft to prevent the egress of water adjacent the terminal of said shaft and cause spraying of the water through the side of the brush, means carried by the shaft within the casing for rotating the brush and a removable, circular partition extending into the casing supporting said shaft and serving to direct the flow of water by said means to positively rotate the shaft and said brush.

1,393,664. AIR-BRAKE-PISTON-LEATHER-EXPANDING RING. Stephen G. Clayback, Gardenville, N. Y. Filed Oct. 22, 1919. Serial No. 332,516. 1 Claim. (Cl. 74—109.)

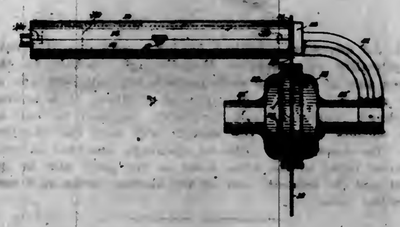
A ring for expanding the piston leathers of an air brake cylinder formed from an annular sheet metal blank, the inner margin of said blank bent outwardly upon itself forming a stiffening portion having flat engaging faces for attaching the ring to the receiving seat of a piston, the outer periphery of the blank being scalloped forming spaced radial fingers bent upwardly in a uniform direction throughout the circumference of the blank at points adjacent the stiffening portion to provide relatively long fingers adapted for resilient bearing upon the piston leather to maintain the latter at all times against leakage and against the wall of the cylinder during the operation of the piston.

1,393,665. ADVERTISING-CABINET. Clarence E. Closson, Potlatch, Idaho. Filed Feb. 3, 1920. Serial No. 355,900. 2 Claims. (Cl. 40—28.)

1. An advertising cabinet having a wall provided with a plurality of apertures therethrough, sockets in the inner side of the wall each immediately adjacent one of the apertures, and a plurality of shutters each having a shank removably and reversibly engaged in one of the sockets whereby the sockets will hold the shutters over the respectively adjacent openings, one face of each shutter being of the same color as the outer side of the wall and the opposite face of the shutter being of a contrasting color.

1,393,666. CHILL-MOLD. Frank Cordes, Pittsburgh, Pa. Filed Dec. 27, 1920. Serial No. 433,107. 3 Claims. (Cl. 22—178.)

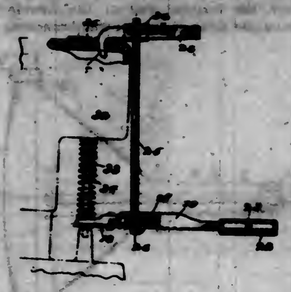
1. A mold chill consisting of an annular ring having its chilling surface divided into connected sections sepa-



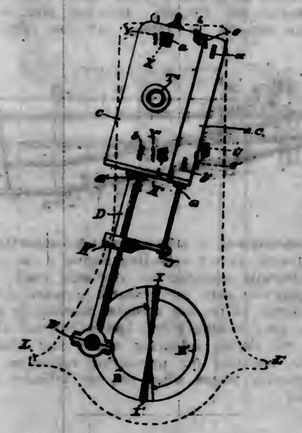
rated by slots or slits, said slots or slits extending obliquely across the inner face of the shell and said inner face forming the outer wall of the mold, substantially as described.

1,393,667. MEANS FOR REFINISHING SEGMENTAL GRINDING-WHEELS. ARTHUR F. CHAMPION, West Hartford, Conn. Filed Apr. 18, 1921. Serial No. 462,286. 4 Claims. (Cl. 125—11.)

1. A device of the class described including in combination, a standard having a tool receiving bore, a work rest associated with the standard, means for yieldingly moving a tool in the bore toward an axis defined by the work rest, and means for clamping the tool in the standard.



1,393,668. AUTOMATIC ROUGH-GRINDING MECHANISM FOR PISTON-RINGS. JAY HIRAM CUMMINGS, Elmira, N. Y. Filed Dec. 16, 1920. Serial No. 431,215. 6 Claims. (Cl. 51—118.)

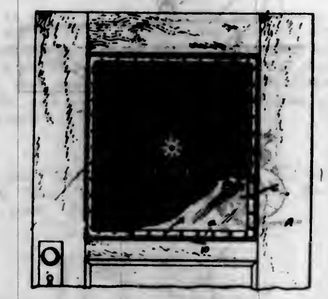


1. A device of the class described comprising a fixed shaft, a hub journaled thereon, a bracket fixed to the shaft having a head at its free end spaced from the periphery of the hub, an outwardly projecting plate carried by the hub having openings adapted for positioning adjacent said head during the rotation of the hub, and automatic jaws carried by the plate adjacent the openings.

1,393,669. VALVE-SPRING LIFTER. LLEWELYN J. DAVIES, Cincinnati, Ohio. Filed June 15, 1920. Serial No. 389,175. 4 Claims. (Cl. 29—86.3.)

1. A valve spring lifter including a fulcrum bar, a coupling sleeve slidably receiving the bar, a supporting bracket for the bar slidably engaged with said sleeve at one side of the bar, means carried by the sleeve to coact with the bracket for locking both the bracket and bar fixed upon the sleeve, and lifting means adapted to be rocked upon said bar.

1,393,670. INTERNAL-COMBUSTION ENGINE. THEODORE E. DAVIS, Brigham, Utah, assignor to Davis Motor Corporation, a Corporation of Utah. Filed Sept. 2, 1920. Serial No. 407,602. 6 Claims. (Cl. 123—42.)



1. A valveless, two-cycle, double-acting, oscillating, internal combustion engine consisting of a power cylinder revolubly suspended on central, oppositely disposed bearings, a piston operating within the cylinder, forming a combustion chamber at each end of the cylinder, a piston rod connecting the piston with a crankshaft terminally connected to a fly wheel, there being ports, laterally and terminally disposed in the cylinder, and penetrating into each combustion chamber of the cylinder; a housing member having oppositely disposed ports coördinating with the ports of the cylinder and operated by the movement of the cylinder; an auxiliary cylinder mounted upon the power cylinder, a piston within the auxiliary cylinder operated by the piston of the power cylinder, there being ports laterally and terminally disposed in the auxiliary cylinder, penetrating into the auxiliary cylinder; the housing member having oppositely disposed ports coördinating with the ports of the auxiliary cylinder, and operated by the movement of the auxiliary cylinder.

1,393,671. DYNAMIC SYSTEM ADAPTED TO IMPART TO A MECHANICAL SYSTEM A RAPID MOVEMENT OF OSCILLATION. LUC LÉON BAUDE DENIS, Paris, France. Filed June 21, 1920. Serial No. 390,575. 4 Claims. (Cl. 74—14.)

1. In a dynamic system adapted to impart to a non-rigid mechanical system a rapid movement of oscillation, a movable part which must take a movement of oscillation, a fixed point, an elastic system connecting the movable part to the fixed point, a non-rotating mass free in space, means giving support to this mass to give action to the movable part.

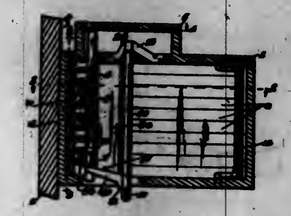
1,393,672. CURTAIN-SUPPORT. HENRY H. DIEKENS, New York, N. Y. Filed Jan. 6, 1921. Serial No. 435,469. 2 Claims. (Cl. 156—14.)

2. A support for panel curtains, consisting of a length of twisted wires having hooks integral therewith to be engaged with the curtain, there being loops directly at the bases of the hooks to receive fasteners one of the twisted wires being bent forwardly at a side of each hook, then across the hook at the back, then formed into said loop and continued from the inner side of the loop and returned to form the hook and its bill, the return wire being continued into the twisted length at the opposite side of the hook from the said loop.

1,393,673. SILENCER FOR COMMUNION-CUP RACKS. MARIAN P. DINGER, Philadelphia, Pa. Filed Dec. 14, 1920. Serial No. 430,596. 1 Claim. (Cl. 248—20.)

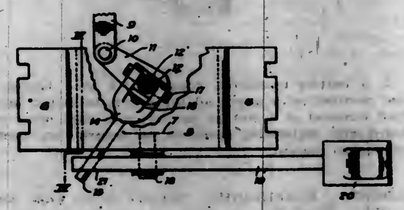
The combination of a communion cup rack having a hole therein for the cup, and a silencer made of rubber, having a thin body portion, and having upper and lower annular ribs extending over and under the rack to hold the silencer in position.

1,393,674. BATTERY-CONNECTOR. WALTER SCOTT DOE, Kent, Ohio. Filed Oct. 25, 1919. Serial No. 333,142. 4 Claims. (Cl. 173—259.)



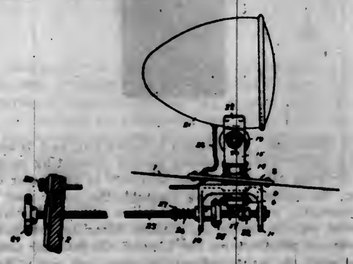
2. A battery conductor, comprising a shell having an end provided with means adapting it to be driven into a lead terminal of a storage battery, said shell being provided with registering apertures for securing an electric conductor thereto.

1,393,675. FLASHLIGHT. WALTER SCOTT DOE, Kent, Ohio. Filed Nov. 2, 1920. Serial No. 421,237. 2 Claims. (Cl. 240—8.5.)



1. A flash light, comprising a casing having a removable cover, a battery in the casing having connecting members, both securing the connecting members to the cover of the casing, the bolts extending through the cover and forming contacts, a housing carrying a lens and pivotally mounted on the cover, an electric lamp in the housing, and contact members on the base of the housing and connected with the lamp and movable into and out of contact with the first mentioned contact by a rotating movement of the housing.

1,393,676. COMBINATION-LOCK FOR AUTOMOBILES. MORTON T. DOWDY, East Bakersfield, Calif. Filed Aug. 5, 1920. Serial No. 401,504. 3 Claims. (Cl. 70—54.)



1. A combination lock including a sliding bolt having laterally projecting pins, rock arms, fingers carried by certain of said rock arms and arranged to engage said pins when successively actuated for retracting said bolt, and pins carried by others of said rock arms and arranged to cause projection of said bolt when the push pins for said rock arms are moved.

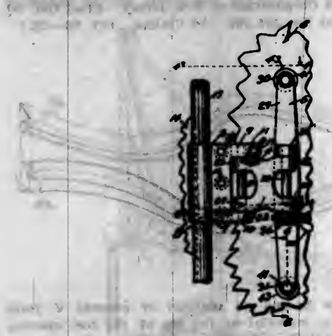
1,393,677. PARALLEL GROUND-THROW SWITCH-STAND. THOMAS H. EDELBLUTE, Pittsburgh, Pa., assignor to Cincinnati Frog & Switch Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 14, 1921. Serial No. 461,262. 8 Claims. (Cl. 246—411.)

1. A switch stand comprising a supporting member, a bell crank having two arms pivotally carried on the supporting member, means whereby the outer end of one of the arms may be moved in an arc relatively to the other arm, said means including a horizontally pivoted connection, an operating lever pivoted between its ends to the supporting member and arranged to swing through an arc of substantially 180 degrees, a handle portion at one side of the pivot, the part of the lever at the other side of the pivot having an opening therethrough through which passes the relatively movable end of the bell crank arm.

1,393,678. SPOTLIGHT-SUPPORT. ARTHUR FALK, Duluth, Minn. Filed Mar. 1, 1921. Serial No. 448,830. 1 Claim. (Cl. 240—7.)

A control for spot lights of the character described comprising a suitable support, two independently operative concentrically disposed rotatable members in the support, an upwardly extending bracket rigidly fixed to the outermost one of said rotative means, a spot light supported above the bracket, a depending bracket intermediate of the spot light and said first mentioned bracket pivotally attached to said latter bracket, the depending bracket being controlled by the innermost one of said rotative members and manually controlled means for operating the rotative means independently.

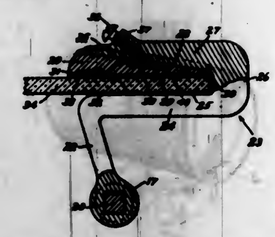
1,393,679. LOCK-JOINT. JOHN FORSTER, Los Angeles, Calif. Filed Aug. 25, 1920. Serial No. 405,809. 2 Claims. (Cl. 20—92.)



1. A lock joint construction comprising crossed members each having a recessed portion and a slot in longitudinal alinement, the side edges of the recesses and slots being beveled so that the recessed portion of each member may be received within the slot of the other of said crossed members.

1,393,680. SUCTION-DREDGE. OTTO FRÜHLING and CURT FRÜHLING, Braunschweig, Germany. Filed July 26, 1920. Serial No. 399,186. 3 Claims. (Cl. 37—47.)

1. A self-propelled suction dredger comprising a suction head and rotary driven plow shares mounted in front of said suction head and adapted to rotate in such a direction as to assist the forward propulsion of the dredger.

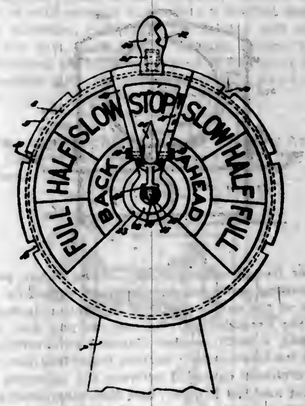


1,393,681. AUXILIARY WINDSHIELD. GEORGE GLAUDEL, Los Angeles, Calif., assignor of one-half to George L. Mitchell, Santa Monica, Calif. Filed Apr. 3, 1919. Serial No. 287,190. 2 Claims. (Cl. 296—84.)

1. An auxiliary windshield comprising a main clamp adapted to be adjustably mounted upon a side bar of a main wind shield, a split clamping bearing upon said main clamp, an attaching plate construction, a split clamping bearing upon said attaching plate construction,

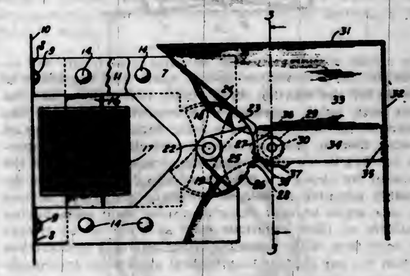
a link pivoted at its respective ends in said split clamping bearings, and a plate connected to the attaching plate construction.

1,393,682. WIND-DEFLECTOR. GEORGE GLAUDEL, Los Angeles, Calif., assignor, by mesne assignments, of fifty per cent. to George L. Mitchell, Santa Monica, Calif. Filed Sept. 22, 1919. Serial No. 325,485. 5 Claims. (Cl. 296—84.)



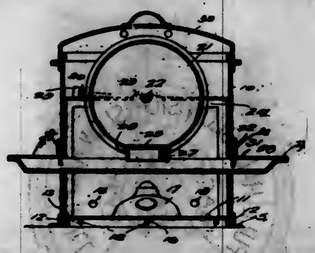
2. An automobile wind deflector comprising a deflector plate and hanger, the latter having means for attachment to a supporting part on the vehicle, and having an arm with a slotted portion to receive the edge of the deflector plate, said means including a wedge complementary to the slot, and a screw tapped through one side of the slot and adapted to engage the wedge.

1,393,683. BAKER'S PEEL. ADAM L. HAPNER, Cincinnati, Ohio. Filed Oct. 27, 1920. Serial No. 420,027. 3 Claims. (Cl. 107—67.)



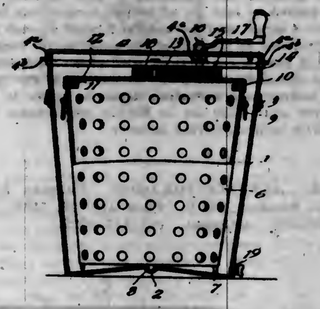
1. A baker's peel comprising a wood blade, a thin metal plate inserted into and extending beyond the front edge of said blade, metal strips secured at the sides of said plate, and engaging over the edge of the blade, shoulder plates secured on said blade, and means for attaching a handle to said blade.

1,393,684. SHIP'S TELEGRAPH. CHARLES J. HENSCHEL, Brooklyn, N. Y. Filed Apr. 4, 1919. Serial No. 287,487. 6 Claims. (Cl. 116—21.)



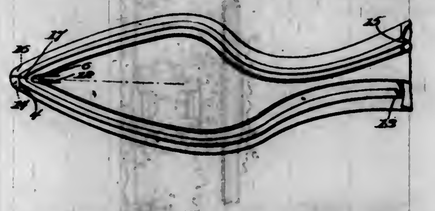
1. In a ship's telegraph the combination of a set of flexible connections extending from one station to another and movable from each of said stations for the purpose of transmitting signals, an actuating device at each station for moving said set of flexible connections in order to transmit a signal, an indicating member at each station to be actuated by said set of flexible connections in order to receive a signal, and mechanism located at each station and controllable at the will of the operator for connecting said set of flexible connections with either said actuating device or said indicating device at the will of the operator and of locking said actuating device in order to render it inactive while said set of flexible connections is connected with said indicating member.

1,393,685. ANNUNCIATOR-DROP. CHARLES J. HENSCHEL, Brooklyn, N. Y. Filed Apr. 25, 1919. Serial No. 292,750. 4 Claims. (Cl. 177—329.)



1. The combination of a movable shutter, a rocking shaft connected with said shutter for actuating the same, an armature shaft, means for rocking the same into predetermined positions, and gearing connected with said rocking shaft and driven by said armature shaft in order to actuate said rocking shaft, said gearing including means for stopping said rocking shaft positively in exact-predetermined positions independently of the precise positions in which said armature shaft is stopped.

1,393,686. WATER-TROUGH. LEONARD J. HOSAR and LEONARD L. FURMAN, Williamsburg, Iowa. Filed May 6, 1919, Serial No. 295,158. Renewed Mar. 24, 1921. Serial No. 455,330. 1 Claim. (Cl. 119—73.)



A water trough comprising a housing, a pan positioned in the housing with its end portions extending through the walls of the same, U-shaped brackets attached to the rims of the extended portions of the pan and with upturned ends, a baffle member disposed transversely of the pan with its intermediate portion depending into the pan and its terminals extended between the upturned ends of the bracket and the housing, and fastening devices operating through the upturned ends, the extended terminals of the baffle member, and the housing.

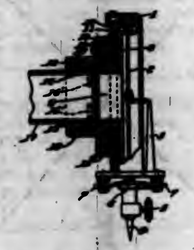
1,393,687. DISH-WASHING MACHINE. MARGARET ELOISE HOSTATER, Westfield, N. Y. Filed Feb. 24, 1917. Serial No. 150,775. 1 Claim. (Cl. 141—9.)

In a dish washing machine an outer imperforate and an inner perforate container spaced apart and supported to provide for the rotation of the inner container within the outer both being provided with removable closures, the closure of the outer container being flanged and having an opening therein, said container having diametrically opposite notches in its upper edge of a depth greater than the flange of its closure, a cross bar having reduced ends detachably mounted in said notches and projecting beyond the side walls of said outer container, said ends having shoulders at their junctions with said bar which engage the inner face of the outer container adjacent said notches to hold the bar against longitudinal movement, intermeshing gears carried by said cross bar and the closure of the inner container, the journal of the cross bar carried gear extending through the opening in the closure of the outer container and equipped with an actuating handle for rotating the gears to operate the inner container, the flange on the outer container closure bearing on said cross bar to assist in retaining said bar in operative position, the closure snugly fitting the upper end of the outer container above the projecting cross bar ends with its flange resting on said ends to assist in retaining the bar in operative position.

1,393,688. SOLE. MERTON E. JOHNSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 30, 1919. Serial No. 334,399. 10 Claims. (Cl. 36—22.)

6. An insole having an incision of general V form through the lip material at the tip of the toe, one leg thereof substantially coinciding with the median line of the forepart of the insole and the other leg thereof lying substantially at right angles to said median line.

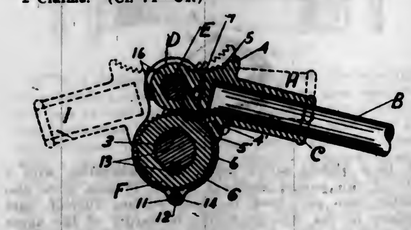
1,393,689. SANITARY CAN-GATE. AUGUST F. LA GIER, Los Angeles, Calif., assignor of one-third to John F. Miller and one-third to Irving R. Smith, Los Angeles, Calif. Filed Mar. 24, 1921. Serial No. 455,182. 1 Claim. (Cl. 221—64.)



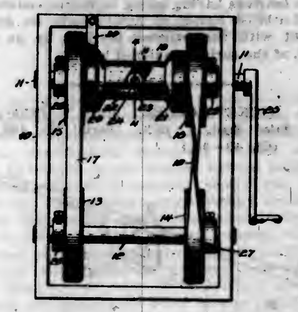
The combination of a closed cylindrical can having a circular flat top provided with a pair of ports, one serving as an air inlet port and the other as a liquid outlet port, said ports being located near the periphery of said top, and on diametrically opposite sides thereof, and a removable gate rotatably mounted on said can, said gate comprising a circular band engaging the upper end of the side walls of the can, and a pair of radial lugs integral with said band, said lugs being bent downwardly to lie flat on the top of the can and arranged on diametrically opposite sides of said band, and adapted to act as slide valves for simultaneously covering or uncovering said ports when said gate is rotated.

1,393,690. FILING-APPLIANCE CASE. EMERSON B. MOSELEY, deceased, Alliance, Ohio, by Metta L. Moseley, administratrix, Alliance, Ohio, assignor to The McCaskey Register Company (Incorporated in 1914), Alliance, Ohio, a Corporation of Ohio. Original application filed May 26, 1915, Serial No. 30,672. Divided and this application filed Oct. 11, 1918. Serial No. 257,783. 11 Claims. (Cl. 217—60.)

1. In a filing appliance, the combination of a casing adapted to support and inclose a set of frames and comprising a stationary member and a movable member hinged on the stationary member, the hinge between said members being arranged between the rear edge of the movable member and the stationary member and members swingably supported by the stationary member for detachable engagement with the movable member to support it in upright position and guides on the movable member for the swingable members.

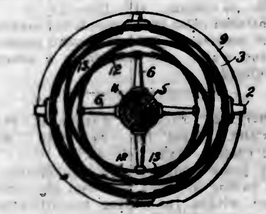


1,393,691. SOUND-BOX FOR TALKING-MACHINES. WILLIAM W. MOYER, Camden, N. J., assignor to Victor Talking Machine Company, a Corporation of New Jersey. Filed Oct. 18, 1917. Serial No. 197,224. 7 Claims. (Cl. 274—35.)



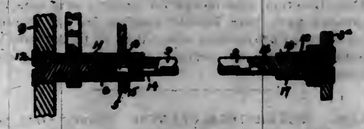
1. In a sound box, the combination of a sound box casing provided with a tubular member rigid therewith, a second rigid tubular member out of contact with said casing and with said first-mentioned tubular member, and adapted to be secured to a sound conveyer, and resilient sound insulating material of substantially tubular form in the space between said tubular members, said resilient material being substantially incased by and between the adjacent surfaces of said rigid tubular members.

1,393,692. RATCHET MECHANISM. FREDERICK A. OST, Minneapolis, Minn. Filed July 15, 1918. Serial No. 244,914. Renewed Mar. 14, 1921. Serial No. 452,232. 2 Claims. (Cl. 74—54.)



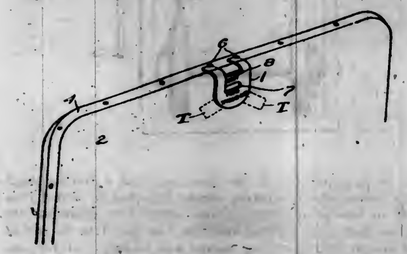
1. In a device of the class described, a drive shaft, a wheel on said shaft having a serrated periphery, side members journaled on said shaft and having recesses, a pivotally swinging handle member interposed between said side members, ratchet actuating balls carried by said handle member adapted to releasably engage said side members in said recesses to produce a ratchet engagement in either direction, and means for holding said side members spaced part, said handle member having angularly located serrated projections adapted to be forced into locking connection with the periphery of said wheel in either direction.

1,393,693. REVERSIBLE CLUTCH. JOSEPH OTTI, Oklahoma, Okla. Filed Apr. 14, 1920. Serial No. 373,939. 2 Claims. (Cl. 74—21.)



1. In an apparatus of the class described, a driving shaft and a driven shaft, rotating means attached to said driven shaft in spaced relation, means adapted to communicate motion from said driving shaft in one direction to one of said driven shaft rotating means and having a clutch element, means adapted to communicate motion from said driving shaft in the opposite direction to the other of said driven shaft rotating means and having a clutch element, a sleeve slidable and rotative upon said driving shaft and having opposing clutch elements adapted to be alternately engaged with the clutch elements of said driven shaft rotating means, said sleeve having a slot directed obliquely to the longitudinal axis of the sleeve, and a roller carried by said driving shaft and operating in said slot, whereby motion will be transmitted in the same direction to the driven shaft regardless of the direction of motion of the driving shaft.

1,393,694. VEHICLE-WHEEL. ROBERT W. PADDEN, Kansas City, Mo. Filed Sept. 20, 1919. Serial No. 325,137. 8 Claims. (Cl. 152—44.)



5. In a vehicle wheel, a rim, a hub, spokes extending radially in different parallel planes from the hub, and springs respectively bearing on the spokes and bearing on the rim at points substantially diametrically opposite to the spokes on which the springs bear.

1,393,695. VACUUM-CLEANER BRUSH. GEORGE R. PAULUS, Canton, Ohio, assignor to The United Electric Company, Canton, Ohio, a Corporation of Ohio. Filed Sept. 12, 1918. Serial No. 253,696. 2 Claims. (Cl. 15—60.)

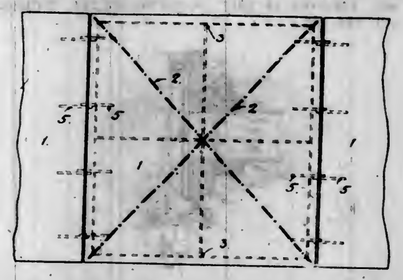
1. In a vacuum cleaner suction shoe, screw plugs in the ends of the shoe, swiveled bearings carried by the plugs, one of the bearings having spring cushioned endwise movement, and a brush having an axial spindle for detachable engagement with the swiveled bearings by an endwise movement of the spring cushioned bearing.

1,393,696. TICKET-HOLDER. JOHN V. PERRIN, Lynn, Mass. Filed Sept. 7, 1920. Serial No. 408,666. 5 Claims. (Cl. 40—11.)

1. A ticket holding attachment of the character described consisting of a single piece of sheet metal bent to provide a panel adapted to fit flatwise against the cushion side of the back of a car seat and an integral laterally projecting flap at the upper end of said panel adapted to be fastened flatwise against the edge of said back, said panel being formed with a ticket receiving hole through the ticket is shoved edgewise into position between the panel and the cushion side of the seat, so that it is yieldingly clamped against the inner side of the panel by said cushion.

1,393,697. COLOR-BASE FOR LEATHER-FINISHES AND METHOD OF MAKING THE SAME. JOHN H. PFINGSTEN, Milwaukee, Wis., assignor to Presto Color Company, Cudahy, Wis. Filed May 28, 1921. Serial No. 473,361. 6 Claims. (Cl. 134—7.)

3. A concentrated color base suitable for making leather finishes, which consists of a finely ground pigment, water soluble oil, and water, and containing a small amount of mercuric chlorid.

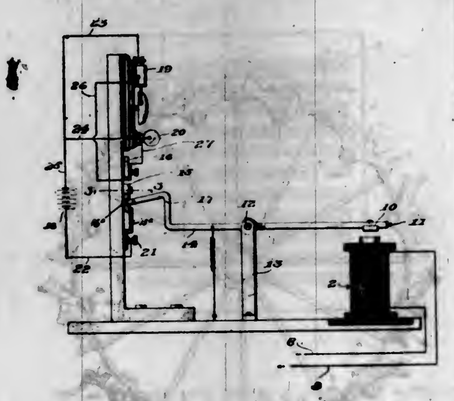


1,393,698. ROTARY PUMP. WALTER J. PIATT, San Leandro, Calif. Filed Dec. 24, 1919. Serial No. 347,060. 2 Claims. (Cl. 103—44.)

1. A rotary pump comprising in combination, a cylindrical casing having an inlet port and an outlet port, a rotor mounted within the casing eccentrically thereto, said rotor having a plurality of radially disposed vanes adapted for outward and inward movement, means whereby the outer ends of the vanes will be retained in continuous engagement with the inner periphery of the casing, a block carried in a pocket formed in the side wall of the casing at a point intermediate the outlet and inlet ports, said block having an inner end surface complemental to the periphery of the rotor and substantially flush with the inner periphery of the casing whereby a continuous seal may be maintained between the inlet and

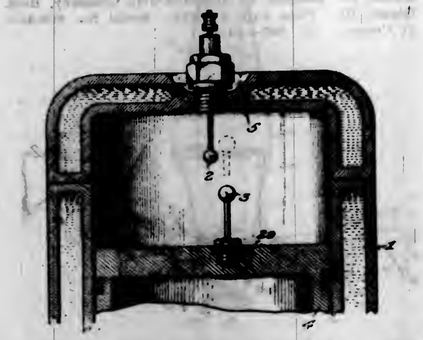
outlet ports of the casing, a set screw threaded through the outer end wall of the pocket, and a swiveled connection between the set screw and the block.

1,393,699. PAVEMENT FOR ROADS AND STREETS. CHARLES H. PURCELL and LAURENCE I. HEWES, Portland, Oreg. Filed Mar. 1, 1921. Serial No. 448,849. 2 Claims. (Cl. 94—13.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



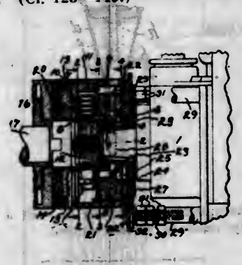
1. The combination of a precast slab of paving material and a connection with an adjacent slab, such connection consisting of overlapping U bars and a rod passing through the loops formed by the U bars and grooves in the slabs substantially as described.

1,393,700. FOLDING SAFETY-RAZOR. ALEXANDER MARIE JOSEPH EUGENE REBOUL, Constantinople, Turkey. Filed Nov. 3, 1913. Serial No. 796,821. 5 Claims. (Cl. 30—12.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat L., 1313.)



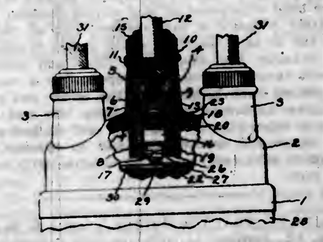
1. In a folding safety razor, the combination with a plate of two handle members hinged to said plate and foldable onto and from the rear surface thereof, said members having lugs projecting forwardly of the upper surface of the plate and adapted, when the members are extended from the plate, to engage over a detachable razor blade on the upper surface of the plate.

1,393,701. SAFETY ELECTRIC SIGNAL FOR RAILWAYS. LEONARDO SANCHEZ, Habana, Cuba, assignor of forty per cent. to Alexandro Angulo and twenty per cent. to Miguel J. Palmer, Habana, Cuba. Filed Nov. 15, 1919. Serial No. 338,207. 5 Claims. (Cl. 200—87.)



1. In a safety electric signal for railways, a circuit closing device having a vertical slidable contact forming a weight to hold the circuit closing device normally open, and an operating lever connected at one end with the circuit closing device and provided at the other end with an armature adapted to be attracted by an electromagnet to operate the circuit closing device.

1,393,702. IGNITION DEVICE FOR INTERNAL-COMBUSTION ENGINES. LEONARDO SANCHEZ, Habana, Cuba, assignor of forty per cent. to Alexandro Angulo and twenty per cent. to Miguel J. Palmer, Habana, Cuba. Filed Nov. 18, 1919. Serial No. 338,907. 2 Claims. (Cl. 123—162.)



1. In a device of the class described, the combination of a cylinder and a piston, of a spark plug mounted in the end of the cylinders and provided with a relatively long projecting stem having a spherical head, and a piston terminal mounted on the piston and also provided with a relatively long stem having a spherical head carried into and out of sparking position with relation to the terminal of the spark plug by the reciprocation of the piston, said heads being of different diameters and presenting continuous convex faces to each other throughout their entire area and being carried past each other by the said reciprocation of the piston.

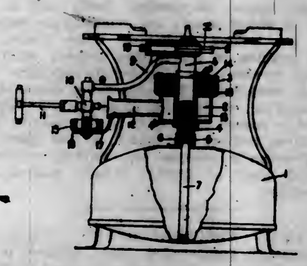
1,393,703. IMPULSE-COUPLING. WOLFGANG E. SCHWARZMANN, Longmeadow, and CHARLES F. TORRE, Springfield, Mass., assignors to American Bosch Magneto Corporation, Springfield, Mass., a Corporation of New York. Filed Dec. 8, 1919. Serial No. 343,297. 25 Claims. (Cl. 123—149.)

1. In an impulse coupling; a rotatable driving member; a rotatable driven member; an impelling spring arranged to be stressed upon angular displacement of said members; centrifugally-responsive locking mechanism adapted to lock the driven member against rotation while the driving member is rotating slowly and to be inoperative at higher speed; and releasing mechanism for releasing the locking mechanism, when locked, at an advanced position of the driving member relatively to the driven member; the centrifugally-responsive locking mechanism consisting of two coöperative elements which, at low speed in one direction of rotation, are relatively positioned to engage each other in one angular position of the driven member and which, at low speed in the reverse direction of rotation, are relatively positioned to engage each other at another angular position of the driven member.

1,393,704. ELECTRIC BRUSH. WOLFGANG E. SCHWARZMANN, Longmeadow, Mass., assignor to American Bosch Magneto Corporation, Springfield, Mass., a Corporation of New York. Filed Feb. 14, 1921. Serial No. 444,715. 9 Claims. (Cl. 171—324.)

2. A contact brush device comprising a guide member having a recess, a brush holder slidable in said recess, a brush carried by said holder, resilient means for moving said holder outwardly, and a detachable means cooperative with said holder to limit the outward movement thereof, whereby upon removing said detachable means, said holder and brush may be removed from said recess of said member.

1,393,705. UNWINDING DEVICE. WILLIAM ERNEST SEED, Preston, England. Filed Jan. 23, 1918. Serial No. 213,433. 8 Claims. (Cl. 242—128.)

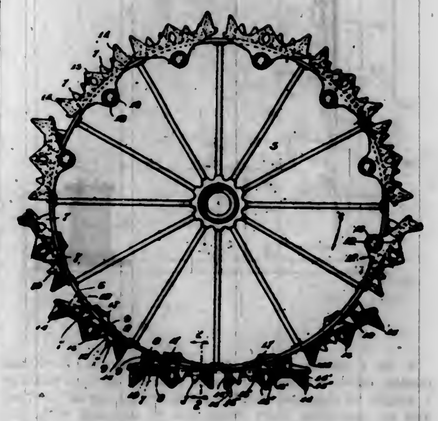


1. In winding, reeling and readying spindles or skewers and shuttle tongues, a removable cap for the outer end

of such spindle, having its inner end adapted to extend slightly within the nose of a cop on the spindle and to

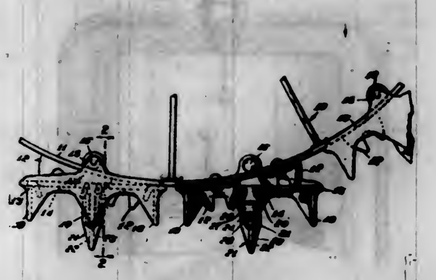
be held on the spindle by friction in such a way that it can be readily removed when required.

1,393,706. OIL-STOVE. JAMES SHANNON, Canonbury, London, England. Filed Aug. 11, 1921. Serial No. 491,558. 12 Claims. (Cl. 158—82.)



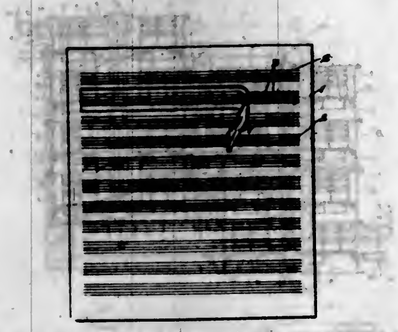
1. In an oil vapor stove the combination of an oil reservoir, a mixing chamber superposed on said reservoir, a burner head superposed on said mixing chamber, means for creating pressure in said reservoir, an oil feed pipe leading out of said reservoir which passes through said mixing chamber and said burner head and terminates above said burner head so as to operate as a vaporizer, a star shaped heat collector on the upper end of said oil feed pipe, an induction tube leading into said mixing chamber, a vapor pipe leading from said oil feed pipe at a point above the burner head, and an injector nozzle connected to said vapor pipe and coacting with said induction tube.

1,393,707. TRACTOR-WHEEL. LOUIS E. SLAUSON, Moline, Ill., assignor to Grid-Iron-Grip Company, Rock Island, Ill. Filed Oct. 16, 1918. Serial No. 258,341. 4 Claims. (Cl. 305—13.)



1. A traction shoe for attachment to the rim of a wheel and comprising a pair of parallel plates having lateral flanges, parallel transverse angle ribs spaced apart and connected to said plates on the bottom of said flanges, and means for loosely connecting the plates to the wheel rim.

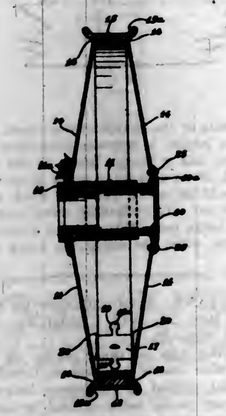
1,393,708. TRACTION-WHEEL. LOUIS E. SLAUSON, Rock Island, Ill., assignor to Grid-Iron-Grip Company, Rock Island, Ill. Filed June 12, 1919. Serial No. 303,841. 12 Claims. (Cl. 305—13.)



1. A traction shoe for attachment to the rim of a wheel and having transverse ground engaging bars at the ends thereof, said bars having recessed outwardly flared outer edges.

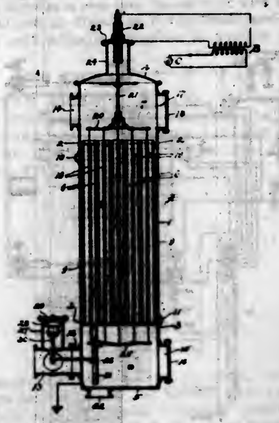
1,393,709. TRACTION-SHOE. LOUIS E. SLAUSON, Rock Island, Ill., assignor to Grid-Iron-Grip Company, Rock Island, Ill. Filed July 8, 1919. Serial No. 308,430. 21 Claims. (Cl. 305—13.)

1. A substantially rectangular traction shoe for attachment to the rim of a wheel and having a plurality of ground engaging members comprising a tooth at each corner of the shoe, said teeth being of approximately the same depth, and a tooth on each side of the shoe midway between the adjacent end teeth and of greater depth than the end teeth.



1,393,710. STRIP FOR CORRECTING MUSIC. JOHN A. SPENCER, Los Angeles, Calif. Filed Sept. 20, 1920. Serial No. 413,690. 4 Claims. (Cl. 283—47.)

2. A correcting strip having a music staff upon one side and a gummed surface upon the other side.



4. A book having stubs and strips connected to said stubs along perforated lines, said strips having music staffs thereon.

1,393,711. WHEEL. CHARLES E. STAILEY and EMMER H. BLAKER, Portsmouth, Ohio. Filed Nov. 26, 1919. Serial No. 340,889. 2 Claims. (Cl. 301—63.)

1. A wheel comprising a hub, a pair of laterally spaced disks through which the hub extends, and a rim encircling the periphery of the disks and having side shoulders engageable by the latter, said rim having a gap and a section removably mounted in said gap, the aforesaid disks having peripheral notches in which bottom portions of said section seat, and said section having projecting wings at its ends, and the rim having recesses in its inner surface at the ends of the gap in which the side wings seat.

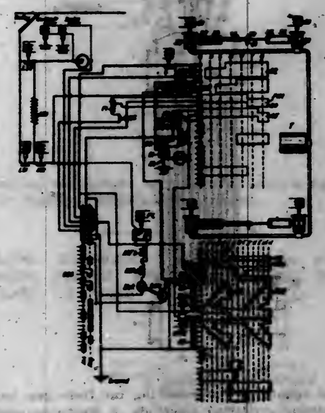
1,393,712. PROCESS AND MEANS FOR REMOVING SUSPENDED MATTER FROM GAS. FRANK W. SPENCER and WILLIAM C. WOODLAND, Detroit, Mich. Filed Nov. 4, 1918. Serial No. 261,122. 12 Claims. (Cl. 183—114.)

12. An apparatus for removing tar from gas, comprising a tubular collecting electrode, a discharge electrode, and means surrounding the collecting electrode for applying heat thereto.

1,393,713. METHOD OF REMOVING AND RECOVERING SOLVENT FROM NITROCELLULOSE EXPLOSIVES. FRED W. STETSON and JESSE L. ESSEX, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Jan. 30, 1920. Serial No. 355,222. 9 Claims. (Cl. 52—20.)

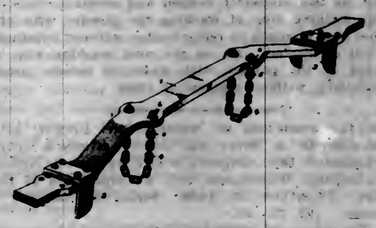
4. The method of separately removing and recovering from nitrocellulose powder the ethyl ether and the ethyl alcohol of the alcohol-ether solvent, which method includes, as two distinctly defined and separate steps, the initial washing step of washing the powder with ethyl alcohol of a strength to remove ether without substantial removal of alcohol, and, as the next washing step, the washing of the powder with water to remove alcohol substantially without removal of ether.

1,393,714. PROCESS OF PRODUCING PICRIC ACID. CHARLES M. A. STINE and JOHN LAWRENCE GILSON, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 25, 1919. Serial No. 333,361. 13 Claims. (Cl. 23—24.)



1. The process of producing picric acid which comprises suspending dinitrophenol in concentrated sulfuric acid, gradually adding thereto a mixture of nitric and sulfuric acids while maintaining the temperature between 160 and 200° F., heating the resulting reaction mixture at a temperature of 200 to 235° F. for about an hour, and then cooling said reaction mixture.

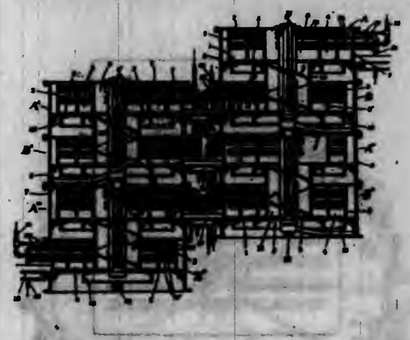
9. In the process of producing picric acid from dinitrophenol, the step which comprises preparing a suspension of 1 part of dinitrophenol in from about 1½ to 3 parts of concentrated sulfuric acid.



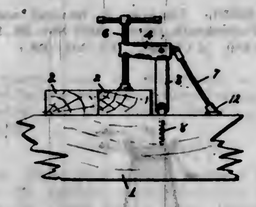
1,393,715. SYSTEM OF CONTROL. NORMAN W. STOBER and RUDOLF E. HELLMUND, Pittsburgh, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 10, 1916. Serial No. 77,428. 7 Claims. (Cl. 172—179.)

1. In a system of control, the combination with a dynamo-electric machine adapted for regenerative break-

ing, of means for controlling said machine to regulate the braking effort thereof, and relay means governing the operation of said controlling means adapted to be connected to respond to electrical quantities of the system which are factors of the machine torque, said controlling means being arranged to affect the circuit connections of said relay means.



1,393,716. AUXILIARY ARCH-BAR. Peter Swanson, Ely, Minn. Filed June 9, 1921. Serial No. 476,133. 3 Claims. (Cl. 105—204.)

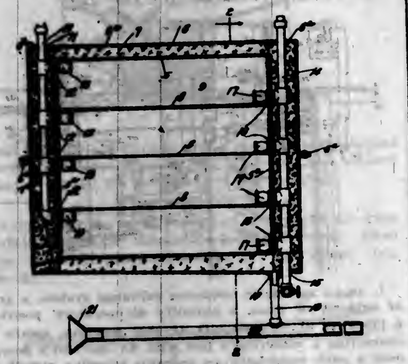


1. An auxiliary arch bar of the character described, comprising a main body portion to fit on top of a standard arch bar, means for holding it in position on a truck and depending hold fast means for engagement with portions of the truck beneath the bar for the purpose described.

1,393,717. APPARATUS FOR THE PROGRESSIVE HEATING OR COOLING OF MILK-BOTTLES AND OTHER CONTAINERS. Godfrey M. S. Tait, Washington, D. C. Filed Feb. 14, 1917. Serial No. 148,643. 5 Claims. (Cl. 126—272.)

1. Apparatus such as described comprising a plurality of superposed rotary tables, a spiral guide above each such table adapted to receive containers and during the motion thereof on such tables to guide such containers toward or from the center as the case may be, and means for passing such containers from the one table to the other, comprising means for regulating the speed of passage of the containers from the one table to the other.

1,393,718. CLAMP. James L. Taylor, Poughkeepsie, N. Y.; Emma A. Taylor and Bessie A. Matthews executrices of said James L. Taylor, deceased. Filed June 21, 1918. Serial No. 241,146. 7 Claims. (Cl. 144—298.)



1. In the clamp of the character described, the combination with a bar having a laterally projecting head with a clamping screw, and a hinged brace at the opposite side from said head, of an anchoring screw hingedly connected to the end of said bar away from said head, and coöperating stop means on said anchoring screw and bar permitting a limited hinge movement and yet holding the bar in working position when the anchoring screw is embedded.

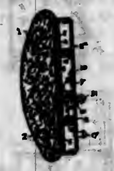
1,393,719. OIL-TANK. Arthur Ernest De Save, Mobile, Ala. Filed Mar. 22, 1918. Serial No. 223,962. 10 Claims. (Cl. 220—85.)

1. In a gasolene tank, an inner casing, an outer casing inclosing the inner casing and spaced therefrom, an absorbent material packed in the space between the two casings, the inner casing being divided by horizontal and vertical partitions into a plurality of compartments, inlets, branches connecting the inlets with the compartments, check valves in the branches, outlets, branches connecting the compartments with the outlets, check valves in the last mentioned branches, an outlet at the bottom of the outer casing, and a longitudinally extending tube without the outer casing and open at both ends the last mentioned outlet communicating with the tube intermediate its ends.

7. In a tank, an inner casing, an outer casing inclosing the inner casing and spaced therefrom, the inner casing being divided into a plurality of compartments, an absorbent material packed between the casings, a vertical inlet in the space between the inner and outer casing and disposed in the absorbent material, branches connecting the inlet with each of the compartments, a vertical outlet in the space between the inner and outer casing and disposed

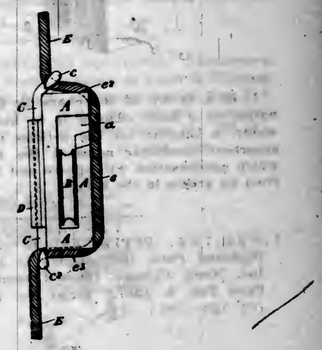
in the absorbent material, branches connecting the compartments with the outlet, check valves in the branches, and an outlet at the bottom of the outer casing.

1,393,720. HYPODERMIC SYRINGE. Harry Lomas and James Mortimer, London, England. Filed Aug. 22, 1917. Serial No. 187,597. 3 Claims. (Cl. 128—234.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In a hypodermic syringe comprising in combination a barrel, a delivery nozzle, a piston, a piston-rod secured to said piston and having a groove running alternately lengthwise and transversely at its periphery and a collar loosely fitting said piston rod and having a pin adapted to project into and engage said groove, substantially as described.

1,393,721. BELT-BUCKLE. Lawrence F. Otten, Newport, Ky. Filed Mar. 14, 1921. Serial No. 451,976. 3 Claims. (Cl. 24—191.)



1. In a belt buckle, a plate, a channel in said plate, a belt adapted to pass through said channel, upturned ears on said plate, a pivot on said ears, a serrated cam having movement about said pivot for engaging said belt, an actuating member separate from the gripping member having movement about said pivot adapted to selectively and positively force said cam into engagement with one portion of the said belt or disengage it therefrom, and means for attaching said actuating member to another portion of said belt.

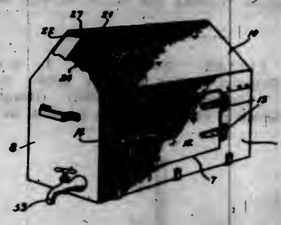
1,393,722. SURGICAL TRUSS. Alfred Matthew Scarff, Croydon, England. Filed Nov. 14, 1916. Serial No. 131,250. 5 Claims. (Cl. 128—117.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A surgical truss embodying therein a truss pad, having a non-flexible base, a non-flexible lever plate, a band attached to said lever plate, a member constantly transmitting substantially uniform pressure from said lever plate to said base, said member having a rigid connection with one of said parts and a universal joint connection with the other permitting oscillatory movement of said base and said plate with relation to each other, cushions between said base and said plate arranged about said member, and means limiting the extent of said oscillatory movement.

1,393,723. PULLEY. Augustus W. L. Scheamuly, Sutton, England. Filed June 11, 1920. Serial No. 388,311. 5 Claims. (Cl. 254—194.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A pulley block having associated therewith rope-engaging means adapted to engage the opposite ends of a supporting-rope bight, within which one side and at least a portion of the opposite ends of the block are embraced.

1,393,724. ROAD-MACHINE. Oscar M. Lackie, Duluth, Minn. Filed May 17, 1920. Serial No. 382,162. 3 Claims. (Cl. 37—42.)

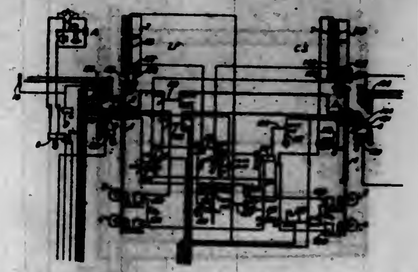


1. In a device of the character described, pilot means, a rear supporting means, a beam connecting the two,

and a plow flexibly connected to the beam and bodily movable in relation to the beam laterally and axially

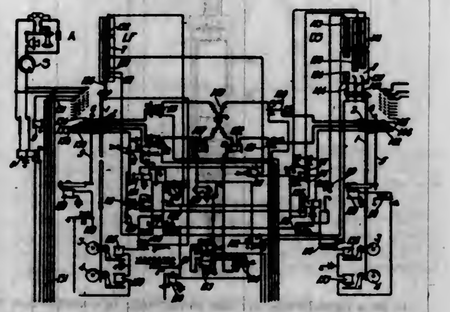
whereby the snow or other material may be shifted to one side or the other of the roadway or divided centrally and a part directed to each side.

1,393,725. STEAMER. MAX LEVIN, Chicago, Ill. Filed Feb. 21, 1920. Serial No. 360,314. 7 Claims. (Cl. 228—26.)



1. In a device of the character described, the combination of a body adapted to be heated and to contain water, a support for the articles in the body and an absorbent conductor adjacent the top of the body to which condensation will adhere and for carrying it away from an article in the body.

1,393,726. PUPPET-VALVE. CARL A. PFANSTIEHL, Highland Park, Ill., assignor to Pfanstiehl Company, Inc., North Chicago, Ill., a Corporation of New York. Filed Feb. 8, 1917. Serial No. 147,895. 2 Claims. (Cl. 123—188.)



1. A valve for internal combustion engines comprising a hollow steel stem, a head fused thereto, the mixed metal of the head and stem extending into the hollow portion of the stem and reinforcing the latter at and near its union with the head.

1,393,727. CALL-DISTRIBUTING SYSTEM. SAMUEL B. WILLIAMS, Jr., Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 28, 1919. Serial No. 341,167. 14 Claims. (Cl. 179—27.)

1. In an automatic telephone exchange system, a group of subscribers' lines, a plurality of operators' positions, a plurality of cord circuits at each position, means for connecting a subscriber's line with an operator's position over a path comprising an operator selecting circuit terminating in means for selecting an idle operator's position, and selector switches for establishing a connection between a calling line and said operator selecting circuit, and switching means for subsequently connecting the terminals of said calling line with a cord circuit of said selected position independent of said path.

1,393,728. TELEPHONE-EXCHANGE SYSTEM. SAMUEL B. WILLIAMS, Jr., Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 8, 1919. Serial No. 343,284. 15 Claims. (Cl. 179—18.)

1. In a telephone system, a calling line, selector switches for extending said line, controlling mechanism for controlling the operation of said selector switches, a quick acting finder switch responsive to the initiation of a call on said line for associating said mechanism therewith, means for subsequently associating said mechanism with said line, an impulse circuit established upon the initial association of said mechanism with said line, a second impulse circuit established upon the subsequent association of said mechanism with said line, means controlled by the calling subscriber for sending impulses over both of said circuits, and means responsive to such impulses for setting said controlling mechanism.

1,393,729. DISK WHEEL FOR AUTOMOBILES. JOSEPH THOMAS PICKERING, New Brighton, England. Filed Feb. 14, 1921. Serial No. 444,963. 7 Claims. (Cl. 301—63.)

1. A disk wheel comprising a hub portion, an inner disk secured thereto, an outer disk, a hub cap adapted to secure the outer disk to the hub portion, a felly formed

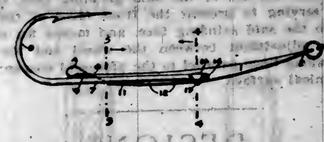
in annular halves, one half secured to each disk and adapted to fit between the disks when in assembled relation, the outer peripheral portion of the disks extending

beyond the felly and formed into a clencher bead adapted to receive a tire, and a rib carried by the felly and adapted to project beyond the peripheral line of the disks.

1,393,730. SHOE AND PROCESS OF MAKING THE SAME. JOHN F. TRENAM, Brockton, Mass. Filed Apr. 12, 1920. Serial No. 373,078. 19 Claims. (Cl. 36—22.)

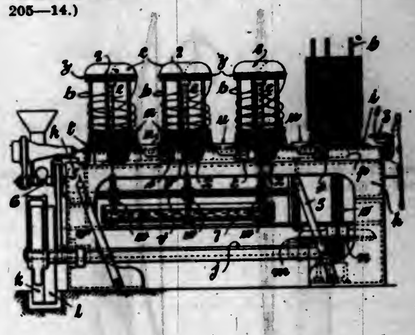
1. A welt shoe having an innersole provided with a continuous rib extending around the shank and the forepart from heel to heel, and an upper and a welt stitched to said rib, said innersole being split at the shank to provide two relatively movable integrally connected layers or members.

1,393,731. STEERING-WHEEL LOCK. JOHN NELSON, Chicago, Ill. Filed Apr. 2, 1920. Serial No. 370,731. 12 Claims. (Cl. 70—129.)



12. The combination of a steering wheel having a tubular hub, a steering port having a collar fitting in said hub, a transverse bolt mounted in said hub and registering with a circumferential groove in the collar, said bolt having a bit adapted to register with longitudinal slots in the collar for operatively connecting the hub to the collar.

REISSUES.



15,204. ARTIFICIAL FISH-BAIT. FREDERICK DUBROW, Sausalito, Calif. Filed Apr. 14, 1920. Serial No. 373,926. Original No. 1,334,022, dated Mar. 16, 1920, Serial No. 192,054, filed Sept. 19, 1917. 1 Claim. (Cl. 43—45.)

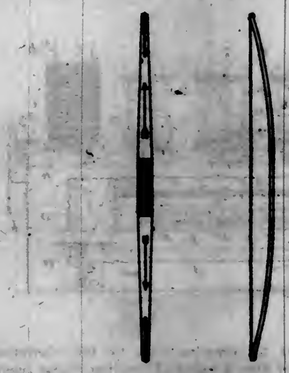
In a device of the character described, the combination of a concavo-convex elongated plate having a tapering front end and a rear portion tapering to the rear and then extended in width sharply on both sides, each extension having a spiral form to form a propeller, said plate having an elongated slot extending centrally of its narrow portion and grooved in its outer surface to the rear of said slot and having a longitudinal series of holes therethrough in front of said last-named groove, a hook having a shank in both of said grooves and extending through said slot and having a loop adjacent to one of said holes, and a

screw extending through said loop and hole and having a head pressed against said loop.

15,205. METHOD AND APPARATUS FOR DRAWING WIRE. ROBERT DUNCAN CONNOR, Withington, Manchester, England. Filed Feb. 3, 1921. Serial No. 442,314. Original No. 1,198,111, dated Sept. 12, 1916, Serial No. 57,305, filed Oct. 22, 1915. 13 Claims. (Cl. 205—14.)

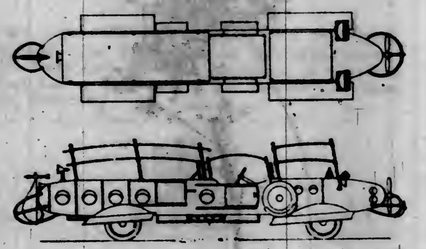
6. In apparatus for drawing wire by the continuous method, a series of dies, a series of rotating blocks, means permitting the delivery of wire from each of said blocks by the uncoiling of the convolutions thereon, and means on each block for maintaining a slight tension upon the wire carried thereby.

15,206. CUTTER-GRINDING MACHINE. FRIEDERICH MÜLLER, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed May 3, 1921. Serial No. 466,594. Original No. 1,338,320, dated Apr. 27, 1920, Serial No. 253,871, filed Sept. 13, 1918. 39 Claims. (Cl. 51—225.)



1. The combination in a cutter grinding machine, of a grinding wheel rotatable about a horizontal axis and hav-

ing a convex conical grinding face, a cutter holder having its axis intersecting and perpendicular to an element of the conical surface of the said grinding face, the said holder serving to present the front faces of the cutter teeth to the said grinding face, and means for effecting relative adjustment between the wheel and the cutter holder along lines parallel to the aforesaid element of the said conical surface.

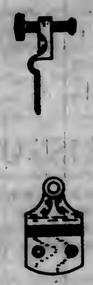


DESIGNS.

59,317. TOY BOW. ADRIAN D. ADRIANCE, Brooklyn, N. Y. Filed Apr. 30, 1921. Serial No. 459,162. Term of patent 7 years.

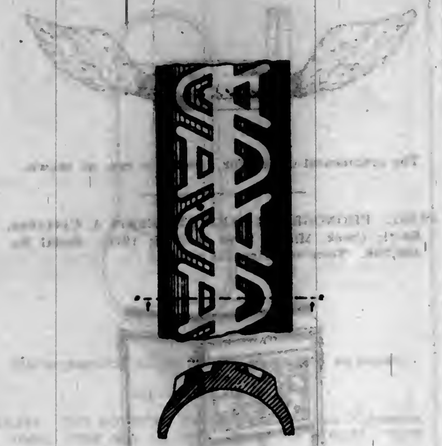
The ornamental design for a toy bow as shown.

59,318. AUTOMOBILE-BODY. JOHN E. ALLEN, Big Creek, Calif. Filed May 17, 1921. Serial No. 470,491. Term of patent 7 years.



The ornamental design for an automobile body, substantially as shown.

59,319. FIRE-EXTINGUISHER. FRANK W. ANDREWS, Wapakoneta, Ohio. Filed Oct. 13, 1919. Serial No. 330,497. Term of patent 14 years.

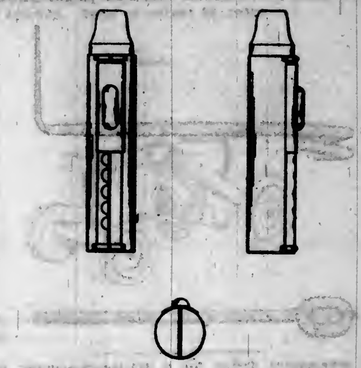


The ornamental design for a fire extinguisher, as shown.

59,320. AUTOMOBILE WINDOW-BRACKET. CHARLES F. ATTWOOD, Grand Rapids, Mich. Filed May 2, 1921. Serial No. 466,240. Term of patent 14 years.

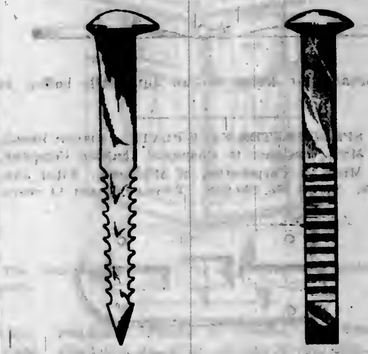
The ornamental design for an automobile window bracket, as shown.

59,321. RUBBER-TIRE CASING. CAROL R. BAKER, Akron, Ohio, assignor to The Akron Universal Tire and Rubber Company, Medina, Ohio. Filed Apr. 9, 1921. Serial No. 460,077. Term of patent 7 years.



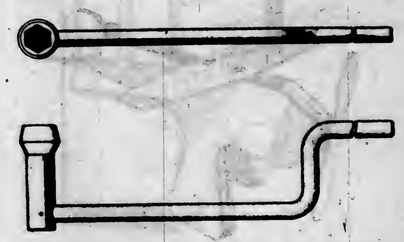
The ornamental design for a rubber tire casing, as shown.

59,322. RUBBER-TIRE CASING. CAROL R. BAKER, Akron, Ohio, assignor to The Akron Universal Tire and Rubber Company, Medina, Ohio. Filed Apr. 9, 1921. Serial No. 460,078. Term of patent 7 years.



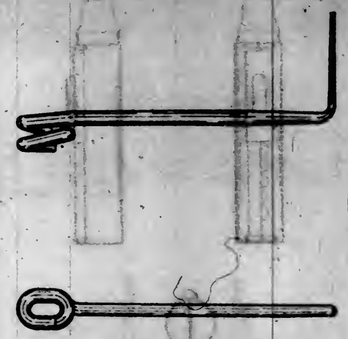
The ornamental design for a rubber tire casing, as shown.

59,323. TOY WHISTLE. JEROME BARTOLOWSKY, Oakland, Calif. Filed Apr. 25, 1921. Serial No. 464,453. Term of patent 14 years.



The ornamental design for a toy whistle, as shown.

59,324. SPIKE. FREDERICK C. BAUER, Sr., Camden, N. J. Filed July 9, 1920. Serial No. 395,164. Term of patent 14 years.



The ornamental design for a spike as shown.

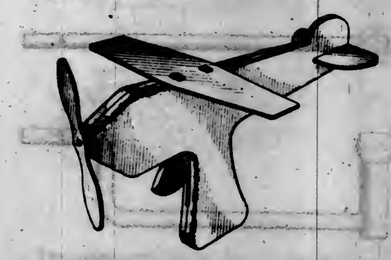
59,325. TOOL. WARREN S. BELLOWS, Worcester, Mass. Filed Sept. 16, 1919. Serial No. 324,256. Term of patent 14 years.

The ornamental design for a tool, as shown.

59,326. DRAIN-COCK-OPENING TOOL. John Bonnow and Edwin Mason, Union, Iowa, assignors of one-third to William R. Stanfield, Union, Iowa. Filed Mar. 10, 1921. Serial No. 451,304. Term of patent 14 years.

The ornamental design for a drain-cock-opening tool, as shown.

59,327. AUTOMOBILE-BUFFER. Donald L. Benton, Adrian, Mich., assignor to American Chain Company, Inc., a Corporation of New York. Filed May 3, 1921. Serial No. 466,624. Term of patent 14 years.



The ornamental design for an automobile buffer, as shown.

59,328. SPEEDOMETER FACE-PLATE. Joseph Berge, Flint, Mich., assignor to Champion Ignition Company, Flint, Mich., a Corporation of Michigan. Filed Jan. 6, 1919. Serial No. 269,948. Term of patent 14 years.

The ornamental design for a speedometer face-plate, as shown.

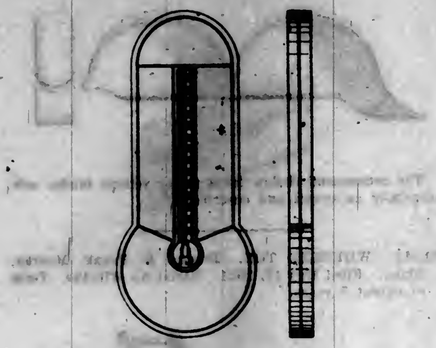
59,329. TOY. John W. Carlson, Chicago, Ill., assignor to Chicago Novelty Mfg. Co., a Partnership composed of John W. Carlson, David Seaholm, and Conrad Johnson. Filed Apr. 20, 1921. Serial No. 463,086. Term of patent 7 years.

The ornamental design for a toy as shown.

59,330. RADIATOR-CAP. James P. Cavanaugh and Samuel C. Pearis, Denver, Colo., assignors of one-third to Isaac S. Dunwoody, Denver, Colo. Filed June 16, 1921. Serial No. 478,176. Term of patent 3½ years.

The ornamental design for a radiator cap, as shown.

59,331. PHONOGRAPH-CABINET. Edwin A. Caviness, Battle Creek, Mich. Filed Dec. 14, 1920. Serial No. 430,768. Term of patent 3½ years.

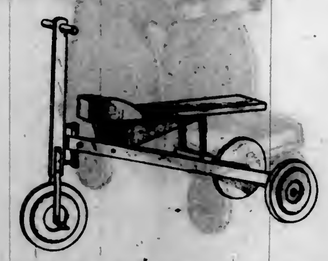


The ornamental design for a phonograph cabinet as shown.

59,332. PHONOGRAPH-CABINET. Edwin A. Caviness, Battle Creek, Mich. Filed Dec. 14, 1920. Serial No. 430,769. Term of patent 3½ years.

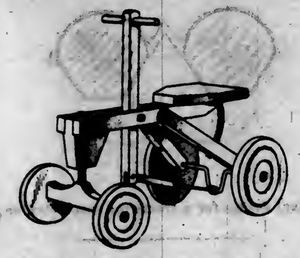
The ornamental design for a phonograph cabinet as shown.

59,335. THERMOMETER. Glenn S. Clark, Kalamazoo, and Plummer B. Sutton, East Lansing, Mich.; said Clark assignor to said Sutton. Filed Apr. 16, 1921. Serial No. 462,034. Term of patent 14 years.



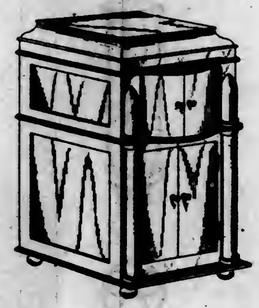
The ornamental design for a thermometer, as shown.

59,334. TOY ROCKER. Clarence J. Clouser, Columbus, Ohio. Filed May 19, 1921. Serial No. 470,910. Term of patent 14 years.



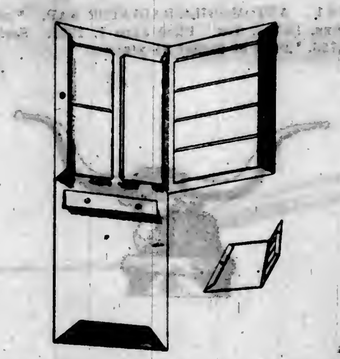
The ornamental design for a toy rocker, as shown.

59,335. CHILD'S VELOCIPEDE. William M. Cobb, Zion, Ill., assignor to Wilbur Glenn Voliva, Zion, Ill., doing business under the firm-name and style of Zion Institutions and Industries. Filed May 3, 1921. Serial No. 466,619. Term of patent 3½ years.



The ornamental design for a child's velocipede, as shown.

59,336. CHILD'S VELOCIPEDE. William M. Cobb, Zion, Ill., assignor to Wilbur Glenn Voliva, Zion, Ill., doing business under the firm-name and style of Zion Institutions and Industries. Filed May 3, 1921. Serial No. 466,620. Term of patent 3½ years.



The ornamental design for a child's velocipede, as shown.

59,337. PHONOGRAPH-CABINET. Edward R. Conley, Springville, N. Y. Filed Feb. 19, 1921. Serial No. 446,523. Term of patent 14 years.

The ornamental design for a phonograph cabinet, as shown.

59,338. FOLDER. Frank J. Coerts, San Francisco, Calif. Filed Oct. 18, 1920. Serial No. 417,855. Term of patent 7 years.

The ornamental design for a folder as shown.

59,339. FRAME FOR SPECTACLES. ORVILLE U. DEENA, Wort Collins, Colo. Filed Apr. 26, 1918. Serial No. 231,069. Term of patent 14 years.

The original design for a frame for spectacles, as shown.

59,340. WHISTLE. EDWARD S. DE TAMBLE, Racine, Wis., assignor to Racine Accessories Manufacturing Co., Racine, Wis., a Corporation of Wisconsin. Filed Jan. 20, 1921. Serial No. 438,789. Term of patent 7 years.

The ornamental design for a whistle, as shown.

59,341. AUTOMOBILE-RADIATOR CAP. VICTOR J. DUPRAS, Dallas, Tex. Filed June 7, 1921. Serial No. 475,723. Term of patent 3½ years.

The ornamental design for an automobile radiator cap, as shown.

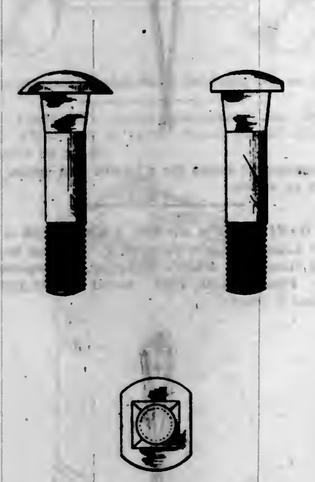
59,342. MOTOR-VEHICLE FENDER. ROLLIN B. FAGNEL, Oakland, Calif. Filed May 26, 1921. Serial No. 472,908. Term of patent 14 years.

The ornamental design for a motor vehicle fender substantially as shown and described.

59,343. WHEELED TOY. EUDORA B. FERRY, Murray, Idaho. Filed May 17, 1921. Serial No. 470,484. Term of patent 7 years.

The ornamental design for a wheeled toy substantially as shown.

59,344. WHEELED TOY. EUDORA B. FERRY, Murray, Idaho. Filed May 17, 1921. Serial No. 470,485. Term of patent 7 years.

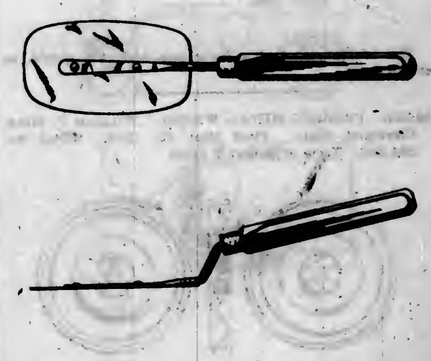


The ornamental design for a wheeled toy substantially as shown.

59,345. SAFETY-RAZOR BLADE. HENRY J. GABELMAN, New York, N. Y. Filed Apr. 30, 1921. Serial No. 465,840. Term of patent 14 years.

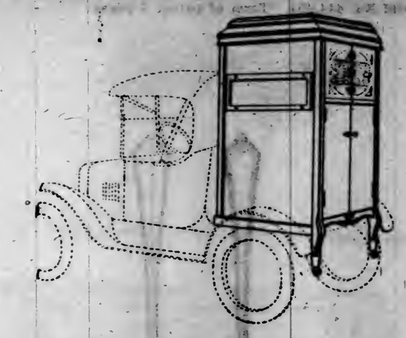
The ornamental design for a safety razor blade, substantially as shown.

59,346. BOLT. HELON V. GILL, Spring Valley, Minn. Filed Dec. 30, 1920. Serial No. 434,162. Term of patent 14 years.



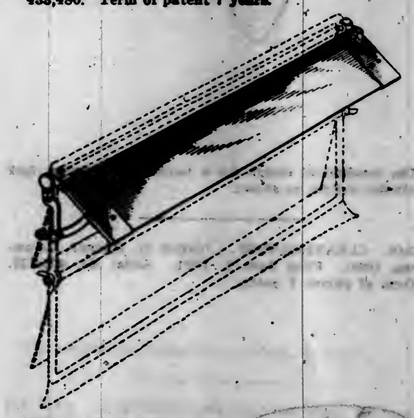
The ornamental design for a bolt, as shown.

59,347. HANDLE FOR A SPOON, FORK, OR SIMILAR ARTICLE. PETER J. GOUMOU, Sag Harbor, N. Y., assignor to Joseph Fabys & Company, New York, N. Y., a Corporation of New York. Filed Feb. 12, 1921. Serial No. 444,604. Term of patent 7 years.



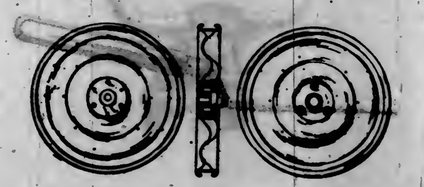
The ornamental design for a handle for a spoon, fork or similar article, as shown.

59,348. CLEANING-TOOL. JOSEPH H. HEBERT, Columbus, Ohio. Filed June 7, 1921. Serial No. 475,727. Term of patent 7 years.



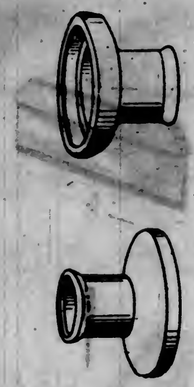
The ornamental design for a cleaning tool, as shown.

59,349. AUTOMOBILE-TRUCK BODY. Charles Hellmanzoner, Chicago, Ill. Filed Feb. 2, 1921. Serial No. 442,896. Term of patent 7 years.



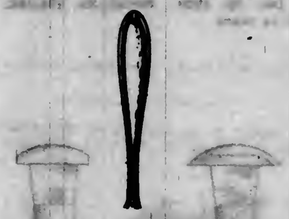
The ornamental design for an automobile truck body as shown.

59,350. SUN AND RAIN SHIELD. Ernest C. Hillman, Los Angeles, Calif. Filed Dec. 27, 1920. Serial No. 433,480. Term of patent 7 years.



The ornamental design for a sun and rain shield, as shown.

59,351. PRESSED-METAL WHEEL. William C. Hinn, Cleveland, Ohio. Filed Mar. 22, 1919. Serial No. 284,506. Term of patent 7 years.

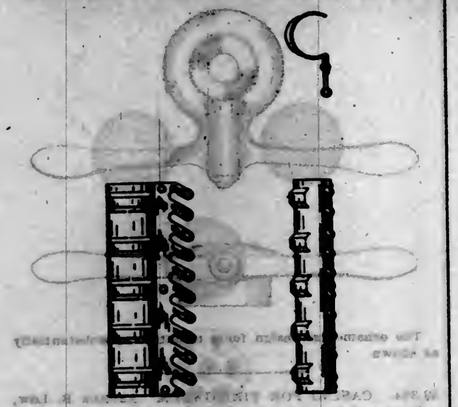


The design for a pressed metal wheel, substantially as shown.

59,352. HUB-SHELL FOR WIRE WHEELS. Hunter S. Heeny, Jr., Buffalo, N. Y., assignor to Wire Wheel Corporation of America, Buffalo, N. Y., a Corporation of New York. Filed Jan. 31, 1919. Serial No. 274,877. Term of patent 14 years.

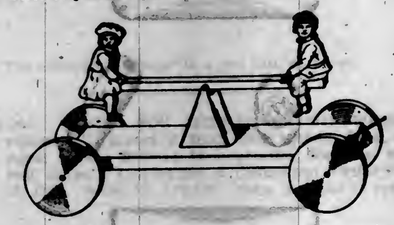
The ornamental design for a hub shell for wire wheels, substantially as shown.

59,353. HANDLE OF A SPOON, A KNIFE, OR A FORK. Sidney James, Niagara Falls, N. Y., assignor to Simeon L. and George H. Rogers Company, a Corporation of Maine. Filed June 28, 1921. Serial No. 481,112. Term of patent 7 years.



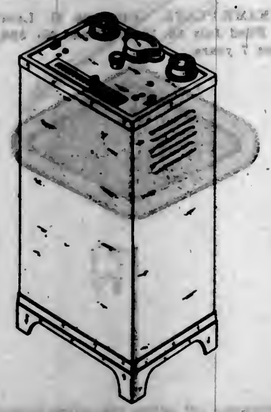
The ornamental design for a handle of a spoon, a knife or a fork as shown.

59,354. HANDLE OF A SPOON, A KNIFE, OR A FORK. Sidney James, Niagara Falls, N. Y., assignor to Simeon L. and George H. Rogers Company, a Corporation of Maine. Filed June 28, 1921. Serial No. 481,113. Term of patent 7 years.



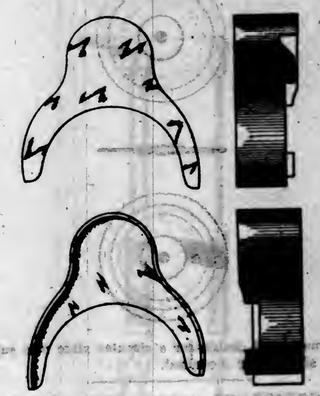
The ornamental design for a handle of a spoon, a knife or a fork as shown.

59,355. BLIND-HOLDING WINDSHIELD-CLIP. Hiram A. Kastner, Galt, Ontario, Canada. Filed Sept. 13, 1920. Serial No. 410,019. Term of patent 7 years.



The ornamental design for a blind-holding windshield clip, as shown.

59,356. TEETERING TOY. Gustaf J. Kallander, Seattle, Wash. Filed June 9, 1921. Serial No. 476,358. Term of patent 7 years.

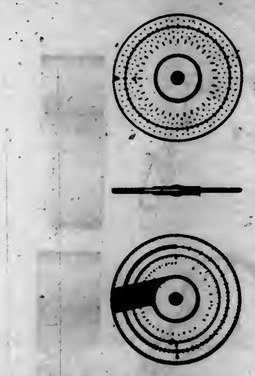


The ornamental design for a teetering toy as shown.

59,357. CABINET. Arion Kalenborn, San Francisco, Calif. Filed May 4, 1921. Serial No. 466,701. Term of patent 3½ years.

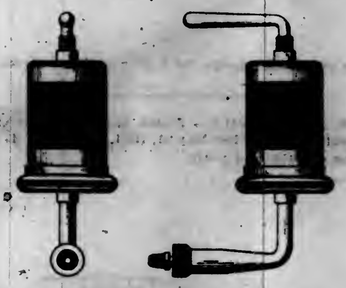
The ornamental design for a cabinet, as shown.

59,358. GEAR-COVER. Gen. Knerr, Philadelphia, Pa. Filed June 1, 1921. Serial No. 474,373. Term of patent 7 years.



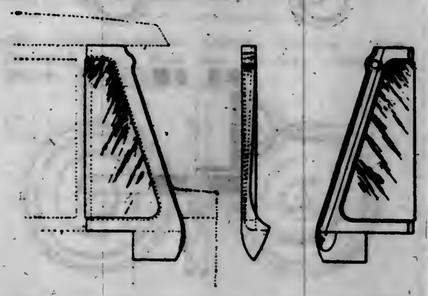
The ornamental design for a gear cover, as shown.

59,359. AUTOMOBILE. James Masakuki Kawahami, Stockton, Calif. Filed May 21, 1921. Serial No. 471,500. Term of patent 14 years.



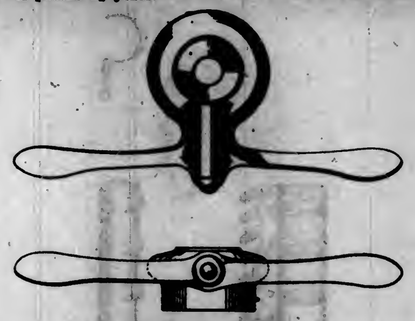
The ornamental design for an automobile, as shown.

59,360. CIRCULAR SLIDE-RULE. JOSEPH F. KELSEY, New York, and FRANCIS J. RANDS, Woodhaven, N. Y., assignors to Keller Mechanical Engraving Co., Brooklyn, N. Y., a Corporation of New York. Filed July 1, 1920. Serial No. 398,416. Term of patent 14 years.



The ornamental design for a circular slide rule substantially as shown and described.

59,361. GREASE-GUN. ALBERT A. KLEMS, Detroit, Mich. Filed Oct. 11, 1920. Serial No. 416,329. Term of patent 7 years.

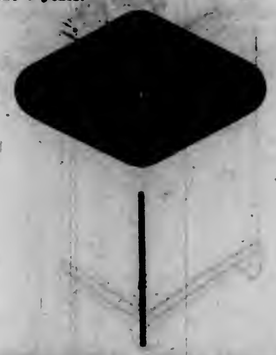


The ornamental design for a grease gun, as shown.

59,362. CORNER-PIECE FOR VEHICLE-TOPS. WILLIAM B. LARKINS, San Rafael, Calif. Filed June 18, 1921. Serial No. 478,748. Term of patent 7 years.

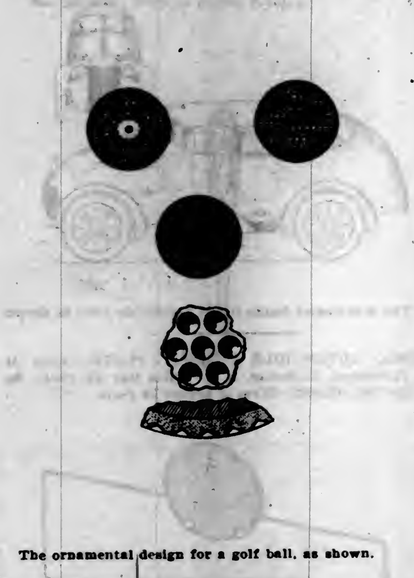
The ornamental design for a corner piece for vehicle tops, as shown.

59,363. RADIATOR-CAP. ARCH L. LITCHFIELD, Toledo, Ohio. Filed June 16, 1921. Serial No. 478,178. Term of patent 14 years.



The ornamental design for a radiator cap substantially as shown.

59,364. CASING FOR TIRE-GAGES. ARTHUR B. LOW, Denver, Colo. Filed June 7, 1920. Serial No. 387,186. Term of patent 14 years.

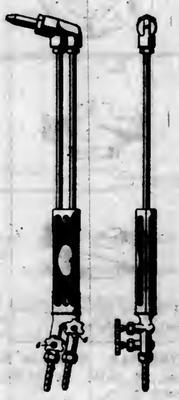


The ornamental design for a casing for tire gages, as shown.

59,365. NAME-PLATE. CHARLES H. LYNCH, Seattle, Wash. Filed July 16, 1920. Serial No. 396,843. Term of patent 7 years.

The ornamental design for a name plate, as shown.

59,366. GOLF-BALL. PATRICK A. MARTIN, Birmingham, England. Filed Oct. 12, 1920. Serial No. 416,567. Term of patent 7 years.



The ornamental design for a golf ball, as shown.

59,367. TUBING FOR AUTOMOBILE-WINDSHIELD FRAMES. WILLIAM B. MCCARTHY, Milford, Conn., assignor to The Rostand Manufacturing Company, Milford, Conn., a Corporation of Connecticut. Filed Oct. 15, 1920. Serial No. 417,249. Term of patent 14 years.

The ornamental design for tubing for automobile windshield frames, as shown.

59,368. WELDING-BLOWPIPE OR SIMILAR ARTICLE. ELOF H. MINDEN, Short Hills, N. J., assignor to American Gas-Accumulator Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Mar. 18, 1920. Serial No. 366,993. Term of patent 14 years.

The ornamental design for a welding blow pipe or similar article, as shown.

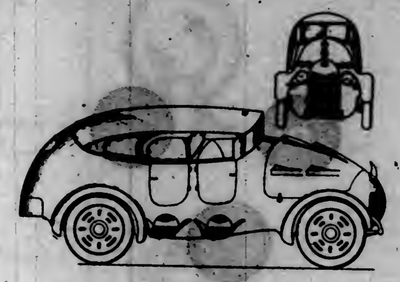
59,369. SECTIONAL SUPPORT FOR ELECTRIC HEATING ELEMENTS. FREDERICK W. MOFFAT, Weston, Ontario, Canada. Filed Apr. 19, 1921. Serial No. 462,695. Term of patent 14 years.

The ornamental design for a sectional support for electric heating elements, as shown.

59,370. SECTIONAL SUPPORT FOR ELECTRIC HEATING ELEMENTS. FREDERICK W. MERRAT, Weston, Ontario, Canada. Filed Apr. 19, 1921. Serial No. 462,606. Term of patent 14 years.

The ornamental design for a sectional support for electric heating elements, as shown.

59,371. WRECKING-BAR. CHARLES NELSON, Hoffman, Minn. Filed Dec. 23, 1919. Serial No. 347,024. Term of patent 14 years.

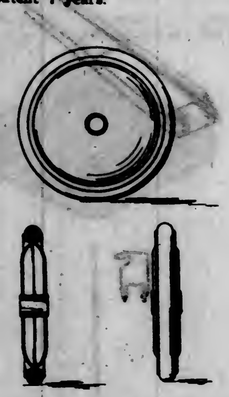


The ornamental design for a wrecking bar, as shown.

59,372. CUFF-BUTTON. JOHN H. OSTER, Cleveland, Ohio, assignor to Arthur S. Newman, Cleveland, Ohio. Filed Jan. 14, 1920. Serial No. 351,487. Term of patent 3½ years.

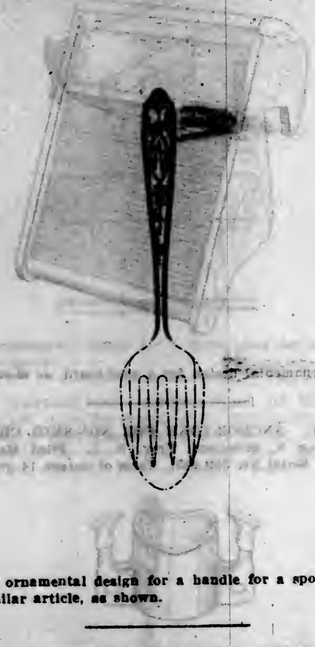
The ornamental design for a cuff button as shown.

59,373. AUTOMOBILE-BODY. ERNEST HAWKSTONE, Los Angeles, Calif. Filed Aug. 26, 1920. Serial No. 405,850. Term of patent 7 years.



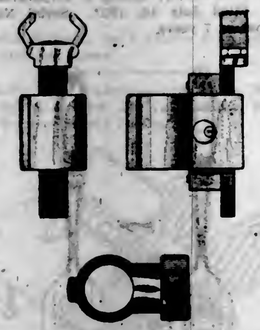
The ornamental design for an automobile body as shown.

59,374. AUTOMOBILE LICENSE-PLATE. JOHN M. PATTERSON, Rochester, N. Y. Filed May 13, 1921. Serial No. 469,380. Term of patent 14 years.



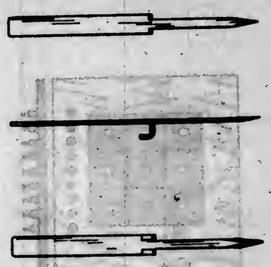
The ornamental design for an automobile license plate as shown.

59,375. DISK WHEEL. WILLIAM L. PFEIFFER, Rochester, N. Y., assignor to William J. Woerner, Rochester, N. Y. Filed May 13, 1921. Serial No. 469,381. Term of patent 7 years.



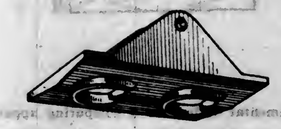
The ornamental design for a disk wheel as shown.

59,376. HANDLE FOR A SPOON, FORK, OR SIMILAR ARTICLE. FREDERICK E. PRITCHARD, Waterbury, Conn., assignor to International Silver Co., Meriden, Conn., a Corporation of New Jersey. Filed July 9, 1921. Serial No. 483,578. Term of patent 7 years.



The ornamental design for a handle for a spoon, fork, or similar article, as shown.

59,377. AUTOMOBILE - STEERING - WHEEL LOCK. CLARA O. RUSH, San Francisco, Calif., assignor to Milton A. Rush, San Francisco, Calif. Filed June 16, 1921. Serial No. 478,171. Term of patent 7 years.

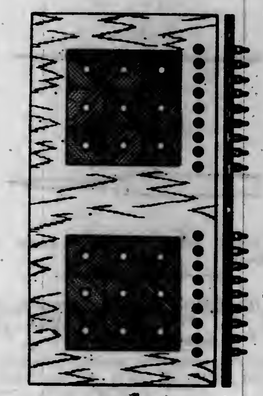


The ornamental design for an automobile steering wheel lock, as shown.

59,378. MILK-BOTTLE-STOPPER REMOVER. TOM W. GAHL, Seattle, Wash. Filed July 12, 1921. Serial No. 485,748. Term of patent 14 years.

The ornamental design for a milk-bottle stopper remover, as shown.

59,379. TRACTION-TREAD. GEORGE L. SCHOFIELD, Frederick, Md. Filed June 10, 1921. Serial No. 476,564. Term of patent 14 years.

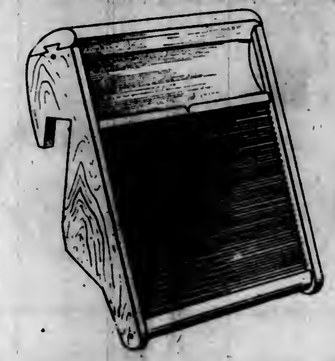


The ornamental design for a traction tread, as shown.

59,380. POWER-STICK CLAMP FOR LOOMS. ROMANO SERAFIN, Hartford, Conn. Filed Mar. 30, 1920. Serial No. 370,014. Term of patent 3½ years.

The ornamental design for a power stick clamp for looms, as shown.

59,381. COMPUTING APPARATUS. NEVA A. SHEPHERD, Omaha, Nebr. Filed Mar. 26, 1921. Serial No. 455,651. Term of patent 7 years.

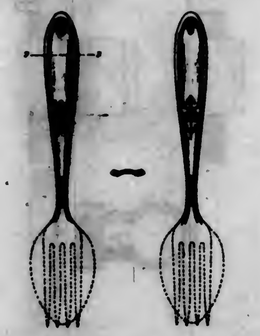


The ornamental design for a computing apparatus, as shown.

59,382. FLUE-CLEANING BLADE. GEORGE E. SHIRLEY, Alba, Mo. Filed May 24, 1920. Serial No. 383,993. Term of patent 7 years.

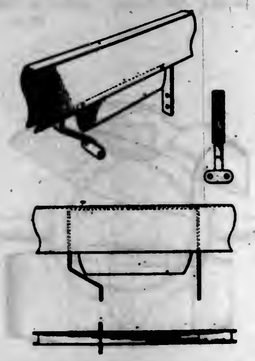
The ornamental design for a flue cleaning blade, as shown and described.

59,383. WASHBOARD. CHARLES SHOLIN, San Francisco, Calif. Filed Oct. 19, 1920. Serial No. 418,169. Term of patent 14 years.



The ornamental design for a washboard, as shown.

59,384. ANCHOR-YOKE FOR NON-SKID CHAINS. WILLIAM N. SLEICHER, Troy, N. Y. Filed Mar. 27, 1920. Serial No. 369,445. Term of patent 14 years.

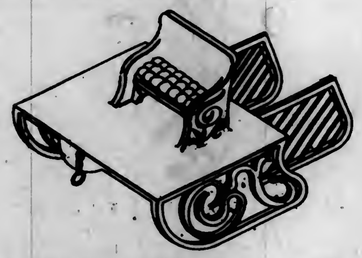


The ornamental design for an anchor-yoke for non-skid chains, as shown.

59,385. HANDLE FOR A SPOON, FORK, AND SIMILAR ARTICLE. IRVING V. SMITH, Glastonbury, Conn., assignor to The Williams Brothers Manufacturing Company, Glastonbury, Conn., a Corporation of Connecticut. Filed July 16, 1921. Serial No. 485,305. Term of patent 7 years.

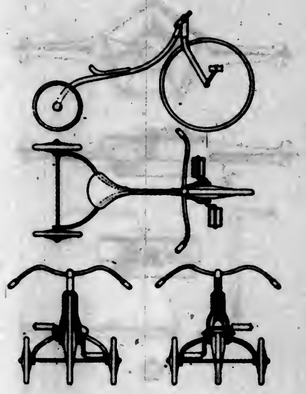
The ornamental design for a handle for a spoon, fork and similar article shown in the accompanying drawing.

59,386. NAME-PLATE FOR AUTOMOBILES. CLARK SCOTES, Puyallup, Wash. Filed June 14, 1921. Serial No. 477,554. Term of patent 7 years.



The ornamental design for a name plate for automobiles, as shown.

59,387. HANDLE FOR A SPOON, FORK, OR SIMILAR ARTICLE. GUSTAVE STROMEMAKER, Wallingford, Conn., assignor to International Silver Co., Meriden, Conn., a Corporation of New Jersey. Filed Nov. 26, 1920. Serial No. 426,658. Term of patent 7 years.

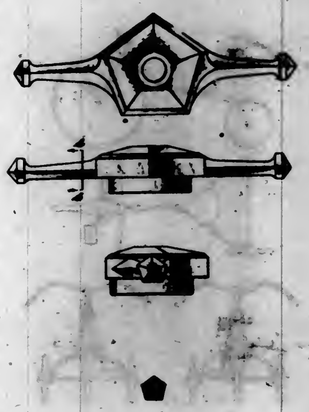


The ornamental design for a handle for a spoon, fork, or similar article, as shown.

59,388. SLED. LEON TKACHUK, Aldergrove, British Columbia, Canada. Filed June 1, 1921. Serial No. 474,260. Term of patent 3½ years.

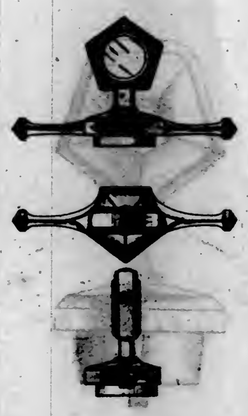
The ornamental design for a sled, substantially as shown.

59,389. CHILD'S VELOCIPEDE. JAMES E. TULLY, St. Louis, Mo., assignor to Metallic Industries, Inc., St. Louis, Mo., a Corporation of Delaware. Filed Feb. 18, 1921. Serial No. 446,181. Term of patent 14 years.



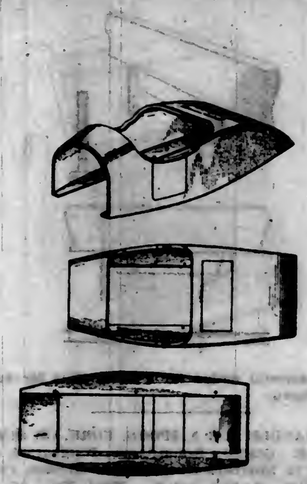
An ornamental design for a child's velocipede, as shown.

59,390. RADIATOR-CAP. WALTER VAN GUILDER, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed June 9, 1921. Serial No. 476,849. Term of patent 7 years.



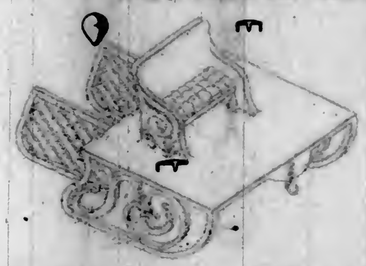
The ornamental design for a radiator cap as shown.

59,391. RADIATOR-CAP. Walter Van Guilder, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed June 10, 1921. Serial No. 476,565. Term of patent 7 years.



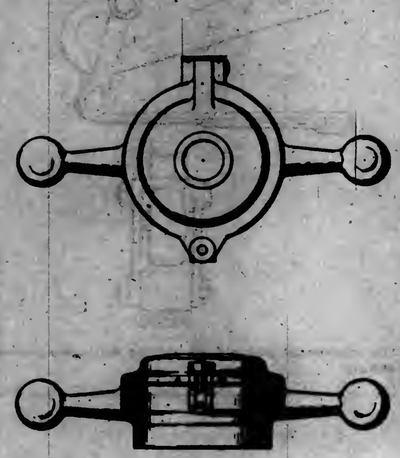
The ornamental design for a radiator cap as shown.

59,392. RADIATOR-CAP WITH TEMPERATURE-INDICATOR. Walter Van Guilder, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed June 10, 1921. Serial No. 476,566. Term of patent 7 years.



The ornamental design for a radiator cap with temperature indicator as shown.

59,393. VEHICLE-BODY. Green J. Wesson, Anniston, Ala. Filed Aug. 21, 1920. Serial No. 405,207. Term of patent 3½ years.

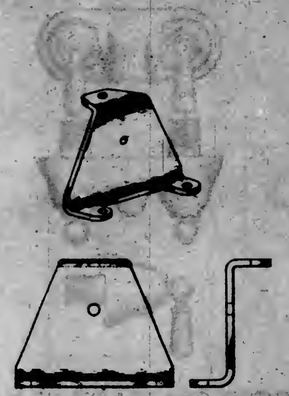


The ornamental design for a vehicle body, as shown.

59,394. SHOE-PLATE. Mansfield M. West, Cleveland, Ohio, assignor to The Universal Shoe Plate Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 3, 1918. Serial No. 256,753. Term of patent 14 years.

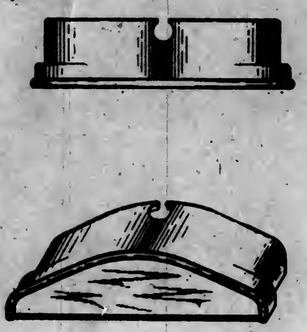
The ornamental design for a shoe plate, as shown.

59,395. RADIATOR-CAP. Frederick G. Whittemore, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed June 9, 1921. Serial No. 476,351. Term of patent 7 years.



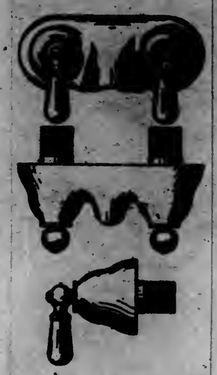
The ornamental design for a radiator cap, as shown.

59,396. TOOL. John G. Williams, West Brownsville, Pa. Filed June 8, 1921. Serial No. 476,101. Term of patent 7 years.



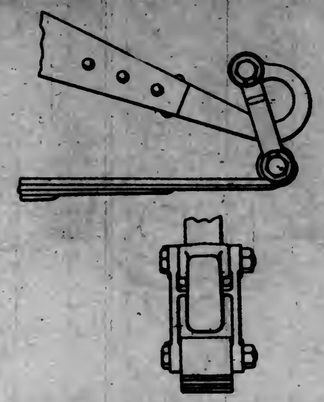
The ornamental design for a tool, as shown.

59,397. CRANK-CASE ARM. Thomas F. Wilson, Providence, R. I. Filed Dec. 13, 1919. Serial No. 345,901. Term of patent 14 years.



The ornamental design for a crank case arm, as shown.

59,398. AUTOMOBILE-RADIATOR CURTAIN-HOOD. Charles C. Woodberry, Cincinnati, Ohio. Filed May 9, 1921. Serial No. 468,177. Term of patent 7 years.



The ornamental design for an automobile radiator curtain hood, as shown.

50,899. BATH-COCK. MAXIMILLIAN WILLIAM WESSNOWSKY, San Francisco, Calif., assignor to Standard Brass Casting Co., Oakland, Calif., a Corporation of California. Filed Oct. 14, 1920. Serial No. 417,661. Term of patent 14 years.

The ornamental design for a bath cock, as shown.

54,469. VEHICLE SPRING SUSPENSION. NATHANIEL WITHEE, Cleveland Heights, Ohio. Filed May 26, 1921. Serial No. 472,913. Term of patent 7 years.

The ornamental design for a vehicle spring suspension, as shown.

TRADE-MARKS

OFFICIAL GAZETTE, OCTOBER 11, 1921.

[PUBLISHED OCTOBER 17, 1921.]

REMAR

Particular description of goods.—Cakes, Candies, and Fruit Preserves.
Claims use since Apr. 19, 1920.

Ser. No. 137,470. (CLASS 50. MERCHANDISE NOT OTHERWISE CLASSIFIED.) THE B. F. GOODRICH COMPANY, New York, N. Y. Filed Sept. 22, 1920.

GOODRICH

Under section 9 of the act of Mar. 19, 1920.
Particular description of goods.—Mats Made Wholly or Partly of Rubber or Having Rubber Incorporated Therein.
Claims use since about 1909.

Ser. No. 137,708. (CLASS 37. PAPER AND STATIONERY.) THE PEERLESS PAPER COMPANY, Dayton, Ohio. Filed Sept. 28, 1920.

Particular description of goods.—Writing and Printing Paper.
Claims use since January, 1919.

Ser. No. 137,709. (CLASS 37. PAPER AND STATIONERY.) THE PEERLESS PAPER COMPANY, Dayton, Ohio. Filed Sept. 28, 1920.

IDYLWILD

Particular description of goods.—Bond-Paper Suitable for Writing and Printing Purposes.
Claims use since January, 1918.

Ser. No. 137,795. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) WADSWORTH, HOWLAND & CO., INCORPORATED, Boston, Mass. Filed Sept. 30, 1920.

FEL KIM

Particular description of goods.—Paint Enamels, Varnishes, Dry, Paste, and Ready-Mixed Paints.
Claims use since 1906.

Ser. No. 137,858. (CLASS 15. OILS AND GREASES.) SERVICE OIL REFINING COMPANY, Kokomo, Ind. Filed Oct. 2, 1920.

HOOSIER LUBRICANTS

The words "Hoosier" and "Lubricants" are hereby disclaimed apart from the mark as shown on the drawing.
Particular description of goods.—Lubricating Oils and Greases.
Claims use since January, 1919.

Ser. No. 138,440. (CLASS 48. MALT BEVERAGES, EXTRACTS, AND LIQUORS.) F. E. HAGGERTY AND SON, San Francisco, Calif. Filed Oct. 18, 1920.

"H-H"

Particular description of goods.—A Syrup Composed of Barley and Hops for Use in Making Home Beverages.
Claims use since Nov. 1, 1919.

Ser. No. 138,712. (CLASS 3. BAGGAGE, HORSE EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS.) THE FEDERAL RUBBER COMPANY, Cudahy, Wis. Filed Oct. 23, 1920.

DAISY

Particular description of goods.—Hoof-Pads.
Claims use since January, 1910.

Ser. No. 138,824. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) NEW ENGLAND BISCUIT COMPANY, Worcester, Mass. Filed Oct. 26, 1920.

CLOVERLEAF OYSTER

No claim being made to the word "Oyster" apart from the mark shown in the drawing.
Particular description of goods.—Crackers.
Claims use since Oct. 31, 1902.

Ser. No. 139,412. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) WILLIAMS-KOHN-MCMANIS CO., Houston, Tex., assignor to W-K-M Company, Houston, Tex., a Firm. Filed Nov. 9, 1920.

W-K-M

Particular description of goods.—Well-Drilling Tools Consisting of Drilling-Bits, Swage-Nipples, Tool-Joints, Drill-Collars, Rotary Pipe-Slips, and Milling-Tools.
Claims use since January, 1920.

Ser. No. 139,524. (CLASS 27. HOROLOGICAL INSTRUMENTS.) B. GUTTER & SONS, New York, N. Y. Filed Nov. 11, 1920.

Meridial

Particular description of goods.—Watches, Watchcases, and Watch-Movements.
Claims use since Apr. 1, 1920.

Ser. No. 139,526. (CLASS 27. HOROLOGICAL INSTRUMENTS.) B. GUTTER & SONS, New York, N. Y. Filed Nov. 11, 1920.

Sractear

Particular description of goods.—Watches, Watchcases, Watch-Movements.
Claims use since Apr. 1, 1920.

Ser. No. 139,528. (CLASS 27. HOROLOGICAL INSTRUMENTS.) B. GUTTER & SONS, New York, N. Y. Filed Nov. 11, 1920.

Particular description of goods.—Watches, Watchcases, and Watch-Movements.
Claims use since Apr. 1, 1920.

Ser. No. 139,761. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) TRUSCON STEEL COMPANY, Detroit, Mich. Filed Nov. 13, 1920.

STUCCOTEX

Particular description of goods.—A Paint Coating for Exterior Surfaces.
Claims use since July 1, 1920.

Ser. No. 140,313. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) MARSHALL FIELD & COMPANY, Chicago, Ill. Filed Nov. 27, 1920.

GLADSTONE

Particular description of goods.—Bedspreads.
Claims use since 1901.

Ser. No. 142,469. (CLASS 19. INKS AND INKING MATERIALS.) CHAS. A. FOLTZ & COMPANY, Cleveland, Ohio. Filed Dec. 1, 1920.

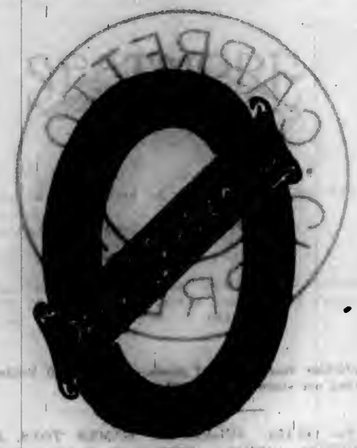
FOYER'S NATIONAL BRAND

Applicant disclaims the right to the exclusive use of the word "Brand," apart from the mark as shown.
Particular description of goods.—Typewriter-Ribbons and Carbon-Paper.
Claims use since 1908.

Ser. No. 140,554. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) THE WUDARY COMPANY, Oshkosh, Wis. Filed Dec. 2, 1920.

No claim is made to the words "Art Toys" apart from the mark shown.
Particular description of goods.—Art Toys Constructed with Wood Veneer.
Claims use since July 1, 1920.

Ser. No. 140,633. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE BERRENS DAIRY PRODUCTS COMPANY, INC., New Orleans, La. Filed Dec. 6, 1920.



The mark being lined for blue.
Particular description of goods.—Milk, Cheese, and Eggs.
Claims use since September, 1919.

Ser. No. 140,697. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) VIMCO MFG. COMPANY, Inc., Buffalo, N. Y. Filed Dec. 6, 1920.

VIMCOLIGHT

The use of the word "Light" being disclaimed as a part of the trade-mark.
Particular description of goods.—Electrical Appliances—Namely, Portable Electric Lamps.
Claims use since Feb. 1, 1920.

Ser. No. 140,764. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE MADAM C. J. WALKER MANUFACTURING CO., Indianapolis, Ind. Filed Dec. 7, 1920.

Particular description of goods.—Toilet Preparations Including Hair-Tonic, Hair Preparation, Toilet Water, Cold-Cream, Cleansing-Cream, Vanishing-Cream, Witch-Hazel Jelly, Superfine Face-Powder, Rouge, Talcum Powder, and Dental Cream.
Claims use since May 1, 1920.

Ser. No. 140,900. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) LOUIS J. PICHA, St. Paul, Minn. Filed Dec. 11, 1920.

BULLY BOY

Particular description of goods.—Wheeled Toys, Generally Known as Scooters.
Claims use since Aug. 24, 1920.

Ser. No. 141,005. (CLASS 7. CORDAGE.) MACWHYTE COMPANY, Kenosha, Wis. Filed Dec. 13, 1920.

BRUNTONISED

Particular description of goods.—Wire Rope.
Claims use since on or about July 1, 1920.

Ser. No. 141,572. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) HILTON COLLINS COMPANY, Louisville, Ky. Filed Dec. 28, 1920.

The same being a portrait and facsimile signature of A. B. Tincup.
Particular description of goods.—Baseball-Bats.
Claims use since Dec. 14, 1920.

Ser. No. 141,573. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) HILTON COLLINS COMPANY, Louisville, Ky. Filed Dec. 28, 1920.

Being a portrait and facsimile signature of Fred Nicholson.
Particular description of goods.—Baseball-Bats.
Claims use since Dec. 16, 1920.

Ser. No. 142,624. (CLASS 27. HOROLOGICAL INSTRUMENTS.) MEYER & STUDELI, Societe Anonyme, Soleure, Switzerland. Filed Jan. 10, 1921.

DELIA

Particular description of goods.—Watches, Clocks, and Parts Thereof.

Claims use since Aug. 17, 1920.

147,438. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ALFRED J. KRANK, St. Paul, Minn. Filed Apr. 28, 1921. Serial No. 146,879.

Hair-Root-Oil

Particular description of goods.—Hair-Shampoo.
Claims use since Dec. 2, 1916.

147,439. (CLASS 2. RECEPTACLES. MARSHALL FIELD & COMPANY, Chicago, Ill. Filed Nov. 27, 1920. Serial No. 140,271.

FIELD SEAMLESS

Particular description of goods.—Cloth Bags.
Claims use since 1916.

147,440. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) THE NU-LAC COMPANY, Fort Wayne, Ind. Filed Mar. 21, 1921. Serial No. 145,034.

NU-LAC
THE TRANSPARENT LUSTRE

Particular description of goods.—A Transparent Luster and Finish for Automobiles and Furniture.
Claims use since Mar. 1, 1920.

147,441. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) WM. J. REUSS, Madison, Wis. Filed Jan. 6, 1921. Serial No. 141,932.

REUSS DE-LUXE POLISH

Particular description of goods.—Polishing Materials.
Claims use since Apr. 30, 1920.

147,442. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) WM. J. REUSS, Madison, Wis. Filed Jan. 6, 1921. Serial No. 141,933.

REUSS DE-LUXE CLEANER

Particular description of goods.—Polishing Materials.
Claims use since Apr. 30, 1920.

147,443. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WILMOT H. SIMONSEN, Medford, Mass. Filed Mar. 2, 1916. Serial No. 100,342.

RY-LENO

Particular description of goods—A Powdered Lemon Pie Filling.
Claims use since Nov. 26, 1913.

147,444. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) L. SONNEBORN SONS, INC., New York, N. Y. Filed Feb. 11, 1921. Serial No. 143,458.

STORMTIGHT

Particular description of goods.—Liquid and Plastic Surface-Coating Waterproofing Material in the Nature of a Paint Adapted to be Spread or Brushed Over Roofs, Walls, &c.
Claims use since August, 1913.

147,445. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) STAFFORD FLOUR MILLS CO., Stafford, Kans. Filed Sept. 29, 1920. Serial No. 137,745.

PREFERRED FLOUR

Particular description of goods.—Wheat-Flour.
Claims use since July, 1918.

147,446. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ED. S. VAIL BUTTERINE CO., Chicago, Ill. Filed May 5, 1921. Serial No. 147,267.

EVER GOOD

Particular description of goods.—Oleomargarin.
Claims use since July 19, 1917.

DECISIONS
OF THE
COMMISSIONER OF PATENTS
AND OF
UNITED STATES COURTS IN PATENT CASES.

COMMISSIONER'S DECISIONS.

EX PARTE ARBUCKLE.

Decided December 7, 1920.

1. PATENTABILITY—COMBINATION OLD—SUBSTITUTION OF EQUIVALENT NOT INVENTION.

Where an applicant claimed the various elements of a lamp in combination with a bellows and means for the passage of fluid for actuating the bellows, and thereby operating the reflector, and the prior art shows the same combination with the exception that it has a piston for operating the bellows, *Held* that the mere substitution of the bellows for the piston does not form a new combination.

2. SAME—SAME—NOVELTY, IF ANY, IS ONE ELEMENT.

Where an applicant improves one element of a combination, *Held* that the invention is in that element itself and not in the combination.

(Note.—This application has resulted in Patent No. 1,378,500, dated May 3, 1921.)

APPEAL from Examiners-in-Chief.

LAMP CONSTRUCTION.

Messrs. Lockwood & Lockwood for the applicant.

WHITEHEAD, *Commissioner:*

Applicant appeals from the decision of the Examiners-in-Chief affirming the action of the Primary Examiner finally rejecting the following claims:

6. The combination with a lamp casing, and a lens therefor, of a tiltable reflector within the lamp casing, a bellows having one end attached to said reflector, and means connected with said bellows for the passage of fluid for actuating the same whereby said reflector may be operated.

7. The combination with a lamp casing, and a lens therefor, of a tiltable reflector mounted within said lamp casing, a bellows mounted between said reflector and casing having one end attached to said reflector, and means for the passage of fluid for actuating said bellows and controlling the movement of said reflector.

The Examiner cited the following references: Starkweather *et al.*, 1,133,942, August 8, 1916; MacDonald, 1,198,466, September 19, 1916; Wolcott, 1,226,294, May 15, 1917.

Applicant's prior patent shows a tilting reflector, such as is disclosed herein, with a piston interposed between the lamp-casing and the reflector and connected to the manifold of the engine, so that when a valve in this connection is opened the air is exhausted from one side of the piston and the reflector caused to move. Claim 1 of that patent reads as follows:

1. The combination with an internal combustion engine, and a movable lamp, of means controlled by the suction of the engine for moving said lamp.

In the present application a bellows is used as the means for moving the reflector instead of a piston.

The Examiner rejected the claims on the theory that there was no invention in substituting for the flexible push-rod or the piston-motor of MacDonald, Wolcott, and Arbuckle, respectively, the bellows-motor of Starkweather *et al.*

On appeal the Examiners-in-Chief reversed this action on the ground that the bellows of Starkweather *et al.* was not a motor, but a mere pump for injecting a liquid into a chamber in the lens. They stated, however, that bellows-motors were old in the art and cited the patents to Gaisel, No. 330,221, November 10, 1885, and Fulton, No. 900,511, October 6, 1908, as showing bellows-motors which could be substituted for the various motors disclosed in the patents cited by the Examiner as a means for tilting the reflector and recommended rejection in view thereof.

The Examiner rejected the claims in accordance with the recommendation of the Examiners-in-Chief and also cited the patent to Roberts, No. 1,181,956, May 2, 1916, as showing a bellows-motor used to directly actuate movable devices which could be readily substituted or employed to move a reflector similar to applicant's.

It is argued that neither a bellows, such as shown in the Roberts patent, which is of the type employed in piano-players, nor that shown in the patent to Fulton, the walls of which are formed of corrugated sheet metal, could be used in place of the piston shown in applicant's prior patent. Reference is made to the testimony of applicant in an interference involving that patent, that he had found by experiment that the walls of the first type of bellows could not be made sufficiently pliable for his purpose without being so porous that they could not be operated by the small vacuum obtainable and that the walls of those of the other type could not be made thin enough to make the bellows sufficiently flexible to be contracted materially by the vacuum created at the intake-manifold.

The combination of the tiltable reflector and means for moving it connected to the manifold so as to be operated by the suction therein is shown in applicant's prior patent, and the references show bellows-motors, the Roberts patent showing an ele-

ment of a typewriter operated thereby. It is not seen that there was anything unobvious in the idea of using a bellows-motor in place of the piston if when it was attempted to make the substitution it was found necessary to devise a new type of bellows the invention lay in the bellows itself and not in the combination. (*In re Bliss*, 138 O. G., 1052; 39 App. D. C., 453; *in re Ratican*, 162 O. G., 540; 36 App. D. C., 95.)

The appealed claims are not limited to an arrangement in which the motor is "controlled by the suction of the engine," as are the claims of applicant's prior patent, but specify only means connected with the bellows for the passage of fluid for actuating the same. If, as applicant contends, the bellows of the prior art would not work satisfactorily when connected with the manifold of the engine, there is nothing to show that they would not work satisfactorily if other means were employed for exhausting the air therefrom.

Furthermore, the application does not even describe, much less claim, the particular type of bellows which it is said applicant found it necessary to use.

The decision of the Examiners-in-Chief is affirmed.

Trade-Mark Law—San Salvador.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., October 6, 1921.

The following note addressed to the Secretary of State by the Minister of San Salvador is published for the information of those concerned.

THOMAS E. ROBERTSON,
Commissioner.

San Salvador, August 6, 1921.

The Honorable THE SECRETARY OF STATE,
Washington.

SIR: I have the honor to inclose a copy and translation of a new Salvadorian trade-mark law promulgated on July 22, 1921, and published in the *Diario Oficial* of July 30, 1921. This law replaces the trade-mark law of May 11, 1910, and its reforms and additions of June 19, 1913, and July 12, 1916.

* * * * * * *

I have the honor to be, sir,
Your obedient servant,
MONTGOMERY SCHUYLER.

(Translation.)

LEGISLATIVE POWER.

The National Legislative Assembly of the Republic of Salvador, in use of its constitutional privileges, and hearing the opinion of the Supreme Court of Justice, decrees: the following trade mark law.

CHAPTER I.

Trade marks and their proprietorship.

ARTICLE 1. Any sign by which products of a factory, of agriculture or objects of commerce shall be considered as a trade or commercial mark.

ART. 2. A mark can be anything not prohibited by law and which serves to distinguish some articles from others, identical or similar; but of separate origin.

ART. 3. There shall not be registered as trade marks:

I. The flags, emblems, or shields, national or municipal, or flags or shields of foreign nations.

II. Neither the form or the color of the article.

III. General terms or expressions used to designate an article or which do not present any character of novelty in relation to the article for which they are used in whatever language it may be.

IV. Designations generally used in Spanish or in another language to indicate the nature of the article, its class or quality.

V. Immoral expressions or drawings.

VI. The name of a natural or juridical person if it is not presented in a peculiar and distinct form.

VII. A mark already registered or used by another, or like it if it had been destined for articles of the same nature.

VIII. The name or picture of a person if he or his heirs object.

IX. The insignia of the "Red Cross" provided, however, that the persons or firms who may have used it up to the present properly registered can not be molested or obliged to introduce any modifications, without prejudice to the rules that the Council of the Red Cross may promulgate.

ART. 4. Any owner of a trade mark, whether national or foreign, may acquire the exclusive right to use it in the Republic by submitting to the provisions of the present law.

ART. 5. The right of opposing the use of any mark which can produce directly or indirectly a confusion between the products should lie with the business man, commercial man or farmer who has fulfilled the procedure required by law.

ART. 6. The ownership of a mark passes to the heirs and can be conveyed by contract.

ART. 7. The cession or sale of the establishment comprises that of the mark, unless there is a stipulation to the contrary, and the buyer has the right of using the mark in question, even though the above mentioned mark is a name, in the same way as did the person ceding it without other restrictions than those expressly stated in the instrument of transfer.

ART. 8. The transfer of a mark should include the authentic instrument which shall be presented to the Patent Office for inscription in the Register of the transfer of trade marks. The transfer shall be included in a note on the margin of the original registry and the instrument of transfer shall be returned with annotation of being registered.

ART. 9. The registration of a mark gives the right to use it exclusively for the articles for which it was meant and for others included in the class to which the said articles belong.

ART. 10. The mark must necessarily be used in the articles for which it is destined. If it shall not be used within a year counting from the registration or shall be unused for a year, its cancellation may be requested. If the mark is foreign, the importation of the article into El Salvador is not necessary and the registration shall not be cancelled if the stipulations of this article have been complied with outside of the Republic.

CHAPTER II.

Registration and inscription.

ART. 11. Whoever desires to obtain the exclusive rights to a trade, commercial or agricultural mark shall apply to the Patent Office delivering his request for one mark unless two or more refer to a single article, except when the mark consists of two or more words or phrases of which one is the translation of the other; in this case the application may comprise all the marks, but the costs and fees shall be paid for each one.

ART. 12. In the application shall be given:

I. Name, profession and address of the owner of the mark.

II. A detailed description of the mark, giving its essential parts and the reserves which may be made concerning them. If the color of the mark constitutes an essential part of it as a distinctive element, a special description of the color shall be made.

III. The designation of the article or articles for which the mark is to be used.

IV. The nationality of the mark.

V. The name of the factory, if it has one.

VI. The name of the country and the city or the place where the article is principally made or used.

ART. 13. There shall accompany the application:

I. Documents proving the identity of the person applying, if necessary.

II. Twenty facsimiles of the mark. If the color of the mark constitutes an essential part of it as a distinctive element, the facsimiles shall be in the proper colors.

III. A cut of the mark which height shall be 20 to 30 millimeters and its length and breadth 15 to 100 millimeters.

IV. Receipt for the fees for registration given by the corresponding office.

ART. 14. The application having been made, the Patent Office shall note the day and hour of its presentation and shall number and mark each one of its sheets.

ART. 15. If the Patent Office finds that the application is in accordance with law and the mark is of those of which the registration is not prohibited, it shall allow the application and shall order published an extract from it together with facsimile of the mark three times in the official publication.

ART. 16. Ninety days having passed, counting from that following the third publication, without any opposition having been presented, it shall be declared that the mark is the property of the applicant and shall be ordered to register and to give the corresponding certificate.

ART. 17. In the event of opposition being presented within the said term, it shall be ordered to stop the procedure of registry and the parties shall be referred to the proper courts to prove their rights. Any one opposing shall present to the Patent Office, within ninety days following the date of the presentation of opposition, a certificate of having presented a corresponding request. If this certificate shall not be presented within the said time, the registry shall be ordered on the request of the interested party and the one opposing shall be condemned to pay costs, damages and injury. If the certificate of having filed the demand shall be presented with the said term, the work of registry shall remain suspended until the execution, or certificate of the executed sentence which may be involved in the judgment, shall be presented and then at the request of the party the registry shall be made, if the applicant won or in the contrary case it shall be declared void.

If the applicant for registry of the mark or the one opposing it desire to drop his application or opposition before the judgment in the courts has been recorded the Patent Office shall give a hearing to the other party and if he shall accept the dropping it shall be accepted; if he does not accept he shall ask that the jurisdiction of the Patent Office shall be suspended until the term shall come of the presentation of the proof of having filed the demand, or if the certificate of the decision of the common court is presented.

ART. 18. The certificate of registry shall be given in the name of the Republic and shall contain:

I. The facsimile of the mark.

II. The name, address and profession of the proprietor.

III. The date and hour of the presentation of the application for registry.

IV. The nationality of the mark.

V. The enumeration and classification of the articles for which it is meant.

VI. The date of registry, its number and that of the book and folio in which it has been done.

VII. The term of the duration of the registry, and

VIII. The seal of the office and the signature of the Commissioner and the Secretary.

The certificate of registry shall have annexed a certified copy of the application for registry; it shall be made in duplicate, one copy being given to the interested party and the other copy being kept in the archives of the office together with the corresponding file for giving certified copies to those desiring them. On the reverse side of the certificate of registry shall be printed articles 8, 9, 10, 19, 21 and 36 of this law.

ART. 19. If a mark shall have already been recorded any one considering himself injured shall apply for the cancellation of the registration. This case shall be examined by an ordinary suit and shall have full effect in five years counting from the date of the registration.

ART. 20. The right of preference for the ownership of a mark shall be accorded according to the use which has been made of it and not in this case from the day and hour in which the application has been filed in the office.

ART. 21. Registration of a mark is valid for twenty years only; this term ended, it shall be invalid if its renewal has not been obtained at the proper time. Each renewal to last for 20 years.

Every registration can be renewed before its term and after the payment of the fees prescribed by the law. The proper receipt having been presented to the Patent Office the renewal of the mark shall be noted in the register, and a certificate of renewal shall be given to the party at interest, as described in article 18 without other procedure.

ART. 22. The Patent Office shall preserve in its archives the trade marks which have been filed, with the respective files and the duplicates of the certificates of registry. To the files shall be attached the receipts for costs and fees and the applications for registry of transfer and renewals and copies of the documents showing the transfer.

There shall be kept books of trade mark registry, books of trade mark transfers and a book for entry of applications for registry and any other books necessary. Likewise there shall be kept an alphabetical index of the trade-mark register in the order of the names of the proprietors and another alphabetical index following the order of the articles to which the marks refer.

The registries shall be made one following the other without leaving more space between them than a line and following the order corresponding to the day and hour of the decree ordering the registry. In the same order shall be numbered the judicial records.

ART. 23. Appeal to the Ministry of Public Works is allowed from the resolutions of the Patent Office admitting or refusing an application for registry, or counter claim, allowing or refusing a registry or a certification, or proving the rights of an attorney and in general all resolutions causing or which might cause irreparable damage.

The time for appealing shall be ten days.

The appeal having been admitted the parties shall be summoned to appear before the third day to make use of their rights before higher authority. Whether or not they appear, the Ministry shall allow twenty days for the parties to present their allegations and proofs and this term having passed the case shall be decided even if the parties have not appeared or argued. In this instance notification shall be made by proclamation when the parties have not appeared or have not indicated a house in this city for the purpose. There shall be no other recourse from the decision of the Ministry.

CHAPTER III.

Of names, marks, etc.

ART. 24. The name of the merchant or producer, that of the partnership, that of the stock company, that of a sign or designation of a house or establishment dealing in certain articles or products, that of a periodical, office or agency, constitute an ownership as regards this law.

ART. 25. Whoever desires to carry on an industry, business or branch of trade already established by another person with the same name or with the same conventional designation shall adopt a modification making this name or designation visibly distinct from that used by the house or establishment already existing.

ART. 26. If the person injured by the use of a name shall not object within the term of one year from the day in which the use was openly begun by another, he shall lose his right to object. This case shall be examined by an ordinary suit.

ART. 27. The right to the exclusive use of a name as property shall end with the business house using it or with the ending of the kind of business to which it was destined.

ART. 28. The registry of a name is not necessary in order to enjoy the rights accorded by this law.

CHAPTER IV.

On counterfeits.

ART. 29. There is a counterfeit of a trade, commercial or agricultural mark in the following cases:

I. When the original mark is imitated in merchandise or products comprised in the same class as itself.

II. When there is sold or offered for sale merchandise having imitated marks.

III. When there is sold, bought or offered for sale imitated mark.

IV. When there is sold, offered for sale or bought original marks without the written consent of the owner.

V. When there are used marks which contain false information concerning the nature, quantity, quality, origin of the merchandise or products, or where it is falsely stated that they have won titles, medals, diplomas and other distinctions at expositions or in other ways.

VI. When without imitating the mark there are taken apart or separated certain articles for applying the mark.

VII. When a person places his name, that of his establishment or any word or sign over an original mark.

VIII. When containers with another mark are refilled with imitation products or are refilled with products which do not correspond to the lawful one described in the mark on the container; or when lawful products containing original marks are mixed with others different or imitations; and when these products are kept or sold. This last is presumed if kept in stores, shops or warehouses.

ART. 30. The Patent Office shall send to the office of each customhouse a facsimile of each registered or renewed mark, with a statement giving:

I. The name, profession and address of the proprietor.

II. The nationality of the mark.

III. The enumeration of the article for which it is meant.

IV. The date of the registry or renewal, its number and that of the book and folios in which it has been done.

V. The date of expiration of the registry.

On the expiration of a registry of a mark, the office will advise the same custom houses.

ART. 31. When it is a question of importing merchandise with imitated marks the director of customs will place them at the disposition of the proper courts.

ART. 32. It shall be presumed that an article has an imitated mark, if it is imported from a country different from that fixed in the application, according to article 12.

ART. 33. Any machine or instrument for imitating a mark shall be confiscated.

CHAPTER V.

[Gives the classification of the articles, 127 classes.]

* * * * * * *

CHAPTER VI.

Tariff for registry.

ART. 35. Stamped paper used in the registry office shall be of 20 cents each sheet. The certificate of registry of trade mark shall be given on plain paper with revenue stamps for five colones on the first sheet and of ten cents on each subsequent sheet. Certified copies of the certificates of registry shall have revenue stamps of two colones on the first sheet and of 10 cents on each following sheet.

ART. 36. The fees for registry of a mark and those for renewal shall be: for natives, 10 colones; for foreigners, 20 colones. The fees for transferring a mark by an act between living people shall be ten colones. Added to the fees established above, there shall be paid for each mark

and for the time the registry lasts an annual tax of three colones for Salvadorians and five colones for foreigners; this payment having to be made by deposits of five annual payments in advance and the proper receipt being presented to the Patent Office within the first month of the corresponding period and if it shall not be presented the privilege shall be declared void and the office shall cancel the registry.

ART. 37. The notice spoken of in Art. 15 of this law shall not cost the interested party more than six colones.

ART. 38. All the laws concerning the registry of trade marks, directly or indirectly, with stamp dues or stamp paper, are abrogated.

CHAPTER VII.

ART. 39. The trade mark law of May 11, 1910, and its amendments and additions of June 19, 1912, and July 12, 1916, are abrogated.

ART. 40. With regard to the payment of annual taxes, the laws in force at the date of the application for registry shall apply, but with respect to marks renewed since this law is in force, the same shall apply as in regard to stamp paper and revenue stamps.

Given in the Hall of Sessions of the Legislative Power, National Palace, San Salvador, the twentieth day of the month of July, one thousand nine hundred and twenty one.

Interference Notice.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., October 7, 1921.

Isaac Newlin, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Simon Levi Company, 715 F Street, San Diego, Calif., for registration of a trade-mark and trade-mark registered April 6, 1921, No. 51,407, to Isaac Newlin of New York, N. Y., and having failed to obtain service upon the registrant, notice is hereby given that unless said Isaac Newlin, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

Adverse Decisions in Interference.

PATENT No. 1,063,152.

On August 19, 1921, a decision was rendered that Albert Henry Midgley and Charles Anthony Vanderwell were not the first inventors of the subject-matter covered by claim 2 of their Patent No. 1,063,152, subject, "Dynamo-electric machine particularly applicable for ignition purposes in connection with internal-combustion engines," and no appeal having been taken within the time allowed such decision has become final.

Printed Copies of Patents.

A printed copy of the complete specification and drawings of any patent published herein can be obtained for ten cents.

Important Information.

In ordering manuscript copies much time will be saved if the order states specifically what is desired, viz:

Application as originally filed. (Petition, specification, oath, and drawings as received.) Application as amended. (Petition, specification, oath, and drawings with amendments entered.)

Application as allowed. (Petition, specification, oath, and drawings as passed by the Examiner for issue.)

Original application. (Facsimile petition, specification, oath, and drawings at present time.)

Specification as originally filed. (As received in Office.)

Specification as amended. (With amendments entered.)

Specification as allowed. (As passed by the Examiner for issue.)

Original specification. (Facsimile at present time.)

File-wrapper. (File-wrapper only.)

File-wrapper and contents. (File-wrapper, contents of record, including photoprints of any tracings or of prints within file-wrapper. In patented cases, printed copy of the specification and drawings of the patent is furnished.)

File-wrapper, contents, and drawings. (File-wrapper and all of the contents of record, including photoprints of any tracings, exhibits, or prints within the file-wrapper. In pending cases, photoprints of the pending drawings only, omitting any canceled. If patented, copy of the specification and drawings of the patent being furnished, photoprints are not made of the original drawings unless specially ordered. If canceled drawings are wanted, they must also be specially ordered.)

Assignment. (Give the liber and page of the record as well as the name of the inventor.)

Printed publications in possession of the Office. (Give title and date of publication, also page and exact portion to be copied.)

Orders for copies of any other records not mentioned above must state specifically the exact paper to be copied.

Patent Office Publications.

The stock of the following publications is held for sale by the Patent Office, and orders for same should be addressed to the Commissioner of Patents:

Weekly Issue—Annual subscription	$1.00
Commissioner's Decisions:	
Weekly edition—Annual subscription	2.00
Single numbers	.05
Trade-Mark Supplements:	
Weekly edition—Annual subscription	2.00
Single numbers	.05
Manual of Classification of the German Patent Office, (translated,) paper cover	1.00
Index to German Classification	1.00
Definitions of Revised Classes and Subclasses, edition of 1913, (Bulletins 1 to 27, inclusive)	.50
Bulletins, excepting Nos. 28 and 29, (new out of print,) published since 1912, each	.10

Other publications than those above named, exclusive of printed copies of patents, trade-mark registrations, etc., formerly sold for sale by the Patent Office, have been transferred to the Superintendent of Documents, Government Printing Office. Orders for such publications should now be sent to the Patent Office, but to the Superintendent of Documents, to whom all remittances for such publications should be made payable.

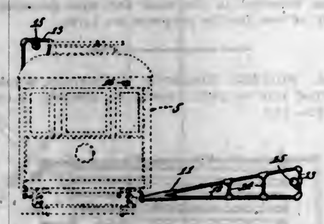
Printed copies of specifications and drawings of patents, trade-mark registrations, etc., will be furnished by the Patent Office, as heretofore.

Condition of Applications Under Examination at Close of Business October 8, 1921.

Room No.	Divisions, Examiners, and subjects of inventions (Oldest new case, Oct. 16; oldest amended, Dec. 24.)	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.
214	1. LOEFFLER, F. S., Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Scattering Unloaders.	May 3	May 14	772
126	2. BALDWIN, M., Bee Culture; Dairy; Matting; Pneumatics; Preserving; Presses; Tents, Canopies, Umbrellas, and Canes; Tobacco; Trees, Plants and Flowers.	Jan. 10	Feb. 21	1,088
175	3. RICH, WM. J. Electric Heating and Electrolysis; Electrochemistry; Heating; Metal-Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Jan. 10	Dec. 24	840
234	4. MERRITT, A. D., Conveyers; Conveyers, Fluid-Current; Excavating; Handling—Hand and Hoist-Line Implements; Hoisting; Material or Article Handling; Pushing and Pulling Implements; Railway Mail Delivery; Traversing Hoists.	Oct. 16	Apr. 30	1,004
167	5. MACNAB, J. F., Book-Making; Books, Strips and Leaves; Harvesters; Jewelry; Manifolding; Music; Printed Matter; Tying Cords or Strands.	Dec. 8	Jan. 14	922
318	6. LEWERS, A. M., Bleaching and Dyeing; Chemicals; Explosive, Pyrotechnic and Match Compositions; Fertilizers; Liquid Coating Compositions; Plastic Compositions; Substance Preparation.	Mar. 10	June 17	943
312	7. JARBOE, C. G., Games and Toys; Optics; Photography; Velocipedes.	Mar. 21	May 24	1,874
131	8. CLIFT, J. W., Beds; Chairs and Seats; Flexible-Sheet Securing Devices; Furniture; Kitchen and Table Articles; Store Furniture; Supports.	July 5	Aug. 25	706
221	9. TRYON, F. M., Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid-Current; Pumps.	Nov. 12	July 12	1,028
235	10. MITCHELL, T. H., Land-Vehicles; Land Vehicles, Animal Draft Appliances; Land-Vehicles—Bodies and Tops; Land-Vehicles—Dumping; Land-Vehicles, Wheel Substitutes; Motor Vehicles.	Mar. 21	July 11	1,199
154	11. ARMSTRONG, H. C., Boot and Shoe Making; Boots, Shoes, and Leggings; Buttons, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whips and Whip Apparatus.	June 15	July 16	422
222	12. PIERCE, P. F., Machine Elements.	Mar. 1	June 22	1,180
323	13. NIXON, G. A., Bolt, Nail, Nut, Rivet, and Screw Making; Chain, Staple, and Horseshoe Making; Driven, Headed, and Screw-Threaded Fastenings; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Tools and Implements, Making; Metal Working; Needle and Pin Making; Turning.	Nov. 18	July 27	1,671
323	14. BRUMBAUGH, N. J., Compound Tools; Cutting and Punching Sheets and Bars; Farriery; Metal-Bending; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire-Working.	Dec. 11	July 18	886
308	15. REDROW, W. L., Bread, Pastry, and Confection Making; Glass; Laminated Fabrics and Analogous Manufactures; Paper-Making and Fiber Liberation; Plastic Block and Earthenware Apparatus; Plastics.	Oct. 22	Feb. 16	1,710
111	16. BACKUS, C. D., Radiant Energy; Telegraphy; Telephony.	Oct. 29	Feb. 12	1,778
307	17. RAFTER, G. S., Coating, Label Pasting and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet Material Associating or Folding; Sheet Feeding or Delivering; Type Setting.	Feb. 7	May 13	1,001
239	18. PORTER, M. E., Liquid Heaters and Vaporizers; Motors, Expansible Chamber Type; Power Plants; Speed Responsive Devices; Steam and Vacuum Pumps.	Dec. 23	Feb. 18	1,770
236	19. GLASCOCK, E. S., Automatic Temperature and Humidity Regulation; Furnaces; Heating Systems; Stoves and Furnaces; Domestic Cooking Vessels; Thermostats and Humidostats.	Dec. 13	Mar. 19	955
179	20. WRIGHT, H., Artificial Body Members; Miscellaneous Hardware; Closure-Fasteners; Cutlery; Dentistry; Locks and Latches; Safes; Undertaking.	Apr. 7	May 27	1,479
212	21. THURBER, W. L., Brakes and Gins; Carding; Clock-Finishing; Continuous-Strip Feeding; Cordage; Felt and Fur; Knitting and Netting; Silk; Spinning; Weaving; Winding and Reeling.	Mar. 1	June 6	661
249	22. COLWELL, J. H., Aeronautics; Firearms; Ordnance; Ammunition and Explosive Devices; Ammunition and Explosive Charge Making.	May 26	July 16	536
217	23. GROESBECK, W. D., Acoustics; Coin-Handling; Horology; Recorders; Registers; Sound Recording and Reproducing; Time-Controlling Mechanism.	Jan. 5	Apr. 10	836
144	24. DARBY, J. J., Apparel; Apparel Apparatus; Garment Supporters; Sewing-Machines.	Jan. 10	May 31	1,098
315	25. LIGHTFOOT, J. H., Agitating; Butchering; Centrifugal Bowl Separators; Mills; Threshing; Vegetable Cutters and Crushers; Gas Separation.	July 23	July 28	396
105	26. HODGES, J. S., Electricity, Generation; Motive Power; Prime Mover Dynamo Plants.	Feb. 18	May 4	802
214	27. ANDERSON, L. S., Abrading; Brushing and Scrubbing; Laundry; Washing Apparatus.	Apr. 2	June 1	1,427
235	28. BENSON, A. E., Internal-Combustion Engines.	Jan. 20	Apr. 25	1,235
147	29. MORRIS, D., Boring and Drilling; Button Making; Cranks or Sockets; Coopering; Tool Handle Fastenings; Wheelwright-Machines; Wood-Sawing; Wood-Turning; Woodworking; Woodworking-Tools.	Feb. 2	July 22	780
152	30. SULLIVAN, M. E., Illuminating-Burners; Illumination; Liquid and Gaseous Fuel Burners; Type-Writing Machines.	Mar. 5	July 20	1,201
172	31. HOLMES, W. N., Alcohol; Ammonia, Water, and Wood Distillation; Charcoal and Coke; Fuel and Igniting Devices; Gas, Heating and Illuminating; Hides, Skins, and Leather; Hydraulic Cement and Lime; Mineral Oils; Oils, Fats, and Glue; Sugar and Salt.	Nov. 8	Jan. 5	2,006
278	32. BANCROFT, J. F., Gas and Liquid Contact Apparatus; Heat Exchange.	Dec. 9	July 5	1,018
70	33. COWLES, W. A., Bridges; Hydraulic and Earth Engineering; Masonry and Concrete Structures; Metallic Building Structures; Roads and Pavements; Roofs.	Mar. 22	May 19	758
304	34. SIMPSON, G. R., Electricity-Transmission to Vehicles; Pneumatic Despatch; Railways; Railway Rolling-Stock; Railway Switches and Signals; Railways, Surface Track; Railway Wheels and Axles; Store Service; Track-Sanders; Vehicle-Fenders.	Aug. 4	Aug. 1	306
57	35. REYNOLDS, E. C., Buckles, Buttons, Clasps, Etc.; Card, Picture, and Sign Exhibiting; Signals and Indicators; Toilet.	July 2	Aug. 15	660
204	36. MORTON, G. L., Automatic Weighers; Driers; Geometrical Instruments; Measuring Instruments; Force Measuring.	May 6	Apr. 22	1,559
107	37. TAYLOR, E. C., Electricity, Circuit Makers and Breakers.	Feb. 8	Feb. 14	1,577
379	38. IDE, G. B., Animal Husbandry; Earth Boring; Fishing, Trapping and Vermin Destroying; Mining, Quarrying, and Ice-Harvesting; Stationery; Stone-Working; Wells.	May 6	May 5	1,170
220	39. COWLES, A. W., Fluid Pressure Regulators; Joint Packings; Multiple Valves; Packed Shaft or Rod Joints; Pipe Joints or Couplings; Rod Joints or Couplings; Valved Pipe Joints or Couplings; Valves; Water Distribution.	Oct. 25	Jan. 12	1,026
273	40. OBERLIN, J. J., Baggage; Bottles and Jars; Check-Controlled Apparatus; Cloth, Leather, and Rubber Receptacles; Deposit and Collection Receptacles; Metallic Receptacles; Package and Article Carriers; Paper Receptacles; Special Receptacles and Packages; Wooden Receptacles.	Jan. 10	Mar. 19	2,245
125	41. BROWN, J. I., Land Vehicles, Wheels and Axles; Resilient Tires and Wheels.	Apr. 14	Apr. 7	857
114	42. CUTTING, H. G., Electrical Conduits and Housings; Electric Signaling; Electric Lamps.	Dec. 7	Jan. 7	1,492
382	43. HOPKINS, F. M., Baths and Closets; Dispensing; Dispensing Beverages; Electricity, Medical and Surgical; Fire-Extinguishers; Sewerage; Surgery; Liquid Separation or Purification.	Dec. 20	Jan. 12	1,600
253	44. SHAFFER, C. H., Air-Guns, Catapults, and Targets; Boats and Buoys; Filling and Closing Portable Receptacles; Marine Propulsion; Railway Draft Appliances; Refrigeration Ships.	Jan. 10	July 15	471
379	45. GILES, A. H., Journal-Boxes, Pulleys, and Shafting; Lubrication; Motors; Spring Devices.	Mar. 21	May 2	1,185
332	46. WOLCOTT, C. L., Curtains, Shades and Screens; Educational Appliances; Fire-Escapes; Ladders; Fluid Sprinkling, Spraying, and Diffusing; Paper Files and Binders; Wooden Buildings; Scaffolds.	Mar. 11	Mar. 11	1,130
264	47. BARKER, H., Brakes; Clutches and Power Stop Control; Elevators; Fluid Pressure Brake and Analogous Systems.	Jan. 24	May 7	1,135
163	48. ROEPKE, O. B., Electricity, Conductors; Electricity, General Applications.	Jan. 26	Feb. 4	1,803
	TRADE-MARKS, DESIGNS, LABELS AND PRINTS: T. L. MEAD, Jr.			
	Trade-Marks.	Nov. 30	July 28	2,819
	Designs.	Mar. 21	May 10	2,206
	Labels and Prints.	Sept. 1	Sept. 17	286

Total number of applications awaiting action, excluding Trade-Mark division, 56,966: Trade-Mark division, 6,291.

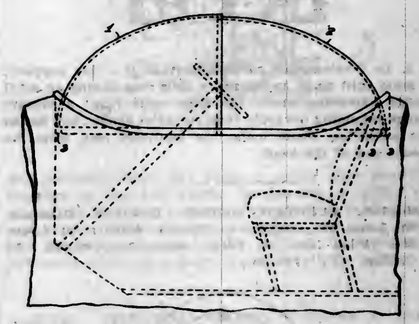
PATENTS



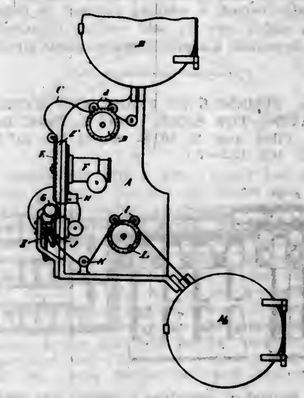
GRANTED OCTOBER 18, 1921.

1,393,732. ELECTRIC HEATING UNIT. CHARLES C. ABBOTT, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Dec. 17, 1920. Serial No. 431,467. 8 Claims. (Cl. 219—67.)

5. An electric heating unit comprising a metallic casing, a core of insulating material in said casing having a groove, a helical resistance element supported on said core with its axis in said groove having one end connected to the casing, a terminal supported within the casing and insulated therefrom for the other end of said resistance element, and granular insulating material packed within the casing around the core and the resistance element.



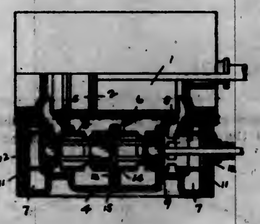
1,393,733. SAFETY-BAR. MARJORIE BELLE ARMITAGE, Colorado Springs, Colo. Filed Nov. 20, 1920. Serial No. 425,462. 4 Claims. (Cl. 105—341.)



1. In combination with a hinged step of a car, a guard, a shaft having a right angled extremity connected to the step, one end of the guard being secured to the shaft to move therewith, and said guard adapted to move to a horizontal position at one side of the car.

1,393,734. WEATHER SCREEN OR HOOD FOR MOTOR-CARS. ROBERT WILLIAM ANDERSON, Liverpool, England. Filed Feb. 18, 1920. Serial No. 359,587. 1 Claim. (Cl. 296—107.)

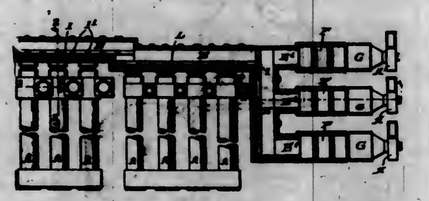
A hood of the character described comprising a pair of substantially quarter-spherical shaped sections mounted for sliding movement and being receivable one within the other by relative rotation of said sections, a frame supporting said sections, a two part casing carried at the lower edge of one of said sections, said casing having undercut faces, a retaining member secured to the frame and projecting between the parts of said casing and including undercut faces engageable with the corresponding undercut faces of the casing to anchor said section and frame together, and antifriction bearing devices arranged to either side of said retaining member and between the frame and section to receive the weight of the latter.



1,393,735. APPARATUS FOR PROJECTION OF MOTION-PICTURES. CARLOS ANSELMI and MARCELINO VITUERO, Buenos Aires, Argentina. Filed June 17, 1920. Serial No. 389,750. 12 Claims. (Cl. 88—18.6.)

1. In combination with the projection apparatus of a moving picture machine, a gripping device, free from film-engaging projections, for gripping the film, means engaging with the film, for advancing it intermittently and means for intermittently operating said gripping device and said advancing means so that the film is advanced while the gripping device is in film-gripping position.

1,393,736. STEAM-ENGINE. EDWIN J. ARMSTRONG, Erie, Pa., assignor to Ball Engine Company, Erie, Pa., a Corporation of Pennsylvania. Filed Jan. 5, 1916. Serial No. 70,416. 4 Claims. (Cl. 121—193.)

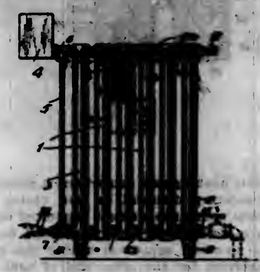


1. In a valve head, the combination of a ring support; a main split ring; an auxiliary split ring having an axial flange extending under the main split ring; a closure flange extending inwardly from the axial flange; and means for admitting steam under the auxiliary ring from the steam end of the head.

1,393,737. ELECTRIC METER. EDWIN C. BALLMAN, St. Louis, Mo., assignor to Stahl A. Whitten, St. Louis, Mo. Filed Nov. 15, 1918. Serial No. 262,895. 17 Claims. (Cl. 171—95.)

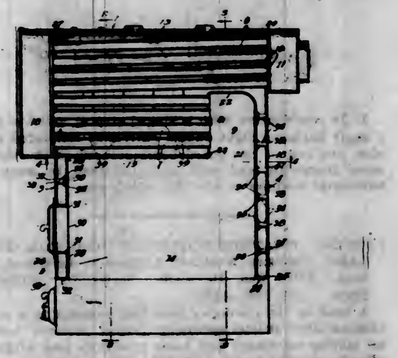
1. An electrical measuring instrument, comprising, a permanent field magnet, an indicating armature movable in the field thereof, a winding adapted to deflect said armature, and a core for said winding constructed and arranged to provide a nearly closed magnetic circuit.

1,393,738. CEMENT-KILN PLANT AND METHOD OF OPERATING THE SAME. JOHN E. BELL, Brooklyn, N. Y. Filed Aug. 2, 1918. Serial No. 247,923. 6 Claims. (Cl. 122—7.)



1. The method of operating a cement kiln plant comprising a plurality of rotary cement kilns, a waste heat boiler section and a flue into which the individual kilns open at points at varying distances from the boiler section, and which connects the series of kilns to said boiler section, which consists in throttling the connection between each kiln and the flue to such an extent as to make the pressure drop or draft consumption between each kiln and the flue greater than the total pressure drop or draft consumption in the flue and maintaining such draft conditions throughout the connected parts of the system as will compensate for the resistance created by the throttling of said connections and bring about a sufficient and an approximately even draft in the kilns.

1,393,739. ELECTRIC BATTERY. RAYMOND C. BENNER and HARRY F. FRENCH, Fremont, Ohio, assignors to National Carbon Company, Inc., a Corporation of New York. Filed Jan. 16, 1919. Serial No. 271,489. 10 Claims. (Cl. 204—41.)

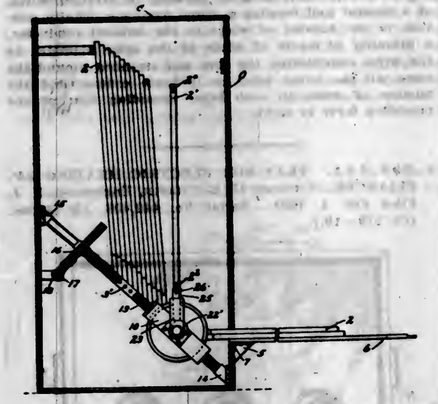


1. In electric batteries, a negative electrode of zinc having bismuth material associated therewith.

1,393,740. RADIATOR. PIERRE JOSEPH HENRI BERNARD, Montreal, Quebec, Canada. Filed June 12, 1920. Serial No. 388,506. 1 Claim. (Cl. 237—262.)

A radiator comprising a plurality of standard sections, each section comprising a casting consisting of a base portion and a head portion, a pair of parallel spaced columns connecting the head portion and the base portion, and the outer walls of the head and base portion having internally threaded aligning openings therein, copper tubes threaded at their opposite ends within said openings and extending through the columns in spaced parallel relation thereto, and plugs threaded in the head and base portions, substantially as and for the purposes set forth.

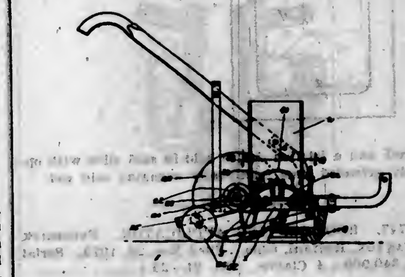
1,393,741. BOILER. ROBERT W. BIRCHFIELD, Waukegan, Ill. Filed July 30, 1920. Serial No. 399,909. 6 Claims. (Cl. 122—74.)



1. In a boiler of the kind described, in combination, an outer shell, flues therein, and crown and side sheets, the fire box between said side sheets including a main combustion space and an auxiliary combustion space rising above and end of the main combustion space, the sheets at the sides of said main and auxiliary combustion spaces together with the main crown sheet being formed from a single plate, and a single plate forming the back sheet, the crown sheet for the auxiliary combustion space and the flue sheet adjacent thereto.

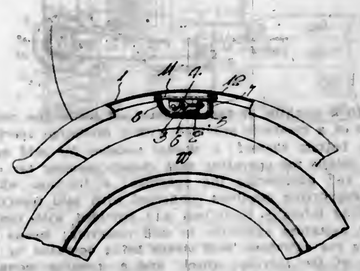
1,393,742. AIR-COMPRESSOR. EMORY LEE BLEVINS, Pattonhill, Mont. Filed Aug. 3, 1920. Serial No. 400,982. 3 Claims. (Cl. 230—27.)

1. A device of the character described comprising a cylindrical shell provided intermediate its ends with an air inlet opening and provided adjacent its ends with outlet openings, a power driven reciprocatory piston rod within said shell, pistons secured upon said rod and provided with outwardly opening spring-pressed valves, a second piston rod within the shell, pistons on said second named rod and positioned appreciably closer together than said first named pistons, said second named pistons being provided with outwardly opening valves and being formed with openings through which said first named piston rod is slidable, racks formed on said piston rods, a transverse shaft, and pinions of different diameters meshing with the respective racks.



1,393,743. EXHIBITING DEVICE. WILLIAM G. BLODGETT and MARLON H. ROACH, Los Angeles, Calif. Filed Mar. 19, 1920. Serial No. 367,141. 5 Claims. (Cl. 211—22.)

1. An exhibiting device comprising a series of display frames each pivoted to swing on its own axis; the axes being equally spaced in parallel positions; the frames constructed and arranged to stack in different angular positions about their axes; and a traveling device movable in the plane of the axes and transversely thereto so as to successively pick up and swing each of the frames about its axis.

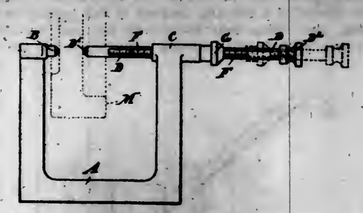


1,393,744. PLANTER. JOHN BLUE, Laurinburg, N. C. Filed Sept. 19, 1919. Serial No. 324,918. 1 Claim. (Cl. 221—126.)

In a planter the combination with a seed hopper having an outlet, a seed plate mounted for rotation in the hopper and having peripheral cells movable to the outlet, and means movable downwardly through the cells successively to eject seeds and to impart an intermittent rotation to the plate, of a housing secured to the hopper and extending over those cells above and adjacent the outlet, the inner wall of the housing being adjacent the cells

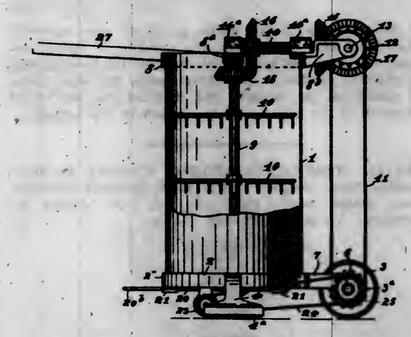
and concentric with the plate, a cut-off gate pivotally mounted at one end within the housing, a spring engaging the other end portion of the gate for holding said end portion yieldingly in contact with the seed plate, and means on the housing for limiting the downward movement of the gate under the action of the spring.

1,393,745. TIRE-CHAIN GUARD. CHARLES A. BULL, Albion, Nebr., assignor to The B.-M. Products Company, Inc., Albion, Nebr. Filed Aug. 23, 1920. Serial No. 405,428. 1 Claim. (Cl. 280—153.)



The combination with a wheel fender and a supporting device positioned beneath the fender and extending in spaced relation thereto, of a guard extending beneath the supporting device and having its side edge portions bent inwardly to provide flanges and its end portions carried upwardly to provide a bottom and end walls, the end walls engaging the underface of the wheel fender in front of and to the rear of the supporting device, and a securing bolt extending through the end walls of the guard and extending above and supported upon the supporting device and held against rotation, the bolt being provided with a nut at one end engaging the underface of the wheel fender and held against rotation thereby.

1,393,746. CALIPERS. JOHN S. BUSHNELL, New York, N. Y. Filed Feb. 13, 1920. Serial No. 358,465. 6 Claims. (Cl. 33—143.)

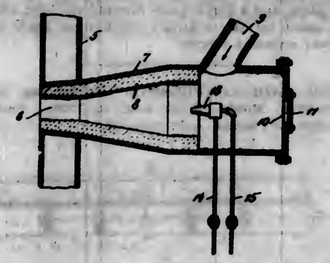


1. In a device of the character set forth, a frame having two arms, an anvil on one arm, a tubular guide on the other arm, a measuring rod non-rotatable but endwise

movable in said guide for cooperation with said anvil, frictional means cooperating with said rod, a slide on

said rod, and a friction device held in said slide with oppositely extended ends frictionally engaging said rod.

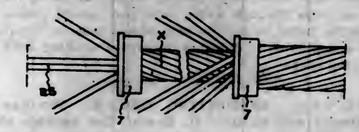
1,393,747. ROOF-COATING APPLICATOR. FREDERICK I. CANNON, Bedford, Ohio. Filed Nov. 26, 1919. Serial No. 340,909. 4 Claims. (Cl. 91—25.)



1. In a machine of the character set forth, the combination of a reservoir provided with a discharge aperture in the bottom thereof; a closure member for said aperture; means for operating said closure member for covering and uncovering the aperture; a traction wheel, fixed supporting members connected with said reservoir, extending laterally therefrom and provided with runner shoes; agitators operative in said reservoir; means for driving the agitators, said means being operated by the action of the traction wheel; and a spreader mounted on the under side of the reservoir.

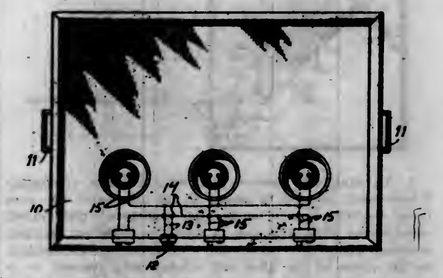
1,393,748. METHOD OF TREATING VANADIUM ORES AND SOLUTIONS. ARTHUR HOWE CARPENTER and GILBERT ALBERT BAUMANN, Sawpit, Colo., assignors to The Colorado Vanadium Corporation, Sawpit, Colo., a Corporation of Colorado. Filed May 13, 1920. Serial No. 381,187. 6 Claims. (Cl. 23—13.)

1. A method of precipitating an insoluble compound of vanadium from a solution of vanadium salt, which comprises adding an alkali metal acid sulfate thereto.



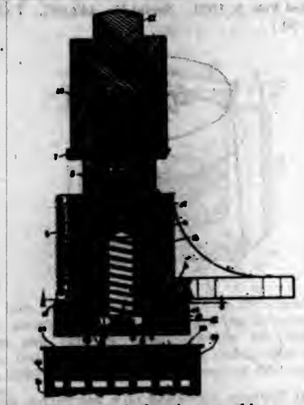
1,393,749. BLAST-FURNACE. ALEXANDER B. CARSTENS, Monterey, Mexico, assignor to The American Metal Company, Limited, a Corporation of New York. Filed Dec. 8, 1919. Serial No. 343,437. 6 Claims. (Cl. 266—14.)

1. In a metallurgical blast furnace, the combination of a conductor for the blast providing a combustion chamber, means for supplying a blast of oxidising gas to the combustion chamber, a fuel burner within said chamber, and means for supplying fuel and an oxidising



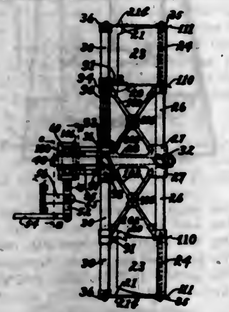
agent to said burner, said fuel being burned within said chamber so that the combustion products thereof commingle with said blast.

1,393,750. SECTOR-CABLE. HILTON P. M. CARTER, Montreal, Quebec, Canada. Filed Feb. 28, 1920. Serial No. 362,164. 3 Claims. (Cl. 173—264.)



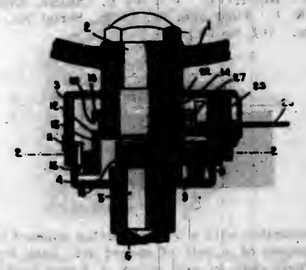
3. A conductor of sector shaped cross-section consisting of a core comprising a plurality of straight wires, of a number and forming a shape having a definite relation to the number of wires in the finished conductor, a plurality of layers of wires of the same diameter as the wires constituting the core and stranded around the same, all the wires being in intimate contact and the number of wires in each layer exceeding that of the preceding layer by eight.

1,393,751. TRAY FOR ELECTRIC HEATING APPLIANCES. CHARLES H. B. CHAPIN, Englewood, N. J. Filed Feb. 4, 1921. Serial No. 442,403. 6 Claims. (Cl. 219—19.)



1. A tray adapted to receive electric heating appliances and provided with a plurality of connector elements for detachably receiving said electric heating devices and supplying current thereto, and means carried by said try for receiving current from a single source and supplying the same to the connector elements and therethrough to the heating appliances.

1,393,752. MACHINE FOR MAKING FLANGED HEADS OR ENDS FOR PAPER OR PULP CONTAINERS. FREDERICK COATES, Wyoming, Ohio, assignor to The Federal Products Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 21, 1920. Serial No. 390,614. 1 Claim. (Cl. 113—48.)

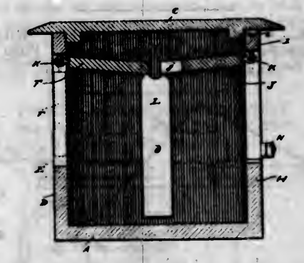


In a flanged head forming machine, a reciprocally mounted sleeve having a pressure plate thereon, a series of pressure blocks upon said pressure plate having their outer faces shaped to conform to the shape of a head to be formed and having their inner ends tapered, a plunger within the sleeve having its end in engagement with the inner ends of the pressure blocks and tapering for cooperation therewith, means for receiving the blank of a container head to be formed and for permitting the entrance of the pressure plate and blocks for forming the blank into a flanged container head therein, said plunger having a recess or chamber and said plate having a lug centrally located thereon, a spring mounted on said lug and extending into said recess for withdrawing said plunger, means for returning the pressure blocks to retracted position and means for withdrawing the pressure plate from head forming position.

1,393,753. AEROPLANE-PROPELLER. GUY B. COLLIER, Kinderhook, N. Y. Filed July 15, 1918. Serial No. 244,841. 2 Claims. (Cl. 170—163.)

1. A propeller comprising inner and outer tubular shells, a series of blades interposed between the shells, a spider having a series of tubular spokes supporting the front edge of the inner shell, a second and similar spider supporting the rear edges of the inner and outer shell, and means for simultaneously varying the angularity of all the blades.

1,393,754. AUTOMOBILE-LOCK. CHARLES N. COLSTAD, Norfolk Downs, Mass., assignor to Masters Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed July 1, 1920. Serial No. 393,270. 9 Claims. (Cl. 70—129.)



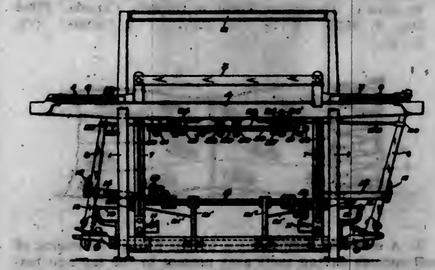
1. In an automobile lock the combination with a stationary housing having internal gear teeth, of a steering shaft carrying planetary gearing meshing with said gear teeth, a stub shaft to which the steering wheel is attached, a gear thereon meshing with said planetary gearing, a locking element rotatable with said steering shaft, and means to cause said locking element to have interlocking engagement with said stationary gear teeth thereby to lock said steering shaft from rotation.

1,393,755. MATTRESS AND THE LIKE. GEORGE ARTHUR CONLAN, Toronto, Ontario, Canada, assignor of one-half to Alan C. Thompson, Toronto, Ontario, Canada. Filed Dec. 8, 1920. Serial No. 429,125. 2 Claims. (Cl. 5—13.)

1. A mattress comprising a fibrous filling; an edging of coil springs having their axes normal to the top and bottom surfaces of the mattress; a ticking; and tufting securing the parts of the mattress together.

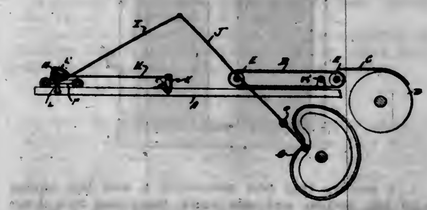
1,393,756. TRAP-NEST. JOSEPH F. COOK, San Francisco, Calif. Filed Oct. 7, 1920. Serial No. 415,897. 5 Claims. (Cl. 119—49.)

1. A poultry trap nest comprising a nest box having solid top, bottom, and side walls, front and rear doors hingedly mounted to swing inwardly and outwardly, means for limiting the outward swing of said doors, and



a common latch means within the nest box to maintain said doors in horizontal position within the nest to permit free passage through the same from the front or rear.

1,393,757. BEEHIVE. WALTER E. CREASE, East Greenwich, R. I. Filed Jan. 21, 1920. Serial No. 352,939. 1 Claim. (Cl. 6—10.)

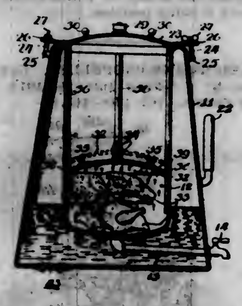


In combination with a beehive having opposed ledges, a cage composed of a pair of spaced side bars formed to seat at their ends on said ledges, a frame having a foraminous covering secured to the bars and depending therefrom, transverse bars secured to the frame and within the covering and extending transversely of the side bars, strips carrying brood combs supported at their ends on the transverse bars, and a removable top for the cage consisting of a rectangular frame having a mesh filler fitted in the space between the side bars of the cage so as to be held in position by the side bars of the cage.

1,393,758. RECOIL PICKING MECHANISM FOR LOOMS. GEORGE CROMPTON, Jr., Worcester, Mass. Filed Apr. 21, 1921. Serial No. 463,252. 16 Claims. (Cl. 139—22.)

1. Picking mechanism for looms comprising spring means for at least partially stopping the shuttle in its box and adapted to be displaced by the shuttle in entering, said spring means acting oppositely to the motion of the shuttle in entering its box and co-acting means substantially preventing increase in the intensity in the action of said spring means as the shuttle goes into its said box.

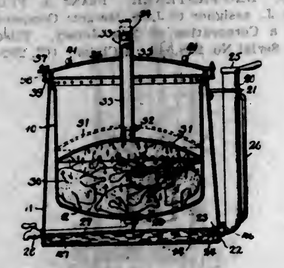
1,393,759. ELECTRIC SHEET-DRIER. WILLIAM J. DANINGBURG, Windsor, Ontario, Canada. Filed Apr. 30, 1920. Serial No. 377,913. 6 Claims. (Cl. 34—18.)



4. In combination with means for causing the travel of printed sheets thereover, a drying member comprising an inclosing shell, a series of resistance elements located therewithin, and insulated wires leading to connection with an external source of electricity for energizing said resistance elements, thereby heating said inclosing shell.

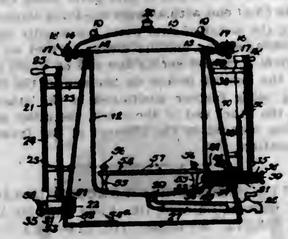
1,393,760. COLLAR-FASTENER. JOHN DEAN, Racine, Wis. Filed Feb. 3, 1921. Serial No. 442,037. 7 Claims. (Cl. 24—90.)

7. A collar fastener consisting of a flat button member adapted to be buttoned to the collar through the rear button hole thereof, a flat member of sheet material adapted to be tucked up into the rear pocket of a shirt neck band, and a flexible connection joining said members and of a length to extend up to said button hole and under the lower edges of the collar and neck band to the lower edge portion of said member extending upwardly in said pocket.



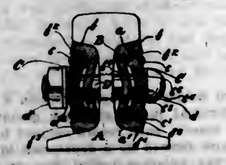
1,393,761. COOKING APPARATUS. ALFRED M. DEMUTH, Chicago, Ill., assignor to Demuth Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 28, 1920. Serial No. 399,572. 10 Claims. (Cl. 53—1.)

1. A cooking apparatus embodying a cooking chamber, a baffle within and extending across the chamber, said baffle confining the steam therebeneath and being freely movable by the action of the steam thereupon, toward and away from the article to be cooked and supported upon and by said article, and a closure for the chamber.



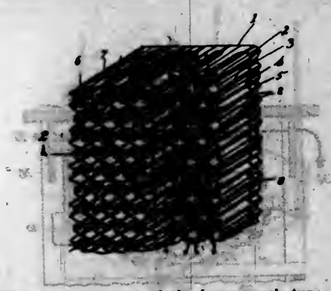
1,393,762. COOKING APPARATUS. ALFRED M. DEMUTH, Chicago, Ill., assignor to Demuth Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 1, 1920. Serial No. 414,104. 7 Claims. (Cl. 53—1.)

1. A cooking apparatus embodying a cooking chamber, a detached downwardly opening deflector within and extending across the chamber, said deflector being adapted to engage and rest against the articles of food in the chamber and operating to direct vapor circulating thereagainst back against the articles of food, a closure for the chamber, a tubular member connected with the baffle, opening therethrough and extending thereabove, and a



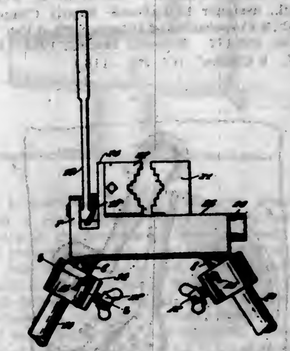
safety blow off valve for controlling the opening in the tubular member, the said closure having an opening therethrough and through which opening the said tubular member freely slides by the rising and falling movements of the baffle caused by the influence of the vapor acting thereon.

1,393,763. COOKING APPARATUS. ALFRED M. DEMUTH, Chicago, Ill., assignor to Demuth Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 13, 1920. Serial No. 423,914. 17 Claims. (Cl. 53—1.)



1. An apparatus of the character described embodying a cooking or treating chamber, a tank in which liquid is converted into vapor, said tank and chamber being out of communication with each other and having a common wall therebetween, a liquid supply holder having a discharge outlet opening into the said chamber, means for controlling the said opening, and a closure for the chamber.

1,393,764. RAIL-JOINT. HARRY E. DOERR, St. Louis, Mo., assignor to Scullin Steel Co., St. Louis, Mo., a Corporation of Missouri. Filed June 8, 1921. Serial No. 475,869. 14 Claims. (Cl. 238—244.)

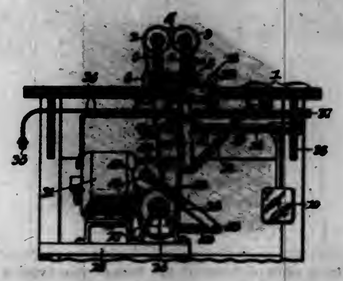


12. In a rail joint, a vertically extensive fish plate and a toggle plate expander having rocking bearings against said fish plate.

1,393,765. RADIATOR. CHARLES A. DRAGERITE, Cincinnati, Ohio. Filed Sept. 22, 1920. Serial No. 413,947. 3 Claims. (Cl. 257—130.)

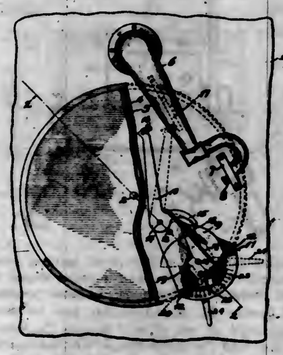
1. In a radiator core of the honey-comb type, a series of units set in staggered relation with relation to the corrugations therein, with the walls of the units spaced apart internally of the radiator to permit longitudinal passage of water therebetween, said corrugations being formed essentially of large corrugations interspaced by small corrugations, with the crests of the large corrugations formed into small corrugations shaped alike to the alternate small corrugations.

1,393,766. PORTABLE PIPE-VISE STAND. WILLIAM S. DU CHARME, Cleveland, Ohio. Filed Apr. 29, 1920. Serial No. 377,435. 1 Claim. (Cl. 81—41.)



The combination with a top plate having parallel upstanding flanges 25 thereon, and a cross flange 7 at one end of said flanges, of a bar 20 slidable lengthwise between said flanges 25, an adjustable jaw on said bar, a fixed jaw mounted on one of said flanges 25, between said adjustable jaw and the cross flange, and an operating device pivoted between said fixed jaw and said cross flange and engaging the said bar 20 to shift the same.

1,393,767. DENTAL-BRIDGE CONSTRUCTION. LEO E. EVELIN, New York, N. Y. Filed Feb. 24, 1919. Serial No. 278,874. 6 Claims. (Cl. 32—12.)

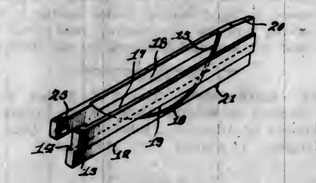


1. An artificial tooth having a pin embedded therein, a member mounted on the pin and rotatable thereon, and an element for supporting said element on another tooth.

1,393,768. WRAPPING-MACHINE. ABRAHAM FEIFER, Philadelphia, Pa. Filed Jan. 15, 1920. Serial No. 351,682. 5 Claims. (Cl. 93—5.)

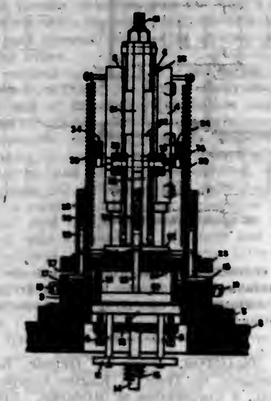
1. A wrapping machine comprising a pair of yieldingly separable rolls normally maintained close together; an endless belt with a bight normally running free and slack over said rolls, so that it may be depressed between them by an article to be wrapped to form a loop about the article, and a bight normally hanging slack from them; and driving means for said belt engaging said latter bight.

1,393,769. PHONOGRAPH. RAYMOND R. FOUTS, Chicago, Ill., assignor to Lakeside Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 16, 1920, Serial No. 359,177. Renewed Jan. 27, 1921. Serial No. 440,527. 9 Claims. (Cl. 192—116.)



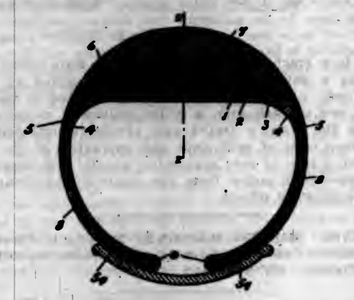
1. A phonograph including a disk record supporting turn table; a tone arm mounted at one end upon one side of the turn table axis to swing over the turn table and carrying at its other end a transmitter that is provided with a stylus which is engageable with record grooves to swing the tone arm and propagate sound therethrough; a pivoted arcuate rack eccentric with respect to its pivot; a pivoted dog engageable with the rack to hold the rack in adjusted position and to be held in adjusted position by the rack, the dog being adjustable to be given a releasing movement from the rack by the tone arm at the conclusion of a record, the curvature of the rack being of increasing radius in the direction of its restoring movement to enable it to escape the dog when released as well as to hold the dog in different angular adjustments to correspond with the different positions to which disk records of different length will swing the tone arm; means for stopping the turn table; and means for operating the stopping means and restoring the released rack.

1,393,770. BAG-FASTENER. FRANZ A. FULLER, Newark, N. J., assignor to J. E. Mergott Company, Newark, N. J., a Corporation of New Jersey. Filed Dec. 24, 1917. Serial No. 208,646. 1 Claim. (Cl. 292—228.)



In a bag or purse frame, the combination of a pair of frame sections, of a flat edge strip provided with a central raised portion, connected with one of said frame sections, to receive and position the holding or locking catch, said edge strip being further provided with a lateral recess to limit the upward movement of the catch, a locking catch located in said central raised portion of the edge strip, comprising a plate, the rear and upper side being formed with a projection positioned in the lateral recess of said edge strip and adapted for engagement with the wall of the central raised portion of the edge strip to permit the oscillatory movement of said catch, said plate being further provided at its front end with a finger receiving element formed by turning the metal of said plate rearwardly upon itself, alined integral spring holding means formed on each end of said catch, a torsion spring one end of which is secured to one of the holding means on one end of the catch, and the spring being further positioned in the other holding means on the other end of the catch, the other end of the spring being secured in the channel of the frame section against rotation.

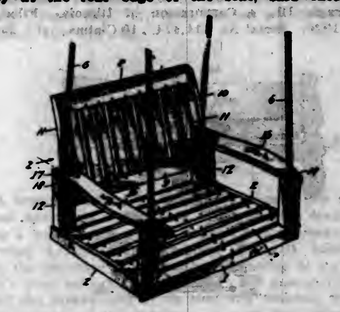
1,393,771. PHONOGRAPH-RECORD HOLDER. EDWARD C. GORDON, Chicago, Ill. Filed June 20, 1919. Serial No. 305,572. 5 Claims. (Cl. 211—16.)



1. A record holder embodying therein a frame, a plurality of individual record supports mounted in side by side relation therein, each record support having a record receiving groove formed by a depression in one side face thereof, and the adjacent record support having a side face which directly abuts that side face of the first mentioned record support that contains the groove and bounds, at least in part, said record receiving groove.

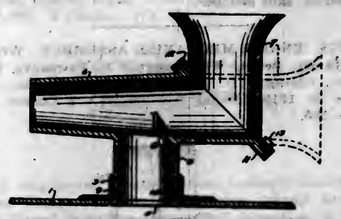
1,393,772. MACHINE AND PROCESS FOR AFFIXING COVERING MATERIAL TO FORMS. OLIVER P. GRAMMWOOD, Billerica, Mass., assignor to Farrington Manufacturing Company, Boston, Mass., a Corporation of Maine. Filed May 3, 1920. Serial No. 378,554. 7 Claims. (Cl. 93—54.)

4. The process of covering an article with a sheet of material which consists in producing a plurality of impaling members upon said article, stretching the sheet of material upon said article and causing the same to engage said impaling members.



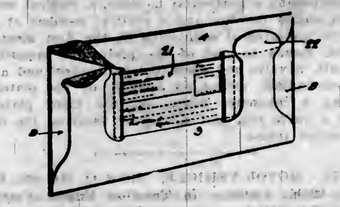
1,393,773. TIRE. ENOCH GRILL, Grand Rapids, Mich. Filed Oct. 9, 1920. Serial No. 415,851. 2 Claims. (Cl. 152—18.)

1. A tire casing comprising a continuous band of metal made up of laminations of sheet metal, a leather covering incasing the same, a fabric covering around the leather, a heavy fabric strip cemented to the outer side of the fabric covering and having its sides extended outwardly and downwardly to make sides to the casing, and a rubber tread vulcanized around the last mentioned fabric and continued over the sides thereof, said last mentioned fabric being also covered with rubber on its inner side, substantially as described.



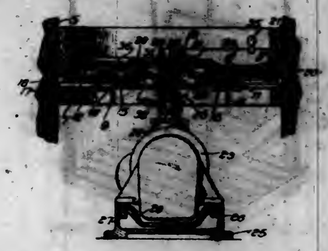
1,393,774. SWING. JOSEPH F. GUSHMAN, Toledo, Ohio. Filed Nov. 28, 1919. Serial No. 341,005. 9 Claims. (Cl. 155—65.)

1. In a swing, the combination of a seat supported by flexible members at the front and rear, a back having a fixed extension at each end telescoped on the rear flexible supporting members so as to be oscillatably held thereby at the rear edge of the seat, said extensions



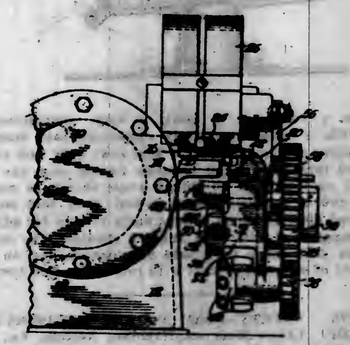
being terminated below the middle of the back, and having arm rests loosely supported on the upper ends thereof, and held thereagainst by the forward inclination of the rear flexible members.

1,393,775. VENTILATOR. GEORGE HANSON, Wilmington, N. C. Filed Apr. 7, 1920. Serial No. 371,923. 2 Claims. (Cl. 98—8.)



2. In a ventilator, a cowl, a stem communicating therewith, a collar operatively supporting said stem, a baffle plate at the junction of said cowl body and stem, a raised threaded annular shoulder formed upon one end of said cowl body at an oblique angle thereto, a mouth piece, and a threaded flange formed upon said mouth piece and disposed at an oblique angle thereto for adjustable engagement with said annular shoulder, the movement of said flange upon said shoulder causing an adjustment of said mouth piece with relation to said cowl.

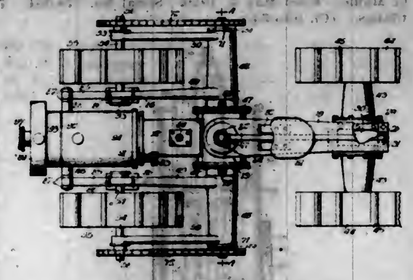
1,393,776. SAFETY-FLAP POCKET REGISTRY-ENVELOP. LEWIS WILLIAM HARDING, Norfolk, Va., assignor of one-half to John A. Lesner. Filed Oct. 18, 1919. Serial No. 331,583. 10 Claims. (Cl. 229—72.)



1. An envelop provided with inwardly extending end flaps, each flap folded upon itself to form an externally located pocket to receive a return card, and means connecting one flap with the other.

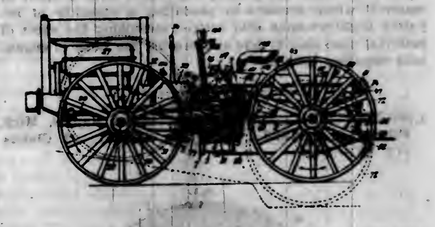
1,393,377. METHOD OF AND APPARATUS FOR BURNING FURNACE-FIREBOXES. Stanislaus Hanusek, Chicago, Ill., assignor to Hardinge Brothers, Inc., Chicago, Ill., a Corporation of Illinois. Filed Sept. 20, 1920. Serial No. 411,414. 10 Claims. (Cl. 25—26.)

1. The combination with a machine for burning fuel oil, comprising a rotary spindle for rotating an atomizing nozzle, of means for co-acting with said spindle in forming the bed of the fire box of the furnace in which said atomizing nozzle is to operate, comprising a member having screw threaded engagement with said spindle and provided with a plurality of arms for supporting a ring forming a part of said fire box bed, and a sweep, for conforming the upper surface of the fire box bed, rotatably mounted on said member.



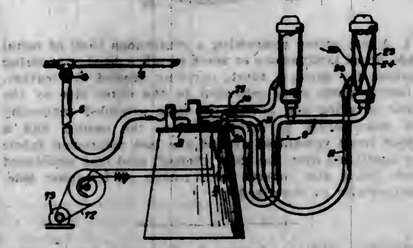
1,393,778. ENGINE-MECHANISM ASSEMBLY. William C. Heath, Beloit, Wis., assignor to Fairbanks, Morse & Co., Chicago, Ill., a Corporation of Illinois. Filed June 19, 1919. Serial No. 305,254. 2 Claims. (Cl. 123—195.)

1. In mechanism of the class described, the supporting plate comprising a horizontal member, a vertical member at right angles thereto, and a vertical member at right angles to an integral with each of the first mentioned members, means on one of the plates for mounting a cam shaft, a valve rod operating mechanism and a governor mechanism, means on another of the plates for mounting a magneto, means on the third plate for guiding a valve rod, and means for securing the device to an engine frame.



1,393,779. MOTOR-VEHICLE. John O. Heinen, Boyne City, Mich., assignor to Traction Engine Company, Boyne City, Mich., a Corporation of Michigan. Filed July 10, 1919. Serial No. 312,042. 15 Claims. (Cl. 180—40.)

1. In a vehicle, the combination of a frame comprising a leading section and a trailing section vertically pivoted to the rear end of the leading section, a pair of supporting wheels pivotally connected on a longitudinal axis to one of the sections, a pair of supporting wheels, each



resiliently connected to the other section and independently oscillatable, and a motor having a driving connection for simultaneously operating the supporting wheels of both sections.

1,393,780. TRACTOR. John O. Heinen, Boyne City, Mich., assignor to Traction Engine Company, Boyne City, Mich., a Corporation of Michigan. Filed Dec. 6, 1919. Serial No. 343,019. 14 Claims. (Cl. 180—49.)

1. In a tractor, the combination of a main frame comprising a pair of upward arms finally united at their rear ends, a front supporting wheel mounted at the forward end of each arm, a motor resiliently mounted between the arms, a trailer arm pivoted intermediate of the rear ends of said arms and supported at the rear end by a pair of rear supporting wheels, and means for communicating power from the motor to the front and rear supporting wheels.

1,393,781. MILKING-MACHINE. Palmer B. Hewlett, Hollister, Calif. Filed June 2, 1919. Serial No. 301,519. 5 Claims. (Cl. 31—101.)

1. In a milking machine, a milk receptacle cover provided with a chambered casing comprising a pair of outer chambers open to the atmosphere, a pair of intermediate chambers, each connected with a teat cup and

a vacuum chamber connected with a source of vacuum, valves controlling communication between each intermediate chamber and the vacuum chamber and the respective outer chambers, and electro-magnetic means for so actuating said valves in timed relation that each intermediate chamber is alternately opened to the atmosphere and to said vacuum chamber, and the timing being such that the intermediate chambers are opened to the atmosphere and said vacuum chamber in alternation with respect to each other.

2. In a milking machine, the combination of a milk receptacle cover, a chambered casing comprising a vacuum chamber, a pair of intermediate chambers and a pair of atmospheric air chambers, a valve interposed between each intermediate chamber and its respective atmospheric chamber, a valve interposed between each intermediate chamber and said vacuum chamber, and electromagnetic means for actuating said valves so that communication is established and shut off between the vacuum chamber and said intermediate chambers in alternation and between said atmospheric chambers and said intermediate chambers in alternation, the actuation being such that when one intermediate chamber is opened to vacuum and closed from atmosphere, the other intermediate chamber is closed from vacuum and opened to atmosphere.

3. In a milking machine, the combination of a milk receptacle cover provided with a chambered casing including a pair of atmospheric air chambers, a pair of intermediate chambers and a vacuum chamber, a pair of valves for each intermediate chamber adapted to be alternately opened and closed to establish communication between each intermediate chamber and the atmosphere and said vacuum chamber in alternation, and electromagnetic means for operating said valves so that the intermediate chambers are alternately in communication with said vacuum chamber.

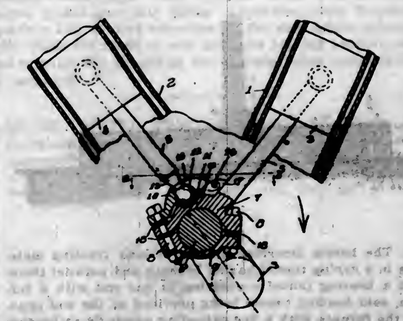
4. In a milking machine, the combination of a milk receptacle cover, a plurality of chambers arranged thereon comprising a pair of atmospheric air chambers, a pair of intermediate chambers and a vacuum chamber, a pair of valves for each intermediate chamber, one of the valves of each pair being movable relatively to the other, and electro-magnetic means for operating all of said valves to cause a valve of each pair to be closed when the other is opened, the pairs of valves being arranged to establish communication between the vacuum chamber and said intermediate chambers in alternation.

5. In a milking machine, the combination of a milk receptacle cover, a plurality of chambers mounted thereon, a source of vacuum connected with one of said chambers, two of said chambers being connected with teat cups and two chambers being open to atmosphere, four valves controlling communication between the various chambers, and electro-magnetic means for actuating said valves so that each teat cup chamber communicates alternately with said vacuum chamber and with the atmosphere, communication between the vacuum chamber and said teat cup chambers being established in alternation.

1,393,782. BALANCING DEVICE FOR EXPLOSION OR INTERNAL-COMBUSTION MOTORS. Oscar Waldemar Hult, Stockholm, Sweden. Filed Mar. 27, 1920. Serial No. 369,356. 4 Claims. (Cl. 74—5.)

1. The combination with an engine having a rotatable crank shaft, of an ignition apparatus including a rotatable part, said rotatable part including a balance weight which rotates in an opposite direction to and with the same angle of velocity as the engine shaft.

2,393,783. SEWING-MACHINE. Clinton H. Hunt, Georgetown, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 17, 1918. Serial No. 254,476. 4 Claims. (Cl. 112—36.)

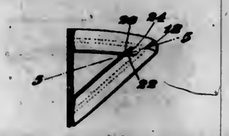


1. A sewing machine for sewing outsoles to the uppers of shoes, having, in combination, stitch forming devices including a hook needle, a work support and a presser foot, comprising a rigid body extending obliquely downward and in the direction of feed and terminating at its lower end in a work engaging foot, a rigid plow mounted on the body of the presser-foot at its base and directed in a direction reverse to the direction of feed for lifting and turning back the channel flap, and a rigid plate-like projection mounted on the body of the presser-foot adjacent its base and extending from the body of the presser-foot in the direction of feed for engaging the outer portion of the channel flap and holding the same out of the paths of the needle and awl.

1,393,784. DETACHABLE SHOE-HEEL. Louis Iannelli, Boston, Mass. Filed Aug. 31, 1920. Serial No. 407,168. 3 Claims. (Cl. 36—36.)

1. A shoe having, in combination, a conical shaped metal member attached at the heel portion thereof having a screw thread extending thereabout increasing in diameter from the lower end thereof upward and a detachable heel adapted to interlock with the screw thread of said metal member and spring into holding engagement with said shoe.

1,393,785. ENGINE. Joseph D. Ingram, Amarillo, Tex. Filed Feb. 7, 1920. Serial No. 357,007. 2 Claims. (Cl. 74—17.)

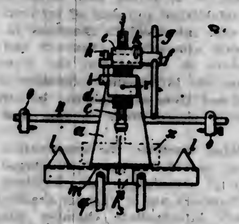


1. In an engine the combination with a crank engaging yoke and a piston rod integral therewith, of another piston rod pivotally connected to the yoke, the two rods being mounted to work in the same plane, and separate means engaged by a single bolt for holding the yoke upon a crank and for holding the pivoted piston rod to the yoke.

1,393,786. OVEN-BURNER. SHERMAN S. TOWNLEY, Buffalo, N. Y. Filed Nov. 17, 1919. Serial No. 338,474. 7 Claims. (Cl. 126—36.)

1. The combination with a range provided with an oven and a burner chamber arranged beneath the oven and opening therein, of a reversible and detachable burner member adapted to provide a burner elevated above the bottom of the oven when in one position and to close the oven against the admission of air through the burner chamber when in the reversed position.

1,393,787. SOLE AND METHOD OF MAKING. MERTON E. JOHNSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Oct. 18, 1919, Serial No. 331,580. Divided and this application filed Dec. 2, 1920. Serial No. 427,738. 9 Claims. (Cl. 12—146.)



1. A sole having a V-shaped incision in its margin at the tip of the toe, and a lineal incision at the rear thereof but oblique thereto.

1,393,788. PROCESS IN DIRECT-ACTION DRIERS. ITHAMAR M. JUSTICE, Dayton, Ohio, assignor to The Manufacturers Equipment Company, Dayton, Ohio, a Corporation of Ohio. Filed May 3, 1919. Serial No. 294,499. 9 Claims. (Cl. 34—24.)

7. The herein described process of heat treating materials in a drying tunnel having beneath and parallel therewith a heating tunnel connecting at one end with a furnace, said heating tunnel being provided at the end opposite the furnace with a flue extending upwardly to heating channels parallel with said drying and heating tunnels and leading to a stack intermediate the ends of the drying tunnel and there being also at the furnace end of the drying tunnel an outlet for the air therein opening into a channel leading to the stack; the process consisting of passing a heating medium through the heating tunnel thence upwardly through the end flue to and along the heating channels to the stack; in introducing air at atmospheric temperature in regulated quantities into the end of the drying tunnel opposite the furnace end of the heating tunnel, in causing the same to be gradually increased in temperature by radiation of heat as it passes therethrough and in conducting it upwardly near the furnace end thereof into and through the air channel extending over and parallel with the drying tunnel to the stack, in introducing into the drying tunnel the material to be treated and in advancing it therealong in the direction of the air current.

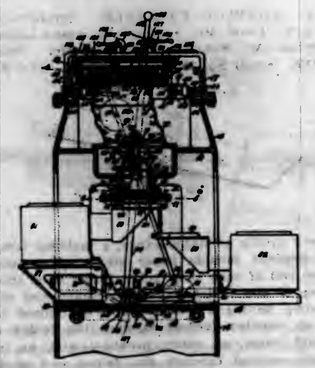
1,393,789. MANDREL-PRESS. LEONHARD KELLENBERGER, St. Gallen, Switzerland. Filed Apr. 17, 1920. Serial No. 374,673. 4 Claims. (Cl. 29—85.)

1. In an improved mandrel-press, the combination with a stand having a base plate, of a screw-threaded sleeve adjustably screwed into the top portion of the stand, a rack slidably mounted within the sleeve, means to operate the said rack when small down-pressure is required, and means to block the rack from movement and cause the said sleeve to be independently moved for use with heavy down-pressure.

1,393,790. TROLLING-SPINNER. HARRY J. KENNEY, Seattle, Wash. Filed Mar. 30, 1920. Serial No. 370,002. 6 Claims. (Cl. 43—45.)

5. A trolling spinner comprising a rotatable member having a central opening and a sinker weight supported centrally of the rotatable member within the opening and spaced from the walls thereof to cause the spinner to travel beneath the surface of the water.

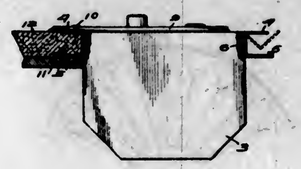
1,393,791. SPLICED JOINT FOR BALE-BANDS. WALLACE D. KIMBALL, New York, N. Y., and CHARLES G. MORTIMER, East Orange, N. J., assignors to National Binding Machine Company, New York, N. Y., a Corporation of New York. Filed Mar. 1, 1917. Serial No. 151,634. Renewed May 6, 1920. Serial No. 379,397. 7 Claims. (Cl. 24—23.)



1. A spliced joint comprising two strap ends to be connected, a tube or sleeve having different portions surrounding the two strap ends, each said portion and its inclosed strap end having a crimp or corrugation therein, said tube or sleeve having a portion of its wall cut out on one side to permit one end of the strap to project therethrough.

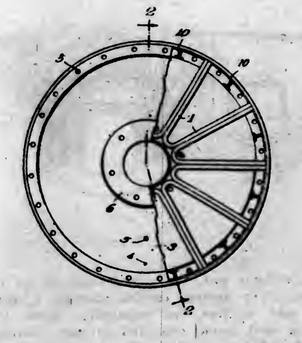
1,393,792. METAL FACING FOR INSIDE OF WINDOW-OPENINGS. GEORGE A. KNAPP, Chicago, Ill., assignor to Knapp Brothers Manufacturing Company, a Corporation of Illinois. Filed Feb. 18, 1921. Serial No. 446,018. 5 Claims. (Cl. 189—75.)

3. A structure having a sheet metal member and a bracket to which it is to be attached and screws permanently secured to the surface of the sheet metal member adjacent the bracket to be received by holes in the bracket and nuts on the screws to hold said member and bracket together without exposing the screws.



1,393,793. CAMERA. CONSTANT J. KRYZANOWSKY, Mount Washington, Md., assignor to The Crown Cork and Seal Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed May 18, 1917. Serial No. 169,423. 24 Claims. (Cl. 88—24.)

1. In a step and repeat camera, an upright frame, a lens carried by said frame with its axis in a vertical plane, a carriage mounted in said frame to move in a horizontal plane, a photographic plate holder carried by said carriage, a master plate moving with said plate holder, and means for locating said master plate in a plurality of predetermined positions.



1,393,794. SWITCH-BOX. CARL H. KUHLMAN, Toledo, Ohio. Filed Jan. 29, 1920. Serial No. 354,815. 2 Claims. (Cl. 247—20.)

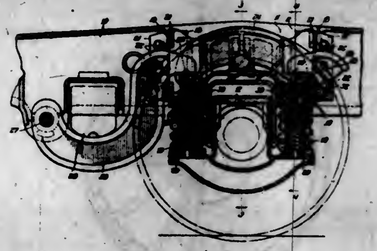
2. In a sheet metal switch box for plastered walls, the sides of the box having flanges extending at right angles to the sides, one set of flanges located at the front edges of the box and the other set of flanges located away from the edges of the box a distance equal to the thickness of the plaster and connected to the edges of the sides of the box by narrow strips formed integral with the sides of the box and the last named flanges and connected to the sides of the box in the same plane as the

first named flanges, the said strips being bent sharply downward and against the sides of the box and severable by return movements of the strips and the second named flanges.

1,393,795. METAL WHEEL. MAURICE LACHMAN, New York, N. Y., assignor, by mesne assignments, to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed Nov. 2, 1917. Serial No. 199,828. 14 Claims. (Cl. 301—63.)

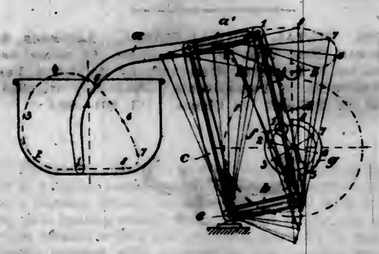
1. A metal wheel comprising a substantially rigid spoke member constructed from flanged metal bars forming radial spokes and side plates comprising disks fastened together and against the sides of the said spoke member with their flat faces or web portions bearing against the flat faces of the flanges at the opposite edges respectively of said bars.

1,393,796. METAL VEHICLE-WHEEL. LAURENCE S. LACHMAN, New York, N. Y., assignor, by mesne assignments, to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed July 31, 1918. Serial No. 247,499. 14 Claims. (Cl. 301—66.)



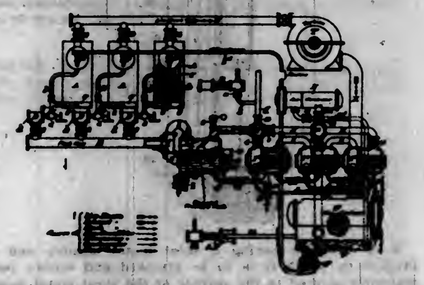
7. In a metal wheel, a metal rim and tubular spokes united therewith by a welded joint comprising the metal of projections integral with and rising from countersinks in the inner surface of the rim and the ends of the spokes butt-welded to said projections.

1,393,797. METAL WHEEL. MAURICE LOCHMAN, New York, N. Y., assignor, by mesne assignments, to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed May 31, 1919. Serial No. 301,622. 5 Claims. (Cl. 301—63.)



1. A metal wheel having a metal rim provided with an internally projecting flange or rib and separate spokes butt-welded by the edge of their extremities to the edge of separated projections of said flange.

1,393,798. SIX-WHEEL EQUALIZING-TRUCK. JOHN A. LAMONT, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed July 18, 1921. Serial No. 485,433. 8 Claims. (Cl. 105—195.)



1. In a railway car, the combination of an intermediate journal box, springs carried thereby, a spring cap bridging said springs, an equalising beam pivotally mounted on said spring cap, and springs interposed between said spring cap and equalising beam for maintaining the equalising beam in its normal horizontal position.

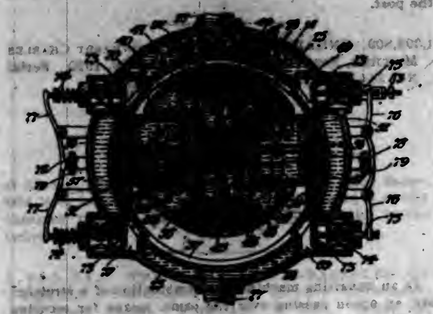
1,393,799. MIXING, KNEADING, AND THE LIKE MACHINE. CARL LAUNER, Berlin, Germany. Filed May 14, 1919. Serial No. 297,173. 2 Claims. (Cl. 74—14.)

1. In a device of the kind described in combination, a linked quadrilateral, one of the pivots of said quadrilateral being fixed, an arm fixed to and forming an elongation of one of the bars opposite said fixed pivot extending beyond the point adjoining said fixed pivot, a crank having its free end pivoted to the other opposite bar and means for turning said crank.

1,393,800. PROCESS FOR CONSERVING HEAT IN STEAM-POWER PLANTS. SAMUEL MORRIS LILLIE, Philadelphia, Pa. Filed Apr. 22, 1918. Serial No. 230,255. 6 Claims. (Cl. 122—1.)

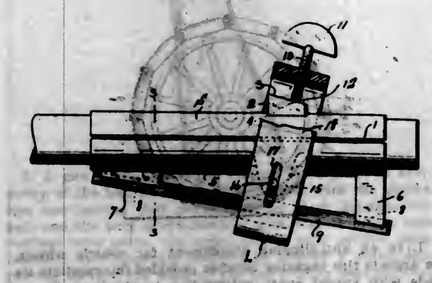
1. The process of utilizing heat in hot water in steam power plants consisting in leading it into a space in which is maintained a lower pressure than the pressure corresponding to the temperature of the water, in employing the resulting flash vapors in an evaporating plant to evaporate water for the production of vapor and distilled water, and in using the vapors for heating the feed water for the boilers.

1,393,801. ENVELOP-FASTENER. CHRISTOPHER H. LOVELL, St. Louis, Mo., assignor, by mesne assignments, to Thomas M. Webster, St. Louis, Mo. Filed Apr. 24, 1919. Serial No. 292,393. 1 Claim. (Cl. 24—17.)



As a new article of manufacture, a fastener comprising two independent flexible paper strips of gummed material, one end of each strip being folded upon itself, the inner face of the folded end being ungummed so as to form a strip having a gummed and ungummed interior surface, an opening formed through the folded end of one of said strips, an eyelet provided with an integral flat tongue secured through the folded end of the remaining strip, the folded end of the strip provided with the opening underlying the folded end of the strip carried by the eyelet provided with the tongue, said tongue being inserted through the opening and folded back against the folded end of the strip carrying the tongue, the free end of the tongue extending to the eyelet in said folded end.

1,393,802. ROTARY ENGINE. BENJAMIN M. LUPTON, Jr., Jersey City, N. J. Filed Dec. 22, 1916, Serial No. 138,260. Renewed Mar. 31, 1921. Serial No. 457,423. 30 Claims. (Cl. 122—8.)

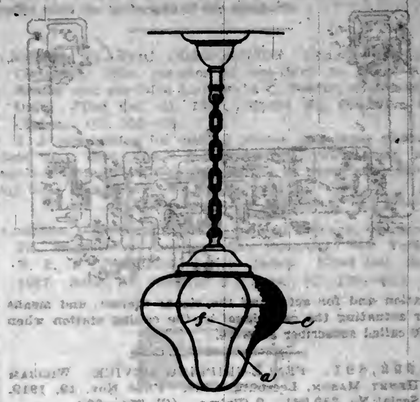


8. In a rotary engine, a casing having a cylindrical bore and provision for the admission and discharge of a fluid, a piston body mounted for relative rotation within and eccentrically of said bore, a sectional piston member carried by and movable transversely of said body, an element

mounted for relative rotation within and concentrically of said bore, having parallel guides with which the respective

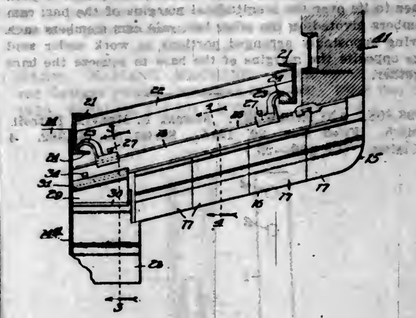
ends of the said piston member are in sliding contact, and means for adjusting the sections of said piston member in relation to the guides.

1,393,803. NUT. ALEXANDER MCKIM, deceased, by Katherine McKim, administratrix, Wilkinsburg, Pa. Filed Mar. 14, 1921. Serial No. 452,382. 8 Claims. (Cl. 85—36.)



1. A device of the class described comprising a loop member, a split sleeve disposed through the loop member, longitudinally spaced lugs carried by the sleeve, a rod disposed through the loop member and contacting with the lugs, and a member threaded through the loop member and engaging the sleeve at a point remote from the lugs.

1,393,804. TRANSPARENT GLASS SCREEN FOR TRANSMITTING SUBSTANTIALLY WHITE LIGHT FROM INCANDESCENT ELECTRIC LAMPS. DONALD N. MACDONALD, Boston, Mass. Filed Jan. 15, 1919. Serial No. 270,873. 5 Claims. (Cl. 240—1.)

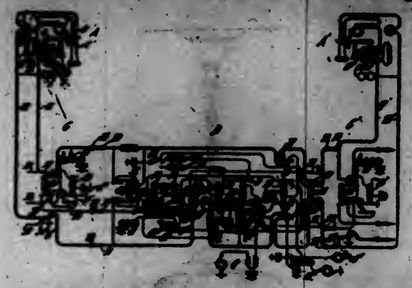


4. An illuminating lamp comprising the combination with an incandescent electric lamp of a screen formed and arranged substantially to surround said lamp and composed of transparent glass having an irregular external light-diffusing surface, and having a bluish color characteristic adapted to absorb substantially the excess of red and yellow light rays emitted from said incan-

descent lamp over the contents of such rays in midday sunlight, said color characteristic being that of finely

ground cobalt blue glass thinly spread over the screen and fused thereto.

1,393,805. FIRE-ARCH. THOMAS A. MARSH, Chicago, Ill., assignor to Green Engineering Company, East Chicago, Ind., a Corporation of Illinois. Filed Oct. 19, 1918. Serial No. 258,845. 5 Claims. (Cl. 110—96.)

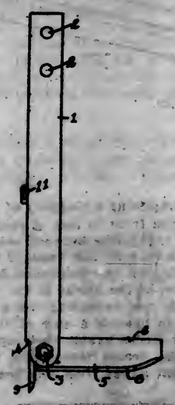


1. A fire-arch, comprising a plurality of laterally spaced beams extending from front to rear of said arch, a row of blocks for each of the spaces between said beams, a plurality of the blocks in each row engaged with the beams at opposite sides thereof and suspended from said beams with the lower faces of the blocks in the same plane, the front block in each row extending below the remaining blocks in the row to provide a step at the front end of the row, said front blocks having their upper ends terminating short of the beams thereabove, and means for suspending said front blocks from said beams.

1,393,806. AUTOMATIC TELEPHONE SYSTEM. TALBOT G. MARVIN, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 12, 1917. Serial No. 196,384. 14 Claims. (Cl. 179—16.)

1. In a telephone system, subscribers' lines, talking equipment therefor, a call signal at the station on each line

for receiving calls, automatic switching mechanism controlled from a calling station for connecting with a called

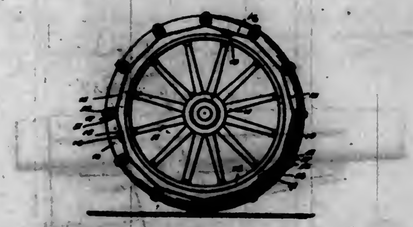


station and for actuating the signal thereat, and means for actuating the call signal at the calling station when the called subscriber answers.

1,393,807. FENCE-GRIPPING DEVICE. WILLIAM HENRY MASON, Leesburg, Ohio. Filed Nov. 19, 1919. Serial No. 339,061. 2 Claims. (Cl. 254—98.)

1. A fence stretching device including, in combination, a pair of gripper bars, one of which is provided with transverse keepers having lugs turned inward toward each other to lie over the longitudinal margins of the bar, cam members pivoted on the other bar, said cam members each having opposingly arranged portions to work under said lugs opposite the margins of the bars to squeeze the bars together.

1,393,808. ANCHOR-POST. ALBERT L. MELVIN, Detroit, Mich. Filed Nov. 26, 1915. Serial No. 62,282. 4 Claims. (Cl. 189—29.)



1. An anchor post comprising a body member formed of angle iron or the like, a driving point of similar character pivotally attached thereto and having a curved and sharpened driving end, a slidable locking bar engaging the point in a manner to hold the same in alinement with the body during the driving operation, the body member and point having abutting portions when held in alinement, the locking bar being movable relative to the point to allow the same to turn on its pivot to an angle with the body by driving, all, the body and the bar being adapted to be inserted between the end of the point and contiguous end of the body member when the point is turned to an angle preventing return of the point to alinement with the post.

1,393,809. UNHAIRING-MACHINE. REINHARDT CHARLES MASCHKE, New York, N. Y. Filed May 26, 1920. Serial No. 384,264. 1 Claim. (Cl. 28—12.)

In an unhairing machine, the combination of a stretcher bar, an apron passing over the same, means for securing a pelt along its one edge to said apron, slotted bearings located in opposite relation to said stretcher bar, pressure rollers journaled in said slotted bearings and between which said pelt is carried by said apron and whereby said pelt is held taut upon said apron during the unhairing operation and springs in said slots whereby one of said rollers is pressed toward the other.

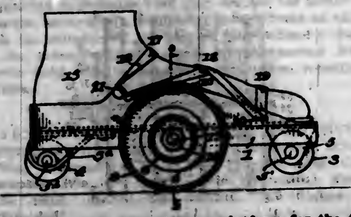
1,393,810. ANTISLIPPING ATTACHMENT FOR VEHICLE-WHEELS. CHARLES MOSS, New York, N. Y., assignor to Mossgrip Co., Inc., New York, N. Y. Filed June 30, 1919. Serial No. 307,673. 2 Claims. (Cl. 152—14.)

1. In an anti-slipping attachment for vehicle wheels, an arcuate tire engaging member provided intermediate its ends with spaced apart outstanding longitudinal flanges and having relatively flat opposite end portions with pairs of spaced slots therein, and the portion of the member between the slots being pressed outwardly to form a pocket therebeneath and between the slots, a tread member secured between said flanges at the outer side of said tire engaging member, and attaching links connected to opposite ends of the tire engaging member, each link having an intermediate portion adapted to lie in one of said pockets and having end portions projecting through said slots and curved to project outwardly from the slots, said links being adapted to freely slide in said pockets for permitting relative movement between the tire engaging member and the links, and the pockets protecting the intermediate portions of the links from contact with the roadway.

1,393,811. HOSE-CLAMP. WALTER MOSSMEIJER and GORDON J. SWEEDEN, Mount Vernon, Ohio. Filed Sept. 29, 1920. Serial No. 413,491. 1 Claim. (Cl. 24—19.)

A hose clamp consisting of a clamping band having flanged overlapping ends, a clamping bolt extending loosely through the flanges having an eye at one end and

threaded at its opposite end, an adjusting nut on the threaded end of the bolt to engage one of the flanges, a cam locking lever, and a pivot pin extending through the eye and forming a journal for said lever at the other end

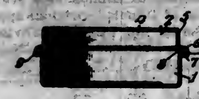


of the bolt permitting the lever to engage the other flange, said lever having a curved handle arranged to lie in snugly engaging relation against a portion of the band in the locked position.

1,393,812. STOCK FOR SINGLE-BARRELED OR DOUBLE-BARRELED GUNS. EUGÈNE MOUSSEAUX, Le Mans, France. Filed Apr. 5, 1920. Serial No. 371,451. 2 Claims. (Cl. 42—71.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A gun stock having the vertical axial plane of symmetry of the butt of the stock coincident with the aiming line and having that portion of the stock between the grip and the butt unsymmetrical with respect to the said vertical axial plane, the upper face of said portion being laterally and upwardly inclined to provide a cheek supporting surface, the sides of the stock below said inclined upper surface being reduced in thickness to provide shoulders above the reduced portion.

1,393,813. ROLLER-SKATE. JOHN MUCK, Milwaukee, Wis. Filed Aug. 19, 1918. Serial No. 250,480. 2 Claims. (Cl. 46—51.)



2. A roller skate comprising a platform for the foot, a plurality of wheels supporting the platform and journaled thereon, and a roller mounted in a spring bearing at the underside of the platform and at the rear of the supporting rollers, whereby said roller may act as a brake for the skate by forcing the spring mounting and engaging the roller with the underside of the platform.

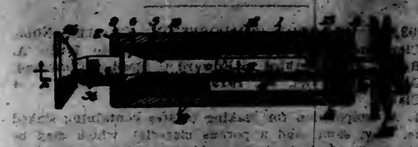
1,393,814. PLASTIC COMPOSITION. CHARLES NOLL, Cleveland, Ohio, assignor of one-third to Irvin A. Reader and one-third to Edward C. Reader, Cleveland, Ohio. Filed Oct. 31, 1919. Serial No. 334,872. 4 Claims. (Cl. 106—94.)

1. A composition for making plaster containing slaked lime, clay, sand, and a porous material, which may be again rendered plastic by the addition of liquid after having once been set.

1,393,815. CONTAINER. CHARLES H. NOWACK, Chicago, Ill., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 21, 1917. Serial No. 208,312. 2 Claims. (Cl. 220—42.)

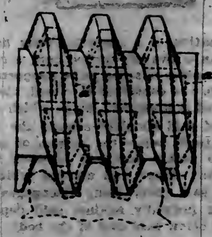
1. The combination of a container body having its top edge formed in an outwardly turned curl, a cover therefor formed with a shoulder adapted to be supported by the top of said curl when the container is closed, the edge of the cover being formed in a vertical flange which depends from the outer part of said shoulder around the outer side of said curl and extends below the bottom of said curl, and a vertically thin gasket arranged between the curl and the said depending flange and against which the flange engages tightly, said cover being disengageable from the body by pressing inwardly against said depending cover flange at a point below said curl of the body.

1,393,816. NAILING-MACHINE. WILLIAM N. OBRIN and GOMMER POWELL, Michigan City, Ind. Filed Dec. 2, 1920. Serial No. 427,821. 5 Claims. (Cl. 1—5.)



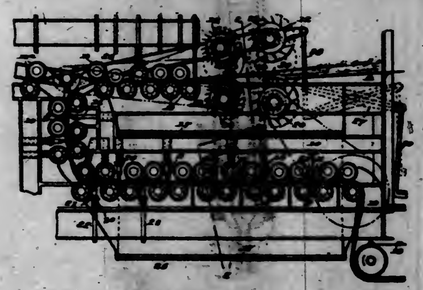
1. In a nailing machine, in combination, a nail-positioning nipple, a bushing slidable within the nipple and so constructed as to straighten the nail.

1,393,817. GRINDER-SPINDLE. CARL G. OLSON, Chicago, Ill., assignor to Illinois Tool Works, Chicago, Ill., a Corporation of Illinois. Filed May 8, 1920. Serial No. 379,737. 9 Claims. (Cl. 64—23.)



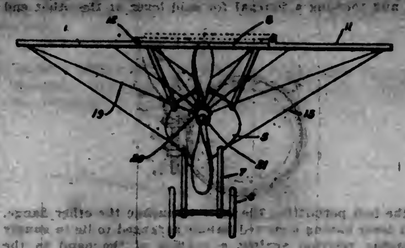
2. In combination, a spindle having a conical portion, a housing having a conical bearing for the conical por-

tion of the spindle, a ring adjustably mounted within the bearing and forming a bearing for the spindle, the ring being adapted to exert endwise thrust on the spindle, and



a spring encircling the spindle and having a stationary abutment at one end and at the other end exerting pressure axially upon said ring to hold the conical portion of the spindle seated in its conical bearing.

1,393,818. RECTIFIED-TOOTH HOB. Carl G. Olson, Chicago, Ill., assignor to Illinois Tool Works, Chicago, Ill., a Corporation of Illinois. Original application filed Jan. 5, 1920, Serial No. 349,687. Divided and this application filed Nov. 1, 1920. Serial No. 420,997. 3 Claims. (Cl. 29—108.)

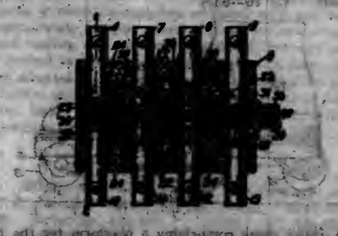


1. A hob having teeth, the cutting faces whereof coincide with one helicoid, viz: the one corresponding to the lead of the hob as a whole, and the individual teeth form truncated helicoids of slower pitch.

1,393,819. APPARATUS FOR DECORTICATING FIBROUS PLANTS. Frank O'Neill, Jr., Philadelphia, Pa. Filed Dec. 8, 1916, Serial No. 135,763. Renewed Mar. 7, 1921. Serial No. 450,459. 7 Claims. (Cl. 13—21.)

2. In a machine of the class described, the combination of rolls arranged in two series with the rolls of one series opposite the spaces between the rolls of the other series, said rolls acting to flatten the plants, and plant bending instrumentalities to which the plants are delivered endwise from said flattening rolls and which comprise rolls and blades situated opposite the spaces between adjacent rolls, and the protuberant bending surfaces of successive blades being faced in opposite directions, said rolls being progressively operated driven at increasing speeds whereby the plants are subjected to a twisting or pulling action.

1,393,820. AIRPLANE. Bradd M. Dayton, Hinsdale, Ill. Filed Nov. 3, 1920. Serial No. 421,220. 11 Claims. (Cl. 244—23.)

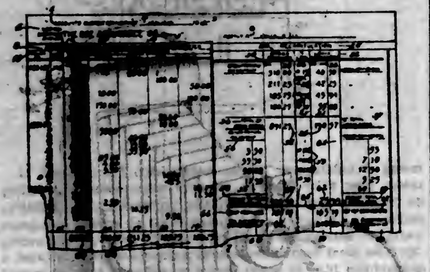


An airplane comprising a body portion, a stationary plane supported above the body portion, hinge sections extending upwardly from the stationary plane, lateral planes having hinge sections, means for connecting the hinge sections to provide hinge members, the hinge sections of one lateral plane being longer than the hinge sections of the opposed plane to permit one plane to be folded over the other plane, and means for connecting the lateral planes to the body portion.

1,393,821. APPARATUS FOR CONCENTRATING ORES BY FLOTATION. Yenkichi Ozuka, Tokyo, Japan. Filed Oct. 17, 1918. Serial No. 258,648. 1 Claim. (Cl. 33—85.)

In a machine of the class described, a casing, partitions subdividing said casing into longitudinally alined compartments, a shaft extending through all said compartments, mixer-beaters mounted upon said shaft in each compartment, the beaters of the first compartments being adapted to mix ore pulp and detention agent without substantial aeration, the beater of the last compartments being provided with means for delivering air into the pulp, all the compartments being connected for the passage of pulp therethrough successively, the first compartments having means for the delivery thereto of detention agents, and flotation means receiving from the last compartments.

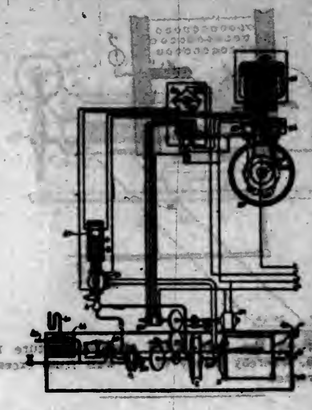
1,393,822. ELECTRIC SWITCH. John B. Parkin, Brentland, D. C. Filed May 14, 1917. Serial No. 168,850. 8 Claims. (Cl. 200—43.)



1. In a multiple switch, the combination of two sets of conductor-terminals of the same number each, and a key having in the number of conductors with definite

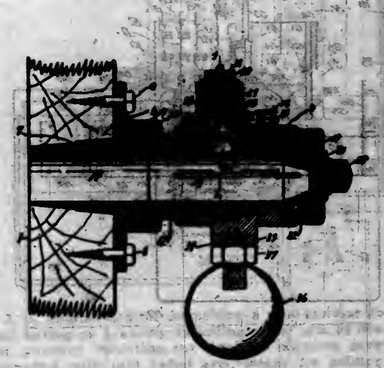
each combined key-terminal, the conductors of each set being [illegible]

8. An electric switch comprising an insulating body provided with an internal keyway of uniform section and open at one end, resiliently mounted contacts at opposite sides of the key-way and substantially flush with the walls thereof, a key of insulating material adapted to fit said key-way and provided with connectors embedded in the key and arranged to connect said contacts in predetermined pairs, and stop means for accurately locating said key in the key-way in position to make the desired connections.



1,393,823. BLANK FOR INSURANCE ACCOUNTING. Theodore C. Parsons, Oak Park, Ill. Filed Aug. 28, 1920. Serial No. 406,399. 5 Claims. (Cl. 283—66.)

1. A sheet having a field designated to receive data concerning insurance written, containing a set of columns each designated by the indication of a rate of per cent., the set as a whole being designated to indicate that the several columns are to receive premiums, a space adjacent each column designated to indicate that it is to receive the total of the entries in that column, a second field containing a column designated to indicate that it is to receive said totals, each line of said column being designated by a rate of per cent. and another column designated to indicate that it is to receive commissions and having its lines designated by the same rates per cent., a space adjacent and in alinement with each of said columns each designated to indicate that it is to receive the total of its column, a third field containing columns and spaces similar to the first field and a fourth field containing columns and spaces similar to the second field, the columns of the fourth field being adjacent to but out of alinement with the total spaces of the second field, being separated by a greater distance than the columns of the second field whereby they are out of alinement with the columns of the second field, spaces adjacent to but out of alinement with the columns of the fourth field and suitably designated to indicate that they are for the totals of said columns respectively, said total spaces being in alinement with the columns of the second field, whereby the totals of the corresponding columns of the second field and fourth field will be separated by spaces containing no entries.

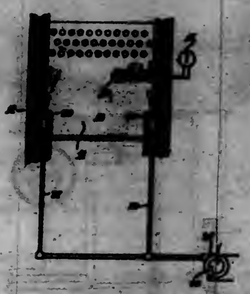


1,393,824. APPARATUS FOR PROPORTIONING STREAMS OF FLUID. John S. Peoples, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 24, 1918. Serial No. 847,215. 17 Claims. (Cl. 235—96.)

1. Apparatus for supplying a plurality of streams of fluid having a constant volumetric ratio, comprising, in combination, a plurality of wet displacement meters,

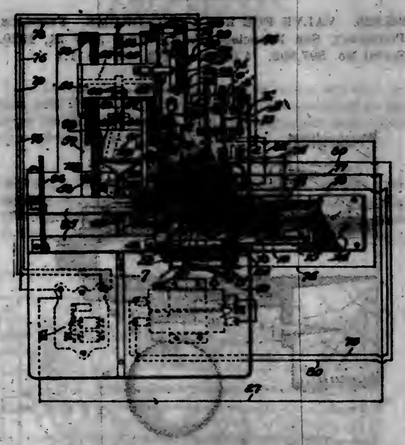
said meters and affording a medium of adjustment of such ratio.

1,393,825. VALVE FOR ROTATING DRUMS. Fremont Portharty, San Francisco, Calif. Filed July 21, 1920. Serial No. 397,992. 4 Claims. (Cl. 137—111.)



1. A relief device for a rotating drum mounted on said drum eccentrically to the axis thereof and including a relief valve which is subject to drum pressure only when said device is in its highest position.

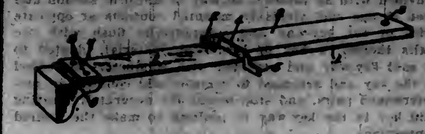
1,393,826. MEANS OF COMBUSTION CONTROL. Fremont D. Porter, Linden, N. J., assignor to Combustion Control Company, Inc., New York, N. Y. Filed Apr. 16, 1919. Serial No. 290,629. 4 Claims. (Cl. 236—35.)



1. The combination with a combustion chamber of means for supplying cooling fluid to the combustion cham-

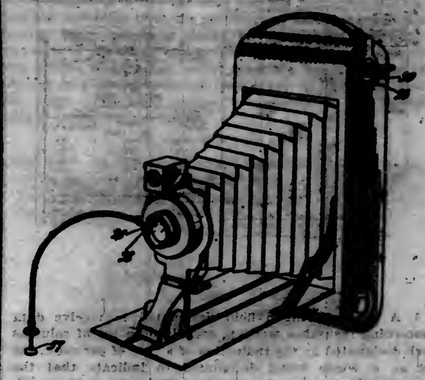
ter, and adjacent the inside walls thereof, and means controlled by the temperature of the combustion chamber

for turning on the fluid when the temperature rises unduly high, whereby injury to the wall from excessive heat is prevented.



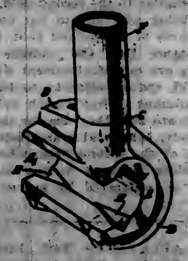
1,393,627. RECORDING SYSTEM AND SELECTOR MECHANISM THEREFOR. PAUL C. RAYMOND, U. S. National Army. Filed July 15, 1918. Serial No. 245,077. 19 Claims. (Cl. 101—51.)

1. In a record sheet controlled selector mechanism, the combination of a set of feelers individually adjustable into and out of operative position and individually movable in operative position under control of the record sheets, means for bringing the feelers in operative position into engagement with the record sheets, and a common actuator selectively controlled by the combined movement of all the feelers, whether one or more, in operative position.



1,393,826. WEIGHING DEVICE. FRITZ REICHMANN, New York, N. Y. Filed May 12, 1916. Serial No. 98,971. 19 Claims. (Cl. 265—69.)

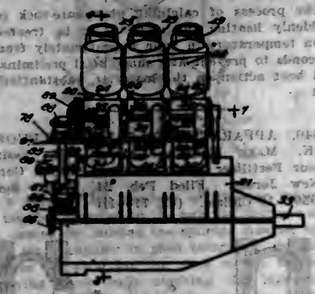
1. In a weighing device, the combination of means to offer resistance to the movement produced by weights applied thereto comprising a force-resisting member and means to vary the point of application of said weights on said force-resisting member longitudinally thereof so



that said force-resisting member will give identical resistance to like weights under varying degrees of temperature.

1,393,829. CAMERA. ANDREW H. ROHLFS, Boise, Idaho. Filed Dec. 16, 1918. Serial No. 267,045. 9 Claims. (Cl. 95—31.)

1. In a camera, a locking member of substantially U-shape having opposed forwardly extending projections, said member having a notched portion on its inner edge and having a projection on its outer edge, substantially as shown.



1,393,830. PIPE-BENDING TOOL. MORTIMER C. ROSENFIELD, Cleveland, Ohio. Filed Dec. 16, 1918. Serial No. 267,263. 1 Claim. (Cl. 81—15.)

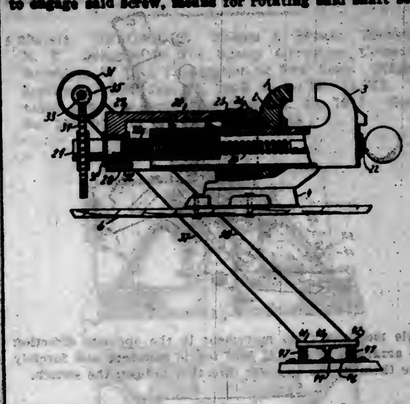
As a new article of manufacture, a pipe bending tool comprising a body portion adapted to partially envelop a pipe and provided with gripping ribs upon its exterior adjacent each end and also provided with a shank and a longitudinal reinforcement, said ribs merging into said shank and reinforcement, the interior of said body being indented at the ends at oppositely disposed points,

said indentations being angular and offset at the outer ends, and gradually tapering toward the central portion of said interior, and a handle adapted to fit upon said shank.

1,393,861. INTERNAL-COMBUSTION ENGINE. ALLEN M. ROSEMAN, Wilmette, Ill. Filed Nov. 25, 1918. Serial No. 268,984. 27 Claims. (Cl. 60—15.)

1. An internal combustion engine comprising a power cylinder, a compressor cylinder co-axial with said power cylinder, a double-acting piston in said power cylinder, an elongated piston in said compressor cylinder, a common piston rod for both of said pistons, a combustion chamber, a manifold for conducting explosive charges from said cylinders to said chamber, a sleeve valve in said combustion chamber for controlling communication between said manifold and said combustion chamber and between said combustion chamber and one end of said power cylinder, and for controlling the exhaust from said power cylinder, and a scavenging piston in said sleeve valve.

1,393,883. COATING AND IMPREGNATING AGENT AND THE PROCESS OF MAKING IT. ANDREW J. ROWLAND, Cincinnati, Ohio, assignor to The Federal Products Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 6, 1920. Serial No. 415,124. 15 Claims. (Cl. 134—17.)



7. The herein described process which consists in first heating metallic oleate to a high degree of temperature, then maintaining said temperature while dissolving therein a quantity of India rubber, then heating said compound to a higher degree of temperature, then blowing steam therethrough at said higher degree of temperature, then reducing the temperature, and then dissolving said compound by the addition of a solvent, substantially as herein described.

1,393,883. COATING AND IMPREGNATING AGENT AND THE PROCESS OF MAKING IT. ANDREW J. ROWLAND, Cincinnati, Ohio, assignor to The Federal Products Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 6, 1920. Serial No. 415,125. 14 Claims. (Cl. 134—11.)

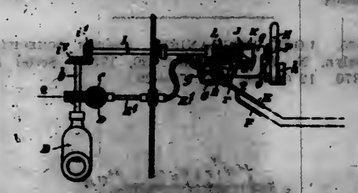
1. The process of making a coating and impregnating agent which comprises in heating metallic oleate, blowing air therethrough until the product, on cooling, becomes pliable and elastic, then increasing the temperature thereof and blowing steam therethrough until the produce is deodorized.

1,393,884. VISE-OPERATOR. LOUIS SALTER, Vallejo, Calif. Filed Dec. 12, 1920. Serial No. 430,579. 2 Claims. (Cl. 81—41.)

1. A vise, comprising a stationary jaw, a traveling jaw slidably mounted thereon, a screw rigidly secured in said traveling jaw, a shaft mounted in said stationary jaw adapted with said screw having a threaded sleeve adapted to engage said screw, means for rotating said shaft so as

to slidably move said traveling jaw in said stationary jaw and a spring balanced foot lever adapted to control said means.

1,393,885. LOCK MECHANISM. JOSEPH SCHECHTER, Brooklyn, N. Y. Filed Nov. 30, 1920. Serial No. 427,870. 12 Claims. (Cl. 70—29.)



1. A lock-mechanism comprising a semi-annular rotary bolt having an inwardly extending radial arm at one end for pivotally mounting the same, a tail-piece pivotally connected with said radial arm, means for guiding the movements of said tail-piece, means for producing a combined reciprocatory and oscillatory movement of said tail-piece to actuate the rotary movements of said bolt, said bolt having detent notches at its outer circumference adjacent to each end, a pivoted detent-tumbler having a transverse detent-bar receivable in one or the other of said notches, and means for releasing said detent-tumbler prior to the actuation of said tail-piece.

1,393,886. ELECTRIC SWITCH. DANIEL M. SCHIPPERS, Boston, Mass., assignor to Sears B. Condit, Jr., Boston, Mass. Filed Mar. 9, 1918. Serial No. 221,847. 12 Claims. (Cl. 200—108.)

12. In an electric switch, stationary and movable switch members, operating mechanism comprising toggle-members, means to restrain said toggle-members from

movement in one manually operated direction whereby to close the switch circuit, and a latch arranged normally to engage and hold said toggle members from movement in the opposite direction when released by said manually operated means, and means also arranged to release said toggle members and forcibly move them in the opposite direction to open the switch.

1,393,837. TELEMOTOR. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed July 21, 1920. Serial No. 397,947. 9 Claims. (Cl. 192—93.)

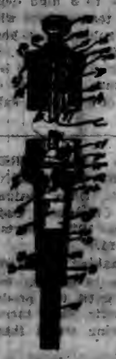
1. In a telemotor, the combination with a device to be actuated, of manually operated means for actuating said device, a motor operatively included in a fluid-pressure system controlling as a distance for actuating said device independently of the manually operated means, and a valve interposed in the system to be actuated by the manually operated means to short-circuit the motor while the device is actuated by said manually operated means.

1,393,838. FUEL CUT-OUT AND COMPRESSION-RELEASE FOR GAS-ENGINES. HYRAM LEE SEWARD and RUSSELL E. HALE, Kansas City, Mo. Filed Apr. 18, 1919. Serial No. 291,049. 3 Claims. (Cl. 123—96.)

1. In an internal combustion engine, the combination with the combustion chamber provided with an exhaust passage having an exhaust valve and also with an inlet valve chamber having a fuel intake connection, of a self-contained attachment adapted to be interposed between said intake connection and valve chamber and including an auxiliary cut-off valve adapted to shut off the intake of fuel to said combustion chamber, means providing a secondary outlet passage from the combustion chamber to said exhaust passage at the exterior of the exhaust valve, [illegible]

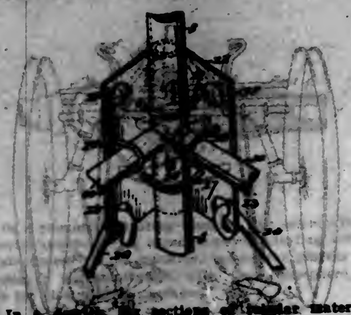
[illegible] heads [illegible] cut-off valve.

1,393,839. [illegible] PROCESS. MARK [illegible], Chicago, Ill., assignor to Armour Fertilizer Works, Chicago, Ill., a Corporation of New Jersey. Filed Feb. 24, 1920. Serial No. 360,982. 10 Claims. (Cl. 71—7.)



1. The process of calcining phosphate-rock consisting in suddenly heating [illegible] to be treated to the reaction temperature [illegible] approximately from one to five seconds to produce only substantial preliminary detrimental heat action on the material, substantially as described.

1,393,840. APPARA[illegible] PHOSPHATE ROCK. MARK [illegible], Chicago, Ill., assignor to Armour Fertilizer [illegible], Chicago, Ill., a Corporation of New Jersey. Filed Feb. 24, 1920. Serial No. 360,980. 10 Claims. (Cl. 71—1.)



1. In a calcining structure of the character described, the combination of a furnace, and means to introduce a slurry stream of the material to be treated under pressure directly into the reaction heat zone of such furnace sufficiently suddenly to prevent any substantial detrimental preliminary heat action on the material, substantially as described.

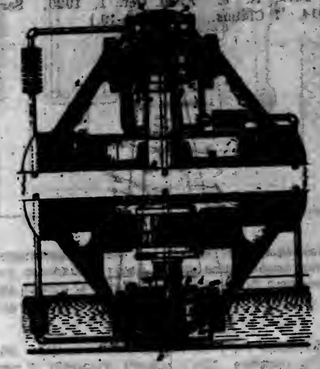
1,393,841. FOUNTAIN MARKING-BRUSH. DON WILLIAM SIMMONS, Los Angeles, Calif. Filed May 26, 1920. Serial No. 384,575. 6 Claims. (Cl. 15—40.)

1. In a fountain marking brush the combination of a tubular casing-member, a piston-member slidably mounted within said casing, a piston rod reciprocatingly carried by said casing, and means detachably connecting said piston and piston rod whereby the latter may be reciprocated independently of the former.

1,393,842. DERRICK. [illegible], Dallas, Texas. Filed Aug. 6, 1920. Serial No. 401,436. 2 Claims. (Cl. 189—36.)

1. In a derrick, the sections of tubular material, a splicing member inserted in the said leg sections at their junction, means for holding the splicing member in place, a splicing plate angular in plan embracing the said sections, means for clamping the plate to the leg sections, girths having their ends abutting the legs at their junction, and means carried by the plate for holding the girths.

1,393,843. GARMENT HOLDER OR HANGER. JOSEPH HENRY SMITH, Denver, Colo. Filed Nov. 1, 1920. Serial No. 420,983. 3 Claims. (Cl. 45—18.)



1. A device of the class described comprising a plate, a U-shaped frame secured to two opposite sides of said plate, and having the open end thereof projecting below said plate, a pair of ears projecting from said plate, one on each side thereof, a hat holding member hingedly connected to said ears, a spring coacting with said plate and hat holding member to [illegible] said hat holding member to a position substantially parallel with said plate, means for actuating said hat holding member against the tension of said spring and means for locking said member in adjusted position against the tension of said spring.

1,393,844. OBSERVATION APPARATUS FOR SUBMARINES. ELMER A. SPERRY, Brooklyn, N. Y. Filed Jan. 20, 1917. Serial No. 143,443. 18 Claims. (Cl. 114—16.)

1. The combination with a submarine vessel, of a searchlight therein contained, means for projecting the [illegible] without the vessel and adjustable about the direction of the beam when projected and a sighting device for determining the direction of the beam when projected.

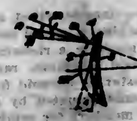
1,393,845. GYROSCOPE. ELMER A. SPERRY, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Original application filed Jan. 25, 1916, Serial No. 74,076. Divided and this application filed Oct. 11, 1917. Serial No. 195,901. 14 Claims. (Cl. 64—48.)

1. In combination, a rotor, a flexible member for normally supporting the major portion of the weight of said rotor and a plurality of radial bearings for transmitting the rotational forces of said rotor.

1,393,846. BUTTON-BLANK GAGE. RICHARD STAMWORTH and LLOYD A. ANGLE, Rochester, N. Y., assignors to Art in Buttons, Inc., Rochester, N. Y., a Corporation of New York. Filed Aug. 26, 1918, Serial No. 251,563. Renewed Aug. 17, 1921. Serial No. 493,097. 6 Claims. (Cl. 33—174.)

1. A button blank gage comprising a base on which the flat face of a button blank is adapted to be positioned, three relatively-movable, equidistantly-arranged gage points spaced from the base a distance equal to the thickness of the button to be made from the blank, and mechanism for simultaneously effecting relative movement between the gage points while maintaining their equidistant relation.

1,393,847. CLOSURE. ROBERT STERLING, East Chicago, Ind. Filed May 14, 1920. Serial No. 381,426. 5 Claims. (Cl. 220—35.)



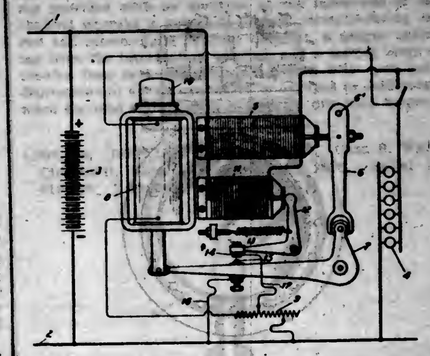
1. In a structure of the character set forth, the combination with an intake member having an inlet opening,

1,393,843. PNEUMATIC DRILLING-MACHINE. JOHN WILLIAM TURNEY, Address, and FRANK HEAD, Upton, London, England. Filed Sept. 27, 1920. Serial No. 413,164. 6 Claims. (Cl. 121—83.)

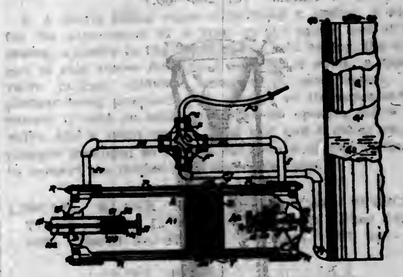
1. In a pneumatic drilling machine, the combination of a throttle handle having passages communicating with the free air spaces of the machine, means for placing such passages in communication with the atmosphere, and means for closing such passages.

1,393,853. LENS. EDGAR D. TILLYER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed June 24, 1919. Serial No. 306,369. 4 Claims. (Cl. 88—54.)

1. A pair of glasses comprising a lens for each eye of the wearer in which the lenses have different focal values, and in which the curves of one lens are adjusted with respect to the other to equalize the marginal prismatic displacement.



1,393,854. DIRECTION-INDICATOR. AARON R. TOWNSEND, Jr., Washington, D. C. Filed Feb. 23, 1921. Serial No. 447,005. 5 Claims. (Cl. 116—35.)



1. A direction indicator comprising a metal strip, a clamp on one end thereof adapted to engage an edge of a windshield section, a pivot pin in the opposite end of said strip, an indicator journaled on said pin, and means to retain said indicator in spaced relation to the strip.

1,393,855. LAMP-VOLTAGE REGULATOR. WILLIAM A. TURNBULL, Niagara Falls, N. Y., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Apr. 28, 1917. Serial No. 163,836. 6 Claims. (Cl. 171—239.)

1. In combination, a main compressible pile, an auxiliary pile connected in shunt across said main pile, operating means for said main pile, operating means for said auxiliary pile, said second mentioned operating means being operable by said first mentioned operating means during a portion only of the travel of said first mentioned operating means, controlling means for said first mentioned operating means, and means for compensating for increased mechanical load when said second mentioned operating means is being operated by said first mentioned operating means.

1,393,856. MEASURING DEVICE FOR SEMILIQUIDS. ERNEST T. UPRIGHT, Fresno, Calif., assignor of one-half to Robert W. Upright. Filed July 28, 1920. Serial No. 399,614. 2 Claims. (Cl. 221—103.)

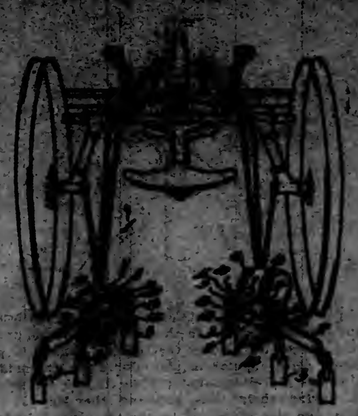
1. In a measuring device the combination of a cylinder, having closed ends, a movable piston therein, a four-way yoke, a lead from each end of the cylinder to said four-way valve, an air tight tank, means for injecting compressed air into the tank, a lead from the inside of the tank near the bottom thereof to said four-way valve, an outlet from said four-way valve, said parts being arranged so that the lead from the tank can be connected with either lead from the cylinder, and the outlet will at all times be connected with the lead from the cylinder not connected with the lead from the tank, means adapted to limit the lateral movement of the piston, a plunger stem extending through each end wall of the cylinder adapted to be pushed outwardly when the piston is at the end of its travel in either direction, substantially as described.

1,393,867. SHIP'S LIGHT. THOMAS UTLEY, Liverpool, England. Filed Sept. 11, 1916. Serial No. 250,806. 2 Claims. (Cl. 114—178.)

1. A combined fixed light and ventilator, comprising a frame shaped to constitute the ventilating casing, a valve detachably mounted on a vertical spindle in said casing, a valve seating plate supporting above the valve on

1,393,840. NECKTIE-STRETCHER. HENRY H. [illegible], New York, N. Y. Filed Oct. 1, 1920. Serial No. 414,814. 7 Claims. (Cl. [illegible]—33.)

1. A neck-tie stretcher comprising a flat body portion, and a pair of flat side portions adjustably mounted to overlap said flat body portion, substantially as set forth.



1,393,849. TIRE. HERMAN H. SWAN, Grand Rapids, Mich. Filed June 4, 1920. Serial No. 386,452. 1 Claim. (Cl. 152—14.)

A tire having on each side of its central plane which is perpendicular to its axis stepped projections spirally disposed about the tire's exterior axis and extending longitudinally in the tire's circumferential direction and laterally in the direction of the exterior axis, each projection extending from laterally further from the central plane of the tire width in proportion to said axis than the projection nearer the tire's periphery, and the stepped projections on one side of said vertical plane winding in a right-hand direction and the stepped projections on the other side of said central plane winding in a left-hand direction.

1,393,860. SPRAYER ATTACHMENT FOR CULTIVATORS. THEODORE F. THOMPSON, Astoria, S. D. Filed Nov. 8, 1920. Serial No. 422,883. 4 Claims. (Cl. 299—39.)

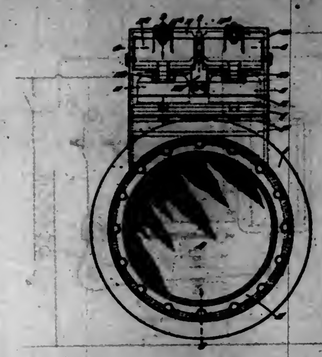
A cultivator attachment of the character described comprising a receptacle holder, shovel beam engaging

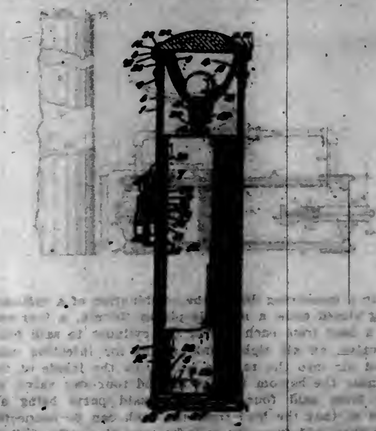
respectively by the clamps for engaging a shovel beam passing through the clamps intermediate the set screws and bracket plates.

1,393,861. JACK. HERMAN A. THOMSEN, Washington, D. C. Filed Nov. 3, 1919. Serial No. 334,673. Renewed Feb. 28, 1921. Serial No. 447,239. 2 Claims. (Cl. 254—96.)

1. A jack of the character described comprising a substantially rectangular casing open at its bottom and carrying at one side elongating sleeves engageable about the axis of a vehicle, an extension formed at one end of the upper portion of the casing, a shaft journaled through the upper portion of the casing and the extension, said shaft being oppositely threaded adjacent its ends and being limited to rotary movement, the underside of the top of the casing being formed with a guide groove, nut members adjustable along said groove and engaged upon the threaded portions of said shaft, a long rough having the ends of the uppermost links connected with said nut members, a foot member connected with the lowermost links of the long tongs, and means for turning said shaft comprising a worm wheel secured thereon within said extension, a shaft journaled through said extension at right angles to said threaded shaft and having one end fashioned for engagement by a handle, and a worm on said second named shaft meshing with the worm wheel.

ledges fit said casing and retained by wedge shaped bushing on the sides of the plate and by a detachable sidegrip plate between the upper part of the said casing and the casing





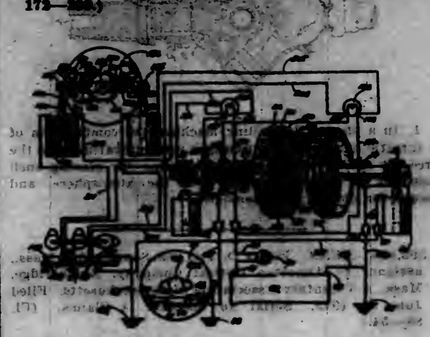


plate and a detachable cover having a ventilating opening therein and secured over the opening in the said casing through which latter opening the valve and casing plate can be removed or replaced.

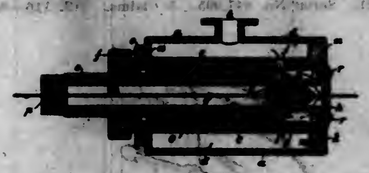
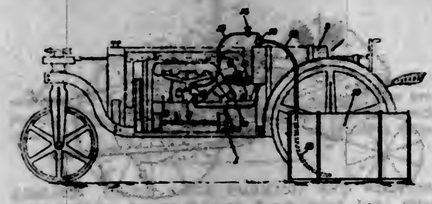
1,393,859. PORTABLE ELECTRIC LIGHT. CHARLES WAGNER, Jamaica, N. Y., assignor to Blumlein Hartman, New York, N. Y. Filed Nov. 12, 1919. Serial No. 337,542. 3 Claims. (Cl. 200—60.)



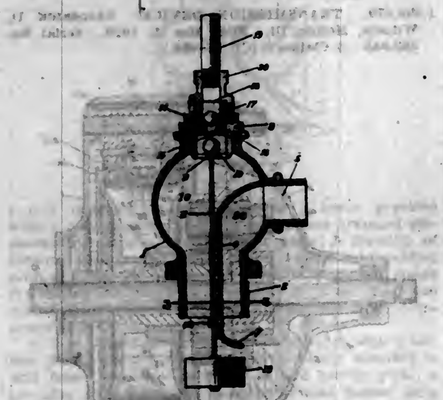
2. In a flashlight, the combination of a battery and lamp casing, a pair of line terminals held to the casing, a metallic housing held to the exterior of the casing electrically connected with one terminal and including the other terminal, a resilient metallic contact plate within the housing secured at one end to the housing and adapted to be flexed into engagement with the inclosed terminal, said housing having a key slot in its outer wall, a push button for flexing the contact plate having a reduced shank portion normally outside of the housing adapted to pass into the narrow portion of the slot and a larger shank portion normally engaged in the wider portion of the slot provided around its inner end with a laterally projecting flange normally engaging the inner side of the outer wall of the housing, the flange shank portion of the button being bevoled adjacent its outer end while its inner being provided at its inner end with a rifled bearing sliding and rotating engagement with the outer surface of the contact plate.

1,393,880. SYNCHRONIZER FOR TALKING MOTION-PICTURES. KENNETH M. WALSH, Chicago, Ill. Filed Feb. 17, 1921. Serial No. 445,242. 5 Claims. (Cl. 172—238.)



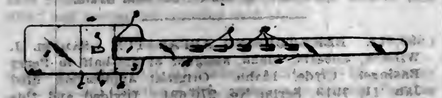
1. In apparatus of the class described, a member adapted to be driven by one machine, a second member adapted to be driven by a second machine, a rheostat for controlling the speed of one of said machines, ratchet mechanism for operating said rheostat, a solenoid for operating said ratchet mechanism, means actuated by a change in the relative speeds of said members for establishing a circuit through said solenoid, and means for intermittently interrupting the circuit of said solenoid to effect the operation of said ratchet mechanism.

1,393,890. MACHINE FOR COATING OR COVERING MATERIAL. HOWARD CHESTER WEEKS, Jackson, Mich. Filed Aug. 12, 1920. Serial No. 403,609. 4 Claims. (Cl. 18—13.)



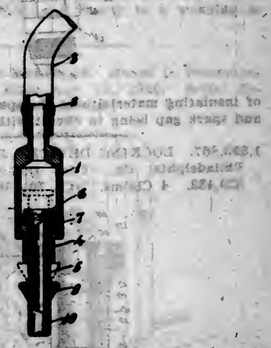
1. In an apparatus for covering ribbons and similar forms of material with a coating of plastic material the combination, with a casing open at one end, into which the plastic material may be introduced under pressure, of a guide and a draw-plate for the ribbon, and a member holding these two in alinement and slightly spaced apart, said member being in the form of a short flanged tube to the flange of which the draw plate is fastened and in the unflanged end of which the guide is supported, said tube being provided with radial perforations through which the plastic material may pass under pressure to the space in the tube interior between the guide and draw plate, and the flange of the tube being adapted to fit into and close the open end of the casing, whereby the guide, draw-plate and connecting member may be removed from or replaced in the casing without disturbing the relative adjustment of guide and draw-plate.

1,393,891. METHOD OF FILLING ENGINE GAS-TANKS. HENRY J. WEIERSHAUSEN, Stockton, Calif. Filed Apr. 5, 1920. Serial No. 371,472. 5 Claims. (Cl. 123—198.)



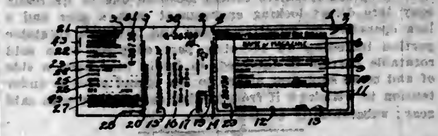
1. A hollow body member adapted to be secured on the upper side of an engine gas-tank over an orifice therein a pipe leading from the top of the body to the intake manifold of the engine, a vertically movable float-valve mounted in the body and adapted to close said pipe when the tank is full, and a relatively large pipe leading from one side of the body below the first named pipe and adapted to be immersed in a source of fuel supply.

1,393,892. SEPARATOR FOR SUCTION FUEL-TANK-FILLING SYSTEMS. HENRY J. WEIERSHAUSER, Stockton, Calif. Filed Feb. 5, 1921. Serial No. 442,645. 2 Claims. (Cl. 158—36.)



1. A device of the character described comprising in a unit, a body member adapted to be connected to a tank and having a continuous air passageway therethrough, a fuel passageway communicating with the air passageway only a one end of said body, and an automatic float valve carried by the body and arranged to close the air-passage when the tank is full.

1,393,893. SEAL. JOHN L. WEINMANN, St. Louis, Mo. Filed June 6, 1919. Serial No. 302,100. 1 Claim. (Cl. 292—322.)



A seal comprising a strip having a comparatively wide part at one end thereof, said wide part having end portions and an intermediate portion, said intermediate portion being folded upon one of the end portions and the other end portion being folded upon the intermediate portion whereby the intermediate portion is interposed between the said end portions, and one of said end portions being provided with a raised portion in the form of a channel, extending from one end of said end portion to the other end thereof, the last mentioned end portion being provided with an aperture at the inner end of said channel whereby a keeper is formed, rivets securing said end and intermediate portions together, a tongue extending from the intermediate portion, and a sealing strip extending from said channel and provided with open ended depressions to act as catches to be engaged by said tongue when the said sealing strip is inserted into said keeper.

1,393,864. BOTTLE-FILLING VALVE. CARL S. WHITE, Cincinnati, Ohio. Filed Oct. 27, 1920. Serial No. 419,929. 2 Claims. (Cl. 251—116.)

2. A bottle filling valve comprising a casing, a nipple for the attachment of a hose on the upper end of said casing, a sleeve in the lower end of said casing, the upper end of said sleeve forming a seat for a valve, a tubular valve plunger slidably mounted in said sleeve, said plunger being provided with a valve on its upper end arranged to seat on said valve seat, an opening below said valve, and a spout on its lower end and a collar on said plunger arranged to rest in the mouth of the bottle and to support the device with the valve open.

1,393,865. BLANK FOR PERIODICAL SUBSCRIPTIONS. HARRY L. WELLS, Chicago, Ill. Filed June 2, 1921. Serial No. 474,556. 3 Claims. (Cl. 283—60.)

1. A postal card containing on the address side the name and address of a company soliciting subscriptions to periodicals and on the other side a contract of subscription to a periodical, a receipt coupon detachably connected to said postal card and bearing a contract whereby it may be used in part payment of an extension of said subscription, and a stub detachably connected to said two other parts and having suitably designated spaces for entering a record of said subscription.

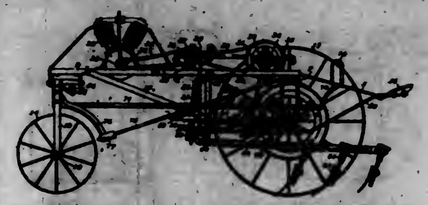
1,393,866. SPARK-PLUG COIL. RALPH H. WHELAN, Detroit, Mich., assignor to Essex Motors, Detroit, Mich., a Corporation of Michigan. Filed May 31, 1919. Serial No. 301,972. 2 Claims. (Cl. 123—148.)

1. A spark plug unit comprising a body of molded insulating material, a metallic base secured thereto, a condenser contained in a chamber within said body, a spark gap mounted on said body, the primary and secondary

windings of a disruptive discharge coil surrounding said body, a sheath for said windings, and a removable cover

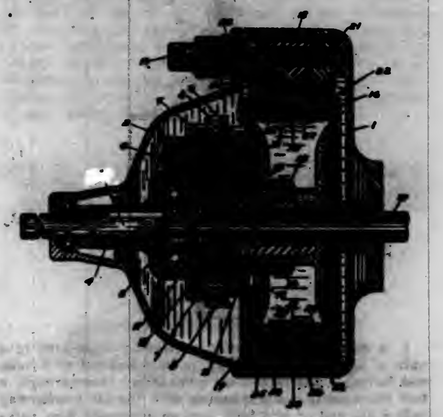
of insulating material over the spark gap, said condenser and spark gap being in circuit with the primary winding.

1,393,867. LOCKING DEVICE. Jessam Mercer White, Philadelphia, Pa. Filed Oct. 9, 1919. Serial No. 329,433. 4 Claims. (Cl. 70—90.)



1. In a device of the character described, the combination of spring-operative means movable due to its resiliency into direct locking engagement with a gear and a lock operative by selective means and having a rotatable portion including an eccentric part adapted, when said rotatable portion is actuated, to freely bear upon a side of and move said first means to flex it and place it under tension to withdraw it from locking engagement with said gear; substantially as described.

1,393,868. SLICING-MACHINE. Solomon Wile, Rochester, N. Y. Filed Aug. 25, 1920. Serial No. 405,991. 7 Claims. (Cl. 17—24.)



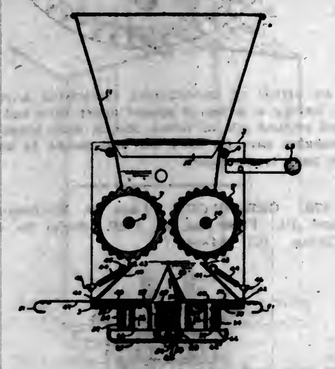
2. A slicing machine comprising a rotary cutter, and a segmental guard for the cutter formed to expose the effective cutting portion of such cutter and hinged at its lower edge to swing away from said cutter.

1,393,869. STEERING MECHANISM FOR CULTIVATORS. Dazzeo E. Wilson, Waterloo, Iowa. Filed June 18, 1920. Serial No. 389,298. 5 Claims. (Cl. 97—36.)

1. In a device of the character described, carrying-wheels, dirigible steering-wheels, a main frame supported on said wheels, a gang-frame having at one end a universal-joint connection with said main frame, and a controller movably connected to said steering-wheels and loosely connected to said gang-frame and movable longitudinally to change the direction of travel of the steering-wheels independently of the gang-frame, or to be moved simultaneously longitudinally and in another direction to operate both the steering mechanism and the gang-frame.

1,393,870. TRANSMISSION DEVICE. Frederick D. Wilson, Moline, Ill. Filed Mar. 1, 1920. Serial No. 362,242. 5 Claims. (Cl. 74—24.)

1. In combination with a planetary gear transmission mechanism, and brake drums operatively connected therewith; an expansion ring adapted for normal engagement with said drums, to cause the same to rotate as a unit; means for holding either of said drums in fixed position independently of the other; and means for contracting said ring, to disengage the same from said drum.

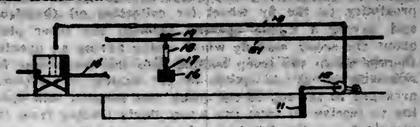


1,393,871. BEET-TOPPING APPARATUS. Samuel J. Wilson, Roberts, Idaho, assignor of one-half to Perry Bastinger, Clyde, Idaho. Original application filed Jan. 11, 1919, Serial No. 270,691. Divided and this application filed Mar. 10, 1920. Serial No. 364,801. 2 Claims. (Cl. 55—107.)

1. A machine of the character described including a movable member, spaced teeth carried by said member, each tooth having convex sides merging with each other at their edges, ribs projecting from the intermediate portion of said sides longitudinally thereof, said ribs and convex sides tapering toward and merging at a point

centrally of one end of the tooth, and opposed lips projecting from said tapered end in alinement with each other and in right angular relation to said convex sides.

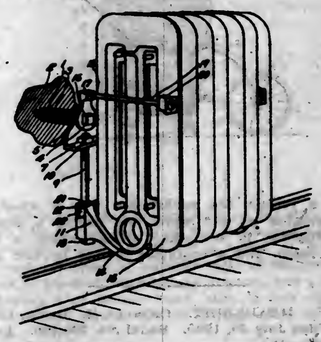
1,393,872. FRIED-CAKE FORMING AND CUTTING MACHINE. Jay B. Winans, South Bend, Ind. Filed Nov. 8, 1920. Serial No. 422,739. 5 Claims. (Cl. 107—14.)



1. A doughnut cutter comprising a frame provided with a bottom plate; dough guiding means arranged substantially centrally of said bottom plate; a plurality of forming dies arranged in a series around said guiding means; means for feeding the dough to said dies; means for cutting the dough as it emerges from the dies; and means for closing the dies to prevent the feed of the dough thereto.

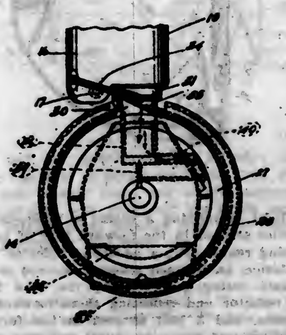
4. In a doughnut cutter, a frame provided with a bottom plate; a shaft vertically and rotatably mounted in said frame adjacent the center of said bottom plate; a plurality of forming dies mounted in said bottom plate around said shaft; means for feeding dough to said dies; a block carried by said shaft and vertically adjustable thereon; a plurality of cutters mounted upon said block and adapted to swing across the face of said dies; and means for rotating said shaft.

5. In a doughnut cutter, a frame provided with a bottom plate; a shaft vertically and rotatably mounted in said frame adjacent the center of said bottom plate; a plurality of forming dies detachably mounted in said bottom plate around said shaft; means for feeding dough to said dies; a block carried by said shaft and vertically adjustable thereon; a plurality of cutters mounted upon said block and adapted to swing across the face of said dies; and means for rotating said shaft.



1,393,873. METHOD OF PRESERVING OLIVES. Henry N. Wolff, Oroville, Calif., assignor to Sunical Packing Company, San Francisco, Calif., a Corporation of California. Filed Sept. 2, 1919. Serial No. 321,107. 8 Claims. (Cl. 99—1.)

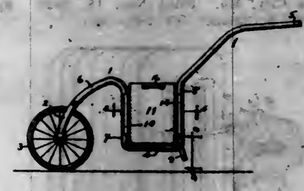
1. The method of preserving olives which comprises treating unit lots of the olives successively in circulating solutions of progressively lessened strength and of predetermined temperature, and washing each unit lot after each treatment.



3. That treatment of olives which consists of charging a foraminous container with a load of olives, and successively shifting the load of olives, without change of container, from one vat to another in successive order; the olives being subjected to a lye solution in the first vat, to a washing in water in the next vat, to a weaker lye solution in the third, and finally to a washing in water in the fourth.

1,393,874. RADIATOR-BRACKET. Miner D. Woodling, Kansas City, Mo. Filed Nov. 18, 1920. Serial No. 424,874. 5 Claims. (Cl. 248—30.)

1. A radiator bracket comprising a bolt, a rod swingingly suspended from said bolt, a radiator seating bracket on said rod, a vertically swinging tie rod member on the bolt, and a radiator engaging tie rod eccentrically engaging said tie rod member.



1,393,875. OILING SYSTEM. Howard P. Woodworth, Bay City, Mich. Filed Dec. 12, 1919. Serial No. 344,390. 8 Claims. (Cl. 184—6.)

5. In an oiling system for internal combustion engines, the combination of a crank case, a crank shaft having bearings in the crank case, a fly wheel on the shaft, a casing for the fly wheel adapted to contain oil, a cover

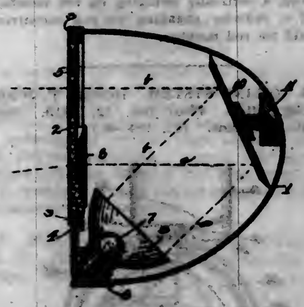


plate removably mounted on the top of the fly wheel casing and having a scoop adapted to project into close proximity to the fly wheel for collecting oil therefrom and having a nipple opening through the cover plate about the scoop, said fly wheel casing having an opening therein above the scoop leading into the crank case for receiving oil at all speeds of the engine, a receptacle arranged in the top of the crank case beneath said opening to receive oil from the scoop, ducts leading from the receptacle to the bearings of the crank shaft, a tank arranged above the crank case, a cam shaft in the tank, and a duct leading from said nipple to the tank for delivering oil from the scoop to the tank when the engine is operated at normal speed.

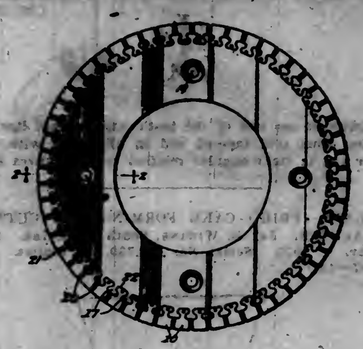
1,393,876. VEHICLE. Lucy W. Wright, Elkhart, Ind. Filed Oct. 18, 1919. Serial No. 331,500. 5 Claims. (Cl. 280—52.)



1. In a vehicle, the combination with a wheel, of a reach mounted on said wheel and having a depending saddle disposed in the plane of the wheel, a handle on said reach, and a container carried by said saddle.

1,393,877. HEADLIGHT. Charles H. Allen, Chicago, Ill. Filed July 29, 1920. Serial No. 399,736. 1 Claim. (Cl. 240—41.)

A headlight comprising a casing a luminous ray producing device secured in the forward part of said casing and inclining rearwardly, a parabolic reflector surrounding said device, an inclined reflector secured to the rear wall of said casing for receiving the rays from said parabolic reflector and reflecting them forward in horizontal planes, and a lens secured in the forward end of said casing, said lens comprising an upper plain portion and a lower plano-convex portion whereby the upper pencils of light is directed in horizontal planes and the lower pencils of light are directed downward and laterally.

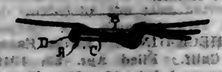
1,393,878. MEMBERS OF BUILDING CONSTITUTING. Terrence G. Arvin, Dayton, Ohio. Filed Aug. 6, 1919. Serial No. 315,772. 7 Claims. (Cl. 171—321.)

4. An article of manufacture comprising a commutator, having a series of spaced apart bars and a compressed stacked pile of fabric blanks, each blank having an engaging part for each bar and means to hold said stacks under compression.

1,393,879. GREASE-CUP. Leon N. Bourdeau, Rock Island, Ill. Filed Aug. 18, 1920. Serial No. 404,481. 2 Claims. (Cl. 184—48.)

2. In a device of the class described, a bushing adapted for mounting on the connecting rod of a locomotive; a plug rotatably adjustable in said bushing, and provided near its inner end with an internal transverse channel; and openings connecting the ends of said channel with the inner face of said plug, and provided with inclined faces on the sides of the openings opposite to the direction of movement of the plug, when being seated.

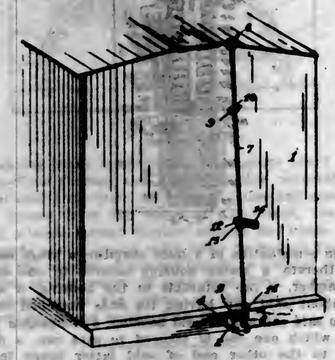
1,393,880. METHOD OF PRODUCING SILICON-STEEL SHEETS. Vance B. Brown, Tarentum, Pa. Filed June 21, 1919. Serial No. 305,923. 6 Claims. (Cl. 29—18.)



[redacted]

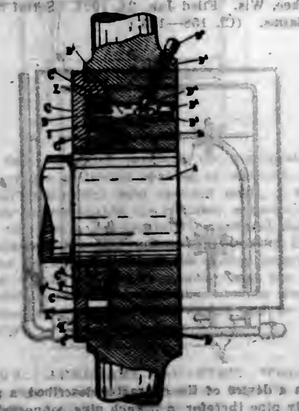
6. The method of rolling low hysteresis action silicon steel sheets, which consists in producing a sheet of silicon steel, in inserting said sheet within a pack of a dissimilar steel finished to a less extent, in heating said pack, in rolling the same to such length as will give the desired thickness to the inserted sheet and then in annealing the finished sheet.

1,393,881. BUSHING. Rudolph E. Burg, San Diego, Calif. Filed Nov. 3, 1919. Serial No. 335,405. 1 Claim. (Cl. 64—32.)



A bushing comprising two oppositely disposed substantially rectangular flanges, the corresponding sides of

which are integrally held together by a closely fitting flat embracing sleeve; and so proportioned that when the ends of a bolt are inserted upwardly through the two flanges and passed over the upper and under the lower at their

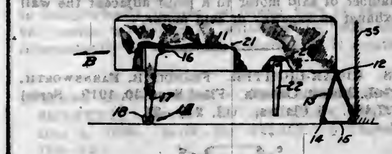


sides opposite the hinge, the stress exerted by the belt will hold the sleeve in engagement with the exterior of the belt, and automatically relatively position the frame into gripping relation irrespective of which is the outward frame.

1,393,882. OPERATING APPLIANCE FOR ANGLE-COCKS FOR AIR-HOSE. Lucius Cornell, Brooklyn, N. Y. Filed July 2, 1920. Serial No. 393,611. 4 Claims. (Cl. 137—139.)

4. The combination with a car provided with an air hose and an angle cock at the car end connection, of an upright operating rod movably supported on the car end and extending to the car top, said rod being connected with the angle cock plug whereby the operating rod can be swung into position to turn the angle cock plug.

1,393,883. ADJUSTABLE HUB-PLATE. Charles W. Dake, Chicago, Ill. Filed July 21, 1919. Serial No. 312,264. 11 Claims. (Cl. 64—25.)

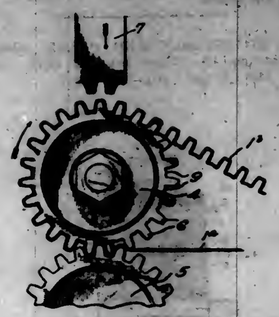


1. A hub having an annular recess on one side, in combination with a plate having two internally threaded flanges, two rings externally threaded to engage said threads on the flanges and means for rotating the rings to advance the plate.

1,393,884. ADJUSTABLE HUB-PLATE. Charles W. Dake, Chicago, Ill. Filed July 21, 1919. Serial No. 312,265. 14 Claims. (Cl. 64—25.)

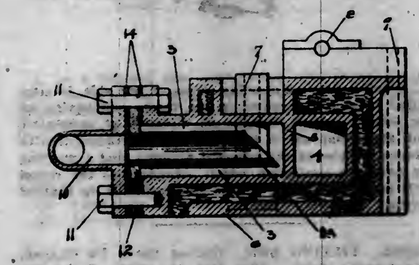
1. A hub having an annular recess on one side, in combination with a ring seated in the recess and having an outer surface which consists of a series of concentric annuli each composed of inclined surfaces staggered with reference to those of the adjacent annulus, and a wearing plate having a projection which extends into the recess and is provided with a surface corresponding to that of the ring.

1,393,885. TILTING BED. Georgh Felix De Grasse, Los Angeles, Calif. Filed Dec. 11, 1920. Serial No. 429,928. 7 Claims. (Cl. 5—18.)



2. In a bed, the combination of: a body; outer legs supporting one side of said body; inner legs pivoted to the floor and to said body, and wholly supporting the other side of said body with said bed in its usable position; and balance props between said inner legs and the center of gravity of said body.

1,393,886. MACHINE ELEMENT. Walter G. Doty, Dayton, Ohio, assignor to The Wagner Engineering Company, Dayton, Ohio, a Corporation of Ohio. Filed June 25, 1917. Serial No. 176,870. 8 Claims. (Cl. 74—41.)



1. As an article of manufacture, a gear comprising a cast metal body, sheet metal rims for the teeth and an

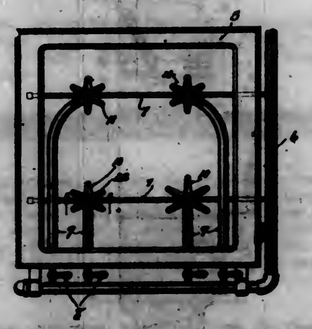
interposed stratum of metal of different physical characteristic, said cast metal body, sheet metal rim and in-

terposed stratum of different metal being integrally united into a conjoint body.

1,393,887. MANIFOLD FOR INTERNAL-COMBUSTION MOTORS. DANIEL S. DU BOIS, Portland, Oreg. Filed Sept. 22, 1920. Serial No. 411,928. 1 Claim. (Cl. 123—122.)

In an internal combustion motor, a flange secured between the intake manifold and the motor, and a tube integral with said flange and having a beveled end, the longest portion of said tube extending into the intake valve chamber of said motor to a point adjacent the wall of the exhaust passageway of said motor.

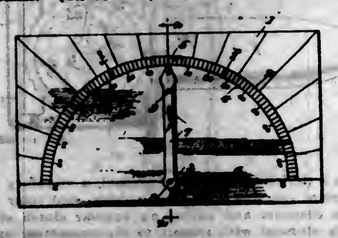
1,393,888. CIGAR-LIGHTER. FRANCIS B. FARNSWORTH, Montreal, Quebec, Canada. Filed Sept. 30, 1919. Serial No. 327,485. 5 Claims. (Cl. 219—21.)



1. A lighter comprising a carrier, an insulated plug in the carrier, electrical connections carried by the plug, and including a high resistance igniter exposed at the outer end of the plug, and electrical connections within the carrier and presenting an open circuit including the connection in the plug and manually operated means for closing the circuit.

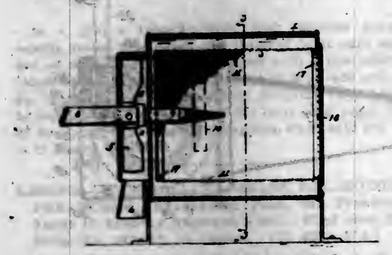
1,393,889. CHECK-HINGE. EMILE FRANCKAERTS, San Francisco, Calif. Filed Apr. 22, 1919, Serial No. 291,910. Renewed July 18, 1921. Serial No. 485,788. 3 Claims. (Cl. 16—54.)

1. The combination of a fluid chamber, a hinge leaf attached thereto, a spring housing secured to one end of said chamber, a cap rotatable in the housing, a spring coiled about said cap having its ends attached respectively to said cap and to said housing, a companion hinge leaf of which one end is secured to said cap, a device secured to the other end of said latter hinge leaf, a spring housing rotatable about said second-named cap and also rotatable relative to said fluid chamber, a coiled spring within said last-named spring housing, of which one end is secured to said last-named spring housing, and the other to said last-named cap, and means in said fluid chamber for controlling the turning of said hinge leaves relative to each other.



1,393,890. GAS-STOVE LIGHTER. CONRAD FUHR, Milwaukee, Wis. Filed Jan. 24, 1921. Serial No. 439,495. 5 Claims. (Cl. 158—115.)

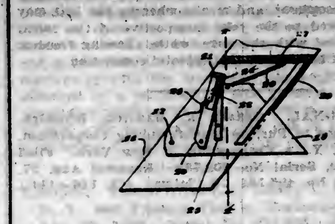
5. In a device of the character described, a gas burner, a supply pipe therefor, a branch pipe connected with said supply pipe, a valve in said supply pipe between the branch pipe and the burner for controlling the supply of gas



to said burner, a vertical cylindrical pilot burner having a series of lateral outlet openings to supply gas for the pilot light, means for adjusting said pilot burner to control the amount of gas supplied thereto, said first named burner being movably mounted on said branch pipe and a cap carried by the pilot burner above the pilot light openings and provided with a peripheral downwardly projecting lip to trap the gas supplied to said first named burner and direct it into contact with the pilot lights.

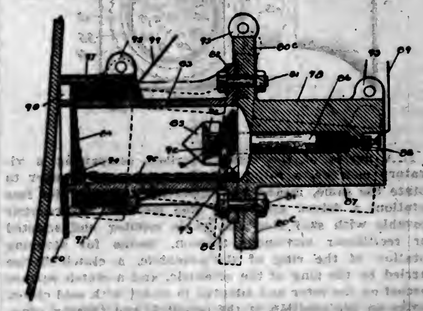
1,393,891. BEARING-BOARD. SOPUS E. HANSEN, Seattle, Wash. Filed Dec. 3, 1919. Serial No. 342,105. 1 Claim. (Cl. 33—72.)

A bearing board comprising a rectangular board having a semi-circle thereon and a straight line connecting the ends of said semi-circle, said straight line and semi-circle being spaced from the edges of the board, the board having a scale formed thereon around the inside of the semi-circle and a second scale being formed on the board around the outside of the semi-circle, a pointer pivotally mounted at the center of said semi-circle, a rear sight vane mounted at the center of the semi-circle and a forward sight-vane mounted on the pointer.



1,393,892. DUST-COLLECTING MACHINE. JACOB C. LUDEN, Reading, Pa. Filed Jan. 31, 1921. Serial No. 441,238. 2 Claims. (Cl. 51—270.)

1. In a dust collecting machine the combination of a casing having a restricted opening at one end, a suction chamber into which said opening leads, a suction fan rotatably located within the chamber, a wheel spindle carried by the fan, a substantially cylindrical dust collecting member within the casing, said member forming a closure for the opposite end of the casing, longitudinal ribs formed on the cylindrical member, and the casing having receiving grooves for said ribs, whereby the cylindrical member may slide into the casing and be guided longitudinally.



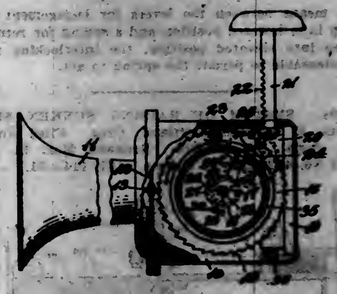
1,393,893. AUXILIARY CAR-STEP. WILLIAM C. MCFEELY, New York, N. Y. Filed Dec. 20, 1920. Serial No. 431,960. 1 Claim. (Cl. 105—447.)

The combination with the sight of steps of a railway car, of an auxiliary step pivotally carried by the sight, the side of the sight having an inclined angular slot, a lever pivotally carried by one end of the auxiliary step, a second lever pivotally carried by the said end of the auxiliary step and slidably engaging the first lever, inter-

locking means between the levers for engagement when the step is in lowered position and a spring for returning the step into elevated position, the interlocking means being releasable to permit the spring to act.

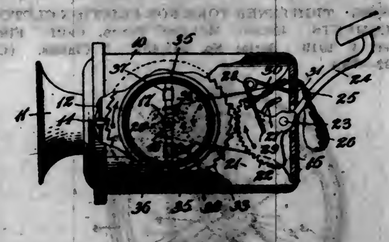
1,393,894. SYSTEM OF RAISING SUNKEN SHIPS. DANIEL F. MCGILL, Portland, Oreg. Filed July 5, 1916, Serial No. 107,604. Renewed Mar. 14, 1921. Serial No. 452,227. 14 Claims. (Cl. 114—51.)

1. In a system for raising sunken vessels; a cylindrical pneumatic tank; a plurality of hoisting cables, each given several turns about said tank, thereby rotatably mounting said tank upon said cables; means to secure the lower end of each of said cables to said sunken vessel; means to independently tighten or loosen each of said cables; and means to continually withdraw air from said tank independently of the position thereof as it rotates.



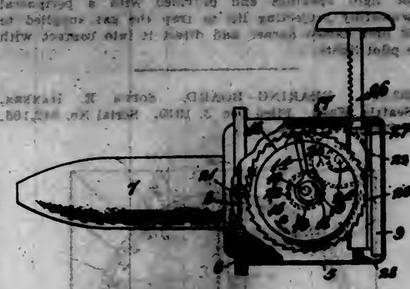
1,393,895. TIGHTENER-YOKE FOR FRICTION-CLUTCH SEGMENTS. EDISON MCLEOD, Banta, Calif. Filed Dec. 4, 1919. Serial No. 342,457. 3 Claims. (Cl. 192—75.)

1. In combination with a shaft, a friction wheel thereon, a friction segment adapted to engage with the wheel,

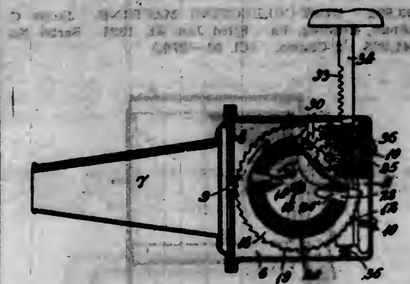


a shaft on the shaft adapted to slide thereon, the latter; a rigid yoke embracing eccentrically the segment and pivotally secured to the shaft on lines parallel to the plane of the wheel on two lost elasticity secured to the segment, and means whereby the bolt may be rigidly secured to the yoke irrespective of the radial alinement thereof with the yoke, while allowing freedom of movement of both about their pivotal connection.

1,393,896. SIGNAL. Gerard R. Massico, Brooklyn, N. Y., assignor to Puritan Manufacturing Corporation, Brooklyn, N. Y., a Corporation of New York. Filed June 9, 1919, Serial No. 302,739. Renewed Aug. 27, 1921. Serial No. 496,161. 6 Claims. (Cl. 116—144.)



1. A device of the class described comprising a vibratory member, a rotor co-acting with said member to rotate the same, means for supporting the rotor for free rotation, a driven guide and stop member, an eccentric movable with said stop and guide member and adapted for rectilinear movement thereon, means for stopping rotation of the ring of the eccentric, a clutch device carried by the ring of the eccentric, and a clutch surface formed on the rotor and adapted to co-act with said clutch device on one position of the eccentric and thereby cause the rotor and said clutch device to revolve together.

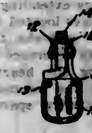


1,393,897. SIGNAL. Gerard R. Massico, Brooklyn, N. Y., assignor to Puritan Manufacturing Corporation, Brooklyn, N. Y., a Corporation of New York. Filed June 9, 1919, Serial No. 302,740. Renewed Aug. 27, 1921. Serial No. 496,162. 8 Claims. (Cl. 116—144.)

1. In a device of the class described, a vibratory member, a rotor co-acting with said member, said rotor having an annular clutch surface, a revolving body independent of said rotor, a rocking clutch element mounted on the revolving body and extending radially from a point near the supporting axis of the rotor to a point near said internal clutch surface and adapted to co-act with the clutch surface, said body having a portion adapted for rigid engagement with the clutch element when the latter is in one position and serving to hold the element in clutch contact with said surface, and means for revolving said body.

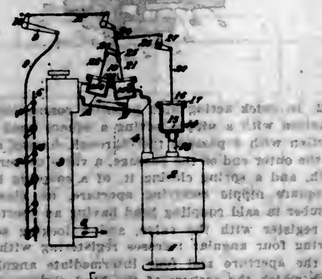
1,393,898. SIGNAL. Gerard R. Massico, Brooklyn, N. Y., assignor to Puritan Manufacturing Corporation, Brooklyn, N. Y., a Corporation of New York. Filed June 9, 1919, Serial No. 302,742. Renewed Aug. 27, 1921. Serial No. 496,163. 4 Claims. (Cl. 116—144.)

1. In a device of the class described, a vibratory member, a rotor co-acting with said member, said rotor having an annular internal clutch surface, a revolving body independent of said rotor, a rocking clutch element mounted on the revolving body and extending radially from a point near the supporting axis of the rotor to a point near said internal clutch surface and adapted to co-act with the clutch surface, said body having a portion adapted for rigid engagement with the clutch element when the latter is in one position and serving to hold the element in clutch contact with said surface, and means for revolving said body.



1,393,899. CHILD'S SLEEPING-GARMENT. Isaac G. [illegible], Minneapolis, Minn. Filed Feb. 9, 1922. Serial No. 449,575. 4 Claims. (Cl. 2—264.)

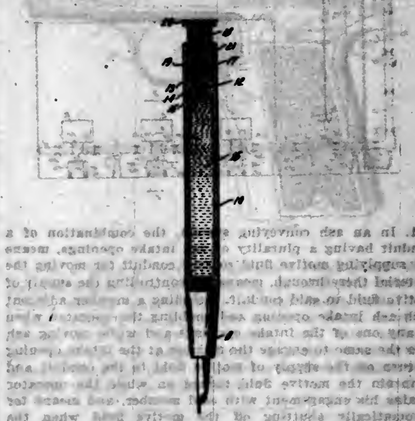
A garment of the kind described having attached foot portions with openings at the tops for the foot portions extended approximately halfway around the legs and adapting the foot portions, when folded, to be turned up



so that the feet can project through the legs of the garment, and means for fastening the folded and back-turned foot portions against the backs of the legs of the garment.

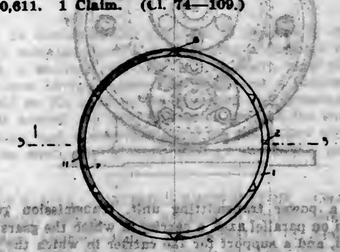
1,393,901. PIN. Eugene Morehouse, Providence, R. I., assignor to B. A. Hallew & Company Inc., Providence, R. I., a Corporation of Rhode Island. Filed July 8, 1920. Serial No. 394,759. 1 Claim. (Cl. 24—160.)

In a pin, a trough-shaped body portion having inwardly rolled side edges and integral joint ears near one end of said body, in combination with a pin tongue provided with a head portion pivoted in said ears and having an integral laterally-extending fulcrum stop positioned to engage said rolled edge of the body at a point forward of the front edge of said joint ears when said pin tongue is in closed position.



1,393,902. CONTROLLING MEANS FOR MOTOR-TEMPERATURES. Stanley H. Page, San Francisco, and Jacob B. Steuble, Oakland, Calif. Filed Mar. 2, 1921. Serial No. 449,218. 3 Claims. (Cl. 123—174.)

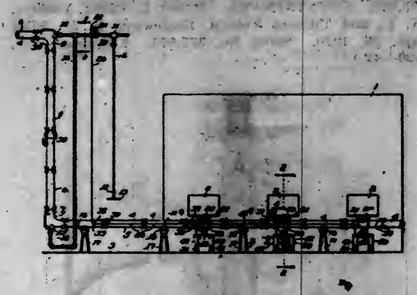
3. In combination with an internal combustion engine cylinder provided with a water jacket, a circulating water



system connected with said jacket, means for controlling the cooling of the water within said system, a plurality of thermostatic members within said water system and each including a movable rod, said members operating at different temperatures, a link pivotally connecting said rods, an operating connection between said controlling means and said link and including a lever shiftable at one end in said link, a movable pressure actuated member communicating with the interior of the engine cylinder and operated by a variation of fluid pressure therein, and a connection between the same and said movable link whereby said lever is operated in said link in accordance with a variation of fluid pressure within the cylinder.

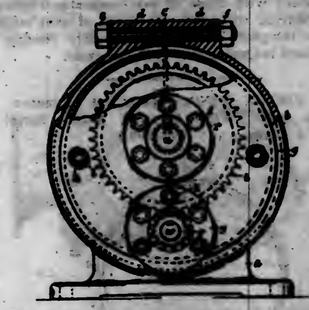
1,393,903. FOUNTAIN-PEN. Henry L. Perry, Yonkers, N. Y., and Thomas Veitch, Englewood, N. J. Filed Apr. 29, 1920. Serial No. 377,575. 9 Claims. (Cl. 120—42.)

9. A fountain pen including a barrel, a partition dividing said barrel into a liquid reservoir and an ink-paste containing magazine open at its end opposite said partition, said partition being provided with a check valve-controlled opening through which said reservoir and said magazine are adapted to communicate, said magazine being provided with interior screw-threads, and a plug having threads meshing with those of said magazine closing the latter and bearing throughout the area of said magazine against the ink-paste therein for forcibly feeding ink-paste from said magazine into said reservoir.



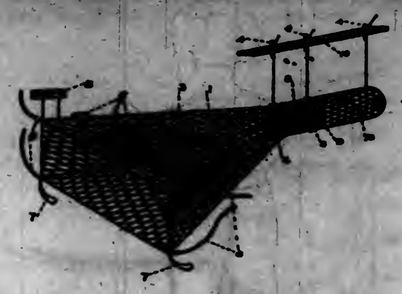
1,393,904. PISTON-RING. Hakk. B. Persing, San Francisco, Calif. Filed Oct. 30, 1920. Serial No. 420,611. 1 Claim. (Cl. 74—109.)

A piston ring having its lower edge beveled outwardly and upwardly from the outer face of the ring to the inner face thereof, and bearing portions dividing the beveled



portions into contact, which bearing portions lay equal in thickness to the thickness of the valve-body portion and furthermore extend from the outer face to the inner face of the ring and are tapered on opposite sides by a point toward the outer face of the ring.

1,293,905. VALVE MECHANISM FOR ASH-CONVEYING OR LIKE SYSTEMS. Herman A. Poppenhusen, Hammond, Ind., and Arthur P. Simons, Chicago, Ill., assignors to Green Engineering Company, East Chicago, Ind., a Corporation of Illinois. Filed Feb. 21, 1919. Serial No. 278,351. 8 Claims. (Cl. 302—36.)



1. In an ash conveying system, the combination of a conduit having a plurality of ash intake openings, means for supplying motive fluid to said conduit for moving the material therethrough, means for controlling the supply of motive fluid to said conduit, including a member adjacent each ash intake opening and enabling the operator when at any one of the intake openings and while moving ash into the same to engage the member at the intake opening to turn on the supply of motive fluid to the conduit and maintain the motive fluid turned on while the operator retains his engagement with said member, and means for automatically shutting off the motive fluid when the operator releases said member.

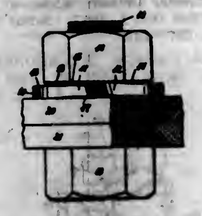
1,293,906. SPEED-CHANGING UNIT. Clifford H. Ramsey, Glen Rock, N. J. Filed May 4, 1920. Serial No. 378,822. 4 Claims. (Cl. 74—7.)

1. In a power transmitting unit, transmission gears journaled on parallel axes, a carrier in which the gears are journaled, and a support for the carrier in which the carrier is rotatively adjustable on an axis parallel with one of the first-named axes, said support having means to grip the carrier extending around the axis on which the carrier is adjustable and also extending around the gears.

1,293,907. FLOATING FISH-TRAP. Reuben Thomas Fields, Wash. Filed Nov. 22, 1919. Serial No. 339,599. 2 Claims. (Cl. 43—103.)

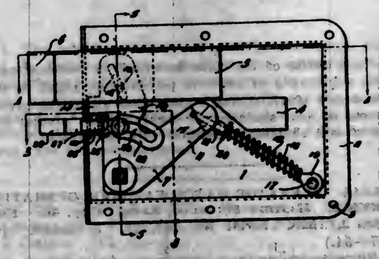
1. A fish trap, comprising in combination, a heart substantially triangular in form, provided at one end with an opening bounded by a metallic ring, a pot cylindrical in form having a rounded closed end and the other end provided with an opening bounded by a metallic ring, interposed between the heart and the pot, a tunnel having a metallic framework cylindrical in outline, the end adjacent the heart having an opening coterminous with said opening in the heart, the end adjacent the pot and communicating therewith, having an opening reduced in diameter, a plurality of cords interiorly located and stretched between said openings in the tunnel, said cords covered by netting and defining in form a truncated cone, said framework also covered by netting and defining in form a cylinder, the heart, tunnel and pot connected with buoys provided with openings therethrough, lines extending from the trap and through said openings, wedges located in the openings and contacting with the cords whereby the location of the buoys may be adjusted with reference to the trap, means for attaching or detaching the heart, tunnel and pot, means for towing the trap and for maintaining the sides of the heart in approximately spaced vertical planes while in operative position.

1,293,908. QUICK-ACTING HIGH-PRESSURE CONNECTION. Walter J. Rudolph, Chicago, Ill., assignor to The Imperial Brass Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 24, 1920. Serial No. 353,796. 6 Claims. (Cl. 284—18.)



2. In quick acting high pressure connections, the combination with a nipple having a square head and a shank portion with a passage therethrough, having a valve seat in the outer end of the passage, a valve coöperating therewith, and a spring closing it, of a coupling head having a square nipple receiving aperture, an elastic packing member in said coupling head having an aperture adapted to register with the valve, and a locking seat member having four angular recesses registering with the angles of the aperture and four intermediate angular recesses with which the corners of the head register when it has been introduced and turned end into which it is forced by the elastic packing member.

1,293,909. CUSHION-TIRE. Dennet Sanderson, Peoria, Ill. Filed May 14, 1919. Serial No. 303,978. 1 Claim. (Cl. 152—32.)

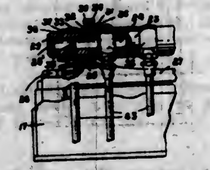


A tire comprising a shoe having a filling consisting of an annular series of spaced resilient spheres touching the shoe at their outermost peripheral portions, and an annular series of alternating resilient blocks, disposed against the inner surface of the shoe and having their ends provided with spherical-sectional concavities in which the spheres are fitted, said blocks extending toward the axis of the shoe well beyond the centers of the spheres and holding the spheres from mutual contact, both annular series being concentric with the shoe.

1,293,910. LOCK-WASHER. Carl Schommert, Newark, N. J. Filed Oct. 25, 1920. Serial No. 419,162. 4 Claims. (Cl. 151—36.)

1. A split lock washer having at each of its ends, a plurality of teeth located at different distances from the center of the washer, all the teeth of one of said ends being bent in the same direction, and all the teeth of the other end being bent in the opposite direction.

1,293,911. AUTOMOBILE-DOOR LATCH. Lawrence A. Schumaker, Michigan City, Ind. Filed Nov. 19, 1920. Serial No. 425,149. 3 Claims. (Cl. 292—335.)

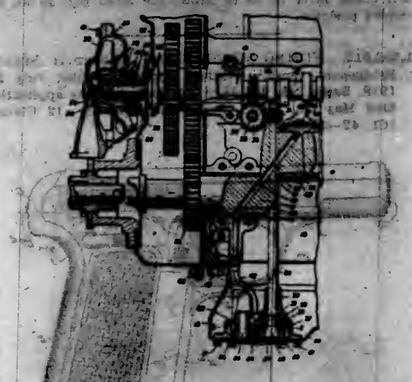


2. In combination, a casing, a latch bolt slidable therein, a bell crank rotatably mounted in the casing, one arm of the bell crank lever provided with a slot, a pin on the latch bolt adapted to ride in the slot, the other arm of the bell crank lever provided with a shoulder having a slot extended therethrough, a rod pivotally carried in the casing so that one end will extend through the slot in the shoulder, and a spring disposed on the rod so as to hold the latch in a retracted or extended position as described and a trigger mechanism for slightly moving the bell crank lever so as to shunt the latch bolt in an extended position.

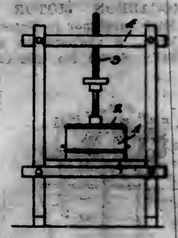
1,293,912. FIRING MECHANISM. Elbert H. Searls, Bridgeport, Conn. Original application filed July 22, 1918, Serial No. 245,981. Divided and this application filed May 21, 1919. Serial No. 301,085. 12 Claims. (Cl. 42—3.)

1. In a fire-arm, a frame having a longitudinal slide track, a breech slide reciprocating on said slide track, a striker moving longitudinally of said breech slide, and a sear having a bearing in the frame in which it slides endwise into and out of coaction with said striker; said sear and its slide bearing extending substantially laterally from the point of coaction with the striker to a position beneath the slide track.

1,293,913. HYDROCARBON-MOTOR. Charles R. Short, Detroit, Mich., assignor to General Motors Company, Detroit, Mich., a Corporation of New Jersey. Filed Apr. 6, 1917. Serial No. 160,129. 13 Claims. (Cl. 64—27.)



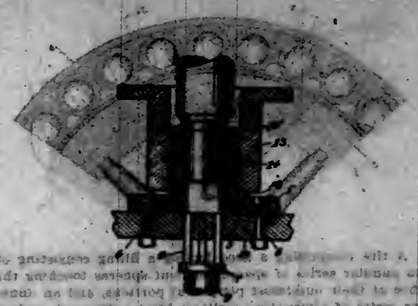
1. In combination a standard or support, a channeled shaft mounted therein, and forming a chamber for lubricant, a member rotatable on the shaft, said shaft and standard having registering ports, and a hollow pin inserted in the port in the standard and pressing on the shaft around the port therein to prevent the shaft from turning, and a removable plug for the hollow pin, whereby the shaft may be filled through the hollow pin.



1,293,914. HYDROCARBON-MOTOR. Charles R. Short, Detroit, Mich., assignor to General Motors Company, Detroit, Mich., a Corporation of New Jersey. Filed June 11, 1917. Serial No. 174,170. 9 Claims. (Cl. 123—175.)

9. In combination in an internal combustion engine, a liquid impelling pump having a casing provided with a bear-

ing; a rotating liquid impelling element carried within said casing and having a hollow tubular sleeve supported in said bearing; a driving shaft extending into said sleeve and having a friction surface in engagement with a co-operating friction surface provided within said sleeve; and a spring located within said sleeve and acting to force said friction surfaces into engagement with one another to thereby secure the driving of said rotating element or impeller from said driving shaft, the adjustment of the parts being such that said friction surfaces may slip to thereby interrupt the driving action of the driving shaft if and when a reduction of temperature brings about a change in the condition of the liquid operated upon of such a character that the pump can no longer cause said liquid to flow.



1,393,915. PROCESS OF FORMING BLOCKS OF CHEESE. NICHOLAS SIMON, Appleton, Wis. Filed Nov. 3, 1919. Serial No. 335,353. 1 Claim. (Cl. 31—68.)

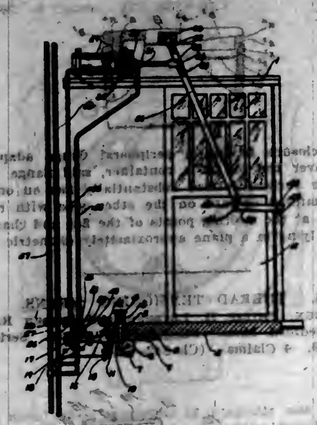
The process of preparing blocks of cheese of standard unitary weight, which consists in forming and partly curing a mass of cheese of definite size, then cutting this mass into a number of blocks of substantially equal size, then adjusting, if necessary, the weight of said blocks to the predetermined standard by adding or subtracting, as required, pieces of partly cured cheese, and finally completing the cure of such blocks to produce a rind completely inclosing the same.

1,393,916. DIES FOR DRAWING AND UPSETTING METAL FORMS. WILLIAM B. SMITH, Norwood, Ohio, assignor to The Cocoaum-Victor Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 5, 1918. Serial No. 265,534. 8 Claims. (Cl. 78—82.)

1. A means for forming a thickened portion on a hollow sheet metal form, which comprises a divided die of the shape of the finished article and provided with a recess for the reception of the sheet metal, the parts thereof having a small normal separability, means for locking the

parts of the divided die together firmly, to prevent their separation or separation, and a plunger shaped to fit the hollow form and to upset the metal into the recess.

1,393,917. AIR-FLOW CONTROLLING MECHANISM FOR INTERNAL-COMBUSTION-ENGINE RADIATORS. LYLE K. SMELL, Detroit, Mich., assignor to Cadillac Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 1, 1917. Serial No. 194,262. 9 Claims. (Cl. 257—132.)



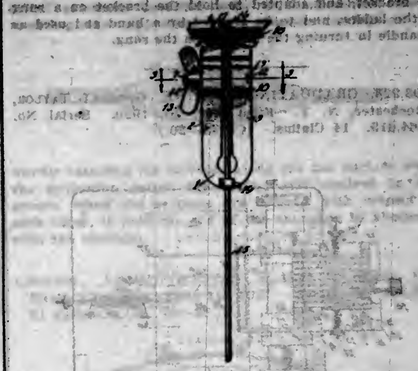
2. In a device of the class described, in combination, a frame, a plurality of shutters pivotally arranged in said frame and a single spring acting upon all of the pivotal supports of said shutters for retaining the pivotal supports of said shutters in contact with said frame.

1,393,918. ELEVATOR-HATCHWAY-DOOR-OPERATING DEVICE. MATHEW SPINELLO, Kansas City, Mo. Filed Mar. 2, 1920. Serial No. 362,731. 3 Claims. (Cl. 187—54.)

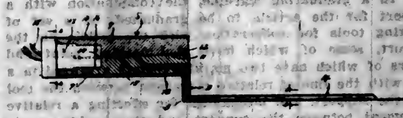
2. In a hatchway door operating mechanism, an air operated motor for opening and closing a door, a valve mechanism for effecting reversal of the motor, said mechanism including a valve, a spring-actuated lever con-

nected to the valve, a segmental rack on said valve, a sliding rack member engaging the segmental rack, a

movable elevator cage, and a foot pedal actuated bolt for moving the sliding rack in one direction to oppose the spring and thereby reverse the valve.



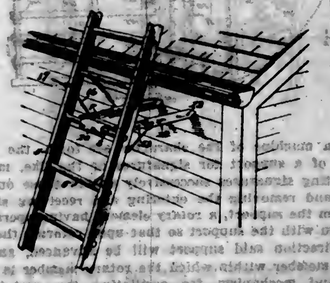
1,393,919. PHONOGRAPH. MORRIS J. STONE, St. Louis, Mo. Filed Sept. 29, 1920. Serial No. 413,558. 4 Claims. (Cl. 240—2.)



1. The combination with a phonograph-cabinet, including its sound-conveying chamber, the cabinet having a compartment adapted to contain records, of an electric lamp positioned upon the cabinet adjacent the compartment, and a panel arranged within the sound-conveying chamber and adjacent the lamp to reflect light from the lamp into the compartment.

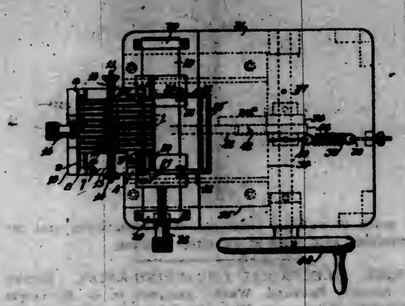
1,393,920. NIPPLE-GRIP. WILLIAM P. STRICKLAND, Chicago, Ill. Filed Nov. 20, 1920. Serial No. 425,512. 5 Claims. (Cl. 81—3.)

1. A device of the character described comprising a body portion having substantially parallel arms formed to provide jaws at the forward ends thereof and having a hook at the rearward end thereof positioned to receive a portion of the work disposed between said jaws, and means for adjusting said jaws relative each other to grip work of varying sizes placed therebetween and for maintaining said jaws in adjusted position.



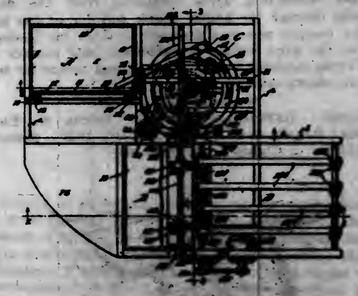
1,393,921. ELECTRICAL UNCAPPING-KNIFE. HENRY C. SWANN, Spokane, Wash., assignor to G. B. Lewis Company, Watertown, Wis. Filed May 11, 1920. Serial No. 380,526. 2 Claims. (Cl. 219—21.)

1. In a tool of the class described, a cutting blade, a heating element carried by the blade, a hollow shank extending from the cutting blade, a lateral attaching plate on the shank, a housing covering said heating element and formed integral with said attaching plate, a longitudinally split handle forming a pair of handle blocks, one end of the handle having a plug socket, the other end of the handle having said attaching plate disposed between the blocks and secured to one of them, current conducting wires extending from the heating element through the hollow shank and one of the handle blocks, contact members disposed between the blocks and having the wires connected therewith, said contact members being extended into the socket, and means for retaining the blocks together.



1,393,922. LADDER-SUPPORT. EDWIN N. TAYLOR, Cedar Rapids, Iowa. Filed Jan. 16, 1920. Serial No. 351,962. 2 Claims. (Cl. 223—60.)

1. A ladder support, comprising a stirrup-shaped bracket, the legs thereof being adapted to rest against a building



and hold the ladder out therefrom, and a transversely disposed, elongated stirrup attached to the cross-bar of the bracket, and adapted to hold the bracket on a rung of the ladder, and to be grasped by a hand and used as a handle in turning the bracket on the rung.

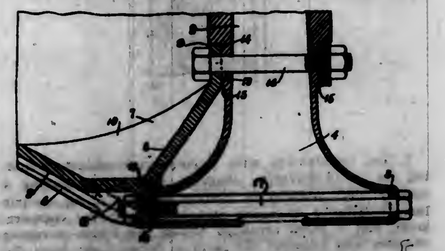
1,393,923. GRADUATING-MACHINE. Gideon L. Taylor, Rochester, N. Y. Filed Mar. 10, 1920. Serial No. 364,619. 14 Claims. (Cl. 33—20.)

1. In a graduating machine, the combination with a support for the article to be graduated, of a set of marking tools for coöperation with the article on the support, some of which have one marking point and others of which have two marking points arranged in a line with the line of relative movement between the tool and the support, and mechanism for effecting a relative movement between the support and the marking tools to cause the tools to make marks on the article on the support.

1,393,924. SIGNATURE-COLLECTING MECHANISM. Joseph C. Tressrath, Lakewood, Ohio, assignor of one-third to William D. Graff, Lakewood, Ohio. Filed Nov. 9, 1918. Serial No. 261,865. 18 Claims. (Cl. 270—55.)

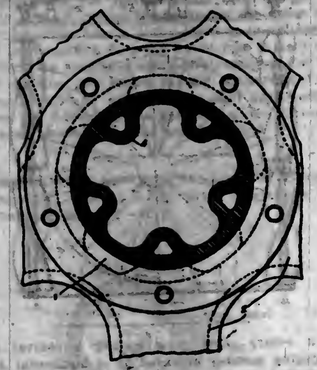
1. In a machine of the character set forth, the combination of a support for signatures or the like, means for inserting signatures successively within those on the support and removing the entering and receiving signatures from the support, a rotary element having operative connection with the support so that upon rotation thereof in one direction said support will be advanced, an oscillatory member within which the rotary member is sustained, and mechanism for oscillating the sustaining member and imparting intermittent rotation to the rotary element.

1,393,925. CLOSURE. Henry E. Townsend, Brooklyn, N. Y. Filed Dec. 12, 1919. Serial No. 344,895. 8 Claims. (Cl. 215—47.)



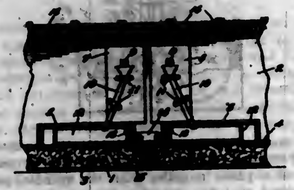
1. A closure having a peripheral flange adapted to extend over the top of a container, said flange having its under surface formed substantially flat on one side and chamfered upward on the other side with rocking fulcrums at the meeting points of the flat and chamfered surfaces lying in a plane approximately diametric to the closure.

1,393,926. THREAD-TENSIONING MEANS. Louis Veillieux, Philip H. Leveque, and Joseph Barnes, New Bedford, Mass. Filed Sept. 30, 1920. Serial No. 413,709. 4 Claims. (Cl. 242—149.)



3. A thread tensioning device comprising a bracket including means for supporting the bobbin and a head over which the thread passes, the latter being provided with a thread-guide, a weighted arm pivotally mounted on said head having a portion extending transversely across the latter, and a friction shoe pivotally mounted on said transverse portion of the arm, a piece of resilient metal secured at one of its ends to the shoe, being spaced from the latter and independently movable with respect thereto.

1,393,927. TRACTOR-WHEEL. George Walters, Dayton, Ohio, assignor to The Dayton Steel Foundry Company, Dayton, Ohio, a Corporation of Ohio. Filed Oct. 30, 1919. Serial No. 334,450. 1 Claim. (Cl. 301—40.)

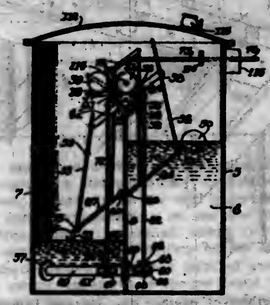


The combination with a metal wheel comprising a main tread arranged parallel to the axis of the wheel and hollow spokes having oppositely directed curves extending substantially to the edges of the main tread, of a supplemental tread member secured to the wheel inclined inwardly of the main tread and adapted to coöperate with said tread and wheel when the wheel is functioning over soft ground, each spoke having a lateral spoke extension extending outwardly in a wide curve and merging with and supporting the supplemental tread.

1,393,928. METAL WHEEL. Charles Walters and Walter W. Ellwood, Dayton, Ohio, assignors to The Dayton Steel Foundry Company, Dayton, Ohio, a Corporation of Ohio. Filed Feb. 25, 1920. Serial No. 361,198. 4 Claims. (Cl. 301—65.)

1. A metal wheel consisting of integrally cast hub and spokes, hollow-cast arches of reinforcing metal formed within the hub and adapted to strengthen said hub, and a separate rim adapted to be secured to the outer free ends of said spokes.

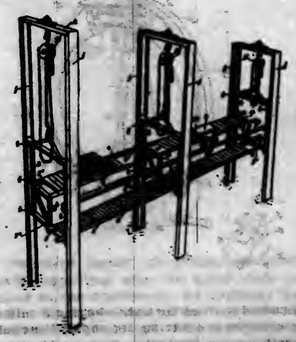
1,393,929. REFRIGERATOR. Joseph A. Weis, Memphis, Tenn. Filed Apr. 26, 1921. Serial No. 464,493. 3 Claims. (Cl. 62—89.)



1. In a refrigerator the combination of a receptacle; a vent leading from the interior to the exterior of said receptacle; upwardly opening closures in the top of said receptacle; a readily removable open container adapted to hold ice and salt mounted within said receptacle with its open end adjacent said closures; an outlet near the top of said container for the drip water; readily removable means for supporting said container out of contact with the side and bottom walls of said receptacle, whereby a free flow of air is permitted on all sides of said container; a readily removable drip water receiving pan within said receptacle adapted to receive the drip water from said outlet; a drain leading from said outlet to said pan; and connections between said pan and the exterior of said receptacle adapted to convey said drip water from said pan, substantially as described.

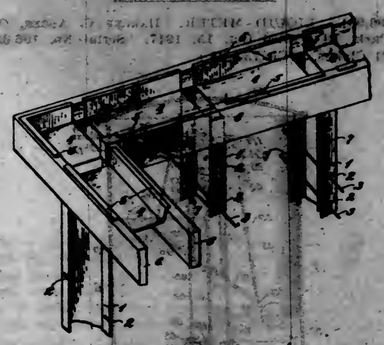
1,393,930. GRATE-SHAKER BAR. Elijah K. Wolfe, Paducah, Ky. Filed Aug. 30, 1919. Serial No. 320,896. 1 Claim. (Cl. 287—119.)

In a device of the class described, a shaker bar section, and a grate bar section, the sections being provided at their meeting ends with broadened heads, the head of one section having a frusto-conical projection defining a shoulder at the end of said head, the projection having a flat longitudinal surface and being provided with a transverse groove one side wall of which is formed by the shoulder, the head of the other section having a cylindrical extension provided with a frusto-conical recess receiving the projection, the extension having an inwardly extended lug movable along the flat surface when the projection enters the recess, and received in the groove, when the sections are rotated with respect to each other, to hold the end of the extension in abutment with the shoulder.



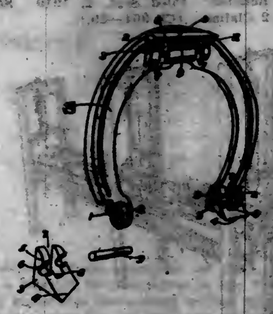
1,393,931. LIQUID-METER. Harley C. Alden, Oak Park, Ill. Filed Oct. 15, 1917. Serial No. 196,657. 21 Claims. (Cl. 73—38.)

1. A liquid meter comprising a plurality of measuring compartments, means for supplying liquid to and means for conveying liquid from the measuring compartments successively whereby each of the measuring compartments is filled and emptied, means for indicating the rate of flow of liquid through the meter and means actuated by the aggregate amount of liquid in the compartments for operating the indicating means.



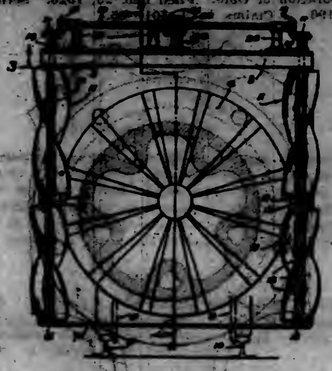
1,393,932. SCAFFOLDING. Achille Anderi, Ixelles, Brussels, Belgium. Filed Sept. 2, 1919. Serial No. 321,105. 2 Claims. (Cl. 304—29.)

1. In a scaffold, a platform for workmen to stand on, a staging for holding building materials, a plurality of rectangular sash-like frames, said platform being seated on the lower bars of said frames and extending from one



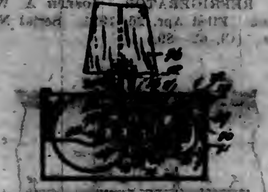
[illegible] side of each frame to and [illegible] said supporting bars and extending from said other upright side of each frame to and [illegible] the middle part of each frame, pairs of [illegible] said frames, the upright sides of each [illegible] with a pair of main [illegible] by a pair of said upright [illegible] lifting means suspended from said cross bars and engaged with said frames.

1,393,833. METHOD OF CONSTRUCTING BUILDING-FRAMES. ARTHUR G. AUSANG, Los Angeles, Calif. Filed Feb. 9, 1920. Serial No. 357,854. 2 Claims. (Cl. 25—131.)

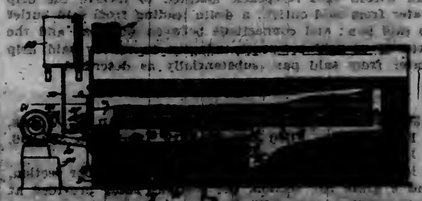


1. The method of casting the vertical individual elements of a building frame, consisting in setting up forms in place and then applying cement under pressure to one side of said forms to produce concrete molding constituting the basic support for the units of a building frame.

1,393,934. CALK-FASTENER. DANIEL BALLENGER, Greeley, Colo., assignor of one-half to J. B. Williams, Greeley, Colo. Filed July 28, 1920. Serial No. 398,328. 2 Claims. (Cl. 168—33.)



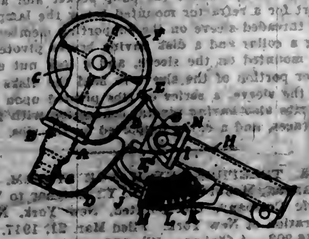
1. The herein-described horseshoe having a calk fastener comprising a screw-eye having its shank inserted in the horseshoe and its eye projecting below said shoe, a calk having a base at right angles to its body and adapted to form a pivot, said eye, the arms of said bifurcated calk mounted in said lower loops, and a pin fitted through said eye and with its ends lying in said grooves.



1. In a rotary snow plow having a central rotary snow engaging member mounted on a horizontal axis, a vertical shaft located at each side of and in front of said member, and cutters carried and driven by said shafts.

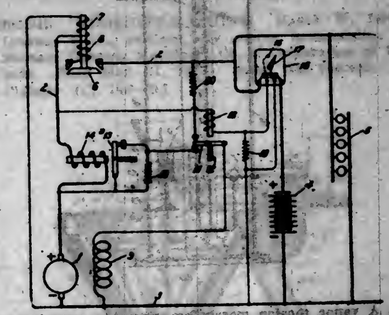
1,393,935. MOTOR MECHANISM FOR MECHANICAL TOYS. SAMUEL BENGER, New York, N. Y. Filed June 1, 1921. Serial No. 474,097. 10 Claims. (Cl. 74—14.)

1. In a mechanical toy, a longitudinally movable spindle, a disk carried thereby, a reciprocable arm arranged for movement in a plane parallel with the spindle, said arm being arranged to contact with said disk and during its movement to move the spindle longitudinally of its axis, means to prevent rotation of the disk during the longitudinal movement of the spindle, but to permit the disk to be rotated by the rotary movement of the arm after said spindle has reached the end of its longitudinal movement.



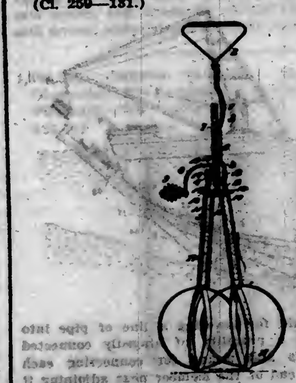
1,393,937. OIL-BURNER. FRANK BRU, Chicago, Ill., assignor of one-fourth to Willard M. McEwen, Chicago, Ill. Filed Feb. 12, 1920. Serial No. 358,008. 16 Claims. (Cl. 158—3.)

1. In a structure of the character described, the combination with a [illegible]



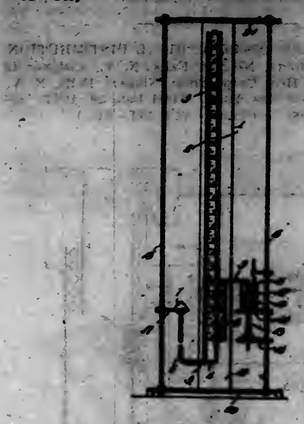
[illegible] member upon which said drum is mounted to rotate, a tension member wound upon said drum and adapted to impart rotation thereto in one direction, a spring adapted to impart rotation to the drum in the direction to rewind the tension member thereon, and coacting braking members carried, respectively, by the attaching member and the drum; said braking members being constructed to develop an increasing resistance to the rotation of the drum imparted by the unwinding of the tension member, and to diminish resistance to the rotation induced by the spring in rewinding the tension member.

1,393,939. OVERHEAD TROLLEY OR COLLECTOR FOR ELECTRIC TRAMWAY AND RAILWAY VEHICLES. THOMAS BLAINEY and DAVID WILLIAMS, Walton, Liverpool, England, assignors of one-half to The Equipment and Engineering Company, London, England. Filed June 8, 1921. Serial No. 475,400. 4 Claims. (Cl. 191—503.)



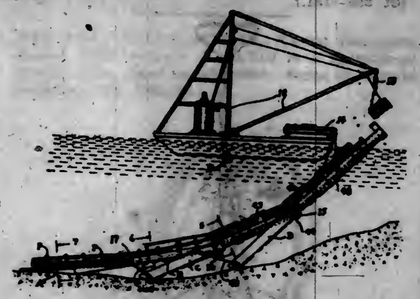
1. An overhead trolley or collector, the combination of a [illegible]

1,393,940. SYSTEM OF ELECTRICAL DISTRIBUTION. WILLIAM L. ELDER, Niagara Falls, N. Y., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Feb. 20, 1917. Serial No. 150,996. 4 Claims. (Cl. 171—313.)



3. In a system of electrical distribution, in combination, a generator, a storage battery, an automatic switch therebetween, a field circuit for said generator normally connected across said generator on one side of said automatic switch, voltage controlled means for connecting said field circuit across said battery on the other side of said automatic switch through a path of greater resistance, and means responsive to the net input to said battery for controlling said voltage controlled means.

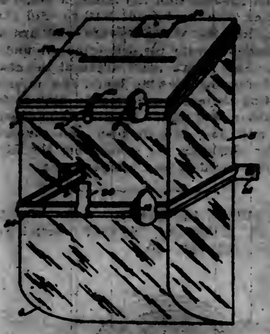
1,393,941. BEATER. LAVERN DOSSWELL, New York, N. Y. Filed Jan. 28, 1918. Serial No. 2,963. 3 Claims. (Cl. 259—181.)



1. An improved beater comprising a framework, a beater blade supporting wire, the upper ends of the said wire secured to the framework, an auxiliary blade supporting wire, the upper ends of the said wire fastened to the framework, the lower ends of the auxiliary blade supporting wire crossing the beater blade supporting wire and a clamp providing means for fastening the two said wires together, beater blades carried by the beater supporting wire, and actuating means carried by the said frame work [illegible]

1,393,843. VAPOR-TENSION APPARATUS. [illegible] Gaines, & Chapman, Salem, Mass., assignors to Chapman & Gaines, Salem, Mass. Filed Oct. 7, 1920. Serial No. 415,976. 9 Claims. (Cl. 73—68.)

1. A vapor tension measuring apparatus comprising a gage tube adapted to contain a quantity of mercury, a receptacle for a sample of liquid to be tested, a connecting tube for placing the upper end of said receptacle in communication with said gage tube at a point spaced below the mercury level of the latter, means for raising and lowering the level of mercury at will, and means for heating the sample.



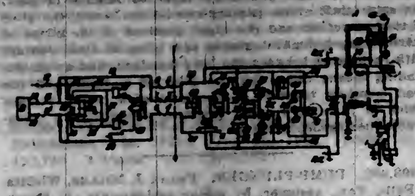
1,393,942. PIPE-LAYING APPARATUS. William L. Chapman, New York, N. Y., assignor to Merritt & Chapman Derrick & Wrecking Company, New York, N. Y., a Corporation of West Virginia. Filed Sept. 13, 1919. Serial No. 323,402. 9 Claims. (Cl. 61—72.)

1. A launching skid for lowering a line of pipe into position, comprising a plurality of hingedly connected overlapping members and means for connecting each member to the rear end of the member next adjoining it forwardly.

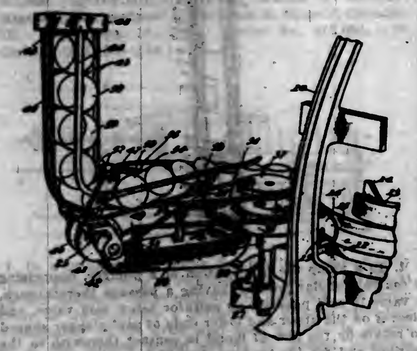
1,393,944. MAIL-BOX. William Moses Chapman, Haviland City, Ind. Filed Apr. 9, 1920. Serial No. 372,510. 1 Claim. (Cl. 232—38.)

In a deposit and collection receptacle, a body portion formed of transparent material and having an inclined upper edge, an integral rib formed adjacent to the upper edge thereof, a split collar having a recessed portion adapted to receive the integral rib, a cover for the receptacle having a recessed portion to embrace the latter rib, said securing means having right angled ends to permit the same to be secured to a support, and a supporting arm secured to the securing means.

1,393,945. ELECTROLIER. Le Roy G. Clark, Detroit, Mich. Filed Nov. 5, 1919. Serial No. 335,975. 6 Claims. (Cl. 240—73.)



1. An electrolier comprising a supporting member having a screw-threaded lower end, a lamp socket engaging the screw-threaded end of the member, a disk upon the supporting member above the lamp socket and acting as a support for a reflector mounted below the lamp socket, a screw threaded sleeve on the supporting member, a disk carrying a collar and a disk having braces pivoted thereto both mounted on the sleeve, and a lock nut engaging the upper portion of the sleeve to hold the disks in position on the sleeve, a series of ribs pivoted upon the collar, the ribs also having pivotal connection with the ends of the braces, and a cover supported by the ribs.

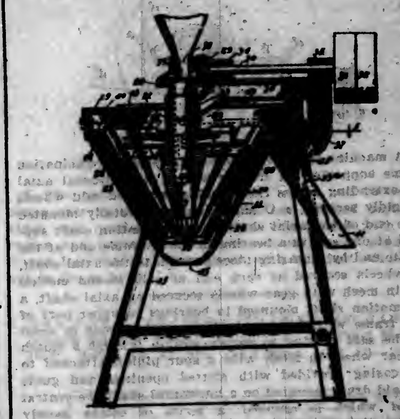


1,393,946. TELEPHONE-EXCHANGE SYSTEM. Henry P. Clausing, Mount Vernon, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 21, 1917. Serial No. 156,206. 4 Claims. (Cl. 179—27.)

1. In a telephone exchange system, the combination with telephone lines, subscribers thereto, an operator's

connecting circuit for interconnecting said lines, a circuit at the calling subscriber including contacts closed in the alternate positions of the rotative test thereof, a signaling device in said circuit, means for preparing an actuating circuit for said device controlled by the called subscriber, and manual means in the operator's connecting circuit for completing said actuating circuit.

1,393,947. CAN FEEDING AND RIGHTING MACHINE. Clarence F. Colbert, Hoopeston, Ill., assignor to Sprague Canning Machinery Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 11, 1918. Serial No. 211,432. 14 Claims. (Cl. 198—1.)



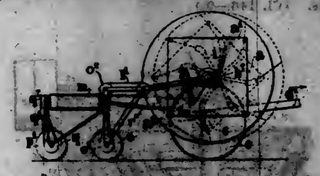
1. A can handling machine for handling sanitary cans comprising a sweep rotatable about a vertical axis, a vertical chute in which the cans are held with their axes in horizontal positions, said sweep having a receding spiral surface, against which the cans are fed, and a shoulder which engages the cans after they have been fed inwardly toward the center of the sweep, along said receding spiral surface, and impositive frictional means for feeding said cans from said vertical chute against said receding surface.

1,393,948. HAIR-CLIPPER. Frank Leo, Milwaukee, Wis., assignor of one-half to Frank Sage, Milwaukee, Wis. Filed May 23, 1921. Serial No. 471,824. 2 Claims. (Cl. 30—1.)

1. A device of the character described, comprising a base member having a ledger blade secured thereto, a housing secured on said base member, a member pivoted to the base member, a train of gears rotatably mounted on said housing, a reciprocating cutter driven by said train and cooperating with the ledger blade, a clutch connecting one of said gears to the pivoted member to be driven when said pivoted member is moved in one direction, a second clutch connecting another of said gears to the pivoted member to be driven when the pivoted member is moved in the opposite direction, whereby said reciprocating member may be constantly driven by the oscillation of said pivot member.

1,393,949. FINISHING-MACHINE. Harry W. Love, Omaha, Nebr., assignor, by mesne assignments, to Sprague Canning Machinery Co., a Corporation of Illinois. Filed Mar. 21, 1917. Serial No. 156,469. 21 Claims. (Cl. 146—9.)

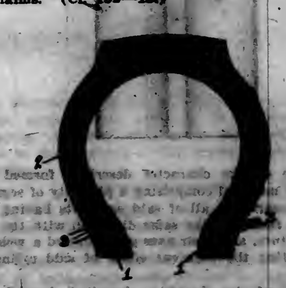
1. In a finishing machine, a conical perforated screen having a vertical axis, means for supplying material to said screen, and means for forcing the material through said screen, comprising a floatably mounted brush.



1,393,950. CHEESE-HOLDER. Arthur J. Meneum, Glenbeulah, Wis., assignor of one-half to Henry Blanke, Plymouth, Wis. Filed Nov. 22, 1920. Serial No. 425,741. 3 Claims. (Cl. 31—68.)

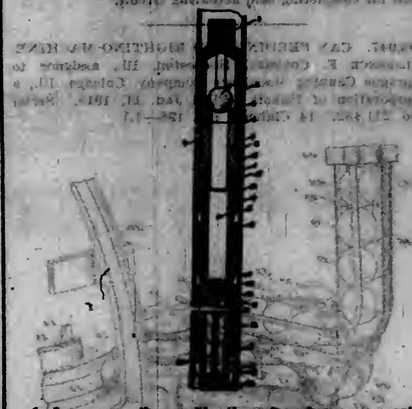
1. A device of the character described formed from resilient sheet material comprising a plurality of segments of cylindrical surfaces, all of said segments having their concave sides facing in the same direction with the same radii of curvature, and their axes parallel, and a web integrally connecting the adjacent edges of said cylindrical segments.

2. A device of the character described formed from resilient sheet material comprising a plurality of segments of cylindrical surfaces, all of said segments having



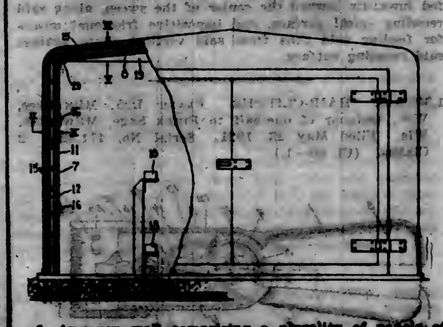
1,393,951. FLAX-PULLING MACHINE. Gerrard Michor, Dromara, Ireland, assignor to The Fibre Corporation Limited, London, England. Filed Apr. 13, 1918. Serial No. 228,462. 3 Claims. (Cl. 56—68.)

1. A machine for pulling flax comprising in combination a frame supported on traction wheels, a horizontal axial shaft extending across the machine on which said wheels are rigidly secured, a U shaped frame pivotally mounted at one end of the axial shaft, a second motion shaft supported at one end in a bearing in the U frame and at the opposite end by a bearing piece parallel to the axial shaft, gear wheels secured at each end of said second motion shaft in mesh with gear wheels secured on axial shaft, a third motion shaft mounted in bearings in upper part of the U frame with a gear wheel mounted thereon in mesh with the said gearing to convey motion through a clutch and gear wheel in mesh with a spur pinion attached to drum casing provided with slotted openings and guide bars, said drum mounted on a horizontal shaft the central part of which is cranked, a series of combs loosely mounted thereon which engage slotted guide bars in drum, whereby the drum and the combs receive a differential movement when rotated substantially as described.



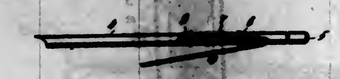
3. In a machine for pulling flax comprising in combination rotating rectangular drums formed in two or more sections upon a rigid cranked shaft secured to the machine frame a series of connecting rods situated at equal angular positions from each other extending radially from a split bearing rotating on the cranked axis, a curved angular extension thereon with a series of taper rods fixed to a bar forming a comb the width of drum, at an angle of 45° with the connecting rods substantially as described.

1,393,952. TIRE-CASING. Charles E. Miller, Anderson, Ind. Filed Mar. 17, 1921. Serial No. 453,025. 4 Claims. (Cl. 152—12.)



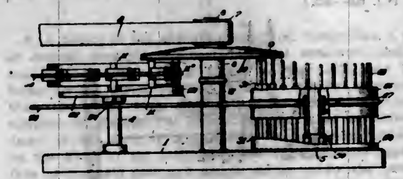
2. A tire casing comprising a body composed of fiber members, tubular bundles of wool, rested only within the other said members, the bundles being arranged with their axes parallel with and at a greater distance from the inner than the outer of the two beads, and a web horizontally connecting the adjacent edges of the outer and inner members.

1,393,953. PUMP-PLUNGER. Frank J. Miller, Wichita Falls, Tex., assignor, by mesne assignments, to Frank Miller Pump Co., Dallas, Tex., a Corporation of Texas. Filed Feb. 14, 1920. Serial No. 358,566. 12 Claims. (Cl. 103—95.)



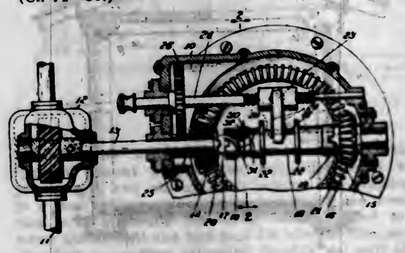
1. In a pump the combination of a plunger, comprising a central tubular member having a passage therethrough, a valve in said passage, an agitater below said valve, and sleeves on the upper and lower ends of said plunger shaped to rotate by the flow of liquid in contact therewith in the manner and for the purpose described.

1,393,954. OVEN-WALL CONSTRUCTION. John A. Miller, Tarrytown, N. Y. Filed Aug. 23, 1919. Serial No. 319,511. 5 Claims. (Cl. 72—68.)



1. An oven wall comprising a plurality of panels of channel form made from sheet metal and the meeting edges of which are turned inward and secured together to thereby provide webs extending from the plane of the panels, a filling of heat non-conducting material located within the channels of said panels and between the ribs formed by the joints between abutting panels; a sheet of metallic lathing having inwardly extending or high ribs arranged at right angles to the ribs of said channels and the extremities of which contact with said filling material to thereby hold the same in place; means for securing said metallic lathing to said panels; and a layer of plastic heat non-conducting material upon and carried by said metallic lathing.

1,393,955. COTTON-STALK PULLER. Thomas H. Monk, Tallahassee, Fla. Filed Sept. 25, 1920. Serial No. 412,790. 1 Claim. (Cl. 254—132.)

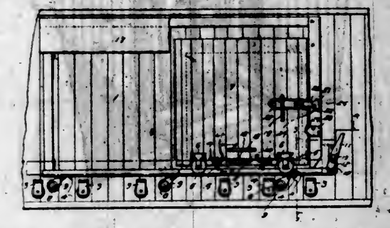


A cotton stalk puller including a handle, a stalk embracing member consisting of a strap, one end of which is countersunk in the handle and detachably connected thereto, the other end of the strap being bent acutely to provide a substantially V-shaped structure for engagement with the stalk.

1,393,956. END-FACE GRINDER. Frank H. Mooney, Hinsdale, Ill., assignor to Clarence E. Barrett, Chicago, Ill. Filed Sept. 18, 1920. Serial No. 411,091. 10 Claims. (Cl. 51—134.)

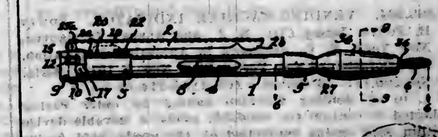
1. In a grinder, a grinding disk having a downwardly directed abrasive face, a rotating drum having a vertical axis and partially underhanging the said disk, the drum having on its periphery a plurality of grooves extending longitudinally of the drum and each adapted to receive one of the objects which are to be ground, separate clamping means carried by the drum and respectively arranged for retaining the objects in the grooves, single means for actuating each of the clamping means while approaching and passing under the said disk, and means for forcing the objects upwardly against the disk while under the latter.

1,393,957. DRIVING MECHANISM FOR WASHING-MACHINES. William F. Moran, Chicago, Ill., assignor to V. B. M. Company, a Corporation of Illinois. Filed July 23, 1919. Serial No. 312,654. 4 Claims. (Cl. 74—60.)



2. In mechanism of the class described, the combination of a driven-shaft, a pair of gears loosely mounted thereon, in spaced relation with each other, a double clutch element slidably mounted on said shaft intermediate of said gears, the clutch element and shaft being caused to rotate together, means adapted to have yielding and positive engagement with the clutch element whereby the clutch element is alternately shifted into clutching engagement with one of said pair of gears, with means mounted on said clutch element and having operative relation with the driven-shaft whereby the clutch element is yieldingly locked in its adjusted positions on said shaft until said first mentioned means is brought into positive operative relation with said clutch element.

1,393,958. NUT-LOCK. Albert J. Ordal, Colton, S. D. Filed Apr. 29, 1919. Serial No. 293,412. 5 Claims. (Cl. 151—13.)

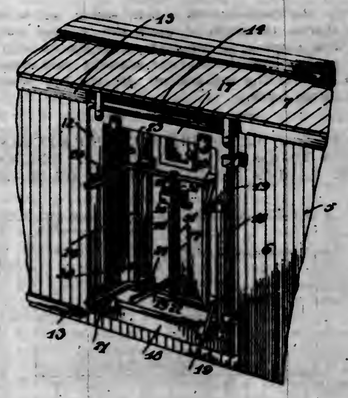


1. The combination with a bolt, and a nut having a recess therein the walls of which are inclined and provided with notches; of means for engagement with said recess and notches in the nut whereby said means is forced into binding engagement with the bolt when the nut is driven home.

1,393,959. CAR-DOOR-OPERATING MECHANISM. Lonnie Thomas Penny, Raleigh, N. C. Filed Mar. 8, 1920. Serial No. 362,960. 11 Claims. (Cl. 20—22.)

1. In combination, a car door, supporting, retaining and locking means therefor, said supporting means comprising rollers, means engaging said rollers for elevating and lowering the supporting means, and a further means whereby the door is prevented from being opened until said supporting means is in an elevated position.

1,393,960. COMBINATION PEN AND BRUSH. William R. Penschuck, St. Paul, Minn. Filed June 10, 1920. Serial No. 387,871. 5 Claims. (Cl. 120—43.)



2. In a device of the class described, a cylindrical barrel, a container for liquid within said barrel, a nipple mounted on one end of said barrel, and adapted to

receive a brush or a pen arranged to be inserted in said nipple and means for allowing liquid to flow from said container to said brush or pen, comprising a valve housing mounted in the end of said barrel, a screw in said housing, air passages in said screw and housing, a lever mounted on said barrel adjacent to said housing, a stopper arranged to be actuated by said lever to close said air passages and a spring to hold said valve in closed position.

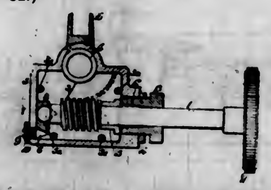
1,393,961. SEALING COMPOSITION FOR RADIATORS. GEORGE EDWIN PERKINS, Atkinson, Ill., assignor of one-fourth to Edwin Everett and one-fourth to J. W. McCullough, Atkinson, Ill. Filed June 2, 1921. Serial No. 474,387. 2 Claims. (Cl. 134—17.5.)

2. The composition for sealing crevices in radiators containing turpentine resin, guaiac resin and flax seed meal, the flax seed meal being in a greater per cent. than the other ingredients and the guaiac resin in a smaller per cent. than the turpentine resin.

1,393,962. GRAIN-CAR DOOR. WILLIAM PINET, Vonda, Saskatchewan, Canada. Filed Dec. 9, 1920. Serial No. 429,470. 4 Claims. (Cl. 20—24.)

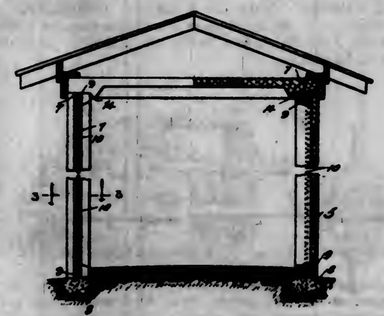
1. The combination in a grain car, of a door, a sliding frame in which the door is mounted, cranks connected to said frame, blocks slidably mounted upon said door, and connected to said cranks, a connection between said cranks and an arm secured to said last mentioned connection, whereby the blocks can be raised and lowered substantially as and for the purposes set forth.

1,393,963. [WITHDRAWN.]



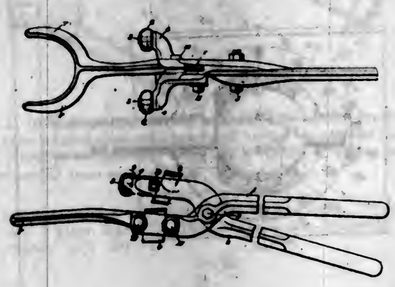
1,393,964. VENDING-MACHINE INDICATOR. EDWIN B. POTTS, Jersey City, N. J., and ALBERT D. GROVER, New York, N. Y., assignors to Autosales Corporation, a Corporation of New York. Filed Nov. 3, 1917. Serial No. 200,177. 6 Claims. (Cl. 116—114.)

1. In a vending machine having an outer casing adapted to contain the vendable goods, a movable device within said casing controlled by the goods, said device being adapted to project out of said casing when the supply of goods is in a certain predetermined condition and to be moved into said casing when the supply of goods is in another predetermined condition, whereby said device acts as an indicator which may readily be



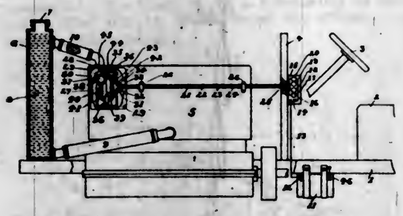
felt from the outside of the machine to ascertain the condition of the supply of goods in the casing.

1,393,965. ADJUSTABLE PIVOT-BEARING. GEORGE HARDIMAN RANSOM, Northfield, Birmingham, England. Filed Dec. 20, 1919. Serial No. 348,165. 1 Claim. (Cl. 64—52.)



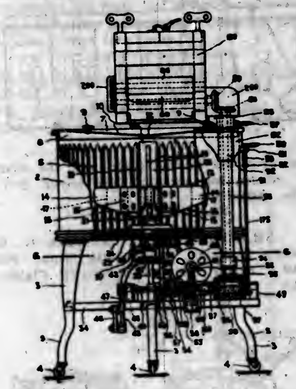
An adjustable pivot bearing for supporting one end of a worm comprising a slide carrying the pivot bearing for the worm, an inclined lower face on said slide and a wedge coacting with said inclined face consisting of a screw having a conical end which engages the inclined face of the wedge whereby longitudinal movement of the screw effects adjustment of the slide and consequent variation in the degree of engagement of said worm with its worm wheel.

1,393,966. CONCRETE BUILDING STRUCTURE. WALLACE CLINTON RICHMAN, Butte, Mont. Filed Feb. 24, 1919. Serial No. 278,643. 5 Claims. (Cl. 72—16.)



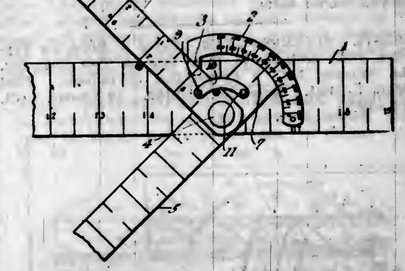
1. In a concrete building structure, a wall formed of concrete boards or slabs vertically disposed in side by side relation, a tie rod common to all of said boards and disposed beneath the lower ends thereof, a similar tie rod common to all of the boards and carried by the upper ends of said boards and vertically disposed tie rods interposed between and inclosed by the proximate edges of adjacent boards, said vertical and horizontal tie rods being interlocked together.

1,393,967. DISK-SHARPENER. PETER RINK, Cresco, Iowa. Filed June 15, 1920. Serial No. 389,072. 11 Claims. (Cl. 76—35.)



1. A device of the character specified, comprising a pair of crossed pivotally connected handle members, each of the said members being forked at one end, one fork being spaced apart farther from the pivotal connection than the other fork, and said first named fork being adapted to engage the supporting shaft of a series of disks at one face of one of the disks, rollers journaled on the arms of the other fork for engaging the opposite face of the said disk and means supported by the handles between the forks and the pivotal connection for engaging and sharpening the opposite faces of the edge of the disk, said means comprising blades held on the handle members, said blades being adjustable relatively to the faces of the disk.

1,393,968. TEMPERATURE-INDICATOR FOR AUTOMOBILES. HARRY A. RISHEL, Philadelphia, Pa. Filed Feb. 10, 1917. Serial No. 147,910. 1 Claim. (Cl. 177—351.)

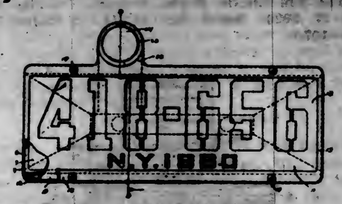


In a device of the kind described which includes a thermal element adapted for application to a water jacket wall and an indicator adapted for application to a dash, transmitting means comprising the combination of a thermally insulating casing applied to the water jacket wall and inclosing the thermal element and electrical connections extending through the wall of the casing and from the element to the indicator and including a source of current, substantially as described.

1,393,969. WASHING-MACHINE. FRANK RITE and JOHN H. BROOK, Toronto, Ontario, Canada, assignors to The Sun Electro Works, Toronto, Canada. Filed Jan. 27, 1920. Serial No. 354,371. 2 Claims. (Cl. 259—107.)

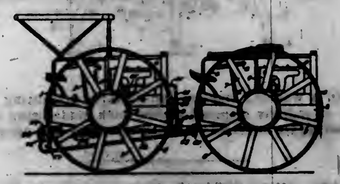
1. In a washing machine, an agitator presenting a plurality of radially disposed blades, each blade being slotted and having its underside inclined upwardly and outwardly.

1,393,970. GEOMETRICAL TOOL. JAMES H. ROBERTS, Charleston, S. C. Filed Jan. 3, 1921. Serial No. 434,613. 3 Claims. (Cl. 33—93.)



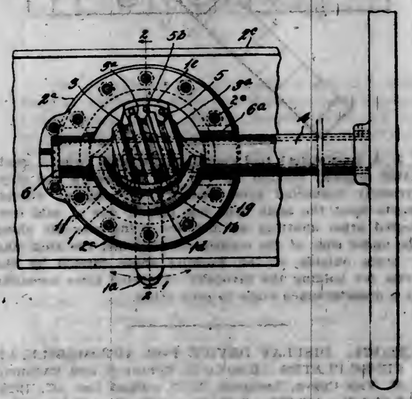
1. A geometrical tool comprising a main arm, a graduated segment secured thereon and having an end stop, pivotally connected arms mounted for angular adjustments upon the main arm, one end of one of said connected arms abutting against and being movable along the under edge of the segment and against the stop, and a brace outside of the working angle formed by the arms for holding the pivotally connected arms normally at a predetermined angle to each other.

1,393,971. DISPLAY DEVICE FOR AUTOMOBILE LICENSE-PLATES. HAROLD E. ROBINSON and RAYMOND M. VAN CLEVE, Lockport, N. Y. Filed Dec. 27, 1920. Serial No. 433,309. 7 Claims. (Cl. 40—132.)



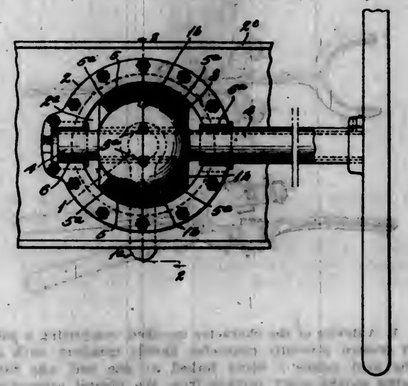
1. A display device characterized by having a one-piece casing forming a reflector and provided with a recess near its outer edge for the reception of a cover glass, a bracket carried by and in interspaced relation with

the casing, a cover for the casing, the cover being formed with a central opening and a depending flange



for taking over the license plate and the casing, and fastening means for securing the cover and license plate to the casing.

1,393,972. TRACTOR-TRUCK. ANDREAS G. RONNING and ADOLPH RONNING, Minneapolis, Minn. Filed May 26, 1919. Serial No. 299,802. 21 Claims. (Cl. 180—14.)



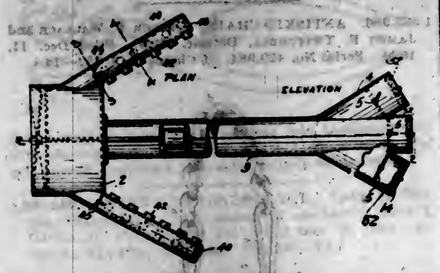
1. A double unit tractor consisting of two tractor units one in front of the other, an engine in each unit, two drive wheels supporting each tractor unit and adapted to be driven by the respective unit engines, a connecting shaft secured to the front unit and slidably mounted in the rear unit, means for equalizing the draft between said two tractor units.

1,393,973. STEERING-GEAR. DAVID E. ROSS, La Fayette, Ind., assignor to Ross Gear & Tool Company, La Fayette, Ind., a Corporation of Indiana. Filed Mar. 7, 1921. Serial No. 450,462. 10 Claims. (Cl. 74—79.)

4. In a steering gear, a rocker shaft having a partispherical head on its inner end adapted to receive a ball; said head having an opening for the entry of the ball at an angle to the axis of the rocker shaft; and a toothed segment on said head opposite a diametrically opposed part of said head; with a spirally toothed ball rotatably fitted in said head and engaging said segment and bearing against the inside of the head opposite said segment; and a steering shaft extending into said head and connected to said ball, substantially as described.

1,393,974. STEERING-GEAR. DAVID E. ROSS, La Fayette, Ind., assignor to Ross Gear & Tool Company, La Fayette, Ind., a Corporation of Indiana. Filed Mar. 7, 1921. Serial No. 450,463. 10 Claims. (Cl. 74—79.)

9. In a steering gear, a rocker shaft having a partispherical head on its inner end, and diametrically opposed spirally grooved segments attached to and within said head; a ball shaped member fitted within the head and having an equatorial series of teeth adapted to engage the spiral grooves in the opposed segments in the head at opposite sides of the ball, and a steering shaft extending through said head and ball and rigidly connected with said ball, whereby rotatorial movement of the steering shaft imparts rocking movement to the rocker shaft.

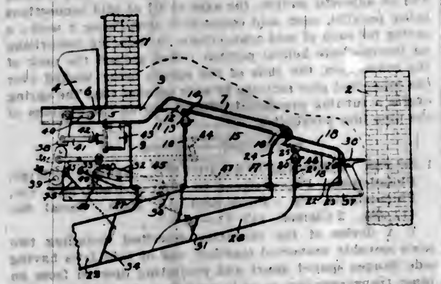


1,393,975. LINING FOR GARMENTS AND ANALOGOUS PURPOSES. FRANK ROWLEY, London, England. Filed Aug. 11, 1919. Serial No. 316,856. 4 Claims. (Cl. 154—46.)

1. A lining for garments and analogous purposes comprising two layers of fabric and a layer of fur from animals of the *Lepus* family between the layers of fabric.

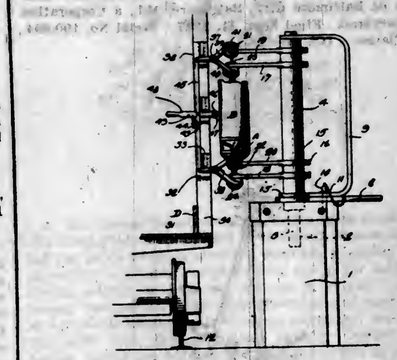
1,393,976. (WITHDRAWN.)

1,393,977. MECHANICAL ATTACHMENT. ANTON EDWARD SAWL, Welby, Colo. Filed Feb. 13, 1919. Serial No. 276,881. 5 Claims. (Cl. 115—12.)



1. In a propelling device, a head, a propeller therein, a tube leading from said head and having an exhaust, and a plurality of exhausts arranged at different angles and projecting from said head.

1,393,978. OIL-CAN. BENJAMIN P. SAUNDERS, Weston, Mo. Filed Apr. 13, 1920. Serial No. 373,643. 1 Claim. (Cl. 221—48.)



An oil can consisting of a body portion for holding oil, a nozzle communicating with said body portion to conduct oil therefrom, a normally closed valve to prevent the escape of oil through said nozzle should the oil can upset, a stem extending through the nozzle to open the valve, and an enlarged grooved outer terminal on said stem.

1,393,979. STOKER-FURNACE. JOHN S. SKELLY, Monongahela, Pa., assignor to Combustion Engineering Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 16, 1919. Serial No. 330,953. 10 Claims. (Cl. 110—48.)

1. In a stoker furnace, the combination of two separable series of fuel supporting grate bars arranged on different levels and longitudinally displaced with reference to each other so that the upper series overlaps the other and discharges thereon, adjacent bars in each series having air passages between them, means for reciprocating bars in the upper series, the bars of both series being tubular and provided with inlet and outlet ports, means for supplying air to the inlet ports, and air chambers for receiving air from the outlet ports and discharging said air upwardly through said passages between the adjacent bars of said two series.

1,393,980. MAIL-BAG EXCHANGE. CHARLES F. SMITH, New York, N. Y. Filed Sept. 12, 1918, Serial No. 253,765. Renewed Mar. 12, 1921. Serial No. 451,843. 5 Claims. (Cl. 258—17.)

1. In a mail bag handling device, the combination with keepers adapted to be attached to the sides of the door opening in a mail car, three cross bars, and adjustable connections between their extremities and the receptive pairs of keepers, the mid-lengths of said cross bars being offset; of mail bag supports rotatably mounted on the upper and lower bars and having levers at their inner ends, a hand lever mounted on the intermediate bar, and link connections between all said levers.

1,393,981. STEERING MECHANISM FOR VEHICLES. WILFRID LAWSON SPENCE, Edinburgh, Scotland. Filed June 16, 1921. Serial No. 477,994. 5 Claims. (Cl. 74—79.)

1. In steering mechanism for vehicles, the combination of a rigid member, a member to be moved relatively to the rigid member, a pair of spring blades attached to said member to be moved, operating mechanism carried by said rigid member and adapted to slide said spring blades relatively in opposite directions, and guides for said operating mechanism, substantially as set forth.

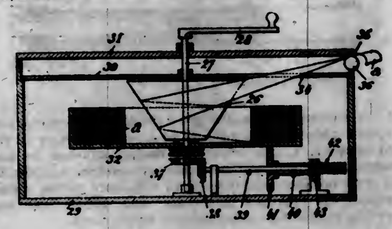
1,393,982. ELECTRIC FUSE. ARCHIE W. STEELE, Bloomfield, N. J., assignor to Wilford J. Hawkins, Montclair, N. J. Filed Sept. 24, 1919. Serial No. 325,891. 5 Claims. (Cl. 200—132.)

1. An electric fuse comprising, a hollow body of insulating material, provided at one end with a cap having a slot therein, a fuse element support within said body and carrying blades, one of which is adapted to project through said slot in separable relation to said cap, a cap

permanently secured to the other blade and adapted to embrace and frictionally engage the other end of said

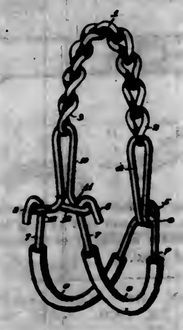
body and means for detachably securing a fuse element in electrical contact with said blades.

1,393,983. CAMERA-SHUTTER. JOHN SWINSCOE, Baltimore, Md., assignor to The Crown Cork and Seal Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed Sept. 11, 1917. Serial No. 190,694. 22 Claims. (Cl. 95—58.)



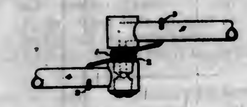
1. In combination, a photographic lens shutter, and gravity operated means for operating said shutter and to place the same in a position for subsequent operation.

1,393,984. EXPLOSIVE AND PROCESS FOR MANUFACTURING IT. CASTEN IVAN TIGELL, Stockholm, Sweden. Filed July 23, 1918. Serial No. 246,302. 5 Claims. (Cl. 52—6.)



1. A safety explosive of the class described containing nitro-hydrocarbons, oxygen yielding substances, combustible carbonaceous substances, aluminium-powder and ferro-silicon containing 90 to 95% of silicon.

1,393,985. UNWINDING APPARATUS. ANDRÉ JOSEPH DENIS ANTOINE VOULGRE, Bayonne, France. Filed Nov. 9, 1918. Serial No. 261,808. 2 Claims. (Cl. 88—18.7.)

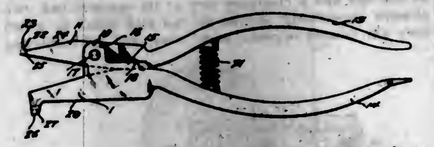


1. An unwinding apparatus comprising in combination: a cylindrical receptacle having an outer rim and open at one side, means for rotatably supporting said receptacle, a coaxially arranged conical drum having its small end projecting into the space within the outer rim, disconnectible operating means for rotating said conical drum at a constant speed, operating means adapted to drive the receptacle at a varying speed, means for receiving the article to be unwound as delivered by the drum and leaving the same free to move along a line substantially normal to the axis of the drum and means for attaching one end of the article to the inside face of the said outer rim.

1,393,986. ANTISKID-CHAIN. GEORGE T. WALLACE and JAMES E. TWITCHELL, Detroit, Mich. Filed Dec. 11, 1920. Serial No. 429,984. 1 Claim. (Cl. 152—14.)

The combination of a single anti-skid chain, felly engaging U-shaped arms adapted to extend from the inner side of a felly to the outer side thereof and have the outer ends of said arms sprung toward each other, said chain having the inner end thereof held by said arms, and a fastener constituting the sole connecting means between the outer end of said chain and the outer ends of said arms, said fastener comprising a link having opposed lateral hook members into which the outer ends of said arms may be sprung by laterally shifting the outer ends of said arms toward each other, said hook members being in proximity to each other and maintaining said link in engagement with said chain.

1,393,987. GAS SERVICE-PIPE. JOHN W. WAMPLER, Wichita, Kans. Filed Feb. 21, 1920. Serial No. 360,540. 1 Claim. (Cl. 285—102.)



A gas service pipe for connection with gas burning appliances, said pipe comprising a plurality of short straight pipe sections, a pivotal connection between each section and an adjacent section, the axes of all of said connections being parallel, each said connection comprising a neck; a spring for each of said connections, each spring comprising an intermediate helical portion coiled around the neck of the connection, the ends of the spring being hooked over the connected pipe sections in such manner that the spring exerts a turning pressure tending to bring the sections of the pipe into parallelism.

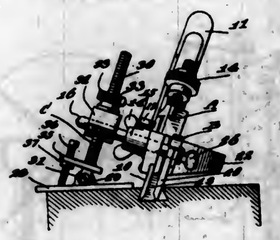
1,393,988. HOSE-BANDING DEVICE. REUBEN D. WIRT, Philadelphia, Pa., assignor to Wirt & Knox Mfg. Co., Philadelphia, Pa. Filed Sept. 18, 1920. Serial No. 411,283. 2 Claims. (Cl. 81—15.)

1. A device of the character described including two jaws movably connected together, one of said jaws having side flanges spaced apart and projecting upward from an inner transverse face so as to provide a channel into which a portion of the other jaw can move in a parallel plane, the distances between the side surfaces of said jaw portion and the inner surfaces of said flanges when said jaw portion is in the channel being substantially equal to the thickness of a wire to be bent so that when the wire is

inserted between said jaws across said channel and said jaws are actuated to move the second mentioned jaw into

the channel, said wire will be bent into U-shape form; with the leg portions thereof adjacent opposite sides of said second mentioned jaw, substantially as described.

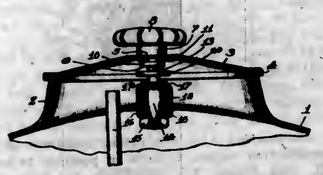
1,393,989. INDENT HARDNESS-GAGE. CAMP M. ZUBLIN, Philadelphia, Pa., assignor of one-half to John J. Davies, Jr., Philadelphia, Pa. Filed Mar. 15, 1921. Serial No. 452,423. 4 Claims. (Cl. 265—12.)



1. In a device of the character stated, a body, a threaded adjusting screw mounted therein, a plunger chamber formed on said body in alinement with said screw, a plunger in said chamber having a ball-pointed end, adapted to pass through an opening in the bottom of said plunger chamber, a rod for said plunger, an upper closure for said chamber through which said rod passes, a spring intermediate said closure and plunger, a shoulder on said plunger rod, and a locking device adapted to coact with said shoulder, and temporarily retain said plunger in its raised position with said spring compressed.

1,393,990. BELT-ADJUSTING MEANS. HENRY FORD, Detroit, Mich. Filed Apr. 15, 1918. Serial No. 228,591. 2 Claims. (Cl. 64—53.)

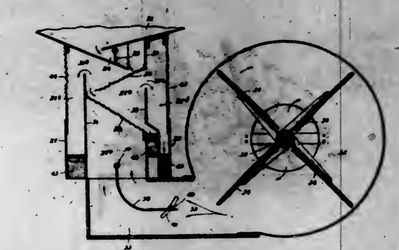
2. The combination with a bracket and a stepped shaft extending therethrough, of tightening means comprising eccentric washers set in said bracket with one of said washers between a stepped portion of said shaft and the bracket and adapted for adjusting said shaft relative thereto, and means adapted to move said shaft and said eccentric washers so that said washers are bound against said bracket.



1,393,991. PLANE. JOHN M. DODENHOF, St. Louis, Mo. Filed Sept. 24, 1920. Serial No. 412,431. 5 Claims. (Cl. 145—10.)

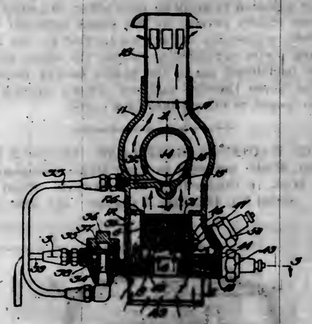
4. In a plane, the combination with a main stock, a pair of sliding guide arms carried by the stock, means for holding the guide arms in adjusted position, a sliding section adjustably carried by the guide arm, means for holding the sliding section in adjusted position, a cutting blade arranged intermediate the sliding section and main stock, of a guide including a pair of blocks adjustably mounted on the guide arm, threaded stems slidably carried by the blocks, means for holding the threaded stems in adjusted position in relation to the blocks, a substantially rectangular shaped flat plate pivotally carried by the lower ends of the stems, and means for holding the plate in adjusted position in relation to the stems.

5. As a new article of manufacture, a guide for bench planes comprising a flat plate, a pair of pivoted stems carried by the upper surface of the plate, blocks adjustably carried by the stems, means for holding the stems and the blocks in adjusted relation to each other, laterally projecting plates rigidly carried by the stems adjacent to their lower ends, adjustable set screws carried by the laterally projecting plates arranged to engage the upper surface of the first mentioned plate, the blocks having transversely extending bores therein, and set screws carried by the blocks arranged to extend into said bores.



1,393,992. RADIATOR-FILLER CAP. EUGENE J. FARKAS, Detroit, Mich., assignor to Ford Motor Company, Dearborn, Mich., a Corporation of Delaware. Filed Dec. 4, 1920. Serial No. 428,229. 7 Claims. (Cl. 220—25.)

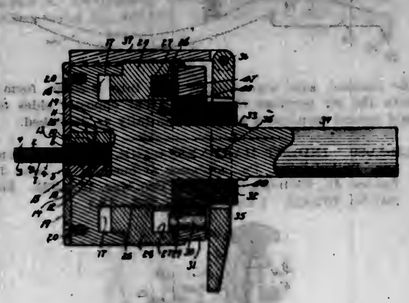
1. The combination of a tank having a filling connection, a cap, a connecting member carried by said cap, and having a configuration relative to said tank filling connection to prevent rotation of said connecting member, a hand piece extending through said cap into screwthreaded engagement with said connecting member and adapted to cooperate with said connecting member in clamping said cap on said filling connection, and means at the inner end of said connecting member retaining said member in the filling connection of said tank so that said cap may be tilted to one side of said tank.



7. Means for connecting a cap to a radiator comprising, in combination with a radiator cap, a member having the inner end slidable in the radiator and its outer end detachably connected to the cap, and means to prevent said member from falling into the radiator when released by said cap.

1,393,993. GRAIN-SEPARATOR. ADOLPH G. PERRING, Minneapolis, Minn. Filed Feb. 2, 1920. Serial No. 355,608. 10 Claims. (Cl. 130—17.)

10. A grain separator having in combination a housing having screened openings in the upper portions of the sides thereof, partitions in said housings adjacent the sides thereof and having openings therethrough adjacent to said screen openings, oppositely inclined screens extending from and between said partitions, and means for forcing a current of air upwardly between said partitions through the said openings therein and out of said screen openings.



1,393,994. STOVE FOR INTAKE-MANIFOLDS OF INTERNAL-COMBUSTION ENGINES. STEPHEN IVAN FERETE, Detroit, Mich., assignor to Essex Motors, Detroit, Mich., a Corporation of Michigan. Filed Oct. 5, 1920. Serial No. 414,921. 14 Claims. (Cl. 123—152.)

1. In combination with the intake manifold of an internal combustion engine, a stove in position to heat the manifold, and means for supplying an automatically measured quantity of liquid fuel to the stove.

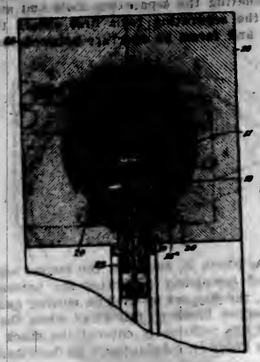
1,393,995. COLLAPSING TAP. JAMES FRAZER, Wilmington, Del., assignor to The Geometric Tool Co., New Haven, Conn., a Corporation. Filed Jan. 17, 1916. Serial No. 72,579. 13 Claims. (Cl. 10—144.)

1. In a collapsing tap, the combination with a head having a slot extending diametrically across its outer face, of two slides located within the said slot in which they ride upon each other, and each of which has a cam-slot at one end and a clearance slot at its opposite end, two chasers respectively carried by the said slides in which they are located opposite each other, and an oscillating

cam-ring encircling the said head and having two oppositely located segmental cams respectively passing through the cam-slot of one slide and the clearance-slot of the other slide, whereby the oscillation of the said ring, the slides, and hence the chasers, are moved in right lines in opposite directions.

1,393,996. REMOVABLE CONSTRUCTION. CHARLES FERRONNIERE, Lyon, France. Filed July 7, 1920. Serial No. 394,446. 2 Claims. (Cl. 189—84.)

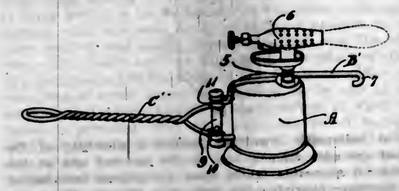
1. Rigid elements for building removable constructions comprising a V shaped or angular piece, outwardly directed projections at one of the free ends of said elements, an eye provided on said projection for receiving the bolt connecting said element with the adjacent one, an eye provided on the apex of the V shaped element for receiving a connecting bolt, the algebraic sum of the distances between the center of both said eyes and the axis of the corresponding arm being equal or somewhat larger than the width of said arm.



1,393,997. PROCESS OF PREPARING CEREAL FOOD. JACOB FRIEDMAN, New York, N. Y. Filed Nov. 19, 1919. Serial No. 339,013. 4 Claims. (Cl. 99—10.)

1. A process of preparing cereal which consists in subjecting the cereal in dry form to a cooking heat and pressure in an entirely closed vessel.

1,393,998. MANUFACTURE OF TIRES. WILLIAM H. FULTON, Irvington, N. J. Filed Nov. 20, 1919. Serial No. 339,454. 7 Claims. (Cl. 18—56.)

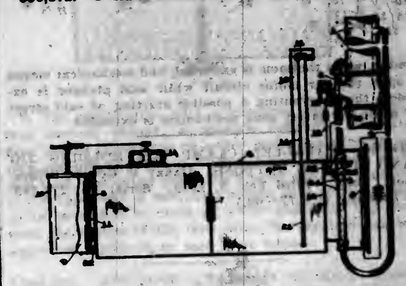


1. In the manufacture of tires, the improvement which consists in forming the tire on an inner core, adhesively sealing the base of the tire to the core, inclosing the tire

with the core inside of it in a suitable mold, and forcing air under pressure between the tire and the core to

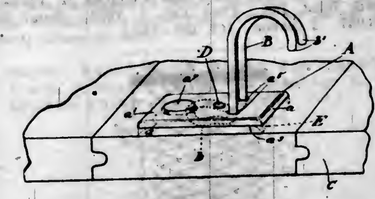
press the tire outwardly against the mold and maintain the tire under tension during vulcanization.

1,393,999. ATTACHMENT FOR BLOWTORCHES. THOMAS W. GARNETT, Topeka, Kans. Filed Nov. 10, 1920. Serial No. 423,017. 4 Claims. (Cl. 158—33.)



1. An attachment for a blow-torch, comprising a member having means at one end whereby to attach said member to the burner support of said torch, said member being adapted to extend laterally from said torch in alinement with the flame from said burner and to engage with its free end the object to be heated to limit the approach of said burner to said object, said free end being rounded to prevent scratching of said object.

1,394,000. VEHICLE-SIGNAL. CLIFFORD H. GEORGER, Buffalo, N. Y. Filed July 2, 1920. Serial No. 393,509. 4 Claims. (Cl. 116—53.)



1. A signal of the character described comprising a casing having side walls and notches arranged therein and extending to the edges thereof, a pivot bolt supported in said notches, an indicating arm pivotally mounted at its lower end on said bolt to swing into and out of said casing, and means for actuating said arm.

1,394,001. APPARATUS FOR OBTAINING PRESSURE TIME DIAGRAMS. NORMAN R. GIBSON, Niagara Falls, Ontario, Canada. Filed Oct. 13, 1919. Serial No. 330,372. 4 Claims. (Cl. 234—17.)

1. Apparatus for obtaining pressure-time diagrams comprising a pressure indicator including a light intercepting body movable to indicate pressure; a camera containing a lens and having a slot therein in front of the lens parallel to the path of said light intercepting body; means behind the lens for moving an actinically sensitive surface in the focal plane of the lens at right angles to the length of the slot; and means for briefly breaking the actinic record at regular predetermined intervals of time by eclipsing the record forming rays.

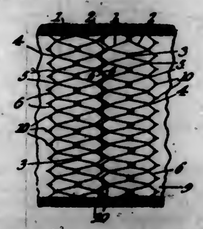
1,394,002. INSERT FOR PLASTIC MATERIALS. WILLIAM M. GOLDSMITH, Cincinnati, Ohio. Filed May 27, 1920. Serial No. 384,692. 8 Claims. (Cl. 72—105.)

8. As a new article of manufacture for use with plastic construction, a perforated cap, a recess formed on the cap, an insert, an eye formed on the insert, the eye being adapted to assume a position between the cap and a mold in which the plastic is to be placed and to have such eye extending partly over the recess formed in the cap, and fingers on the insert extending through the perforations in the cap, the eye being capable of being moved to an extended position after the fingers are embedded in a plastic material.

1,394,003. MECHANICALLY-OPERATED SAFETY ZONE. CHARLES GOHR, Los Angeles, Calif. Original application filed May 29, 1920, Serial No. 385,320. Divided and this application filed Jan. 21, 1921. Serial No. 439,001. 8 Claims. (Cl. 105—341.)

1. In combination with a street car, a mechanism adapted to provide a safety zone comprising, a stationary cylinder, a reciprocal plunger mounted therein, a piston attached to said plunger, a valve to supply air pressure

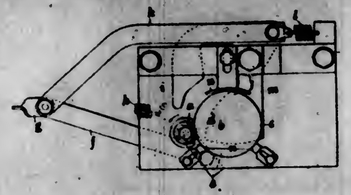
to one side of said piston to cause the reciprocation of same against the tension of a spring, for the purpose of providing a safety zone, and in combination with said mechanism, means to illuminate the end of said reciprocal



member, when the same is extended, and mechanical means to open the car motor circuit while said plunger is extended, thus preventing a possible starting of said street car while the safety zone mechanism is extended.

1,394,004. PARALLEL CLAMP FOR HOLDING JIG AND FIXTURE BUTTONS. HARRY V. GOULD, Bridgeport, Conn. Filed Feb. 3, 1919. Serial No. 274,783. 6 Claims. (Cl. 77—62.)

1. A clamp of the character described comprising a cross piece having a central unthreaded hole, arms extending from the cross piece, and bars having parallel inner faces at the ends of the arms, said bars being provided with recesses for convenience in passing the bars over a fixture button.

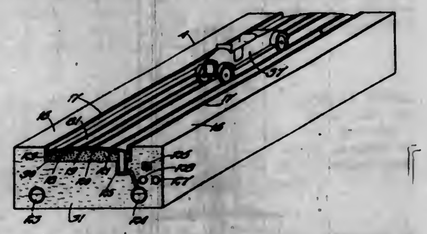


1,394,005. SPRING FOR CHAIR-BACKS AND THE LIKE. EDWIN E. GRAFF and CHARLES M. FISHER, South Bend, Ind. Filed Mar. 3, 1920. Serial No. 363,037. 2 Claims. (Cl. 155—181.)

1. A back cushion for automobile chairs and the like comprising a back structure, parallel spring units having their ends inturned and secured to the upper and lower portions of the back structure, said units being bulged outwardly from the structure, each unit including crossed zigzag wires twisted together at their points of intersection and having eyes at their side angles, zigzag attaching wires having hooked portions extending into the eyes, a pad extending over the spring units, and means for connecting the zigzag wires to the back surface of the pad.

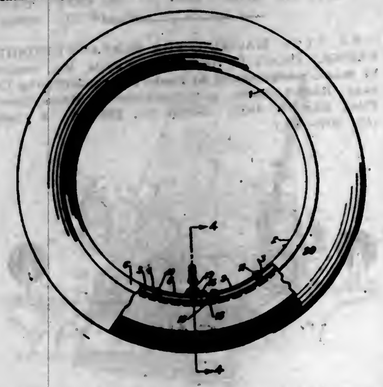
1,394,006. SHEET-METAL-BLANK FEEDER. HARRY ALBERT GRIFFITHS, Birmingham, and RICHARD HANSON GRIFFITHS, Sutton Coldfield, England. Filed Feb. 14, 1921. Serial No. 444,885. 2 Claims. (Cl. 271—1.)

1. In mechanism for individually feeding sheet metal blanks from a stack to the tools of a press, the combination of a pair of oscillatory separating tools, a support arranged in conjunction with one of the tools, and means for actuating the separating tools and support so that one of the separating tools first enters the stack of the blanks and forms an apertury between the bottom



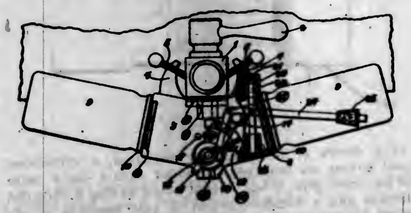
blank and those above it, and then the second separating tool enters and completely separates the bottom blank from the stack, the support meanwhile moving and finally allowing the bottom blank to fall away when the second separating tool has sufficiently entered the stack to support the blanks above it, substantially as described.

1,394,007. COLLAPSIBLE WARDROBE. MARY LUCY HALL, Louisville, Ky. Filed Jan. 3, 1921. Serial No. 434,516. 7 Claims. (Cl. 45—118.)



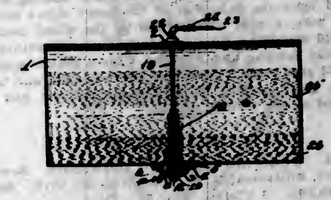
1. A collapsible wardrobe having a plurality of detached spreader frames, one at the top and one at the bottom; a separable fabric cover comprising rectangular end members overlying the respective frames; three side walls, permanently fixed to the edges of said end members of the cover; a front wall divided vertically into two side curtains, detachably fixed to the bottom end member cover and a band extending below the front edge of the upper end member of the cover and across the front wall to which the two parts of the front wall or curtains are attached by clasps and clasps connecting the proximate vertical edges of the two curtains of the front wall.

1,394,008. TOY. ROBERT C. HARGREAVES, Detroit, Mich., assignor of one-third to Roy D. Chapin and one-third to Guido G. Behn, Detroit, Mich. Filed Dec. 2, 1920. Serial No. 427,885. 14 Claims. (Cl. 35—16.)



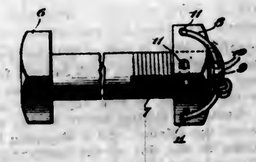
1. A toy composed of a series of sections constructed to simulate the appearance of a highway, the ends of the sections being covered with paper printed to illustrate the cross-sectional structure of a highway, and the surface being formed into a track for the passage of a toy vehicle.

1,394,009. TIRE-RIM. CHESTER N. HAUPTS, Columbus, Ohio. Filed July 15, 1920. Serial No. 396,464. 3 Claims. (Cl. 301—32.)



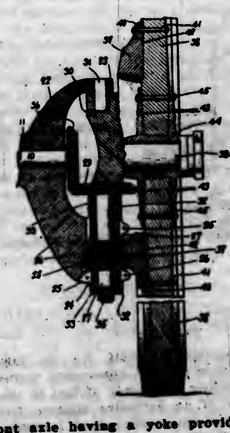
3. A tire rim comprising a substantially resilient metallic body formed to include separated and spaced ends, a pair of hinged toggle sections having their outer portions hinged to said ends, the meeting ends of said sections being formed to include a tongue extension capable of lying within a recess formed in the other coöperative section, said extension being pivotally connected to the inner wall of said recess, shoulders formed with the adjacent ends of said sections and situated in offset relationship with respect to the hinge of said tongue extension and operating to arrest outward movement on the part of said sections, and a strip formed with the section in which the recess is provided, said strip being capable of engaging with the other complemental section to relieve said shoulders of the stresses set up by the expanding movements of the sections, and said strip being further provided with an opening capable of receiving the air valve structure of a pneumatic tire carried by said rim, whereby said structure will serve to lock said sections to said tire.

1,394,010. LIQUID-DISPENSING DEVICE. THOMAS E. HESTER, St. Louis, and FREDERICK J. HARDESTY, Maplewood, Mo. Filed June 24, 1920. Serial No. 391,462. 4 Claims. (Cl. 221—112.)



1. A liquid dispensing device, comprising a secondary container including a central body, and removable elements connected therewith; there being an air opening through the upper wall of said central body; a needle valve for controlling said air opening, a float controlled lever operated by the liquid received in said secondary container for controlling said needle valve; a discharge spigot from said secondary container; a valve for said spigot; and means for adjusting said lever by the movement of said discharge spigot valve for determining the liquid level at which the air opening will be closed.

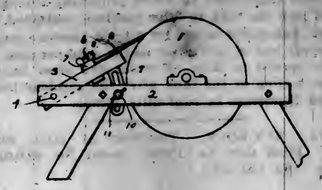
1,394,011. FILTER FOR GASOLENE-TANKS. HENRY A. HILLS, Grand Rapids, Mich. Filed Sept. 4, 1917. Serial No. 189,550. 4 Claims. (Cl. 210—170.)



2. The combination with a gasolene tank, of a drain trap secured thereto, a pet-cock connected therewith, filter means impervious to water projecting through said trap and into the tank to filter gasolene contained within said tank, and outlet means for filtered gasolene connected to the upper end of said filter means, said pet-cock adapted to be opened to draw off water and other impurities from the bottom of the tank after the gasolene has been separated therefrom by said filter means.

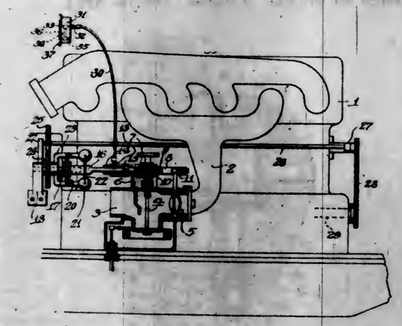
1,394,012. NUT-LOCK. THEODORE M. HILL, Shubert, Nebr. Filed Oct. 14, 1920. Serial No. 416,924. 1 Claim. (Cl. 151—5.)

A bolt having a reduced portion extending from an end of and smaller than its shank and a transverse hole extending through said reduced portion, said reduced portion being arranged to permit insertion in and removal from the hole of a nut-locking wire when the nut practically covers the hole.



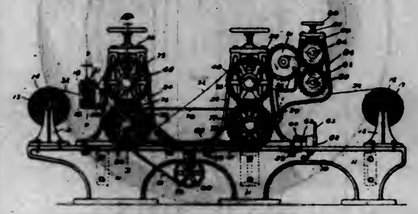
1,394,013. FRONT-WHEEL DRIVE FOR VEHICLES. SAMUEL T. HOENER, Slater, Mo. Filed Apr. 5, 1920. Serial No. 371,330. 2 Claims. (Cl. 74—101.)

1. A front axle having a yoke provided with upper and lower bearings of which the latter is provided with



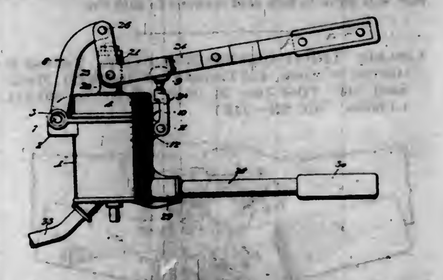
a removable cap member and is extended to form a sleeve bearing, a bracket block carrying a front wheel spindle and provided with an upper bearing pin mounted in the upper bearing of said yoke and a lower bearing sleeve mounted upon the extension of the lower sleeve bearing of said yoke, a gear ring carried by the wheel mounted upon said spindle, a counter spindle mounted within the lower yoke bearing and provided with a pinion meshing with said gear ring, a front axle shaft member and intermeshing gears carried by said shaft member and the upper end of the counter spindle.

1,394,014. WORK-SUPPORT FOR GRINDERS. SAMUEL E. HOLT, Rhinebeck, N. Y. Filed Aug. 23, 1919. Serial No. 319,503. 1 Claim. (Cl. 51—239.)



The combination with a rotary grinder and its supporting frame, of an adjustable work support formed with a longitudinal slot and pivoted to the frame at its end remote from the grinder, a stop adjustably mounted in said slot, a depending slotted sector at the end of the support adjacent the grinder, and a clamping bolt in the frame and lying in the slot of the sector for clamping the support in adjusted position.

1,394,015. AUTOMATIC ACCELERATOR AND FUEL-REGULATOR. GEZA HORVATH, Highland Park, Mich. Filed Oct. 8, 1919. Serial No. 329,859. 3 Claims. (Cl. 123—100.)



1. A fuel regulating device for the carbureters of internal combustion engines, comprising means for simultaneously regulating the supply of fuel to the carbureter and the supply of an explosive mixture from the carbureter to the engine, said means including a rolling gear and governor actuated means adapted to regulate the fuel supply to the carbureter by rolling the gear of the first mentioned means independent of any adjustment of remaining elements of the first mentioned means.

1,394,016. MACHINE FOR SURFACE-FINISHING PAPER. HENRY P. HOWE, Stacy Falls, Me., assignor, by mesne assignments, to Eastern Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed May 18, 1918. Serial No. 235,406. 8 Claims. (Cl. 101—23.)

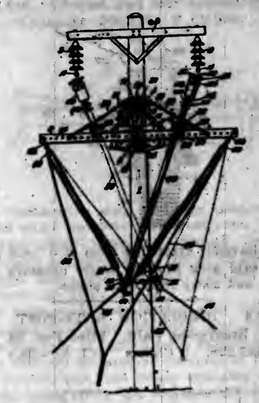
1. A machine for surface-finishing a paper web on both sides, comprising complemental cylindrical rolls between which the paper is passed, marking sheets surrounding said rolls, mechanism for rotating said rolls synchronously in relatively opposite directions, and means for pressing said rolls together, the pressure between the rolls being supported wholly by their adjacent surfaces, and the rolls having surface depressions registering with one another to receive the ends of the markers; said depressions being diagonally arranged, whereby when they pass the line of roll tangency the continuity of pressure remains unbroken.

1,394,017. PRESSURE-OPERATED GREASE-INJECTING DEVICE OR GREASE-GUN FOR AUTOMOBILE SERVICE. FRANK JACKSON, Denver, Colo. Filed Aug. 29, 1919. Serial No. 320,290. 1 Claim. (Cl. 221—78.)

In a device of the character described, a cylindrical vessel having an inlet pipe provided with a check valve and an outlet pipe, a lug on said vessel having a threaded aperture and a handle screwed in said aperture, a cap hinged to said vessel having a lug thereon and an axial aperture, a yoke hinged to said vessel and adapted to be swung up over said lug and a thumb screw in the end of said yoke to engage said lug; a piston in said vessel having a rod which extends out through the axial aperture in said cap, a yoke secured upon the end of said rod, a lever having a forked end, the members of which terminate in foot portions, the heels of which are pivotally connected to the yoke on the piston rod, upright arms, the lower ends of which are pivotally mounted on the hinge pin of said cap, their upper ends being pivotally connected to the toe ends of said lever.

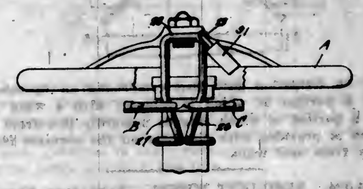
1,394,018. CONVEYER-BELT. ISAAC S. JACKSON, Newark, N. J., assignor to The Rosendale-Reddaway Belting & Hose Co., Newark, N. J., a Corporation of New Jersey. Filed Dec. 11, 1919. Serial No. 344,174. 2 Claims. (Cl. 91—68.)

1. A conveyer belt having a protective coating thereon, said coating comprising a material adapted to be applied to the belt in substantially a fluid state, and a solid material adapted to be thereafter applied and retained by the setting of the first mentioned material.



1,394,019. CABLE-COUPLING. HERMAN A. JENSEN, Castle Rock, Wash. Filed Nov. 12, 1920. Serial No. 423,719. 2 Claims. (Cl. 24—126.)

2. A cable coupling consisting of the combination with a socket-piece, and a head revolubly united by an annular flange provided on the head and a corresponding recess provided in the socket-piece, of an annular groove in the head, and a transverse retaining member in the socket-piece traversing the groove in the head.



1,394,020. INSULATOR-CHANGER. TOMLINSON FORT JOHNSON, Jr., Atlanta, Ga. Filed Mar. 16, 1918. Serial No. 223,048. 32 Claims. (Cl. 175—265.)

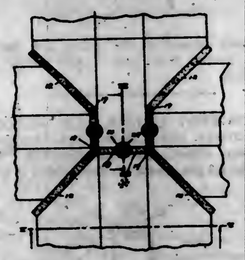
1. An insulator changer for high tension circuits, comprising a cross-arm for temporary use, a support for the cross-arm having means for securing it to a line pole, a lifting pole with a retaining head at one end for a line

wire and having means at the other end for attaching tackle to the lifting pole, and a pole guide attachable to the cross-arm.

1,394,021. LOCKING DEVICE FOR AUTOMOBILES. EDWARD F. JONES, San Antonio, Tex., assignor of one-half to Caesar Cazell, San Antonio, Tex. Filed Mar. 21, 1919. Serial No. 284,040. 1 Claim. (Cl. 70—126.)

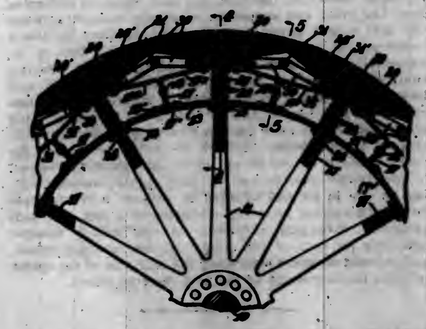
In a lock for the throttle control and steering wheel of an automobile, shackle members having their ends pivotally connected together, the said members diverging from the pivot and shaped in oppositely extending loops, the said looped portions of the said members having a clearance for the reception of a steering column of an automobile, the said members embracing the throttle controlling lever for limiting the movement of the said lever, one of said members being of greater length than the other, said longer member having its extremity lying at an angle to the main portion thereof at a point opposite the end of the shorter member, the said extension of the longer member having an eye in its end overlying the end of the shorter member and the said shorter member having an eye in its end adapted to register with the first mentioned eye for receiving a shackle of a lock, the said angularly extending extremity of the longer member overlying an arm of the spider of said steering wheel, and the said members embracing the said arm of the spider to limit the movement of the said steering wheel.

1,394,022. BALL-COCK. OWEN H. JONES, Hartford, Conn. Filed Feb. 26, 1918. Serial No. 219,233. 1 Claim. (Cl. 137—104.)



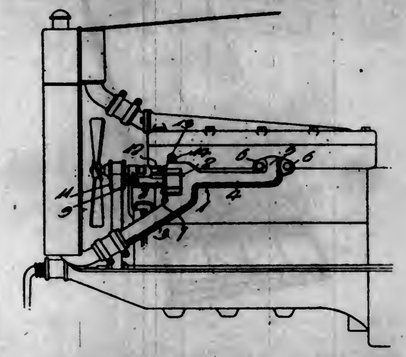
A ball cock comprising a body section having a recess in one end, a cap section having a neck and a lip overlying said recess, means for securing said sections together, a valve seat removably held in said recess by said lip, a diaphragm extending across the chamber in the cap section

and overlying said recess, and a plunger comprising a head fitting an opening in said diaphragm, and a shank



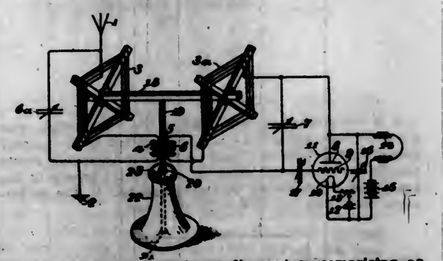
of reduced diameter extending from said head through an opening in said neck whereby water pressure is diverted at the head and away from said shank.

1,394,023. IRRIGATION GATE-POST. AUGUSTUS KEMPKEY, Brentwood, Calif. Filed Feb. 28, 1921. Serial No. 447,228. 6 Claims. (Cl. 61—28.)



1. An irrigation gate post comprising an upstanding post a portion of which is integral with a wing wall and a portion of which extends upwardly therefrom and which is provided with channels on the surfaces facing away from said walls.

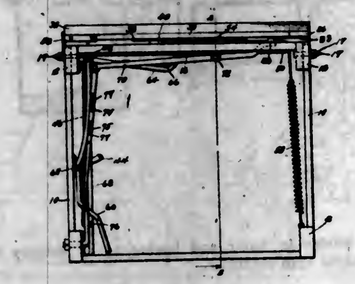
1,394,024. RESILIENT WHEEL. ALEXANDER KINDSER, Canon City, Colo. Filed Sept. 29, 1920. Serial No. 413,492. 5 Claims. (Cl. 152—8.)



5. In a vehicle wheel a series of spokes having borings therein, a rim having outwardly projecting parallel flanges, a series of spring arms arranged in oppositely extending pairs on said rim, a series of blocks slidably confined between said flanges and secured at opposite ends to one arm of adjacent pairs, studs on the inner faces of said blocks engaging in the borings in the said spokes, and coiled expansion springs surrounding said studs, and toggle links pivoted at one end to the flanges of said rim and engaging said blocks at opposite ends and serving to limit outward movement of said blocks.

1,394,025. AUTOMOBILE WATER-PUMP. VINCENT KLUGA and FELIX KLUGA, Niagara Falls, N. Y. Filed Nov. 22, 1920. Serial No. 425,883. 1 Claim. (Cl. 123—175.)

A water pipe connection comprising a casting having a horizontal pipe section having at one end side ears for receiving securing screws for fitting into threaded openings formed in the wall of an engine, a pipe engaging tubular arm extending from its second end, the second end of the horizontal section being enlarged to provide a head having a pump chamber open at its outer side and having its inner side communicating with the upper end of the tubular arm, and an upper passage communicating with the water passage of the horizontal section, a lug extending from the enlarged end of the horizontal arm in the same plane as said side ears, a set screw passing through the threaded opening of said lug for engaging the wall of an engine and swinging the horizontal arm to apply locking pressure upon the screws passing through the side ears, a sleeve having a head at its inner end for closing the open outer side of said chamber, a shaft journaled in said sleeve and having an extended outer end portion and an inner end portion extending into said chamber, a rotary pump head upon the inner end of said shaft, and a pulley upon the outer end of said shaft.



1,394,026. RADIO SYSTEM. LLOYD M. KNOLL, Philadelphia, Pa., assignor of one-fourth to Thomas Appleby, Philadelphia, Pa. Filed Apr. 2, 1920. Serial No. 370,683. 19 Claims. (Cl. 250—11.)
